Home Fire Sprinklers Save Lives

Fire sprinklers and smoke alarms reduce your risk of dying in a fire by 82 percent.

Fire sprinklers protect your home and your family. Learn the facts:

- Home fire sprinklers keep fires small by reducing the heat, flames and smoke made in a fire.
- Only the home fire sprinkler closest to the fire will spray water.
- Home fire sprinklers put much less water on the fire than a fire department hose.
- Home fire sprinklers can be installed in new and already built homes. Install a home fire sprinkler system if you are remodeling or building a home.
