What's the point? Attendance patterns, as accounted for in the history of the High School Class of 1982 (the HS&B/So), presented paradoxes. As a dichotomous variable in the original *Tool Box*, multi-institutional attendance evidenced no association with bachelor's degree attainment; classic community college transfer bore strong and positive fruit; but the more general phenomenon of attending more than one institution and not returning to the first institution of enrollment evidenced a strong negative relationship to degree completion. These paradoxes are unwound in table 24, the logistic account of the associations between the increasingly complex postsecondary attendance patterns of the 1990s and degree completion.

As befits the topic of attendance patterns, the variables considered and admitted to the Step 5 logistic model are those of time and place:

Ever part-time:	flagging those students who, at some time in their undergraduate careers, enrolled part-time in an academic term other than a summer term;
Summer:	number of credits earned during summer terms in three bands: none, 1–4, and more than 4;
Classic transfer:	community college to four-year after earning more than 10 credits from the community college;
Four-to-four:	four-year college to four-year college transfer; and
Multiple schools:	marking students who attended more than one institution, whether they formally transferred or not.

Actually, one major time-related attendance pattern variable is purposefully left out of the equation, continuous enrollment—or NOSTOP, as it is abbreviated. NOSTOP was one of the most powerful of the postsecondary history variables in the original *Tool Box*. Given the length of the grade-cohort postsecondary histories in the longitudinal studies,[43] a student was allowed a one-semester (or its equivalent, and exclusive of summer terms) stop-out period and still considered continuously enrolled. When this variable is entered into the logistic model, its positive value and extraordinary statistical significance do not permit us to ascertain fully how

[43]Up to 12 years for the High School Class of 1972 (NLS-72), 11 years for the High School Class of 1982 (HS&B/So), and 8.5 years for the High School Class of 1992 (NELS:88/2000).

Table 24. Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time: Postsecondary attendance patterns

Variable	Parameter estimate	Adjusted standard error	*t*	*p*	Delta-p
Intercept	-4.6208	0.7114	3.68	0.001

the other variables in the model are interacting. Its strength deflates the associative contribution of other factors in student performance that might better illuminate the dynamics of degree completion. Hence, in *The Toolbox Revisited*, we set aside NOSTOP until the last possible moment, the final Step 7.

All five attendance pattern variables introduced in table 24 break the barriers of significance at this stage of model-building:

- Ever part-time: Whether the student was ever part-time, a decidedly negative influence on degree completion. The Delta-p statistic tells us that part-time status reduces the probability of completion by over 35 percent. While previous research has documented the extent to which part-time enrollment pulls students off the "persistence track" (Carroll 1989), the 35 percent reduction in probability seems high given the fact that nearly half of the NELS:88/2000 postsecondary students were part-time at some time. Students are inconsistent in their understanding of what part-time means, and under a more generous definition of the concept, the reduction in probability dropped to 30 percent—still a puzzlingly high number (see definition of PARTTIME in the Glossary).

- Summer-term credits: The more, the better. That is, each step up the short ladder of summer-term credits increases the probability of completion by 14.4 percent.

- Classic community college transfer: The significance of transfer is solid at $p < .05$, and the Delta-p says that the probability of completion for a transfer student increases by 21 percent. At one point in the construction of this variable for the NELS:88/2000 cohort, a flag was added to indicate whether the student's first enrollment at the four-year college occurred within four years of entry to the community college. This attempted refinement of a time-sensitive variable did not change its position in the Step 5 logistic model. Given the fact that many students who ultimately transfer move back and forth between community colleges and four-year institutions, it is very difficult to determine the precise moment of transfer, i.e., the season on the academic clock at which both institutions recognize a permanent change in status for the student. A flag for first date of attendance at the four-year school does not help.

- Four-year to four-year transfer: This variable is not as strong as community college transfer. Its statistical significance is marginal at $p < .10$. The Delta-p says that those who started in a four-year college and transferred to another four-year college increased the probability of earning a bachelor's degree by 15 percent. Some 18.5 percent (s.e. = 0.86) of those who started in four-year colleges transferred to another four-year college. In comparing those who transferred to those who didn't, one could say only that the more selective the first institution attended, the less likely the student would transfer.[44]

[44]Only 5.4 percent (s.e. = 1.54) of NELS students who started in highly selective four-year colleges transferred to another four-year college, versus 15.7 percent (s.e. = 1.71) for those who began in selective institutions and 20.0 percent (s.e. = 0.99) for those who started in nonselective four-year schools.

- Multi-institutional attendance: In the steps of the logistic model of the original *Tool Box*[45] in which it appeared, the parameter estimates for this variable were -0.009, 0.015, and -0.077, and with odds ratios ranging from 0.93 to 1.02. All these data are basically flat and inconsequential. The situation in *The Toolbox Revisited* is different. In light of the two transfer variables and the ostensive intersection of multi-institutional attendance with transfer, what does this variable say by coming out of a logistic model with a Delta-p indicating that attendance at more than one school reduces the probability of earning a bachelor's degree by about 16.5 percent? While further probing of the issue is advised, it appears that the message of the three variables (community college transfer, four-year to four-year transfer, and multi-institutional attendance) is that formal transfer is more effective than broader patterns of multi-institutional attendance, including simultaneous enrollment and "swirling." This common sense encourages institutions to track and guide apparent nomads toward formal transfer.

Of the other statistically significant variables in this step, even though Academic Resources and socioeconomic status quintile are receding in time, they are not so receding in strength, and are very much with the explanation of degree completion. In this new configuration, no delay of entry to postsecondary education and first-year grades are actually stronger than they were in Step 4 in their positive parameter estimates and Delta-p statistics. The negative consequences of earning fewer than 20 credits in the first calendar year following initial enrollment is also among the continuing statistically significant variables, though with a lower parameter estimate and Delta-p statistic than observed in tables 15 (first-year performance logistic) and 16 (financing logistic). What counts continues to count.

And what counts less but remains statistically acceptable for presentation includes: (a) the set of basic demographic variables that has been in the logistic narrative from the beginning, (b) education expectations (which are proving far weaker for the High School Class of 1992 than they were for the High School Class of 1982), and (c) two curricular features of the first year of postsecondary attendance (remedial course work and credits in college-level mathematics) that are about to be reconstructed in Step 6, when we extend the temporal scope of curricular experience to a student's entire undergraduate career.

Step 6: Extended Postsecondary Performance

Both the attendance pattern variables and those covered in this step (and the next) are distinguished from first-year performance considerations (Step 3) by the temporal reach of the observed behaviors. All the variables from Step 5 are carried forward. We then ask what additional key academic measures span the full range of a student's undergraduate history—from entrance through the first calendar year of attendance, and beyond.

As previously noted, consideration of continuous enrollment has been set aside for the last step in the logistic model sequence. Of other extended performance variables, what was called the "DWI Index" in the original *Tool Box* and is described more prosaically here as the ratio of courses from which the student withdrew or repeated to all courses for which the student

[45] Adelman (1999), table 39, pp. 80-81.

enrolled, also is set aside for the last step, as it is another case of a very strong variable that would overwhelm other extended performance measures that the reader should see play out.

The block of variables entered for the first time in Step 6 includes two reconstructions of curriculum-related factors originally presented within the confines of the first calendar year of attendance: type and extent of remedial problems (replacing first-year remediation), and cumulative credits in college-level mathematics (replacing first-year credits). "Remedial Problem" (see page 34 and table 8 above and description in the Glossary, p. 190) was not admitted to the model, while cumulative mathematics credits was easily admitted.

The variable marking the *trend* in cumulative student grade point averages at three points in time is an improvement over its predecessor in the original *Tool Box* (which offered only two points of reference). Event-history analysts would no doubt want to see more points than three, but more points than three would result in the loss of more students than the 22 percent already lost by insisting on three (due principally to cases in which the true date of first attendance could not be determined).

Table 25 offers a descriptive account of the three trend populations (rising, flat, and declining) in terms of average cumulative GPAs at each measurement point, the average elapsed undergraduate time period (in years) that is covered by those three markers, and the proportion of each group that earned a bachelor's degree. The purpose of presenting table 25 is to demonstrate that the permutations of relationships between GPAs at the three moments of measurement work, and the results evidence *prima facie* sense. Students with rising GPAs are more likely to earn bachelor's degrees than those in the other two groups, and students with falling GPAs seem more likely to spend more time as undergraduates (though the differences here are not great). The reader will also note that for the plurality of students, grades were flat over an average undergraduate stay of roughly four and three-quarter calendar years.

Table 25. Three trends in postsecondary grade point average (GPA) of 1992 12th-graders who attended a four-year college at any time through December 2000 and offered complete postsecondary records, by GPA at three points in time, average undergraduate time, and percentage earning bachelor's degree

	Average GPA					
GPA trend	First calendar year	First two calendar years	At end of undergraduate career	Average elapsed undergrad time	Percentage earning bachelor's degree	**Percentage of all in group**
Rising	2.43 (0.30)	2.64 (0.28)	2.93 (0.18)	4.76 (0.57)	73.5 (1.80)	**37.0 (1.09)**
Flat	2.72 (0.25)	2.63 (0.27)	2.73 (0.26)	4.79 (0.59)	65.5 (1.63)	**43.9 (1.10)**
Falling	3.09 (0.29)	2.90 (0.29)	2.70 (0.30)	4.92 (0.81)	63.8 (2.38)	**19.1 (0.89)**

NOTES: Standard errors are in parentheses. Column for percent of all in group may not add to 100.0 percent due to rounding. Weighted Ns: rising GPA = 415k; flat GPA = 486k; falling GPA = 215k.

Changing majors: Not a rare phenomenon

St. John et al. (2004) complained that research on persistence pays inadequate attention to college major. Agreed. There are a number of problems with the extant research when major is an issue, not the least of which is the definition of "persistence" as within-year, i.e., fall to spring, and no attention to *change*-of-major. Stoecker, Pascarella and Wolfle (1988) paid considerable heed to major field, found some race-by-field interactions in a structural equation model, and did so within the context of a nine-year longitudinal study with degree completion as the dependent variable (a better framework than that used by others). But they faced problems of tracking change of major, moment of decision on major, the problem of students who drop out without a major, and the exclusion of community college transfers.

In response to these difficulties, the Step 6 extended postsecondary performance model tried out a variable that marks change of major. This variable was not accepted into the model, principally as a by-product of overlapping characteristics with the community college transfer variable, as virtually all community college transfers "change major" from general studies to a specific field on entrance to a four-year college (see Glossary, p. 191). But it is worth noting that 50 percent (s.e. = 1.26) of NELS:88/2000 bachelor's degree recipients changed majors at least once, and that this estimate comes very close to Simpson's (1987) estimate of 48 percent for a 1976–84 cohort. The 50 percent mark thus appears to be a strong reference point.

All the elements are now in place for the stage of analysis that examines student histories through the end of their undergraduate careers (with the exception of continuous enrollment and the ratio of withdrawals and repeats to all courses). The logistic for Step 6 is presented in table 26. There are three major observations:

> 1) Race/ethnicity, never statistically significant in steps 1 through 5, does not even qualify for entry under extended postsecondary performance. Performance variables overwhelm demography. At this key inflection point in the analysis of degree completion, it appears race/ethnicity doesn't matter (Light and Strayer 2002), though it may be operating as an indirect effect through other variables. But to test what happens in a different way, the Step 6 logistic model was run defining "minority" separately for each of the four major race/ethnicity groups. This test was run at this point in the logistic narrative because Step 7 introduces two very powerful variables that would bury race/ethnicity indicators. The model itself emerged significant for white students, but not for African-American, Latino, or Asian students. For white students, all the significant variables in table 26 were the same except for four-year to four-year transfer, which dropped below the threshold of significance. For Latino students, the only statistically significant variable within a nonsignificant model (t = 1.37 with 10 degrees of freedom) was whether the student had ever been part-time. For African-American students, the only statistically significant variables within a nonsignificant model (t =1.70 with 13 degrees of freedom) were summer-term credits and whether the student had ever enrolled part-time. For Asian students, nothing was significant within a nonsignificant model (t = 0.34 with 13 degrees of freedom).

SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

2) The new cumulative college-level math credits variable proves its worth, with a Delta-p statistic that says for every move up the credit-range the probability of earning a bachelor's degree increases by 11.8 percent, putting it in the same range of influence as summer-term credits and trend in grades.

3) When trend in grades is added to the variable block, the influence of first-year grades increases, in part because, by definition, a rising GPA trend requires a lower starting point. In fact, the first-year GPA quintile factor is twice as strong, measured in Delta-p, than the trend.

We also note variables carried forward and remaining statistically significant in the model:

- As predicted, Academic Resources continues to lose some of its power as students move further away in time from high school performance. There are too many intervening experiences. In Step 1, the Delta-p said that for each rung up the quintile Academic Resources scale, the probability of earning a bachelor's degree increased by nearly 15 percent (see table 12 above). At this point, that increase in probability is 6.6 percent. Tested separately (see Appendix J), the tolerance collinearity statistic for Academic Resources dipped close to a 0.50 mark that was set for a caution light. While still acceptable, the tolerance statistic indicates that, at this point in a stepwise logistic with 17 other variables, a Venn diagram would show the circle for Academic Resources overlapping (but not eclipsing) many of the other variables in the model.

- Socioeconomic status quintile continues to evidence some explanatory power, and with a Delta-p that basically doesn't change from model to model. In this model, moving up each step of the SES quintile ladder increases the probability of earning a bachelor's degree by 6.5 percent. SES would assume a more significant dynamic, as Cabrera, Burkum, and LaNasa (2005) have demonstrated with the HS&B/So cohort, if one entered the entire logistic narrative by SES quintile, and the elaboration of that dynamic will be left to future research.

- The echoes of first-year credit generation are still noteworthy. The Delta-p says that dropping below 20 credits will decrease the probability of bachelor's degree attainment by 22.4 percent.

- Whether the student was ever part-time remains a very strong negative, with a Delta-p unchanged from its first appearance in the attendance pattern model.

- Earning credits during summer terms is still good advice, though each step of that variable now adds 11.2 percent to the probability of earning a bachelor's degree, as opposed to 14.4 percent when it was first introduced under attendance patterns.

- Both the classic community college transfer variable and the four-year-to-four-year transfer variable stay in the model with positive contributions to the

probability of degree completion of 18 percent and 15 percent respectively, even as the multi-institutional variable strengthens with a negative parameter estimate and a restraining influence of 22 percent on the probability of degree completion. This tension continues to challenge analysis.

The only other variable carried forward, but losing statistical significance is that indicating no delay of entry. No delay, which has bounced above and below the line of statistical significance, now drops below.

Lastly, what has not counted in previous steps of the model still does not count: education anticipations, selectivity of first institution, first year remediation, gender, and parenthood.

Three major themes emerge in this penultimate step of logistic analysis:

- The combination of the strength of Academic Resources (composite high school performance, dominated by academic curriculum intensity) and cumulative college-level math credits underscores the power of curricular momentum on both sides of the matriculation line.

- A group of attendance and performance factors, including part-time status at some point, low credit momentum coming out of the first calendar year of enrollment, and multi-institutional attendance apparently colored by "swirling" and not formal transfer, are strong restraints on academic momentum.

- Validating the event history critique of the original *Tool Box* offered by DesJardins, McCall, Ahlburg, and Moye (2002), two measures of GPA—first-year and trend—reflecting the quality of student effort, are very positive contributors to degree completion. The stronger position of the class rank/GPA quintile variable within Academic Resources reinforces this message. Grades count; and yes, there is a competitive message here, since our GPA scales and quintile breaks are relative, not absolute.

Step 7: Final Factors

The very last step in the logistic narrative takes all 17 variables from the extended postsecondary performance model of table 26, and adds the two strongest variables from the original *Tool Box* analysis. One of these, a dichotomous variable for continuous enrollment called NOSTOP, is a staple of analyses of postsecondary careers (e.g., Carroll 1989; Astin 1993; Horn 1998; Berkner, He, and Cataldi 2002).

The second of these notable variables is not such a staple of analysis. It is the ratio of courses from which the student withdrew *without penalty* and those the student repeated to all courses in which the student enrolled. This is a rare topic in the higher education literature, and was last

seen in the major journals in Adams and Becker (1990), though the number of course withdrawals appears on the check list of elements in analyses of time-to-degree (Knight 2002, 2004b). The ratio counts course attempts, not credits. Withdrawals without penalty are not the same as courses "dropped" within set periods most colleges and community colleges mark for "drop-and-add," and dropped courses are not included in the ratio. As for no-credit repeats: Less than 4 percent of respondents to the 2002 survey of grading practices conducted by the American Association of Collegiate Registrars and Admissions Officers indicated their institutions did *not* allow repeats; fully 55 percent indicated that a student could repeat *any* course for a better grade; and 55 percent indicated that students could repeat a course as often as they liked (AACRAO 2002). These proportions suggest a very lenient environment. Nothing here involves penalty grades. These are all cases of noncredit grades. The variable WRPT Ratio is dichotomous: On one side of the dividing line are students who withdrew from or repeated 20 percent or more of all courses for which they enrolled.

Table 27 presents the final step of the logistic model for *The Toolbox Revisited*. The power of the last two variables entered is instantly obvious:

- Withdrawing from or repeating 20 percent or more of courses decreases the probability of earning a bachelor's degree by nearly half!!!

- Remaining continuously enrolled increases the probability of degree completion by 43.4 percent.

As a consequence of the introduction of NOSTOP and the WRPT Ratio, remediation in the first calendar year, a weakening variable from the point of its introduction, is forced out of the model. Its attempted replacement, the more elaborate description of type and intensity of undergraduate remedial problems (REMPROB), was tried out again, and again did not qualify to enter the model. As noted previously, remediation appears to be a neutral factor in this account.

The marker for earning less than 20 credits in the first year of attendance, previously a strong contributor to the model, is turned on its head in the final step, and drops below the threshold of significance. Why? Principally because, as table 28 demonstrates, nearly 60 percent of those who wound up withdrawing from or repeating 20 percent or more of the courses for which they registered were *already withdrawing from and repeating 20 percent or more of their courses in the first year*. When one withdraws without penalty, one earns zero credits. When one repeats a course, one earns credits only once (assuming one passes, of course). What the relationships in table 28 strongly suggest is that low credit production in the first year is a logical consequence of withdrawal and repeat behavior. If we allow negative momentum to start early, the consequences will snowball. The phenomenon argues for more intense academic advising and monitoring, more accurate placement, and (in some cases) more sensible credit loads in the first calendar year of enrollment.

Table 27. Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time: Final factors, with complete academic history

Lastly, the variable marking swirling multi-institutional attendance continues to be negative —though marginally significant with $p <. 10$—in table 27 at the same time that both community college transfer and four-year-to-four-year transfer variables fall out of significance altogether. In this final accounting, then, all three type of multi-institutional accounts fade in associative power in the face of behaviors that transcend institutional effects: continuous enrollment and academic performance reflected in grades.

Table 28. To what extent does the final ratio of undergraduate course withdrawal and no-credit repeat grades reflect the ratio and volume of withdrawal and no-credit repeat grades in the first calendar year of enrollment? Answers from the history of 1992 12th-graders who attended a four-year college at any time

Final ratio of withdrawals and no-credit repeats to all courses attempted	Percent for whom first-year withdrawal and repeat ratio was 20 percent or higher	Number of withdrawals and no-credit repeats in the first year		
		None	One	Two or more
Less than 20 percent	5.4 (0.60)	66.7 (1.15)	22.7 (1.06)	10.6 (0.71)
20 percent or higher	57.5 (3.93)	13.7 (2.05)	20.3 (3.17)	66.0 (3.62)

NOTES: Standard errors are in parentheses. Weighted N for those with a ratio of no-penalty withdrawals and no-credit repeats to all courses attempted of 20 percent or higher: 106k; of those with a ratio below 20 percent: 1.08M.

Summing Up the Logistic Narrative

Parts III and IV of *The Toolbox Revisited* have walked the reader, sometimes painstakingly, through the consideration of independent variables for each of the seven roughly chronological steps from high school background to extended postsecondary performance. At the end of each step, a logistic account of what was associated with completion of bachelor's degrees for 1992 12th-graders who attended a four-year college at any time was offered. The logistic account applied to students' histories as of that particular moment only. Step 7, of course, offered the concluding account.

But to judge the full sweep of these seven steps, we ought to see them together in the same table. Table 29 allows summative statements about the changing strength of independent variables, the continuity of what counts, and required goodness-of-fit statistics for the whole model. Let's start with the goodness-of-fit statistics because they validate the model. The reader can find them at the bottom of the second page of the table. Everything that is supposed to happen in a stepwise logistic model (Cabrera 1994; Menard 1995) happens. The G^2 (also called the "maximum likelihood function") falls with each step; G^2/df (degrees of freedom in this calculation is the product of the unweighted number of students in the model minus the number of variables

in the model) also falls with each step, though perhaps too much in Step 7. The chi square statistic is a little more erratic, but rises as it is supposed to. So do the pseudo R^2 and the percent of concordant probabilities predicted at each step. These results are a relief to any analyst .

Table 29 includes all the variables that were entered at any of the seven steps of the logistic account, even if they were not carried forward to subsequent steps because they did not meet the *t* statistic threshold criterion that was set at 0.765. In this manner, we can see where these variables were introduced and where they fell out of the model (the first "X" in the table marks the spot). Race/ethnicity is the most noted example because it was present from the beginning, and even though it was never statistically significant, it qualified to be retained until extended postsecondary performance variables were introduced. In Step 7—and because race/ethnicity is a sensitive factor in public discourse on education—another approach was tried out whereby each of the four major race/ethnicity groups was treated as an independent variable in the model. Only the Asian student variable qualified for entry, but wound up with a *t* statistic less than 0.50.

Another "casualty"—though for a very different reason—is the variable describing credits in college-level mathematics in the first calendar year. This variable was purposefully replaced in Step 6 (extended postsecondary performance) by cumulative credits in college-level mathematics across the student's entire undergraduate career because it was more appropriate to the temporal framework. First-year college-level math was never significant, but its more expansive replacement was, as might be expected from comparative participation rates in college-level mathematics by the end of the *second* calendar year of enrollment (table 21).

Another virtue of the presentation in table 29 is that because all statistically significant variables are highlighted in bold, the reader can swiftly identify what was consistently meaningful among the potential associations with bachelor's degree completion for this group of students. From the moment of their introduction, the following factors met the criteria:

- Academic Resources quintile
- Socioeconomic status quintile
- Low (less than 20) credits in the first calendar year of attendance
- First calendar year GPA
- Summer-term credits
- Ever part-time
- Trend in GPA
- Cumulative "career" credits in college-level mathematics

And no delay of entry to postsecondary education from high school evidenced positive and significant association with degree completion in half the stages of the logistic narrative in which it was in play.

When one adds the withdrawal/repeat ratio and continuous enrollment (which appear only in the last step of model-building), some rough themes emerge. Of the ten independent variables, three involve **uses of time** (continuous enrollment, ever part-time, summer-term credits); and four clearly reflect different aspects of **academic performance** (high school Academic Resources, first-year GPA, trend in grades, low-credits in the first year, and the withdrawal/repeat ratio).

Under the temporal theme, no delay of entry floats in and out of statistical significance. Some might say, e.g., of no delay of entry, that the fact a variable is significant in one step of the logistic and not in another "does not always mean that different effects are operating" (Anaya 1999, p. 507). One of the reasons that the logistic narrative provides collinearity statistics (see Appendix J) is to reassure the reader that, for whatever reason a variable ducks in and out of significance, it is not because it is excessively tangled up with other variables. The "tolerance" collinearity statistic for no delay of entry is consistently in the high comfort zone.

Summary of Parts III and IV: Investment Behaviors

When we look across the series of ingredients that rise to the top of strength of association with degree completion, we can interpret them in terms of what Noxel and Katunich (1998) called an "investment model," though this author prefers "investment behaviors," a microscale version of human capital. Once the modest consequences of socioeconomic status are accounted for, each step offers students a set of decisions that require the commitment of time and effort likely to yield a future benefit. These decisions move students, sometimes smoothly and sometimes less so, toward the degree. The choices made, beginning with high school curriculum (from the available curriculum—which is an opportunity-to-learn issue) and quality of effort in high school (reflected in class rank/GPA), allow subsequent leverage. Entering a postsecondary institution directly from high school, earning 20 or more credits in the first calendar year of enrollment, and performing well enough in that first calendar year to fall in the top 40 percent of a GPA distribution build on previous investment, and are all signs of commitment. Subsequent choices that may not be reflected in a bounded period of time, such as excessive course withdrawals, prove to be poor decisions with negative returns, breaking accumulated momentum. Other configurations of choice, including summer-term credit generation, meeting the challenge of college-level mathematics, effort that yields a rising GPA, and most of all, remaining continuously enrolled, all reflect continuing leverage of attainment. This is what academic momentum is all about.

Tinto's (1987) approach is just as direct: Students have responsibilities, and are expected to invest time on behalf of their own learning. Yes, in his words, students have the right "to refuse education" (p. 135), but since the primary commerce of the institution is education, those who refuse should not be surprised if (in his very delicate phrasing) the institution exercises its "right . . . to be selective in its judgments as to who should be further educated" (p. 135). One begins to see why student choice (and the responsibility inherent in student choice) emerges not only as a dominant theme of *The Toolbox Revisited* as well, but as the principal challenge to academic advising and counseling from secondary through postsecondary education.

One grants that a great deal more is going on in the lives of traditional-age students at the same time. They are not bloodless. The literature on persistence has included not only a mass of psychological and social considerations (Harmston 2004; Hu and St. John 2001; Kahn and Nauta 2001; Robbins et al. 2004), but also basic aspects of maturation such as physical fitness (Zhang and Richards 1998), nutrition, roommate conflicts, dating problems, time management (Purcell and Clark 2002), and personality-environment congruences and dissonances (Feldman, Smart, and Ethington 2004). Studies such as Stage's investigation of "motivational orientation" (1989) are also valuable in that they override stock demographic explanations and identify "subsets of college students who might react similarly to college experiences" and, hence, assist advisers and student service personnel. Our data sources do not include these factors.

What the Literature Calls "Institutional Effects"

A major strand of the literature on postsecondary retention derives from Tinto's (1987) constructs of academic and social integration, constructs that contributed to the emergence of the National Survey of Student Engagement (Kuh 2001) and its use by hundreds of institutions in assessing the effects of environments on student behaviors. The reason Tinto's work generated such a continuing elaboration and response is a combination of its elegance and *prima facie* common sense. At whatever age they start out, entering postsecondary students are not empty vessels; they come with demographic characteristics and high school experiences (and, if there is a gap of years between high school graduation and postsecondary entry, work experiences and family formation as well) that condition and shade where and how they enter the postsecondary system. Once at an institution, these background characteristics interact with the academic processes and social environment of that institution to yield varying degrees of determination to persist and complete credentials. Institutional culture, including habits of faculty interactions with students outside of the formal classroom and opportunities for a variety of peer group interactions, plays a significant role in Tinto's models of academic and social integration.

It is not surprising that the mass of studies drawing on Tinto's work are institution-specific or use institutional characteristics as independent variables. To attain enough depth on all these features of student lives so that direct and indirect influences can be mapped through path analysis requires extraordinary probing, which is best carried out in institutional contexts where adequate samples can be assembled. Even if we employed hierarchical linear models to illuminate the relationships between nested characteristics of individuals within institutions and outcomes such as GPA, we would need much larger samples of students within each institution than the NELS:88/2000 provides.[46]

---

[46]In a case of a continuous dependent variable for student engagement, and sets of independent variables describing both student and institutional characteristics (half of them continuous), Porter (2005) demonstrates the statistical superiority of multilevel analysis versus Ordinary Least Squares analysis. There are three significant differences between Porter's illustration and the story line of *The Toolbox Revisited* : (1) the dependent variable (bachelor's degree attainment) and most of the independent variables in this data essay are dichotomous, hence, our method is logistic, not linear, (2) Porter's model assumes that students attend only one institution, whereas more than half the students in this analysis attended two or more, and (3) while multilevel analyses can create models for institutions "even for schools with few student observations" (Porter 2005, p. 110), of the 3,258 institutions in the NELS:88/2000 postsecondary transcript files, 1,003 had only one student in the sample. An institution-level model with a population of one is out-of-scope.

With the student as the unit of analysis, and 25 percent of the students in the universe we are examining attending *more than two* institutions as undergraduates, the calculation of institutional effects becomes problematic. For the students who attended only one four-year college, the weighting of institutional characteristics such as those Titus (2004) admits into his analysis of three-year persistence at the same institution (e.g., control, size, selectivity, degree of residentiality, and percent female, etc.) are fairly easy to plot. But for those who attended more than one institution, a weighting scheme for the influence of each institutional characteristic based on the proportion of undergraduate time each student spent in different institutions would be necessary. For a student who earned 26 credits at a community college, 30 credits at a four-year baccalaureate residential college, and 75 credits at an urban university, the ratios would dilute the very meaning—let alone effect—of any single institutional characteristic. This example is not a fantasy. Consider, for example, the credit accumulation at each school attended by two sets of students from the NELS:88/2000 who attended three institutions as undergraduates (fig. 2).

Figure 2. Examples of credits earned at each institution attended by 1992 12th-graders who earned standard high school diplomas by December 1996, attended a four-year college at some time, earned a bachelor's degree, and attended three institutions as undergraduates, by type of transfer

	Credits earned at each school attended		
Student cases	School #1	School #2	School #3
Community college transfers			
#1	66 (community coll)	34 (four-year)	62 (four-year)
#2	32 (community coll)	28 (community coll)	90 (four-year)
#3	41 (community coll)	18 (four-year)	64 (four-year)
Four-year-to-four-year transfers[a]			
#1	24	36	92
#2	36	21	88
#3	25	30	79

[a] All three schools attended by these three students were four-year colleges.
SOURCE: National Center for Education Statistics. NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

How does one evaluate indirect effects of institutional characteristics and experiences (class size, contact with faculty, peer group interactions, etc.) for these students? Does one weight each potential effect by the percentage of credits earned at each school in relation to all credits earned? Can one somehow arrive at a consolidated index for each effect across schools? How would one compare these indices to those for students who attended only two institutions? To those for students who attended only one? All six of the students in figure 2 above earned bachelor's degrees. For students who did *not* earn bachelor's degrees but who attended three institutions,

what is the minimum threshold of credits one would set at each institution attended before trying to determine the range of institutional characteristics and student experiences that might have some degree of association with the dependent variable? Across all patterns of inter-institutional "traffic" (Astin and Astin 1993), is there a common effects metric that encompasses mere excursions (incidental attendance at second or third institutions), true migration (formal transfer), and the nomadic behavior described as "swirling"? The author tried to develop a descriptive framework of excursion, migration, fragmentation, and discovery for this task, but with less than satisfactory results (Adelman 2004b). Certainly, there are more sophisticated models that can address the rhetorical questions above, but they risk both neglect or devaluation of life-changing experiences at institutions where a student spent comparatively little time and earned few credits, and false identification of effects that can be very fleeting.

Postsecondary student attendance patterns have rendered consolidated institutional-effects analyses moot. For that reason, these analyses are best carried out within the context of individual institutions (no matter where else the student goes to school). This study does not belittle the constructs of institutional effects and assessment efforts such as those of the National Survey of Student Engagement (NSSE) at all. For college and community college administrators, these assessments count a great deal in determining the kinds of environmental adjustments likely to intensify student involvement with institutional services as well as to heighten student satisfaction with instruction, even if the student is present for only 24 credits.

Even so, many of the variables of institutional effects analyses (and that includes high schools as well as colleges and community colleges) are sufficiently beyond the control of administrators so that the practical implications of whatever paths one delineates as productive are limited. Yes, high schools can change the structure of opportunity-to-learn, e.g., by not even offering arithmetic or watered-down pre-algebra and simultaneously conveying a clear message to students that they can meet the challenge of higher level math (Lee, Croninger, and Smith 1997). And the postsecondary level can follow suit, e.g., community colleges can refuse to teach arithmetic or basic algebra. Neither of these strategies is micromanagement, and, however some may wish otherwise, neither is likely to be implemented on a large scale. At the postsecondary level, the very conditions of control shift: An administrator cannot change the fact that the institution was not the student's first choice and that he or she is determined to transfer from the moment of first registration; there is no drug to prescribe for a student with severe homesickness; one cannot—and should not—prevent the student from changing majors for the second time; no college authority has any influence on the romantic life and angst of 20 year-olds that may affect their involvement with academic pursuits (Okun, Taub, and Witter 1986); administrators can't sand down every potentially hard edge of their schools. Furthermore, there is a natural capacity limit to truly meaningful contact with faculty outside the classroom. To use examples from the National Survey of Student Experience, how many faculty can deans deploy for student participation in faculty research projects or for students to work with faculty on committees and

student life programs?[47] The larger and/or less residential the institution, the less the opportunity for student-faculty interaction in other than casual or ritualistic activities (Hu and Kuh 2002).

To repeat: The NELS:88/2000 does not reach the details of student development or institution-specific student experiences accounted for in other research lines. The elaborate connections between student background characteristics, social and psychological predispositions, initial perceptions and responses to a particular postsecondary environment, strength of goal commitments, etc. in relation to not only the fact but also the pace of student progress toward a credential—all of which have been explored and documented by the touchstone giants of postsecondary student outcomes research (Astin, Pascarella and Terenzini, Cabrera, Tinto)—lie beyond the scope of national longitudinal studies. That is not an excuse for the "economic" reading, broadly construed, of academic momentum. We all know that the many investment decisions made by students along their paths through postsecondary education do not occur in social and psychological vacuums. But the archival data on which this study draws isolate moments in which student choice intersects the structures of opportunity offered by institutions whose first order of business—and first order reason for existing in our society and economy—is the generation, preservation, and distribution of knowledge. This is a story about taking advantage of that mission; it is not a story about growing up, although that happens along the way.

---

[47]Kuh et al. (2001) reported that less than 20 percent of seniors in 2000 indicated experiencing these modes of nonstandard faculty contact. By 2004, that proportion had not changed, while 58 percent of seniors indicated they had talked often or very often with faculty outside of class about their grades (a ritualistic interaction that shouldn't carry much weight in assessments of student/faculty contact). See www.nsse.iub.edu/~nsse/2004_annual_ report/html/responses _senior sfi.html. (Accessed 7/31/05).

Part V
Closing the Gap

One of the principal objectives of the *No Child Left Behind* legislation as it works its way through grades K–8 is to close the gaps in achievement between minority and majority students. When that objective is extended to high schools, as this essay underscores in Part III above, we have no adolescent left behind. And when extended to postsecondary schooling, as the logistic narrative has done, our objective is to leave no young adult behind, either. While race/ethnicity itself was not a significant variable in that narrative, the fact of an unhappy gap remains in degree completion—which means that there are residual echoes of experience by race/ethnicity that affect education outcomes. It is not the intention of this monograph to explore these echoes (there are far more sophisticated techniques and far more knowledgeable researchers than the author to engage in that task). But if we focus on the academic story line, we can at least draw some parameters of possibility for assisting minority students.

Two issues attendant on this observation are now addressed: our confidence in degree completion rates, and what might contribute to closing the gap between majority and minority populations in degree completion.

Bachelor's completion rates: Some remarkable agreements

The most prescient and eloquent statement of the problems attendant on our romance with graduation rates was offered a decade ago by Ronco (1996):

> Performance, even in relatively straightforward terms like graduation and retention, eludes our attempts to measure it. Students no longer march lockstep through four years of college to graduation. The educational model of the new millennium will likely be characterized more by lifelong learning, where students move among various kinds of higher education institutions, stopping in and out as their lifestyles and educational needs dictate. Enrollment patterns like these make indicators like four- or even six-year graduation rates for first-time, full-time freshmen largely irrelevant. Transfer students deprive both the sending and receiving institution of retention and graduation credit. (p. 1).

But accepting the object of policy affections for a moment, the most enduring context for the analyses of *The Toolbox Revisited* involves what its predecessor called the Dow Jones Industrial Average accountability measure of U.S. higher education: the proportion of entering undergraduates who earn a bachelor's degree. There are very few truly reliable national portraits of degree completion because there are very few data sources of convincing scope and magnitude. The task requires a longitudinal study with a tested sampling design and matching weights. The technology for a full census of completion does not yet exist.

Ewell (2004) has reminded us that a *student-based* indicator of completion leads to assessments of the benefits of higher education to the entire society and economy. An *institution-based* indicator does none of that, though there is no question that the institution is responsible for contributing to the student's discovery of intellect and path to attainment. While the student is obviously more important, institutions are partners.

There are three recent national accounts of bachelor's degree completion for students who started out in postsecondary education together that can demonstrate how these two indicators, student and institutional, play out.[48] Each account comes from a different data set:

1. The NELS:88/2000 that is the subject of *The Toolbox Revisited.* To repeat its major characteristics: The temporal term is a maximum of 8.5 years (1992–2000) from the month of entrance, no matter when that happens and at what enrollment intensity (full-time or part-time). This is a grade cohort, with all students roughly the same age.
2. A six-year longitudinal study, based on the Cooperative Institutional Research Project's (CIRP) data, that followed 1994 entering college freshmen to 2000 (Astin and Oseguera 2002). While dominated by traditional-age students, this cohort is not wholly homogenous in terms of age at entrance, but is confined to those who started out, full-time, at 262 four-year colleges, weighted to represent beginning full-time freshmen at all public and not-for-profit private four-year colleges (for-profit four-year colleges are not included).
3. Another 6-year longitudinal study, 1995/6 through 2001, conducted by NCES as a spin-off from the massive Congressionally-mandated National Postsecondary Student Aid Study. We have used this data set, the Beginning Postsecondary Students longitudinal study, previously. Beginning students of all ages and enrollment intensities (full-time, part-time, and mixed) are included.

Let us set these three data sets side-by-side, adjust the two NCES databases to match both each other and the CIRP database, and then assess how much they disagree with each other. We will confine both the NELS:88/2000 and the BPS 95/96–2001 to those who started out in four-year colleges, limit the dates of entry of the NELS:88/2000 cohort to the same year (1992) and, most importantly, put an upper bound on age at date of entry in the Beginning Postsecondary Students of 20. Table 30 offers these comparisons.

---

[48]There are other large longitudinal studies of degree completion, but their samples of institutions and students are not representative. For example, Saupe, Smith and Xin (1999) used the Consortium for Student Retention Data Exchange information from 174 public four-year colleges to track six-year (1989–96) institutional graduation rates. While these 174 institutions enrolled nearly half of entering four-year college students in 1989, they represent a class, not a universe. For another, but more dated example, Stoecker, Pascarella, and Wolfle (1988) used a 1980 CIRP follow-up to an initial 1971 sample of roughly 10,000 students who had attended only one four-year college in the interim. Some 487 college and universities were represented. Stocker, Pascarella, and Wolfle were interested in institutional effects, so their restriction of the universe to students who had attended only one school is justified, and their findings revealing. But that doesn't justify using the conclusions as a generalized model of degree completion—certainly not under contemporary conditions of student mobility. For state-level postsecondary longitudinal studies, only Florida has produced data sets comparable to the national accounts.

Given the conditions under which degree completion is judged, the conclusions of these three data sets do not differ that much from each other. We can say that roughly a third of traditional-age students who start in a four-year college will earn a bachelor's degree from the *same* school in the traditional four-year period, and that between 54 and 58 percent will earn the degree from the same school in which they began within six years of entry. When the option of earning a degree from a *different* four-year college than the one in which these students commenced study is included (in the NELS:88/2000 and BPS 95/96–2001), six-year degree completion rates for traditional-age students are in the 62–67 percent range. Only when the temporal boundaries are extended to 8.5 years in the NELS:88/2000 does degree attainment for those who started in four-year colleges approach 70 percent, and Florida state longitudinal studies show a similar rate (Johnson, Coles, and Thomas 2004).

Table 30. Bachelor's degree completion rates for students who began in four-year colleges according to three different national longitudinal studies of the 1990s

	Percent completing bachelor's degree		
Bachelor's degree completion modes	NELS:88/2000 1992–2000	Cooperative Institutional Research Project (CIRP) 1994–2000[a]	Beginning postsecondary students 1995–2001
Bachelor's from same school in 4 years	30.9 (1.14)	36.4	33.1 (1.3)
Bachelor's from a different school in 4 years	3.0 (0.30)	Not available	2.3 (0.3)
Bachelor's from same school in 6 years	52.9 (1.27)	57.6	53.7 (1.2)
Bachelor's from a different school in 6 years	11.3 (0.79)	Not available	8.1 (0.4)
Bachelor's from same school in 8.5 years	55.3 (1.24)	60.6[b]	Not available
Bachelor's from different school in 8.5 years	14.1 (0.84)	Not available	Not available
Total degree completion:	69.3 (1.16)	60.6[b]	61.8 (1.2)

[a] As reported in Astin and Oseguera (2002). Standard errors are not available.
[b] In Astin and Oseguera, this cumulative figure includes students who were still enrolled at their institution of first attendance at the end of six years.
NOTES: Standard errors for the NELS:88/2000 and BPS95/96–2001are in parentheses.
SOURCES: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement) and Beginning Postsecondary Students Longitudinal Study, 1995/96–2001, Data Analysis System (NCES 2003-173). Astin and Oseguera (2002).

Degree Completion: How High Can It Go?

If roughly seven out of ten traditional-age students who start in a four-year college—and roughly two out of three who ever attend a four-year college—graduate within eight and one-half years, how likely is it that the rate will improve, by how much, and among what groups? When looking back at the factors consistently contributing to bachelor's degree completion in table 29 and asking which are most subject to change by external parties with little to modest, but creative, effort, a few stand out, and encourage speculation. All depend on student response. In the words of Tinto's (1987) astute guidance:

> Though . . . institutions owe each admitted student an equal degree of attention, it does not follow that institutions should be held accountable for the equal education of all admitted students. To absolve . . . [students] of at least partial responsibility for their own education is to make a serious error. (p. 135)

Let's look at each of the more promising levers, and then explore what the configuration of change in behaviors and policy might suggest for upper boundaries of degree completion and the closing of the gap in completion among race/ethnicity groups.

1) **Less than 20 credits in the first calendar year of enrollment**: Approximately nine percent of those who entered four-year colleges at any time earned between 15 and 19 credits in their first calendar year, with African-Americans and Latinos overrepresented.[49] Within this group, only 35 percent (s.e. = 3.05) earned bachelor's degrees compared with 77.7 percent (s.e. = 0.99) of those who earned 20 or more credits. Fifteen to nineteen credits is close enough to 20 to be optimistic: If we know more about who students are and where they come from, colleges and community colleges can target dual enrollment efforts to yield at least six additive credits for these students, thus pushing them across the 20-credit line. But we do know something about these students, and our optimism must be tempered by the facts that 15.3 percent (s.e. = 2.49) of them were assigned to remedial reading in their first postsecondary year, an overlapping 34.5 percent (s.e. = 3.93) never reached Algebra 2 in high school, and only 27.9 percent (s.e. = 2.96) earned any college-level mathematics credits in that first year. For the residual group (about six percent of those who enrolled in a four-year colleges at any time), suburban high school students from the Pacific and Southwest Central census divisions[50] are overrepresented, and provide some geo-direction for dual-enrollment policy targeting.

---

[49]Some 7.4 percent (s.e. = 0.56) of white students earned between 15 and 19 credits in their first calendar year of attendance, compared with 11.1 (s.e.=1.86) of African-Americans and 18.5 percent (s.e. = 3.30) of Latinos.

[50]The Pacific census division includes California, Oregon, Washington, Alaska, and Hawaii; the Southwest Central encompasses Texas, Oklahoma, Arkansas, and Louisiana.

2) **Ratio of non-penalty withdrawals and no-credit repeat courses to all courses attempted**: For about 10 percent of the NELS:88/2000 cohort who attended a four-year college at any time, this ratio was 20 percent or higher. That is, this group of students withdrew from or repeated at least one out of every five courses in which they enrolled, behavior negatively associated with degree completion. Compared with white students, all minority groups are overrepresented.[51] What would happen if institutions limited the number of no-penalty withdrawals and no-credit repeats students were allowed to accumulate, converting these cases above a given threshold to penalty grades? This is a risky proposition and difficult to model because we do not always know why students withdraw from courses after the customary drop/add periods (Adams and Becker 1990). Students repeat courses to earn better or passing grades. In the case of remedial work, the repeat is required, and the list of courses with the highest ratios of withdrawal and repeat grades is dominated by remedial offerings (Adelman 2004a, table 6.6, p. 84). In other cases, repeats are a luxury. Since no-penalty course withdrawals and no-credit repeats increase time-to-degree measurably for those who earn degrees (Adelman 2004a, table 6.2b, p. 79; Knight 2004b; Noxel and Katunich 1998), and since these behaviors have a rippling effect by blocking other students from seats, often in high demand courses, it is in institutions' self-interest to limit the practice. Intensified advisory care to student credit loads (Szafran 2001) and more precise placement criteria should help.

A good example of the way this might work is provided by Eno, McLaughlin, Brozovsky, and Sheldon (1998), who predicted difficulty ratings for specific courses likely to be taken by entering freshmen in their institution on the basis of both overall high school GPA and, more importantly, grades in specific high school courses. The hypotheses for each student within each course were then set against the empirical record of students' actual performance in the college course at issue. The information assists students' advisers with indications of which courses a student might find particularly difficult. The likelihood of no-penalty withdrawals or no-credit repeat grades is attenuated by delaying students' engagement with those courses until they have gathered the requisite momentum elsewhere in the college curriculum.

3) **Use of summer terms**: As table 31 suggests, earning more than four credits during summer terms may have a considerable influence on the degree completion rates of African-American students in particular. That is, 78.2 percent (s.e. = 4.12) of those who started in four-year colleges and exceeded this threshold earned bachelor's degrees, compared with 21.2 percent (s.e. = 4.59) of those who did not earn summer-term credits at all. The difference was also significant for white students, but not to the same degree. Parallel comparisons for Latinos and Asians were not statistically significant.

---

[51]Some 8.3 percent (s.e.= 0.68) of white students were in the high ratio category, versus 12.2 percent (s.e. = 3.04) of Asian students, 12.3 percent (s.e. = 1.96) of African-American students, and 19.6 percent (s.e. = 3.56) of Latinos.

Table 31. Of 1992 12th-graders who started their postsecondary careers in four-year colleges, percentage who earned bachelor's degrees by December 2000, by number of credits earned in summer terms, by race/ethnicity

	Percentage earning bachelor's degrees by December 2000		
	Number of summer-term credits		
Race/ethnicity	None	1–4	More than 4
All	56.2 (1.99)	68.1 (2.78)	79.7 (1.29)
White	59.8 (2.22)	74.2 (2.58)	82.2 (1.19)
African-American	21.2 (4.59)	42.5 (10.3)	78.2 (4.12)
Latino	48.6 (7.14)	28.3 (7.15)	56.4 (6.21)
Asian	66.8 (10.3)	70.0 (13.0)	77.9 (7.08)

NOTES: Standard errors are in parentheses. Weighted N=1.14M.
SOURCE: National Center for Education Statistics: NELS:88/2000 postsecondary transcript files (NCES 2003-402 and Supplement).

Summer-term enrollment that results in more than four additive credits works for just about everybody (we saw that in the multivariate analyses). While it surprisingly does not shorten time-to-degree for those who earn degrees (see Appendix K), summer credits are associated with higher graduation rates for everyone except Latino students. It is thus in an institution's self-interest to encourage the use of summer-term work, either at the institution itself or at another school. Ways of approaching this goal shy of tuition discounting include moving some of the offerings of high demand courses from the traditional academic-year terms into the summer term, offering summative course work in the major in the summer term, and recruiting students for credit-bearing internships and cooperative education placements in the summer terms. Academic administrators in cooperation with strategic enrollment managers can be very creative.

4) **The high school curriculum component of Academic Resources:** One of the more dramatic illustrations of the potential influence of high school performance on bachelor's degree attainment in the original *Tool Box* isolated four major race/ethnicity groups, confined each to those who entered a four-year college directly from on-time high school graduation, and compared two estimates: the bachelor's degree attainment rate for everyone versus the bachelor's degree attainment rate for those who were in the top 40 percent on each of the three component measures of Academic Resources (curriculum, class rank/GPA, and senior year test score). Though undercut by the fact that, in multivariate analyses, race/ethnicity does not play much of a role in bachelor's degree completion, the cross-tabulation of these estimates suggested that the criterion-referenced curriculum variable had the potential to boost African-American degree completion by 28

percent and Latino degree completion by 18 percent (though that datum was statistically shaky) and white students' degree completion by 10 percent. For Asian students of the period, test scores made more of a difference than either curriculum or class rank/GPA.

Class rank/GPA and senior year test score are not criterion referenced, and while performing better in high school in terms of grades and tests improved degree completion in the original *Tool Box*, it was by lesser magnitudes. It was observed that "in a happy paradox, *everybody* can be in the 'highest 40 percent' on the [criterion-referenced] curriculum measure," whereas that is not true for test scores or class rank (Adelman 1999, p. 85). Content counts, particularly for minority students, and the influence of special preparation programs supports that conclusion (Ishitani and Snider 2004)

Does this analysis still hold, particularly as we have already observed improvements in academic curriculum participation by the High School Class of 1992 compared with the High School Class of 1982 (see tables 4 and 5 above)? That depends on what else is in the mix of factors associated with degree completion, and unlike the original analysis of this feature in *Answers in the Tool Box*, the other factors are matters of *postsecondary* entry and *postsecondary* academic behavior.

How might the four factors just highlighted, along with direct entry to higher education following high school graduation, cumulatively influence bachelor's degree completion for the core universe of this study, the subjects of table 29? To remind the reader just who these students are:

- they were 12th-graders in 1992;
- they earned a standard high school diploma (not a GED) by December1996 (as the NELS transcript records conclude in December 2000, an honest account of degree completion should allow the student at least four years to reach that mark);
- they attended a four-year college at any time (20 percent started in community colleges, and those who started in community colleges earned an average of 52 credits [s.e. = 1.58] from community colleges and 59.5 credits [s.e. = 1.92] from four-year colleges); and
- their postsecondary records were complete, i.e., no transcripts were missing.

Table 32 takes this group, and first sets down a base bachelor's degree completion rate for the entire cohort by four major race-ethnicity groups.[52] The table then enters five key conditions influencing degree attainment that are subject to the initiatives and control of second parties, and marks the *potential* bachelor's degree completion rate for students meeting the thresholds of those cumulative conditions. As each condition is added to the cumulation, the universe narrows for the NELS:88/2000 cohort, and as it narrows, hypothetical degree completion rates rise. One could choose a different sequence of conditions, but the bottom line would be the same.

---

[52]There were too few American Indians in the base group to follow through a narrowing population as conditions for academic momentum were added.

Table 32. Hypothetical cumulative consequences of variables critical to bachelor's degree completion for 1992 12th-graders who earned a standard high school diploma by December 1996, attended a four-year college at any time, and whose postsecondary records were complete, by race/ethnicity

	Percentage earning bachelor's degree				
Cumulative conditions	**White**	**African-American**	**Latino**	**Asian**	**All**
1)Baseline, no conditions	**67.6 (1.18)**	**52.1 (4.26)**	**45.4 (3.74)**	**67.9 (4.71)**	**64.6 (1.12)**
2) No delay of entry	71.0 (1.22)	54.6 (4.49)	50.5 (3.79)	68.2 (4.89)	67.9 (1.15)
3) No delay, top 40 percent of high school curriculum, and highest high school mathematics above Algebra 2	85.6 (1.50)	65.9 (8.57)	69.2 (6.33)	91.5 (1.96)	84.1 (1.40)
4) No delay, top 40 percent of high school curriculum, and more than four credits in summer terms	90.6 (1.31)	84.6 (5.95)	69.2 (8.12)	92.6 (2.27)	89.1 (1.30)
5) No delay, top 40 percent of high school curriculum, more than four credits in summer terms, and 20 or more credits in first calendar year of attendance	92.6 (1.23)	88.2 (5.28)	71.9 (9.07)	93.9 (2.16)	91.4 (1.24)
6) No delay, top 40 percent of high school curriculum, more than four credits in summer terms, 20 or more credits in first calendar year, and less than 10 percent of grades were withdrawals or no-credit repeats	95.5 (0.98)	94.3 (4.62)	79.4 (11.1)	95.3 (2.20)	94.6 (1.07)

NOTES: Standard errors are in parentheses. Weighted Ns for each cumulative step: (1) 1.45M; (2) 1.33M; (3) 712k; (4) 621k; (5) 310k; (6) 273k.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402).

These are statistical coincidences, not causes. The subjunctive is very strong in this presentation. The standard errors indicate that not all these changes would be statistically significant, particularly for minority students, but that phenomenon, too, is a consequence of a shrinking population at each step. No delay of entry is invoked as the first condition because it results in the least shrinkage, leaving a larger population with which to assess the other four factors.

All five conditions of table 32 are criterion-referenced. That is, everyone can meet those conditions; everyone can cross those thresholds. The populations could be much larger. Does that mean that future degree completion rates will look like those in this table if everyone meets the criteria on all five counts? No: We know that not everybody will make it. We have already marked and acknowledged that some students will flunk out or become status dropouts for other reasons. But the table suggests just where the improvements are likely to be dramatic—and for whom. Some examples, by race/ethnicity, would be instructive.

For **Latino** students, high school academic curriculum attainment and entering college directly from high school provide the greatest leaps in degree completion, narrowing the gap with white students from 22.2 percent in the base rate to 16.4 percent. But little else narrows the gap much further. Postsecondary summer-term participation, for an obvious case, yields something of a zero, and getting across the 20-credit line in the first year of attendance appears to do little for Latino graduation rates (though if the sequence of conditions were different, it would do more). If we are looking carefully at this fastest growing population in the United States, we pour our efforts into high school preparation above everything else. A decade from now, we will be able to assess better whether postsecondary behaviors become more impressive contributors.

For **white** and **Asian** students, moving into the top 40 percent of the high school academic curriculum intensity index and completing high school mathematics beyond Algebra 2 also is the strongest engine among these variables for boosting college graduation rates. Earning more than four summer-term credits adds something for white students, but nothing to speak of for Asian students. The other factors may contribute minor momentum, but once one reaches a hypothetical 90 percent completion rate, subsequent improvements are not meaningful.

For **African-American** students, who start out at a higher bachelor's degree completion rate than do Latinos, the high school academic curriculum factor does not close the degree completion gap by a statistically significant amount, but earning more than four credits in summer terms offers a stunning boost, narrowing the completion gap vis-a-vis white students from 15.5 percent to 6 percent. The momentum provided by this high-octane persistence behavior continues through the first calendar year credits criterion and avoidance of no-penalty withdrawals and no-credit repeat grades until, at the bottom line of the hypothetical rates set forth in table 32, African-American degree completion rates would be no different from those of whites and Asians.

What did African-American students in the NELS:88/2000 cohort universe who attended a four-year college at any time study during summer terms? A transcript-based account can be very revealing—and in this case, positively so. Using 110 aggregate course categories, table 33 displays the 15 categories accounting for the highest percentages of summer-term credits earned.

Table 33. Percentage of credits earned during undergraduate summer terms by African-American 1992 12th-graders in aggregate course categories

Category	Percent of total summer-term credits
Business other than accounting and administrative science	5.5
Chemistry	5.1
Physical education activities/health information	4.9
College-level mathematics[a]	4.1
College-level writing[b]	3.7
General biology	3.3
Psychology other than general psych	3.0
Physics	2.8
U.S. history surveys, American Civilization	2.8
Micro/macroeconomics	2.6
Accounting	2.5
Calculus	2.5
Foreign languages	2.4
Liberal studies/general humanities/general social science	2.1
Oral communication/public speaking	2.0
Total for top 15 categories	46.7

[a] Includes college algebra, finite mathematics, precalculus, and statistics.
[b] Includes standard English composition, technical writing, creative writing, and advanced essay.
NOTE: The calculation is a "credit ratio" in which the unit of analysis is the course category. All student-weighted earned credits from all course categories are added, with the total a finite glass of 100 percent that becomes the denominator for subsequent calculations. No standard errors are produced.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402).

