Explanation of an Expedition in Florida Neck, by Thirty three Jamaica Indians Accompany'd by Capt T. Nairn.
EXPLANATION To find the Distance between any two Places, in this Map by ye Scale of English Miles, fitted from 15 to 55 Degrees of Latitude as you see ye lines numbred up each side, the lines that go from top to bottom, intersecting ye Parallels of Latitude at every 30 Miles; so that each Parallel contains 300 Miles in Y Latitude that ye Parallel is numbred with. Example I desire to know the Distance between New York and ye Indian Fort in Pennsilvania; I extend ye Compasses from one Place to ye other and applying that to the Scale upon ye Parallel of 41, I find it is 128 Miles.
A Scale of English Miles for Longitude
55 Degrees West from London
