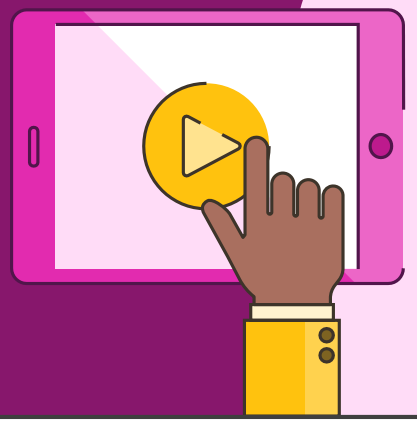
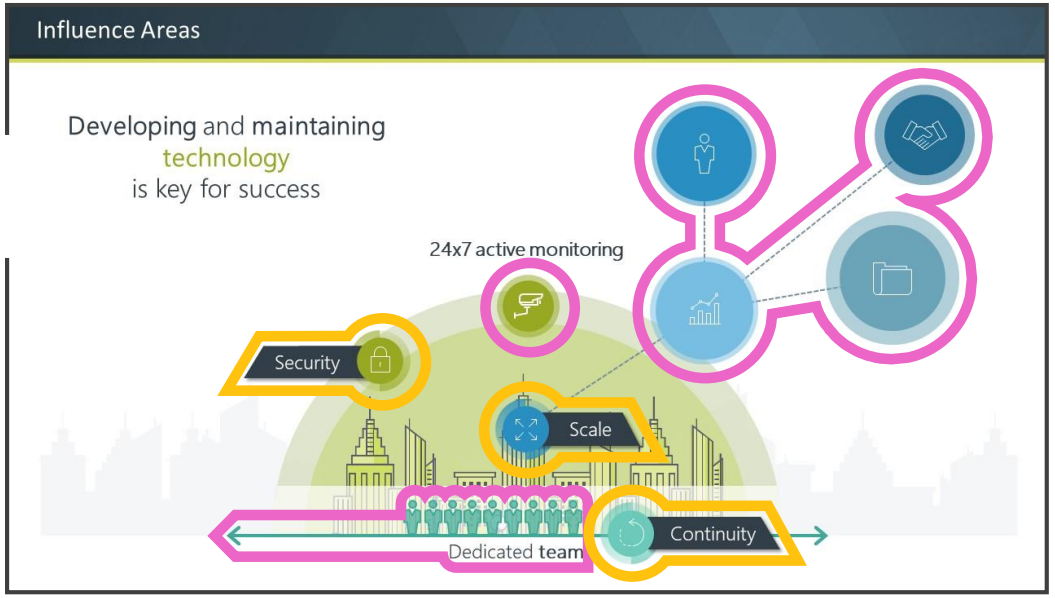
Interactive content with trigger animations

Create interactive presentations with triggers! Develop slides where you choose what content to share with each audience, giving you a responsive PowerPoint and a great deal of flexibility. Create interactive content like short quizzes, using them for maximum effect.



View video tutorial

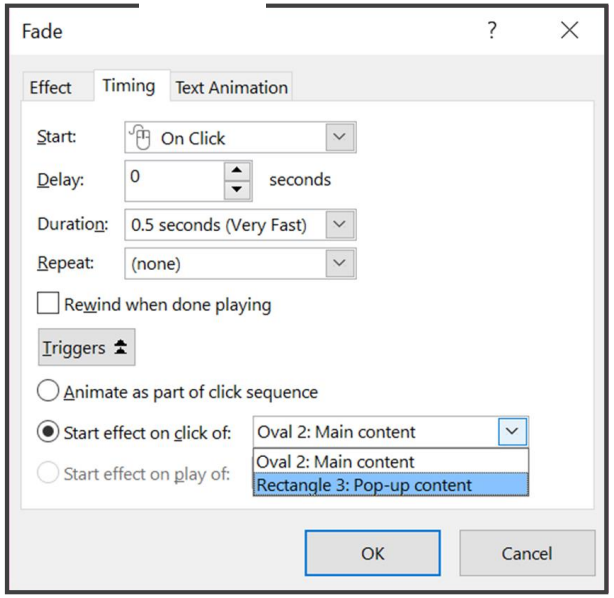
Triggers cause animations to start when you click an object on the slide. Use triggers to reveal and hide additional information, click to change colour to highlight something, or play media.