This is a very respectable list for anyone. It advises advisers: Point out to African-American students that their peers have proved (a) summer-term credit production is a benefit, and (b) the student can concentrate in the summer terms on the kind of critically demanding and critical gateway courses that might not otherwise be in as intense focus during an academic year term. The learning goes deeper under single-subject concentration. Examples include organic chemistry, calculus, and experimental psychology. To repeat: There are values in summer-term credit production for everybody, but if summer-term credit production looks like it benefits a particular group more than others, that needs to be said. If we don't know why the benefits seem more significant for African-American students, let us submit the issue to future research.

Is the story for low-SES students the same?

Reviewers of drafts of this document asked whether the same type of analysis could be performed by socioeconomic status, since we know that the gap in degree completion between the highest and lowest SES quintiles is far wider than any pair of race/ethnicity comparisons (Adelman 2004a, table 3.1, p.34). The lowest SES quintile group is small: only 6 percent of the

1.43 million 1992 12th-graders who graduated from high school by December 1996 with a regular diploma and who attended a four-year college at some time. These students completed bachelor's degrees at a rate of 35.9 percent, compared with 55.4 percent for students in the middle (3rd) SES quintile, and 79.7 percent for students in the highest SES quintile. Perhaps the best illustration of what might close the gap for them is to compare their hypothetical rates of completion with students from the middle and highest quintiles, and table 34 does so. We use the same levers as variables because they are subject to second-party action. But we have to stop after the step where summer-term credits are added in because (a) in extending the data beyond the boundaries of table 34, subsequent variables in the cumulative sequence (first-year credit threshold and withdrawal/repeat limits) do not add anything to the degree completion rates of low-SES students, and (b) the standard errors of the estimates have risen to the point at which comparisons between the lowest SES quintile group and the middle group are not statistically significant. The data of table 34, though, send clear messages: Despite obviously great limitations inherent in low socioeconomic status, the most promising engine of momentum for

Table 34. Hypothetical cumulative consequences of variables critical to bachelor's degree completion for 1992 12th-graders from the lowest, middle, and highest socioeconomic status quintiles who earned a standard high school diploma by December 1996, attended a four-year college at any time, and whose postsecondary records were complete

Cumulative conditions	Percentage earning bachelor's degree		
	Lowest SES quintile	Middle (3rd) SES quintile	Highsest SES quintile
1) Baseline, no conditions	35.9 (3.74)	55.4 (2.34)	79.7 (1.50)
2) No delay of entry	39.9 (4.18)	59.7 (2.47)	81.3 (1.46)
3) No delay, top 40 percent of high school curriculum, and highest high school mathematics above Algebra 2	58.7 (6.14)	72.5 (3.71)	89.0 (1.21)
4) No delay, top 40 percent of high school curriculum, highest high school math above Algebra 2, and more than 4 credits in summer terms	59.6 (9.73)	82.2 (5.26)	91.2 (1.25)

NOTES: Standard errors are in parentheses. Weighted Ns for each cumulative step: (1) 1.43M; (2) 1.31M; (3) 546k; (4) 260k.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402).

these students is a strengthened high school curricular background, and achieving that objective requires greater attention to the provision of curriculum and the quality of learning environments in schools attended by these students, no matter where those schools are located. Even then, the degree completion gap between the lowest and highest SES quintile would be 32 percent.

The bottom line on degree completion

In reporting the proportion of college students who complete bachelor's degrees, there seem to be as many answers as there are observers. A number of rules are recommended:

1. Use transcript-based data sources. They do not lie; they do not exclude.
2. Follow the student, not the institution. Community college transfer students are followed to determine degree completion. Do it for everybody! And if one insists on institutional graduation rates, give the institution credit for students who transfer in. We don't do that now.
3. Do not restrict the universe to students who entered higher education only in the fall term and only full-time (otherwise one excludes half of an entering cohort).
4. Do not mix your 18 year-old daughter and your 34 year-old brother-in-law in the same analytic of degree completion. They live on different planets of life's responsibilities. In other words, institutions should consider ledgers indicating degree completion rates separately by age bracket at the point of entry, and national accounts should follow suit.
5. The only people for whom bachelor's degree completion rates should be calculated are those who actually enrolled at a bachelor's degree-granting institution at some time.

All these common sense rules, respectful of students and their families, were observed in *The Toolbox Revisited*—and in *Answers in the Tool Box* before it.

The elaborate multivariate analyses of Parts III and IV of this essay provided a framework within which academic momentum toward bachelor's degree completion (not toward something else such as first-year GPA or second-year retention) could be tracked and judged, but without race/ethnicity as a vector. When we extract from this framework the most tractable variables and examine their potential repercussions in terms of closing degree completion gaps by race/ethnicity, there is no question that the academic intensity of secondary school curriculum continues to serve as the engine of subsequent academic momentum, and that the use of summer terms for substantive, highly focused postsecondary coursework is an effective booster to that engine. Both these variables are mixtures of the student's use of time and the mastery of content.

But what does "academic intensity" or "an academically 'rigorous' curriculum" really mean? What content, postsecondary as well as secondary, could be labeled as "challenging," that is, the knowledge toward which students eagerly reach as opposed to unenthusiastically slog through? These questions are part of a large missing component in this study. Part VI of this essay will reflect on that component with the greater care it deserves.

Part VI
The Missing Element of This Story

There is (at least) one major missing element of the story line in both the original *Tool Box* and *The Toolbox Revisited*, and some important questions readers might have asked in the course of the logistic narrative that should be addressed. The missing element, a by-product of the limitations of the NCES grade-cohort longitudinal studies database, is content standards in high school curricula. Postsecondary curricula, which are far more complex in organization, offer a different framework for assessing potential student learning.

Beyond Course Titles to Content Standards

In the years following the release of *A Nation at Risk* (1983), a standing one-liner on the lecture and conference circuit ran something like "we've changed the marquée on the theater, but the show inside is still the same." The marquée carried the course titles, and for better or worse, that is what our grade-cohort longitudinal studies transcript files rely on. As Shireman (2004) has concisely put it, "If schools just change the names of the courses . . .students will not have learned anything more" (p. 4). In building the NELS:88/2000 data files, we discovered that in some high schools, "precalculus" on a transcript could mean any mathematics prior to calculus, including Algebra 1. On the postsecondary transcripts we often ran across cases of professorial marketing with course titles such as "Tooth Brush," "Dots to Dinosaurs," "Time After Time," and (yes) "Good Books" that even online catalogues could not explain. The postsecondary transcripts also carried 3-credit courses in topics such as social event planning, daily living skills, and "appreciation of sports" that, when the syllabi were examined online, could be offered to junior high school students. One has to acknowledge the limitations of the data source, in addition to its virtues. But the limitations, in these cases, were serendipitous because the online search for concrete clues to the content of course work was dispiriting.

Over the past two decades, states have paid increasing attention to content standards for elementary and junior high school curricula, and the *No Child Left Behind* legislation has stimulated a period of intense review and refinement of these standards. But as *Achieve* pointed out in its review of state high school graduation requirements (2004), similar detailed sets of content standards at the secondary school level are rare. We get generalized requirements that reference course titles such as "11th-grade English" or "Applied Biology," and have no idea what precise learning objectives will be pursued. There have been exceptions, of course, with mathematics being an often revisited subject and in ways that demonstrated the difference between what should be expected of all high school graduates and what should be expected of entering postsecondary students (California Education Roundtable 1997).

The past five years in particular have witnessed the birth and expansion of a number of large-scale efforts to get beyond Carnegie unit credit counting to comprehensive criterion-referenced statements of what graduating high school students should know and be able to do in order to

"succeed" in postsecondary environments. By "succeed" is meant completing degrees (see, e.g., American Association of Universities 2003; Achieve 2004). We have also witnessed the growth of high profile alternative approaches to secondary-postsecondary transitions such as "early college high schools." These efforts have been aided and abetted by comparative analyses of emerging state high school exit examinations and the content and knowledge-objectives of lower division college courses (Conley 2003; Venezia, Kirst, and Antonio 2003). The American Diploma Project (Achieve 2004) pushes beyond general knowledge-objectives to include samples of college assignments (e.g., profit-maximizing output analyses in microeconomics, pH calculations for a complex solution in introductory chemistry, an essay assignment on Plato's distinction between thinking and belief in introductory philosophy) and workplace tasks (e.g., a bank loan officer's assessment of an application from a corporation for $1.7 million to purchase two corporate aircraft, a report requiring measurements of DC supply voltage for diffusion furnaces in semiconductor manufacturing and analysis of furnace regulator modification costs, and the determination of dosages in an insulin therapy regimen). These are superb examples of digging below the credit count to the stuff of learning.

Granting that the academic quality and intensity of one's high school curriculum is a key determinant of postsecondary success, there is no assurance that either the standards of secondary school performance, content coverage, or challenge of the material will come close to the threshold demands of either four-year or community colleges. For the vast majority of high school graduates, who will not attend selective institutions, the "disconnect" is considerable. Indeed, Venezia, Kirst and Antonio (2003) urge everyone to pay more attention than that to which the media are accustomed to the "broad access colleges," including community colleges, because the service of these institutions to the bulk of the nation's postsecondary learners has the greatest potential to better "the civic and economic well-being" of every state and region (p. 46).

It is with that in mind that the work of the American Diploma Project (2004) is noteworthy because the sample assignments and examination questions selected signal precisely the kind of learning expected of the bulk of the nation's postsecondary newcomers. Such assignments and questions provide clear expectations for students entering community college occupational programs as well as those moving into the general education portions of postsecondary education. The microeconomics problems come from a community college, the chemistry from a research university.

Previews of the future and their risks

In fact, it could be argued that these previews of lower-division postsecondary learning objectives and tasks should be part and parcel of 11th- and 12th-grade curricula, equally accessible to students intending traditional lines to a bachelor's degree and those following career and technical education paths that *may* include the bachelor's, but certainly involve the occupationally oriented community college associate degrees. We can get to these levels through a modest amount of dual-enrollment for many students, but for those for whom dual enrollment is inaccessible, special postsecondary preview modules could be offered either by high school

faculty with the requisite knowledge or by visiting college and community college faculty.[53] Somehow, students should have a taste of what will be expected, and whether their current knowledge and skills puts them at least on the threshold of those expectations, if not beyond. Some may argue that such previews will scare some students away from continuing their education or that some secondary school teachers will resist the intrusion. One has to be optimistic in both cases, and come to the task with the conviction that it's worth the risk. The risk to academic momentum of not providing these opportunities is greater.

While each state bears principal authority and responsibility for linking the curricular pathways of secondary and postsecondary sectors (Venezia et al. 2005), the examples set forth by the American Diploma Project and the "previews of the future" strategies described above do not treat state borders as Maginot lines. And for good reason: Roughly one out of four undergraduates (and one out of three African-American students) in *The Toolbox Revisited* universe started their postsecondary careers in a state other than that in which they graduated high school. The geographic mobility of our traditional-age postsecondary populations suggests that, at the least, multistate regions (e.g., South Atlantic) should be considered productive information zones for providing those concrete signals of expectations and specific examples of quality postsecondary student work.

Moving the messages to students, families, and school teachers

Let's take the best of what is offered by reports such as that of the American Diploma Project and books such as Conley's recent (2005) *College Knowledge*, and move it out to much larger audiences than policymakers and others who habitually read such reports and books. It might be more helpful for each college and community college to include in its information packages for prospective students a sample of those examination questions and assignments in courses typically taken by lower-division students. One might go even further and provide examples of exemplary student responses—even less-than-exemplary student responses—to those examination questions and assignments.

---

[53]Dual enrollment has made huge strides since the NELS:88/2000 cohort went to high school. Some 38 states now have formal policies (Karp, Bailey, Hughes, and Fermin 2004), though these vary widely in terms of what is offered and by whom, who pays tuition, who gets credit toward what, academic eligibility, grade levels, course enrollment limits, and whether credits earned are placed in escrow (though that varies more by institution than state). The 2002–03 NCES survey of dual enrollment practices at postsecondary institutions distinguished between high school students who took courses within formal agreements and those who took courses outside of those agreements. Our NELS:88/2000 transcript data cannot make that distinction, so they lump together all postsecondary credits earned at colleges or community colleges prior to the date of high school graduation.

Kleiner and Lewis (2005) estimate that 813,000 high school students took courses at postsecondary institutions, either within and/or outside of dual enrollment programs and agreements, in 2002–03, compared with the weighted 213,000 NELS:88/2000 students who earned any postsecondary credits through dual enrollment during their high school years (1989–92). While not exactly comparable populations, those figures are testimony to the growth of student participation in these arrangements.

A quarter century ago, the Educational Testing Service worked on developing an experimental examination to assess lower division college competencies across a matrix of cognitive operations (e.g., analysis, synthesizing) and general curricular areas (e.g., science, humanities). Called "Academic Competences in General Education," the questions were open-ended (not multiple-choice) and required responses that could be composed in roughly 10 minutes. For example, one question went something like this:

> Suppose a new method for producing energy had been developed that, when brought on-stream, would have the effect of slowing the rotation of the Earth from 24 to 26 hours. Before we can flip the switch on this new form of energy, an Environmental Impact Statement (EIS) must be filed. What would be the chapter headings and major sub-headings of that EIS ? You need not fill in the details, but the most important questions about the potential effects of a 26-hour day ought to be included.

In a trial of the examination, faculty sorted student responses to questions such as "Earth's Rotation" into piles of descending quality. They then described what the students whose responses were rated most highly did to earn that rating, turned to the second most highly rated collection of responses and arrived at a consensus of what these students did *not* do that the first group did—and so on down the line of the piles of student papers they had rated until a level euphemistically described as "nonresponsive" was reached. The faculty descriptions were subsequently aggregated and ironed out as performance criteria. One could then turn to incoming freshmen with this question, along with an example of a first-rate response and an example of a fourth-rate response (out of seven levels), show them the performance criteria and say, "This is what you can expect to be able to do by the middle of next year; would you be better than the fourth level now?" A light goes on somewhere—or should—when entering students see that what it takes to respond effectively to the "Earth's Rotation" question draws on a selection of knowledge from economics and business, psychology, international relations, world history, cultural anthropology, physical geography, technologies, visual arts—all in addition to the core sciences. More important, the light goes on when students see a good example of how to put all this together in an outline of a document that is as much a product of daily work life as it is a college exercise.

And a similar light can go on among high school seniors as well, nearly all of whom think they are going on to something called "college," but have little idea what that means beyond the fact that they will no longer be bound by school rules. Prospective students are not the only audience for this information: Their families and high school teachers are equal players. Not all parents will understand the assignments, laboratories, and examination questions, but certainly they will sense, from the examples, that postsecondary education is serious business, that their children will not get through with a carefree study schedule, that colleges and community colleges have standards, and that such examples are typical of what their children will learn. Inevitably (being optimistic about this) they will be proud enough at the prospect to ask their children to be prepared. High school teachers reading these assessment "prods" will have to reflect on the extent to which their graduating seniors possess the academic foundations and momentum to

respond successfully. To the extent to which high school teachers have doubts, they may adjust the form and content of their own assignments, laboratories, and examinations. Students are bound to be the beneficiaries of the resulting "postsecondary practice runs."

Postsecondary dimensions of content

At the postsecondary level, the issue of content is somewhat easier to address, but only in the context of a student's entire undergraduate record. We know that students completing organic chemistry enrolled in the course not only with general chemistry as a background, but also mathematics at at least the precalculus level. We know that students completing a course in American economic history would have a very difficult time without prior learning in both U.S. history writ large and the standard introductory micro/macroeconomics sequence. A course in the psychological and cultural components of health care in a community college allied health program will probably not be offered to anyone without previous course work in general psychology. The chances that a fine arts degree candidate's transcript shows an entry for a course in color and color theory without prior foundations and studio courses are remote. In higher education, we can use the second- and third-level courses in a field as rough confirmations of learning at the introductory level. There is a sufficient lattice-work within disciplines to track traces of content from one point on the scaffolding to another. No, the traces inherent in second- and third-level courses in a field are not in themselves content standards, and nuance is expected from school to school, but there is a generalizeable quality to these content cues. In fact, the generalizeable portions of upper-division curricula are what one is likely to see on the Graduate Record Examination Board's subject matter examinations. This topic witnessed a surge of interest in the 1980s (for a paradigmatic analysis, see Oltman 1982), and is worth renewed exploration.

Part VII
Concluding Messages

Compared to its predecessor, *Answers in the Tool Box*, the preponderance of the *Toolbox Revisited* story has been on the postsecondary side of the matriculation line. Implicitly, it calls on colleges, universities, and community colleges to be a great deal more interventionary in the precollegiate world, to be more self-reflective about the paths they offer from high school through their own territories. It also calls on them both to fortify their institutional research capacities and integrate them more intimately with academic advising and course scheduling. As noted above, we are witnessing measurable ferment on the high school side of the passage, and as the principles of the *No Child Left Behind* legislation move beyond grade 8, we will see more. The higher education sector cannot sleep through these changes.

To students as agents of their own futures

Beyond that fundamental banner of institutional fortification, there are three sets of messages impelled by both studies. The first set is for entering high school students who, when asked, blithely shrug that "of course I'm going to finish college."

1. Just because you say you will continue your education after high school and earn a college credential doesn't make it happen. Wishing doesn't do it; preparation does! So . . .

2. Take the challenging course work in high school, and don't let anyone scare you away from it. Funny thing about it, but you learn what you study, so if you take up these challenges, your test scores will inevitably be better (if you are worried about that). If you cannot find the challenge in the school's offerings, point out where it is available on-line, and see if you can get it that way. There are very respectable Web sites offering full courses in precalculus, introductory physics, humanities, music theory, and computer programming, for example.

3. Read like crazy! Expand your language space! Language is power! You will have a lot less trouble in understanding math problems, biology textbooks, or historical documents you locate on the Web. Chances are you won't be wasting precious credit hours on remedial courses in higher education.

4. If you don't see it now, you will see it in higher education: The world has gone quantitative: business (obviously), geography, criminal justice, history, allied health fields—a full range of disciplines and job tasks tells you why math requirements are not just some abstract school exercise. So come out of high school with more than Algebra 2, making sure to include math in your senior year course work, and when you enter higher education, put at least one college-level math course under your belt in the first year–no matter what your eventual major.

5. When you start to think seriously about postsecondary options, log on to college and community college Web sites and look not so much for what they tell you of how wonderful life is at Old Siwash, but what they *show* you of the kinds of assignments and examination questions given in major gateway courses you will probably take. If you do not see these indications of what to expect, push! Ask the schools for it! These assignments and questions are better than SAT or ACT preparation manuals in terms of what you need to complete degrees.

6. See if your nearest community college has a dual-enrollment agreement with your school system, allowing you to take significant general education or introductory occupational courses for credit while you are still in high school. Use a summer term or part of your senior year to take advantage, and aim to enter higher education with at least six credits earned this way—preferably more.

7. You are ultimately responsible for success in education. You are the principal actor. The power is yours. Seize the day—or lose it!

Given the story lines of *The Toolbox Revisited,* it is obvious that students are partners in their own education fate, and shouldn't wait around for someone else to do something to them or for them.

Public discourse, part 1: Dissonant data and their discontents

The second set of messages is for those who engage in public discourse on education in general, secondary-to-postsecondary transitions, and ultimately, degree completion rates (with all stops in-between). We have some problems here.

Foremost among these problems is the sheer volume of dissonant statistics that are thrown around about student progress, and all the labels of "at risk," "minimal college-qualified," and "failure" that get pasted to populations in the process. The "at risk" labeling default has gone so far as to turn students into "patients," whose "illnesses" must be diagnosed and followed up with early intervention, intensive intervention, and continuous intervention (Seidman 2005, p. 298) that may even continue after graduation—and for "a modest fee" (p. 299). The data dissonance and deficit language cloud perceptions and preclude constructive policy. We all have considerable cleaning up to do.

On any given day, the public will be offered a half-dozen different statistics on high school graduation rates, college-enrollment rates, college completion rates, grades, and time-to-degree. The data will appear in respectable academic journals in articles that were reviewed by peers who often are experts on statistical technique and (at best) novices on the data sources. Or they will appear in publications and on Web sites of respectable organizations, even though they were never reviewed by anyone outside the organization. Anything that appears between respectable

covers is taken as authoritative, and once it moves into the mainstream press and onto the home pages, we read the headlines but not the footnotes. Inference runs rampant.[54]

For any of these statistics, we never ask who is in the denominator: that is, who are we counting, and who are we not counting—and how? As a consequence, what often pours out are scare stories that make for good press and bad policy. The bad data-driven scare story, in fact, has become the preferred narrative. We are scared by stagnant high school graduation rates over a 30 year period during which the size of the grade cohorts declined significantly then expanded dramatically with the baby boom echo, and during which we witnessed increased immigration from countries with mandatory school attendance ages much lower than ours. By an alternative view, it's amazing we have maintained a stable high school graduation rate (the quality of high school curriculum aside). The same alternative view could be advanced with reference to rates of postsecondary credentialing: It's remarkable we are maintaining the same degree-granting rates in the face of significantly higher enrollments (unless, of course, we are awarding an excess of cheap degrees).

Dissonance by age and season: A plea for honest tracking

The source of many unnerving postsecondary stories is one of the most grievous errors in analyses of student progress: including in the denominator students who started their postsecondary careers at age 29, 36, or 47 along with the mass of students who entered the postsecondary universe at age 18 or 19. Common sense says that a 19-year-old and a 31-year-old are on completely different life trajectories, and the national data from the Beginning Postsecondary Students longitudinal studies back up the common sense. When the newspaper story uses the term, "college students," most adults think of their children, not their brother-in-law or their coworker. Community and four-year college administrators know the difference, and provide academic programs, scheduling and services for those different populations.

But what are they to do when the press and the news Web sites complain that nearly half of entering students do not return for their second year or that the graduation rate is *only* 50 percent (thus assuming everyone else is a dropout), and they are called before legislative committees and boards of trustees to explain? There is an enormous difference by age at entry to the postsecondary system in these measures, and an even greater distortion when one restricts the

---

[54]For example, consider the following statement in a respectable publication: "One of the key reasons that low income students have such low completion rates in postsecondary education is that many work long hours in order to be able to afford college. They struggle to balance work with part-time enrollment in college . . ." (Allen, Goldberger, and Steinberg 2004, p. 222). The data source for this assertion is the National Postsecondary Student Aid Study of 2000, a one-year snapshot that includes no "completion rate" data. Analyses of the NPSAS 2000 data files show that the statement does not reach the threshold of justification unless one divides the population by age bracket. At that point, one finds that, and among traditional-age students (presumably the group referenced by the scare), poor kids are no more likely to be working longer hours at their jobs than anyone else, though they are more likely to use their wages for education expenses. That, at least, is an honest statement—for a snapshot population. And it is not what we really would want to know.

definitions of what it means to "return to" or "graduate from" to those who started in the fall term, full-time, and who came back to or earned a degree from the same school. That denominator knocks out half of traditional-age students from the calculation, and denies the realities of geographic mobility that the Bureau of the Census—let alone NCES longitudinal studies—has documented for the 20-something population (Schachter 2004; Adelman 2005b). Policies designed to "retain" students who have already moved to another state or who are *de facto* ghosts by not being included in the retention denominator in the first place are, at best, wastes of energy.

What is *not* a waste of energy is the task of developing more universal and efficient student tracking systems, and recapturing the headlines from the mongers of scare. There are those who will not accept NCES national longitudinal studies on the grounds that they are samples (no matter how scientific the sampling design), that we can only afford to start one every six or 10 years, and then have to wait for people to age and accumulate academic history by which time, the grievance goes, "the data are old." Impatient to simulate instant longitudinal cohorts, they impute sequences of data from different sources and with denominators that include "projections," and produce shock data that cannot be validated by any sensible reference points, e.g., that only 18 percent of ninth-graders will earn an associate or bachelor's degree within the subsequent ten years (National Center for Public Policy and Higher Education 2004).[55]

But even the best of state tracking systems and the services of the independent National Student Clearinghouse information system that currently (2005) covers about 2900 institutions (and cites a burgeoning interest in including high schools in the universe), will not produce the wealth of information that a NELS:88/2000 or a Beginning Postsecondary Students study yield. This essay cannot recommend policy in these matters, but it can recommend creativity and cooperation, serious reading of the papers and reports from Florida's tracking system (e.g., Whitfield and Howat 1999; Goodman, Latham, Copa, and Wright 2001; Goodman, Copa, and Wright 2004; Johnson, Coles, and Thomas 2004), and reflection followed by activistic innovation, and will wager that the long-term results look better than the scare stories assume.

Public discourse, part 2: The language we use

Language does more than reflect reality—it creates reality as well. There are considerable problems with the language used in describing what happens to students in our education system, and our choice of terms sets boundaries and colors of reality. The boundaries and colors, in turn, condition the terms of policy. Let us illustrate with a few paired terms. These are contrary rhetorics, and this study frankly admits to taking sides in their contention. But it does so in order to urge a positive tone that, not so by-the-way, legislators, superintendents of schools, college presidents and other leaders would prefer to use. The language of leadership is a "can do" language, not a punitive rhetoric.

---

[55]There has never been a national longitudinal study of ninth-graders. But we do have a national longitudinal study of eighth-graders—the NELS:88/2000—with transcripts, not imputations, projections, and dubious math. If we follow these eighth-graders, including high school dropouts, all the way through to age 26, ultimately 34 percent earned either an associate or bachelor's degree (see the full account offered in Appendix L, table L12). That percentage at least puts us in range of doing better. If we accept the putative (and utterly false) 18 percent, we risk abandoning all hope and effort.

"Attrition" versus "Persistence." When "attrition" is the governing term, we worry about students who (it appears) leave school or college, and seek explanations for departure that have included theories of organizational turnover (Bean 1983) and failures of academic and social integration (Tinto 1987). At the first sign of exit—even though the student may return—we turn to negativity. There has to be something wrong here, we say. The student was "at risk," the institution did not respond—we witness a cycle of blame.

When "persistence" is the governing term, we take our directions from students. What did they do that resulted in attainment? What structures of opportunity do we need to offer so that future students can follow the same paths? What do we think works? Can we test it out? This is a far more positive approach. This essay endorses it: Drop "attrition," embrace "persistence"!

"Retention" versus "Persistence." Institutions "retain"; students "persist." If our language is governed by "retention" all we see are institutions determined to hold on to students, keeping them in places that may be unproductive, at all costs, and for the sake of their public ratings. If our language follows student "persistence," on the other hand, we see those individuals making a series of rational choices that take advantage of the opportunities offered by institutions so as both to discover true interests and reach productive ends. Tinto would not object if the rhetoric of leaving an institution was turned into a saga of discovery. Students may go elsewhere; they may take extended time off from higher education; but ultimately they may judge the change as positive and not a result of failure (Tinto 1987, pp. 132–33). In the rhetoric of "retention," students are passive: Something is done to them, and that "something" assumes a deficit model. Under the rhetoric of "persistence" they are actors shaping their fate, with a model of success in mind. Wouldn't anyone rather have success?

"Pipelines" versus "Paths." As Bach et al. (2000) noted—and others have followed—there is no linear path to a degree, particularly for students who start out in community colleges. The default "pipeline" metaphor, used to describe presumably linear learning experiences and environmental sequences, is wholly inadequate to describe student behavior. Pipelines are unidirectional closed spaces, and under the "pipeline" metaphor students are passive creatures (as in "retention") swept along or dropping out of the space completely through leaks at the joints. But student behavior doesn't look like that at all: It moves in starts and stops, sideways, down one path to another and perhaps circling back. Liquids move in pipes; people don't.

At the high school level, for example, a student can acquire momentum in science through a combination of statistics and biology, on the one hand, or physics and calculus, on the other. These are different paths, but who is to say that, once in a four-year or community college, these students could not move in very different directions? The students entering a community college with the statistics and biology background thinking they were heading for further study in allied health fields could easily discover business and computer programming, and transfer to a four-year college to pursue an academic program in management information systems with both quantitative background and empirical habits of mind born of study in the life sciences. The paths to degrees offer many such intersections.

Under the "pipeline" metaphor, we look for easy (sometimes glib) causalities along a single line of explanation. "Paths," on the other hand, allow for multiple analyses and discoveries of tools that suggest (but do not predict) productive routes to education goals. This essay obviously endorses "paths."

Reiterations

Virtually all reviewers of drafts of this study recommended a concluding reiteration of its major themes and conclusions. Three configurations of themes and conclusions stand out in response:

First, there was a story about curriculum, the content of schooling, that was compelling in its secondary school dimensions in the original *Tool Box*, and is even more compelling now on both secondary and postsecondary stages. What you study, how much of it, how deeply, and how intensely has a great deal to do with degree completion. All of this is common sense, but requires equitable execution with emphasis on primary tools, which in this story means that:

- Secondary schools must provide maximum opportunity-to-learn, by which we mean not merely course titles, but course substance. If we seek better preparation for any kind of postsecondary education—occupational, professional or traditional arts and sciences—we have to ratchet up the challenge of content.

- Postsecondary institutions have got to be active players and reinforcers at the secondary school level—particularly in partnership with schools that are not providing or inspiring students—with opportunity to learn at those ratcheted-up levels of content. Pep talks, family visits, recruitment tours, and guidance in filling out application and financial aid forms are not enough.

- Indeed, the first year of postsecondary education has to begin in high school, if not by AP then by the growing dual enrollment movement or other, more structured current efforts (for examples, see Hughes, Karp, Fermin and Bailey 2005). If all traditional-age students entered college or community college with a minimum of 6 credits of "real stuff," not fluff, their adaptation in the critical first year will not be short-circuited by either poor placement or credit overload.

Second, this curriculum story, joined by nuances of attendance patterns that turn out to have significant leverage, continues into higher education. These features of the saga of degree completion are rarely attended to, and all provide tools to enhance completion rates.

- It's not merely getting beyond Algebra 2 in high school any more: The world demands advanced quantitative literacy, and no matter what a student's postsecondary field of study—from occupationally-oriented programs through traditional liberal arts— more than a ceremonial visit to college-level mathematics is called for.

- Academic advisers and counselors have to target every first-time student for at least 20 additive credits by the end of the first calendar year of enrollment. We saw the same consequences in the original *Tool Box*, though now we understand better that the chances of making up for anything less than 20 credits diminish rapidly in the second year. Community colleges have some special challenges here, given increasing rates of transfer among traditional-age students. With 6 credits of dual-enrollment course work, even part-time students can reach 20 credits in the first calendar year, and community colleges enroll the bulk of traditional-age part-time students.

- Excessive no-penalty withdrawals and no-credit repeats appear to do irreparable damage to the chances of completing degrees. This phenomenon was also observed in the original *Tool Box*. Twice advised, institutions might think very seriously about tightening up, with bonuses of increased access and lower time-to-degree.

- More than incidental use of summer terms has proven to be a degree-completion lever with convincing fulcrum. It's part of the calendar-year frame in which students are increasingly participating. Four-year and community colleges can entice students into fuller use of summer terms with creative scheduling.

Third, in contrast to their treatment in the mass of literature on academic progress, students are explicit, rather than implicit, in *The Toolbox Revisited.* They are respected adults playing large roles in their own destinies. What we call "variables" are not bloodless abstractions: they are signs of what students do; and our messages are about where and when the green lights and caution lights will flash along the paths toward degrees. While we trust that school and college actions will not leave them behind, they have equal responsibilities.

Legacy

These are limited beginnings of change in the terms of the enterprise with which any reader of this document is concerned. They are honest terms and do not pretend to predict, rather help us draw a background tapestry against which we can judge just how well we are doing for our children as they cross the cusp of adulthood. The terms derive from the story; the story derives from the wisdom of the U.S. Department of Education in establishing and maintaining its longitudinal studies; and our subsequent discussions and enlightenment derive from the leadership of the National Center for Education Statistics in executing those studies and providing us with archives of information that are the envy of other nations. All of this constitutes an unmatchable legacy.

APPENDIX B

Principal Features of the NCES Grade-cohort Longitudinal Studies

There are four grade-cohort longitudinal studies designed and conducted by the National Center for Education Statistics. Three of these have been completed:

- National Longitudinal Study of the High School Class of 1972 (NLS-72), started with a cohort of seniors in the spring of 1972, concluded in 1986;
- High School and Beyond, with a cohort of seniors in 1980, concluded in 1986, and another cohort of sophomores in 1980 (HS&B), concluded in 1993; and
- National Education Longitudinal Study of 1988, initiated with an eighth-grade class in 1988 (NELS:88), concluded in 2000.

The data from these studies are available in both public release and restricted (license required) form on CD-ROM, with electronic code books (ECBs) listing all variables, with descriptions and distributions.

The fourth, the Education Longitudinal Study of 2002 (ELS:2002), starting with a sample of 20,000 10th-grade students in the spring of 2002, is in progress.

Curtin, Ingels, Wu, and Heuer (2002) offer a figure with a temporal presentation of the four longitudinal studies,[56] highlighting their component and comparison points. Each of the studies begins with a national probability sample involving a stratified sample of schools and a random sample of students within the target grade in those schools. Schools in minority communities are over-sampled. In some cases, the samples are refreshed at later points in the longitudinal study (NELS:88 in 1990 and 1992)[57] and, in some cases, augmented at a later point (NLS-72 in 1973).

Each of these longitudinal studies includes a great deal more information than what is used in *The Toolbox Revisited.* Not all of them are comparable in terms of the depth with which various topics are explored. The surveys of the NLS-72 were focused wholly on students, whereas those

Washington, DC: U.S. Department of Education, National Center for Education Statistics (http://nces.ed.gov/pubs2002/2002323.pdf, p.3).

[57]As Lucas and Berends (2002) remind us, the high schools attended by students in the NELS study are not a true representative sample. The reason stems from the decision to begin the longitudinal study in the eighth grade. When students move into high schools from the eighth grade (or, in some districts, from the ninth grade), it is impossible for the sampling framework to be based on high schools. Roughly 1,000 middle schools and junior high schools became 4,000 high schools by grade 10, and there was no way to follow the students into all 4,000 of those schools. So the NELS sample was refreshed in 10th and 12th grades to reflect the total enrolled population in those years (Ingels et al. 1994), and , by necessity, the refreshing was based in the high schools in which the vast majority of the existing NELS cohort students were enrolled.

of the subsequent longitudinal studies included parents, teachers, and secondary school administrators. The cognitive tests administered in the 12th grade to the NLS-72 cohort were administered in the 10th and 12th grades to subsequent cohorts, thus enabling measures of intellectual growth. High school course-taking for the NLS-72 was summarized and reported by the school, whereas for the HS&B/Sophomore cohort and NELS:88/2000 high school course-taking was derived directly from transcripts. And the postsecondary transcripts for the NELS:88/2000 were used to fill in missing information from the high school transcripts in that cohort. Labor market histories were far more detailed in the NLS-72 and HS&B/Sophomore cohort than they were for the NELS:88/2000. Military records exist for the NLS-72 but not for any subsequent study. Student financial aid information included an unobtrusive Pell Grant file for the HS&B/Sophomore cohort, and that for the NELS:88/2000 included data from the National Student Loan Data System (though this file requires more cleaning and reconstruction in order to be truly helpful).[58]

Lastly, the shift from paper-and-pencil survey response forms to computer-assisted telephone interviews (CATI) in the1990s constricted the range of questions asked (e.g., there was no time to ask students about reasons for changing majors, reasons for transferring from one college to another, and degrees of satisfaction with different aspects of postsecondary experience), whereas the NLS-72 paper survey forms covered these topics in some depth.

Nonetheless, the archives of these data sets are the richest we have to explore the nature of secondary and postsecondary education and its consequences in the early adult life histories of Americans over the past 30 years.

---

[58]See the brief discussion of financial aid data in the NELS:88/2000 in Adelman, C. *Principal Indicators of Student Academic Histories in Postsecondary Education, 1972-2000.* Washington, DC: U.S. Department of Education, 2004, p. 98.

APPENDIX C

Differences Between the High School & Beyond/Sophomore Cohort and NELS:88/2000 High School Record Variables, and Limited Imputation Procedures for the NELS:88/2000

The principal portions of the data sets in question are secondary school transcripts and allied information derived from survey questionnaires and computer assisted telephone interviews (CATI). The secondary school transcripts were collected and coded by the same contractor for both data sets, but the returns were very different. The High School & Beyond/Sophomore cohort began with a stratified national sample of secondary schools, all of which agreed to participate in the project and provide transcripts, access to teachers and administrators. The NELS:88/2000 began with a national stratified sample of schools with eighth grades, all of which agreed to participate in the project and provide appropriate information. As noted above in Appendix B, when students moved into high schools, the NELS sample was refreshed in10th and 12th grades to reflect the total enrolled population in those years (Ingels et al. 1998), and, by necessity, the refreshing was based in the high schools in which the vast majority of the existing NELS cohort students were enrolled. The analysis file created for this study includes the12th grade refreshed sample, but some of the high schools that were not part of the original stratified sample did not provide transcripts.

At the postsecondary level, on the other hand, the transcript return rate increased from 89 percent for the HS&B/So to 93 percent for the NELS:88/2000 (Curtin, Ingels, Wu, and Heuer 2002), and the proportion of postsecondary participants with complete records increased from 88 to 97 percent.

Editorial processes

The postsecondary transcript-based versions of both data sets were edited by the same person (the author of this study), and with the same rules, a feature that increases reliability at the price of intra-coder bias. If one thinks of two sets of archival documents: secondary and postsecondary transcripts for two cohorts, i.e., four data files, in only one did the editor actually see the paper documents submitted by institutions, namely, the postsecondary transcript files of the NELS. These artifacts contained information that allowed corrections and fill-ins for missing information on the secondary school transcript files, e.g., state location of high school, high school graduation date, high school diploma type, Advanced Placement course credits (by examination), and SAT and ACT test scores. Hence, the presentation of secondary school transcripts on the restricted file with the postsecondary transcript data (NCES CD#2003-402) is more accurate than it is on earlier NELS restricted files. After a year of use, a supplement to NCES 2003-402 was issued in June 2004, containing further refinement of both high school and college transcript-derived variables, in addition to new derived variables.

Missing data and limited imputation

The analysis files for both this study and *Answers in the Tool Box* used high school transcripts with complete records for at least grades 10–12. But the NELS:88/2000 transcript data, as well as test score data, fell short of the HS&Beyond/So coverage, even after preparation of the 2004 Supplement to the original NELS Postsecondary Files that included the second round of corrections and fill-ins of missing information on the high school transcripts.

Table C1. Unweighted percentage of 1982 and 1992 12th-graders missing precollegiate academic performance data

	HS&B/So	NELS:88/2000	After Supplement
Performance variables			
Curriculum measure	18%	14%	14%
Class rank/GPA	13	20	17
Senior test score	9	14	14
One or more measures	**18**	**24**	**21**

SOURCES: High School & Beyond/Sophomore cohort (NCES #2000-194); NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

Class rank/GPA, the combined high school class rank/grade point average quintile, is the major problem in the comparison displayed in table C1. In both data sets this variable (called "CLSSRNKQ" for programming purposes) was constructed in the same way, but the input data initially yielded a far smaller universe for the NELS than was the case for the HS&B/So.

The construction of this variable begins with class rank, expressed as a percentile, for students whose high school graduating classes are greater than 10. Class rank was chosen for the base reference because it overrides variability in local grading practices. Not all high schools compute class rank, so for a significant percentage of students, this datum is missing. For these missing cases (as well as for the students from very small high schools), the variable construction turns to high school grade point average (where available, and only for students with three years or more of course work in all high schools attended). In both data sets, all known cases of high school GPA were weighted and set out in quintiles. The missing cases of class rank, by quintile, were then substituted by the GPA quintile (the correlation between the two quintile scales was .84).

However, there are two significant differences in data input between the HS&B/So and the NELS:88/2000. First, the HS&B/So grade point average was for academic courses only, whereas in the NELS, the GPA applied to all courses. Second, by the time of the NELS histories, some high schools evidently were indicating neither class rank nor cumulative GPA of

any kind on transcripts (either that or the original data entry for the NELS high school transcripts did not compute GPA). While 13 percent of the HS&B/So students were missing the combined CLSRANKQ variable, half again of that proportion (20 percent) of the NELS students lacked a CLSSRNKQ value (see Glossary for further details and citations).

This difference would have serious consequences in the replication of the original *Tool Box* hypotheses. The universe of NELS students with positive CLSSRNKQ values was initially smaller than those for the curriculum variable (HSCURRQ) and senior year test score (SRTSQUIN). Since the multivariate analyses of both *Tool Box* studies depend on positive values for all three variables, the composite variable built from a partition of the three would overestimate the value of CLSSRNKQ at the expense of the other two components. In preparing the analysis file for this study, plausible values for missing cases of CLSSRNKQ were imputed when values for both curriculum quintile (HSCURRQ) and test score quintile (SRTSQUIN) were positive and equal, e.g., both were in the third quintile. In these cases, CLSSRNKQ was assigned the same value as the other two variables. The impact of this imputation strategy lowered the unweighted missing cases of CLSSRNKQ from 20 to 17 percent, and the unweighted cases of NELS:88/2000 students missing one or more of the high school performance variables from 24 to 21 percent (see table C1).

Bias and potential imputation.

Even after this revision, a problem remained, and a multiple imputation procedure was followed (Herzog and Rubin 1983). In the original edited version of the NELS high school transcript data that appears on NCES data CD 2003-402 (March 2003), and modified by its June 2004 supplement, some 17.3 percent of the students were missing CLSSRNKQ, 13.8 percent were missing HSCURRQ, and 13.5 percent were missing SRTSQUIN. Under NCES statistical standards, CLSSRNKQ would have to be evaluated, since the proportion of students with non-missing values was less than 85 percent.[59]

The formula used to determine the nonresponse (i.e., missing) bias in these three variables was:

> A*(b-c) where A is the percent of students missing data, b is the percent of those missing data who did NOT earn a bachelor's degree, and c is the percent of those not missing data who did not earn a bachelor's degree.

To obtain the relative bias with respect to the estimate, the result of this formula is divided by b.

The initial nonresponse bias rates for the three variables were:

	Bias	Relative bias
HSCURRQ	0.015	0.021
CLSSRNKQ	0.034	0.049
SRTSQUIN	0.039	0.048

[59]See NCES 2002b.

In other words, for example, if the estimate for the curriculum variable was based only on those with positive values, it would overestimate the percent who did not earn bachelor's degrees by 2 percent. These are all small biases, and would not threaten tests of statistical significance. But the missing cases were less than random: Students who never entered postsecondary education by age 26 or 27 were overrepresented, and those who never graduated from high school or who were still enrolled in high school after the scheduled graduation of the class in 1992 would not show complete transcript records in1992.

In order to increase the number of students with positive and plausible values for all three components of the Academic Resources variable, another limited imputation was undertaken, focused on class rank/GPA. The first question identified, of all students who were in the 12th grade in 1992 and for whom the file showed positive values for both the curriculum (HSCURRQ) and test score (SRTSQUIN) variables:

1) those who also showed a positive quintile value for class rank/GPA (CLSSRNKQ), and were in the *same quintile* on all three measures.	16.6%
2) those who were in the same quintile on both curriculum and test score measures, also had a positive quintile value for class rank/GPA, but the rank of this quintile differed from the others by $\pm$ 1.	13.4
3) those who were in the same quintile on both curriculum and test score measures, but were missing class rank/GPA.	2.7
4) those who were missing class rank/GPA, and whose quintile positions on curriculum and test score measures differed by 1.	2.5
5) those who were in the same quintile on both curriculum and test score measures, also had a positive quintile value for class rank/GPA, but the rank of this quintile differed from the others by > 1.	5.8
6) those who were not in the same quintile on both curriculum and test score measures, whether or not class rank/GPA was missing.	59.0

The focus of imputation was on those members of groups 3 and 4 whose high school transcripts registered 12 or more academic Carnegie units. This small group was then examined for *prima facie* anomalies in variables such as postsecondary attendance, selectivity of first institution of attendance (if any), and postsecondary remedial work. There were none. An algorithm was then developed that assigned a value to CLSSRNKQ, as follows: (1) where HSCURREV = SRTSQUIN, the class rank/GPA quintile was assigned the same value; (2) where the difference between HSCURREV and SRTSQUIN was $\pm$1, CLSSRNKQ was assigned the lower value in half the cases, and the higher value in the other half.

The result reduced the proportion of missing ("nonresponse") cases of CLSSRNKQ from 17.3 to 15.8 percent. The nonresponse bias rates improved as follows:

	Before imputation	After imputation
Bias rate	0.034	0.019
Relative bias	0.049	0.026

The consequent reconstruction of Academic Resources

The proportion of students with non-missing values for all three components of the Academic Resources index rose from 70 to 72 percent as a result of the imputation described above. However small the increase, it required a recalculation of the comparative weights of the three components of Academic Resources, in the following steps:

a) A logistic regression was run with bachelor's degree attainment as the dependent variable, the three components as independent variables, and a universe limited to1992 12th-graders. The ratios of the standardized beta coefficients for each of the independent variables produce the weights for each variable in the composite. The changes between the earlier version of these weightings and the post-imputation version are small, but required, as table C2 shows.

Table C2. Differences in ratios of standardized betas for the three components of the Academic Resources composite, before and after limited imputation of missing class rank/GPA data for 1992 12th-graders

	Partition weight	
Component of Academic Resources	Before imputation	After imputation
Curriculum	41.9	42.4
Class rank/GPA	32.9	32.5
Senior-year test score	25.2	25.1

SOURCE: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

b) Each of the three components is then multiplied by its weight brought forward from the logistic model. So, for example, a student in the third quintile of HSCURRQ is credited with 1.272 points (3*0.424). The points are added, then weighted by the enhanced NELS high school transcript weight for those in the 12th grade in 1992 (F4F2HWT), then set out in quintiles of Academic Resources. The difference in distributions of the values of Academic Resources, before and after imputation, are indicated in table C3.

Table C3. Differences in distribution of 1992 12th-graders across the values of the Academic Resources composite variable, before and after limited imputation of missing class rank/GPA data

	Percent distribution of students	
Values of Academic Resources	Before imputation	After imputation
Missing	29.9	27.9
Highest quintile	14.3	14.6
2nd quintile	13.3	14.3
3rd quintile	14.2	14.7
4th quintile	13.9	13.6
Lowest quintile	14.3	14.9

APPENDIX D

Technical Issues

Accuracy of estimates and standard errors

There are different kinds of statistics in *The Toolbox Revisited*, and all of them are estimates derived from student samples. Two kinds of error occur when samples are at issue: errors in sampling itself, particularly when relatively small subpopulations (for example, American Indians) are involved; and nonsampling errors. Even in surveys as large as the three grade-cohort longitudinal studies used in this monograph, sampling errors can affect estimates of statistical significance.

Non-sampling errors are more serious. A good example of a non-sampling error would be the fact that transcripts are missing for some students in all three grade-cohort studies. The transcripts are missing either because the student did not tell the interviewer that he or she attended the school (and there were no transfer credits on another transcript to identify the school); the school refused to send the transcript; the school could not find the transcript; the information sent by the school was not really a transcript; or while the student may have enrolled at the school he or she never registered for courses and did not generate a record. In this case, we can mitigate the effect of missing transcripts by differential weighting of the population, and, indeed, for both the High School and Beyond/Sophomore and NELS:88/2000 files, the analyst is given a choice of weights, one of which is confined to students with complete records (see the discussion of weights and flags below). Weighting, though, will not address the panoply of nonsampling errors.

The effects of sampling and non-sampling errors ripple through databases. To judge the accuracy of any analysis, one needs to explicate and judge these effects. When the unit of analysis is the student, this is a straightforward issue because the original samples in the longitudinal studies consisted of students. For example, when questions are asked about the proportion of students who earned credits in an aggregate category of courses (e.g., table 21), the questions are about nonrepetitive behaviors of the students who were sampled. The descriptive comparisons in *The Toolbox Revisited* dealing with non-repetitive student behaviors require invocation of the Students'*t* statistic to determine whether the difference between two independent estimates is significant. The formula for computing Students' *t* values is:

$$t = \frac{(P_1 - P_2)}{(se_1^2 + se_2^2)}$$

where P_1 and P_2 are the estimates to be compared and se_1 and se_2 are the corresponding standard errors. In this case, if $t \geq 1.96$, one has a statistically significant difference at $p < .05$, a standard marker. For the judgments of statistical significance in all cross-tabulations in this document, an Excel template developed by MPR Associates for the production of reports to the National Center for Education Statistics, was used.

The formula becomes more complex, however, for multiple comparisons among categories of an independent variable such as race/ethnicity. For multiple comparisons, the critical value for *t* rises depending on the number of comparisons that can be made in the family of the independent

variable. For race/ethnicity presented in five categories, there are10 possible comparisons, so the significance level of each test must be $p \leq .05/10$ or $p \leq .005$. To determine the significance level of t values in any comparison of means or proportions, the result should be matched against standard published tables of significance levels for two-tailed hypothesis testing.

When estimates are not independent, a covariance term must be added to the Students' t formula

$$t = \frac{(P_1 - P_2)}{(se_1^2 + se_2^2) - 2(r)se_1se_2}$$

where r is the correlation between the two estimates. The determination of correlations requires a statistical software package, such as SAS or SPSS, and the invocation of proper weights for the comparison.

Because none of the longitudinal studies invoked in *The Toolbox Revisited* was based on a simple random sample of students, the technique for estimating sampling error involves a more complex approach known as the Taylor series method. To produce Taylor series standard errors, the estimates presented used AM, a program developed by Jon Cohen and associates at the American Institutes for Research under contract to the National Center for Education Statistics.

Flags and weights

Each of the grade-cohort studies used in this monograph carries a complex set of flags and weights to mark the populations for which estimates are to be generated. The selection of these flags and weights is very important for both the accuracy and meaningfulness of estimates.

For the postsecondary transcript sample of the High School and Beyond/Sophomore cohort (HS&B/So), the process was somewhat complex. Using the weights for the first follow-up survey (1982, the scheduled 12th-grade year for this cohort), three postsecondary transcript weights were developed. The first was based on a ratio of the sum of weights for all students in the 1982 panel who subsequently (in surveys of 1984, 1986 or 1992) claimed to have attended a postsecondary institution to the sum of weights for those for whom a transcript validating the claim was subsequently received. The ratio was then modified by factors derived from the stratification cells in the 1982 survey design to create multipliers that were applied to the raw weights for the students for whom transcripts were received or for whom postsecondary attendance was imputed from survey storylines. This is a generous formulation for all likely postsecondary participants.

The second High School and Beyond/Sophomore weight involved the same procedure as the first but a more restrictive ratio applied to those students for whom a true postsecondary transcript was received. These students are more than "likely" participants; they are "known participants." The third weight followed the same procedure as the second, but confined the population to only those students with complete postsecondary records (i.e., no missing transcripts). This weight is used in analyses of credit production and grades, since complete records are necessary for the analysis of both these features of student academic history. These weights are labeled PSEWT1, PSEWT2, and PSEWT3, respectively.

To accompany these weights for the comparisons that hold the population to students who were in the 12th grade in 1982, a special flag, SENRFLAG, was constructed from variables in the HS&B/So that described student status in 1982. Using the given flag for participation in the 1982 cohort sample would be insufficient and not wholly accurate because not all students were in the 12th grade in 1982, e.g., students who graduated early from high school in 1981. But there were also students who were labeled "early graduates" on the data set (and thus candidates for exclusion from a 12th-grade flag) whose high school graduation date was listed as 1982. Early graduates were excluded, and erroneously labeled "early graduates" were included in the population with SENRFLAG = 1. If these students were not participants in the 1982 panel (even if postsecondary transcripts were received) their weight = 0. Using the 1982 panel weight alone without this flag will not produce an accurate universe of 1982 12th-graders.

For all calculations of HS&B/So data in this document, SENRFLAG = 1, and the appropriate PSE weight invoked.

The weights and flags for the NELS:88/2000 are more complex, still, because the cohort, established in the eighth grade, was "refreshed" twice: first, to be representative of the census of 10th-graders in 1990, and second, to be representative of the census of 12th-graders in 1992. The weights deriving from the 1992 12th-grade refreshing are at the core of weights subsequently developed for the postsecondary transcript sample. The same three postsecondary weight types developed for the High School and Beyond/Sophomores were employed here, but in combination with the 12th-grade (second follow-up survey, or F2) weight and the student's presence in the final (2000) survey panel, F4. In addition, a set of weights based on the NELS high school transcripts in combination with the three postsecondary weight types also was developed when questions arise concerning the relationship between secondary school variables derived from high school transcripts and postsecondary variables derived from postsecondary transcripts.

The most frequently used NELS:88/2000 weights in *The Toolbox Revisited* are:

F4F2P2WT	For all known postsecondary participants who were 12th-graders in 1992.
F4F2HP3W	For all postsecondary participants with complete records who were 12th-graders in 1992 and for whom high school transcripts are also part of the file.
F4F2P3WT	For all postsecondary participants with complete records who were 12th-graders in 1992.

As in the case of the High School and Beyond/Sophomore cohort, a special flag was developed for 12th-graders in 1992. The existing flag on the NELS:88/2000 files excluded over 250 students who, in fact, were awarded high school diplomas in the spring of 1992 and who carry positive weights for the panel (the descriptive windows of the Electronic Code Book for the fourth follow up survey of 2000 offer no reasons or clues for this anomaly). These students are included in the flag, GRADE12A, used in this monograph.

The weighted Ns for samples used in a table are provided in the notes to the tables. Even if the same weight and flag is used on two tables, the weighted Ns may differ slightly because missing values in a particular variable are excluded from the calculations.

Multivariate analyses

For all multivariate analyses in this monograph, special procedures were employed in accordance with the complex sampling designs of NCES longitudinal studies. These procedures are in the spirit, though not exactly to the letter, of those discussed and recommended by Thomas and Heck (2001). Thomas and Heck recommended alternative ways of producing both regression models and their adjusted standard errors in a single step, as opposed to the two-stage procedure used in this study. The reader should be aware that the software employed in this study, AM, correctly estimates standard errors associated with complex, cluster samples.

For any model, an adjusted weight based on the population with non-missing values on all variables in the model was calculated, in the following steps:

1. A weight appropriate to the question was selected. For example, for determinants of transfer from a community college to a four-year college, the weight for NELS students with received postsecondary transcripts, F4F2P2WT, was chosen.
2. A simple tabulation of the dependent variable was then run for students who evidenced positive (non-missing) values for all variables in the model. Call this universe A. The selected weight was invoked.
3. The log of the program for step 2 produces both unweighted and weighted Ns for universe A.
4. The selected weight is then adjusted by what Thomas and Heck (2001) refer to as NORMWT, i.e., the weighted N / unweighted N of universe A.
5. The selected weight is then multiplied by the NORMWT, thus adjusting the effective sample size.
6. The example would look as follows:

   F4F2P2WT / (f4f2p2wtA / unweighted N for A configuration of variables)

7. The result becomes a variable in its own right, a weight with a name, e.g., COREWT1.

A root design effect (DEFT) reflects the effect of departures from simple random sampling, and in the methodology reports for the NELS:88/2000, is calculated for sub-populations on each of a selection of variables (Haggerty et al. 1996; Curtin, Ingels, Wu, and Heuer 2002). For any logistic model in *The Toolbox Revisited*, a DEFT based on the population with non-missing values on all variables in the model was calculated in order to adjust the standard errors produced by statistical packages such as SAS (used in the production of this study). The DEFT is calculated in three steps:

1. The requisite data for a simple standard error are produced by the same equation used for NORMWT, and set out as follows:

$$\sqrt{\frac{p(1-p)}{N}} = \text{s.e.}$$

2. A matching Taylor series standard error is produced by AM software with the same dependent variable and equation, with the population filtered by positive (non-missing) values for the same variables used in the equation in step 1. The Taylor series s.e. takes into account both stratum and primary sampling unit in combination with the weight selected, hence accounting for the complex sampling design.

3. The DEFT = Taylor Series s.e. / simple s.e.

Every discrete multivariate analysis has a unique DEFT. The DEFTs for the NELS:88/2000 are rather substantial, e.g., 1.83, reflecting not only the original sampling design in 1988 but also the successive "refreshings" of the sample in 1990 and (for the analyses in this monograph) in 1992.[60] They are used to adjust the standard errors in the multivariate analyses, and hence reduce the likelihood of overestimating the effects of independent variables. The effect of the DEFT also is reflected in the production of the *F* and *t* statistics, for which the formulas used are:

$$\left(\frac{\beta}{\text{s.e.} \times \text{DEFT}}\right)^2 = F$$

and

$$\sqrt{\frac{F}{\text{DEFT}^2}} = t$$

In the logistic models employed in *The Toolbox Revisited*, the level of significance of the *t* statistic—*p*—for a two-tailed test is determined by reference to a standard table of critical values of *t* that can be found in any statistics textbook.

Collinearity data

This study includes Appendix J with tolerance statistics for collinearity for all the logistic model tables in order to assure the reader that the independent variables included in the models do not exhibit a nearly perfect linear relationship, in other words, that they do not overlap to such an extent that analysis of each variable, taken singly, is impossible. There are sometimes situations in which one variable is part of the definition of another, e.g., family income in relationship to

[60]Curtin, Ingels, Wu, and Heuer (2002) report the mean DEFT for all students in the fourth follow-up (2000) survey of the NELS as 1.954 (p. 209). The range of DEFTs in *The Toolbox Revisited* is 1.76 to 2.19.

socioeconomic status or multi-institutional attendance in relation to transfer. In cases such as these, collinearity statistics are produced as by-products of Ordinary Least Squares regressions for the variables in the logistic models.

Of these by-products, tolerance is the statistic of choice: It measures how well one independent variable can be predicted by other independent variables in the model, and is equal to $1-R^2$ for that variable. Ideally one would want this predictive relationship to be close to 1. The literature (e.g., Belsley, Kun, and Welsch 1980) suggests that there are no hard and fast rules for determining collinearity using either tolerance or its inverse, variance inflation, but that, in general, a tolerance reading of .20 or less evidences collinearity problems. This study adopted a tolerance threshold of 0.50, i.e., any reading above that threshold indicates no serious collinearity problem. Any indication below that point required further investigation of the independent variable(s) in question through correlation matrices. If the variables in question were part of the constructs of other variables, a choice was made as to which variable would be dropped. Dropping independent variables is one of the recommended options when potential multicollinearity arises (Knight 2004).

APPENDIX E

Populations Included and Excluded From the Study Universe

The population subject to analysis in *The Toolbox Revisited* consisted of 1992 12th-graders who subsequently attended a four-year college at any time through December 2000, who earned their high school diploma by December 1996, who presented complete high school transcript records and a senior year test score, whose postsecondary records were complete, and whose socioeconomic status was known. But there are other students who participated in the 1992 NELS:88/2000 survey and who subsequently attended a four-year college at some time who are not part of this population principally because (a) one or more of these data elements were missing or (b) because they were not in the 12th grade in 1992.

It is natural to ask about the demographic characteristics of the students who are excluded from the analysis because they are missing data or because they were not in the 12th grade in 1992, compared with the demographic characteristics of the students who *are* included. In order to compare distributions of this comparative demography, we include all 1992 survey participants.

Considering those who attended a four-year college at some time but were nonparticipants because one or more of the key data elements were missing, key contrasts include:

- A higher proportion of minority students than white students;
- A higher proportion of students who were 20 years old or older in 1992 than those who were less than 20 years old;
- A higher proportion of students from the lowest third of family income distribution than those from higher income levels;
- A higher proportion of first-generation students than those whose parents had either some college or who had earned at least a bachelor's degree;
- A higher proportion of nonnative speakers of English than those from English monolingual backgrounds;
- A higher proportion of those with three or more siblings than those who were either only children or had one or two siblings;
- A higher proportion of those who became parents by age 20 than those who did not;
- A higher proportion of those who had been retained in grade at least once than those who were never held back; and
- A higher proportion of those who came from high schools in urban areas than those from suburban or rural areas.

Some 60 percent of this group was missing only one of the key data elements, but it was a very important one: a high school transcript.

Of nonparticipants because they were not in the 12th grade in 1992, we notice distinctively higher proportions by age (20 years or older), origin in a second language household (though not among nonnative speakers of English), and parental status, and among those who had been retained in grade and those who earned General Education Diplomas.

Table E1. Percentage distribution of participants in the 1992 survey of the NELS:88/2000 by participation status in *The Toolbox Revisited* universe, by demographic and schooling background characteristics

Characteristics	Participants in the universe of this study	Nonparticipants[a] who were 12th-graders in 1992	Nonparticipants[a] who were *not* 12th-graders in 1992
All students	77.8 (1.11)	20.6 (1.05)	1.6 (0.33)
By gender			
Male	76.5 (1.57)	21.3 (1.46)	2.2 (0.57)
Female	79.2 (1.35)	19.8 (1.34)	1.0 (0.22)
By race/ethnicity			
White	81.1 (1.08)	18.0 (1.07)	0.9 (0.20)
African-American	64.3 (4.44)	30.0 (4.04)	5.7 (2.72)
Latino	66.2 (4.11)	29.6 (3.99)	4.2 (1.19)
Asian	73.2 (5.09)	26.6 (5.09)	0.1 (0.09)
American Indian	53.6 (12.8)	43.1 (13.0)	2.4 (2.30)
By age in 1992			
Missing	48.5 (9.15)	51.5 (9.15)	#
20 or older	41.6 (8.56)	47.9 (9.52)	10.4 (4.86)
Under 20	79.2 (1.06)	19.3 (1.01)	1.5 (0.34)
By family income			
Missing	70.8 (3.02)	27.1 (2.55)	2.2 (1.24)
Highest third	81.5 (1.44)	17.3 (1.41)	1.2 (0.37)
Middle third	80.1 (1.79)	19.2 (1.79)	0.7 (0.17)
Lowest third	71.3 (1.74)	25.2 (2.60)	3.5 (1.12)
By postsecondary generational status			
Missing	66.2 (4.08)	33.4 (4.07)	0.4 (0.24)
First generation	73.7 (2.73)	23.8 (2.74)	2.5 (0.68)
Parents had some college	78.3 (1.72)	19.2 (1.60)	2.5 (0.74)
Parents earned bachelor's	81.2 (1.34)	18.1 (1.32)	0.7 (0.27)
By second language background			
Nonnative speakers	68.8 (3.78)	28.9 (3.73)	2.3 (0.81)
From second language households	68.3 (5.48)	22.5 (4.94)	9.2 (4.06)
Monolingual English	79.0 (1.12)	19.7 (1.08)	1.3 (0.35)

See notes at end of table.

Table E1. Percentage distribution of participants in the 1992 survey of the NELS:88/2000 by participation status in *The Toolbox Revisited* universe, by demographic and schooling background characteristics—continued

Characteristics	Participants in the universe of this study	Nonparticipants[a] who were 12th-graders in 1992	Nonparticipants[a] who were *not* 12th-graders in 1992
By number of siblings			
None	76.0 (4.37)	23.3 (4.39)	0.6 (0.31)
One or two	81.8 (1.15)	17.2 (1.13)	1.0 (0.24)
Three or more	71.8 (2.04)	25.5 (1.87)	2.7 (0.84)
By parenthood			
Parent by age 20	64.6 (5.38)	22.5 (4.07)	12.9 (4.62)
Not a parent by age 20	78.3 (1.10)	20.5 (1.07)	1.2 (0.25)
Held back in grade at least once			
Missing	59.2 (6.33)	38.5 (6.21)	2.3 (1.11)
Yes	62.9 (4.85)	30.4 (4.54)	6.7 (2.64)
No	79.9 (1.07)	18.9 (1.04)	1.2 (0.31)
By urbanicity of high school location			
Urban	69.9 (2.36)	27.1 (2.15)	2.9 (0.99)
Suburban	80.1 (1.58)	19.0 (1.57)	0.9 (0.28)
Rural	83.9 (1.71)	14.9 (1.71)	1.2 (0.29)
By type of high school diploma[b]			
Standard	79.0 (1.07)	20.5 (1.06)	0.5 (0.13)
GED	8.7 (2.56)	23.6 (6.49)	67.7 (7.10)

[a] Nonparticipants are defined as students who were either (a) missing data on senior year test score or socioeconomic status or both, (b) missing an in-scope high school transcript, (c) graduated from high school in January 1997 or later, (d) presented an incomplete postsecondary record, and/or (e) were not in the 12th grade in 1992.
[b] A tiny percentage who received a certificate of attendance was included with the GEDs.
Rounds to zero.
NOTES: Standard errors are in parentheses. Universe consists of students who participated in the 1992, 1994, and 2000 follow-ups of the NELS:88/2000 and who attended a four-year college at some time. Weighted N=1.45M.

APPENDIX F

Gradations of Academic Intensity of High School Curriculum

The following figure sets forth the 31 gradations (in descending value) of academic curriculum intensity and quality as used in the development of the Academic Resources index and variable for the NELS:88/2000 cohort. The figures in the boxes represent the minimum rounded number of Carnegie units required for the gradation on a given *row*. Where a cell is empty, there are no minimum requirements. Where a cell indicates "none" (for remedial math and remedial English), it means that no remedial work is allowed for that gradation. Where the cell for AP courses indicates zero, that means the student did not take any AP courses, not a minimum. For the NELS:88/2000 cohort, computer science was not nearly as widely offered as it is today. Therefore, computer-related credits were brought into play only to disaggregate lumps in the distribution. Total high school academic credits is an empirically-derived factor that comes into play only in the very lowest gradations.

The basic five-subject credit thresholds were constructed in the course of examining the edited, coded transcript data for students who were known high school graduates with graduation dates through Dec.31, 1996. The editorial process paid particular attention to all cases that showed less than 16 total high school credits. Where the evidence strongly suggested dissonance with other variables in the student's record, all transcript records from that student's *school* were examined. Where nonstandard credit metrics were found, they were adjusted with reference to state standards for high school graduation (Medrich, Brown, and Henke 1992), and major components (e.g., mathematics, English, etc.) multiplied or divided by as much as (but no more than) two. For example, when a group of students from the same high school showed 40–45 Carnegie units in a state that required 20 for an academic diploma, the editorial process cut those 40–45 units in half—across all subjects in which they were given. The editorial process also Windsorized cases of total Carnegie unit counts above 32, adjusting the major components down one-by-one, and dropped fragmentary transcripts with less than 6 Carnegie unit counts.

As noted in the parallel appendix in the original *Tool Box*:

> These gradations of academic intensity and quality are based on the history of one national high school class that was scheduled to graduate in 1982. The next graduating class for which we possess similar data is that of 1992. While the specific number of Carnegie units, APs, and remedial indicators might change, the basic form and principles of the gradations will probably not change. This presentation of the possibilities of high school curricular attainment is criterion-referenced: theoretically, *everybody* can reach gradation level #1. (p. 114)

The account of curriculum for the class of 1982 had 40 gradations. This account, for the class of 1992, has 31. One implication of the shrinking number of gradations is that, in fact, more students were moving up the academic intensity ladder, clustering at higher criterion-referenced levels.

Table F1 presents the actual mean number of Carnegie units earned in core academic fields, irrespective of the theoretical thresholds, for students in each of the five quintiles of academic intensity derived from the 31 more detailed gradations.

Figure 3. Curriculum components of the 31 gradations of the high school academic intensity measure of the NELS:88/2000, by Carnegie unit minimums

Grada-tion	English	Math	Science	Foreign Langs	Hist and Soc Stu	Highest Math	Remed Math	Remed English	APs	Computer Science	Total Academ Units
1	3.75	3.75	>2.0*	>2.0	>2.0	>Alg2	None	None	>1	>0	
2	3.75	3.75	>2.0	>2.0	>2.0	>Alg2	None	None	>0		
3	3.75	3.75	>2.0	>2.0	>2.0	>Alg2	None	None	0	1.0	
4	3.75	3.75	3.0	>2.0	>2.0	>Alg2	None	None			
5	3.5	3.0	2.0	2.0	2.0	>Alg2	None	None	>1		
6	3.5	3.0	2.0	2.0	2.0	>Alg2	None	None	>0

10	3.5	3.5	2.0	2.0	2.0	Alg2	None	None	0	>0	
11	3.5	3.5	2.5	2.0	2.0	Alg2	None	None	0		
12	3.0	2.0	1.0		1.0	>Alg2	None	None	>0		
13	3.0	2.5	2.0	1.0	2.0	>Alg2	None	None	0		
14	3.0	2.5	2.0*		2.0	>Alg2	None	None	0		
15	3.0	2.5	2.0*	2.0	2.0	Alg2	None	None	0	>0	
16	3.0	2.5	2.0	2.0	2.0	Alg2	None	None	0		
17	3.0	2.5	1.0	1.0	2.0	<Alg2	None	None	0		
18	3.0	3.0	1.5	1.0	1.5	<Alg2		None			
19	2.5	3.0	1.5	1.0	1.5	Alg2	None				
20	2.5	2.5	1.5	0.5	1.0	<Alg2			0		≥12
21	2.5	2.5	2.0		1.0	Alg2	Net 0			>0	≥12
22	2.5	2.5	1.0		1.0		Net 0			>0	≥12
23	2.5	2.0	2.0		1.5	<Alg2	Net 0				≥12
24	2.5	2.0	2.0		1.5	<Alg2	Net 0			1.0	
25	2.5	2.0	1.0		0.5	Alg2	Net 0	None			
26	2.5	2.0	1.0			<Alg2	None	None			≥12
27	2.5	2.0	1.0		1.0		Net 0				

28	2.5	1.5	1.0		0.5		Net 1				
29	2.5	1.5	1.0		0.5						
30	2.0	1.0	0.5		0.5						
31											≥6

NOTES: (1) Net 1 means the sum of total mathematics credits minus remedial mathematics credits was 0.5 or less, i.e., if remedial math appeared at all on a student's transcript, it was a major presence; Net 0 means the sum of total mathematics credits minus remedial mathematics credits was more than 0.5, i.e. of remedial math appeared at all on a student's transcript, it was a minor presence.
(2) The figures in the cells for English, math, science, foreign languages, and history and social studies represent the minimum rounded number of Carnegie units required for the gradation on a given row. Where a box is empty, there are no minimum requirements.
(3) An asterisk in a cell for science credits indicates core laboratory science (biology, chemistry, and physics).
(4) The reference points for highest level of mathematics studied in high school are higher than Algebra 2 (>Alg2), Algebra 2 (Alg2), and less than Algebra 2 (<Alg2). Where there is no entry in the cell, there is no highest mathematics requirement for that row.
(5) Minimum requirements for total high school academic Carnegie units, e.g., =>12 and =>6, come into play only in the very lowest gradations of the curriculum distribution.
(6) When the distribution of students across these 31 levels is weighted and then aggregated to quintiles, the quintile breaks are as follows: 1–8 (highest quintile), 9–15 (2nd quintile), 16–20 (3rd quintile), 21–25 (4th quintile), and 26–31 (lowest quintile).

APPENDIX H

The Timing of Departure

When this narrative took up the topic of the second calendar year of student histories and pointed out that roughly one out of five of our subjects had become status dropouts by that point, the question naturally arose: What happens to all those students who leave after the first year—or even the first semester—when most attrition occurs? How does one account for them? We need to provide some corrective data in this excursion, since we considered status dropout status only in the context of the paradoxes of first-to-second year persistence.

With rare exceptions (e.g., Tinto 1987), most attrition studies are (a) short-term, as in first year to second year, without allowing for the fact that students who skip the second year may return in the third or fourth years, and (b) limited to attrition at the same institution, without allowing that the student who can no longer be found at Old Siwash may, in fact, be enrolled at Greentree Valley Community College. Students who leave one school and attend another one are not dropouts—they are most likely transfers. Tinto (1987) made that point a long time ago, and it should be obvious. If they are not transfers, they may be on temporary "excursions" or more sustained voyages that end in either fragments or "discovery" (Adelman 2004b).

Given the systemwide perspective and the length of a longitudinal study such as the NELS:88/2000, a more sophisticated question about withdrawal can be asked, looking backwards from the last month of the longitudinal study (December 2000):

> What percentage of traditional-age students who entered postsecondary education during this period are no longer enrolled—anywhere—and never completed a credential of any kind, by timing of the gap between their first month and last month of enrollment?

This question follows the student—wherever the student goes. It tells us who became a "status dropout" by age 26 or 27 (which does not preclude even these students from returning at a later moment). And it tells us *when* the student became a status dropout, setting up an inquiry concerning the reasons for departure that follows Tinto's (1988) common sense suggestion that these reasons change by point of departure. Table H1 sets forth these data for *all* 1992 12th-graders who entered postsecondary education, by type of institution first attended.

Yes, the highest attrition rate in postsecondary education occurs in the first year (Schutz and Malo 2003), but table H1 shows that the proportion of traditional-age students who leave in the first year and never return is not radically higher than the proportion of those who leave at later points in time, and differs by type of institution first attended. Consider the face validity of these data: The mean number of credits earned by students who ultimately became status dropouts, by period of departure, matches roughly what one would expect—half or less of the full-time norm for the period. Proportion, however, is not the ideal way to assess the phenomenon.

Event-history accounts of attrition offer a more enlightening approach (e.g., Ronco 1996; DesJardins, Ahlburg, and McCall, 1999). The driving force of event history is risk or hazard, as befits a methodology derived from medical history analyses (Singer and Willett 1991), as in:

given the patient's medical momentum and other configurations of the patient's life-style, demography, and environment, when is the patient at risk of dying (the ultimate censoring event) if the patient did not die last year? The flip side of risk in event history is survival. While the purpose of this study stops short of survival analysis, the first step involved in setting up risk modeling involves determining hazard probabilities, and these are instructive in light of the

Table H1. Percentage of 1992 12th-graders who entered postsecondary education and withdrew without completing any credential by December 2000, by timing of withdrawal and institution of first attendance

Withdrawal behavior and its timing	Institution of First Attendance: Four-year	Community college	Other sub-bacc[a]	Mean credits	**Percent of all**
Left postsecondary without a credential and did not return					
Left within 11 months of first enrollment	4.6 (0.59)	14.6 (1.13)	15.5 (2.77)	9.85 (0.54)	**8.9 (0.58)**
Left within 12–23 months	3.3 (0.41)	11.0 (1.32)	6.5 (1.50)	21.64 (0.99)	**6.7 (0.59)**
Left within 24–47 months	4.9 (0.41)	12.5 (1.11)	4.6 (1.05)	39.88 (1.62)	**7.9 (0.50)**
Left within 48–102 months and not enrolled in 2000	8.7 (0.73)	14.3 (1.23)	4.0 (1.62)	58.29 (2.68)	**10.6 (0.65)**
No credential but still enrolled in 2000	4.7 (0.52)	9.2 (0.94)	1.8 (0.85)	70.98 (3.56)	**6.4 (0.47)**
Earned credential	73.8 (1.09)	38.4 (1.67)	67.7 (3.55)	124.73 (0.90)	**59.5 (1.05)**

[a] Sub-baccalaureate institutions other than community colleges.
NOTES: Standard errors are in parentheses. Columns may not add to 100 percent due to rounding. "Credentials" can be certificates, associate degrees, or bachelor's degrees.

first-year performance variables used in our analysis. That is, if we start at the first month of the first term of attendance and, for each calendar year following that point, asked what percentage of students left the postsecondary system with no degree and had not returned to school by December 2000, changing the denominator for each year to the number of students who remained in the system, we have a "declining risk set" (Ronco 1996) that serves as a rough guideline for the timing of potential dropout. The annual metric is obviously more even than the time brackets chosen for table H1.

The "declining risk set" for this study is presented in table H2. To summarize: For all postsecondary students, the risks of becoming a status dropout are highest in the first year, decline through the fourth year, flatten out through the sixth year, and decline after that. For students who attended a four-year college at any time, the risks of becoming a status dropout are much lower across the temporal board, are slightly higher in the first year, drop and then flatten from the second year through the sixth, and drop again after that. This is only the first step—and hardly the final analysis—of event history, but is perhaps a more accurate way of describing the parameters for understanding the phenomenon of when students leave postsecondary education.

Table H2. Declining "hazard probabilities" for 1992 12th-graders who entered postsecondary education, by calendar year following first date of enrollment

	"Hazard probabilities" for leaving without a degree	
Departure timing for those who never returned by December 2000	All students	All who attended a four-year institution at any time
First calendar year	.102	.039
Second calendar year	.061	.029
Third calendar year	.048	.030
Fourth calendar year	.039	.027
Fifth calendar year	.037	.027
Sixth calendar year	.041	.029
Seventh calendar year	.031	.025
More than seven calendar years	.026	.020

SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

The reader of table H1 will note that community college beginners exit sooner than do students who started at four-year colleges, and are more likely to still be enrolled at the end of the longitudinal study period. While there is comparatively little variance in the pace of permanent dropout for students who started in community colleges when the periods between the first and the fourth year are considered, there is no question that beyond that point, attrition slows. The same cannot be said for the pace of status dropout for students who started in four-year colleges: The rate of permanent attrition appears to be stable over time, a finding slightly different from that of the "declining risk set" approach, and a product of the clumping of years in table H1. As for sub-baccalaureate institutions other than community colleges, which specialize in short-term certificate programs, the status dropout rate drops dramatically from the first year to the second and subsequent periods.

Advancing on Tinto's (1988) suggestion, Eaton and Bean (1995) hypothesize that the factors affecting attrition are different for first-year students who withdraw from higher education versus the factors that come into play for students who leave at later points in time. Unfortunately, Eaton and Bean could not investigate that hypothesis because their study was confined to first-year and second-year students at one institution (a public research university), and bracketed

only one year's account of retention/attrition (for a similar inquiry, see Patrick 2001). The NELS: 88/2000 data, on the other hand, offer 8.5 years and a myriad of institutional types in which to explore and detail the boundaries of the issue. As Ronco (1996) notes, the timing and duration of "enrollment events" is a critical framework for identifying factors associated with graduation, transfer, and stop-out—the three modes of "exit" from an institution.

Table H3 provides a framework for future consideration of the differential attrition hypothesis. The literature on the putatively sophisticated economic decisionmaking of adolescents with respect to entering higher education, even in the face of uncertainty of returns (Altonji 1993), can be extended to reasons for leaving a path to postsecondary credentials. As Beattie (2002) points out, human capital theory is not rigid: it recognizes something called individual taste or proclivity that may be only tangentially related to group membership (e.g., ethnicity, gender, family income). At the least, students already in the postsecondary system know that they will eventually be better off for their education efforts (or they wouldn't have been there in the first place). So, what did the students in our universe who did not complete a bachelor's degree program (and who were not still enrolled as degree candidates at the end of the 8.5 year period) tell us of their reasons for leaving, by period during which they became status dropouts?

Table H3. Reasons for leaving postsecondary education without credentials by timing of exit: 1992 12th-graders who entered postsecondary education by December 1996

	Percent offering these reasons for leaving postsecondary education				
Timing of withdrawal	**Finances**	**Job/ Military**	**Academic**	**Personal/ Family**	**Mood/ Lifestyle**
Left postsecondary without a credential and did not return					
Left within 11 months of first enrollment	19.7 (3.10)	14.8 (2.03)	5.9 (1.92)	31.5 (3.51)	25.9 (3.99)
Left within 12-23 months	25.2 (5.19)	11.0 (2.81)	5.6 (1.40)	42.6 (6.19)	12.7 (2.23)
Left within 24-47 months	19.4 (3.60)	17.4 (2.69)	3.6 (0.99)	35.2 (3.78)	20.5 (2.30)
Left within 48-102 months and not enrolled in 2000	17.8 (2.19)	18.9 (2.45)	7.7 (2.46)	29.3 (4.04)	21.2 (3.21)

NOTES: Rows will not add to 100.0 because (a) student responses to questions about reasons for departure are not mutually exclusive, and (b) a category for "other" is not included. Standard errors are in parentheses.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

When the NELS:88/2000 students were asked (in the spring of 2000) why they left school, they were offered a list of reasons (though only 17 percent of students responding to the question indicated more than one reason). As table H3 indicates, personal and family reasons for departure dominate all other reasons for students who left postsecondary education without a credential between the 12th and 47th month following the first month of enrollment. The same factor ranks at the top versus all other factors except mood/lifestyle for students who left in the first year and students who left after the fourth year. Strictly financial reasons are not as prominent in students' judgment as some contend. "Job/military considerations" might be considered "financial," but there is too much ambiguity in that category of response to leap to that conclusion. Some 6.6 percent (s.e. = 0.47) of the1992 12th-graders subsequently served in the military, but 14.9 percent (s.e. = 4.95) of status dropouts who cited financial reasons for leaving school had served in the military, and an identical 14.9 percent (s.e. = 3.84) who cited "job/military considerations" for leaving had served in the military. If the NELS files had offered a more complete labor market history, we might be able to resolve the ambiguities.

As a partial confirmation of these observations, consider the work of Li and Killian (1999), who surveyed 622 students of all ages and levels who left a large state flagship university in 1997 (present in the winter term but not the following fall) and elicited 45 discrete reasons for departure. First, Li and Killian discovered that 20 percent of these students were not really dropouts at all, rather either transfers to other institutions (principally for reasons of academic program or location) or stop-outs with intentions of returning. Of the remaining students, 43 percent left for academic reasons (e.g., didn't like the program, classes too large, poor performance), 34 percent left for personal reasons (e.g., unstated personal problems, location issues including homesickness, illness, "social" reasons), and 20 percent for financial reasons. Of the financial reasons, Li and Killian advise us that "individual patterns of money management, more than family income" may be responsible for financially-driven attrition (p. 12), and that if we are going to understand attrition at all so that student affairs officers can establish realistic efforts to address what is within the control of the institution to assist, we have to dig below the level of large-scale concepts of academic and social integration. There is a considerable range of reasons that students leave an institution, and, as Li and Killian point out, students usually have more than one reason for departure. We can't control homesickness; we can help students deal with money management.

As for academic reasons for departure, table H4 reveals that compared to those who earned bachelor's degrees, no one in the departure universe was performing very well, no matter when they left, and even though a tiny percentage (see table H3) cited academic reasons for walking away. Braxton, Brier, and Hossler (1988) argue that when students are asked about their reasons for withdrawal in post-hoc surveys, they offer "socially acceptable rationalizations." We should hence be appropriately wary of the percentage distributions in table H3. Given the low percentage of students who cited academic reasons, and GPAs and cumulative credits for the same students that can be described as, at best, marginal, there is some indirect support for this contention.

Table H4. Mean postsecondary GPAs of 1992 12th-graders who withdrew without completing any credential, by timing of withdrawal, and compared with GPAs of those who had not completed a credential but were still enrolled in 2000, and those who earned bachelors degrees by December 2000

Departure behavior and timing	Mean grade point average: In first calendar year of attendance	Through second calendar year of attendance	Entire undergraduate record
Left postsecondary without a credential and did not return			
Left within 1st 11 months of first enrollment	2.10 (0.091)	2.10 (0.091)	2.10 (0.091)
Left within 12–23 months	2.30 (0.057)	2.08 (0.058)	1.83 (0.100)
Left within 24–47 months	2.31 (0.049)	2.26 (0.046)	2.03 (0.060)
Left within 48–102 months	2.10 (0.059)	2.02 (0.054)	2.03 (0.050)
No credential, but still enrolled	2.14 (0.069)	2.08 (0.069)	2.19 (0.078)
Earned bachelor's degree	2.89 (0.015)	2.91 (0.014)	3.04 (0.011)

APPENDIX I

Course Categories Included in Aggregates for Participation Rates In the First Two Calendar Academic Years of Attendance

Aggregate	Course categories
College-level writing	English composition; technical writing; creative writing; advanced essay
Oral communications	Oral communications; public speaking/debate; voice
Computer-related	Introduction to computer science; introduction to computing; computer programming: general
Introductory biological sciences	General biology; human biology; cellular biology; zoology: general; botany: general
Introductory physical sciences	General chemistry; general physics; general geology
College-level mathematics	College algebra, liberal arts mathematics, finite mathematics, statistics, precalculus, calculus
Core history	Western civilization, world history, U.S. history surveys, European history 1789–present, Asian history, African history, Latin-American history
General psychology	[single course category]
Micro/macroeconomics	[single course category]
Humanities other than literature and foreign languages	Humanities: general; introduction to philosophy; ethics (philosophy); religious studies surveys; interdisciplinary humanities; arts/humanities
Literature	Literature: general; introductions to poetry, fiction, drama, non-fiction prose; English literature; American literature; Afro-American literature
Core social sciences	Anthropology: general; cultural anthropology; geography: general; introduction to political science; U.S. government; introduction to sociology
Visual/graphic arts	Visual communications; introduction to design; fine arts: introduction; art history; drawing
Foundation business	General business principles; business law/legal environment; introduction to accounting

APPENDIX K

So They Earned a Degree! Now, How Long Did It Take Them?

The second most frequently asked question about U.S. higher education concerns time to degree. Despite accumulating evidence over the past quarter-century, the normative benchmark for completing a bachelor's degree has remained at four elapsed academic years. Our ideal seems not only to get it over with, but to get it over with in normative time. An altruistic argument in favor of the normative is that when students finish in a timely manner, they make room for others, i.e., completion keeps the access channels open. Yet recipients of bachelor's degrees are adults who have made a variety of decisions concerning competing goals and obligations that often do not include finishing a degree in four years. For example, if one looks at all recipients of bachelor's degrees in 1999–2000, and asks when they commenced their studies and how old they were when the degree was awarded, one finds that 62.8 percent (s.e. = 1.5) of the 7.5 percent of bachelor's degree recipients who were over 40 in 2000 started out in postsecondary education before 1980. At a minimum, the elapsed time to degree for these people was 20 years (in fact, the average was over 27 years). Of the 9.2 percent (s.e. = 0.4) of degree completers who were between 30 and 39 in 2000, 73.3 percent (s.e. = 1.7) entered postsecondary education prior to 1990, so, at a minimum, the elapsed time to degree for these people was 10 years (in fact, the average was nearly 15 years).[61]

The key phrase for our purposes is "elapsed time," as that is the customary way of measuring time to degree. It is not surprising that the older the baccalaureate recipient, then more likely that student had taken at least two years off from higher education, and the more likely that their principal reason for doing so was "change in family status," as in becoming a parent and raising children. The reader might consider, in passing, when complaints are raised about excessive time to degree, whether our system of higher education should be "blamed" for providing the opportunity for adults with different life trajectories to return to school and complete degrees, even if the time between initial enrollment and degree award is 15 or more years. That is the practical meaning of elapsed time.

There is an obvious difference between elapsed and enrolled time. When DesJardins, Ahlburg, and McCall (2002) investigated factors leading to "timely graduation," they confined one of their universes to students who had never stopped out—not even for the one term this study allows stop-out without labeling the student a non-continuous enrollee.[62] If we followed this mode of analysis, we could focus in on student *uses* of enrolled time to determine what contributed to and what detracted from year-by-year progress. Knight (2002) includes types and timing of

---

[61] All data in this paragraph were generated from the National Center for Education Statistics: Baccalaureate and Beyond Longitudinal Study, 2000: Data Analysis System.

[62] The research here involved a "competing risks" model in which the histories of students who had never stopped out were compared to the histories of those who had stopped out, hence, embraced both elapsed and enrolled time.

remediation, majors and changes-of-major, course withdrawals and repeats, course failures, credit hours earned and grades in general education courses, hours per week working and studying, and first-year grade point average among variables reflecting different aspects of the uses of time.[63] Volkwein and Lorang (1996) took up the phenomenon of students with extended time-to-degree because they purposefully carried lighter credit loads. Why did they carry less than the 15 credit per semester norm for the institution that served as the site for this study? To enhance GPA (an objective which precipitated dropping difficult courses), and to generate more free time, some of which was for work or family responsibilities, or both. Some respondents also cited difficulty of enrolling in a course "at the time I wanted," a phenomenon familiar to anyone who has worked student registration lines.

We also know that many disciplines require credit hour production that, when translated into standardized semester metrics, exceed the 120 credits that would be produced by students who attended only during the regular academic year and carried a standardized full-time load of 15 credits per semester. In a survey of 91 public universities in all 50 states, Pitter, LeMon, and Lanham (1996) found combinations of university and program requirements ranging from 122–124 credits in social sciences, foreign languages, psychology, mathematics, and protective services, for example, to 130–142 credits in such fields as engineering, architecture, and health professions (e.g., nursing, physical therapy, etc.). They also confirm our observation of five-year bachelor's degree programs in pharmacy, for a noted case, with a median credit requirement of 161. Any requirement above 120 credits will either add time to degree or encourage students to (a) earn credits by examination, including Advanced Placement, (b) attend during summer terms, and/or (c) carry credit loads in excess of 15 per semester in order to graduate "on time".[64] As Garcia (1994) observed, whether the student is a community college transfer or a native student in a four-year college, the "basic recipe" for completing a bachelor's degree within the standard "templates for time-to-degree is to maintain continuous enrollment and to earn more than 30 semester units each academic year" (p. 8). Sounds simple, but the list of diverting phenomena is long, complex, and often best assessed for *indirect* effects, as Garcia has done, using path analysis.

What we learn from these studies of the uses of enrolled time in relation to normative models of time to degree is what to include in both descriptive and multivariate accounts of elapsed time—and elapsed time is the measure used in both the original *Tool Box* and *The Toolbox Revisited.* The descriptive statistics are offered to the reader in Appendix L, table L13, but some basic observations are worth repeating here. First, the mean elapsed time to degree for bachelor's recipients in the NELS:88/2000 was 4.58 calendar years, and the median time (which

---

[63]Knight's list for a "hypothesized model of effects upon total semesters elapsed" (Knight 2002, p. 6) also includes provisions for variables derived from student surveys that are parallel to those used in the National Survey of Student Engagement, e.g., in Kuh et al. 2001.

[64]The small number of NELS:88/2000 bachelor's recipients who completed the degree in three elapsed calendar years or less entered with a mean of 10.6 acceleration credits (s.e. = 2.81) and subsequently accumulated a mean of 12.2 credits during summer terms (s.e. = 1.94).

is probably more meaningful) was 4.24 calendar years.[65] Shorter time to degree is observable among students from the highest quintile of high school Academic Resources, students who first entered highly selective institutions, among those who brought more than four acceleration credits across the matriculation line, and among those who attended only one school. Considerably longer time to degree is observable among those who attended three or more schools, among both community college to four-year college and four-year-to-four-year transfer students, among those who took more than one remedial course, those who were not continuously enrolled, and those who majored in the physical sciences. Most of these relationships confirm common sense.

But it is the multivariate analysis that will tell us what counts, and that is the purpose of table K1. Table K1 presents a linear (Ordinary Least Squares) regression in which the dependent variable, time to degree, is set on a scale with four values: more than 6 calendar years, 5–6 years, 4–5 years, and less than 4 calendar years (which encompasses the normative four-year degree). With one exception, a dichotomous variable indicating whether the student ever engaged in a cooperative education or internship course, the independent variables selected were those previously explored and (in most cases) used in the logistic narrative of Part IV of this study. The statistically significant independent variables are highlighted in bold. How do we read the table? What do we see?

On reading the table: First, the R^2 indicates that this linear model accounts for half the variance in timing of bachelor's degree completion for the NELS:88/2000 cohort. That's a very convincing level. Second, the positive parameter estimates mark variables that add time to degree, while the negative parameter estimates indicate variables that shrink it. Third, the following variables did not meet the significance threshold for entering the model (set at $p < .05$): race/ethnicity, becoming a parent by age 20, multi-institutional attendance, and freshman year remediation.

There is no question of the major contributors to extended time to degree:

1. Excessive no-penalty course withdrawals (W) and no-credit repeats (NCR)—Damaging to degree completion, these are just as damaging to time to degree. Yes, we can keep students continuously enrolled, but if much of that enrollment is nullified by withdrawals and repeats, we have what Tinto calls retention without education. It's worse, though, because every seat at every available hour in every facility of an institution of higher education is at stake, and every seat marked with a W or NCR bars another student from sitting down. When the blocked seats reach a critical mass, general access is impeded as well. This observation is worth repeating.

---

[65]Broh (1991) presented an intriguing argument for an alternative time to degree calculation that began with the *median*, not the mean, and included students who had not finished the degree but who were still enrolled as degree candidates. In *The Toolbox Revisited*, the median for students who had completed degrees is 4.24 calendar years. Including students who had not earned degrees by December 2000 but who were still enrolled as bachelor's candidates, the median time to degree would be 4.49—very close to the mean of 4.58.

2. Transfer, both classic community college to four-year, and four-year to four-year—As previously noted, transfer often involves a hiatus in enrollment and extra effort to meet prerequisite requirements at the new institution.
3. Change of major—Garcia (1994) observed that the more times the student changed major, the greater the elapsed time to degree. Knight (2002, 2004a, 2004b) also includes multiple changes of major among the set of variables with significant impact on both enrolled and elapsed time.
4. Whether the student was ever part-time—Since our variable for part-time attendance was constructed partly with reference to course withdrawals that, in effect, produced lighter course loads, the result here backs up the conclusions of Volkwein and Lorang (1996).

Table K1. Ordinary Least Squares regression indicating factors influencing time-to-degree for 1992 12th-graders who earned bachelor's degrees by December 2000

Variable	Parameter estimate	Adjusted standard error	*t*	*p*	Partial R-square[a]

					$R^2 = 0.5052$
					Adjusted $R^2 = 0.5056$

†Variable did not meet minimum criterion for statistical significance in this model.
[a] Indicates the contribution of each variable to the explanation of variance, the total R^2.
[b] Ratio of no-penalty withdrawals and no-credit repeats to all courses attempted.
[c] See Glossary, p. 191.
NOTES: Root design effect = 1.55. Statistically significant variables are highlighted in bold. Weighted N=922k.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

And there is no question concerning which variables will contract time to degree: continuous enrollment and no remediation (the highest value of the "total remediation" variable). Socioeconomic status is a marginally significant contributor to lower time to degree, while the position of freshman year GPA quintile as a contributor to extended time to degree is somewhat puzzling.

Of those variables that were admitted to the linear model but failed to reach the threshold of statistical significance, enrollment in cooperative education or internship courses deserves special attention because it raises contrasting policy options with respect to influences on time to degree. Knight (2004b) observes that:

> Timely degree completion is not all that matters in terms of college student outcomes. Both analytical and student self-report evidence supports the fact that enrollment in cooperative education classes, involvement in internships, etc., while extending time-to-degree, significantly improves student learning and skill development, affective outcomes, career prospects, and the like. Significantly reducing time-to-degree could perhaps demand a trade-off against other long-term (and maybe more important) outcomes. (p. 14).

It turns out that the NELS:88/2000 baccalaureate students who engaged in cooperative education or internships or clinical externships did not take longer than others to complete degrees. But Knight is really asking readers to reflect on the principal objectives of conducting a baccalaureate enterprise. The modes of instructional delivery in professional and applied fields, in particular, often include carefully designed, graded experience in occupational environments, involving considerable time commitments that lie beyond the classroom. If we say to a school of engineering, "You can't offer cooperative education any more and cannot require more than 128 credits for a degree," what do we accomplish in terms of the quality of student learning and the quality of engineering graduates?

In contrasting spirit, if we observe institutions in which students can withdraw from courses, without penalty, as much as 10 weeks into a 14-week semester, a volume of withdrawals equivalent to 15 percent of all credits offered by the institution in a calendar year, and the average time to degree for native students at that institution to be well over five calendar years, we would accomplish a great deal by a tightening of course withdrawal policy. Here is a prime candidate for future research governed by quasi-experimental design: Find two comparable institutions (mission, size, demography, distribution of majors), one with lax withdrawal rules, the other with restrictive rules. The hypothesis, from everything learned in this data essay: An institution that restricts course withdrawal policy will witness higher graduation rates and shorter average time to degree.

Table L4. Descriptive relationship of number of credits earned in the first calendar year of attendance by 1992 12th-graders to highest degree earned by December 2000

	Highest degree earned by December 2000				
Number of credits in first year	None	Certificate	Associate	Bachelor's or higher	**Percentage of all students**
0–10	84.6 (1.44)	6.4 (0.98)	5.4 (0.88)	3.6 (0.75	**24.5 (0.94)**
11–19	63.9 (2.27)	4.9 (0.88)	12.0 (1.65)	19.2 (1.70)	**16.5 (0.73)**
20–29	27.5 (1.39)	3.8 (0.75)	8.4 (0.79)	60.3 (1.60)	**31.0 (0.83)**
30 or more	10.6 (0.86)	5.1 (0.66)	7.9 (0.83)	76.5 (1.31)	**27.9 (0.81)**
Among those who attended a four-year college at any time, number of credits earned in first year					
0–10	75.8 (3.15)	4.9 (1.50)	8.8 (2.18)	10.4 (2.11)	**12.4 (0.88)**
11–19	53.9 (2.82)	2.1 (0.55)	12.1 (2.22)	31.9 (2.51)	**14.1 (0.70)**
20–29	24.2 (1.39)	2.0 (0.79)	5.0 (0.62)	68.9 (1.59)	**38.8 (1.01)**
30 or more	8.4 (0.81)	0.6 (0.16)	3.4 (0.48)	87.6 (0.93)	**34.8 (0.94)**

NOTES: Standard errors are in parentheses. Rows may not add to 100.0 percent due to rounding. Weighted N for all 1992 12th-graders = 2.09M; for those who attended a four-year college at any time:1.47M.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

Table L5. Percentage distribution of enrollment intensity over six years (1995/96–2001) of students who started out in postsecondary education in 1995/96, by age as of December 1995

Age at entry	Enrollment intensity		
	Full-time only	Part-time only	Both full-time and part-time
All Students	47.0 (1.1)	12.2 (0.8)	40.7 (1.0)
Less than 21	51.8 (1.1)	4.4 (0.5)	43.8 (1.1)
21–23	40.0 (3.8)	18.7 (3.1)	41.3 (1.1)
24–29	30.2 (3.7)	35.5 (4.6)	34.3 (4.2)
30 and older	32.1 (3.1)	42.9 (3.5)	25.0 (2.8)

NOTES: Standard errors are in parentheses. Rows may not add to 100.0 percent due to rounding.
SOURCE: National Center for Education Statistics: Beginning Postsecondary Students Longitudinal Study, 1995/96–2001, Data Analysis System (NCES 2003-171).

As the reader will notice, about 48 percent of traditional-age students in the BPS longitudinal study of 1995/96-2001 told us that they attended part-time at some point in their undergraduate careers. In contrast, only 38 percent of the NELS:88/2000 postsecondary cohort indicated in their 2000 CATI interviews that they had attended part-time at any time. Are the two cohorts, three years apart in their modal starting date, that different? No.

NELS:88/2000:

Part-time by student report	37.7
Part-time by transcript evidence	9.7
Total part-time	47.4

BPS95/96–2001 students who started before they were 21:

Always part-time	4.4
Mixed full-time and part-time	43.8
Total part-time	48.2

So a dichotomous variable indicating whether the student *ever* attended part-time can be included in the logistic model in Step 5 (attendance patterns).

Table L6. Mean Carnegie unit credits earned in grades 10–12 by (a) all 1992 12th-graders and (b) by those of known socioeconomic status who attended a four-year college at any time and for whom high school transcript records and senior year test scores were complete

	Mean Carnegie units earned by:	
Category of earned credits	All 1992 12th-graders	All 1992 12th-graders who are the subjects of *The Toolbox Revisited*[a]
All high school credits	17.93 (0.09)	18.74 (0.09)
All academic credits	16.06 (0.09)	17.13 (0.09)
All vocational credits	1.28 (0.03)	1.01 (0.03)
English	4.11 (0.02)	4.18 (0.02)
Mathematics	3.39 (0.03)	3.61 (0.03)
Foreign language	1.98 (0.04)	2.31 (0.04)
Science	3.14 (0.03)	3.39 (0.03)
Social sciences	3.55 (0.03)	3.64 (0.03)

[a] These students are the same as those described under (b) in the title of this table.

NOTES: Standard errors are in parentheses. Weighted N for all 1992 12th-graders: 2.62M. Weighted N for 1992 12th-graders who graduated from high school by December 1996, attended a four-year college at any time, and were of known socioeconomic status: 1.41M.

SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

Table L7. Logistic account of the three components of Academic Resources in relation to bachelor's degree attainment for all 1992 12th-graders with complete records for all three components

Variable	Parameter estimate	Adjusted standard error	F	*t*	*p*	Standard-ized estimate	Odds Ratio
Intercept	-5.3515	0.2348	529.46	11.12	0.01		
Curriculum intensity	0.6273	0.0568	122.17	5.39	0.02	0.4672	1.87
Classrank/GPA	0.4700	0.0529	79.05	4.34	0.05	0.3686	1.60
Senior test score	0.3649	0.0561	42.25	3.17	0.10	0.2785	1.44

NOTES: Standard errors adjusted by root design effect=2.05; universe consists of 1992 12th-graders with high school transcript records and senior year test scores. Percent of concordant probabilities predicted: 85.1; G^2=7536.7; *df*=8280; G^2/df=90.9; X^2 (df)=2977.32 (3).

Table L8a. First season of postsecondary attendance of NELS:88/2000 students (a) who participated in the 1992 NELS survey and (b) who were 12th-graders in 1992 and subsequently attended a four-year college

	All students in 1992 survey	12th-graders in 1992 with full high school records who attended a four-year college
First season of attendance		
Summer term	5.8 (0.46)	4.4 (0.49)
Fall term	82.1 (0.83)	91.3 (0.65)
Winter or spring terms	12.1 (0.71)	4.3 (0.37)

Table L8b. Percentage of two groups of NELS:88/2000 postsecondary students who entered in the fall term: (a) All who participated in the 1992 NELS survey and (b) those who were 12th-graders in 1992 and subsequently attended a four-year college, by race/ethnicity and socioeconomic status quintile

	Percent Entering in the Fall Term	
	All students in 1992 survey	12th-graders in 1992 with full high school records who attended a four-year college
By race/ethnicity		
White	84.3 (0.84)	92.3 (0.54)
African-American	73.8 (3.53)	85.7 (4.28)
Latino	73.9 (2.19)	86.1 (3.49)
Asian	83.3 (3.54)	89.9 (3.77)
American Indian	85.1 (5.82)	97.1 (2.87)
By socioeconomic status quintile		
Highest	92.2 (0.73)	93.7 (0.81)
2nd quintile	83.3 (1.85)	90.6 (1.66)
3rd quintile	79.6 (1.68)	90.8 (1.04)
4th quintile	77.4 (1.83)	89.9 (1.32)
Lowest	66.0 (2.96)	82.7 (3.62)

NOTES: Standard errors are in parentheses. Weighted Ns: 1992 survey participants = 2.18M; 1992 12th-graders who attended a four-year college at any time and who presented full high school records = 1.18M.

Table L9. Percentage of 1992 12th-graders earning credits in college-level math courses, both in the first calendar year of attendance and cumulatively, by number of credits earned in college-level mathematics, and type and selectivity of first institution of attendance

Characteristics of first institution	Number of credits in all college-level math courses earned in the first calendar year of attendance: None	1-4	More than 4
Type of first institution			
Four-year	44.2 (1.20)	30.2 (1.02)	25.6 (0.98)
Community college	82.1 (1.22)	12.0 (1.00)	6.0 (0.75)
Other sub-baccalaureate	89.2 (2.72)	9.5 (2.70)	1.3 (0.51)
Selectivity of first institution			
Highly selective	25.1 (5.69)	26.9 (4.24)	48.0 (5.32)
Selective	26.9 (1.98)	32.0 (2.38)	41.1 (2,28)
Nonselective	51.3 (1.26)	30.1 (1.15)	18.6 (0.91)
Open-door	82.4 (1.17)	11.8 (0.96)	5.8 (0.73)
Not ratable	92.4 (2.51)	3.7 (2.09)	3.9 (1.42)

	Number of credits in all college-level math courses earned at any time in the undergraduate careers of students who earned more than 10 undergraduate credits[a]: None	1–4	5–9	More than 9
Type of first institution				
Four-year	23.2 (0.96)	26.3 (0.96)	28.9 (0.92)	21.5 (0.99)
Community college	52.8 (1.82)	21.4 (1.47)	16.1 (1.29)	9.6 (1.01)
Other sub-baccalaureate	79.1 (3.88)	12.4 (3.62)	6.1 (1.70)	2.4 (0.83)
Selectivity of first institution				
Highly selective	18.1 (5.44)	17.8 (3.53)	18.0 (3.34)	46.1 (5.33)
Selective	16.5 (1.74)	21.1 (2.21)	31.9 (2.13)	20.5 (2.16)
Nonselective	25.4 (1.02)	29.1 (1.14)	28.7 (1.09)	16.8 (0.94)
Open-door	54.2 (1.77)	21.2 (1.43)	15.6 (1.24)	9.1 (0.92)
Not ratable	88.0 (3.10)	2.7 (1.14)	7.9 (2.65)	1.4 (0.81)

[a] The "more than 10 undergraduate credits" criterion excludes incidental students.

NOTES: Standard errors are in parentheses. Rows may not add to 100.0 percent due to rounding. Weighted N for all 1992 12th-graders = 2.09M; for those who earned more than ten credits: 1.83M.

Table L11. Institutional attendance patterns of 1982 and 1992 12th-graders who subsequently earned more than 10 postsecondary credits[a]

Attendance characteristics	Class of 1982	Class of 1992
Number of schools attended		
One	46.9 (0.82)	43.5 (1.06)
Two	33.8 (0.75)	35.1 (0.93)
More than two	19.3 (0.63)	21.5 (0.84)
For those who attended more than one school:		
Attended in more than one state	39.5 (1.21)	35.7 (1.36)
Institutional combinations:		
Four-year only	38.9 (1.21)	27.5 (1.17)
Reverse transfer[b]	7.6 (0.60)	8.2 (0.76)
Community college transfer	18.1 (0.90)	22.1 (1.12)
Alternating/simultaneous[c]	10.2 (0.67)	13.8 (1.01)
Four-year student with incidental community college[d]	[e]	12.7 (0.90)
Four-year plus other sub-baccalaureate	4.9 (0.46)	1.8 (0.36)
Community college only	10.2 (0.69)	9.1 (0.71)
Community college and other sub-baccalaureate	5.3 (0.50)	3.0 (0.33)
Sub-baccalaureate trade school only	1.1 (0.22)	0.3 (0.20)
Other combinations	3.6 (0.51)	1.5 (0.31)

[a] The reason for excluding incidental students (those who earned 10 or fewer credits) is that they provide an insufficient history for judging multi-institutional attendance.
[b] Student began in four-year institution, did not earn a degree, and transferred to a community college.
[c] Student moved back and forth between four-year and two-year institutions, or attended two institutions at the same time, or did both.
[d] Student was based in a four-year institution, and earned 10 or fewer credits, principally during summer terms, from community colleges. This measure was not available in the High School & Beyond/Sophomore cohort transcript file.
[e] Category was not available in the High School & Beyond/Sophomore cohort transcript files (NCES 2000-194).
NOTES: Standard errors are in parentheses. Rows may not add to 100.0 percent due to rounding. Weighted N for those who earned more than ten credits: 1.83M.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

Table L12. Percentage distribution of final (December 2000) education status of 1988 eighth-graders, by type and timing of high school diploma (if any), and including those who did not earn high school diplomas

Secondary/postsecondary status	Percent
1) Earned standard high school diploma by July 1992 and	
Earned at least a bachelor's degree	29.1 (0.94)
Associate degree was highest earned credential	4.7 (0.28)
Certificate was highest earned credential	2.8 (0.24)
No degree, but still enrolled in 2000	4.6 (0.33)
No degree, not enrolled in 2000	23.6 (0.79)
Never entered postsecondary education	13.1 (1.10)
2) Earned standard high school diploma *after* July 1992 and	
Earned at least a bachelor's degree	0.2 (0.12)
Associate degree was highest earned credential	0.3 (0.14)
Certificate was highest earned credential	0.2 (0.04)
No degree, but still enrolled in 2000	0.4 (0.14)
No degree, not enrolled in 2000	1.9 (0.29)
Never entered postsecondary education	1.6 (0.23)
3) Earned GEDs or certificates of attendance and	
Earned at least a bachelor's degree	0.1 (0.03)
Associate degree was highest earned credential	0.2 (0.05)
Certificate was highest earned credential	0.4 (0.14)
No degree, but still enrolled in 2000	0.8 (0.22)
No degree, not enrolled in 2000	2.8 (0.38)
Never entered postsecondary education	3.9 (0.46)
4) Others	
Did not graduate from high school, but entered postsecondary	1.0 (0.42)
Did not graduate from high school, no postsecondary	6.7 (0.65)
Indeterminable high school graduation status	1.7 (0.37)

NOTES: Standard errors are in parentheses. Percent column may not add to 100.0 due to rounding. Weight used throughout this table is the F4BYWT with a base year (1988) flag. F4BYWT covers NELS:88/2000 students who were in both the base year (1988) sample and the 2000 follow-up survey sample. Weighted N=2.93M.

GLOSSARY

VARIABLES AND THEIR CONSTRUCTION

This glossary serves not only to expand the definition of the variables considered for *The Tool-box Revisited*, but also to provide details on their construction and allied guidance for interpretation that the reader may find helpful. As in Part II of this study, the presentation follows the order of the seven steps of the logistic narrative.

Where the initial definition of the variables in Part II was simple and transparent, e.g., GENDER, no further elaboration is provided here. Nearly all these variables were either taken directly or derived from other variables on NCES 2003-402 and its June 2004 Supplement.

Step 1a: Demographic Background

NNSE (Nonnative speaker of English)—New in this analysis.

The most notable demographic change between postsecondary students from the High School Class of 1982 and those from the High School Class of 1992 was a doubling of those who not only came from households where English was a second language, but who themselves were users of the heritage language. More than half of both Asian and Latino postsecondary students were so classified (Adelman 2004a, table 1.3, p. 9).

IMMIG (Family immigrant status)—New in this analysis.

Allied to second language background is the immigrant status of families. A dichotomous variable, IMMIG, was created to indicate whether the student's parents were immigrants to the United States within the previous 10 years. Among those who attended a four-year college at any time, 27.5 percent (s.e. = 3.33) of Asian students and 8.8 percent (s.e. = 1.61) of Latino students came from recent immigrant families. The dichotomous variable did not meet the minimum *t* criterion for retention in the demographic logistic model. Nonresponse bias undermines this variable: Responses from nearly 15 percent of the NELS:88/2000 families are missing.

BROSIS (Number of siblings)—New in this analysis.

Some research has indicated that students from larger families have more difficulty entering and successfully participating in higher education (Stage and Hossler 1989; Leigh and Gil 2003; Perkhounkova, McLaughlin, and Noble 2004). The dichotomous variable, BROSIS, marks students with three or more siblings versus those with one, two, or none.

FIRSTGEN (First generation postsecondary student)—New in this analysis.

A dichotomous variable under which the criterion for first-generation status is that *neither* parent had attended a postsecondary institution. Parents' education status was reported by parents themselves, not by students. The discrepancy between students' understandings of their parents' education status and parental accounts was demonstrated in the original *Tool Box* (p. 36): For the High School Class of 1982, only 50 percent of the students with at least one parent who had

earned a bachelor's degree (but not a graduate degree) could correctly describe their parents' achievement. Parents' highest level of education is a key component of socioeconomic status, and the original *Tool Box* did not test it separately.

FAMINC (Family income)—New in this analysis.

Family income in 1991 (the year before NELS students were scheduled to be in the 12th grade) was reported by parents, and set in six bands with a fairly even distribution of all respondents across those bands. In 2005 dollars (adjusted for a Gross Domestic Product deflator[66] of 1.288), as shown in figure 4, these bands were:

Figure 4. 1991 family income bands used in the NELS:88/2000 in 2005 dollars

Income band	Income range ($000)
Highest	96.6 and higher
Second	64.4–96.5
Third	45.1–64.3
Fourth	32.2–45.0
Fifth	19.3–32.1
Lowest	Less than 19.3

SOURCES: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement); *Budget of the United States Government: Historical Tables, Fiscal Year 2005*, table 10.1.