Add an **Entrance animation** to additional information.

Double click animation event, select **Timing,** then **Triggers**, and choose which object to act as the **clickable button.**

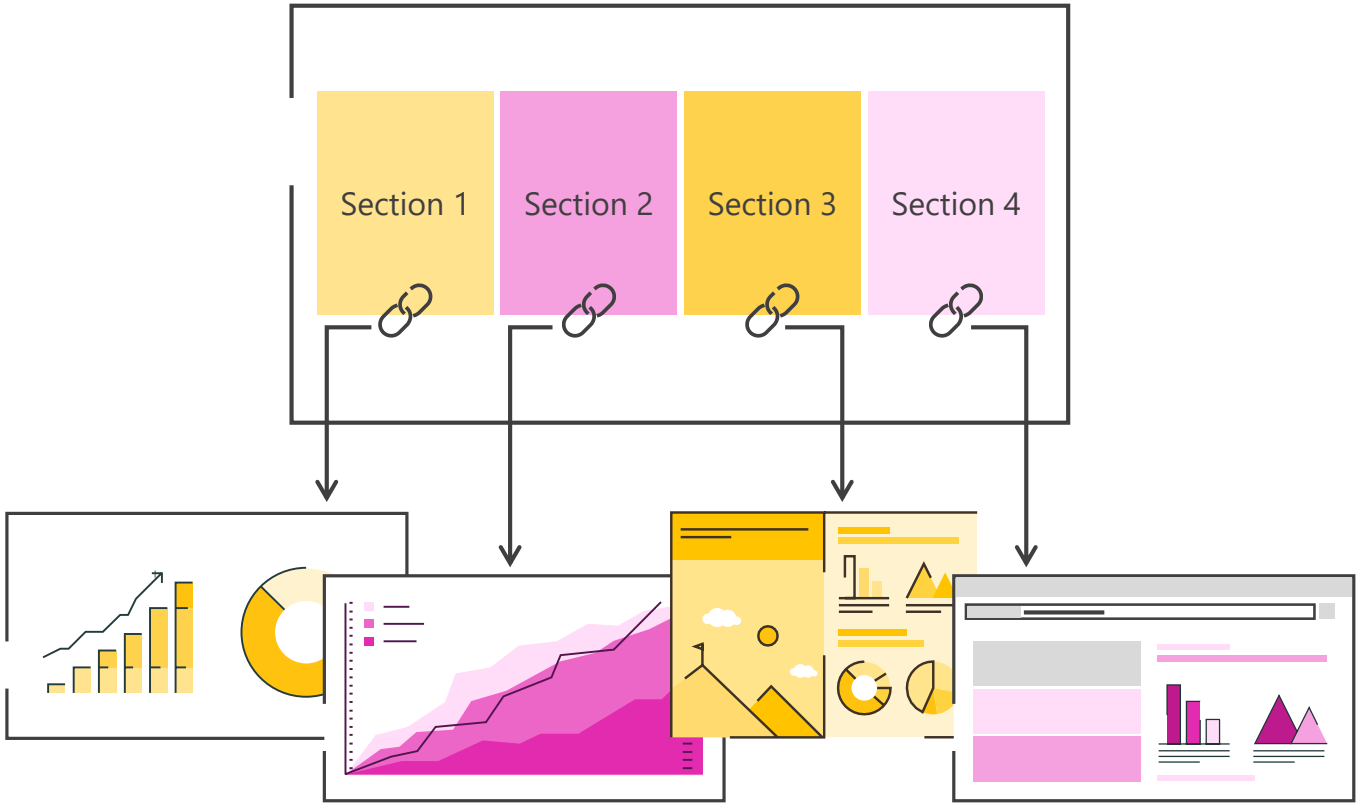
Using both an entrance and an exit animation means you can turn the pop-up on and off.



Flexible navigation using hyperlinks

Create flexible navigation within your PowerPoint presentation using hyperlinks to move around the deck seamlessly and effortlessly with clickable menus. It makes for a more interactive presentation and discussion with your audience and it's really easy.

View video tutorial



- Right click on an object (not a group) and choose **link**.
- Hyperlink any object to travel to a slide, webpage or document.
- Hyperlink boxes on menu slides to jump to different chapters.
- Hyperlink invisible boxes over multiple objects or groups.
- Hyperlink logos to return to menu.