For purposes of our analysis, the bands were combined in pairs—highest two, middle two, and lowest two—to produce a trichotomy. This version is used in the Step1a logistic model (demographic characteristics only), along with FIRSTGEN, as one of the proxies for socioeconomic status.

NEWCHILD (Parenthood by age 20)—Carried forward from *Answers in the Tool Box.*

The variable, abbreviated as NEWCHILD, is a dichotomous marking of students (of either sex) who became parents by age 20. It was a powerful, negative, and consistently significant variable through all stages of the logistic story of the HS&B/So. A decade later, the rate of early parenthood had changed. For the entire cohort of the HS&B/So, 11.6 percent (s.e. = 0.43) became parents by age 20, a proportion that rose to 16.4 percent (s.e. = 0.92) for the NELS:88/2000. For those who ever entered a postsecondary institution, these percentages drop in half. Georges (2000) would remind us of the common sense that students who became parents by age 20 were not likely to enter college at all by that time. Indeed, 59.4 percent (s.e. = 2.30) of

[66]For the GDP deflator calculator, go to http://www1.jsc.nasa.gov/bu2/inflateGDP.html

the NELS:88/2000 participants who had children by 1994 did not enter any postsecondary institution by 2000, compared with 20.9 percent (s.e. = 0.89) of those who did not become parents by 1994.[67]

SESQUINT (Socioeconomic status quintile)—Carried forward from the original *Tool Box*.

In NCES longitudinal studies, socioeconomic status (abbreviated SES) is a composite index of family income, parents' highest level of education, prestige of parents' occupations, and the presence of items such as books, regular newspapers, and a computer in the student's household. Parents provide this information, and the 1992 parent interview was the primary source. The NELS:88/2000 files presented this index in centiles, as did the HS& Beyond/So file before it. To match quintile presentations of high school curriculum intensity, high school class rank/Grade Point Average, 12th-grade test score, and the composite variable, Academic Resources (see below), the centile scale was collapsed to quintiles. SES is an anchor of the education attainment literature, with recent studies enlightening our understanding of the complex ways students of different SES backgrounds experience higher education (e.g., Walpole 2003).

Step 1b: High School Background

EDUANTIC (Education anticipations)—Modified from *Answers in the Tool Box*.

In both the original *Tool Box* and *The Toolbox Revisited*, this is a composite variable describing the consistency and level of the student's education expectations, hence, goal commitment (Allen and Nora 1995). It departs considerably from measures of student education "aspirations" that are based on the student's answer to a single question at one moment in time. The variable was built from matched pairs of questions asked in grades 10 and 12. The High School & Beyond/Sophomore cohort surveys included six pairs of questions: highest level of education expected, planned dominant activity in the year following high school graduation, timing of college entry, choice of a two-year or four-year college as entry point, lowest level of education with which the student would be satisfied, and whether the student would be disappointed if he or she did not graduate from college.

The NELS:88/2000 version does not have as strong a base. Only two pairs of questions were asked in grades 10 and 12 that feed into the construction: highest level of education expected and timing of college entry.[68] In grade12 only, the respondent was asked what was the most likely type of postsecondary institution he or she would enter: four-year, two-year, or trade school, and the answer to this question also was used in building the variable. But the lack of parallelism

---

[67]These percentages are based on the entire panel of participants in 1992 who also participated in the 1994 and 2000 follow-up surveys.

[68]Georges (2000) used a similar level-of-expectations by consistency-of-expectations construct for parental visions of their children's future education in the NELS:88/2000 cohort. Parents were interviewed on this issue when students were in the eighth grade and again when students were scheduled to be in the 12th grade.

between the HS&B/So survey and the NELS:88/2000 lead to revisiting the NELS categories and applying stricter algorithmic standards to yield an education anticipations variable closer to the structure of its predecessor, as displayed in figure 5.

Even after this construction, the education anticipations variable required an adjustment. Unlike the quintile variables for curriculum, class rank/GPA, and senior year test score, in which meanings are linear, the five-level anticipations variable is categorical. For purposes of multivariate analysis, the five levels were reduced to three as follows: (1) consistently expected to earn a bachelor's degree; (2) raised expectations to the bachelor's degree between grades 10 and 12; and (3) either lowered expectations from the bachelor's level between grades 10 and 12 or never expected to earn a bachelor's degree. The result is still a categorical variable, but the reference point—expectations for earning a bachelor's degree—is now constant in all three values.

Figure 5. Comparison of the education anticipations composite variable in the High School & Beyond/Sophomore cohort and the NELS:88/2000: Changes in students' expectations between grade 10 and grade 12

HS& B/So	NELS:88/2000
Bachelor's consistent	Bachelor's consistent
Raised to bachelor's	Raised to bachelor's
Lowered from bachelor's to some college; associate consistent	Lowered from bachelor's to some college, inconsistent
Lowered to no degree; associate inconsistent	Raised to some college; consistent "some college"
No degree plans, don't know	Sub-baccalaureate, including high school diploma or less

SOURCES: National Center for Education Statistics: High School & Beyond/Sophomore cohort, NCES 2000-194; NELS:88/2000 Postsecondary Transcript Files, NCES 2003-402.

CLSSRNKQ (Class rank/GPA quintile)—Carried forward from the original *Tool Box*.

This variable is a composite of high school class rank and GPA quintile. In both the HS&B/So and NELS:88/2000 data sets the composite was constructed in roughly the same way. The construction is described in detail in Appendix C, but the key features are worth repeating here.

The construction of this variable began with class rank, expressed as a percentile, for students whose high school graduating classes were larger than 10. Class rank was chosen for the base

reference because it overrides variability in local grading practices,[69] and responds to the divergence between stable scores on standardized tests such as the SAT or ACT and rising GPAs among the college bound (College Board 1998). Not all high schools compute class rank,[70] so for a significant percentage of students, this datum is missing. For these missing cases (as well as for the students from very small high schools), the variable construction turns to high school GPA (where available, and only for students with three or more years of course work). Basing a percentage scale first on class rank, and filling in the missing values with available GPAs from a matched scale using an equipercentile concordance methodology (Houston and Sawyer 1991), weighting the combined scale and cutting it by quintiles solves some of the bias and validity problems that would result from relying on GPA alone.

SRTSQUIN (Senior year test score quintile)—Carried forward from the original *Tool Box*.

SRTSQUIN is the quintile version of a senior year test score. Comparing the HS&B/So to the NELS:88/2000, this variable had the least variation in construction among the precollegiate academic performance variables. In both data sets, composite scores on an "enhanced mini-SAT" given to survey participants in the 12th grade were set out in percentiles. For missing cases, ACT scores were first converted to the SAT scale using ACT's equipercentile concordance methodology (accounting for the 1989 revision of the ACT test battery), and a combined SAT/ACT variable constructed. Scores on this variable were set out in percentiles, and filled in for missing cases of the senior year test score percentile using the equipercentile concordance method. SRTSQUIN reduces the noise in the lumpy distribution with a quintile presentation. Despite these efforts, 14 percent of the students in the NELS:88/2000 database are missing a senior year test measure, compared to 9 percent in the HS&B/So (see Appendix C). It must be acknowledged that the construction of SRTSQUIN combines low-stakes test scores with high-stakes test scores, though it is unclear how that ultimately affects a quintile presentation.

HIGHMATH (Highest level of mathematics reached in high school)—Carried forward from the original *Tool Box*.

In the original construction of this variable in both the HS&B/So and NELS:88/2000 data sets, some editing of the original coding of high school mathematics courses was required in light of postsecondary transcript evidence. For example, if the original coding in 1992 judged the student's highest level of high school mathematics to be "geometry," and the student's postsecondary transcript record of 2000 showed enrollment and completion of "Calculus III" in the first semester of college, then it was obvious that the original coder did not know the

---

[69]Among the divergent policies found by the College Board (1998): (a) 9 percent of high schools do not use A-F or numeric grading systems; (b) 8 percent of high schools do not give credit for grades lower than C-; (c) 19 percent of high schools are in districts where grading systems vary; and (d) 43 percent of high schools exclude some courses when calculating GPA.

[70]In its survey of high school grading practices, the College Board (1998) found that 19 percent of high schools did not calculate class rank.

difference between "geometry" and "analytic geometry," and the student's high school record had to be adjusted accordingly. HIGHMATH is considered a categorical variable (as opposed to a continuous variable) because the distance between its levels cannot be judged as ordinal.

SCIMOM (High school momentum in science and mathematics)—New in this analysis.

This variable has three values: (1) A student who reached a level of math beyond Algebra 2 and who earned three or more Carnegie units in core laboratory science was labeled as having sufficient momentum in STEM (Science, Technology, Engineering, and Mathematics)-oriented fields to enhance that momentum even further in a postsecondary environment (whether or not they chose to do so). (2) Students who reached Algebra 2 but no higher, and accumulated more than 1.5 units of core laboratory science exhibited "modest" science momentum, and (3) those whose high school records fell short of "modest" on either the mathematics or science criteria were labeled "weak-to-minimal" in terms of science momentum. SCIMOM is one of three variables tested together as proxies for the combined measure of the academic intensity of a student's high school curriculum, HSCURRQ.

FLAN (Number of units of foreign language in high school)—New in this analysis.

This variable was developed as part of a configuration of proxies for academic curriculum intensity so that we could test the proxies against the consolidated academic curriculum index, HSCURRQ, described on pages 24–27 and in Appendix F. FLAN indicates the number of Carnegie units earned in high school foreign language study, and has five values: more than 3 units, from 2.01 to 3 units, from 1.01 to 2 units, from 0.1 to 1 unit, and 0 units. FLAN is one of three variables tested as proxies for HSCURRQ.

ADVANCE (Number of Advanced Placement courses)—New in this analysis.

This variable was constructed with three values based simply on the number of AP courses recorded: three or more, one or two, and none. It was tested, along with SCIMOM and FLAN, as a proxy for the consolidated academic curriculum index, HSCURRQ.

The identification of Advanced Placement course work in the NELS:88/2000 was a complex task.The version of the NELS:88/2000 high school transcripts to which researchers have referred in the past understates participation in AP courses, though it was difficult to say precisely by how much. Two proxy measures were employed to create the first version of an AP variable on the data file used in this study:[71] AP test scores recorded on the high school transcripts and AP entries on the postsecondary transcripts (which do not include test scores). These were combined to yield 7 percent of the NELS:88/2000 12th-graders, compared with the College Board's

[71]NCES CD 2003-402.

estimate of approximately 11 percent of 1992 12th-graders having taken AP courses.[72] Not everyone who takes AP courses takes AP examinations, and while that might explain some of the gap in the estimates, it still left an uncomfortable discrepancy between the NELS and College Board accounts of Advanced Placement volume.

In light of this low yield and anomalies in the data, a new approach was taken in the work that produced the 2004 Supplement to the original NCES 2003-402 files. Enough new cases of AP course taking (*not* courses labeled "honors" or just "advanced") were identified to raise the proportion of NELS 12th-graders with AP courses to 9.4 percent.[73]

Step 2: Postsecondary Entry

FIRST4 (First school attended was a four-year college)—Carried forward from *Answers in the Tool Box.*

The dichotomous variable indicating whether the first institution attended by the student was a four-year school was active in the original *Tool Box* account, but did not qualify for entry into the model in this replication. It is not clear why this should be the case. Some 81.9 percent (s.e. = 0.82) of the class of 1982 who attended a four-year college at any time started at a four-year college, versus 78.1 percent (s.e. = 1.04) of the class of 1992. There is no meaningful difference in those numbers.

DOCT (First school attended was a doctoral degree-granting institution)—Carried forward from the original *Tool Box.*

Another dichotomous variable indicating that the first institution attended by the student was not only a four-year college, but a doctoral degree-granting school. In the original *Tool Box*, this variable was admitted to the steps of the logistic model but was never statistically significant. In *The Toolbox Revisited* analysis, this variable did not qualify for entrance in the model, even though roughly similar percentages of students who attended a four-year college at any time started in a doctoral degree-granting institution (33.8 percent; s.e. = 1.06 for the HS&B/So versus 34.1 percent; s.e. = 1.11 for the NELS:88/2000).

---

[72]See indicator #14 in *The Condition of Education, 1999*. Washington, D.C.: National Center for Education Statistics, 1999, p. 56.

[73]This approach began by isolating students who were consistent in their claims to have taken an "advanced placement course," planned to take an AP test, and reported taking at least one AP test between 1990 and 1993. From this group, those for whom AP course work had already been recorded were dropped. The balance were first matched against the HIGHMATH variable. For students who reached calculus or precalculus, responses to another question as to whether they took the course to earn college credit were invoked. If the student responded positively, the record was credited with an AP course. College transcripts were also examined for foreign language study at advanced levels in the first year of attendance (along with more than 2 years of foreign language study in high school), etc. Where matches were found, the student record was credited with an AP course.

The variable indicating the selectivity of the first institution of attendance (SELECT) is, to a large extent, confounded with doctoral degree-granting status (55 percent of the NELS:88/2000 students who started at doctoral degree-granting institutions started at either selective or highly selective schools).

SELECT (Selectivity of first institution attended)—Carried forward from the original *Tool Box.*

A dichotomous variable indicating that the first institution attended by the student was either highly selective or selective.[74] Some 4.1 percent (s.e. 0.49) of the universe for this study started in highly selective institutions (e.g., Princeton, the University of California at Berkeley, and Harvey Mudd). Another 17.8 percent (s.e. = 0.98) began their postsecondary careers in selective institutions (principally flagship state universities such as Michigan-Ann Arbor, North Carolina-Chapel Hill, Wisconsin-Madison, and Texas-Austin). More than half of the universe of students in this study (56.3 percent; s.e. = 1.32) commenced study in nonselective four-year colleges, and 20.7 percent (s.e. = 1.19) in open-door institutions, a category that is just about identical to community colleges. For the previous cohort of students from the High School Class of 1982, selectivity of first institution had a modestly positive and statistically significant association with degree completion until the last step of that analysis, extended postsecondary performance. Readers interested in the distribution of first institutional selectivity by race/ethnicity, gender, and socioeconomic status are referred to Appendix L, table L3.

NODELAY (Direct entry to postsecondary education following high school)—Carried forward from the original *Tool Box.*

This dichotomous variable was built from a simple distinction: Among students for whom we know both the month and year of high school graduation and the month and year of a transcript-documented attendance in a postsecondary institution following high school graduation, is the difference (a) seven months or less, (b) 8–18 months, or (c) more than 18 months? The first of these options is regarded as "direct entry." Dual enrollment courses do not count in this determination. The student who graduates from high school in June has until the following January to enroll and be judged "no delay." To those who might question the seven month allowance and argue for four months, one would point to a small percentage of graduates with April commencement dates who would be judged late entrants in September under a four-month rule.

---

[74] Institutional selectivity in the postsecondary files of all three grade-cohort longitudinal studies conducted by the National Center for Education Statistics has five values: highly selective, selective, nonselective, open-door, and not ratable. The first three of these values were based on the selectivity cells developed by the Cooperative Institutional Research Project (CIRP) at UCLA for its annual survey (since 1966) of entering freshmen. Community colleges and area vocational-technical institutes (AVTIs) were assigned the value of "open-door." Theological seminaries, music conservatories, and sub-baccalaureate vocational schools were considered "not ratable."

ACCELCRD (Credits earned prior to high school graduation and by examination)—New in this analysis.

ACCELCRD sums all college credits earned by course work prior to high school graduation, along with credits earned by examination—including Advanced Placement, College Level Examination Program (CLEP), and institutional challenge exams (the majority of these—in the records of the NELS:88/2000—in foreign languages). Most of these credits were earned either prior to matriculation or during the first term of enrollment, though some were earned at later points in the student's undergraduate career. The ACCELCRD values were set at three levels: more than 4 credits, 1–4, and zero.

Step 3: First-year Performance

LOWCRED (Less than 20 additive credits earned in the first calendar year of attendance)— Carried forward from *Answers in the Tool Box.*

A dichotomous variable built on an analysis of the mean number of additive credits (those that count toward degrees) earned by all postsecondary students in the first calendar year following the date of first enrollment. The threshold at which this broad population began to earn any credentials (including certificates and associate degrees) was 20 credits (in the NELS:88/2000 population, 20.252 credits, to be precise; s.e. = 1.016). LOWCRED is an early momentum indicator with enduring consequences. As table L4 in Appendix L demonstrates, the more additive credits earned in the first year, the more likely a degree will be completed.

FRSHGRAD (Grade point average in the first calendar year of attendance)—Carried forward from the original *Tool Box.*

Grade point averages were determined for the first *full calendar year* of postsecondary attendance, and were then set out in quintiles. FRSHGRAD is a dichotomous variable that divides the highest two quintiles from the other three. For the history of the HS&B/So used in the original *Tool Box* study, the dividing line was 2.70. For that of the NELS:88/2000 used in *The Tool- box Revisited*, the line is drawn at 2.88. The difference reflects the general trend in GPAs of the two cohorts (see Adelman 2004a, table 6.1, p. 78).

FREM (Any remedial course work in the first calendar year of attendance)—New in this analysis.

FREM is a dichotomous variable marking students who took any remedial courses during the first calendar year of attendance. Three variations on first-year remediation were tried out in the process of arriving at this formulation: one that focused only on remedial reading, another on remedial math, and a third on all types of remediation. The dichotomous version of the latter was the only form that could meet the minimal statistical criteria for entrance into the stepwise logistic model and allow us to track any association of early remediation with degree completion.

Step 4: Financial Aid

In general, the NCES grade-cohort longitudinal studies have been weak on financial aid information, where as the event-cohort Beginning Postsecondary Students longitudinal studies have offered a panoply of financing data. For example, if we were to ask about grants or scholarships received in the first year of attendance (1995–96) for the BPS:95/96–2001 by traditional-age students who attended a four-year college at some time, we would find the information indicated in table Glossary-1.

We would know, too, that for those who received grants/scholarships in 1995/96, the amount constituted an average of 69.3 percent (s.e. = 1.0) of all aid received, and covered 33.4 percent (s.e. = 0.7) of the price of attendance for the 1995–96 academic year. We could easily break these averages out by type of institution first attended. And we would know more, as the BPS:95/96–2001 covers PLUS (Parent Loan for Undergraduate Students) loans, Perkins loans, Stafford loans (subsidized and unsubsidized), need-based aid by source, merit-aid by source, Pell grants, SEOG (Supplementary Educational Opportunity Grants) grants, and other types of financial aid. If the grade-cohort longitudinal studies such as the NELS:88/2000 had gathered even a third of this information, a much richer analysis would be possible—though not necessarily an analysis demonstrating a significant association of types, amounts, and ratios of financial aid to degree completion.

Table Glossary-1. Percentage of 1995/96 beginning postsecondary students 20 years old and younger who attended a four-year college at any time, and received grants or scholarships in 1995/96, by source and average amount of award, and bachelor's degree attainment rate by 2001

			Percent earning bachelor's degree by 2001	
Source of grant	Percent receiving grant	Average amount of grant	Received grant or scholarship	Did not receive grant or scholarship
All sources	54.6 (1.3)	$4506.00 (170.7)	59.8 (1.4)	49.1 (1.9)
Federal	23.2 (1.0)	1958.60 (34.0)	47.8 (1.9)	57.1 (1.4)
State	19.1 (1.0)	1757.40 (68.8)	58.6 (2.0)	54.0 (1.4)
Institution	31.9 (1.3)	4312.00 (208.0)	67.5 (1.7)	49.0 (1.5)
Other	16.1 (0.7)	1529.60 (73.5)	71.1 (2.0)	51.9 (1.4)

NOTE: Standard errors are in parentheses.
SOURCE: National Center for Education Statistics: Beginning Postsecondary Students Longitudinal Study, 1995/96–2001, Data Analysis System (NCES 2003-173).

Step 5: Attendance Patterns

FOURTRAN (Transfer from one four-year college to another)—New in this analysis.

The algorithm for classic transfer from a community college to a four-year college was fairly easy to construct. But to distinguish a true four-year-to-four-year college transfer required an indirect route. In the final survey of NELS longitudinal study (2000), respondents who attended any postsecondary institution(s) were asked whether they ever "transferred credits." One cannot equate the yes/no answer to that question with institutional transfer. One group of four-year-to-four-year transfers was easy to identify: those who started in a four-year college and earned a bachelor's degree from a different four-year college. The second group was defined by the following attendance characteristics: They started in a four-year college, attended at least two four-year colleges, earned more than 30 credits from four-year colleges, were *not* reverse transfers, and earned less than 20 credits from community colleges and other sub-baccalaureate institutions. For the most part, these students did not earn bachelor's degrees, but they accumulated an average of 85.6 credits (s.e.=3.57) from four-year colleges. Of those who did not earn a degree, 34.6 percent (s.e. = 4.17) were still enrolled and degree-candidates in 2000.

MULTINS (Student attended more than one postsecondary institution as an undergraduate)—Carried forward from *Answers in the Tool Box.*

MULTINS is a dichotomous variable indicating that the student attended more than one institution. This is a macro-vision of otherwise multidirectional student behavior. One might suspect that when MULTINS, TRANSFER, and FOURTRAN are in the same logistic model, at least one of these variables will evidence an unacceptable degree of collinearity. But within the context of the universe under study in *The Toolbox Revisited*, the correlation between community college transfer (TRANSFER) and MULTINS is 0.3363 and that between four-year-to-four-year transfer (FOURTRAN) and MULTINS is 0.3246. These are modestly positive, but not so high as to indicate collinearity problems. What that may mean is that the three independent variables are making distinctly different statements in the context of the logistic regressions in which they appear.

SUMMER (Number of credits earned during summer terms)—New in this analysis.

Attendance and credit generation during summer terms turned out to be a strong proxy for high-octane persistence among community college students (Adelman 2005a), and was, hence, brought into the model for the population of those who attended a four-year college at any time. The variable was set by three bands of the number of credits earned in this manner: more than 4, 1–4, and 0. Some 54.8 percent (s.e. = 0.92) of all 1992 12th-graders who continued their education earned credits in at least one summer term; 61.1 percent (s.e. = 0.96) of those who earned more than 10 credits did so, as did 63.2 percent (s.e. = 1.10) of the universe on which this essay focuses. Given the magnitude of those percentages, it is not so much the fact of using summer terms, but the volume of credit generation that should count.

PARTTIME (Was the student's enrollment intensity *ever* part-time?)—New in this analysis.

The original *Tool Box* declined to confront part-time status and its effects. If one is using transcripts as evidence, there are a number of problems in determining which students are part-

time and when. This issue deserves extended attention, with support drawn from very different data sources (see, e.g., O'Toole, Stratton, and Wetzel 2003). Even if one standardizes credits on a semester metric across over 3000 institutions in the NELS:88/2000 postsecondary transcript files, it is often difficult to know what is considered "part-time" in term X at institution Y in program Z. With over 60 percent of students earning credits in summer terms, we would be obligated to include such terms in an account of enrollment intensity, and the question, "What is 'full-time' in a summer term?" would have to be answered in each institution. In the last survey of the NELS:88/2000 cohort in 2000, students were asked whether they had ever "attended less than full time." Despite the ambiguity of the phrasing and students' understanding of what "less than full time means," student responses were accepted as the first stage of creating a variable indicating part-time status at some point in their careers. In their 1994 interviews, students were also asked about their enrollment intensity status at the first institution they attended. When they indicated part-time, that fact overrode any denial of part-time status in their 2000 interview. Proximate judgment supercedes retrospection.

The second stage in developing this rough proxy draws on the transcripts and the notion of reducing credit load to part-time status. To identify students who may start with a full-time schedule but reduce it to part-time intensity by withdrawing from courses, we take the average credit load per semester for bachelor's degree recipients—14.2 (average annual load of 30.8 minus the sum of summer-term credits, credits by examination, and dual enrollment credits divided by two)—and ask by what percentage that figure would have to fall to bring the student's credit load below the threshold for full-time status (12 credits). The answer is 16.2 percent. So for the sake of this crude proxy measure, it is assumed that students who withdrew from attempted credits at 16.2 percent rate or higher were—or became—part-time at some time. With that group added to students who indicated part-time status in the course of their 2000 interviews, the proportion of NELS students who were part-time at some time in the undergraduate careers was 47.4 percent—compared with 48.2 percent of traditional-age students in the BPS longitudinal study of 1995/96–2001 (for an account of enrollment intensity in both data sets, see Appendix L, table L5).

Step 6: Extended Postsecondary Performance

REMPROB (Nature and intensity of remedial work)—Carried forward from *Answers in the Tool Box.*

In both the original *Tool Box* and *The Toolbox Revisited*, REMPROB describes the nature and extent of a student's remedial course work without the boundary of the first calendar year of attendance. For that reason, when REMPROB is tried out in the logistic narrative at the stage of extended postsecondary performance, it replaces the freshman year remediation variable (FREM).

REMPROB is created by an if-then-else logic that starts with remedial reading as the most serious of remedial problems,[75] and works its logical steps as follows:

---

[75]For an elaboration of REMPROB in relation to student demographic backgrounds, high school performance, and degree attainment, see Adelman 2004a, pp. 87–94, and Wirt, et al. (2000), indicator 14, p. 52 and supplemental tables (p. 152).

1. Any remedial reading
2. Two or more remedial courses (not reading, and, if math, more than two)
3. One or two courses of remedial mathematics only
4. One remedial course (not reading, not math, thus leaving writing, language arts, and general basic skills)
5. No remedial course work

For the sake of presentation in the logistic sequence, REMPROB is a dichotomous variable in which remedial reading plus more than one remedial course falls on one side of the border, and all other remediation (including no remediation) on the other side. In the original *Tool Box*, REMPROB was admitted into the model, but did not reach the threshold of statistical significance. In *The Toolbox Revisited*, REMPROB did not meet the minimum statistical standard for entry into the model when it was invoked in Step 6.

TREND (Trend in student's grade point average)—Modified from previous presentation in the original *Tool Box*.

This variable describes the trend in a student's postsecondary grade point average (GPA), and applies only to those students with complete undergraduate transcript records and computable GPAs. In its original *Tool Box* version, two reference points were used: end of the first calendar year GPA, and final undergraduate GPA. From these two markers, one could observe whether GPA was rising, flat, or falling, using a ratio of final GPA to first-year GPA. Ratios in the .95 to 1.05 range were judged to indicate no change, with ratios above 1.05 indicating a rising GPA, and ratios below 0.95 indicating a falling GPA. For a slightly better set of markers, the NELS:88/2000 postsecondary transcript files thus added a variable for GPA two years after entry. With three points of reference, ratios are not invoked, rather relationships (greater, less than, or equal to)—and at three points in time. From the permutations of these relationships one can determine whether the trend was rising, flat/inconsistent, or falling.

CUMMATH (Number of credits earned in college-level mathematics)—New in this analysis.

This variable, setting out cumulative credits earned in college-level mathematics in three bands (more than four, 1–4, and 0) replaces the parallel variable for first-year college-level mathematics credits in the context of an extended postsecondary history account. The motivation for including this curriculum marker is the same: Even if postsecondary students do not concentrate their studies in science, technology, engineering, or mathematics/computer science (STEM), their quantitative background will be called upon (in business and the social sciences, in particular). Student academic momentum, it is hypothesized, will be as much enhanced by quantitative study on the post-matriculation side of education history as it was in secondary school.

CHANMAJ (Change of major)—New in this analysis.

If transcripts are our principal source of evidence, the only moment at which we are sure of a student's major is the moment of degree award. Sometimes, the NELS:88/2000 transcripts with no degree indicated a major, which was verified by hand-and-eye reading by two judges only when the transcript carried a minimum of 15 credits and the major field indicated carried a minimum of 12. But that still leaves a large swath of missing accounts of students' major. It is wholly possible, for example, that a student earning a B.S. in computer science changed majors

twice along the way, and in two different institutions. In the matter of major—and change-of-major—the transcript is not as credible as the student. So the last NELS survey in 2000 asked students whether they had changed majors at any time, but unfortunately did not ask "from what to what."

A dichotomous change-of-major variable was developed and tried out for this study. Basically, it took the universe of students who said they changed majors, and added to that universe community college transfer students who moved from general studies to a discrete major, and cases where the student presented two transcripts with no degrees but different majors. It also took student responses in 1994 to questions about their major at the first institution attended and that at the most recent institution attended. Where the student reported two different disciplinary majors, e.g. electrical engineering at the first institution and biology at the most recent institution, that, too, was marked as a change of major no matter what the student told interviewers in 2000. Unfortunately, all these steps created a collinearity problem with the TRANSFER variable, and CHANMAJ did not qualify for entrance into the logistic narrative. On the other hand, it was admitted and played a notable role in the linear account of time to degree (see Appendix J).

Step 7: Final Model

NOSTOP (Continuous enrollment)—Carried forward from *Answers in the Tool Box.*

Given the extended potential undergraduate periods of 12 years (National Longitudinal Study of the High School Class of 1972), 11 years (High School and Beyond/Sophomores), or 8.5 years (NELS:88/2000), it makes no sense to describe stop-out behavior as one semester or its equivalent. In all three NCES postsecondary transcript-based grade-cohort studies, non-continuous enrollment was defined as *more than* a one semester (or its equivalent, e.g., two quarters) stop-out period. In the dichotomous variable, NOSTOP, the student is considered continuously enrolled even with one semester (or two quarters) off. From the moment of its introduction, NOSTOP was the strongest independent variable in the logistic narrative of the original *Tool Box*.

WRPT Ratio (Ratio of non-penalty withdrawal and no-credit repeat grades to all grades received)—Carried forward from the original *Tool Box.*

In the original *Tool Box*, this variable was called the DWI (drops, withdrawals, and incompletes) index. DWI is not a wholly accurate acronym. What is really described is a ratio in which the number of courses from which the student withdrew without penalty *plus* those the student repeated is the numerator, and the total number of courses in which the student enrolled is the denominator. The ratio counts course attempts, not credits. Withdrawals without penalty are not the same as courses "dropped" within set periods that most colleges and community colleges mark for "drop-and-add." Courses "dropped" are not included in the ratio. Nothing here involves penalty grades. All cases at issue are noncredit grades. The variable WRPT ratio is dichotomous: On one side of the dividing line are students who withdrew from or repeated 20 percent or more of all courses in which they enrolled.

Part IV. Matriculation and Beyond: The Features of Postsecondary History

13. Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time: Postsecondary entry phase 45
14. Percentage of 1992 12th-graders who earned credits in five categories of college-level mathematics courses in the first calendar year of attendance; and among non-incidental students, the percentage who ever earned credits in those five categories, by type of institution first attended 48
15. Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time: First postsecondary year performance 49
16. Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time: Postsecondary financing 51
17. Percentage of 1992 12th-graders with complete postsecondary records who persisted in postsecondary education from their first calendar year of enrollment to a second calendar year, by type of institution first attended, and, of those who persisted, percentage with lagging first-year performance 54
18. Of 1992 12th-graders who earned a standard high school diploma by December 1996 and attended a four-year college at any time, credits earned, and GPA at the end of the second year following initial enrollment in postsecondary education, and extended postsecondary attendance and performance markers, by ultimate bachelor's degree status 56
19. Status drop-out rates at the end of the second year following initial enrollment in postsecondary education of 1992 12th-graders who attended a four-year college at any time, and allied academic performance data 57
20. Of 1992 12th-graders who earned a standard high school diploma by December 1996 and attended a four-year college at any time, course participation rates by the end of the end of the second year following initial enrollment in postsecondary education, by ultimate degree status 58
21. Of 1992 12th-graders who earned a standard high school diploma by December 1996 and attended a four-year college at any time, participation rates in lower division course category aggregates and average number of credits earned in each aggregate by the end of the second year following initial enrollment in postsecondary education, by ultimate degree status 60
22. Relationships of GPA in first year of attendance to number of institutions attended by 1992 12th-graders, by type of first institution attended by 1992 12th-graders, by type of first institution attended 63

Tables (continued) **Page**

23. Combinations of institutions attended by 1992 12th-graders who attended a four-year college at any time and who also attended more than one school, and percentage earning bachelor's degrees under each combination 64
24. Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time: Postsecondary attendance patterns 66
25. Three trends in postsecondary GPA of 1992 12th-graders who attended a four-year college at any time through December 2000 and offered complete postsecondary records, by GPA at three points in time, average undergraduate time, and percentage earning bachelor's degree 69
26. Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time: Extended postsecondary performance 71
27. Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time: Final factors, with complete academic history 75
28. To what extent does the final ratio of undergraduate course withdrawal and no-credit repeat grades reflect the ratio and volume of withdrawal and no-credit repeat grades in the first calendar year of enrollment? Answers from the history of 1992 12th-graders who attended a four-year college at any time 76
29. Seven steps of a logistic regression model with bachelor's degree attainment by age 26 or 27 as the outcome for 1992 12th-graders who attended a four-year college at any time 78

Part V: Closing the Gap

30. Bachelor's degree completion rates for students who began in four-year colleges according to three different national longitudinal studies of the 1990s 87
31. Of 1992 12th-graders who started their postsecondary careers in four-year colleges, percent who earned bachelor's degrees by number of credits earned in summer terms, by race/ethnicity 90
32. Hypothetical cumulative consequences of variables critical to bachelor's degree completion for 1992 12th-graders who earned a standard high school diploma by December 1996, attended a four-year college at any time, and whose postsecondary records were complete, by race/ethnicity 92
33. Percent of credits earned during undergraduate summer terms by African-American 1992 12th-graders in aggregate course categories 94
34. Hypothetical cumulative consequences of variables critical to bachelor's degree completion for 1992 12th-graders from the lowest, middle, and highest socioeconomic status quintiles who earned a standard high school diploma by December 1996, attended a four-year college at any time, and whose postsecondary records were complete 95

Acknowledgments

For review of the drafts of *The Toolbox Revisited*, the author is deeply grateful to Laura Horn of MPR Associates, Alisa Cunningham of the Institute for Higher Education Policy, Rosa Aronson of the National Association of Secondary School Principals, Alberto Cabrera of the University of Wisconsin-Madison, six anonymous external reviewers selected by the Office of Vocational and Adult Education (OVAE) of the U.S. Department of Education, and expresses particular appreciation for the meticulous review by Paula Knepper of the Department's National Center for Education Statistics. In the final stages of review and revision, the author is especially appreciative of the efforts and insights of Jeffrey Owings of the National Center for Education Statistics and David Bergeron of the Office of Postsecondary Education, both of the U.S. Department of Education.

While cited in the text, it is appropriate to repeat gratitude for the paths blazed and inspirations offered by Karl Alexander of Johns Hopkins University and Vincent Tinto of Syracuse University. C. Dennis Carroll and Jeffrey Owings, both of the National Center for Education Statistics, are responsible for the data sets used and the way they are used, and for continued support, encouragement, instruction, and tough oversight. All who invoke these national data treasures owe them.

Colleagues in the Policy, Research, and Evaluation Studies group of OVAE—Braden Goetz, Andrew Abrams, Ricardo Hernandez, and Chief of Staff, Jana Toner—are thanked for their management of the review process for this document, for instructive feedback, and for shepherding the penultimate drafts of this document through the Department, while Joan Athen made sure that the community college role in the story of the students traced in this document was appropriately highlighted. The final shape of *The Toolbox Revisited* owes a considerable amount to its ultimate editor, Katherine Devine, and to the support of Jacquelyn Zimmermann, the Department's Director of Editorial Policy and Publications. For the Web version, the author owes much to the skill and dedication of Carol Bryant.

Executive Summary

The Toolbox Revisited is a data essay that follows a nationally representative cohort of students from high school into postsecondary education, and asks what aspects of their formal schooling contribute to completing a bachelor's degree by their mid-20s. The universe of students is confined to those who attended a four-year college at any time, thus including students who started out in other types of institutions, particularly community colleges.

The core question, data source, and legacy

The core question is not about basic "access" to higher education. It is not about persistence to the second term or the second year following postsecondary entry. It is about completion of academic credentials—the culmination of opportunity, guidance, choice, effort, and commitment.

To answer the question, *The Toolbox Revisited* uses the most recently completed of the national grade-cohort longitudinal studies conducted by the National Center for Education Statistics. This study, known as the NELS:88/2000, began with a national sample of eighth-graders in 1988. They were scheduled to be in the 12th grade and graduate from high school in 1992. They were followed through December 2000. In addition to regular interviews with these students, the data set on which this essay draws includes the critical components of high school and college transcripts, and the transcript data are the principal sources for the academic history observed.

The Toolbox Revisited was designed as a replication of a noted previous study published by the U.S. Department of Education, *Answers in the Tool Box: Academic Intensity, Attendance Patterns, and Bachelor's Degree Attainment* (1999), hereinafter referred to as "the original *Tool Box,*" which based its analysis on a national cohort of high school students who were scheduled to graduate in 1982, and who were followed through 1993. The question naturally arose as to whether the hypotheses and analyses based on that cohort's history would hold up in the story of the slightly overlapping 1992–2000 period.

We have learned a great deal in a very short time from numerous initiatives of states and private foundations to prepare high school students better for higher education, and from major federal stimuli under the *No Child Left Behind* legislation to jump start the process of academic momentum prior to high school. One of the reasons for examining the academic history of the NELS:88/2000 cohort is that its students attended high school after the wave of reforms in the 1980s that followed the critique of U.S. education offered by the seminal report, *A Nation at Risk* (1983), and, hence, may provide some clues as to the likely outcomes of current reform efforts.

Much has changed in other ways, too, since the High School Class of 1982 (the subjects of the original *Tool Box*) moved through their scheduled 12th grade and through postsecondary education. A dramatically higher proportion of high school seniors of all race/ethnicity groups continue their education, though access gaps remain (Wirt et al. 2005, indicator 22). Postsecondary attendance patterns among traditional-age students have become far more

complex, with nearly 60 percent of undergraduates attending more than one institution, and 35 percent of this group crossing state lines in the process; community college transfer rates rising nearly 10 percentage points; one out of eight undergraduates based in four-year institutions using community colleges to fill in pieces of their curriculum, and another eight percent "swirling" back and forth between the four-year and two-year sectors. Dual-enrollment while in high school, credit-by-examination, and use of summer terms all added to the dynamic mix of time and space that marked student pathways in the1990s.

With all this change, we still measure something called "college graduation rates" with anachronistic formulas that do not track students through increasingly complex paths to degrees. As a result, we do not understand what is really going on. The dominant language accompanying analyses bemoaning putatively low graduation rates is a language of "attrition," with students labeled "at risk" or "minimally college-qualified," and leaking out of "pipelines."

This study looks at student histories derived from transcript records in a different way and with a different tone. It follows the student, not the institution, because it is the *student's* success that matters to families—and to the nation. It allows the maximum length of postsecondary time for the High School Class of 1992, 8.5 years, for students to earn degrees no matter how many institutions they attend. It notes that if the history of the Class of 1982 were truncated at 8.5 years, there has been a decent improvement in bachelor's degree attainment among non-incidental students (those who earned more than 10 credits, i.e. "made a go of it") who attended a four-year college at any time (from 60 to 66 percent). It is natural to ask how this happened, to identify the moments and aspects of schooling that may have made a difference, and to reflect on what might make the most difference in the future for narrowing degree-completion gaps by race/ethnicity. In that task, *The Toolbox Revisited* looks for the features of academic history that are realistically subject to change by institutions whose principal business is the generation, preservation, and dissemination of knowledge. While acknowledging that for degree-completion rates to improve, students themselves must respond, and that their response does not occur in a vacuum, the features of student histories that are the domain of this inquiry do not include social and psychological variables attendant on the passage from adolescence to adulthood.

It is important to note that, as was the case for the original *Tool Box*, the student universe for *The Toolbox Revisited* constitutes roughly half who reach the 12th grade (table 1). It does not include students who failed to graduate from high school, those who earned General Education Diplomas (GEDs), those who had not enrolled in any postsecondary institution by the age of 26, and those who entered the postsecondary system but never attended a bachelor's degree-granting institution. The resulting demographics are slightly more female, slightly less minority, less with a second language background, and a higher socioeconomic status distribution than the cohort as a whole (table 2).

Organization

We learned from critiques of the original *Tool Box* to sort the chronology of events with greater care. There are seven steps in the analysis of *The Toolbox Revisited*, each of which involves a

collection of variables that are investigated in terms of the degree to which they help us explain bachelor's degree completion for the population of students under investigation:

Step 1: Demographic background and high school history
Step 2: Postsecondary entrance (timing and type of institution)
Step 3: First postsecondary year history (curriculum and performance)
Step 4: Factors of financing postsecondary education in the early years
Step 5: Postsecondary attendance patterns
Step 6: Extended postsecondary history (curriculum and performance)
Step 7: Final model, with complete academic history

This essay also takes an important pause outside the steps of the core statistical model to consider the characteristics of student progress through the *second* year following postsecondary entry.

As each step of the statistical model of student history is set forth, it is pointed out where the results are similar to the findings of the original *Tool Box* with its earlier population, and where they diverge. All seven steps are subsequently assembled together in one place (table 29) so that the reader can observe the factors that have *consistently* contributed to degree completion.

Principal Stories and Guidance

This executive summary offers themes, highlights, and implications of the data for those who comment on secondary and higher education and make decisions about institutional or system policy—editorial writers, legislators, researchers, education administrators.

Two national longitudinal studies, a decade apart, have told similar stories. When the second story reinforces the first—and sheds even more light—something has to be right, and it behooves us to pay attention. Both of them provide support for current efforts to improve the quality of high school curricula and the participation in those curricula of ever larger proportions of students. Both of them provide guidance for college and community college processes likely to lead students to degree completion.

Some of what was learned from the original *Tool Box* was taken to heart at the secondary school level, and, in some respects, we are seeing positive results in academic curricular participation in high schools. But counting Carnegie units[1] in English or science is not the same as describing and validating what students have learned, and whether that learning links smoothly to the performance expectations of the postsecondary world. *The Toolbox Revisited* says we have more to do, that the bulk of our task lies both after the college matriculation line, and in communication and outreach between postsecondary institutions and high schools. How do we

[1]A Carnegie unit is the basic credit system for U.S. secondary schools. It is generally recognized as representing a full year (36-40 weeks) in a specific class meeting four or five times per week for 40-50 minutes per class session (Martinez and Bray 2002).

learn what we have to do? By following students in the richness and complexity of their postsecondary histories.

Curriculum, starting in high school, and continuing

However complex students' attendance patterns, the principal story line leading to degrees is that of content. What one learns is what one studies, and what one brings to economic and community life. The story starts in high school, but merely crossing the bridge to college or community college doesn't mean the story is over. Furthermore, the bridge is not always aligned with the road on the other side.

The academic intensity of the student's high school curriculum still counts more than anything else in precollegiate history in providing momentum toward completing a bachelor's degree. At the highest level of a 31-level scale describing this academic intensity (see Appendix F), one finds students who, through grade 12 in1992, had accumulated:

3.75 or more Carnegie units of English
3.75 or more Carnegie units of mathematics
highest mathematics of either calculus, precalculus, or trigonometry
2.5 or more Carnegie units of science *or* more than 2.0 Carnegie units of core laboratory science (biology, chemistry, and physics)
more than 2.0 Carnegie Units of foreign languages
more than 2.0 Carnegie Units of history and social studies
1.0 or more Carnegie Units of computer science
more than one Advanced Placement course
no remedial English; no remedial mathematics

These are minimums. In fact, students who reached this level of academic curriculum intensity accumulated much more than these threshold criteria (see table F1), and 95 percent of these students earned bachelor's degrees (41 also percent earned master's, first professional, or doctoral degrees) by December 2000.

Provided that high schools offer these courses, students are encouraged or required to take them, and, in the case of electives, students *choose* to take them, just about everybody could accumulate this portfolio. Unfortunately, not all high schools present adequate opportunity-to-learn, and some groups of students are excluded more than others. Latino students, for example, are far less likely to attend high schools offering trigonometry (let alone calculus) than white or Asian students. Students from the lowest socioeconomic status (SES) quintile attend high schools that are much less likely to offer any math above Algebra 2 than students in the upper SES quintiles (table 6). If we are going to close gaps in preparation—and ultimate degree attainment—the provision of curriculum issue has to be addressed. In recent years, colleges and community colleges have begun to provide these courses to high school students, and distance learning provides additional options if students have access to the technology. The hypothetical

consequences of participating in curriculum configurations approaching that illustrated above for Latino degree completion rates, in particular, are stunning (table 32).

There is a quantitative theme to the curriculum story that illustrates how students cross the bridge onto and through the postsecondary landscape successfully. The highest level of mathematics reached in high school continues to be a key marker in precollegiate momentum, with the tipping point of momentum toward a bachelor's degree now firmly above Algebra 2. But in order for that momentum to pay off, earning credits in truly college-level mathematics on the postsecondary side is *de rigeur*. The world has gone quantitative: business, geography, criminal justice, history, allied health fields—a full range of disciplines and job tasks tells students why math requirements are not just some abstract school exercise. By the end of the second calendar year of enrollment, the gap in credit generation in college-level mathematics between those who eventually earned bachelor's degrees and those who didn't is 71 to 38 percent (table 21). In a previous study, the author found the same magnitude of disparity among community college students in relation to earning a terminal associate degree (Adelman 2005a). The math gap is something we definitely have to fix.

A dominant feature of academic histories that cannot really be assessed until the end of the second year following college entry is the extent to which students successfully completed credits in a range of "gateway" courses. It is at this point that the postsecondary curricular story line fully emerges, with ratios of participation in the "gateways" between those who ultimately earned degrees and those who did not running 6:1 in American literature, 4:1 in general chemistry, and more than 3:1 in precalculus, micro/macroeconomics, introduction to philosophy, and world civilization (table 20). These gaps in curricular participation argue for academic administrators to identify their key gateway courses and regularly monitor participation.

College and community college expectations for their first-year students in those gateway courses—expressed through examinations, paper and laboratory assignments—need to be more public. Examples such as those offered by the American Diploma Project in its report, *Ready or Not: Creating a High School Diploma That Counts* (2004), should be shared with larger audiences than policymakers and others who habitually read such reports. Parents should see those assignments even if they don't understand them; high school teachers should ponder them to assess whether their exiting students are likely to be prepared; and, most importantly, high school students have got to see them as road signs to their next education destination. *The Toolbox Revisited* advocates making these examples part and parcel of admissions packets, publicity brochures, and Web sites. There is risk in this: Some students may be scared away. But there is no better way to enhance articulation and preparedness than to display what students can expect.

Postsecondary benchmarks

In both colleges and community colleges, the curriculum story line intersects attendance patterns and performance in ways that set benchmarks for academic advisement and intervention:

- Less than 20 credits by the end of the first calendar year of enrollment (no matter in what term one started, whether summer, fall, winter, spring) is a serious drag on degree completion. The original *Tool Box* told the same story. It is all the more reason to begin the transition process in high school with expanded dual enrollment programs offering true postsecondary course work so that students enter higher education with a *minimum* of 6 additive credits to help them cross that 20-credit line. Six is good, 9 is better, and 12 is a guarantee of momentum.
- We falsely believe that beginning students drop out of higher education in appalling numbers by the end of their scheduled first academic year of attendance. In fact, about 90 percent of traditional-age beginning students turn up somewhere (maybe not at the first school attended) and at some time (maybe not in the fall term) during the subsequent calendar academic year (which we measure as July 1 through June 30). However impressive this percentage, the *quality* of persistence counts more, and, for a third of these students, the quality of persistence leaves much to be desired (table 17). *The Toolbox Revisited* urges that institutions monitor and report the quality (as much as the fact) of persistence.
- More than 60 percent of the students in the sample under investigation enrolled during summer terms. Undergraduates are not only more geographically mobile, but have shattered observance of the traditional academic calendar. Summer term credits are more than metaphors for high octane persistence: Earning more than 4 credits during those terms held a consistently positive relationship to degree completion, and gave African-American students, in particular, a significant boost in hypothetical graduation rates (table 32). College and community college administrators can be very creative in expanding the use of summer terms.

Student uses of time

The example of summer-term credits, particularly in combination with the complex multi-institutional attendance patterns, underscores another theme of *The Toolbox Revisited*: Student uses of time in undergraduate careers are now more important than their uses of place. In other words, *when* students do something academic has a more significant relationship to degree completion than *where* they do it. For example:

- For the High School Class of 1982 (the subjects of the original *Tool Box)*, timing of entry to postsecondary education never rose to a level of statistical significance in the analysis, whereas variables for the type of institution first entered played inconsistent but positive roles in explaining degree completion. A decade later, with a higher proportion of high school students continuing to college, the situation was reversed (table 13). What this means is that recruitment efforts have to insure that students enter postsecondary education immediately following high school graduation. The longer students wait, the less likely they will finish a degree.

- The only characteristic of the first institution of attendance to be admitted to statistical analysis was selectivity, but it never rose above the threshold of significance. Quite frankly, one isn't worried about degree completion for the 5 percent of traditional-age undergraduates who enter highly selective colleges. One is more concerned with the rest of the river—particularly the 78 percent who start in either nonselective four-year colleges or open-door community colleges.
- The original *Tool Box* study declined to confront part-time status and its effects. If one is using transcripts as evidence, there are a number of problems in determining which students are part-time and when. *The Toolbox Revisited* found a way around these problems to mark whether a student's enrollment intensity *ever* fell into part-time status, i.e., less than 12 credits per semester or its equivalent. Part-time attendance by whatever means, as Carroll (1989) labeled it, proved "hazardous" to degree completion health (table 24; table 29).
- In longitudinal studies extending for as long a period of postsecondary time as does the NELS:88/2000 (8.5 calendar years), a student is allowed stop-out periods totaling one semester or its equivalent (e.g., two quarters), exclusive of summer terms, and still be considered "continuously enrolled." Continuous enrollment is a factor of attendance patterns, and another marker of the student's use of time. It proves to be overpowering: with 16 other variables in play, continuous enrollment increases the probability of degree completion by 43 percent (table 27). The original *Tool Box* offered the same message, arguing for assiduous monitoring of student stop-out periods. Put another way: Keep the student continuously enrolled, even part-time (less damaging than excessive stop-out periods).

Purposeful migration versus "swirling"

The complexity of student postsecondary enrollment patterns, already a notable phenomenon for the population under study in the original *Tool Box*, accelerated in the subsequent cohort. The construction of the NELS:88/2000 postsecondary transcript files took advantage of what we learned from more sophisticated institutional and state system tracking studies of the 1990s; hence, some new attendance pattern variables were available and others (those describing different kinds of multi-institutional attendance) refined.

What we found for the students of the 1992-2000 period was this:

- Formal transfer from a community college to a four-year college and formal transfer from one four-year college to another were positively associated with degree completion, but wandering from one school to another was not.

In fact, the nomadic multi-institutional attendance behavior increasingly known as 'swirling,' held a significant and negative relationship to degree completion (table 24, table 39). These statements are a very simple untangling of complex realities.

The basic question asked of the transcript data—did a student attend only one school or more than one?—begins a process of inquiry to determine *how* the student attended second and third institutions. Given very taut definitions of what transfer means, we are advised to ensure that multi-institutional attendance is purposeful and productive. For that, we require much better student tracking systems than we currently possess, and regular contact with students in motion.

Student academic performance

More than the original *Tool Box*, *The Toolbox Revisited* recognizes that the path of student academic performance, marked by grades, is a reflection of quality of effort, and pays off. It starts in high school: Academic curriculum participation is still the strongest of the precollegiate momentum indicators, but between the 1980s and 1990s, class rank/GPA moved markedly ahead of senior year test score in its contribution to students' overall "Academic Resources" index, a composite indicator of high school curriculum intensity, class rank/GPA, and senior year scores on a 90-minute exam best described as a mini, enhanced SAT (see p. 16 and Glossary).

This story continues on the postsecondary side of the matriculation line:

- Earning grades that place one in the top 40 percent of first-year GPA for the whole cohort is a strong—and positive—contributor to academic momentum, and remains in the account of degree completion throughout the histories of both the class of 1982 and the class of 1992 (table 15).

- The theme of quality-of-student-effort, reflected in grades, is strengthened when the canvas covers the student's entire undergraduate career. In the original *Tool Box*, the variable describing the *trend* in students' GPA had only two reference points: first calendar year and final GPA. For *The Toolbox Revisited*, there are three such points: first calendar year GPA, cumulative GPA for the first two calendar years, and GPA as of the last date of attendance, whether or not a degree was earned. A rising trend in grades fits with attainment (table 25), contributing positively and significantly (table 26).

A story twice told should be a story to which we listen

Both the original *Tool Box* and *The Toolbox Revisited* revealed that one of the most degree-crippling features of undergraduate histories is an excessive volume of courses from which the student withdrew *without penalty* and those the student repeated. We set this up as a ratio, and marked those who withdrew from or repeated 20 percent or more of their course attempts. Doing so cuts the probability of completing a degree in half (table 27)!

The withdrawals counted here are not "drop" grades that apply during standard drop-and-add periods at the beginning of terms. They are the result of institutional policies that allow withdrawals without penalty after the drop-and-add period. No-credit repeats are standard fare

in remedial courses, but when they reach destructive levels the question arises as to how many times an institution allows a student to repeat a course. Think of it this way: Every non-penalty withdrawal and no-credit repeat means that a seat in a course is not available to someone else. Add those seats up, and admission to an institution may not be available to someone else. Excessively lax withdrawal and repeat policy, then, ultimately blocks general access. And in terms of degree completion, such policies do students no favors.

What Does Not Count in The Account of Completion?

- Students' education "anticipations" (the consistency and level of their vision of how far they will get in school) were not significant at any step of the logistic account for the High School Class of 1992. This is a change from the position of the "anticipations" variable in the original *Tool Box*, where it ducked in and out of significance. The new message is more clear: Among students who attend a four-year college at some time, expectations are distinctly secondary to one's uses of academic time and to one's academic performance.

- Whereas grants and student work-study were modestly significant contributors to degree momentum at *early* stages of students' postsecondary careers in the history of the High School Class of 1982, the data on finance mechanisms for the High School Class of 1992 are poor, and the results inconclusive. Analysts are directed instead to the Beginning Postsecondary Students longitudinal studies, which contain detailed financial aid data (but skeletal information on high school histories and postsecondary course work).

- Of student demographic characteristics, only one—socioeconomic status—was significantly associated with degree completion, though in a modest manner. Gender and race/ethnicity were never significant in the logistic narrative, even though some *indirect* effects of these key demographic characteristics would probably be found in other statistical models. When each race/ethnicity group was treated as an independent variable, the basic story did not change.

- Both a dichotomous variable marking any remedial work in the first calendar year of attendance, and an elaborate variable describing types and extent of remediation over the course of a student's entire undergraduate career were employed in the analysis, but to no avail. The same procedure was used in the original *Tool Box*, where the variables were admitted to the statistical model but did not reach the threshold of significance. Sufficient numbers of students who took remedial classes successfully moved through them so that remediation did not make a strategic difference in degree completion.

- Half of the students in the sample for *The Toolbox Revisited* who earned bachelor's degrees changed their major along the way. It was natural to ask whether change-of-major had any influence on degree attainment. It did not,

principally because, with few exceptions, community college transfer students come in to the four-year institution from a general studies program and automatically are classified as "change-of-major" the minute they enter a specific program at the four-year school.

Students as active, responsible participants

The Toolbox Revisited does not treat students as passive creatures whose fate is wholly molded by schools and colleges. It demonstrates that, within the population of traditional-age students who attend a four-year college at any time (obviously including community college transfers), we *can* improve graduation rates and close some of the gaps in completion by race/ethnicity and socioeconomic status. But it also argues that there is a limit to what we can realistically do unless students respond to highly targeted advice and prodding.

The analysis of *The Toolbox Revisited* identifies features of academic history that are most tractable in terms of second party intervention. But there is also something we might dub "first party intervention." Once the modest echoes of socioeconomic status are accounted for, each step of academic history offers *students* a set of decisions that require the commitment of time and effort likely to yield the return of earning a degree. Provided there is opportunity, the choices made by students, beginning with high school curriculum and quality of effort in high school, allow subsequent leverage. Entering a postsecondary institution directly from high school, earning 20 or more credits in the first calendar year of enrollment, and performing well enough in that first calendar year to fall in the top 40 percent of a GPA distribution build on previous academic investments, and are all signs of commitment.

Subsequent choices that may not be reflected in a bounded period of time, such as excessive course withdrawals, prove to be poor decisions with negative returns, breaking accumulated momentum. Other configurations of choice, including summer-term credit generation, meeting the challenge of college-level mathematics, effort required to yield a rising GPA, and most of all, remaining continuously enrolled, all reflect continuing leverage of attainment. This is what academic momentum is all about. While these choices do not take place in a social and psychological vacuum, this is a story about the intersection of student choice with the structures of opportunity offered by institutions whose first order of business is the distribution of knowledge. It is not a story about growing up, although that happens along the way.

Degree Completion: How High Can We Go? How Much Can the Gaps Be Closed?

In Part V of *The Toolbox Revisited*, three different national longitudinal studies conducted during the 1990s are set side-by-side, so as to demonstrate a remarkable degree of agreement on the rate of bachelor's degree completion for students who started out in four-year colleges (granted, that is only part of the broader universe addressed in this essay). Looking at the concordance of these three sources (table 30), it is fair to say that:

- A third of traditional-age students who started in a four-year college earned a bachelor's degree from the same school in the "traditional" four-year period.

- Between 54 and 58 percent earned the degree from the same school in which they began within six years of entry.
- When the option of earning a degree from a different four-year college than the one in which these students commenced study, the six-year completion rates are in the 62–67 percent range.
- Only the NELS:88/2000 extends the time period for earning a degree beyond six years; at 8.5 years, its degree completion rate for students who started in a four-year college approaches 70 percent.

However, it is unfortunate to note that despite increased participation of minority students to postsecondary education over the past quarter century, the gap in bachelor's degree completion between whites and Asians, on the one hand, and Latinos and African-Americans, on the other, remains wide.

What features of academic history might close the gaps, and by how much?

The data-driven exercise in Part V of *The Toolbox Revisited* can be characterized as "reasoned speculation." From the NELS:88/2000, we start with a degree completion gap between whites and Asians vis-a-vis African-Americans of 15 percent; and with reference to Latinos, 22 percent. We go back through our analysis and ask what factors:

(a) consistently contributed to bachelor's degree completion at all stages of the model in which they were "in play," and

(b) were most subject to change by external parties with little-to-modest—but creative—effort that might improve the portrait of degree completion.

Five factors stand out, four of which affect small populations in which minority students are over-represented. Small populations can add up. These factors are:

1. **First-year credit generation**, i.e., the goal of making sure that postsecondary students end their first calendar year of enrollment with 20 or more additive credits.

2. The problem of **excessive no-penalty withdrawals and no-credit repeats**, which affect 10 percent of the cohort. Institutional policy and advising can cut the incidence of withdrawals and repeats in half.

3. **Use of summer terms**. Strategic enrollment management can move more sections of high demand courses into summer terms, offer credit-bearing internships in summer terms, and engage in other creative initiatives that will also smooth out the utilization of institutional resources over what has become an "academic calendar year."

4. **No delay of entry.** This is a matter of recruitment strategy among high school students whose commitment to postsecondary education is less than fervid. The later they show up, the more their postsecondary fate is in jeopardy.

5. **The high school curriculum component of "Academic Resources."** This is not a case of "little-to-modest" effort or a small population. It is a megawork in progress, much of which depends on students' reading skills on entering high school. If students cannot read close to grade level, the biology textbook, the math problems, the history documents, the novel—all will be beyond them. And if high schools are not offering a full academic curriculum, there is little hope.

But with those five factors in mind, and assuming full student response and success, *potential* degree completion rates were hypothesized based on the records of NELS:88/2000 high school graduates by race/ethnicity (table 32) and socioeconomic status quintile (table 34). Virtually every one of these factors contributed to closing degree completion gaps, but none more than high school academic curriculum participation—which, to repeat, is criterion-referenced, hence, open to everyone to rank at or near the top. For African-American students, the combination of moving into the top 40 percent of the high school academic curriculum intensity index plus earning more than four credits during postsecondary summer terms would lower the degree completion gap vis-a-vis white and Asian students from 15 percent to 6 percent. For students from the lowest socioeconomic status quintile, moving into the top 40 percent of the academic curriculum intensity index and entering postsecondary education directly from high school would improve degree completion from 36 to 59 percent. For Latino students, the same steps would improve degree completion from 45 to 69 percent. Does that mean that future degree completion rates will look like those in tables 32 and 34 if everyone meets the criteria on all five counts? No; not everybody will make it. But the tables suggest just where the improvements could be dramatic—and for whom.

Messages to Students and Commentators

Student responsibility (the intersection of choice with opportunity) is a major theme of *The Toolbox Revisited* in a way that was only implicit in the original *Tool Box*. The essay concludes with some recommendations for students, who are partners in their own education fate, who shouldn't wait around for someone else to do something for them, and who are rarely addressed in studies of attainment.

The concluding messages also reflect on the dissonant data of public discourse on high school graduation rates, college attrition rates, and college graduation rates, examples of consequent "scare stories" that do not help us identify and address real problems, and a plea for creativity and cooperation in developing better student tracking systems. These messages also urge a considerable change in the language we use in describing what happens to students from a negative rhetoric that assumes passivity to one that respects students as active players, seeking and discovering paths to their education goals.

A Guide for Reading Tables and Terms

Interchangeable terms

This essay frequently compares the histories of two grade-cohort longitudinal studies carried out by the National Center for Education Statistics (NCES). Each of these studies can be referenced in a number of ways, and all of these references are used.

The following labels for the longitudinal study that began with a national sample of 10th-graders in 1980, the High School and Beyond/Sophomore cohort, are interchangeable:

HS&B/So
High School Class of 1982
class of 1982 (where inter-cohort comparisons of 12th-graders are at issue)

"High School & Beyond/Sophomore cohort" will also be spelled out when the entire longitudinal study, including all its data set components, is the subject.

The following labels for the longitudinal study that began with a national sample of eighth-graders in 1988, the National Education Longitudinal Study of 1988, are interchangeable:

NELS:88/2000
High School Class of 1992
class of 1992 (where inter-cohort comparisons of 12th-graders are at issue)

On reading tables in this study, part 1: Descriptive cross-tabulations

All tables in this study are constructed to meet the statistical standards for table presentation of the National Center for Education Statistics (NCES 2002a). They are stand-alone tables, so that if they are reproduced outside the context of the essay, they tell a complete, self-contained story. To ensure a complete story, the descriptive cross-tabulations in this document include the standard errors of the estimates. The reason for this election—instead of placing tables of standard errors in an appendix—is to enable the reader to judge, on the spot, whether the difference between any two estimates is statistically significant. While the text draws the reader's attention to statistically significant (and insignificant) estimates important to the narrative, it does not comment on all statistically significant estimates. In general, the formula invoked for statistical significance is the simple student's *t* test:

$$t = (P_1 - P_2) \div \overline{(se_1^2 + se_2^2)}$$

where P_1 and P_2 are the percentage estimates to be compared and se_1 and se_2 are the corresponding standard errors. If $t > 1.96$, one has a statistically significant difference at $p < .05$ (which means that the probability that this observation would occur by chance is less than 1 in 20), a standard marker. In the case of multiple comparisons, the critical value for *t* rises.[2]

[2]For technical issues concerning standard errors and multiple comparisons, see Appendix D.

Variances in estimates

The reader will often find that estimates for the same phenomenon will differ somewhat, e.g., in one table a bachelor's degree completion rate is 69.3 percent, in another table, 64.6 percent. These differences are due to the definition of the universe (i.e., who are we counting?) for each table and the weight employed in the calculation.

On reading tables in this study, part 2: Logistic models

The core analytic method employed in *The Toolbox Revisited* is a logistic regression, and there are a baker's dozen tables in both the text and appendices that present the results of logistic models. There are many ways in which researchers have presented these results (Peng, So, St. John, and Stage 2002), and a number of statistics are employed in these representations. *The Toolbox Revisited* employs the following for each row of these tables:

The name of the variable—Variable names were created so that the realities to which they refer are self-evident.

The unadjusted parameter estimate—also known as the log odds, or the natural logarithm of the odds of the outcome of interest happening, e.g., whether a bachelor's degree was earned. The reader should note whether the sign for this estimate indicates a positive or negative relationship to bachelor's degree completion, as well as the magnitude of the estimate (though that alone does not indicate whether the estimate is significant).

The adjusted standard error of measurement for the estimate—Some researchers will say that this statistic is not necessary. The author provides it because, without it, one could not verify the accuracy of the other statistics on the row. We need the adjustment because NCES longitudinal studies are based on complex sampling designs. The adjusted standard error is calculated by multiplying the simple standard error by the Root Design Effect for students who offer non-missing values for all variables in the logistic model at issue (see Appendix D).

The t statistic—This is the measure that opens the gate to the judgment of degree of significance for the variable in question on that row. Again, some researchers will say that this statistic is not necessary because in the next column, the p statistic indicating degree of significance is provided. The author offers the t statistic because a minimum t of 0.765 was selected as a threshold for keeping a variable in the sequence of logistic models, and the reader should see those instances where a variable fails to meet that criterion. Why 0.765? In any statistics textbook, one will find an appendix with a table of relationships between levels of significance (p values) and t-values for two-tailed significance tests according to the number of degrees of freedom (number of variables in a model minus one). If one goes to the column for the lowest level of significance in this standard table ($p < .50$), and scrolls down to the t-value for the smallest number of

variables used in any of the logistic models in *The Toolbox Revisited*, three, one will find it equal to 0.765. This is a very generous threshold.

The *p* statistic—This notation tells us whether the observed relationship would occur by chance, and, if so, at what ratio of chance. A *p* of <.05 says that the odds of the relationship between independent and dependent variables in that model occurring by chance are less than 1 in 20. This is also known as a 95 percent confidence level. In all of the logistic models in *The Toolbox Revisited* there are variables that do not meet the *t* requirements for even a marginal level of significance ($p < .10$). All variables with a *p* of <.10 or better are highlighted in bold.

Delta-p is the critical statistic for telling the story of the association of the parameter estimate with degree completion. It says that every unit change in the independent variable changes the *probability* that X will happen by Y percent—and the Y is indicated by the Delta-p, e.g., 0.1285 would be translated in the text as 12.9 percent. The statement of change in probability is not a linear statement, and is always the result of relationships among the variables in a particular logistic model. It certainly should not be read as a statement of cause or prediction.

Three decision rules

In indicating whether a variable was used in the logistic models of *The Toolbox Revisited*, three criteria were observed:

- Any statistical software package (the Statistical Analysis System, or SAS, was used in this report) allows one to set a threshold of statistical significance for a variable to be admitted to a multivariate model. The default threshold is that 95 percent confidence level, represented as $p < .05$. For both the original *Tool Box* and *The Toolbox Revisited* this threshold was changed to a much more generous .2, i.e., the probability that the variable would be admitted by chance is less than 1 in 5. The purpose of the more generous threshold is to allow more variables to "compete," so to speak, within the boundaries of a statistical model, and then to see which variables survive.
- As noted above, the survival indicator in a model was a *t* value set to 0.765. If a variable failed to exceed that value when utilized in the step of the logistic series in which it was introduced, it was not carried forward to subsequent steps.
- Collinearity—Think of the Venn diagrams you learned in high school mathematics. If each circle in the Venn diagram represents a variable, you don't want a situation where two or more of them overlap to a point approaching an eclipse, for if they do, analysis of either one is impossible. There are special statistics for determining the extent of collinearity, and these were employed to determine when this situation arose. When it arose, one of the variables had to be dropped. This often happens when one variable is a major component of another, e.g., family income in relation to socioeconomic status. The narrative will describe these cases. For further comments on collinearity, see Appendix D.

THIS PAGE INTENTIONALLY LEFT BLANK

Organization of This Data Essay

The following is a brief outline of *The Toolbox Revisited* so the reader knows what to expect.

Part I: Background. The introduction presents the basic question, the data sets invoked, the purposes and statistics of the investigation, and the demography of the subject universe.

Part II: Variables Explored and Used in This Analysis. This short section of the study lists all the independent variables that were considered and provides brief definitions and basic statistical characteristics. A summary figure (pp. 20–21) indicates which of these met the criteria for inclusion in the logistic narrative of Parts III and IV. A more elaborate glossary (pp.179–193) provides details on the construction of these variables, allied data and commentary, and will be of particular interest to researchers.

Part III: What Is and What Happens Before Matriculation. Here we begin the chronological narrative, using both descriptive and multivariate data, of what ultimately made a difference in bachelor's degree attainment by December 2000 for 1992 12th-graders who attended a four-year college at any time. Part III begins with background demographic characteristics, then adds the critical components of high school academic history.

Part IV: Matriculation and Beyond. This section continues the cumulative steps of the logistic narrative, starting with the characteristics of entry to the postsecondary world, and continuing with first calendar year performance, financing considerations, attendance patterns, and extended performance (that is, taking students' entire undergraduate careers into account). It includes a special consideration for the second calendar year of enrollment and concludes its logistic narrative with attention to two very powerful variables: continuous enrollment and the ratio of course withdrawals and repeats to the number of all courses attempted.

Part V: Closing the Gap. Having demonstrated how the universe of independent variables is related to degree completion, *The Toolbox Revisited* then asks two questions: (1) To what extent do the major national data sets agree on "graduation rates"? And (2) Given what we have learned about what makes a difference in degree completion, what variables provide the most promising guidance for closing the gap in graduation rates, by race/ethnicity and socioeconomic status, for students who attend a four-year college at any time?

Part VI: The Missing Element of This Story. A key missing part of the story that is a by-product of the limited features of the NELS:88/2000 is addressed in this section: the content standards of high school and postsecondary course work. Other brief "excursions"—timing and reasons for permanent ("status") drop out from college, and time-to-degree—are placed in Appendices H and K respectively.

Part VII: Messages. Finally, *The Toolbox Revisited* offers some messages—to students and to those who engage in public discourse about the issues we have covered—and highlights the major conclusions of the study.

Appendices: With one exception, appendices are presented in the order in which they are cited in the text. The exception is the last appendix, Appendix L, that contains a variety of reference tables on miscellaneous topics raised in the text.

[THIS PAGE INTENTIONALLY LEFT BLANK]

Part I
Background

This study explores the academic resources and momentum students build through their high school and college careers, and analyzes the relationships between those factors and degree completion rates. It departs from most previous research on attainment by focusing on the details of students' high school and college curricula and academic performance that are available from transcript records. Its principal data are drawn from the National Education Longitudinal Study of 1988 (hereafter referred to as the NELS:88/2000 or just NELS). This longitudinal study followed a national sample of over 12,000 students (representing a weighted 2.9 million students) from the time they were in the eighth grade in 1988 to roughly age 26 or 27 in December 2000.

In round numbers, of the high school graduates in this cohort, 83 percent engaged in some form of postsecondary education by age 26, and 68 percent attended a four-year college at some time. Of those who earned any credits from four-year colleges at any time (which includes a substantial proportion of students who began postsecondary study in community colleges), 66 percent earned a bachelor's degree.

While the 66 percent completion rate sounds impressive for a mass system of higher education, it masks an unhappy differential by race/ethnicity, and more so by socioeconomic status. As we strive to improve high school graduation rates, to invite greater numbers of high school graduates into the postsecondary system, simply to maintain—let alone improve—our completion rates will take a great deal of effort. We need constructive guidance and benchmarks.

This study was designed as a follow-up and replication of a previous attempt to provide that guidance—*Answers in the Tool Box: Academic Intensity, Attendance Patterns, and Bachelor's Degree Attainment* (hereafter referred to as the original *Tool Box*).[3] Since its publication in 1999, the original *Tool Box* has become one of the most frequently cited works in public discussions about—and initiatives to improve—the preparation of students for higher education. Its most visible uses have included the presentations of the Texas "Master Scholars" program (2002), the revisions in entrance requirements for the University of North Carolina system (2000), standards goals set by the Illinois Board of Higher Education (2001), and suggestions of the Education Commission of the States for state high school graduation policies (2001). It was summarized in major litigation addressed to inequities in opportunity-to-learn in high schools (e.g., *Daniel v. California* 1999), and in the research literature, its analyses of both precollegiate preparation and post-matriculation attendance patterns and performance have also been marked (e.g., Horn and Kojaku, 2001; Zucker & Dawson, 2001; Cabrera and La Nasa, 2001) and improved on (DesJardins, McCall, Ahlburg and Moye, 2002; Cabrera, Burkum, and LaNasa 2005).

---

[3]Out of print but available at http://www.ed.gov/students/prep/college/thinkcollege/early/aboutus/edlite-resources.html.

The analyses in the original *Tool Box* were based on the High School & Beyond/Sophomore cohort longitudinal study (hereafter occasionally referred to as the HS&B/So), the second of the U.S. Department of Education's national grade-cohort longitudinal studies,[4] which followed a national sample of 10th-graders from 1980 to1992 in surveys and to September 1993 on postsecondary transcripts. As with all of the grade cohort longitudinal studies carried out by the National Center for Education Statistics,[5] test scores are included in the database, along with surveys of parents, school teachers, and school administrators. The modal high school graduation year for the HS&B/So was 1982, and student age at the conclusion of the study was 29 or 30.

The HS&B/So data, while compelling, are now somewhat dated. There were considerable changes in both the demography and postsecondary entrance behavior of high school seniors in the comparatively short span of the decade between 1982 and 1992. Appendix A highlights contrasts in selected background characteristics of all 12th-graders in the two longitudinal studies cohorts. Some of these changes have been frequently observed (higher proportion of minority students, westward and southward movements of populations, higher proportion of high school seniors entering higher education and planning to earn a bachelor's degree), and some rarely observed (higher proportion who grew up in mixed-ethnicity neighborhoods, and a higher proportion with parents who indicated some postsecondary education). The question naturally arises as to whether the hypotheses and analyses based on the history of the High School & Beyond/Sophomore cohort would hold up in the story of the NELS:88/2000. The NELS history offers a more contemporary account,[6] one that, in terms of secondary school records, may reflect the high school curriculum reforms of the mid- and later-1980s[7] that followed the discussion of the report of the National Commission on Excellence in Education, *A Nation at Risk* (1983). *The Toolbox Revisited* follows the same path of analysis using the NELS:88/2000 as did its predecessor with the HS&B/So. In that sense, it is a replication. It is a modified replication, however, because it introduces new constructs based on critiques of the original *Tool Box* and because it offers a more refined chronology of steps from high school to the end of a student's undergraduate education.

A substantial amount of the analyses and endorsements that followed the original *Tool Box* revived the flagging "seamless" K–16 themes of the 1980s post-*Nation at Risk* reform effort. In an October 2000 policy brief that visited these issues, the Education Commission of the States reminded people of what most of the 1980s reform reports did not address: the fact that K-12 and postsecondary systems are governed in very different ways, even in the public sector of postsecondary, and that there is a consequent "disconnect" of substantial dimensions (Education

---

[4]The first was the National Longitudinal Study of the High School Class of 1972 (1972–86).

[5]For a description of the grade-cohort studies, see Appendix B.

[6]A fourth-grade-cohort longitudinal study is currently in progress. Called the ELS2002, it began with a national sample of 10th-graders in 2002 and is expected to run at least through 2012. We obviously will have to wait some years before we see its full results.

[7]For an account of changes in high school graduation requirements in the years immediately following issuance of *A Nation at Risk*, see Stedman and Jordan (1986).

Commission of the States 2000). The metaphor of bridges (Venezia, Kirst and Antonio 2003) and the rhetoric of disconnect (e.g., Conley 2003) created a more sophisticated focus of analysis than the reform reports of the 1980s embraced. The major work that sought to build new bridges and connect the disconnects underscored the obligation of the system not merely to assure college "access," but degree completion, with curriculum playing the key role. While "degree completion," in public discourse, refers to the bachelor's degree, the same principles apply to associate degrees granted principally by community colleges as well (Adelman 2005a).

What Did the Original *Tool Box* Say?—And Based on What Kind of Evidence?

In a nutshell, here are the major conclusions of the High School & Beyond/Sophomore-based *Answers in theTool Box* analysis:

1) Of three traditional measures of precollegiate educational history—curriculum configuration, academic performance (on a scale that combines class rank and GPA), and assessed general learned abilities (a senior year mini-SAT)—the intensity and quality of one's secondary school curriculum was the strongest influence not merely on college entrance, but more importantly, on bachelor's degree completion for students who attended a four-year college at any time. The highest level of mathematics the student reached in high school played a significant role in the strength of the curriculum configuration. One of the major contributions of *Tool Box* not only to the literature, but to practice as well, was to change what was understood by the "entry characteristics"of students by digging out and demonstrating the power of the academic intensity of secondary school curriculum over combinations of standardized test scores and grades.

2) By moving into the top two quintiles of the curriculum measure and completing a high school mathematics course beyond Algebra 2, African-American students who started out in a four-year college would hypothetically increase their bachelor's degree attainment rate from 45 percent to 73 percent; Latino students who did the same would hypothetically increase their bachelor's degree attainment rate from 61 percent to 79 percent.[8] These increases were significantly greater than those for white and Asian students under this scenario, and, more importantly, were considerably greater than the influence of moving into the top two quintiles of either test scores or class rank/GPA. In other words, curriculum counts, particularly for minority students.

3) The three traditional precollegiate measures can be combined in a composite measure of "Academic Resources." This measure had continuing, statistically significant relationships with bachelor's degree completion in both linear and (more appropriately and convincingly) logistic regression sequences involving four post-matriculation steps (blocks of variables for financial aid, attendance patterns, first-year performance, and extended postsecondary performance).

---

[8]For African-American students in the HS&B/So who reached the 12th grade and entered postsecondary education, 52.3 percent started in four-year colleges, a percentage that rose to 54.2 in the NELS:88/2000. The comparable percentages for Latino students, who are more likely to start in community colleges, were 38.9 percent for the HS&B/So and 38.6 percent for the NELS:88/2000. For white students, the proportions starting in four-year colleges were 54.3 percent for the HS&B/So and 57.4 percent in the NELS:88/2000.

4) Post-matriculation behaviors and attendance patterns that were strongly and positively associated with bachelor's degree attainment were continuous enrollment, transfer from a community college to a four-year institution after more than 10 credits earned at the community college, and the *trend* in students' grades.

5) Post-matriculation behaviors and attendance patterns that had a strong negative influence on bachelor's degree attainment were the ratio of courses from which the student withdrew or repeated to all courses attempted, and earning less than 20 credits in the first calendar year of postsecondary attendance.

6) Socioeconomic status had a modest and diminishing association with bachelor's degree attainment. Minority status had a modest negative association until performance (first-year performance and continuing performance) was taken into account, at which point it had no effect Gender had no effect at any stage of the model. The only demographic variable to have a strong (and in this case, negative) association with degree completion was becoming a parent by age 20.

The overall message was about academic momentum and what adds to that momentum at each stage of a student's history from secondary school onward. The evidence was archival, was treated in the tradition of quantitative history (Elder, Pavalko, and Clipp 1993; Clubb, Austin and Kirk 1989; Haskins and Jeffrey 1990), and like this essay, did not claim causality.

Why use these data sets?

There are three types of national data sets available to construct longitudinal analyses such as the original *Tool Box* and this replication, but only one type of data set—the NCES transcript-based grade-cohort study—is truly suited to the task. The other two are (1) the Cooperative Institutional Research Project (CIRP) occasional longitudinal follow-ups to its annual survey of entering college freshmen, and (2) the NCES Beginning Postsecondary Students studies (BPS). Each of these has its virtues, and will be revisited in Part V of this study when we compare what three different longitudinal studies of the 1990s say about degree-completion rates. The CIRP produces an enormous amount of information on student attitudes, values, and college experiences, and does so with large samples of (principally) entering four-year college students. Its occasional longitudinal follow-ups involve sufficient history (e.g., six or nine years) to track not only long-term undergraduate completion rates, but also postbaccalaureate education (Astin 1993). The BPS longitudinal studies are shorter (five or six years), not dependent on institutional decisions to participate (as is the CIRP), inclusive of students of all ages at entry, and, as befits their principal population sample (a subset of the triennial National Postsecondary Student Aid Study), contain very strong and reliable financial aid data. The BPS study of 1995/96–2001 will be used at a number of points in this study to expand the range of our observations.

However, in both cases, all features of precollegiate history must be rendered as exogenous variables. The high school histories provided by students in CIRP are retrospective, and the precollegiate histories in the Beginning Postsecondary Students studies derive from a combination of retrospective offerings by students and accounts on the student information

questionnaires for those who took either the Scholastic Assessment Test (SAT) or American College Test (ACT) within the two years prior to the BPS start date (nearly half the students in the BPS studies did *not* take either exam). As Kahn and Nauta (2001) demonstrated, there is an inevitable loss of accuracy in the process of these retrospections.

On the other hand, the very nature of a longitudinal study population assembled in the 10th grade (High School & Beyond/Sophomore cohort) or eighth grade (NELS:88/2000) renders precollegiate history endogenous to analytic models. The transcript-base overrides student accounts and provides far more detail than either paper-and-pencil surveys (used by CIRP) or computer-assisted telephone interviews (used by the BPS studies) can provide.

Every data set sacrifices something. No data set is constructed with the questions a particular researcher may have a decade later, so variables are derived and secondary. The High School & Beyond/Sophomore study and the NELS:88/2000 are wanting in many ways where the other studies are strong: financial aid (BPS), and changes in values and opinions (CIRP). But as stories about the core activities we call education, they are unsurpassed by the others.

Purposes and Statistics of This Monograph

The primary purpose of this monograph is to trace the elements of academic momentum as they played out in the secondary school and college history of the High School Class of 1992 (through December 2000) compared with the parallel history of the High School Class of 1982 that was the foundation for the original *Tool Box* study. In the process, the analysis is enriched by including variables we learned to construct or modify on the basis of commentaries and critiques of *Tool Box*, and by a more accurate chronological order in presentation of those variables. The portrait of academic momentum that emerges is a framework within which more sophisticated analyses can be pursued, and within which ameliorative policies (the tools) can be advocated. This study does not pretend to answer complex questions about indirect effects of home, peer, school, and postsecondary institution interactions, but rather trusts future research to deal with those issues.

A secondary task is to demonstrate the construction of a replication when the two data sources, a decade apart, are presumably parallel, but turn out to be something less (for a key example, see Appendix C). The principal encouragement for the replication is that the bachelor's degree attainment rate for students who attended a four-year college at any time remained the same despite differences in the length of cohort history: 65.6 percent for the HS&B/So over 11 years, and 66.5 percent for the NELS:88/2000 cohort over 8.5 years (Adelman 2004a, table 2.2, p. 21). If the HS&Beyond/So history were truncated at 8.5 years, the bachelor's degree attainment rate would have been 59.7 percent. From this perspective there was a marked improvement in degree completion for traditional age college students over the two decades in question. It is natural to ask how this happened, and if the answers to that question provide any guidance for the future.

In terms of statistical technique, both the original *Tool Box* and *The Toolbox Revisited* use simple logistic regression, not structural equations or other path models that are common to causal inquiries or searches for indirect effects, e.g., of discrete aspects of school or college environments (Dey and Astin 1993). A logistic regression is focused on an event that either happens or it doesn't. The dependent variable is dichotomous: yes or no. The independent variables are judged within each model by the degree to which they contribute to what happened in relation to or controlling for all other independent variables in the model (Hair, Anderson, Tatham, and Black 1995).

There are a number of ways of expressing this "degree." One is by an "odds ratio," which, expressed in a simple way, is a ratio of the odds that X will happen given a unit of change in the independent variable to the odds of X not happening, and ultimately shows the strength of association between the independent and dependent variables—with the closer the odds ratio to 1, the less the strength of the association.[9] This was the measure used in the original *Tool Box*. Another way of expressing the value of the contribution of an independent variable is by a "Delta-p" statistic that says every unit change in the independent variable changes the *probability* that X will happen by Y percent given the values of the other variables in the model (Peterson 1985; Cabrera 1994). The narrative of *The Toolbox Revisited* relies on Delta-p,[10] and the logistic model tables provide Delta-p statistics only for those parameter estimates that are statistically significant since there is no way to determine the statistical significance of the Delta-p itself (Cabrera 1994).[11]

But in this paper there is a major methodological departure from the original *Tool Box* study: there are seven (and not five) steps in the model employed, all driven by the empirical history of the NELS:88/2000 students. Following St. John, Paulsen, and Starkey (1996), the blocks of variables in each step were entered "in a sequence that parallels the order in which students pass through well-established stages of persistence behavior" (p. 194) on their way toward bachelor's degree completion (or not). Each of the seven steps, too, is cumulative. That is, variables in one step that meet the statistical criteria for remaining in the model are carried forward to the next step. This extended accounting, which we will call a "logistic narrative," allows "a meaningful examination of the direct effects of variables on persistence, as well as their interactions with the variables entered in successive steps" (St. John, Paulsen, and Starkey 1996, p. 194).

The reader can already tell that there is a great deal of technical material in this presentation, but it is presented in the spirit of the U.S. Department of Education's goal of building a culture of evidence. The author trusts that reports such as *The Toolbox Revisited* will contribute to the

---

[9] Odds ratios, as Peng, So, Stage, and St. John (2002) remind us, are not odds. Their interpretation is not as transparent as the original *Tool Box* assumed them to be. And while an R^2 statistic is presented in the logistic tables of this study, it cannot be read the way one would interpret an R^2 in a linear regression, i.e., it does not indicate the percent of variance in the dependent variable that is explained by the independent variables (Long, 1997). For that reason, it is called a "pseudo R^2" (Cabrera 1994) and is one of a number of measures of goodness-of-fit. As blocks of variables are added to the model in the stepwise manner followed here, the pseudo R^2 should increase.

[10] For the computation of Delta-p, I am using a shortcut recommended by Paul Allison of the University of Pennsylvania: bp(1-p), where b is the logistic coefficient and p is the probability for the dependent variable in the model. This heuristic produces slightly higher values than the formula advanced by Petersen (1985).

[11] For all technical issues, please see Appendix D.

attainment of that goal. Some of the technical material is placed in appendices so that researchers have access to documentation, and all readers have access to reference material.

Who Are We Talking About? And Who Are We *NOT* Talking About?

As was the case for the original *Tool Box*, the basic universe of analysis in *The Toolbox Revisited* does *not* consist of everybody who started out in the cohort. We have to be very clear about this. The basic question of both studies is:

> What demographic, high school performance, postsecondary entry, and postsecondary history (attendance patterns, academic performance) factors are convincingly associated with bachelor's degree attainment for 12th-graders who subsequently attended a four-year college at any time in their undergraduate careers?

This is not a question about completing high school, completing high school on time, or completing high school on time with a standard diploma (as opposed to a GED or certificate of attendance).[12]

This is not a question about entering the postsecondary system. We are not talking about "access." Nor is it a question about "persistence" to the second term or the second year following entry to postsecondary education. It certainly is not about "retention" in the same institution to the second term or the second year.

This is a question about *completion* of academic credentials—the culmination of opportunity, advisement, choice, effort, and commitment.

The question is carefully worded. The universe does not include people who never reached the 12th grade. In fact, as a consequence of the sampling design and weighting of the two longitudinal studies, both essays include only those students who were in the 12th grade *in the same year*,[13] along with those who graduated from high school. The definition of the universe also requires that we have demographic information, high school transcripts,[14] test scores, and postsecondary transcripts for everybody whose careers are subject to analysis. Not everybody can present all this information, and, with rare exceptions (involving some aspects of high school records, and as explained in Appendix C) both the original *Tool Box* and *The Toolbox Revisited* decline to impute any of this information.

---

[12]For details on the high school graduation status of those who were eighth-graders in 1988, see Appendix L, table L1.

[13]For details on those in the NELS:88/2000 cohort who, though in the 12th grade in 1992 along with others, had previously been held back at least one year in the course of their schooling, see Appendix L, table L2.

[14]Only 21.3 percent (s.e. = 1.17) of the NELS:88/2000 who were in the 12th grade in 1992 were missing high school transcripts, compared with 73.7 percent (s.e. = 2.58) of those who had either dropped out of high school or were not in-grade. Nearly 100 percent of the former group graduated from high school with a standard diploma.

There are two other notable features of the basic question. First, both essays argue that, regardless of what students *say* on a survey about their education expectations, it is what they actually *do* that counts. So the only students we can talk about honestly with respect to bachelor's degree attainment are those who set foot in a bachelor's degree-granting institution at some time. This criterion obviously includes students who started their postsecondary careers in community colleges and other types of sub-baccalaureate institutions. Second, the term used to describe the relationship between the dozens of independent variables describing demography, high school performance, postsecondary entry, and postsecondary history and the dependent variable of bachelor's degree completion is "convincingly associated." Neither essay claims "cause" or "prediction."

To illustrate how these conditions restrict the universe, let us start with 2.93 million 1988 eighth-graders in the NELS:88/2000 cohort. Table 1 lays out the stages of contraction of the basic population until we reach the subject universe of this study.

Table 1. From macro to micro: Contraction of the universe of 1988 eighth-graders to the universe subject to analysis in *The Toolbox Revisited*

Description of Universe	Percent	Descending weighted N[a]
A. Initial universe of 1988 eighth-graders	100.0	2.93M
B. Of (A), those who were in the 12th grade in 1992	83.6 (0.98)	2.45M
C. Of (B), those who continued to postsecondary education at any time through December 2000	81.7 (1.28)	2.0M
D. Of (C), those who presented complete high school transcripts, test scores,[b] complete postsecondary transcript records, and socioeconomic status information	80.5 (1.01)	1.61M
E. Of (D), those who attended a four-year college at any time.	73.5 (1.00)	1.19M
Net percentage of 1988 eighth-graders in the universe	41	1.19M
Net percentage of 1992 12th-graders in the universe	51	1.19M

[a]Like other NCES longitudinal studies, the NELS:88/2000 cohort is a stratified sample, in which each student is assigned a weight to represent other similar students in the cohort (see Curtin, Ingels, Wu, and Heuer 2002).
[b] See definition of SRTSQUIN in Glossary.
NOTES: Standard errors are in parentheses.
SOURCE: National Center for Education Statistics: NELS:88/2000 postsecondary transcript files (NCES 2003-402 and Supplement).

Looking more closely at our universe in terms of the types of schools attended, we find that 20.2 percent (s.e. = 1.13) started in community colleges, and 41.0 percent (s.e. = 1.29) earned credits from community colleges, whether or not they started at community colleges. While we will describe the attendance patterns of the NELS:88/2000 cohort in more detail later, the point is that the universe under analysis is not limited to those who attended *only* four-year institutions, and that the community college plays a significant role in the careers of the group of students under consideration.

To repeat: Our subject universe consists of half the 1992 12th-grade students in the NELS:88/2000 cohort. We are *not* talking about:

- students who did not graduate from high school or those who graduated with something other than a standard diploma (G.E.D. or Certificate of Attendance);
- students for whom we do not have full high school records (transcripts, grades, test scores);
- students for whom socioeconomic status could not be determined;
- students who did not enter any postsecondary institution by December 2000, when they were 26 or 27 years old; and
- students who entered the postsecondary system, but never set foot in a bachelor's degree-granting institution.

That is the other half. Some 22.2 per cent (s.e. = 1.05) of 1992 12th-graders who attended a four-year college at any time are in this "other half" because they are missing key information that excludes them from the universe under analysis. Readers interested in the demographic differences between included and excluded students due to missing data elements are referred to Appendix E.

Comparative demography of the subject universe

Given the strong boundaries drawn around the subject universe, how does its demography compare to less restrictive definitions? Table 2 sets out the major demographic categories, and compares the target subject universe with (a) all 1988 eighth-graders who participated in the last survey of the NELS:88/2000 in 2000, (b) all participants in the 1992 survey, whether or not they were in school or in the 12th grade,[15] and (c) all 1992 12th-graders who attended *any* postsecondary institution by December 2000.

As readers work from left to right across the columns of table 2, they will notice that gender balances are even until the moment of entry to postsecondary education, at which point women pull ahead of men. The same type of observation applies to the race/ethnicity distribution: At the point of entry to postsecondary education, the proportion of African-Americans, Latinos, and American Indians declines, while that of whites and Asians rises. In the universe for this study,

[15]The reader should note that, unlike the High School & Beyond/Sophomore cohort study, the NELS:88/2000 sample was "refreshed" in 1992 to be representative of 12th-graders in that year. The "refreshed" students are included in our analyses.

Table 2. For each of four definitions of the universe of students in the NELS:88/2000, percentage distribution by gender, race/ethnicity, socioeconomic status quintile, and second language background

Demographic variable	1988 eighth-graders	All 1992 survey participants	All 1992 12th-graders who entered postsecondary education	1992 12th-graders who attended a four-year college at any time and met other criteria to be subjects of this study[a]
Gender				
Men	49.7 (1.01)	49.9 (0.83)	46.5 (0.93)	48.8 (1.27)
Women	50.3 (1.01)	50.1 (0.83)	53.5 (0.93)	51.2 (1.27)
Race/ethnicity				
White	71.7 (1.50)	71.5 (1.30)	74.9 (1.29)	78.2 (1.31)
African-American	12.9 (1.26)	12.7 (0.94)	10.3 (0.90)	9.4 (1.03)
Latino	10.5 (0.87)	10.4 (0.84)	9.1 (0.88)	7.0 (0.72)
Asian	3.5 (0.32)	3.7 (0.31)	4.8 (0.43)	4.7 (0.42)
American Indian	1.4 (0.43)	1.7 (0.55)	0.7 (0.23)	0.6 (0.18)
Second language background				
Nonnative speaker of English	8.6 (0.68)	10.1 (0.83)	10.0 (0.90)	7.4 (0.67)
Native speaker of English from a second language household	3.3 (0.33)	2.7 (0.21)	2.4 (0.23)	2.2 (0.28)
Socioeconomic status quintile				
Highest quintile	21.3 (0.92)	21.1 (0.88)	29.1 (1.08)	38.5 (1.52)
2nd quintile	20.8 (0.79)	21.0 (0.69)	25.3 (0.88)	26.4 (1.24)
3rd quintile	20.7 (1.10)	19.8 (0.68)	20.2 (0.73)	17.7 (0.85)
4th quintile	19.6 (0.83)	19.2 (0.66)	15.4 (0.61)	11.7 (0.59)
Lowest quintile	17.6 (0.93)	18.9 (0.85)	10.0 (0.73)	6.8 (0.50)

[a]1992 12th-graders with known socioeconomic status and high school records (transcripts and test scores), who graduated from high school by December 1996, and attended a four-year college at any time.

NOTES: Standard errors are in parentheses. Columns for gender, race/ethnicity, and socioeconomic status quintile may not add to 100.0 percent due to rounding.

SOURCE: National Center for Education Statistics: NELS:88/2000 postsecondary transcript files (NCES 2003-402 and Supplement).

the proportion of whites rises even further, while that of Asians, American Indians, and African-Americans[16] holds steady, and that of Latinos declines. There are no statistically significant differences in the proportion of students who were nonnative speakers of English[17] until the final boundaries are drawn for the universe for this study.

The most dramatic and expected changes in the distributions of table 2 are by socioeconomic status quintile, with quantum leaps in the proportion of students from the top two quintiles as soon as one crosses the postsecondary line, and parallel declines in the proportion of students from the bottom two quintiles. Only the third quintile (the 41st–60th percentile) remains stable until the final contraction of the cohort for the universe used in this study.

What do these demographic changes within the universes of students who might be the subjects for a study mean? *The Toolbox Revisited*—and *Answers in the Tool Box* before it—is a study about students who graduate from high school and go on to college. Given historical data, it is not surprising that this group will evidence a higher SES profile and a lower percentage of under-represented minorities than others in the same grade cohort. Since the 1980s, women have been in the majority in this group.[18] Within our subject universe, demography is not necessarily destiny, as the original *Tool Box* demonstrated. For the comparison group—the other half that either does not graduate from high school, graduates but doesn't continue its education, or graduates and continues but never at a four-year college—*The Toolbox Revisited* says: If we want more people to wind up with at least a bachelor's degree in life, here are some guidelines based on the experience of people who tried.

Summary of Part I

What do *Answers in the Tool Box* and *The Toolbox Revisited* do, and what do they not do? Both studies use the histories of 12th-graders who subsequently attended a four-year college at any time (entered in any term and not just the fall term, entered as part-time as well as full-time students, entered in community colleges as well as four-year institutions) to indicate what factors in those histories are associated with completing a bachelor's degree—not in four years, not in six years, but whenever the longitudinal tracking ended (8.5 years from high school graduation for the class of 1992; 11 years for the class of 1982). They do not ascribe cause or pretend to predict. They recognize that what is associated with degree completion in one generation may not be associated with it in the next, or that the strength of association may change. Conditions and populations change, after all. Rigid prediction is a risky call, and besides, that's not what the data and statistical standards allow one to do.

---

[16]The difference in the African-American proportion of the two universes is not statistically significant.

[17]Nonnative speakers were defined as those who said their first language was not English and, in grade 10 and/or 12 (the 1992 survey) indicated that they spoke to their mothers most or all of the time in their first language.

[18]Though to the extent to which the group includes students who commenced their postsecondary studies in community colleges—and it does—that majority will be a little less.

[THIS PAGE INTENTIONALLY LEFT BLANK]

Part II
Variables Explored and Used in This Analysis

With two major exceptions—high school academic curriculum intensity and the composite high school performance variable we call "Academic Resources," both of which are covered in Part III—the construction and allied information for most of the variables explored in *The Toolbox Revisited* are detailed in the Glossary (starting on p. 179). Whenever the reader asks for details on "How was that defined?" or "How did they get that?" the Glossary is the place to go.

The purpose of this section is to provide the reader with an advance reference list of the variables considered and used in this analysis. The reader should keep in mind that "variables" are *representations* of realities (e.g., first-year college grades) or constructs (e.g., transfer). We use them as a shorthand.

The variables listed and described are presented in the order of the steps of the logistic narrative for which they were considered. The collection represents neither a "fishing expedition" nor a "mind dump," as a majority of the variables considered were determined by the attempt to replicate the original *Tool Box* study with a more recent parallel cohort. A quick summary of their properties can be found in figure1.

Demographic background variables defined

1) NNSE—Nonnative speaker of English. A dichotomous variable marking those students whose first language was not English *and* who, in grade 12, reported that they conversed in that language with their mothers most or all of the time.

2) IMMIG—Parent immigrant status. A dichotomous variable indicating whether the student's parents were immigrants to the United States within the previous 10 years.

3) BROSIS—Number of siblings. A dichotomous variable marking students with three or more siblings, versus those with one, two, or none.

4) FIRSTGEN—First generation postsecondary student. A dichotomous variable indicating students for whom neither father nor mother ever attended a postsecondary institution.

5) FAMINC—Family income. This variable was first set in six bands, then trichotomized to yield upper-, mid-range, and low-income populations.

6) URBAN—A dichotomous variable indicating whether the student's high school was located in an urban area.

7) NEWCHILD—A dichotomous variable to mark students, male or female, who became parents by the time they were 20 years old.

8) RACE—A dichotomous race/ethnicity variable, with under-represented minority (African-American, Latino, and American Indian) = 1 and White and Asian = 0.

9) GENDER—A dichotomous variable in which male = 1 and female = 0.

10) SESQUINT—Socioeconomic status quintile. See Glossary.

High school background variables defined

1) EDUANTIC—Education anticipations. A three-level variable: (a) consistently (in grades 10 and 12) expected to earn a bachelor's degree; (b) raised expectations to the bachelor's degree between grades 10 and 12; and (c) either lowered expectations from the bachelor's level between grades 10 and 12 or never expected to earn a bachelor's degree.

2) CLSSRNKQ—High school class rank/GPA quintile. See Glossary and Appendix C for accounts of construction and limited imputation, respectively.

3) SRTSQUIN—Senior year test score quintile. A test of general learned abilities was administered to NELS high school seniors and the results set out in percentiles. For those who did not take that test but for whom SAT or ACT scores were available, those scores were substituted using an equipercentile concordance methodology, weighted, and set out in quintiles. See Glossary for a more detailed account.

4) HIGHMATH—Highest level of mathematics reached in high school. A five-level variable with calculus and precalculus at the high end and Algebra 1 and prealgebra at the low end. See Glossary.

5) SCIMOM—High school momentum in science and mathematics. A three-level variable combining highest level of mathematics with numbers of credits earned in core laboratory science. See Glossary.

6) FLAN—Number of units of foreign language in high school on a five-level scale.

7) ADVANCE—Number of Advanced Placement (AP) courses. Three values based simply on the number of AP courses recorded: three or more, one or two, and none. See Glossary for a full account of identifying AP course work.

8) HSCURRQ—Academic intensity of high school curriculum, in quintiles. This variable is the core of the analysis of students' precollegiate histories, and, hence, is described in detail in Part III and Appendix F.

9) ACRES—Academic Resources. A quintile index representing a composite of students' pre-collegiate attainment (curriculum plus class rank/GPA plus senior year test score). ACRES is the dominant precollegiate variable in both the original *Tool Box* and *The Toolbox Revisited.* The construction of this variable is described in detail in Part III.

Postsecondary entry variables defined

1) FIRST4—A dichotomous variable indicating whether the first postsecondary institution attended by the student was a four-year college.

2) DOCT—Another dichotomous variable indicating whether the first postsecondary institution attended was a doctoral degree-granting institution.

3) SELECT—A dichotomous variable indicating that the first institution attended by the student was either highly selective or selective.[19] See Glossary for details on selectivity.

4) NODELAY—A dichotomous variable marking students who entered postsecondary education within seven months of high school graduation.

5) ACCELCRD—Acceleration credits. A sum of all college credits earned by both course work prior to high school graduation and by examination. The values of this variable were set at three levels: more than 4 credits, 1–4, and zero.

First-year performance variables defined

1) LOWCRED—A dichotomous variable marking students who earned less than 20 additive credits earned in the first calendar year of attendance. For descriptive data on the relationship between number of credits earned in the first year and highest degree, see Appendix L, table L4.

2) FRSHGRAD—GPA in the first calendar year of attendance. Grade point averages were determined for the first *full calendar year* of postsecondary attendance and were then set out in quintiles. FRSHGRAD is a dichotomous variable that divides the highest two quintiles from the other three.

---

[19]Institutional selectivity in the postsecondary files of all three grade-cohort longitudinal studies conducted by the National Center for Education Statistics has five values: highly selective, selective, nonselective, open-door, and not ratable. The first three of these values were based on the selectivity cells developed by the Cooperative Institutional Research Project (CIRP) at UCLA for its annual survey (since 1966) or entering freshmen. For the distribution of NELS:88/2000 postsecondary students by selectivity of first institution attended, see Appendix L, table L3.

3) FREM—A dichotomous variable indicating any remedial course work in the first calendar year of attendance.

4) FCOLMATH—Another dichotomous variable indicating whether the student earned any credits in college-level mathematics during the calendar year following first enrollment. "College-level mathematics" was defined to include college algebra, finite math, statistics, precalculus, calculus,[20] and a category of "liberal arts mathematics" courses that require the equivalent of high school Algebra 2 as a prerequisite, and include such topics as game theory, basic combinatorics, and foundations of numerical methods.

Financing postsecondary schooling variables

There are three dichotomous financing variables in both *Answers in the Tool Box* and *The Toolbox Revisited*: GRANTS, LOANS, and STUWORK. Each indicates only whether the student used that form of financing during his/her early postsecondary career. The reader is referred to the text of Part IV for elaboration.

Attendance pattern variables defined

1) TRANSFER—community college to four-year. With students going back and forth between community colleges and four-year colleges, it is important to mark transfer as a permanent change of venue, a migration that is formally recognized by system rules. A transfer student is one who (a) started in a community college, (b) earned more than 10 credits from the community college before (c) enrolling in a four-year college and (d) earning more than 10 credits from the four-year college. The only time limit set for these changes of venue and credit accumulation is the length of the longitudinal study. In the case of the NELS:88/2000, that means 8.5 years from the modal high school graduation data of June 1992. This is a dichotomous variable.

2) FOURTRAN—A dichotomous variable indicating transfer from one four-year college to another. The algorithm for classic transfer from a community college to a four-year college was fairly easy to construct. But to distinguish a true four-year-to-four-year college transfer required an indirect route. See Glossary for details.

3) MULTINS—A dichotomous variable indicating that the student attended more than one institution. This is a macro-vision of otherwise multidirectional student behavior.

4) SUMMER—Number of credits earned during summer terms, set in three bands: more than 4, 1–4, and none.

---

[20]The category of "calculus" includes not only the standard sequence but also special "short calculus" or "brief calculus" courses, and specialized introductions to calculus for business, economics, and life science majors.

5) PARTTIME—A dichotomous variable tagging students whose enrollment intensity was *ever* part-time. The construction of this variable involves complex algorithms, and the reader is referred to the Glossary for details. (For an account of enrollment intensity in both the NELS:88/2000 and the Beginning Postsecondary Students longitudinal study of 1995/96–2001, see Appendix L, table L5).

Extended postsecondary performance variables defined

1) TREND—Trend in student's GPA: rising, flat, or falling. Cumulative undergraduate GPA was measured at three points in time—at the end of the first calendar year following initial enrollment, at the end of the first two calendar years following initial enrollment, and at the end of the student's undergraduate career, no matter when that occurred. See Glossary for further elaboration.

2) CUMMATH—Number of credits earned in college-level mathematics: more than 4, 1–4, and 0.

3) CHANMAJ—A dichotomous change-of-major variable. See Glossary for a full description.

Final factors variables defined

1) NOSTOP—In all three NCES postsecondary transcript-based grade-cohort studies, noncontinuous enrollment was defined as *more than* a one semester (or its equivalent, e.g., two quarters) stop-out period. In the dichotomous variable, NOSTOP, the student is considered continuously enrolled even with one semester (or two quarters) off.

2) WRPT Ratio—A dichotomous variable. On one side of the dividing line are students who withdrew from or repeated 20 percent or more of all courses in which they enrolled (ratio of non-penalty withdrawal and no-credit repeat grades to all grades received).

Summary: Locus of Responsibility

Figure 1 presents the basic statistical characteristics for 39 of the major variables described above that were either tested, used in trials, and/or employed in the final logistic narrative of *The Toolbox Revisited.* Seven of these variables describe demographic characteristics, and another three label types of financial aid that ultimately are offshoots of demography. Of the remaining 29 variables, 14 are principally matters of student choice (e.g., changed major), five are indicators of student academic effort (e.g., first-year grades), seven reflect interactions of student choice plus student effort plus opportunity to learn (e.g., highest high school math), two mark interactions of student effort and institutional judgment or guidance (e.g., first-year remediation), and one (education anticipations) reflects student experience, attainment, and self-assessment, along with the encouragement of family and peers. The student is at the center of all these representations. The locus of responsibility for the way each of these variables will tilt lies as much with the student as with external forces. *The Toolbox Revisited* is optimistic that most students can make it all come out right. We will return to this optimism in Part VII.

Figure 1. Values, means, standard deviations, use of variables considered, and step no., if used, in the logistic narrative of *The Toolbox Revisited*, with universe confined to 1992 12th-graders with complete high school records and known socioeconomic status who attended a four-year college at any time through December 2000

Variable	Values	Programming name	Mean	S.D.[a]	Used	Step no.	Relationship to variables in the original *Tool Box*
Nonnative speaker of English	2[b]	NNSE	0.1472	0.3544	No		New

Part III
What Is and What Happens Before Matriculation

There are at least three distinct ways of setting up Step 1 in the progression of multivariate analyses that lead us to appreciate what makes a difference (and how much of a difference) in completing a bachelor's degree for students who attended a four-year college at any time. The first step covers both student demographics and high school performance. Let us cover the demographics first because they do not present complex analytic choices.

What If We Knew Nothing Except Demography?

The demographic background of students is marked as of a set moment in time (in our case, in grade 12). It is what students look like, where they are living, their parents' education(s), occupation(s), and income(s), and other features of the student's family. Demographic characteristics may be subject to special attention in education policy from local to national levels, but, with the exception of the student's marital and parental status, are not subject to change.

Demographic variables are normally considered in the context of other aspects of student experience, behaviors, and attitudes when attainment of any kind (e.g., high school graduation, test scores, grades, college degree) is the dependent variable. Indeed, that is the way this analysis treats demographic characteristics. But to demonstrate what happens to the demographic variables in the analysis, this section opens with a stark presentation. If someone asked us to explain bachelor's degree completion for 1992 12th-graders who subsequently attended a four-year college at any time, and all we knew about them were demographics, what would the various associations of demography with degree attainment look like?

Table 3 presents a logistic exploration that started with nine demographic variables described in Part II above. The socioeconomic status quintile variable is not included, but two of its components (family income and parents' highest level of education) are present to serve as proxies for SES. Two of the nine demographic variables—whether the student was a nonnative speaker of English and family immigrant status—were not accepted into the logistic equation.

Whether there were nine variables or seven, however, this logistic model fails to reach significance as a *model,* regardless of whether independent variables within the model turn out to be significant. The t value for the intercept falls below the threshold of 0.765 this study uses for keeping independent variables under consideration, and the proportion of concordant probabilities predicted at 63 percent is the lowest–by far–of any logistic model in this study.

Of the independent variables within the model, four are significant, even though that significance is undercut by the statistical characteristics of the model as a whole. The most significant ($p < 0.01$) is first generation college status, with a Delta-p statistic that says the probability of completing a bachelor's degree is reduced by roughly 21 percent for first generation students.

Race/ethnicity and gender are significant at $p <.05$, with the messages of the Delta-p that minority status reduces the probability of earning a bachelor's degree by 17 percent, and being male reduces that probability by 11 percent. Falling in the highest third of family income is marginally significant.

Table 3. Logistic account of the relationships among major demographic variables and bachelor's degree attainment for 1992 12th-graders who attended a four-year college at any time

Variable	Parameter estimate	Adjusted standard error	*t*	*p*	Delta-p
Intercept	0.2250	0.1869	0.69		
Race/ethnicity	**-0.7257**	**0.1434**	**2.90**	**0.05**	**-0.1660**
Gender	**-0.4760**	**0.1072**	**2.54**	**0.05**	**-0.1089**
Parenthood	-1.6285	0.5255	1.77	†	†
Siblings	-0.3619	0.1109	1.87	†	†
Family income	**0.3870**	**0.1111**	**2.00**	**0.10**	**0.0885**
First generation	**-0.9137**	**0.1420**	**3.69**	**0.01**	**-0.2089**
Urban high school	0.1839	0.1217	0.87	†	†

†Variable did not reach the minimum level of significance (p<.10) in a two-tailed test.
NOTES: Statistically significant variables are in bold. $G^2 = 6288.09$; $df=5144$; $G^2/df = 1.222$; $X^2(df) = 413.76(7)$; pseudo $R^2 = .077$. Proportion of concordant probabilities predicted = 63.0. Root design effect = 1.75.
SOURCE: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

But the most important message is the failure of the purely demographic analysis itself. If the statistical model does not reach a convincing level of significance, and all the variables inside the model are basically cut from the same cloth, then even if some of those variables are significant within the model, the cloth is frayed. That failure sets up a hypothesis that will unravel in the course of subsequent steps of the logistic narrative: Among students who attended a four-year college at any time, student demographics and family demographics may have, at best, indirect connections with degree completion. In fact, at the moment high school academic history is included in the multivariate account, demography plays a considerably reduced role at the same time that the logistic model becomes more persuasive.

High School Background and History

This is where the academic momentum story begins, where the major contributions of the original *Tool Box* were most prominent, and where the story continues to be of considerable importance.

There were four core high school background and performance variables in the first step of the logistic inquiry in the original *Tool Box*: senior year test score, a combined index of class rank and GPA, academic curriculum intensity, and the student's education "anticipations." The first three of these variables were combined in a composite index of "Academic Resources" that proved to have lasting positive repercussions through students' postsecondary histories.

Before we examine the results of the Step 1 logistic model, we should (a) revisit education "anticipations," and (b) provide a detailed account of how *The Toolbox Revisited* deals with high school curriculum.

"Anticipations" versus "aspirations"

Both the original *Tool Box* and this study employ a variable that some people will interpret as indicating students' education "aspirations." But this construct is carefully labeled "anticipations," and is *not* based on the student's answer to a question asked only once (for example, in a 12th-grade survey or in a freshman registration line). Rather, "anticipations" is built from sets of questions asked in both the 10th grade and the 12th grade, and describes the *consistency* and *level* of the student's abstract expectations and concrete plans.

Perhaps as a by-product of the national visibility of discussions on secondary-to-postsecondary transitions that followed the release of *A Nation at Risk* in1983, along with a burst in recruitment of minority students by both colleges and professionally-oriented organizations such as the National Action Committee for Minorities in Engineering, the proportion of 12th-graders who *consistently* expected to earn at least a bachelor's degree more than doubled from 22.5 percent (s.e. = 0.58) among 1982 12th-graders to 59.4 percent (s.e. = 1.02) among 1992 12th-graders. Continuing one's education after high school, at some point and "in some form of postsecondary education" is now a norm of expectations among high school graduates: 92.6 percent (s.e. = 0.54) of NELS:88/2000 students who graduated from high school with any kind of diploma, whether "on-time" in 1992 or later, expected to continue their education in a postsecondary setting. That which is a norm of behavior is like breathing in and breathing out. When virtually everyone expects to continue, the serious curricular "disconnect" between K-12 and postsecondary systems eloquently dissected by Venezia, Kirst, and Antonio (2003) is even more fraught with hazards and ironies. "Anticipations," one can surmise, will not play as significant a role in a logistic account of bachelor's degree completion as it did in the original *Tool Box*.[21]

To aspire is an active concept. In our ordinary usage, it means to hope, seek, wish, or yearn. When Kao and Tienda (1998) describe "aspirations" as "a realistic evaluation of likely outcomes" (p. 352), they are not describing "aspirations" as we normally understand the term. Qian and Blair (1999), too, indicate that they use the "aspirations" to describe expectations or plans

[21]Even there, the variable floated in and out of significance over the steps of the logistic model (see Adelman 1999, pp. 80–81).

"rather than a wish" (p. 622). And that's just the point: With these rare exceptions, the literature on education "aspirations" consistently confounds an emotively-laden term applied to motivation, desire, or drive with an assessment of possibility based in experience (Mezias 1988). Underneath the consistency-by-level construct of the educational "anticipations" variable used in both the original *Tool Box* and in this study is what Kao and Tienda (1998) document as a growth from abstract attitudes about a very distant possibility when students are in junior high school to a rational judgment based on both school experience and input from parents and peers as the time draws closer to high school graduation. There is no doubt that the consistency-by-level formulation of our anticipations variable is influenced by what happens to students between grades 10 and 12.

A different interpretation of expectations is implicit in Venezia, Kirst, and Antonio (2003): Expectations become assumptions, more passive than "aspirations." Their principal thesis—that students falsely assume that the momentum inherent in a high school diploma is sufficient not merely to enter a postsecondary environment ("the easy part," in their words) but to complete a credential—is all the more powerful when these assumptions end in less than completion. The principal culprit lies in poorly articulated (secondary-to-postsecondary) curricula (Conley 2005), a topic addressed in Part VI of this essay.

Academic Intensity of Secondary School Curriculum

Think of a series of moving walkways in an airport. Passengers expect that one leads to the next, and don't think too much about what's happening along the way. What the most perceptive of contemporary analysts of the curriculum paths from high schools into colleges of any kind have observed (Venezia, Kirst and Antonio; and Conley) might be described as a disconnect in both the location and speed of these successive moving walkways, so that the passengers stepping mindlessly off the first and heading to the second trip, stumble into the moving hand rail, and desperately grasp at their luggage so that it doesn't get stuck in the space between the two segments. This issue was imperfectly highlighted in the original *Tool Box* and is worth extended preliminary attention here.

The "differential course work" hypothesis, originating in the work of Pallas and Alexander (1983) and Alexander and Pallas (1984) in relation to high school test scores, and validated by *Answers in the Tool Box* with a longer time frame and a bachelor's degree attainment dependent variable, remains the core of the presentation in *The Toolbox Revisited* as well. With these forebears as guidance, we are going to look at the components of the curriculum variable, alternative presentations of those components for multivariate analyses, and some critiques of the measure. In the past decade, a number of short-hand representations of the high school curriculum, e.g., the New Basics as advocated in *A Nation at Risk* (1983), "minimum college-qualified" (Berkner and Chavez 1997), and "track location" (Lucas 1999; Lucas and Berends 2002) have become common in both the research literature and the general press. The New Basics are the best known of these heuristics. The highest level of these "new basics"

—which simply counted Carnegie units[22] (four of English, three each of mathematics, science, and social studies, and two of foreign language)—has been labeled "rigorous" (McCormick 1999), even though three units of mathematics could amount to no more than plane geometry and the science in question could lack any laboratory components. After the publication of the original *Tool Box*, the literature added criteria for highest level of math, core laboratory science, and Advanced Placement course work to the judgment of "rigor," and sought a trichotomous presentation with labels such as "core curriculum or less," "mid-level," and "rigorous" (Horn and Kojaku 2001).

Quite frankly, the word "rigorous" is somewhat of a misnomer since a course requiring a high concentration of intellectual effort can be presented in a relaxed manner with comparatively low standards for success. Put another way, calculus or laboratory chemistry, for example, can be taught in a very laid-back fashion, while an otherwise "ordinary" survey of U.S. history can require the search for, discovery, and cataloguing of original source material, readings in archival methods, and frequent examinations and project presentations with criterion-referenced grading standards. Both the original *Tool Box* and *The Toolbox Revisited* prefer the term, "academic intensity," defend the continuous variable of academic curriculum intensity as a more flexible language of accounting, and decline to invoke labels of "college qualified," "at risk," and others.

The academic curriculum intensity variable is called HSCURRQ. It takes a weighted distribution of NELS:88/2000 students across 31 levels of academic curriculum intensity and quality (there were 40 levels in the records of the High School Class of 1982, the subjects of the original *Tool Box*), and divides the distribution by quintile. Each level of academic curriculum intensity is a distinct configuration of numbers of Carnegie units[23] earned in core academic areas and other distinct notations about students' course of study. For example, in both data sets, at the highest level, one finds students who, between grades 9 and 12, accumulated.[24]

3.75 or more Carnegie units of English;
3.75 or more Carnegie units of mathematics;
highest mathematics of either calculus, precalculus, or trigonometry;
2.5 or more Carnegie units of science *or* more than 2.0 Carnegie units of core laboratory science (biology, chemistry, and physics);
more than 2.0 Carnegie units of foreign languages;
more than 2.0 Carnegie units of history and/or social studies;
more than 1 Advanced Placement course; and
no remedial English; no remedial mathematics.

---

[22]A Carnegie unit is the basic credit system for U.S. secondary schools. It is generally recognized as representing a full year (36–40 weeks) in a specific class meeting four or five times per week for 40–50 minutes per class session (Martinez and Bray 2002).

[23]It is important to note that the Carnegie unit thresholds indicated, e.g., 3.75 units of English, are not determined *a priori*, but rather from the empirical distribution of Carnegie units standardized across the NELS high school transcripts in their edited version. See the descriptive windows for all the high school curriculum variables on the NCES data sets in CD # 2003-402 and its June 2004 Supplement.

[24]For mean numbers of Carnegie units earned in major curriculum areas, see Appendix L, table L6.

These are minimums. In fact, at the highest level of academic curricular intensity, students had accumulated an average of 4.30 Carnegie units of English, 4.34 units of mathematics (94 percent having reached precalculus or calculus), 3.63 units of core laboratory science, 3.76 units of foreign languages, and 3.79 units of history and other social studies, along with an average of three AP courses. That is an impressive portfolio.

To this particular configuration, the NELS:88/2000 version of the highest level of academic curriculum intensity adds any Carnegie units in "computer science," a far more frequent and integrated elective in the high school curriculum by 1990, when the NELS students were in the 10th grade, as opposed to 1980, when the High School & Beyond/So students were in the 10th grade (the mass availability and marketing of PCs began in 1984).

Each subsequent level in a descending logical cascade subtracts something from this configuration (see Appendix F) until a relatively smooth distribution is achieved. Nothing is perfect in these algorithmic adjustments; and whatever lumpiness in distribution remains is assuaged in the quintile version.

In light of recent literature on the effects of AP course-taking versus scores on AP examinations (e.g., Geiser and Santelices 2004; Klopfenstein and Thomas 2005), it is important to note that in both the original *Tool Box* and in this study, AP course work is *not* treated as a discrete variable, rather as *part* of the overall index of academic curricular intensity. However, in a moment we will demonstrate what happens when AP is invoked as a distinct independent variable in alternative constructions of the first step of our core logistic model.

The basic critique of this account of high school curriculum has much merit: Numbers of courses (expressed in Carnegie units) in specific subject areas are not equivalent to high content standards or performance standards in those courses (Barth and Haycock 2004). In the cascading curriculum levels of the Academic Intensity variable, a student could accumulate three units of watered down history and social studies and still have three units. A national transcript accounting has no way of knowing what is demanded in thousands of history and social studies courses offered in 1100 high schools, a point made in the staff research for *A Nation at Risk* (see Adelman 1983). The only domestic examples available for those who argue for test-driven high content standards in individual high school subjects such as U.S. history or chemistry or Algebra 2 are the College Board achievement tests (now called SAT II) and the New York State Regents. Some other states (e.g., Michigan) have tests in place for merit-based scholarships that cover broad areas of the curriculum (e.g., math, science) and language skills (reading, writing) but not specific subjects. In this respect, they are closer to the ACT examination, though at a less demanding level (Bishop 2004). The high school transcripts that serve as our evidence are very inconsistent in entering SAT II subject exam scores, so we have nothing on which to rely for an external validation of content. Getting beyond course titles to content standards is addressed in Part VI of this study.

Altonji's work (1996) offers a second important critique. He would have us control high school curriculum variables for school effects and "quality of courses," but admits that whatever one tries for proxy measures, the results would be "imperfect." Altonji draws our attention to the fact that more than half the variance in the mean number of Carnegie units earned in academic

subjects by the NLS-72 cohort[25] was across schools, indicating disparities in opportunity to learn, teacher quality, and student talents and proclivities. One might put Altonji's conclusion more baldly: Students from higher SES backgrounds attend high schools that serve similar students, schools in which parental expectations and involvement are high, and schools in which curriculum offerings and teacher quality follow SES demands and can afford to do so because the tax base is higher. These students tend to enter college and earn degrees at higher rates than students from "lesser" backgrounds and from schools that accompany those backgrounds, therefore, the influence of the academic intensity of high school curriculum will be overstated.

The implicit response of the original *Tool Box* made explicit in *The Toolbox Revisited* is that there are inequities in opportunity to learn and proclivity to learn that are reflected in the geo-demography of schools, but in a logistic account of bachelor's degree attainment in which the results are reported with the Delta-p statistic, socioeconomic status will modulate some of the effects of curriculum. The message encourages all high schools to offer the requisite curricula, to make sure they have teachers who can deliver that curricula, to believe that their students can all reach higher levels of academic intensity in preparation, and to encourage their students to do so—no matter what students' intentions for subsequent education or work may be. As the principles of the *No Child Left Behind* legislation are applied in high schools, this is a large part of what they mean.

Highest level of mathematics and changes in high school course-taking

In comparing the high school records of the HS&B/So (High School Class of 1982) with those of the NELS:88/200 (High School Class of 1992), and looking only at earned Carnegie units, what we principally witness is an improvement of precollegiate preparation of students in mathematics

Table 4. Percentage of 1982 and 1992 12th-graders in academic high school programs whose high school curriculum fell below selected content and intensity thresholds

	Class of 1982		Class of 1992	
Curriculum markers	**All 12th-graders**	**In academic program**	**All 12th-graders**	**In academic program**
Percent of students with:				
Highest level of mathematics *less than* Algebra 2	60.2 (0.78)	35.4 (1.02)	37.7 (1.11)	24.2 (1.24)
Maximum of one year of core laboratory science	60.1 (0.82)	37.1 (1.04)	34.3 (1.17)	21.0 (1.22)
Maximum of one year of foreign language	28.3 (0.88)	14.3 (0.75)	41.5 (1.30)	28.4 (1.47)

NOTES: "Core laboratory science" is confined to biology, chemistry, and physics. Standard errors are in parentheses. Weighted N for students in academic program: HS&B/So = 1.5M; NELS:88/2000 = 1.8M.
SOURCES: High School & Beyond/Sophomore Cohort (NCES 2000-194) and NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

[25]The National Longitudinal Study of the High School Class of 1972, the first, most elaborate, and longest (1972–86) of the NCES grade-cohort longitudinal studies

and science, a change that affects the amount of remediation necessary in four-year colleges, as well as mathematics course-taking at the college-level (Adelman, Daniel, and Berkovits 2003). We also note an unsettling increase in the percentage of students taking a maximum of one year of foreign language course work (though that percentage spread might be mitigated somewhat if we accounted for the increase in bilingual heritage language users between the two cohorts). Table 4 sets forth some basic threshold markers in these curricular areas.

Thresholds are suggestive, but not conclusive, of the shape of change in curricular preparation. By reverse logic, table 4 says only that X percent of students are getting beyond point Q in secondary school study. It does not say how far beyond, and that may make more of a difference in academic momentum. The mathematics analysis in the original *Tool Box* was a proxy for the general metaphor of momentum, and it may be instructive to compare the results of those calculations—a distribution and a logistic—to what emerges from the NELS:88/2000 involving all the rungs on the "math ladder." Tables 5, 6, and 7 do so, confining their universes only to students who were in the 12th grade in the year they were scheduled to be in the 12th grade. They do not restrict the universes to those who entered postsecondary education, let alone to those attended four-year colleges at some time. These are very inclusive groups.

Table 5 confirms other observations in these data sets: The efforts following *A Nation at Risk* to move students further ahead in high school mathematics had positive results. Higher proportions of students were reaching Algebra 2 and higher levels. Bachelor's degree attainment rates for those who moved at least one step beyond Algebra 2 in high school were stable, but declined at every level at or below Algebra 2. Table 5 provides a framework that needs to be validated in a more convincing way, and that is the purpose of table 7. Table 7 presents the results of logistic analyses and does so in odds ratios (departing from the presentation of other logistics in *The Toolbox Revisited*) to match the way in which this table was presented in the original *Tool Box* study.[26]

From the write-ups and presentations of the original *Tool Box* study a principle for high school curriculum guidance arose: "One step beyond Algebra 2 doubles the odds that you will earn a bachelor's degree." What does that mean, i.e., how does one read table 7? An odds ratio indicates that every unit of change in an independent variable (in this case, each step up the math ladder) increases the odds of X happening versus the odds of X *not* happening by Y (the odds ratio). For table 7, the data for the full model—using only highest mathematics and socioeconomic status quintile—are presented first, in bold. In both cohorts, the odds ratio says that every step up the math ladder multiplies the odds of earning a bachelor's degree by roughly 2.5 versus an odds ratio for each step up the socioeconomic status quintile measure of 1.68 (for the class of 1982) and 1.78 (for the class of 1992). These data are statistically significant ($p < .05$ or better).

---

[26]The High School Class of 1982 data in table 7 are slightly different from those in the previous presentation in *Answers in the Tool Box* (table 6, page 17) because a more accurate 12th-grade flag for that data set has been developed to match the NELS:88/2000.

Table 5. Bachelor's degree attainment rate by highest level of mathematics reached in high school by 1982 and 1992 12th-graders

	Class of 1982		Class of 1992	
Level of math	Percentage reaching this level of math	Earned bachelor's	Percentage reaching this level of math	Earned bachelor's
Calculus	5.2 (0.36)	82.1 (2.45)	9.7 (0.54)	83.3 (2.72)
Precalculus	4.8 (0.37)	75.9 (2.43)	10.8 (0.65)	74.6 (2.04)
Trigonometry	9.3 (0.51)	64.7 (2.32)	12.1 (0.81)	60.0 (3.32)
Algebra 2	24.6 (0.75)	46.4 (1.54)	30.0 (1.08)	39.3 (2.31)
Geometry	16.3 (0.65)	31.0 (1.92)	14.2 (0.87)	16.7 (1.87)
Algebra 1	21.8 (0.69)	13.4 (1.33)	16.5 (0.92)	7.0 (1.24)
Pre-algebra	18.0 (0.66)	5.4 (1.19)	6.7 (0.53)	3.9 (1.34)

NOTES: Standard errors are in parentheses. The columns for level of math may not add to 100.0 percent due to rounding.

SOURCES: National Center for Education Statistics: High School & Beyond/Sophomore Cohort (NCES 2000-194) and NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

The balance of the table takes each level of high school mathematics, and runs a logistic regression *for that level*, with bachelor's degree completion as the dependent variable, and SES quintile as the sole control. For the class of 1982, reaching calculus in high school increased the odds of earning a bachelor's degree by a very impressive 8.18 to 1. For the class of 1992, the odds ratio for calculus was still in the same range at 7.52 to 1. The parameter estimates for the calculus line are almost identical (2.102 versus 2.018). These are consistent results.

When one looks at the columns in table 7 for the class of 1982, one notices that the sign of the parameter estimate moves from negative to positive territory between geometry and Algebra 2, and the value of the parameter estimate rises above 1.0 between Algebra 2 and trigonometry. The odds ratio more than doubles in each of those steps, but only in the step between Algebra 2 and trigonometry (the "one step beyond") is the parameter also positive. For the class of 1992, all those relationships move up one rung on the "math ladder," principally because a higher percentage of this group (than the percentage for the class of 1982) reached precalculus or calculus while a lower percentage failed to get as far as Algebra 2. The critical boundary for math momentum now lies firmly beyond Algebra 2.

But therein lies the rub, for not everyone has the chance to reach beyond Algebra 2. Differential lack of opportunity-to-learn was a major theme in the original *Tool Box* and is just as prominent a theme in this study of a cohort a decade later. Table 6 illustrates this unhappy situation. It asks what proportion of students—by race/ethnicity and socioeconomic status quintile—attended high schools that offered key math courses beyond Algebra 2.

If mathematics momentum is as important as we contend it to be, one can see the ripples of opportunity—or lack of opportunity—that start in high school offerings. In the matter of calculus, Latino students and those from any socioeconomic status quintile other than the highest are at a distinct disadvantage with respect to the opportunity even to confront the subject. African-American students join the other groups in less access to both trigonometry and statistics. While this issue will be revisited, it deserves underscoring here: The task of providing quality secondary school curricula to *everybody*, the *paths* to AP, the *paths* to the kind of learning challenges students will face in higher education, is enormous. If the promise of *No Child Left Behind* is to be realized at the secondary school level, it is first and foremost through the equitable provision of opportunity-to-learn.

Table 6. Percentage of 1992 12th-graders who attended high schools that offered courses[a] in statistics, trigonometry, and calculus, by race/ethnicity and socioeconomic status quintile

	Percent attending high schools that offered:		
Demographic group	Calculus	Trigonometry	Statistics
Race/ethnicity			
White	58.6 (1.67)	76.9 (1.29)	27.7 (1.62)
African-American	50.8 (4.14)	67.0 (3.90)	19.5 (2.71)
Latino	44.6 (4.04)	59.9 (3.55)	18.2 (2.44)
Asian	61.3 (4.31)	71.9 (3.61)	30.1 (3.94)
Socioeonomic status quintile			
Highest quintile	71.6 (1.93)	83.1 (1.64)	34.0 (2.30)
2nd quintile	56.2 (2.32)	73.2 (2.13)	27.1 (2.01)
3rd quintile	54.1 (2.39)	71.4 (2.33)	24.9 (1.92)
4th quintile	49.3 (2.46)	70.3 (2.28)	20.3 (1.80)
Lowest quintile	43.5 (2.86)	63.7 (2.66)	18.5 (2.06)

[a] Responses are based on surveys of school administrators and math teachers of NELS students in 1990. Where the administrator did not answer the question, the math teachers did not indicate that they taught the subject, and students did not earn any credits in the subject, the calculation assumes that the school did not offer the subject. This approach may underestimate the percentage of high school offering the subjects at issue.

NOTES: Standard errors are in parentheses.

SOURCES: National Center for Education Statistics: NELS:88/94 (NCES 96-130), and NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402).

Since "highest high school mathematics" is a critical sorting component in the construction of the composite variable describing the academic intensity of a student's secondary school curriculum, the ramifications of more students completing courses beyond Algebra 2, it is hypothesized, will ironically diminish (however modestly) the explanatory power of curriculum and raise the power of academic performance (class rank/GPA). To illustrate with a metaphor: If it was said that a student who reaches precalculus in high school and earns a C has a better chance of finishing a bachelor's degree than a student who gets only as far as Algebra 2 with an A-, we now have to raise the bar for performance in precalculus to at least a B- in order for the prediction to hold.

Table 7. The math ladder for 1982 and 1992 12th-graders: Odds ratios and parameter estimates of earning a bachelor's degree at each rung, controlling for socioeconomic status quintile

	1982 12th-graders				1992 12th-graders			
Variable	Odds ratio	parameter estimate	Adjusted standard error	*p*<	Odds ratio	parameter estimate	Adjusted standard error	*p*<
Highest math	**2.56**	**0.938**	**.0426**	**.01**	**2.50**	**0.918**	**.0467**	**.01**
Socioeconomic status quintile	**1.68**	**0.520**	**.0359**	**.02**	**1.78**	**0.571**	**.0449**	**.05**
By highest level of mathematics:								
Calculus	8.18	2.102	.0426	.01	7.52	2.018	.1936	.05
Precalculus	6.34	1.846	.1895	.05	4.91	1.591	.1592	.05
Trigonometry	3.76	1.352	.1267	.05	3.05	0.860	.1422	.10
Algebra 2	1.82	0.599	.0867	.05	0.89	-0.115	.1030	†
Geometry	0.63	-0.468	.1108	†	0.24	-1.434	.1812	.10
Algebra 1	0.19	-1.666	.1386	.02	0.07	-2.688	.2788	.10
Pre-algebra	0.06	-2.778	.2614	.05	0.05	-3.088	.6684	†

† Variable did not reach the minimum level of significance (p < .10) in a two-tailed test.

NOTES: For both 1982 and 1992 12th-graders, the universe consists of all students for whom highest mathematics in high school could be determined, SES data were available, and highest postsecondary credential at the end of the cohort study period was known. Root design effect for the high school class of 1982 (HS&B/So cohort)=1.59; root design effect for the high school class of 1992 (NELS:88/2000 cohort)=1.98. NELS:88/2000 goodness-of-fit data for the full model: G^2 = 8289.25; *df* = 9135; G^2/df = 0.91; percent concordant probabilities predicted = 84.3. HS&B/So cohort goodness-of-fit data for the full model: G^2 = 8371.74; *df* = 9288; G^2/df = 0.892; percent concordant probabilities predicted = 80.0.

SOURCES: High School & Beyond/Sophomore Cohort (NCES 2000-194); NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

The general improvement in the high school curriculum profile of the NELS:88/2000 cohort is reflected, at least among students who subsequently attended a four-year college at any time, in diminished postsecondary remediation for that population. Table 8 sets out the distribution of what in the original *Tool Box* study was called the "remedial problem," a logical cascade that distinguishes not only the amount of remediation a student takes in college, but also the kind of remediation at issue. The logical cascade begins with remedial reading, then sorts out those students whose only remediation consists of one or two courses in mathematics, then divides the balance of the remedial population between those who required more than two remedial courses and those who required only one. The type of remediation at issue for both these residual populations is usually writing, but also includes courses devoted to basic study skills and general developmental work. If the population included students who never attended a four-year college, this distribution would look very different.[27]

Table 8. Percentage of 1982 and 1992 12th-graders who attended a four-year college at any time, by type and amount of remedial courses taken in postsecondary education

Type and amount of remediation	High School Class of 1982	High School Class of 1992
Any remedial reading	10.0 (0.56)	7.8 (0.72)
Remedial math only (1–2 courses)	14.0 (0.65)	9.8 (0.65)
More than 2 remedial courses of any kind other than reading	14.5 (0.72)	8.9 (0.64)
Only 1 remedial course other than reading	9.0 (0.50)	6.5 (0.41)
No remedial courses	52.5 (1.04)	66.9 (1.07)

NOTES: (1) Standard errors are in parentheses. (2) Columns may not add to 100.0 percent due to rounding.
SOURCES: High School & Beyond/Sophomore Cohort (NCES 2000-194) and NELS:88/2000 Postsecondary Transcript Files (2003-402).

[27]Among all NELS:88/2000 students who participated in the 1992 survey and subsequently attended *only* community colleges, 64.5 percent (s.e. = 1.88) took at least one remedial course and 43.7 percent (s.e. = 1.98) took more than one. Among those who attended only sub-baccalaureate trade schools, which often do not require remediation, 32.4 percent (s.e. = 5.89) took at least one remedial course and 21.9 percent (s.e. = 6.07) took more than one. There is a considerable difference between the norms and requirements of community colleges versus those of other sub-baccalaureate institutions in the matter of remediation, and we should not mix the two in analyses of remediation.

Summary of high school curriculum and performance variables

To remind the reader of our tools before heading into Step 1 of the logistic narrative: For the high school curriculum components of the analysis we have a composite variable called HSCURRQ, and four variables set forth in Part II above describing discrete components of HSCURRQ that we can test as proxy measures for the composite—highest level of mathematics, science momentum (a combination of highest math and core laboratory science credits), foreign language credits, and number of Advanced Placement courses. In a moment all these will appear in a correlation matrix that will provide a preview of how they might play out in multivariate analyses.

For our other performance measures, we bring forward from Part II a quintile presentation of the student's high school class rank/GPA, and a quintile presentation of senior year test score.

Academic Resources

The original *Tool Box* advanced a notion explored and developed by Karl Alexander of Johns Hopkins and his associates in numerous exemplary contributions to the research literature: A student's academic background was far more important than demographic variables such as gender, race/ethnicity, family composition, and socioeconomic status in relation to test performance (Alexander and Pallas 1984), entering higher education (Thomas, Alexander, and Eckland 1979), and, in one study, degree completion (Alexander, Riordan, Fennessey and Pallas 1982). How does one reflect a composite idea of "academic background" of students coming out of high school and into postsecondary education? The key measure of Academic Resources (or ACRES, as the original *Tool Box* variable was called in order to elicit the idea of academic cultivation), combined curricular record, academic performance (class rank/GPA) as an indicator of student effort, and an external measure in the form of performance on tests of general learned abilities. These three components, as we have seen, are set out in quintiles. To get a preliminary idea of their relative strength in relation to bachelor's degree completion and to equalize the conditions of judging degree-completion rates by performance quintiles, table 9 takes all on-time high school graduates in 1992 and indicates the percentage who completed a bachelor's degree by December 2000 by quintile of each of the three components of Academic Resources. To be included in table 9, the student's record had to contain positive values for all three components.

Table 9 offers some hints of what multivariate analysis will confirm. Compared to the distributions for academic curriculum intensity and class rank/GPA, the test score quintile variable yields weaker degree completion rates in its highest two quintiles. This is a clear sign that the test score quintile will not have as strong an association with degree completion as the curriculum and performance factors. At first glance, it looks as if class rank/GPA will be fairly dependable, but it has one minor bump. The reader is directed in table 9 to the percentage of eventual bachelor's recipients from the lowest quintile of class rank/GPA (13 percent) compared to the percent of bachelor's degree completers in the lowest quintile of test scores and academic curriculum (about 9 percent in both cases). The differences are statistically significant in a

descriptive account such as that of table 9, but how meaningful they turn out to be must await a multivariate context. In the meantime, one would posit that the class rank/GPA measure may not prove as strong as the curriculum measure.

Table 9. Percentage of on-time 1992 high school graduates who continued their education in any postsecondary institution who completed bachelor's degrees by December 2000, by quintile performance in the three component variables of Academic Resources

	Percent completing bachelor's degree				
Population	Quintiles of Academic Resources components				
	Highest	Second	Third	Fourth	Lowest
All on-time1992 high school graduates who continued to postsecondary education at any time					
Curriculum	81.7 (1.50)	60.5 (2.14)	35.5 (1.93)	23.4 (1.99)	8.7 (1.37)
Class rank/GPA	78.8 (1.47)	59.1 (2.24)	40.3 (2.11)	25.7 (2.16)	13.0 (1.94)
Senior test score	74.9 (1.72)	53.9 (1.92)	37.2 (2.16)	26.7 (2.41)	8.9 (1.31)

NOTES: Standard errors are in parentheses. Weighted N = 1.6M.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

A multivariate analysis involving these variables, in fact, confirms our suspicions, and its results are presented in table 10. The model is the foundation for construction of the composite variable, Academic Resources, and is derived from ratios of the standardized beta estimates of the three high school performance indicators produced by a logistic regression with bachelor's degree attainment as the dependent variable and no controls (the logistic regression itself can be found in Appendix L, table L7). The change in these ratios between those for the High School Class of 1982 and those for the High School Class of 1992, while still leaving academic curriculum with the highest weight, narrows the gap between curriculum and performance, and lowers the strength of test scores as a component of Academic Resources. Given the differences in overall participation in the variable, i.e., the proportion of 12th-graders for whom all three components have positive values, some of the change may be an artifice of the NELS:88/2000 data set. But the principal message is one observed when commenting on the change in the distribution of students by highest level of mathematics studied in high school: The higher the average level of mathematics attainment, the more student effort, reflected in grades, will count. This theme will continue to play out when our story crosses the matriculation line into postsecondary education; and it was one of the principal points made by DesJardins, McCall, Ahlburg and Moye (2002) in their critique of the original *Tool Box* study.

When using all three measures—curriculum, class rank, and ACT test score—in a traditional linear analysis predicting first-year college grades, Pike and Saupe (2002) found curriculum to be the strongest, though their curriculum variable was dichotomous (students either meeting or not meeting the entrance specifications for a selective state university), which would naturally increase its power. Even when they introduced indirect effects of high school characteristics —control (private/public), size, mean ACT score of students, and mean proportion of students who attended the university—the parameter estimates for this curriculum variable were significantly greater than those for test scores or class rank. While *The Toolbox Revisited* is not in the business of predicting first-year grades, it is gratifying to note research that has similar respect for the propulsive power of course of study.

Table 10. Component weights of the high school Academic Resources variable for 1982 12th-graders and 1992 12th-graders who presented positive values for all three components

Components of Academic Resources	1982 12th-graders	1992 12th-graders
Academic curriculum intensity	.41	.42
Classrank/GPA	.30	.33
Senior test score	.29	.25

NOTE: Columns will add to 1.00.
SOURCES: High School & Beyond/Sophomore cohort (NCES 2000-194), and NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

A second message bears repeating from its formulation in the original *Tool Box*: Student effort in curriculum participation and performance over the three *years* of high school (grades 10 to 12) reflected in the transcript data is worth considerably more than performance on a three-*hour* test on a Saturday morning. Test scores are a natural consequence of the academic intensity of curriculum and quality of student effort reflected in grades, and the weakening position of the test score variable in the ACRES configuration for the NELS:88/2000 cohort is a natural outcome of improvements in academic curriculum participation of the post-*A Nation at Risk* era.

Correlations

Now that we have all the precollegiate variables explained and in place, the process of bringing zoom and macro lenses of multivariate analysis to bear begins. The first stage sets forth a correlation matrix of precollegiate academic variables including three outcomes: on-time high school graduation, basic postsecondary "access," and bachelor's degree completion. Table 11 presents the Pearson's *r* results. Some of these correlations are weak, suggesting that one or both of the variables in question will not add to the explanatory power of a logistic regression. On-time high school graduation, for the most noted example, is not related to anything (this was also true in the parallel correlation matrix in the original *Tool Box*). Other relationships are not surprising, e.g., Advanced Placement has almost no bearing on entering postsecondary education (96.7 percent [s.e. = 1.48] of NELS 12th-graders with any AP courses entered the postsecondary sphere, versus 75.9 percent [s.e. = 1.01] of those with no AP course work).

Table 11. Correlations of major precollege Academic Resources variables and high school graduation status, college entry, and bachelor's degree attainment by December 2000 for 1992 12th-graders

	Curriculum intensity quintile (CURRQ)	AP courses (APCRS)	Highest math (5 levels) (HMATH)	Science momentum (3 levels) (SCIMOM)	Foreign language (3 levels) (FLAN)	Class rank/GPA quintile (RANK)	Senior test quintile (TEST)	On-time HS grad, standard diploma (ONTIME)	Post-secondary entry (PSENT)
CURRQ	-----	0.368	0.777	0.774	0.645	0.572	0.581	0.167*	0.352
APCRS		-----	0.438	0.366	0.270	0.326	0.317	0.050*	0.111*
HMATH			-----	0.869	0.519	0.618	0.634	0.124*	0.301

True to its position in the construction of the composite academic curriculum intensity variable (abbreviated here as CURRQ), in fact, Advanced Placement does not exhibit as strong a correlation with the composite as do the mathematics, science momentum, and foreign language components. Why? Because AP is invoked as a sorting criterion in only six of those 31 levels of academic curriculum intensity (see Appendix F), while highest mathematics is invoked in 25 levels, foreign languages in 18, and core laboratory science or all science in 30. Common sense says that we will find higher correlations of these other components with the composite curriculum variable.

But among those other components, the correlation between the highest level of mathematics and science momentum (which includes highest math in its definition) is so strong (0.869) as to set off collinearity bells. The clear message is to use only one of them in any multivariate analysis. The highest level of mathematics was dropped because the variable represents only one curricular area, whereas SCIMOM carries two. Likewise, following Pedhazur's (1982) rules of thumb for identifying potential collinearity problems from correlations, table 11 advises that if we use the high school academic curriculum index, we should not invoke either highest level of math or science momentum in the same multivariate model.

The only other observations of the correlation matrix of table 11 worth special attention are:

- When bachelor's degree completion is the reference point, the relative correlations of the curriculum, class rank/GPA, and test score variables are in roughly the same relationship observed in the more complex construction of the composite Academic Resources variable: Curriculum exhibits the strongest correlation, followed by class rank/GPA, followed by test score.
- However, when the referent variable is simply entering postsecondary education, (a) the correlation coefficients are much lower, and (b) the test score variable is slightly stronger than class rank/GPA.

The bottom line of these two conclusions: What counts for completion will be more potent than what counts for mere entrance (the "easy part," in the words of Venezia, Kirst, and Antonio, 2003).

Step 1: The First Logistics

In the commentaries and critiques of these aspects of the original *Tool Box*, two potent questions were raised:

> 1) Is a composite variable such as Academic Resources, a variable that yokes together very different types of measures (a basically qualitative curriculum index, class rank and GPA, test score), as convincing as these measures taken separately in any multivariate account of degree completion (DesJardins, McCall, Ahlburg, and Moye 2002)?
>
> 2) Unlike class rank/GPA and senior test score, the academic curriculum intensity variable is built from components, some of which are high profile in their own right, e.g., Advanced Placement and highest level of mathematics reached in high school. If we substitute the major components for the composite in an account of degree completion, will they be as convincing?

In light of these questions, three distinct ways of setting up the first step in the progression of logistic analyses that lead us to appreciate what makes a difference (and how much of a difference) in completing a bachelor's degree for students who attended a four-year college at any time were explored. The first step covers both student demographics and high school performance.

What happens to all those demographic variables in the "demography only" logistic of table 3 when these three competing approaches were tried out? With the exception of gender, race/ethnicity, and becoming a parent by age 20, the minute the high school performance variables enter, the demographic variables disappear. Taken individually, none of them—first postsecondary generation status, second language dominant, recent immigrant status, family income, number of siblings, and urbanicity of community in which the student's high school was located—meet the statistical criteria for either entering or staying in the logistic models employed in this study. But two of these variables, family income and level of parents' education, play dominant roles in the construct of socioeconomic status, which itself more than qualifies for the logistic treatment.

Repetition of a special note on the components of the high school academic curriculum intensity variable is necessary in the context of this first step in the logistic narrative. With the exception of Klopfenstein and Thomas (2005), a spate of recent reports and commentaries on the Advanced Placement program (e.g., College Board 2005) claim that the original *Tool Box* demonstrated the unique power of AP course work in explaining bachelor's degree completion. To put it gently, this is a misreading. AP is only a *component* of the academic curriculum intensity in both the original *Tool Box* and this replication. But to test the misreadings, AP was tried out as one of three variables that might serve as proxies for curriculum intensity. The other two variables tested as substitutes were a measure of momentum in science (SCIMOM) which includes elements of HIGHMATH and Carnegie units earned in both core laboratory science and all science courses, and number of Carnegie units earned in foreign languages.

So, three distinct approaches to logistic regression models were tried out for Step 1. The first, table 12, keeps the composite variable Academic Resources, and includes nothing else. The second divided Academic Resources into its three components. And the third dropped the high school academic curriculum intensity variable and replaced it with its three proxy components: science momentum, foreign language study, and AP.

Which one of these three versions should be carried forward in the stepwise analysis? In the first version (table 12), maintaining the composite of Academic Resources, only Academic Resources and socioeconomic status quintile are statistically significant (though with a p value of <0.10, SES is a barely influential presence) The Delta-p statistic says that each step up the five-quintile ladder of Academic Resources improves the probability of degree completion by about 15 percent. The Delta-p applied to socioeconomic status quintile says that for each step the probability of degree completion increases by about 7 percent. Expectations do not make a difference, and the demographic variables, while all carrying negative parameter estimates, do not meet the criteria for statistical significance either. Message: At this stage, and in this formulation, the composite representation of student learning in high school, Academic Resources, is a very persuasive construct.

The second and third versions of the Step 1 logistic can be found in Appendix G, and both are far less convincing. In the second version, Academic Resources was divided into its three components: curriculum, performance (class rank/GPA), and test score. The test score component, with a t statistic of 0.35 (far below the threshold requirement of 0.765), disqualifies this version from the logistic narrative. This result also reinforces our previous observation that when both academic curriculum participation and the quality of student effort within that curriculum (grades) improve, test scores will automatically rise and paradoxically become less important with reference to the dependent variable of degree completion.

In the third version of Step 1, of the three proxy variables for high school academic curriculum intensity, only science momentum (that combination of highest level of math and number of Carnegie units in core laboratory science) emerged as statistically significant. Neither Advanced Placement nor foreign language study reached the threshold level of significance, and, with a t statistic of 0.75, foreign language study was on the borderline of disqualification in terms of further consideration. The senior test score quintile variable did not even meet the minimum statistical criterion for entrance. Had we taken this version forward into subsequent stages of student history we would have only one proxy for high school curriculum (science momentum), and no traces of the external measurement of general learned abilities that the senior year test

score quintile conveys. At least the composite index of high school performance, Academic Resources, includes a trace of external assessment.

Table 12. Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time—demographic and high school background, version 1: Using the composite variable for high school Academic Resources

Variable	Parameter estimate	Adjusted standard error	*t*	*p*	Delta-p
Intercept	-4.2762	0.6360	3.10	.05

Summary decision: The composite variable, Academic Resources, stays in the logistic narrative; other versions of representing high school performance fail.

THIS PAGE INTENTIONALLY LEFT BLANK

Part IV
Matriculation and Beyond: The Features of Postsecondary History

On reflection, the original *Tool Box* made a mistake in the order and boundaries of the blocks of variables entered in its analysis. Following high school background, and tracking students who ultimately attended a four-year college at any time, it jumped first to financial aid, for which the High School & Beyond/Sophomore data set contained detailed information (including unobtrusive Pell Grant files) covering the first four years of a student's postsecondary history. It then considered a configuration of attendance patterns that covered everything from the timing of entry to postsecondary education to extended aspects of attendance such as whether the student *ever* left his or her first institution of enrollment and *never* returned to that institution. Thirdly, it followed this mixture of time periods with a block of first-year performance indicators. The order and content of these three blocks of variables scrambled time and student history.

The Toolbox Revisited unscrambles that sequence so that momentum can be more clearly observed. We begin with the transition from secondary school to postsecondary matriculation, and focus on timing of entry and type of first institution. We then move on to first-year performance, the importance of which is fully justified by the research literature. Only after accounting for the first year do we confront financial aid (which, in the NELS:88/2000 data set, covers only the first two years of post-high school history, and is the weakest section of the study, by far).[28] Longer-term attendance patterns and extended performance (curriculum and trends in grades) come later, as they should.

In shaping the universe for analysis so that a full history is visible, one minor change to the boundaries will be exercised. The NELS:88/2000 cohort was scheduled to graduate from high school in the spring of 1992. Not all of them did, so the upper boundary for high school graduation will now be set at December 1996. Very few cases are affected,[29] but, as the NELS history ends in December 2000, the point of changing the upper boundary is to allow enough time for late high school graduates to build a postsecondary history.

In entering this sequence, the reader should note that the master program generating the mass of student-level variables included on the restricted NCES data sets of transcript-based files for both the HS&B/So cohort and the NELS:88/2000 was basically the same, hence, there were no

---

[28]Financial aid comes *after* first-year performance because the story line is more interested in the potential relationship of aid to completion among those who are *already enrolled*. If the topic was initial access, then the financial aid package for the first year would be part of the postsecondary entry configuration of variables. The NELS:88/2000 unfortunately does not allow us to distinguish modes of financing postsecondary education in the first year from those of the second year.

[29] Those who earned a high school diploma of any kind *after* December 1996 constituted 2.7 percent of all 1992 12th-graders (s.e. = 0.16) and 0.7 percent of all 1992 12th-graders who subsequently attended a four-year college (s.e.= 0.16).

algorithmic differences that would account for change in student behaviors such as attendance patterns and academic performance. There are minor exceptions, and these will be noted in the narrative.

Step 2: Matriculation

The research literature has long held that where one starts out in higher education has enormous consequences, particularly with reference to completing degrees (Velez 1985). The vast majority (78.7 percent; s.e. = 1.15) of the universe under study here started out in a four-year college. Do any characteristics of that first institution stand out in multivariate analysis?

Only selectivity of the first institution was admitted to the Step 2 logistic model (the fact that the institution was a four-year college was not admitted). To be sure, there are other characteristics of the first institution of attendance. But if the dichotomous "selective" variable turns out to have but modest, if any, significance in the account, it is unlikely that other stock institutional characteristics—size, control, residential/commuter ratio—will have any influence, either. The best of the institutional characteristics variables in the literature is probably Stoecker, Pascarella and Wolfle's (1988) "size." This is not a simple measure, rather a factorial scale that includes total enrollment, student/faculty ratio, and public control. However attractive the concept, institutional size rarely breaks through as a stand-alone factor in literature with large national samples because of student taste—some like it large, some like it small—and taste is too variant. All this does not mean that where one starts out is irrelevant to completion, rather it directs our attention to other features of student academic history. More to the point, with 64.8 percent (s.e. = 1.06) of NELS:88/2000 students who attended a four-year college at some time attending more than one institution, and 26 percent (s.e. = 1.01) attending more than two, the task of ascribing influence to institutional characteristics is daunting (for a discussion of this issue, see pp. 81–84).

In addition to the selectivity variable (SELECT), Step 2 includes NODELAY, a marker for direct entry to postsecondary education following high school graduation. It also includes a new variable, ACCELCRD, made possible by the construction of the NELS:88/2000 postsecondary transcript file to reflect the practice of dual-enrollment that expanded during the period the High School Class of 1992 was attending high school and that has become much more visible since then. ACCELCRD sums all college credits earned by course work prior to high school graduation, along with credits earned by examination—including AP, the College Level Examination Program (CLEP), and institutional challenge exams. Most of these credits were earned either prior to matriculation or during the first term of enrollment, though some were earned at later points in the student's undergraduate career. A previous brief analysis of this phenomenon (Adelman 2004a, pp. 55–56) suggested that acceleration might have a bearing on degree completion since the descriptive data indicated a positive relationship between the number of "acceleration" credits earned and both (a) high school academic curriculum intensity quintile and (b) selectivity of the first institution attended.

Table 13 sets forth the relationships of the variables in play at the postsecondary matriculation stage to bachelor's degree completion for students who attended a four-year college at any time. Academic Resources is still in a commanding position, and the Delta-p statistic indicates that with each step up the quintiles of Academic Resources the probability of completion increases by 12.8 percent. Socioeconomic status quintile is still significant, though again, marginally so. Of all the new variables, no delay of entry alone is statistically significant, and its Delta-p says that students who enter college directly from high school increase the probability of bachelor's degree attainment by 21.2 percent, a very persuasive marker.

Table 13. Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time: Postsecondary entry phase

Variable	Parameter estimate	Adjusted standard error	*t*	*p*	Delta-p
Intercept	-4.2124	0.6588	2.02	0.01

[a] Variables did not meet threshold criterion for statistical significance

NOTES: Statistically significant variables are highlighted in bold. Standard errors adjusted by root design effect = 2.19. G^2 = 5060.17; *df* =4913; G^2/df = 1.030; X^2 (df) = 1101.0 (9); pseudo R^2 = 0.2127; percent concordant predicted probabilities = 78.5.

SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

The selectivity of the first institution of attendance, while yielding a positive parameter estimate, does not reach the threshold of significance, and the *t* value for acceleration credits, at 0.73, falls just below the threshold for retention in the overall statistical model. The case of acceleration credits is one for which the author hoped for a better outcome, but once a rule is set, it is observed: The variable is dropped from subsequent steps. The demographic variables are

retained, but don't tell us much. And education expectations barely stays under consideration with a *t* value of 0.78. Beattie's human capital analysis (2002) downplayed education expectations as a central feature of explaining outcomes, particularly in consideration of group differences. It turns out that, even with a more sophisticated variable (our "anticipations") than the customary way of marking "aspirations," Beattie is right.

Step 3: First-Year Performance

Now that we have our universe of 1992 12th-graders in college, no matter where they started out, the most prominent initial marker of progress is a configuration of first-year academic performance indicators—and by "first year" is meant the *first calendar year* following the month in which the student first enrolled in their "true" first postsecondary institution after high school graduation.[30]

Most research on the critical first year of postsecondary education takes as its subjects students who start out in the fall term, and, by custom-and-usage, measures of retention (whether term-to-term or year-to-year) begin with fall enrollments. The transcript data, however, teach us that not all students commence postsecondary study in the fall term, and that there is a modest bias in drawing a universe based on fall term beginners only. For all 1992 12th-graders who entered postsecondary education at any time, 82.1 percent (s.e. = 0.83) started in the fall term, 5.8 percent (s.e. = 0.46) started in the summer term, and 12.1 percent (s.e. = 0.71) began in the winter or spring terms (depending on local academic calendars). While the full data on first term of entrance are presented in Appendix L, tables L8a and L8b, it is important to note here that Latino and African-American students are less likely than white students to commence postsecondary study in the fall term, and the same is true when students from lower socioeconomic status quintiles are compared with students from the highest socioeconomic status quintile. Any measure of retention or completion that confines its universe to students who began their postsecondary careers in the fall term is, to put it gently, grossly incomplete.

The cumulative number of variables qualifying for the logistic narrative increases by 50 percent when our field of vision opens out to first-year performance. The logistic model of the original *Tool Box* included three first-year performance variables, two of which were major contributors to understanding degree completion, and are carried forward: a marker for earning less than 20 credits in the first calendar year and a tag for students whose first calendar year GPA fell in the top 40 percent of the GPA distribution for that period. *The Toolbox Revisited* adds dichotomous variables indicating whether the student took any remedial courses in the first calendar year, and

---

[30]The "true" first institution of attendance excludes (1) colleges and community colleges in which the student was enrolled prior to high school graduation; (2) institutions in which the student was enrolled during the summer immediately following high school graduation and prior to fall term postsecondary entry (unless the institution was the same in both periods); and (3) "false starts," that is, cases in which the student enrolled, but then withdrew during the first term of attendance, only to enroll and complete course work in a different institution at a later point in time (in these cases, the second institution is the "true first institution"). The true first *date* of attendance is the first month of enrollment at the true first institution.

whether the student earned any credits in college-level mathematics during that period. The mathematics variable, identified as potentially potent by Astin and Astin (1993), represents a major departure in the way *The Toolbox Revisited* approaches its subject, for it introduces the potential association of *postsecondary* curriculum with degree completion (the original *Tool Box* did not raise this issue).

The first calendar year of attendance is the year in which students' preparation for postsecondary education is most sorely tested (Pascarella and Terenzini 1991), and in which both remediation and college-level mathematics study serve as indicators of that preparation. The lower division curriculum sets out course "gateways" through which students must pass in both universities (Hanson 1998) and community colleges (Boughan 2001). Every school can identify its list from high enrollment courses[31] and there is no question that most of these gateways require a direct connection to the content of high school curricula that define "readiness." Remediation stalls student momentum toward those gateways; college-level mathematics itself is a gateway.

In a different approach, American College Testing (2004) defines "college readiness" as a remediation-free postsecondary experience, and sets its benchmarks for "readiness" as

> . . . The level of achievement [based on ACT test scores] for students to have a high probability of success (a 75 percent chance of earning a course grade of C or better, a 50 percent chance of earning a B or better) in such credit-bearing college courses as English Composition, [College] Algebra, and Biology. . . (p. 1).

With all due respect to ACT, earning a C—or even a B—in college algebra is not why most students go to school. There are better ways to benchmark, starting with the Academic Resources index of total high school performance in which curriculum (including highest level of mathematics reached in secondary school) dominates and test scores do not. Instead of a grade in a single course, we then acknowledge the proportion of students who completed credits in *any* of five core college-level math courses during the first year of attendance, and, among those who became non-incidental students (i.e., earned at least an adjusted semester's worth of credits), the proportion who *ever* completed credits in those courses. In table 14, one notes right away that among those who start in community colleges and complete college-level math courses in the first year, college algebra is the dominant math course. Among those who start in four-year colleges, it is not the dominant math course, even though it ranks at the top in terms of student participation.[32]

---

[31]Hanson's (1998) list from the University of Texas at Austin ranges from Ecology, Evolution, and Society, to Introduction to U.S. and Texas Government, to General Psychology, to Calculus I and II for Science and Engineering Students.

[32]For more discrete details on credits earned in college-level mathematics, the reader is directed to table L9, Appendix L.

Ironically, the ACT study helps explain why curriculum quality emerges as more influential than test scores in building the Academic Resources composite, and justifies continuing to track curriculum (in this case, using mathematics momentum) across the matriculation line. The test scores are dependent variables that respond directly to increases in the concentration and level of study in each of the major secondary school content areas (see, e.g., Florida Department of Education 2005). The ACT study sees value-added in each step up the math curriculum ladder in terms of scores on the ACT math test. So when the dependent variable is degree completion, it is this curriculum—more than the test score—that sets the value-added tone.

Table 14. Percentage of 1992 12th-graders who earned credits in five categories of college-level mathematics courses in the first calendar year of attendance, and among non-incidental students,[a] the percentage who ever earned credits in those five categories, by type of institution first attended

College-level math category	Percent completing during first calendar year of attendance, starting in:		Among all students earning more than 10 credits, percent who ever earned credits in
	Four-year colleges	Community colleges	
College algebra	21.7 (1.01)	17.0 (1.19)	28.2 (0.92)
Precalculus	18.6 (0.85)	4.9 (0.77)	17.4 (0.69)
Calculus	17.6 (0.96)	1.6 (0.26)	16.8 (0.74)
Finite mathematics	4.6 (0.54)	0.9 (0.30)	6.4 (0.46)
Statistics, probability	5.3 (0.42)	2.3 (0.58)	19.6 (0.82)

[a] A non-incidental student is defined as one who earned more than 10 undergraduate credits.
NOTES: Standard errors are in parentheses. Weighted Ns: four-year college beginners = 1.14M; community college beginners = 789k; all who earned more than 10 credits = 1.84M.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

But does that mean that curriculum continues to have the same influence in a postsecondary setting? The issue comes up twice in the sequence of logistic models, first in table 15, which presents the results of the Step 3 logistic: first-year performance variables. What do we see?

- Earning less than 20 credits in the first calendar year following postsecondary entry is a distinct drag on degree completion. The Delta-p says that falling below the 20-credit threshold lessens the probability of completing a bachelor's degree by a *third*!

- First-year grades, a proxy for both student effort and acclimation to the academic demands of a new environment (Pascarella and Terenzini 1991), move in the opposite direction from low credits: If one's first-year GPA falls in the top two quintiles, the probability of earning a degree increases by nearly 22 percent.

Table 15. Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time: First postsecondary year performance

Variable	Parameter estimate	Adjusted standard error	*t*	*p*	Delta-p
Intercept	-3.5834	0.6054	3.33	0.01	
Academic Resources quintile	**0.3419**	**0.0699**	**2.75**	**0.01**	**0.0754**

† Variables did not meet threshold criterion for statistical significance

NOTES: Statistically significant variables are highlighted in bold. Standard errors adjusted by root design effect = 1.78. $G^2 = 4411.64$; $df = 4764$; $G^2/df = 0.926$; X^2 (df) = 1516.37(12); pseudo $R^2 = 0.2893$; percent concordant predicted probabilities = 83.3.

SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

- Academic Resources and socioeconomic status are the only other statistically significant variables. The Delta-p story for socioeconomic status quintile remains at roughly the same level: Each step up the SES ladder increases the probability of degree completion for this population by 6 percent or so. The Delta-p strength for Academic Resources, however, falls from 12.8 percent in the postsecondary entry model to 7.5 percent here, a natural consequence of the introduction of other competing curricular and grade-based variables.

- The two new curricular variables for remediation and college-level mathematics produce *t* statistics that justify carrying them forward, but do not reach even a threshold statistical significance level of $p<0.10$.

In the last observation there is a surprise that calls out for explanation. The parameter estimate for remediation in the first year is positive, not negative as conventional wisdom would assume. Students in this group who took any remedial courses in the first year earned bachelor's degrees at a 48.7 percent rate (s.e. = 2.70) compared to 69.9 percent (s.e. = 1.26) of those who did not take remedial courses in the first year (not in table). That is a significant and meaningful difference from which, one might assume, remediation would be a negative. But there are other variables in this model that determine the sign and strength of the parameter estimate and its statistical significance. In a study of the academic careers of traditional-age community college students, the author found that remediation (one dichotomous variable marking any remedial reading, and one multi-level variable based on type and number of remedial courses) did not affect either transfer or (for students who did not transfer) completion of an associate degree (Adelman 2005a). Other recent research, using a very sophisticated targeting of students whose need for remediation may differ according to the school they enter, goes beyond the finding that remediation is not a drag on degree completion to demonstrate that, in terms of persistence, remediation yields decidedly positive results (Bettinger and Long 2005). Two studies do not make for a definitive conclusion, but the evidence that students who successfully pass through remedial course work gain momentum toward degrees is beginning to build.

As for the other variables in the Step 3 model, we note that NODELAY drops out of the statistically significant range with an indirect message of "once a student is in college, their performance counts more than when they arrived." In other words, the ramifications of delayed entry can be overcome, but only with the kind of considerable effort reflected in first-year credit accumulation and first-year grades. The reader will note of table 16, however, that when financial aid variables are part of the logistic model, NODELAY rises back above the significance threshold.

Step 4. Adding Financial Aid to the Equation

There is a major difference between the High School & Beyond/So and NELS:88/2000 data sets in the nature and temporal coverage of financial aid information. For the HS&B/So, an unobtrusive Pell Grant file provided data on at least one type of grant-in-aid. Student reports covered four years (1982–86) of other types of grants-in-aid, loans, and work (including, but not confined to, college work-study from all sources) while enrolled. Three dichotomous variables resulted: GRANT, LOAN, and STUWORK. In the original *Tool Box* study, based on the HS&B/So data, GRANTS and STUWORK were modestly significant contributors to the explanation of bachelor's degree completion in both the financial aid and attendance pattern steps of the model, but fell below the threshold of statistical significance as soon as first-year and extended performance factors were taken into consideration.

The NELS:88/2000 financial aid information covered the period 1992–94 only, i.e., the first two years following the modal high school graduation date for the cohort. In the initial input versions of the data in 1994 (the third NELS follow-up survey), the information was provided by students for each institution attended, and in answer to the question, simply phrased, "besides your previous savings, how are you paying for this?" The options were grants, loans, work, parents, and other forms of aid. For students who attended more than one institution during the 1992–94 period, it is thus possible for different combinations of financial aid types to be attached to the

discrete attendance cases. For our purposes, if a student reported using any one form of financial aid or support (grants, loans, work-study or campus job) at *any* institution attended, a positive entry was recorded for that *type* of financial aid or support for that student.

Table 16: Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time: Postsecondary financing

Variable	Parameter estimate	Adjusted standard error	*t*	*p*	Delta-p

† Variables did not meet threshold criterion for statistical significance
NOTES: Statistically significant variables are highlighted in bold. Standard errors adjusted by root design effect = 1.78. G^2 = 4396.88; *df* =4763; G^2/df = 0.923; X^2 (df) = 1519.14(13); pseudo R^2 = 0.2915; percent concordant predicted probabilities = 83.4.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

For those who ask about the importance of initial financial aid package offerings to students' choice of where to enter the postsecondary system, the NELS:88/2000 is of little help. The Beginning Postsecondary Students longitudinal study of 1995/96–2001, on the other hand, has the data elements but does not provide convincing guidance: For traditional-age students (i.e., those who began at age 20 or younger)in the BPS95/96–2001, 7 percent (s.e. = 0.7) of those who

started at four-year colleges and had applied to more than one school and 3.4 percent (s.e. = 1.6) of those who started at community colleges and had applied to more than one school said the financial aid package was the principal reason for their selection.[33] Such percentages do not merit further inquiry.

We come to Step 4 of the logistic model, then, with a weak collection of dichotomous financial aid variables, and the results must be judged in that light. As table 16 reveals, only the variable indicating whether the student received College Work-Study funds from any source or held a campus job was even admitted to the *Toolbox Revisited* model, and even then, produced a *t* statistic of 0.66, below the 0.765 required for carrying forward to the next step. Before that next step is taken, though, this narrative needs an important pause.

A Critical Pause for the Second Calendar Year

The literature on postsecondary persistence, retention, and attrition has historically taken its pauses and measures at the end of the student's first academic year. A more constructive notion for plotting the path of academic momentum on the far side of the postsecondary matriculation line may be to give students two full calendar years following the initial date of enrollment before taking their progress pulses, yet the research on this possibility has been surprisingly limited to date (see Smith 1995, and Nora, Barlow and Crisp 2005).[34] Looking backwards from the final degree completion status of our NELS:88/2000 universe to mark cumulative change to the end of the second calendar year following entry on key indicators provides a richer framework for advisement.

"Retention" and its paradoxes

No national database will support the assertion that a quarter of four-year college entrants and half of community college entrants "do not return for their second year" (Kazis 2004, p. 4). Contrary to this negative conventional wisdom, the proportion of students in the universe for this study who "persisted" to the second postsecondary year is substantial. The definition of "persistence" is active and student-centered, marks a calendar academic year as July 1 through the following June 30, and runs as follows:

> Whenever the student first enrolls and earns credits in postsecondary education (summer, fall, winter, spring) marks the first academic calendar year of their postsecondary history.
>
> If the student enrolls and earns credits at *any* time and at *any* institution during the next academic calendar year, that student has "persisted."

---

[33]National Center for Education Statistics, BPS95/96–2001 Data Analysis System; NCES 2003-173.

[34]Nora, Barlow, and Crisp (2005) offer a potentially promising analysis of a cohort at one nonselective four-year institution that is undercut somewhat by lack of data on age distribution and the fact that retention and six-year graduation rates are confined to that institution. But the authors include cumulative GPA to the second year, enrollment intensity, remediation, three core courses (what this study calls "gateways"), and a rough course withdrawal factor—all of which speak in favor of their approach.

"Retention," which puts the student in a passive role vis-a-vis a specific institution, is not the right word to describe this sequence: It's "persistence." There are two important points to underscore: (1) This definition reveals an extremely high rate of persistence, but (2) whether we talk about institutional "retention" or student "persistence," the true measure is not the fact of the event, rather the *quality* of the student's record going forward. The second academic calendar year offers students the opportunity to recapture any lack of momentum of the first. In that respect, the second year may be even more important than the first.

The unhappy paradoxes of retention rates and retention quality[35] are revealed in table 17. The universe for the table is confined to students with complete records. The proportion of students who enrolled sometime, somewhere in the second academic calendar year following entrance to postsecondary education is about 90 percent for all NELS:88/2000 postsecondary students and 96 percent for those with standard high school diplomas who subsequently attended a four-year college at some time (and in this group, just about everybody who started in community colleges). These data ought to destroy the mythologies of low first-to-second year retention (which, by the formulas most commonly applied, include only students who started full-time and in the fall semester and returned to the same school the following fall semester). This account gives students credit for persisting, and gives students who started in sub-baccalaureate trade schools credit for earning a certificate in their first year and then going on their way.[36]

However, this account also shows that, even when one confines the universe to the group being followed in *The Toolbox Revisited*, roughly one out of five entered the second year with low credit momentum, and roughly one out of six carried low first year GPAs. The overlap, too, is considerable: 40 percent of those coming out of their first year with fewer than 20 credits were also in the bottom quintile of first year GPA (not in table). Low credit momentum is also due to the number of courses taken in the first year, with 41.7 percent (s.e. = 2.46) of those who earned less than 20 credits attempting seven or fewer courses—a proxy for part-time status—versus 2 percent (s.e. = 0.27) of those who emerged with 20 or more credits. The reason for counting course attempts and not credit attempts is a by-product of the volume of remedial courses (which do not carry additive credits). Half of the low first-year credit group were tied up in remediation, versus 17 percent of those who reached or exceeded the 20-credit threshold.

---

[35]As Tinto (1987) noted, "The point of retention efforts is not merely that individuals be kept in college, but that they be retained so as to be further educated." (p. 136) Poor retention quality significantly lowers the odds of further education.

[36]The persistence rates for all 1992 12th-graders noted in this paragraph are slightly different from those previously reported (Adelman 2004a, table 3.4, p. 42), where the weight for known postsecondary participants (not the weight for students with complete records) was used.

Table 17. Percentage of 1992 12th-graders with complete postsecondary records who persisted in postsecondary education from their first calendar year of enrollment to a second calendar year, by type of institution first attended, and, of those who persisted, percentage with lagging first-year performance

Student group	Persisted	Earned one-year certificate	Did not persist	Of those who persisted, first-year performance indicators: Less than 20 credits	In lowest GPA quintile
All 12th-graders	89.7 (0.57)	0.9 (0.13)	9.4 (0.55)	33.2 (1.12)	17.4 (0.81)
Type of first institution					
Four-year college	95.2 (0.59)	0.1 (0.03)	4.7 (0.59)	15.9 (0.91)	15.2 (0.86)
Community college	84.0 (1.12)	0.4 (0.10)	15.6 (1.11)	60.7 (1.93)	21.5 (1.76)
Other sub-bacca-laureate	71.5 (3.06)	14.8 (2.52)	13.7 (2.01)	31.4 (5.17)	11.9 (2.70)
All with standard high school diploma by December 1996 who attended a four-year college at any time	95.8 (0.50)	0.1 (0.03)	4.2 (0.50)	21.9 (0.98)	15.5 (0.88)
Type of first institution					
Four-year college	95.2 (0.59)	0.1 (0.03)	4.7 (0.59)	15.9 (0.91)	15.2 (0.86)
Community college	97.9 (0.87)	2.1 (0.87)	#	44.0 (2.93)	15.7 (2.72)
Other sub-bacca-laureate	Low N[a]	Low N[a]	Low N[a]	Low N[a]	Low N[a]

Rounds to zero.
[a] Reporting standard not met.
NOTES: Standard errors are in parentheses. Row totals for the three persistence/retention columns may not add to 100.0 percent due to rounding. Weighted N for all 12th-graders with complete postsecondary records: 1.88M; for all 12th-graders with complete postsecondary records who attended a four-year college at any time and who earned a standard high school diploma by December 1996: 1.38M

Momentum at the end of the second calendar year

First-year background certainly helps explain some of what transpires in student histories by the end of the second year. Tables 18 and 19 offer a skeleton of two-year performance so that future research on the momentum hypothesis can become more sophisticated than this outing. The information is presented in two separate tables to make sure the messages are clear. The most overwhelming phenomenon to note in table 18 is that by the end of the second calendar year, those who never earned their bachelor's degree were already 25 credits behind those who did (57.4 credits earned by those who eventually received a bachelor's degree versus 31.6 for those who did not earn the degree), and for those who were behind, there was no difference between starting in a four-year college and starting in a community college. One set of "culprits" was attendance pattern related: lower percentage full time, lower percentage continuously enrolled, lower percentage getting to and beyond 20 credits in the first calendar year. All these factors decrease the probability of completion.

Credit momentum is clearly in play. For the universe of this study, the mean number of credits earned within two calendar years of the date of entry was 49.5 (s.e. = 0.51). It takes a lot of work in the second calendar year for those whose additive credit totals in the first year were less than 20 to reach that mean, and only 3.6 percent (s.e. = 1.03) did, compared with 77.6 percent (s.e. = 1.02) for those who earned 20 or more credits in the first year.

But a second set of negative vectors is clearly that of academic performance. In table 18 the spread in mean grade point average between those who eventually earned the degree and those who did not is substantial by the end of the second year, and it is not surprising that nearly one in five of those who never earned any credential had already become status dropouts (see table 19). The data remind us of a common sense fact that few analysts or commentators ever acknowledge when writing about student academic careers after high school: A measurable proportion of postsecondary students will not perform well (for GPAs of status dropouts, by timing of permanent departure from postsecondary education, see Appendix H, table H4). Higher education has standards, and some students will, in fact, be placed on academic probation or be formally dismissed for academic reasons, i.e., flunk out. These compressed signals are not as likely to be entered on official records as graduation with honors (*cum laude*, etc.). [37]

[37]Compressed signals are used to mark extremes of academic performance. The American Association of Collegiate Registrars and Admissions Officers has reported that 90 percent of its member institutions enter graduation with honors on transcripts (AACRAO 2002), and, in a 2005 survey of transcript practices , found that 70 percent enter academic probation or dismissal (www.aacrao.org/pro_development/surveys/transcript05.htm).

Table 18. Of 1992 12th-graders who earned a standard high school diploma by December 1996 and attended a four-year college at any time, credits earned and GPA at the end of the second year following initial enrollment in postsecondary education, and extended postsecondary attendance and performance markers, by ultimate bachelor's degree status

Selected attendance and academic performance markers	Of those who earned bachelor's		Of those who attended a four-year college, but did not earn bachelor's	
Earned 20 or more credits in first year	90.8 (0.79)		46.8 (1.88)	
Always full-time	79.3 (1.04)		37.9 (1.85)	
Continuously enrolled	93.5 (0.58)		45.7 (1.93)	
Cumulative credits and GPA two years from entry				
	average credits	mean GPA	average credits	mean GPA
All students in universe	57.4 (0.35)	2.91 (0.14)	31.6 (0.86)	2.13 (0.36)
Started in four-year college	58.8 (0.30)	2.92 (0.14)	32.1 (0.85)	2.03 (0.39)
Started in community college	49.2 (1.30)	2.84 (0.42)	31.6 (2.20)	2.37 (0.81)
If no remedial courses in first year	58.8 (0.36)	2.97 (0.14)	34.1 (1.13)	2.19 (0.32)

NOTES: Standard errors are in parentheses.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

Table 19 serves another function in the narrative, namely, to look back from the end of the longitudinal study in December 2000, and ask what percentage of postsecondary students were no longer enrolled and had not earned a credential of any kind, by timing of the gap between their first month and last month of enrollment? These students are called "status dropouts" (though they may return to postsecondary education at a later date). While the general subject of timing and reasons for departure is elaborated in Appendix H, table 19 looks at the eventual dropout population only by their status at the end of the second year of attendance. It says, very simply that:

(a) of those who never earned a credential, 23 percent became status dropouts by the end of the second year;

(b) of all those who ultimately became status dropouts over an 8.5 year period, roughly a third did so by the end of the second year;

(c) for those who dropped out in either the first or second year, GPAs were decidedly below thresholds required for degrees, but

(d) when asked why they left without a degree, less than 6 percent cited academic reasons (also see Appendix H, table H2).

Yes, the status dropout rate proves higher during the first year than the second, but by the end of the second year, the loss of academic momentum is very evident.

Table 19. Status dropout rates at the end of the second year following initial enrollment in postsecondary education of 1992 12th-graders who attended a four-year college at any time, and allied academic performance data

Timing of departure	Percent of those who never earned a degree who became status dropouts	Percent of all who ultimately became status dropouts	Mean grade point average at end of enrollment	Percentage of dropouts who said they left for academic reasons
Left postsecondary without credential, never returned:				
during first 11 months	13.1 (1.62)	19.1 (1.33)	1.68 (0.81)	5.9 (1.92)
during months 12–23 after first enrollment	10.3 (1.26)	13.3 (1.56)	1.98 (0.68)	5.6 (1.40)

NOTES: Standard errors are in parentheses. Weighted N for status dropouts in first two years = 103k.

Curriculum gateways

As significant in the panorama of student performance through the end of the second calendar year are rates of participation in specific courses identified as curricular gateways in four-year colleges by Hanson (1998) and in community colleges by Boughan (2001). The taxonomy of postsecondary courses used to code the transcripts for both the High School & Beyond/ Sophomore cohort and the NELS:88/2000 data files includes over 1100 discrete course categories[38] of which 645 were used to answer the following question: "What percentage of students in the *Toolbox Revisited* universe successfully completed credits in each course category between the month they first entered postsecondary education to a point two calendar years later?" Table 20 presents the 25 academic course categories[39] in which the highest percentage of those who eventually earned bachelor's degrees garnered credits during that time span, and for each course category, also presents matching percentages for students who attended a four-year college at any time but who did not complete a bachelor's degree.

[38]The most recent version, *Taxonomy of Postsecondary Courses Based on the National Transcript Samples, 2003*, is available at www.ed.gov/rschstat/research/pubs/empircurr/index.html.

[39]Though their enrollments were substantial, physical education activities, health information, physical conditioning, orientation, and personal development courses were excluded.

Table 20. Of 1992 12th-graders who earned a standard high school diploma by December 1996 and attended a four-year college at any time, course participation rates by the end of the second year following initial enrollment in postsecondary education, by ultimate degree status

	Percentage of students who earned credits by the end of the second year following initial enrollment	
Course	Earned bachelor's	Did not earn bachelor's
English composition	82.3 (1.03)	53.4 (1.40)
General psychology	61.5 (1.18)	32.2 (1.19)
General biology	35.2 (1.24)	12.4 (0.87)
Introduction to sociology	34.4 (1.12)	19.6 (1.08)
U.S. history surveys	32.6 (1.22)	14.9 (0.97)
Micro/macroeconomics	30.3 (1.14)	9.3 (0.88)
General chemistry	30.1 (1.05)	7.5 (0.74)
College algebra	26.7 (1.20)	13.9 (0.94)
U.S. government	25.3 (1.12)	10.4 (0.74)
Calculus	23.7 (1.11)	3.2 (0.43)
Precalculus	22.4 (0.95)	5.8 (0.68)
Oral communication	20.4 (1.03)	11.0 (0.72)
Introduction to philosophy	18.9 (1.05)	5.0 (0.49)
Literature: general	18.9 (1.03)	5.0 (0.56)
Spanish: intro and intermed	18.8 (1.01)	5.9 (0.61)
Western civilization	17.0 (0.93)	6.5 (0.62)
Introduction to computing[a]	15.8 (0.90)	10.9 (0.81)
Introductory accounting	15.7 (0.81)	7.2 (0.56)
Statistics (mathematics)	14.4 (0.79)	3.7 (0.68)
World civilization	12.1 (0.93)	4.0 (0.50)
General physics	12.1 (0.83)	2.3 (0.42)
Public speaking	11.2 (0.78)	6.2 (0.67)
Music appreciation	10.9 (0.84)	3.8 (0.45)
Drama criticism/history	10.7 (0.73)	2.9 (0.46)
American literature	10.3 (0.71)	1.7 (0.28)

[a] This is not "introduction to computer science."

NOTES: Standard errors are in parentheses. Weighted N for bachelor's recipients = 935k; for those who did not earn bachelor's = 513k. All row estimate comparisons are significant at $p<.05$.

SOURCE: National Center for Education Statistics: NELS:88/2000 postsecondary transcript files (NCES 2003-402 and Supplement).

This is a story that moves curriculum details forward from high school. It is empirically-driven, which is to say that the volume of course participation identifies the gateways for both community college transfer students and those who started in four-year colleges in the NELS:88/2000 cohort. Given the disparity in the number of credits accumulated by the end of the second academic calendar year between those who eventually earned the bachelor's degree and those who did not, the spreads in participation rates in these 25 course categories are not surprising. The ratios of these percentage participation rate contrasts are 7:1 in calculus, 6:1 in American literature, 5:1 in general physics, 4:1 in general chemistry, and more than 3:1 in precalculus, micro/macroeconomics, introduction to philosophy, general literature surveys, statistics, history/criticism of drama, and world civilization. These courses cover the full range of traditional lower-division distribution requirements (akin to pick one from bin A, two from bin C, etc.) in four-year colleges and general studies associate degree requirements (the bulk of the transfer curriculum) in community colleges, with the standard non-remedial English composition and college algebra the most visible gateways for the community college group (Boughan 2001).

The list of 25 discrete categories in table 20 invites aggregation and, with aggregation, the inclusion of other lower division courses that serve gateway roles. For example, there are four college-level mathematics courses among the 25, and they certainly can be aggregated as we have already done in our assessment of first-year performance. General biology is not the only introductory biology course category in the taxonomy used. Some institutions still use a zoology-botany sequence; others open the study of life forms with cellular biology; others, still, offer the option of human biology as a starting point. All of these course categories are in the taxonomy, and joining them with general biology in an aggregate allows a broader and more accurate coverage of participation in gateways to upper division course work requiring a grounding in the biological sciences.

Table 21 takes this alternative approach to describing the curricular participation of students who earned bachelor's degrees and those who did not. Table 21 uses 14 aggregate gateways, two of which are single-course categories repeated from table 20 (general psychology and micro/macroeconomics). While Appendix I provides a listing of all course categories under each aggregate, a few notes are necessary in the text:

- Humanities other than literature covers multidisciplinary introductions to the humanities, introduction to philosophy, ethics, and introduction to religious studies (usually a comparative religions survey). It does not include foreign languages.

- "Foundation business" is included for two reasons. First, business fields have historically claimed the largest percentage of majors among traditional-age bachelor's degree completers and a substantial proportion of associate degrees awarded to traditional-age students by community colleges (Adelman 2004a, tables 5.1, p. 61 and 5.4, p. 65). Secondly, prospective business majors appear to take at least one introductory gateway course in the area during their first two years (introduction to business, business law or business legal environment, and/or introductory accounting).

Table 21 displays not only the percentage of students in the bachelor's and no-bachelor's groups who earned credits in each of the 14 aggregates, but also, for those who earned any credits in the aggregates, the average number of credits earned. The reader will notice first, that the use of aggregates narrows the difference in participation rates between the two groups. For example, in the category of standard English composition, the difference in participation rates between those who eventually earned a bachelor's degree and those who didn't is 82.3 percent to 53.4 percent (table 20); but when the category becomes "college-level writing," and includes technical writing, creative writing, and advanced essay, the participation difference narrows to 84.5 percent to 68.6 percent. That is still a significant gap, though not as severe as others in table 21. For the record, the credits earned in the aggregates of table 21 account for 59 percent of all credits earned by students in this study during their first two years of postsecondary education.

Table 21. Of 1992 12th-graders who earned a standard high school diploma by December 1996 and attended a four-year college at any time, participation rates in lower-division course category aggregates and average number of credits earned in each aggregate by the end of the second year following enrollment in postsecondary education, by ultimate degree status

	Earned bachelor's degree by December 2000		Did not earn bachelor's degree by December 2000	
Course aggregate[a]	Percentage completing credits	Average credits earned	Percentage completing credits	Average credits earned

At the same time—and with few exceptions—the differences in average credits earned in the 14 aggregates are negligible, statistically insignificant, or meaningless—or all three of the above. In other words, when students who did *not* earn a degree took courses in these aggregates, they earned credits at the same rate as those who *did* earn the degree. The problem is still that a much lower percentage of those who did not earn degrees even pass through these gateways.

What does this account of the second calendar year mean?

The sequence of steps of the logistic narrative of what matters in degree completion in *The Toolbox Revisited* moves from first-year performance (with an apostrophe of financial aid considerations) to longer-term vistas of attendance patterns and extended performance. It does not make a distinct stop at the end of the second year. And yet by the end of students' second year, a significant spread in credit generation, academic performance, and curricular participation has opened up between those who eventually completed bachelor's degrees and those who did not. An event history account appropriate to the analysis of withdrawal (e.g., DesJardins, Ahlburg, and McCall 1999) would include a measurement at this point. So as the logistic narrative heads into consideration of attendance patterns (Step 5), the reader might ask what would happen if we took first year-credits and first-year GPA and replaced those variables with *second*-year cumulative measures.

An experimental logistic was constructed in response to that hypothetical question (see Appendix L, table L10). What happened? The Delta-p statistic for the credits variable barely budged and the Delta-p for GPA declined but slightly, i.e., at first glance, it doesn't make a difference whether one uses first- or cumulative second-year measures. At the same time, though, the strength of that cumulative second-year credits substitute[40] wreaked havoc on critical variables that would otherwise be highlighted under attendance patterns, e.g., community college transfer and four-year-to-four-year transfer. As we will note in a moment, disentangling the consequences of different kinds of multi-institutional attendance is more critical to the analysis of degree completion than status at the end of the second year.

What about the gateway lower-division courses taken by the end of the second calendar year? Are any of them key portals to degrees? Beyond college-level writing (a requirement) and college-level mathematics, this is not a fair question, for the answer depends on a student's major and the requirements of the degree-granting department. Consider an English major who took general physics, the introductory micro/macroeconomics sequence, and introduction to design to satisfy distribution requirements. None of these courses (which are gateways to upper-division offerings in other fields) is a portal to completing a degree in English, though one could argue that they provide literature majors with analytic tools, reference points, and contexts that can only

[40]The variable for cumulative credits to the end of the second calendar academic year was constructed in a manner different from the dichotomous presentation of first calendar academic year credits. Cumulative credits is a categorical variable with four levels based on empirical mean credits earned and standard deviation (49 and 19 respectively): 0–29, 30–49, 50–69, and 70 or more.

enrich their interpretive powers. In fact, it could also be argued that the distribution courses gathered in the 14 aggregates of table 21 are secondary in propulsive power to the second level of course work in specific fields. For example, "everybody" takes general psychology, but those who log experimental psychology and developmental psychology are establishing a beachhead in the field, and those courses become the real portals to the degree.

One might use the number of curricular "gateways" through which students had passed by the end of their second calendar academic year as an independent variable, but the national samples with which we work in grade-cohort longitudinal studies would require consensus of academic administrators as to the curricular locations and expected threshold numbers of these gateways, and that consensus is simply not available. In fact, given the variety of presentations of postsecondary curricula across over 3,000 degree-granting institutions, that consensus may be impossible. This is ultimately a matter for local configuration and analysis (for a course cluster approach, see Zhai, Ronco, Feng, and Feiner 2001) as well for future research that would revisit the differential course work hypothesis in *postsecondary* contexts that appeared in the literature a decade ago (e.g., Ratcliff et al. 1995; Kroc, Howard, Hull, and Woodard 1997). As this pause in the narrative of *The Toolbox Revisited* demonstrates, though, those analyses cannot be profitably engaged on the basis of the student's first-year work alone. The second year is just as important.

Step 5: Postsecondary Attendance Patterns

One of the principal contributions of *Answers in the Tool Box* was to document, on a national scale, what college and community college registrars, institutional research officers, and enrollment managers had known for some time: the increasingly complex enrollment patterns of postsecondary students (Hearn 1992; Kearney, Townsend, and Kearney 1995). This complexity has steadily accelerated since the 1970s, when the first high school cohort tracked by the National Center for Education Statistics attended college (for historical comparisons of multi-institutional attendance patterns, see Appendix L, table L11). It is not merely a case of the proportion of non-incidental[41] undergraduates attending more than one school increasing from 47 to 57 percent;[42] it is more a question of *how* they attended more than one school, and in what combinations and order (Adelman 2004a, pp. 45–50).

The most critical distinction on this dynamic landscape is between transfer and multi-institutional attendance. Transfer is a migration that is formally recognized by system rules, a sequential movement from a *de jure* status in one institution to a *de jure* status at a second institution (or third, or fourth). Furthermore, the student's stay at the second institution is not a short visit. So, for example, the beginning community college student who earns 46 credits at the first school and 5 credits at the second is a multi-institutional student not a transfer student. In the context of

---

[41]"Non-incidental" means students who earned more than 10 credits in their undergraduate careers. Those who earned 10 or fewer credits do not accumulate enough history for analysis of attendance patterns.

[42]Kuh et al. (2001) found that 53.2 percent of the 32 thousand seniors who participated in the 2000 National Survey of Student Engagement had attended more than one institution.

a four-year student's history, earning 102 credits at the first school (ultimately, the degree-granting school), 21 credits at a different four-year college and 9 credits at a community college along the way, involves a situation in which *credits* are transferred, not the student. But the student who begins at a community college and earns 44 credits at the community college before attending a four-year college, then earns 55 credits from the four-year college and is still enrolled at the four-year college at the end of our tracking period is a transfer student.

Whether and how students attend more than one school may also depend on student performance in the first calendar year of enrollment. Using the five-year Beginning Postsecondary Students longitudinal study of 1989–94, McCormick (2003) demonstrated that for students who started in four-year institutions, the higher the first-year self-reported GPA, the more likely the student would stay put, whereas for students who started in two-year colleges, a higher GPA was associated with transfer, hence, with multi-institutional attendance. Do these findings hold up in a transcript-based longitudinal study such as the NELS:88/2000? Table 22 outlines the corroboration: For four-year college students, McCormick's observation is unconditionally seconded; for community college students, the difference between attending one school and two schools strongly supports the argument.

Table 22. Relationships of grade point average (GPA) in the first year of attendance to number of institutions attended by 1992 12th-graders, by type of first institution attended

Type and number of institutions	First year GPA
Started in four-year college	
One institution	2.74 (0.03)
Two institutions	2.61 (0.04)
Three or more institutions	2.53 (0.04)
Started in community college	
One institution	2.39 (0.05)
Two institutions	2.59 (0.04)
Three or more institutions	2.45 (0.09)

NOTES: Standard errors are in parentheses.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

The students in the subject universe of this study were even more mobile than the NELS:88/2000 cohort as a whole: 35.9 percent (s.e. = 1.17) attended only one institution, compared with 46.2 percent (s.e. =1.04) of all NELS students who earned any postsecondary credits. And our subjects were more likely to attend *more than two* institutions than the larger universe (25.3 percent (s.e. = 1.15) versus 20 percent (s.e. = 0.81). This higher degree of

mobility invites us to identify the deeper structures of attendance so that we can better sort the relationships between starting point, performance, migration, and degree completion.

For those students who attended more than one school, table 23 lays out some basic patterns. One should be very careful in reading them. The universe consists of the 64 percent of 1992 12th-graders who not only attended a four-year school at any time *but also* attended more than one institution as undergraduates. Institutional mobility is built into the definition. It is not surprising (in fact, it is outrightly redundant) that reverse transfers do not earn bachelor's degrees and that classic community college transfers who earn bachelor's degrees receive them from an institution other than the one first entered.

Those obvious observations aside, the most intriguing students in this configuration are what de los Santos and Wright (1990), Borden (2004), and others have called "swirlers." The basic definition of "swirling" follows a pattern first observed in the High School & Beyond/ Sophomore cohort data and was labeled "alternating sectoral enrollment." In this pattern, the student starts in either a four-year college or a community college, and moves back and forth between them for at least one cycle, accumulating more than 10 credits from both sectors in the process. In the sample isolated in table 23, 63 percent of these cycles began in four-year colleges

Table 23. Combinations of institutions attended by 1992 12th-graders who attended a four-year college at any time who also attended more than one school, and percentage earning bachelor's degrees under each combination

		Earned bachelor's degree	
Institutional combination	Percent attending	Total	From other than first institution
Two or more four-year colleges	31.8 (1.41)	82.3 (1.52)	42.3 (2.57)
Reverse transfer (four-year to community college)	9.7 (1.00)	<0.1 (0.42)	N.A.
Community college to four-year college (including classic transfers)	24.0 (1.37)	58.1 (2.97)	99.7 (0.26)
Alternating sectoral enrollment ("swirling")	15.4 (1.24)	39.1 (3.77)	69.7 (4.55)
Four-year-college-based student attending community colleges for incidental course work	14.3 (1.01)	86.4 (2.32)	24.6 (4.39)
Other combinations	4.7 (0.62)	4.6 (1.42)	45.1 (13.5)

NOTES: Standard errors are in parentheses. Column for attending may not add to 100.0 percent due to rounding. Weighted N=753k.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

and 37 percent in community colleges (s. e. = 3.98; not in table). Furthermore, 57.6 percent of the students engaged in just one cycle of alternating enrollment while 42.4 percent rotated through two or more alternating cycles of attendance (s.e. = 4.05; not in table). Among the major categories of students who attended more than one school in table 23 there is a broad range of bachelor's degree completion rates (39 to 86 percent), and the "swirlers" are at the low end of that range.

What's the point? Attendance patterns, as accounted for in the history of the High School Class of 1982 (the HS&B/So), presented paradoxes. As a dichotomous variable in the original *Tool Box*, multi-institutional attendance evidenced no association with bachelor's degree attainment; classic community college transfer bore strong and positive fruit; but the more general phenomenon of attending more than one institution and not returning to the first institution of enrollment evidenced a strong negative relationship to degree completion. These paradoxes are unwound in table 24, the logistic account of the associations between the increasingly complex postsecondary attendance patterns of the 1990s and degree completion.

As befits the topic of attendance patterns, the variables considered and admitted to the Step 5 logistic model are those of time and place:

Ever part-time:	flagging those students who, at some time in their undergraduate careers, enrolled part-time in an academic term other than a summer term;
Summer:	number of credits earned during summer terms in three bands: none, 1–4, and more than 4;
Classic transfer:	community college to four-year after earning more than 10 credits from the community college;
Four-to-four:	four-year college to four-year college transfer; and
Multiple schools:	marking students who attended more than one institution, whether they formally transferred or not.

Actually, one major time-related attendance pattern variable is purposefully left out of the equation, continuous enrollment—or NOSTOP, as it is abbreviated. NOSTOP was one of the most powerful of the postsecondary history variables in the original *Tool Box*. Given the length of the grade-cohort postsecondary histories in the longitudinal studies,[43] a student was allowed a one-semester (or its equivalent, and exclusive of summer terms) stop-out period and still considered continuously enrolled. When this variable is entered into the logistic model, its positive value and extraordinary statistical significance do not permit us to ascertain fully how

[43]Up to 12 years for the High School Class of 1972 (NLS-72), 11 years for the High School Class of 1982 (HS&B/So), and 8.5 years for the High School Class of 1992 (NELS:88/2000).

Table 24. Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time: Postsecondary attendance patterns

Variable	Parameter estimate	Adjusted standard error	*t*	*p*	Delta-p

Parenthood	-0.8677	0.4246	1.16	†	†

† Variables did not meet threshold criterion for statistical significance.

[a] Set in three bands: 0, 1–4, and more than 4.

NOTES: Statistically significant variables are highlighted in bold. Standard errors adjusted by root design effect = 1.76. $G^2 = 3749.31$; $df = 4759$; $G^2/df = 0.788$; X^2 (df) = 1984.37(17); pseudo $R^2 = 0.3813$; percent concordant predicted probabilities = 88.1.

SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

the other variables in the model are interacting. Its strength deflates the associative contribution of other factors in student performance that might better illuminate the dynamics of degree completion. Hence, in *The Toolbox Revisited*, we set aside NOSTOP until the last possible moment, the final Step 7.

All five attendance pattern variables introduced in table 24 break the barriers of significance at this stage of model-building:

- Ever part-time: Whether the student was ever part-time, a decidedly negative influence on degree completion. The Delta-p statistic tells us that part-time status reduces the probability of completion by over 35 percent. While previous research has documented the extent to which part-time enrollment pulls students off the "persistence track" (Carroll 1989), the 35 percent reduction in probability seems high given the fact that nearly half of the NELS:88/2000 postsecondary students were part-time at some time. Students are inconsistent in their understanding of what part-time means, and under a more generous definition of the concept, the reduction in probability dropped to 30 percent—still a puzzlingly high number (see definition of PARTTIME in the Glossary).

- Summer-term credits: The more, the better. That is, each step up the short ladder of summer-term credits increases the probability of completion by 14.4 percent.

- Classic community college transfer: The significance of transfer is solid at $p < .05$, and the Delta-p says that the probability of completion for a transfer student increases by 21 percent. At one point in the construction of this variable for the NELS:88/2000 cohort, a flag was added to indicate whether the student's first enrollment at the four-year college occurred within four years of entry to the community college. This attempted refinement of a time-sensitive variable did not change its position in the Step 5 logistic model. Given the fact that many students who ultimately transfer move back and forth between community colleges and four-year institutions, it is very difficult to determine the precise moment of transfer, i.e., the season on the academic clock at which both institutions recognize a permanent change in status for the student. A flag for first date of attendance at the four-year school does not help.

- Four-year to four-year transfer: This variable is not as strong as community college transfer. Its statistical significance is marginal at $p < .10$. The Delta-p says that those who started in a four-year college and transferred to another four-year college increased the probability of earning a bachelor's degree by 15 percent. Some 18.5 percent (s.e. = 0.86) of those who started in four-year colleges transferred to another four-year college. In comparing those who transferred to those who didn't, one could say only that the more selective the first institution attended, the less likely the student would transfer.[44]

[44]Only 5.4 percent (s.e. = 1.54) of NELS students who started in highly selective four-year colleges transferred to another four-year college, versus 15.7 percent (s.e. = 1.71) for those who began in selective institutions and 20.0 percent (s.e. = 0.99) for those who started in nonselective four-year schools.

- Multi-institutional attendance: In the steps of the logistic model of the original *Tool Box*[45] in which it appeared, the parameter estimates for this variable were -0.009, 0.015, and -0.077, and with odds ratios ranging from 0.93 to 1.02. All these data are basically flat and inconsequential. The situation in *The Toolbox Revisited* is different. In light of the two transfer variables and the ostensive intersection of multi-institutional attendance with transfer, what does this variable say by coming out of a logistic model with a Delta-p indicating that attendance at more than one school reduces the probability of earning a bachelor's degree by about 16.5 percent? While further probing of the issue is advised, it appears that the message of the three variables (community college transfer, four-year to four-year transfer, and multi-institutional attendance) is that formal transfer is more effective than broader patterns of multi-institutional attendance, including simultaneous enrollment and "swirling." This common sense encourages institutions to track and guide apparent nomads toward formal transfer.

Of the other statistically significant variables in this step, even though Academic Resources and socioeconomic status quintile are receding in time, they are not so receding in strength, and are very much with the explanation of degree completion. In this new configuration, no delay of entry to postsecondary education and first-year grades are actually stronger than they were in Step 4 in their positive parameter estimates and Delta-p statistics. The negative consequences of earning fewer than 20 credits in the first calendar year following initial enrollment is also among the continuing statistically significant variables, though with a lower parameter estimate and Delta-p statistic than observed in tables 15 (first-year performance logistic) and 16 (financing logistic). What counts continues to count.

And what counts less but remains statistically acceptable for presentation includes: (a) the set of basic demographic variables that has been in the logistic narrative from the beginning, (b) education expectations (which are proving far weaker for the High School Class of 1992 than they were for the High School Class of 1982), and (c) two curricular features of the first year of postsecondary attendance (remedial course work and credits in college-level mathematics) that are about to be reconstructed in Step 6, when we extend the temporal scope of curricular experience to a student's entire undergraduate career.

Step 6: Extended Postsecondary Performance

Both the attendance pattern variables and those covered in this step (and the next) are distinguished from first-year performance considerations (Step 3) by the temporal reach of the observed behaviors. All the variables from Step 5 are carried forward. We then ask what additional key academic measures span the full range of a student's undergraduate history—from entrance through the first calendar year of attendance, and beyond.

As previously noted, consideration of continuous enrollment has been set aside for the last step in the logistic model sequence. Of other extended performance variables, what was called the "DWI Index" in the original *Tool Box* and is described more prosaically here as the ratio of courses from which the student withdrew or repeated to all courses for which the student

[45] Adelman (1999), table 39, pp. 80-81.

enrolled, also is set aside for the last step, as it is another case of a very strong variable that would overwhelm other extended performance measures that the reader should see play out.

The block of variables entered for the first time in Step 6 includes two reconstructions of curriculum-related factors originally presented within the confines of the first calendar year of attendance: type and extent of remedial problems (replacing first-year remediation), and cumulative credits in college-level mathematics (replacing first-year credits). "Remedial Problem" (see page 34 and table 8 above and description in the Glossary, p. 190) was not admitted to the model, while cumulative mathematics credits was easily admitted.

The variable marking the *trend* in cumulative student grade point averages at three points in time is an improvement over its predecessor in the original *Tool Box* (which offered only two points of reference). Event-history analysts would no doubt want to see more points than three, but more points than three would result in the loss of more students than the 22 percent already lost by insisting on three (due principally to cases in which the true date of first attendance could not be determined).

Table 25 offers a descriptive account of the three trend populations (rising, flat, and declining) in terms of average cumulative GPAs at each measurement point, the average elapsed undergraduate time period (in years) that is covered by those three markers, and the proportion of each group that earned a bachelor's degree. The purpose of presenting table 25 is to demonstrate that the permutations of relationships between GPAs at the three moments of measurement work, and the results evidence *prima facie* sense. Students with rising GPAs are more likely to earn bachelor's degrees than those in the other two groups, and students with falling GPAs seem more likely to spend more time as undergraduates (though the differences here are not great). The reader will also note that for the plurality of students, grades were flat over an average undergraduate stay of roughly four and three-quarter calendar years.

Table 25. Three trends in postsecondary grade point average (GPA) of 1992 12th-graders who attended a four-year college at any time through December 2000 and offered complete postsecondary records, by GPA at three points in time, average undergraduate time, and percentage earning bachelor's degree

	Average GPA					
GPA trend	First calendar year	First two calendar years	At end of undergraduate career	Average elapsed undergrad time	Percentage earning bachelor's degree	**Percentage of all in group**
Rising	2.43 (0.30)	2.64 (0.28)	2.93 (0.18)	4.76 (0.57)	73.5 (1.80)	**37.0 (1.09)**
Flat	2.72 (0.25)	2.63 (0.27)	2.73 (0.26)	4.79 (0.59)	65.5 (1.63)	**43.9 (1.10)**
Falling	3.09 (0.29)	2.90 (0.29)	2.70 (0.30)	4.92 (0.81)	63.8 (2.38)	**19.1 (0.89)**

NOTES: Standard errors are in parentheses. Column for percent of all in group may not add to 100.0 percent due to rounding. Weighted Ns: rising GPA = 415k; flat GPA = 486k; falling GPA = 215k.

Changing majors: Not a rare phenomenon

St. John et al. (2004) complained that research on persistence pays inadequate attention to college major. Agreed. There are a number of problems with the extant research when major is an issue, not the least of which is the definition of "persistence" as within-year, i.e., fall to spring, and no attention to *change*-of-major. Stoecker, Pascarella and Wolfle (1988) paid considerable heed to major field, found some race-by-field interactions in a structural equation model, and did so within the context of a nine-year longitudinal study with degree completion as the dependent variable (a better framework than that used by others). But they faced problems of tracking change of major, moment of decision on major, the problem of students who drop out without a major, and the exclusion of community college transfers.

In response to these difficulties, the Step 6 extended postsecondary performance model tried out a variable that marks change of major. This variable was not accepted into the model, principally as a by-product of overlapping characteristics with the community college transfer variable, as virtually all community college transfers "change major" from general studies to a specific field on entrance to a four-year college (see Glossary, p. 191). But it is worth noting that 50 percent (s.e. = 1.26) of NELS:88/2000 bachelor's degree recipients changed majors at least once, and that this estimate comes very close to Simpson's (1987) estimate of 48 percent for a 1976–84 cohort. The 50 percent mark thus appears to be a strong reference point.

All the elements are now in place for the stage of analysis that examines student histories through the end of their undergraduate careers (with the exception of continuous enrollment and the ratio of withdrawals and repeats to all courses). The logistic for Step 6 is presented in table 26. There are three major observations:

> 1) Race/ethnicity, never statistically significant in steps 1 through 5, does not even qualify for entry under extended postsecondary performance. Performance variables overwhelm demography. At this key inflection point in the analysis of degree completion, it appears race/ethnicity doesn't matter (Light and Strayer 2002), though it may be operating as an indirect effect through other variables. But to test what happens in a different way, the Step 6 logistic model was run defining "minority" separately for each of the four major race/ethnicity groups. This test was run at this point in the logistic narrative because Step 7 introduces two very powerful variables that would bury race/ethnicity indicators. The model itself emerged significant for white students, but not for African-American, Latino, or Asian students. For white students, all the significant variables in table 26 were the same except for four-year to four-year transfer, which dropped below the threshold of significance. For Latino students, the only statistically significant variable within a nonsignificant model (t = 1.37 with 10 degrees of freedom) was whether the student had ever been part-time. For African-American students, the only statistically significant variables within a nonsignificant model (t =1.70 with 13 degrees of freedom) were summer-term credits and whether the student had ever enrolled part-time. For Asian students, nothing was significant within a nonsignificant model (t = 0.34 with 13 degrees of freedom).

Table 26. Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time: Extended postsecondary performance

NOTES: Statistically significant variables are highlighted in bold. Standard errors adjusted by root design effect = 1.76. $G^2 = 3355.32$; $df = 4632$; $G^2/df = 0.745$; X^2 (df) = 1965.7 (18); pseudo $R^2 = 0.3984$; percent concordant predicted probabilities = 89.3.

SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

2) The new cumulative college-level math credits variable proves its worth, with a Delta-p statistic that says for every move up the credit-range the probability of earning a bachelor's degree increases by 11.8 percent, putting it in the same range of influence as summer-term credits and trend in grades.

3) When trend in grades is added to the variable block, the influence of first-year grades increases, in part because, by definition, a rising GPA trend requires a lower starting point. In fact, the first-year GPA quintile factor is twice as strong, measured in Delta-p, than the trend.

We also note variables carried forward and remaining statistically significant in the model:

- As predicted, Academic Resources continues to lose some of its power as students move further away in time from high school performance. There are too many intervening experiences. In Step 1, the Delta-p said that for each rung up the quintile Academic Resources scale, the probability of earning a bachelor's degree increased by nearly 15 percent (see table 12 above). At this point, that increase in probability is 6.6 percent. Tested separately (see Appendix J), the tolerance collinearity statistic for Academic Resources dipped close to a 0.50 mark that was set for a caution light. While still acceptable, the tolerance statistic indicates that, at this point in a stepwise logistic with 17 other variables, a Venn diagram would show the circle for Academic Resources overlapping (but not eclipsing) many of the other variables in the model.

- Socioeconomic status quintile continues to evidence some explanatory power, and with a Delta-p that basically doesn't change from model to model. In this model, moving up each step of the SES quintile ladder increases the probability of earning a bachelor's degree by 6.5 percent. SES would assume a more significant dynamic, as Cabrera, Burkum, and LaNasa (2005) have demonstrated with the HS&B/So cohort, if one entered the entire logistic narrative by SES quintile, and the elaboration of that dynamic will be left to future research.

- The echoes of first-year credit generation are still noteworthy. The Delta-p says that dropping below 20 credits will decrease the probability of bachelor's degree attainment by 22.4 percent.

- Whether the student was ever part-time remains a very strong negative, with a Delta-p unchanged from its first appearance in the attendance pattern model.

- Earning credits during summer terms is still good advice, though each step of that variable now adds 11.2 percent to the probability of earning a bachelor's degree, as opposed to 14.4 percent when it was first introduced under attendance patterns.

- Both the classic community college transfer variable and the four-year-to-four-year transfer variable stay in the model with positive contributions to the

probability of degree completion of 18 percent and 15 percent respectively, even as the multi-institutional variable strengthens with a negative parameter estimate and a restraining influence of 22 percent on the probability of degree completion. This tension continues to challenge analysis.

The only other variable carried forward, but losing statistical significance is that indicating no delay of entry. No delay, which has bounced above and below the line of statistical significance, now drops below.

Lastly, what has not counted in previous steps of the model still does not count: education anticipations, selectivity of first institution, first year remediation, gender, and parenthood.

Three major themes emerge in this penultimate step of logistic analysis:

- The combination of the strength of Academic Resources (composite high school performance, dominated by academic curriculum intensity) and cumulative college-level math credits underscores the power of curricular momentum on both sides of the matriculation line.

- A group of attendance and performance factors, including part-time status at some point, low credit momentum coming out of the first calendar year of enrollment, and multi-institutional attendance apparently colored by "swirling" and not formal transfer, are strong restraints on academic momentum.

- Validating the event history critique of the original *Tool Box* offered by DesJardins, McCall, Ahlburg, and Moye (2002), two measures of GPA—first-year and trend—reflecting the quality of student effort, are very positive contributors to degree completion. The stronger position of the class rank/GPA quintile variable within Academic Resources reinforces this message. Grades count; and yes, there is a competitive message here, since our GPA scales and quintile breaks are relative, not absolute.

Step 7: Final Factors

The very last step in the logistic narrative takes all 17 variables from the extended postsecondary performance model of table 26, and adds the two strongest variables from the original *Tool Box* analysis. One of these, a dichotomous variable for continuous enrollment called NOSTOP, is a staple of analyses of postsecondary careers (e.g., Carroll 1989; Astin 1993; Horn 1998; Berkner, He, and Cataldi 2002).

The second of these notable variables is not such a staple of analysis. It is the ratio of courses from which the student withdrew *without penalty* and those the student repeated to all courses in which the student enrolled. This is a rare topic in the higher education literature, and was last

seen in the major journals in Adams and Becker (1990), though the number of course withdrawals appears on the check list of elements in analyses of time-to-degree (Knight 2002, 2004b). The ratio counts course attempts, not credits. Withdrawals without penalty are not the same as courses "dropped" within set periods most colleges and community colleges mark for "drop-and-add," and dropped courses are not included in the ratio. As for no-credit repeats: Less than 4 percent of respondents to the 2002 survey of grading practices conducted by the American Association of Collegiate Registrars and Admissions Officers indicated their institutions did *not* allow repeats; fully 55 percent indicated that a student could repeat *any* course for a better grade; and 55 percent indicated that students could repeat a course as often as they liked (AACRAO 2002). These proportions suggest a very lenient environment. Nothing here involves penalty grades. These are all cases of noncredit grades. The variable WRPT Ratio is dichotomous: On one side of the dividing line are students who withdrew from or repeated 20 percent or more of all courses for which they enrolled.

Table 27 presents the final step of the logistic model for *The Toolbox Revisited*. The power of the last two variables entered is instantly obvious:

- Withdrawing from or repeating 20 percent or more of courses decreases the probability of earning a bachelor's degree by nearly half!!!

- Remaining continuously enrolled increases the probability of degree completion by 43.4 percent.

As a consequence of the introduction of NOSTOP and the WRPT Ratio, remediation in the first calendar year, a weakening variable from the point of its introduction, is forced out of the model. Its attempted replacement, the more elaborate description of type and intensity of undergraduate remedial problems (REMPROB), was tried out again, and again did not qualify to enter the model. As noted previously, remediation appears to be a neutral factor in this account.

The marker for earning less than 20 credits in the first year of attendance, previously a strong contributor to the model, is turned on its head in the final step, and drops below the threshold of significance. Why? Principally because, as table 28 demonstrates, nearly 60 percent of those who wound up withdrawing from or repeating 20 percent or more of the courses for which they registered were *already withdrawing from and repeating 20 percent or more of their courses in the first year*. When one withdraws without penalty, one earns zero credits. When one repeats a course, one earns credits only once (assuming one passes, of course). What the relationships in table 28 strongly suggest is that low credit production in the first year is a logical consequence of withdrawal and repeat behavior. If we allow negative momentum to start early, the consequences will snowball. The phenomenon argues for more intense academic advising and monitoring, more accurate placement, and (in some cases) more sensible credit loads in the first calendar year of enrollment.

Table 27. Logistic account of factors associated with earning a bachelor's degree in the history of 1992 12th-graders who attended a four-year college at any time: Final factors, with complete academic history

Lastly, the variable marking swirling multi-institutional attendance continues to be negative —though marginally significant with $p <. 10$—in table 27 at the same time that both community college transfer and four-year-to-four-year transfer variables fall out of significance altogether. In this final accounting, then, all three type of multi-institutional accounts fade in associative power in the face of behaviors that transcend institutional effects: continuous enrollment and academic performance reflected in grades.

Table 28. To what extent does the final ratio of undergraduate course withdrawal and no-credit repeat grades reflect the ratio and volume of withdrawal and no-credit repeat grades in the first calendar year of enrollment? Answers from the history of 1992 12th-graders who attended a four-year college at any time

Final ratio of withdrawals and no-credit repeats to all courses attempted	Percent for whom first-year withdrawal and repeat ratio was 20 percent or higher	Number of withdrawals and no-credit repeats in the first year		
		None	One	Two or more
Less than 20 percent	5.4 (0.60)	66.7 (1.15)	22.7 (1.06)	10.6 (0.71)
20 percent or higher	57.5 (3.93)	13.7 (2.05)	20.3 (3.17)	66.0 (3.62)

NOTES: Standard errors are in parentheses. Weighted N for those with a ratio of no-penalty withdrawals and no-credit repeats to all courses attempted of 20 percent or higher: 106k; of those with a ratio below 20 percent: 1.08M.

Summing Up the Logistic Narrative

Parts III and IV of *The Toolbox Revisited* have walked the reader, sometimes painstakingly, through the consideration of independent variables for each of the seven roughly chronological steps from high school background to extended postsecondary performance. At the end of each step, a logistic account of what was associated with completion of bachelor's degrees for 1992 12th-graders who attended a four-year college at any time was offered. The logistic account applied to students' histories as of that particular moment only. Step 7, of course, offered the concluding account.

But to judge the full sweep of these seven steps, we ought to see them together in the same table. Table 29 allows summative statements about the changing strength of independent variables, the continuity of what counts, and required goodness-of-fit statistics for the whole model. Let's start with the goodness-of-fit statistics because they validate the model. The reader can find them at the bottom of the second page of the table. Everything that is supposed to happen in a stepwise logistic model (Cabrera 1994; Menard 1995) happens. The G^2 (also called the "maximum likelihood function") falls with each step; G^2/df (degrees of freedom in this calculation is the product of the unweighted number of students in the model minus the number of variables

in the model) also falls with each step, though perhaps too much in Step 7. The chi square statistic is a little more erratic, but rises as it is supposed to. So do the pseudo R^2 and the percent of concordant probabilities predicted at each step. These results are a relief to any analyst .

Table 29 includes all the variables that were entered at any of the seven steps of the logistic account, even if they were not carried forward to subsequent steps because they did not meet the *t* statistic threshold criterion that was set at 0.765. In this manner, we can see where these variables were introduced and where they fell out of the model (the first "X" in the table marks the spot). Race/ethnicity is the most noted example because it was present from the beginning, and even though it was never statistically significant, it qualified to be retained until extended postsecondary performance variables were introduced. In Step 7—and because race/ethnicity is a sensitive factor in public discourse on education—another approach was tried out whereby each of the four major race/ethnicity groups was treated as an independent variable in the model. Only the Asian student variable qualified for entry, but wound up with a *t* statistic less than 0.50.

Another "casualty"—though for a very different reason—is the variable describing credits in college-level mathematics in the first calendar year. This variable was purposefully replaced in Step 6 (extended postsecondary performance) by cumulative credits in college-level mathematics across the student's entire undergraduate career because it was more appropriate to the temporal framework. First-year college-level math was never significant, but its more expansive replacement was, as might be expected from comparative participation rates in college-level mathematics by the end of the *second* calendar year of enrollment (table 21).

Another virtue of the presentation in table 29 is that because all statistically significant variables are highlighted in bold, the reader can swiftly identify what was consistently meaningful among the potential associations with bachelor's degree completion for this group of students. From the moment of their introduction, the following factors met the criteria:

- Academic Resources quintile
- Socioeconomic status quintile
- Low (less than 20) credits in the first calendar year of attendance
- First calendar year GPA
- Summer-term credits
- Ever part-time
- Trend in GPA
- Cumulative "career" credits in college-level mathematics

And no delay of entry to postsecondary education from high school evidenced positive and significant association with degree completion in half the stages of the logistic narrative in which it was in play.

When one adds the withdrawal/repeat ratio and continuous enrollment (which appear only in the last step of model-building), some rough themes emerge. Of the ten independent variables, three involve **uses of time** (continuous enrollment, ever part-time, summer-term credits); and four clearly reflect different aspects of **academic performance** (high school Academic Resources, first-year GPA, trend in grades, low-credits in the first year, and the withdrawal/repeat ratio).

Under the temporal theme, no delay of entry floats in and out of statistical significance. Some might say, e.g., of no delay of entry, that the fact a variable is significant in one step of the logistic and not in another "does not always mean that different effects are operating" (Anaya 1999, p. 507). One of the reasons that the logistic narrative provides collinearity statistics (see Appendix J) is to reassure the reader that, for whatever reason a variable ducks in and out of significance, it is not because it is excessively tangled up with other variables. The "tolerance" collinearity statistic for no delay of entry is consistently in the high comfort zone.

Summary of Parts III and IV: Investment Behaviors

When we look across the series of ingredients that rise to the top of strength of association with degree completion, we can interpret them in terms of what Noxel and Katunich (1998) called an "investment model," though this author prefers "investment behaviors," a microscale version of human capital. Once the modest consequences of socioeconomic status are accounted for, each step offers students a set of decisions that require the commitment of time and effort likely to yield a future benefit. These decisions move students, sometimes smoothly and sometimes less so, toward the degree. The choices made, beginning with high school curriculum (from the available curriculum—which is an opportunity-to-learn issue) and quality of effort in high school (reflected in class rank/GPA), allow subsequent leverage. Entering a postsecondary institution directly from high school, earning 20 or more credits in the first calendar year of enrollment, and performing well enough in that first calendar year to fall in the top 40 percent of a GPA distribution build on previous investment, and are all signs of commitment. Subsequent choices that may not be reflected in a bounded period of time, such as excessive course withdrawals, prove to be poor decisions with negative returns, breaking accumulated momentum. Other configurations of choice, including summer-term credit generation, meeting the challenge of college-level mathematics, effort that yields a rising GPA, and most of all, remaining continuously enrolled, all reflect continuing leverage of attainment. This is what academic momentum is all about.

Tinto's (1987) approach is just as direct: Students have responsibilities, and are expected to invest time on behalf of their own learning. Yes, in his words, students have the right "to refuse education" (p. 135), but since the primary commerce of the institution is education, those who refuse should not be surprised if (in his very delicate phrasing) the institution exercises its "right . . . to be selective in its judgments as to who should be further educated" (p. 135). One begins to see why student choice (and the responsibility inherent in student choice) emerges not only as a dominant theme of *The Toolbox Revisited* as well, but as the principal challenge to academic advising and counseling from secondary through postsecondary education.

One grants that a great deal more is going on in the lives of traditional-age students at the same time. They are not bloodless. The literature on persistence has included not only a mass of psychological and social considerations (Harmston 2004; Hu and St. John 2001; Kahn and Nauta 2001; Robbins et al. 2004), but also basic aspects of maturation such as physical fitness (Zhang and Richards 1998), nutrition, roommate conflicts, dating problems, time management (Purcell and Clark 2002), and personality-environment congruences and dissonances (Feldman, Smart, and Ethington 2004). Studies such as Stage's investigation of "motivational orientation" (1989) are also valuable in that they override stock demographic explanations and identify "subsets of college students who might react similarly to college experiences" and, hence, assist advisers and student service personnel. Our data sources do not include these factors.

What the Literature Calls "Institutional Effects"

A major strand of the literature on postsecondary retention derives from Tinto's (1987) constructs of academic and social integration, constructs that contributed to the emergence of the National Survey of Student Engagement (Kuh 2001) and its use by hundreds of institutions in assessing the effects of environments on student behaviors. The reason Tinto's work generated such a continuing elaboration and response is a combination of its elegance and *prima facie* common sense. At whatever age they start out, entering postsecondary students are not empty vessels; they come with demographic characteristics and high school experiences (and, if there is a gap of years between high school graduation and postsecondary entry, work experiences and family formation as well) that condition and shade where and how they enter the postsecondary system. Once at an institution, these background characteristics interact with the academic processes and social environment of that institution to yield varying degrees of determination to persist and complete credentials. Institutional culture, including habits of faculty interactions with students outside of the formal classroom and opportunities for a variety of peer group interactions, plays a significant role in Tinto's models of academic and social integration.

It is not surprising that the mass of studies drawing on Tinto's work are institution-specific or use institutional characteristics as independent variables. To attain enough depth on all these features of student lives so that direct and indirect influences can be mapped through path analysis requires extraordinary probing, which is best carried out in institutional contexts where adequate samples can be assembled. Even if we employed hierarchical linear models to illuminate the relationships between nested characteristics of individuals within institutions and outcomes such as GPA, we would need much larger samples of students within each institution than the NELS:88/2000 provides.[46]

---

[46]In a case of a continuous dependent variable for student engagement, and sets of independent variables describing both student and institutional characteristics (half of them continuous), Porter (2005) demonstrates the statistical superiority of multilevel analysis versus Ordinary Least Squares analysis. There are three significant differences between Porter's illustration and the story line of *The Toolbox Revisited* : (1) the dependent variable (bachelor's degree attainment) and most of the independent variables in this data essay are dichotomous, hence, our method is logistic, not linear, (2) Porter's model assumes that students attend only one institution, whereas more than half the students in this analysis attended two or more, and (3) while multilevel analyses can create models for institutions "even for schools with few student observations" (Porter 2005, p. 110), of the 3,258 institutions in the NELS:88/2000 postsecondary transcript files, 1,003 had only one student in the sample. An institution-level model with a population of one is out-of-scope.

With the student as the unit of analysis, and 25 percent of the students in the universe we are examining attending *more than two* institutions as undergraduates, the calculation of institutional effects becomes problematic. For the students who attended only one four-year college, the weighting of institutional characteristics such as those Titus (2004) admits into his analysis of three-year persistence at the same institution (e.g., control, size, selectivity, degree of residentiality, and percent female, etc.) are fairly easy to plot. But for those who attended more than one institution, a weighting scheme for the influence of each institutional characteristic based on the proportion of undergraduate time each student spent in different institutions would be necessary. For a student who earned 26 credits at a community college, 30 credits at a four-year baccalaureate residential college, and 75 credits at an urban university, the ratios would dilute the very meaning—let alone effect—of any single institutional characteristic. This example is not a fantasy. Consider, for example, the credit accumulation at each school attended by two sets of students from the NELS:88/2000 who attended three institutions as undergraduates (fig. 2).

Figure 2. Examples of credits earned at each institution attended by 1992 12th-graders who earned standard high school diplomas by December 1996, attended a four-year college at some time, earned a bachelor's degree, and attended three institutions as undergraduates, by type of transfer

	Credits earned at each school attended		
Student cases	School #1	School #2	School #3
Community college transfers			
#1	66 (community coll)	34 (four-year)	62 (four-year)
#2	32 (community coll)	28 (community coll)	90 (four-year)
#3	41 (community coll)	18 (four-year)	64 (four-year)
Four-year-to-four-year transfers[a]			
#1	24	36	92
#2	36	21	88
#3	25	30	79

[a] All three schools attended by these three students were four-year colleges.
SOURCE: National Center for Education Statistics. NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

How does one evaluate indirect effects of institutional characteristics and experiences (class size, contact with faculty, peer group interactions, etc.) for these students? Does one weight each potential effect by the percentage of credits earned at each school in relation to all credits earned? Can one somehow arrive at a consolidated index for each effect across schools? How would one compare these indices to those for students who attended only two institutions? To those for students who attended only one? All six of the students in figure 2 above earned bachelor's degrees. For students who did *not* earn bachelor's degrees but who attended three institutions,

what is the minimum threshold of credits one would set at each institution attended before trying to determine the range of institutional characteristics and student experiences that might have some degree of association with the dependent variable? Across all patterns of inter-institutional "traffic" (Astin and Astin 1993), is there a common effects metric that encompasses mere excursions (incidental attendance at second or third institutions), true migration (formal transfer), and the nomadic behavior described as "swirling"? The author tried to develop a descriptive framework of excursion, migration, fragmentation, and discovery for this task, but with less than satisfactory results (Adelman 2004b). Certainly, there are more sophisticated models that can address the rhetorical questions above, but they risk both neglect or devaluation of life-changing experiences at institutions where a student spent comparatively little time and earned few credits, and false identification of effects that can be very fleeting.

Postsecondary student attendance patterns have rendered consolidated institutional-effects analyses moot. For that reason, these analyses are best carried out within the context of individual institutions (no matter where else the student goes to school). This study does not belittle the constructs of institutional effects and assessment efforts such as those of the National Survey of Student Engagement (NSSE) at all. For college and community college administrators, these assessments count a great deal in determining the kinds of environmental adjustments likely to intensify student involvement with institutional services as well as to heighten student satisfaction with instruction, even if the student is present for only 24 credits.

Even so, many of the variables of institutional effects analyses (and that includes high schools as well as colleges and community colleges) are sufficiently beyond the control of administrators so that the practical implications of whatever paths one delineates as productive are limited. Yes, high schools can change the structure of opportunity-to-learn, e.g., by not even offering arithmetic or watered-down pre-algebra and simultaneously conveying a clear message to students that they can meet the challenge of higher level math (Lee, Croninger, and Smith 1997). And the postsecondary level can follow suit, e.g., community colleges can refuse to teach arithmetic or basic algebra. Neither of these strategies is micromanagement, and, however some may wish otherwise, neither is likely to be implemented on a large scale. At the postsecondary level, the very conditions of control shift: An administrator cannot change the fact that the institution was not the student's first choice and that he or she is determined to transfer from the moment of first registration; there is no drug to prescribe for a student with severe homesickness; one cannot—and should not—prevent the student from changing majors for the second time; no college authority has any influence on the romantic life and angst of 20 year-olds that may affect their involvement with academic pursuits (Okun, Taub, and Witter 1986); administrators can't sand down every potentially hard edge of their schools. Furthermore, there is a natural capacity limit to truly meaningful contact with faculty outside the classroom. To use examples from the National Survey of Student Experience, how many faculty can deans deploy for student participation in faculty research projects or for students to work with faculty on committees and

student life programs?[47] The larger and/or less residential the institution, the less the opportunity for student-faculty interaction in other than casual or ritualistic activities (Hu and Kuh 2002).

To repeat: The NELS:88/2000 does not reach the details of student development or institution-specific student experiences accounted for in other research lines. The elaborate connections between student background characteristics, social and psychological predispositions, initial perceptions and responses to a particular postsecondary environment, strength of goal commitments, etc. in relation to not only the fact but also the pace of student progress toward a credential—all of which have been explored and documented by the touchstone giants of postsecondary student outcomes research (Astin, Pascarella and Terenzini, Cabrera, Tinto)—lie beyond the scope of national longitudinal studies. That is not an excuse for the "economic" reading, broadly construed, of academic momentum. We all know that the many investment decisions made by students along their paths through postsecondary education do not occur in social and psychological vacuums. But the archival data on which this study draws isolate moments in which student choice intersects the structures of opportunity offered by institutions whose first order of business—and first order reason for existing in our society and economy—is the generation, preservation, and distribution of knowledge. This is a story about taking advantage of that mission; it is not a story about growing up, although that happens along the way.

---

[47]Kuh et al. (2001) reported that less than 20 percent of seniors in 2000 indicated experiencing these modes of nonstandard faculty contact. By 2004, that proportion had not changed, while 58 percent of seniors indicated they had talked often or very often with faculty outside of class about their grades (a ritualistic interaction that shouldn't carry much weight in assessments of student/faculty contact). See www.nsse.iub.edu/~nsse/2004_annual_ report/html/responses _senior sfi.html. (Accessed 7/31/05).

Part V
Closing the Gap

One of the principal objectives of the *No Child Left Behind* legislation as it works its way through grades K–8 is to close the gaps in achievement between minority and majority students. When that objective is extended to high schools, as this essay underscores in Part III above, we have no adolescent left behind. And when extended to postsecondary schooling, as the logistic narrative has done, our objective is to leave no young adult behind, either. While race/ethnicity itself was not a significant variable in that narrative, the fact of an unhappy gap remains in degree completion—which means that there are residual echoes of experience by race/ethnicity that affect education outcomes. It is not the intention of this monograph to explore these echoes (there are far more sophisticated techniques and far more knowledgeable researchers than the author to engage in that task). But if we focus on the academic story line, we can at least draw some parameters of possibility for assisting minority students.

Two issues attendant on this observation are now addressed: our confidence in degree completion rates, and what might contribute to closing the gap between majority and minority populations in degree completion.

Bachelor's completion rates: Some remarkable agreements

The most prescient and eloquent statement of the problems attendant on our romance with graduation rates was offered a decade ago by Ronco (1996):

> Performance, even in relatively straightforward terms like graduation and retention, eludes our attempts to measure it. Students no longer march lockstep through four years of college to graduation. The educational model of the new millennium will likely be characterized more by lifelong learning, where students move among various kinds of higher education institutions, stopping in and out as their lifestyles and educational needs dictate. Enrollment patterns like these make indicators like four- or even six-year graduation rates for first-time, full-time freshmen largely irrelevant. Transfer students deprive both the sending and receiving institution of retention and graduation credit. (p. 1).

But accepting the object of policy affections for a moment, the most enduring context for the analyses of *The Toolbox Revisited* involves what its predecessor called the Dow Jones Industrial Average accountability measure of U.S. higher education: the proportion of entering undergraduates who earn a bachelor's degree. There are very few truly reliable national portraits of degree completion because there are very few data sources of convincing scope and magnitude. The task requires a longitudinal study with a tested sampling design and matching weights. The technology for a full census of completion does not yet exist.

Ewell (2004) has reminded us that a *student-based* indicator of completion leads to assessments of the benefits of higher education to the entire society and economy. An *institution-based* indicator does none of that, though there is no question that the institution is responsible for contributing to the student's discovery of intellect and path to attainment. While the student is obviously more important, institutions are partners.

There are three recent national accounts of bachelor's degree completion for students who started out in postsecondary education together that can demonstrate how these two indicators, student and institutional, play out.[48] Each account comes from a different data set:

1. The NELS:88/2000 that is the subject of *The Toolbox Revisited.* To repeat its major characteristics: The temporal term is a maximum of 8.5 years (1992–2000) from the month of entrance, no matter when that happens and at what enrollment intensity (full-time or part-time). This is a grade cohort, with all students roughly the same age.
2. A six-year longitudinal study, based on the Cooperative Institutional Research Project's (CIRP) data, that followed 1994 entering college freshmen to 2000 (Astin and Oseguera 2002). While dominated by traditional-age students, this cohort is not wholly homogenous in terms of age at entrance, but is confined to those who started out, full-time, at 262 four-year colleges, weighted to represent beginning full-time freshmen at all public and not-for-profit private four-year colleges (for-profit four-year colleges are not included).
3. Another 6-year longitudinal study, 1995/6 through 2001, conducted by NCES as a spin-off from the massive Congressionally-mandated National Postsecondary Student Aid Study. We have used this data set, the Beginning Postsecondary Students longitudinal study, previously. Beginning students of all ages and enrollment intensities (full-time, part-time, and mixed) are included.

Let us set these three data sets side-by-side, adjust the two NCES databases to match both each other and the CIRP database, and then assess how much they disagree with each other. We will confine both the NELS:88/2000 and the BPS 95/96–2001 to those who started out in four-year colleges, limit the dates of entry of the NELS:88/2000 cohort to the same year (1992) and, most importantly, put an upper bound on age at date of entry in the Beginning Postsecondary Students of 20. Table 30 offers these comparisons.

---

[48]There are other large longitudinal studies of degree completion, but their samples of institutions and students are not representative. For example, Saupe, Smith and Xin (1999) used the Consortium for Student Retention Data Exchange information from 174 public four-year colleges to track six-year (1989–96) institutional graduation rates. While these 174 institutions enrolled nearly half of entering four-year college students in 1989, they represent a class, not a universe. For another, but more dated example, Stoecker, Pascarella, and Wolfle (1988) used a 1980 CIRP follow-up to an initial 1971 sample of roughly 10,000 students who had attended only one four-year college in the interim. Some 487 college and universities were represented. Stocker, Pascarella, and Wolfle were interested in institutional effects, so their restriction of the universe to students who had attended only one school is justified, and their findings revealing. But that doesn't justify using the conclusions as a generalized model of degree completion—certainly not under contemporary conditions of student mobility. For state-level postsecondary longitudinal studies, only Florida has produced data sets comparable to the national accounts.

Given the conditions under which degree completion is judged, the conclusions of these three data sets do not differ that much from each other. We can say that roughly a third of traditional-age students who start in a four-year college will earn a bachelor's degree from the *same* school in the traditional four-year period, and that between 54 and 58 percent will earn the degree from the same school in which they began within six years of entry. When the option of earning a degree from a *different* four-year college than the one in which these students commenced study is included (in the NELS:88/2000 and BPS 95/96–2001), six-year degree completion rates for traditional-age students are in the 62–67 percent range. Only when the temporal boundaries are extended to 8.5 years in the NELS:88/2000 does degree attainment for those who started in four-year colleges approach 70 percent, and Florida state longitudinal studies show a similar rate (Johnson, Coles, and Thomas 2004).

Table 30. Bachelor's degree completion rates for students who began in four-year colleges according to three different national longitudinal studies of the 1990s

	Percent completing bachelor's degree		
Bachelor's degree completion modes	NELS:88/2000 1992–2000	Cooperative Institutional Research Project (CIRP) 1994–2000[a]	Beginning postsecondary students 1995–2001
Bachelor's from same school in 4 years	30.9 (1.14)	36.4	33.1 (1.3)
Bachelor's from a different school in 4 years	3.0 (0.30)	Not available	2.3 (0.3)
Bachelor's from same school in 6 years	52.9 (1.27)	57.6	53.7 (1.2)
Bachelor's from a different school in 6 years	11.3 (0.79)	Not available	8.1 (0.4)
Bachelor's from same school in 8.5 years	55.3 (1.24)	60.6[b]	Not available
Bachelor's from different school in 8.5 years	14.1 (0.84)	Not available	Not available
Total degree completion:	69.3 (1.16)	60.6[b]	61.8 (1.2)

[a] As reported in Astin and Oseguera (2002). Standard errors are not available.
[b] In Astin and Oseguera, this cumulative figure includes students who were still enrolled at their institution of first attendance at the end of six years.
NOTES: Standard errors for the NELS:88/2000 and BPS95/96–2001are in parentheses.
SOURCES: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement) and Beginning Postsecondary Students Longitudinal Study, 1995/96–2001, Data Analysis System (NCES 2003-173). Astin and Oseguera (2002).

Degree Completion: How High Can It Go?

If roughly seven out of ten traditional-age students who start in a four-year college—and roughly two out of three who ever attend a four-year college—graduate within eight and one-half years, how likely is it that the rate will improve, by how much, and among what groups? When looking back at the factors consistently contributing to bachelor's degree completion in table 29 and asking which are most subject to change by external parties with little to modest, but creative, effort, a few stand out, and encourage speculation. All depend on student response. In the words of Tinto's (1987) astute guidance:

> Though . . . institutions owe each admitted student an equal degree of attention, it does not follow that institutions should be held accountable for the equal education of all admitted students. To absolve . . . [students] of at least partial responsibility for their own education is to make a serious error. (p. 135)

Let's look at each of the more promising levers, and then explore what the configuration of change in behaviors and policy might suggest for upper boundaries of degree completion and the closing of the gap in completion among race/ethnicity groups.

1) **Less than 20 credits in the first calendar year of enrollment**: Approximately nine percent of those who entered four-year colleges at any time earned between 15 and 19 credits in their first calendar year, with African-Americans and Latinos overrepresented.[49] Within this group, only 35 percent (s.e. = 3.05) earned bachelor's degrees compared with 77.7 percent (s.e. = 0.99) of those who earned 20 or more credits. Fifteen to nineteen credits is close enough to 20 to be optimistic: If we know more about who students are and where they come from, colleges and community colleges can target dual enrollment efforts to yield at least six additive credits for these students, thus pushing them across the 20-credit line. But we do know something about these students, and our optimism must be tempered by the facts that 15.3 percent (s.e. = 2.49) of them were assigned to remedial reading in their first postsecondary year, an overlapping 34.5 percent (s.e. = 3.93) never reached Algebra 2 in high school, and only 27.9 percent (s.e. = 2.96) earned any college-level mathematics credits in that first year. For the residual group (about six percent of those who enrolled in a four-year colleges at any time), suburban high school students from the Pacific and Southwest Central census divisions[50] are overrepresented, and provide some geo-direction for dual-enrollment policy targeting.

---

[49]Some 7.4 percent (s.e. = 0.56) of white students earned between 15 and 19 credits in their first calendar year of attendance, compared with 11.1 (s.e.=1.86) of African-Americans and 18.5 percent (s.e. = 3.30) of Latinos.

[50]The Pacific census division includes California, Oregon, Washington, Alaska, and Hawaii; the Southwest Central encompasses Texas, Oklahoma, Arkansas, and Louisiana.

2) **Ratio of non-penalty withdrawals and no-credit repeat courses to all courses attempted**: For about 10 percent of the NELS:88/2000 cohort who attended a four-year college at any time, this ratio was 20 percent or higher. That is, this group of students withdrew from or repeated at least one out of every five courses in which they enrolled, behavior negatively associated with degree completion. Compared with white students, all minority groups are overrepresented.[51] What would happen if institutions limited the number of no-penalty withdrawals and no-credit repeats students were allowed to accumulate, converting these cases above a given threshold to penalty grades? This is a risky proposition and difficult to model because we do not always know why students withdraw from courses after the customary drop/add periods (Adams and Becker 1990). Students repeat courses to earn better or passing grades. In the case of remedial work, the repeat is required, and the list of courses with the highest ratios of withdrawal and repeat grades is dominated by remedial offerings (Adelman 2004a, table 6.6, p. 84). In other cases, repeats are a luxury. Since no-penalty course withdrawals and no-credit repeats increase time-to-degree measurably for those who earn degrees (Adelman 2004a, table 6.2b, p. 79; Knight 2004b; Noxel and Katunich 1998), and since these behaviors have a rippling effect by blocking other students from seats, often in high demand courses, it is in institutions' self-interest to limit the practice. Intensified advisory care to student credit loads (Szafran 2001) and more precise placement criteria should help.

A good example of the way this might work is provided by Eno, McLaughlin, Brozovsky, and Sheldon (1998), who predicted difficulty ratings for specific courses likely to be taken by entering freshmen in their institution on the basis of both overall high school GPA and, more importantly, grades in specific high school courses. The hypotheses for each student within each course were then set against the empirical record of students' actual performance in the college course at issue. The information assists students' advisers with indications of which courses a student might find particularly difficult. The likelihood of no-penalty withdrawals or no-credit repeat grades is attenuated by delaying students' engagement with those courses until they have gathered the requisite momentum elsewhere in the college curriculum.

3) **Use of summer terms**: As table 31 suggests, earning more than four credits during summer terms may have a considerable influence on the degree completion rates of African-American students in particular. That is, 78.2 percent (s.e. = 4.12) of those who started in four-year colleges and exceeded this threshold earned bachelor's degrees, compared with 21.2 percent (s.e. = 4.59) of those who did not earn summer-term credits at all. The difference was also significant for white students, but not to the same degree. Parallel comparisons for Latinos and Asians were not statistically significant.

---

[51]Some 8.3 percent (s.e.= 0.68) of white students were in the high ratio category, versus 12.2 percent (s.e. = 3.04) of Asian students, 12.3 percent (s.e. = 1.96) of African-American students, and 19.6 percent (s.e. = 3.56) of Latinos.

Table 31. Of 1992 12th-graders who started their postsecondary careers in four-year colleges, percentage who earned bachelor's degrees by December 2000, by number of credits earned in summer terms, by race/ethnicity

	Percentage earning bachelor's degrees by December 2000		
	Number of summer-term credits		
Race/ethnicity	None	1–4	More than 4
All	56.2 (1.99)	68.1 (2.78)	79.7 (1.29)
White	59.8 (2.22)	74.2 (2.58)	82.2 (1.19)
African-American	21.2 (4.59)	42.5 (10.3)	78.2 (4.12)
Latino	48.6 (7.14)	28.3 (7.15)	56.4 (6.21)
Asian	66.8 (10.3)	70.0 (13.0)	77.9 (7.08)

NOTES: Standard errors are in parentheses. Weighted N=1.14M.
SOURCE: National Center for Education Statistics: NELS:88/2000 postsecondary transcript files (NCES 2003-402 and Supplement).

Summer-term enrollment that results in more than four additive credits works for just about everybody (we saw that in the multivariate analyses). While it surprisingly does not shorten time-to-degree for those who earn degrees (see Appendix K), summer credits are associated with higher graduation rates for everyone except Latino students. It is thus in an institution's self-interest to encourage the use of summer-term work, either at the institution itself or at another school. Ways of approaching this goal shy of tuition discounting include moving some of the offerings of high demand courses from the traditional academic-year terms into the summer term, offering summative course work in the major in the summer term, and recruiting students for credit-bearing internships and cooperative education placements in the summer terms. Academic administrators in cooperation with strategic enrollment managers can be very creative.

4) **The high school curriculum component of Academic Resources:** One of the more dramatic illustrations of the potential influence of high school performance on bachelor's degree attainment in the original *Tool Box* isolated four major race/ethnicity groups, confined each to those who entered a four-year college directly from on-time high school graduation, and compared two estimates: the bachelor's degree attainment rate for everyone versus the bachelor's degree attainment rate for those who were in the top 40 percent on each of the three component measures of Academic Resources (curriculum, class rank/GPA, and senior year test score). Though undercut by the fact that, in multivariate analyses, race/ethnicity does not play much of a role in bachelor's degree completion, the cross-tabulation of these estimates suggested that the criterion-referenced curriculum variable had the potential to boost African-American degree completion by 28

percent and Latino degree completion by 18 percent (though that datum was statistically shaky) and white students' degree completion by 10 percent. For Asian students of the period, test scores made more of a difference than either curriculum or class rank/GPA.

Class rank/GPA and senior year test score are not criterion referenced, and while performing better in high school in terms of grades and tests improved degree completion in the original *Tool Box*, it was by lesser magnitudes. It was observed that "in a happy paradox, *everybody* can be in the 'highest 40 percent' on the [criterion-referenced] curriculum measure," whereas that is not true for test scores or class rank (Adelman 1999, p. 85). Content counts, particularly for minority students, and the influence of special preparation programs supports that conclusion (Ishitani and Snider 2004)

Does this analysis still hold, particularly as we have already observed improvements in academic curriculum participation by the High School Class of 1992 compared with the High School Class of 1982 (see tables 4 and 5 above)? That depends on what else is in the mix of factors associated with degree completion, and unlike the original analysis of this feature in *Answers in the Tool Box*, the other factors are matters of *postsecondary* entry and *postsecondary* academic behavior.

How might the four factors just highlighted, along with direct entry to higher education following high school graduation, cumulatively influence bachelor's degree completion for the core universe of this study, the subjects of table 29? To remind the reader just who these students are:

- they were 12th-graders in 1992;
- they earned a standard high school diploma (not a GED) by December1996 (as the NELS transcript records conclude in December 2000, an honest account of degree completion should allow the student at least four years to reach that mark);
- they attended a four-year college at any time (20 percent started in community colleges, and those who started in community colleges earned an average of 52 credits [s.e. = 1.58] from community colleges and 59.5 credits [s.e. = 1.92] from four-year colleges); and
- their postsecondary records were complete, i.e., no transcripts were missing.

Table 32 takes this group, and first sets down a base bachelor's degree completion rate for the entire cohort by four major race-ethnicity groups.[52] The table then enters five key conditions influencing degree attainment that are subject to the initiatives and control of second parties, and marks the *potential* bachelor's degree completion rate for students meeting the thresholds of those cumulative conditions. As each condition is added to the cumulation, the universe narrows for the NELS:88/2000 cohort, and as it narrows, hypothetical degree completion rates rise. One could choose a different sequence of conditions, but the bottom line would be the same.

---

[52]There were too few American Indians in the base group to follow through a narrowing population as conditions for academic momentum were added.

Table 32. Hypothetical cumulative consequences of variables critical to bachelor's degree completion for 1992 12th-graders who earned a standard high school diploma by December 1996, attended a four-year college at any time, and whose postsecondary records were complete, by race/ethnicity

	Percentage earning bachelor's degree				
Cumulative conditions	**White**	**African-American**	**Latino**	**Asian**	**All**
1)Baseline, no conditions	**67.6 (1.18)**	**52.1 (4.26)**	**45.4 (3.74)**	**67.9 (4.71)**	**64.6 (1.12)**
2) No delay of entry	71.0 (1.22)	54.6 (4.49)	50.5 (3.79)	68.2 (4.89)	67.9 (1.15)
3) No delay, top 40 percent of high school curriculum, and highest high school mathematics above Algebra 2	85.6 (1.50)	65.9 (8.57)	69.2 (6.33)	91.5 (1.96)	84.1 (1.40)
4) No delay, top 40 percent of high school curriculum, and more than four credits in summer terms	90.6 (1.31)	84.6 (5.95)	69.2 (8.12)	92.6 (2.27)	89.1 (1.30)
5) No delay, top 40 percent of high school curriculum, more than four credits in summer terms, and 20 or more credits in first calendar year of attendance	92.6 (1.23)	88.2 (5.28)	71.9 (9.07)	93.9 (2.16)	91.4 (1.24)
6) No delay, top 40 percent of high school curriculum, more than four credits in summer terms, 20 or more credits in first calendar year, and less than 10 percent of grades were withdrawals or no-credit repeats	95.5 (0.98)	94.3 (4.62)	79.4 (11.1)	95.3 (2.20)	94.6 (1.07)

NOTES: Standard errors are in parentheses. Weighted Ns for each cumulative step: (1) 1.45M; (2) 1.33M; (3) 712k; (4) 621k; (5) 310k; (6) 273k.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402).

These are statistical coincidences, not causes. The subjunctive is very strong in this presentation. The standard errors indicate that not all these changes would be statistically significant, particularly for minority students, but that phenomenon, too, is a consequence of a shrinking population at each step. No delay of entry is invoked as the first condition because it results in the least shrinkage, leaving a larger population with which to assess the other four factors.

All five conditions of table 32 are criterion-referenced. That is, everyone can meet those conditions; everyone can cross those thresholds. The populations could be much larger. Does that mean that future degree completion rates will look like those in this table if everyone meets the criteria on all five counts? No: We know that not everybody will make it. We have already marked and acknowledged that some students will flunk out or become status dropouts for other reasons. But the table suggests just where the improvements are likely to be dramatic—and for whom. Some examples, by race/ethnicity, would be instructive.

For **Latino** students, high school academic curriculum attainment and entering college directly from high school provide the greatest leaps in degree completion, narrowing the gap with white students from 22.2 percent in the base rate to 16.4 percent. But little else narrows the gap much further. Postsecondary summer-term participation, for an obvious case, yields something of a zero, and getting across the 20-credit line in the first year of attendance appears to do little for Latino graduation rates (though if the sequence of conditions were different, it would do more). If we are looking carefully at this fastest growing population in the United States, we pour our efforts into high school preparation above everything else. A decade from now, we will be able to assess better whether postsecondary behaviors become more impressive contributors.

For **white** and **Asian** students, moving into the top 40 percent of the high school academic curriculum intensity index and completing high school mathematics beyond Algebra 2 also is the strongest engine among these variables for boosting college graduation rates. Earning more than four summer-term credits adds something for white students, but nothing to speak of for Asian students. The other factors may contribute minor momentum, but once one reaches a hypothetical 90 percent completion rate, subsequent improvements are not meaningful.

For **African-American** students, who start out at a higher bachelor's degree completion rate than do Latinos, the high school academic curriculum factor does not close the degree completion gap by a statistically significant amount, but earning more than four credits in summer terms offers a stunning boost, narrowing the completion gap vis-a-vis white students from 15.5 percent to 6 percent. The momentum provided by this high-octane persistence behavior continues through the first calendar year credits criterion and avoidance of no-penalty withdrawals and no-credit repeat grades until, at the bottom line of the hypothetical rates set forth in table 32, African-American degree completion rates would be no different from those of whites and Asians.

What did African-American students in the NELS:88/2000 cohort universe who attended a four-year college at any time study during summer terms? A transcript-based account can be very revealing—and in this case, positively so. Using 110 aggregate course categories, table 33 displays the 15 categories accounting for the highest percentages of summer-term credits earned.

Table 33. Percentage of credits earned during undergraduate summer terms by African-American 1992 12th-graders in aggregate course categories

Category	Percent of total summer-term credits
Business other than accounting and administrative science	5.5
Chemistry	5.1
Physical education activities/health information	4.9
College-level mathematics[a]	4.1
College-level writing[b]	3.7
General biology	3.3
Psychology other than general psych	3.0
Physics	2.8
U.S. history surveys, American Civilization	2.8
Micro/macroeconomics	2.6
Accounting	2.5
Calculus	2.5
Foreign languages	2.4
Liberal studies/general humanities/general social science	2.1
Oral communication/public speaking	2.0
Total for top 15 categories	46.7

[a] Includes college algebra, finite mathematics, precalculus, and statistics.
[b] Includes standard English composition, technical writing, creative writing, and advanced essay.
NOTE: The calculation is a "credit ratio" in which the unit of analysis is the course category. All student-weighted earned credits from all course categories are added, with the total a finite glass of 100 percent that becomes the denominator for subsequent calculations. No standard errors are produced.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402).

This is a very respectable list for anyone. It advises advisers: Point out to African-American students that their peers have proved (a) summer-term credit production is a benefit, and (b) the student can concentrate in the summer terms on the kind of critically demanding and critical gateway courses that might not otherwise be in as intense focus during an academic year term. The learning goes deeper under single-subject concentration. Examples include organic chemistry, calculus, and experimental psychology. To repeat: There are values in summer-term credit production for everybody, but if summer-term credit production looks like it benefits a particular group more than others, that needs to be said. If we don't know why the benefits seem more significant for African-American students, let us submit the issue to future research.

Is the story for low-SES students the same?

Reviewers of drafts of this document asked whether the same type of analysis could be performed by socioeconomic status, since we know that the gap in degree completion between the highest and lowest SES quintiles is far wider than any pair of race/ethnicity comparisons (Adelman 2004a, table 3.1, p.34). The lowest SES quintile group is small: only 6 percent of the

1.43 million 1992 12th-graders who graduated from high school by December 1996 with a regular diploma and who attended a four-year college at some time. These students completed bachelor's degrees at a rate of 35.9 percent, compared with 55.4 percent for students in the middle (3rd) SES quintile, and 79.7 percent for students in the highest SES quintile. Perhaps the best illustration of what might close the gap for them is to compare their hypothetical rates of completion with students from the middle and highest quintiles, and table 34 does so. We use the same levers as variables because they are subject to second-party action. But we have to stop after the step where summer-term credits are added in because (a) in extending the data beyond the boundaries of table 34, subsequent variables in the cumulative sequence (first-year credit threshold and withdrawal/repeat limits) do not add anything to the degree completion rates of low-SES students, and (b) the standard errors of the estimates have risen to the point at which comparisons between the lowest SES quintile group and the middle group are not statistically significant. The data of table 34, though, send clear messages: Despite obviously great limitations inherent in low socioeconomic status, the most promising engine of momentum for

Table 34. Hypothetical cumulative consequences of variables critical to bachelor's degree completion for 1992 12th-graders from the lowest, middle, and highest socioeconomic status quintiles who earned a standard high school diploma by December 1996, attended a four-year college at any time, and whose postsecondary records were complete

Cumulative conditions	Percentage earning bachelor's degree		
	Lowest SES quintile	Middle (3rd) SES quintile	Highsest SES quintile
1) Baseline, no conditions	35.9 (3.74)	55.4 (2.34)	79.7 (1.50)
2) No delay of entry	39.9 (4.18)	59.7 (2.47)	81.3 (1.46)
3) No delay, top 40 percent of high school curriculum, and highest high school mathematics above Algebra 2	58.7 (6.14)	72.5 (3.71)	89.0 (1.21)
4) No delay, top 40 percent of high school curriculum, highest high school math above Algebra 2, and more than 4 credits in summer terms	59.6 (9.73)	82.2 (5.26)	91.2 (1.25)

NOTES: Standard errors are in parentheses. Weighted Ns for each cumulative step: (1) 1.43M; (2) 1.31M; (3) 546k; (4) 260k.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402).

these students is a strengthened high school curricular background, and achieving that objective requires greater attention to the provision of curriculum and the quality of learning environments in schools attended by these students, no matter where those schools are located. Even then, the degree completion gap between the lowest and highest SES quintile would be 32 percent.

The bottom line on degree completion

In reporting the proportion of college students who complete bachelor's degrees, there seem to be as many answers as there are observers. A number of rules are recommended:

1. Use transcript-based data sources. They do not lie; they do not exclude.
2. Follow the student, not the institution. Community college transfer students are followed to determine degree completion. Do it for everybody! And if one insists on institutional graduation rates, give the institution credit for students who transfer in. We don't do that now.
3. Do not restrict the universe to students who entered higher education only in the fall term and only full-time (otherwise one excludes half of an entering cohort).
4. Do not mix your 18 year-old daughter and your 34 year-old brother-in-law in the same analytic of degree completion. They live on different planets of life's responsibilities. In other words, institutions should consider ledgers indicating degree completion rates separately by age bracket at the point of entry, and national accounts should follow suit.
5. The only people for whom bachelor's degree completion rates should be calculated are those who actually enrolled at a bachelor's degree-granting institution at some time.

All these common sense rules, respectful of students and their families, were observed in *The Toolbox Revisited*—and in *Answers in the Tool Box* before it.

The elaborate multivariate analyses of Parts III and IV of this essay provided a framework within which academic momentum toward bachelor's degree completion (not toward something else such as first-year GPA or second-year retention) could be tracked and judged, but without race/ethnicity as a vector. When we extract from this framework the most tractable variables and examine their potential repercussions in terms of closing degree completion gaps by race/ethnicity, there is no question that the academic intensity of secondary school curriculum continues to serve as the engine of subsequent academic momentum, and that the use of summer terms for substantive, highly focused postsecondary coursework is an effective booster to that engine. Both these variables are mixtures of the student's use of time and the mastery of content.

But what does "academic intensity" or "an academically 'rigorous' curriculum" really mean? What content, postsecondary as well as secondary, could be labeled as "challenging," that is, the knowledge toward which students eagerly reach as opposed to unenthusiastically slog through? These questions are part of a large missing component in this study. Part VI of this essay will reflect on that component with the greater care it deserves.

Part VI
The Missing Element of This Story

There is (at least) one major missing element of the story line in both the original *Tool Box* and *The Toolbox Revisited*, and some important questions readers might have asked in the course of the logistic narrative that should be addressed. The missing element, a by-product of the limitations of the NCES grade-cohort longitudinal studies database, is content standards in high school curricula. Postsecondary curricula, which are far more complex in organization, offer a different framework for assessing potential student learning.

Beyond Course Titles to Content Standards

In the years following the release of *A Nation at Risk* (1983), a standing one-liner on the lecture and conference circuit ran something like "we've changed the marquée on the theater, but the show inside is still the same." The marquée carried the course titles, and for better or worse, that is what our grade-cohort longitudinal studies transcript files rely on. As Shireman (2004) has concisely put it, "If schools just change the names of the courses . . .students will not have learned anything more" (p. 4). In building the NELS:88/2000 data files, we discovered that in some high schools, "precalculus" on a transcript could mean any mathematics prior to calculus, including Algebra 1. On the postsecondary transcripts we often ran across cases of professorial marketing with course titles such as "Tooth Brush," "Dots to Dinosaurs," "Time After Time," and (yes) "Good Books" that even online catalogues could not explain. The postsecondary transcripts also carried 3-credit courses in topics such as social event planning, daily living skills, and "appreciation of sports" that, when the syllabi were examined online, could be offered to junior high school students. One has to acknowledge the limitations of the data source, in addition to its virtues. But the limitations, in these cases, were serendipitous because the online search for concrete clues to the content of course work was dispiriting.

Over the past two decades, states have paid increasing attention to content standards for elementary and junior high school curricula, and the *No Child Left Behind* legislation has stimulated a period of intense review and refinement of these standards. But as *Achieve* pointed out in its review of state high school graduation requirements (2004), similar detailed sets of content standards at the secondary school level are rare. We get generalized requirements that reference course titles such as "11th-grade English" or "Applied Biology," and have no idea what precise learning objectives will be pursued. There have been exceptions, of course, with mathematics being an often revisited subject and in ways that demonstrated the difference between what should be expected of all high school graduates and what should be expected of entering postsecondary students (California Education Roundtable 1997).

The past five years in particular have witnessed the birth and expansion of a number of large-scale efforts to get beyond Carnegie unit credit counting to comprehensive criterion-referenced statements of what graduating high school students should know and be able to do in order to

"succeed" in postsecondary environments. By "succeed" is meant completing degrees (see, e.g., American Association of Universities 2003; Achieve 2004). We have also witnessed the growth of high profile alternative approaches to secondary-postsecondary transitions such as "early college high schools." These efforts have been aided and abetted by comparative analyses of emerging state high school exit examinations and the content and knowledge-objectives of lower division college courses (Conley 2003; Venezia, Kirst, and Antonio 2003). The American Diploma Project (Achieve 2004) pushes beyond general knowledge-objectives to include samples of college assignments (e.g., profit-maximizing output analyses in microeconomics, pH calculations for a complex solution in introductory chemistry, an essay assignment on Plato's distinction between thinking and belief in introductory philosophy) and workplace tasks (e.g., a bank loan officer's assessment of an application from a corporation for $1.7 million to purchase two corporate aircraft, a report requiring measurements of DC supply voltage for diffusion furnaces in semiconductor manufacturing and analysis of furnace regulator modification costs, and the determination of dosages in an insulin therapy regimen). These are superb examples of digging below the credit count to the stuff of learning.

Granting that the academic quality and intensity of one's high school curriculum is a key determinant of postsecondary success, there is no assurance that either the standards of secondary school performance, content coverage, or challenge of the material will come close to the threshold demands of either four-year or community colleges. For the vast majority of high school graduates, who will not attend selective institutions, the "disconnect" is considerable. Indeed, Venezia, Kirst and Antonio (2003) urge everyone to pay more attention than that to which the media are accustomed to the "broad access colleges," including community colleges, because the service of these institutions to the bulk of the nation's postsecondary learners has the greatest potential to better "the civic and economic well-being" of every state and region (p. 46).

It is with that in mind that the work of the American Diploma Project (2004) is noteworthy because the sample assignments and examination questions selected signal precisely the kind of learning expected of the bulk of the nation's postsecondary newcomers. Such assignments and questions provide clear expectations for students entering community college occupational programs as well as those moving into the general education portions of postsecondary education. The microeconomics problems come from a community college, the chemistry from a research university.

Previews of the future and their risks

In fact, it could be argued that these previews of lower-division postsecondary learning objectives and tasks should be part and parcel of 11th- and 12th-grade curricula, equally accessible to students intending traditional lines to a bachelor's degree and those following career and technical education paths that *may* include the bachelor's, but certainly involve the occupationally oriented community college associate degrees. We can get to these levels through a modest amount of dual-enrollment for many students, but for those for whom dual enrollment is inaccessible, special postsecondary preview modules could be offered either by high school

faculty with the requisite knowledge or by visiting college and community college faculty.[53] Somehow, students should have a taste of what will be expected, and whether their current knowledge and skills puts them at least on the threshold of those expectations, if not beyond. Some may argue that such previews will scare some students away from continuing their education or that some secondary school teachers will resist the intrusion. One has to be optimistic in both cases, and come to the task with the conviction that it's worth the risk. The risk to academic momentum of not providing these opportunities is greater.

While each state bears principal authority and responsibility for linking the curricular pathways of secondary and postsecondary sectors (Venezia et al. 2005), the examples set forth by the American Diploma Project and the "previews of the future" strategies described above do not treat state borders as Maginot lines. And for good reason: Roughly one out of four undergraduates (and one out of three African-American students) in *The Toolbox Revisited* universe started their postsecondary careers in a state other than that in which they graduated high school. The geographic mobility of our traditional-age postsecondary populations suggests that, at the least, multistate regions (e.g., South Atlantic) should be considered productive information zones for providing those concrete signals of expectations and specific examples of quality postsecondary student work.

Moving the messages to students, families, and school teachers

Let's take the best of what is offered by reports such as that of the American Diploma Project and books such as Conley's recent (2005) *College Knowledge*, and move it out to much larger audiences than policymakers and others who habitually read such reports and books. It might be more helpful for each college and community college to include in its information packages for prospective students a sample of those examination questions and assignments in courses typically taken by lower-division students. One might go even further and provide examples of exemplary student responses—even less-than-exemplary student responses—to those examination questions and assignments.

---

[53]Dual enrollment has made huge strides since the NELS:88/2000 cohort went to high school. Some 38 states now have formal policies (Karp, Bailey, Hughes, and Fermin 2004), though these vary widely in terms of what is offered and by whom, who pays tuition, who gets credit toward what, academic eligibility, grade levels, course enrollment limits, and whether credits earned are placed in escrow (though that varies more by institution than state). The 2002–03 NCES survey of dual enrollment practices at postsecondary institutions distinguished between high school students who took courses within formal agreements and those who took courses outside of those agreements. Our NELS:88/2000 transcript data cannot make that distinction, so they lump together all postsecondary credits earned at colleges or community colleges prior to the date of high school graduation.

Kleiner and Lewis (2005) estimate that 813,000 high school students took courses at postsecondary institutions, either within and/or outside of dual enrollment programs and agreements, in 2002–03, compared with the weighted 213,000 NELS:88/2000 students who earned any postsecondary credits through dual enrollment during their high school years (1989–92). While not exactly comparable populations, those figures are testimony to the growth of student participation in these arrangements.

A quarter century ago, the Educational Testing Service worked on developing an experimental examination to assess lower division college competencies across a matrix of cognitive operations (e.g., analysis, synthesizing) and general curricular areas (e.g., science, humanities). Called "Academic Competences in General Education," the questions were open-ended (not multiple-choice) and required responses that could be composed in roughly 10 minutes. For example, one question went something like this:

> Suppose a new method for producing energy had been developed that, when brought on-stream, would have the effect of slowing the rotation of the Earth from 24 to 26 hours. Before we can flip the switch on this new form of energy, an Environmental Impact Statement (EIS) must be filed. What would be the chapter headings and major sub-headings of that EIS ? You need not fill in the details, but the most important questions about the potential effects of a 26-hour day ought to be included.

In a trial of the examination, faculty sorted student responses to questions such as "Earth's Rotation" into piles of descending quality. They then described what the students whose responses were rated most highly did to earn that rating, turned to the second most highly rated collection of responses and arrived at a consensus of what these students did *not* do that the first group did—and so on down the line of the piles of student papers they had rated until a level euphemistically described as "nonresponsive" was reached. The faculty descriptions were subsequently aggregated and ironed out as performance criteria. One could then turn to incoming freshmen with this question, along with an example of a first-rate response and an example of a fourth-rate response (out of seven levels), show them the performance criteria and say, "This is what you can expect to be able to do by the middle of next year; would you be better than the fourth level now?" A light goes on somewhere—or should—when entering students see that what it takes to respond effectively to the "Earth's Rotation" question draws on a selection of knowledge from economics and business, psychology, international relations, world history, cultural anthropology, physical geography, technologies, visual arts—all in addition to the core sciences. More important, the light goes on when students see a good example of how to put all this together in an outline of a document that is as much a product of daily work life as it is a college exercise.

And a similar light can go on among high school seniors as well, nearly all of whom think they are going on to something called "college," but have little idea what that means beyond the fact that they will no longer be bound by school rules. Prospective students are not the only audience for this information: Their families and high school teachers are equal players. Not all parents will understand the assignments, laboratories, and examination questions, but certainly they will sense, from the examples, that postsecondary education is serious business, that their children will not get through with a carefree study schedule, that colleges and community colleges have standards, and that such examples are typical of what their children will learn. Inevitably (being optimistic about this) they will be proud enough at the prospect to ask their children to be prepared. High school teachers reading these assessment "prods" will have to reflect on the extent to which their graduating seniors possess the academic foundations and momentum to

respond successfully. To the extent to which high school teachers have doubts, they may adjust the form and content of their own assignments, laboratories, and examinations. Students are bound to be the beneficiaries of the resulting "postsecondary practice runs."

Postsecondary dimensions of content

At the postsecondary level, the issue of content is somewhat easier to address, but only in the context of a student's entire undergraduate record. We know that students completing organic chemistry enrolled in the course not only with general chemistry as a background, but also mathematics at at least the precalculus level. We know that students completing a course in American economic history would have a very difficult time without prior learning in both U.S. history writ large and the standard introductory micro/macroeconomics sequence. A course in the psychological and cultural components of health care in a community college allied health program will probably not be offered to anyone without previous course work in general psychology. The chances that a fine arts degree candidate's transcript shows an entry for a course in color and color theory without prior foundations and studio courses are remote. In higher education, we can use the second- and third-level courses in a field as rough confirmations of learning at the introductory level. There is a sufficient lattice-work within disciplines to track traces of content from one point on the scaffolding to another. No, the traces inherent in second- and third-level courses in a field are not in themselves content standards, and nuance is expected from school to school, but there is a generalizeable quality to these content cues. In fact, the generalizeable portions of upper-division curricula are what one is likely to see on the Graduate Record Examination Board's subject matter examinations. This topic witnessed a surge of interest in the 1980s (for a paradigmatic analysis, see Oltman 1982), and is worth renewed exploration.

THIS PAGE INTENTIONALLY LEFT BLANK

Part VII
Concluding Messages

Compared to its predecessor, *Answers in the Tool Box*, the preponderance of the *Toolbox Revisited* story has been on the postsecondary side of the matriculation line. Implicitly, it calls on colleges, universities, and community colleges to be a great deal more interventionary in the precollegiate world, to be more self-reflective about the paths they offer from high school through their own territories. It also calls on them both to fortify their institutional research capacities and integrate them more intimately with academic advising and course scheduling. As noted above, we are witnessing measurable ferment on the high school side of the passage, and as the principles of the *No Child Left Behind* legislation move beyond grade 8, we will see more. The higher education sector cannot sleep through these changes.

To students as agents of their own futures

Beyond that fundamental banner of institutional fortification, there are three sets of messages impelled by both studies. The first set is for entering high school students who, when asked, blithely shrug that "of course I'm going to finish college."

1. Just because you say you will continue your education after high school and earn a college credential doesn't make it happen. Wishing doesn't do it; preparation does! So . . .

2. Take the challenging course work in high school, and don't let anyone scare you away from it. Funny thing about it, but you learn what you study, so if you take up these challenges, your test scores will inevitably be better (if you are worried about that). If you cannot find the challenge in the school's offerings, point out where it is available on-line, and see if you can get it that way. There are very respectable Web sites offering full courses in precalculus, introductory physics, humanities, music theory, and computer programming, for example.

3. Read like crazy! Expand your language space! Language is power! You will have a lot less trouble in understanding math problems, biology textbooks, or historical documents you locate on the Web. Chances are you won't be wasting precious credit hours on remedial courses in higher education.

4. If you don't see it now, you will see it in higher education: The world has gone quantitative: business (obviously), geography, criminal justice, history, allied health fields—a full range of disciplines and job tasks tells you why math requirements are not just some abstract school exercise. So come out of high school with more than Algebra 2, making sure to include math in your senior year course work, and when you enter higher education, put at least one college-level math course under your belt in the first year–no matter what your eventual major.

5. When you start to think seriously about postsecondary options, log on to college and community college Web sites and look not so much for what they tell you of how wonderful life is at Old Siwash, but what they *show* you of the kinds of assignments and examination questions given in major gateway courses you will probably take. If you do not see these indications of what to expect, push! Ask the schools for it! These assignments and questions are better than SAT or ACT preparation manuals in terms of what you need to complete degrees.

6. See if your nearest community college has a dual-enrollment agreement with your school system, allowing you to take significant general education or introductory occupational courses for credit while you are still in high school. Use a summer term or part of your senior year to take advantage, and aim to enter higher education with at least six credits earned this way—preferably more.

7. You are ultimately responsible for success in education. You are the principal actor. The power is yours. Seize the day—or lose it!

Given the story lines of *The Toolbox Revisited,* it is obvious that students are partners in their own education fate, and shouldn't wait around for someone else to do something to them or for them.

Public discourse, part 1: Dissonant data and their discontents

The second set of messages is for those who engage in public discourse on education in general, secondary-to-postsecondary transitions, and ultimately, degree completion rates (with all stops in-between). We have some problems here.

Foremost among these problems is the sheer volume of dissonant statistics that are thrown around about student progress, and all the labels of "at risk," "minimal college-qualified," and "failure" that get pasted to populations in the process. The "at risk" labeling default has gone so far as to turn students into "patients," whose "illnesses" must be diagnosed and followed up with early intervention, intensive intervention, and continuous intervention (Seidman 2005, p. 298) that may even continue after graduation—and for "a modest fee" (p. 299). The data dissonance and deficit language cloud perceptions and preclude constructive policy. We all have considerable cleaning up to do.

On any given day, the public will be offered a half-dozen different statistics on high school graduation rates, college-enrollment rates, college completion rates, grades, and time-to-degree. The data will appear in respectable academic journals in articles that were reviewed by peers who often are experts on statistical technique and (at best) novices on the data sources. Or they will appear in publications and on Web sites of respectable organizations, even though they were never reviewed by anyone outside the organization. Anything that appears between respectable

covers is taken as authoritative, and once it moves into the mainstream press and onto the home pages, we read the headlines but not the footnotes. Inference runs rampant.[54]

For any of these statistics, we never ask who is in the denominator: that is, who are we counting, and who are we not counting—and how? As a consequence, what often pours out are scare stories that make for good press and bad policy. The bad data-driven scare story, in fact, has become the preferred narrative. We are scared by stagnant high school graduation rates over a 30 year period during which the size of the grade cohorts declined significantly then expanded dramatically with the baby boom echo, and during which we witnessed increased immigration from countries with mandatory school attendance ages much lower than ours. By an alternative view, it's amazing we have maintained a stable high school graduation rate (the quality of high school curriculum aside). The same alternative view could be advanced with reference to rates of postsecondary credentialing: It's remarkable we are maintaining the same degree-granting rates in the face of significantly higher enrollments (unless, of course, we are awarding an excess of cheap degrees).

Dissonance by age and season: A plea for honest tracking

The source of many unnerving postsecondary stories is one of the most grievous errors in analyses of student progress: including in the denominator students who started their postsecondary careers at age 29, 36, or 47 along with the mass of students who entered the postsecondary universe at age 18 or 19. Common sense says that a 19-year-old and a 31-year-old are on completely different life trajectories, and the national data from the Beginning Postsecondary Students longitudinal studies back up the common sense. When the newspaper story uses the term, "college students," most adults think of their children, not their brother-in-law or their coworker. Community and four-year college administrators know the difference, and provide academic programs, scheduling and services for those different populations.

But what are they to do when the press and the news Web sites complain that nearly half of entering students do not return for their second year or that the graduation rate is *only* 50 percent (thus assuming everyone else is a dropout), and they are called before legislative committees and boards of trustees to explain? There is an enormous difference by age at entry to the postsecondary system in these measures, and an even greater distortion when one restricts the

---

[54]For example, consider the following statement in a respectable publication: "One of the key reasons that low income students have such low completion rates in postsecondary education is that many work long hours in order to be able to afford college. They struggle to balance work with part-time enrollment in college . . ." (Allen, Goldberger, and Steinberg 2004, p. 222). The data source for this assertion is the National Postsecondary Student Aid Study of 2000, a one-year snapshot that includes no "completion rate" data. Analyses of the NPSAS 2000 data files show that the statement does not reach the threshold of justification unless one divides the population by age bracket. At that point, one finds that, and among traditional-age students (presumably the group referenced by the scare), poor kids are no more likely to be working longer hours at their jobs than anyone else, though they are more likely to use their wages for education expenses. That, at least, is an honest statement—for a snapshot population. And it is not what we really would want to know.

definitions of what it means to "return to" or "graduate from" to those who started in the fall term, full-time, and who came back to or earned a degree from the same school. That denominator knocks out half of traditional-age students from the calculation, and denies the realities of geographic mobility that the Bureau of the Census—let alone NCES longitudinal studies—has documented for the 20-something population (Schachter 2004; Adelman 2005b). Policies designed to "retain" students who have already moved to another state or who are *de facto* ghosts by not being included in the retention denominator in the first place are, at best, wastes of energy.

What is *not* a waste of energy is the task of developing more universal and efficient student tracking systems, and recapturing the headlines from the mongers of scare. There are those who will not accept NCES national longitudinal studies on the grounds that they are samples (no matter how scientific the sampling design), that we can only afford to start one every six or 10 years, and then have to wait for people to age and accumulate academic history by which time, the grievance goes, "the data are old." Impatient to simulate instant longitudinal cohorts, they impute sequences of data from different sources and with denominators that include "projections," and produce shock data that cannot be validated by any sensible reference points, e.g., that only 18 percent of ninth-graders will earn an associate or bachelor's degree within the subsequent ten years (National Center for Public Policy and Higher Education 2004).[55]

But even the best of state tracking systems and the services of the independent National Student Clearinghouse information system that currently (2005) covers about 2900 institutions (and cites a burgeoning interest in including high schools in the universe), will not produce the wealth of information that a NELS:88/2000 or a Beginning Postsecondary Students study yield. This essay cannot recommend policy in these matters, but it can recommend creativity and cooperation, serious reading of the papers and reports from Florida's tracking system (e.g., Whitfield and Howat 1999; Goodman, Latham, Copa, and Wright 2001; Goodman, Copa, and Wright 2004; Johnson, Coles, and Thomas 2004), and reflection followed by activistic innovation, and will wager that the long-term results look better than the scare stories assume.

Public discourse, part 2: The language we use

Language does more than reflect reality—it creates reality as well. There are considerable problems with the language used in describing what happens to students in our education system, and our choice of terms sets boundaries and colors of reality. The boundaries and colors, in turn, condition the terms of policy. Let us illustrate with a few paired terms. These are contrary rhetorics, and this study frankly admits to taking sides in their contention. But it does so in order to urge a positive tone that, not so by-the-way, legislators, superintendents of schools, college presidents and other leaders would prefer to use. The language of leadership is a "can do" language, not a punitive rhetoric.

---

[55]There has never been a national longitudinal study of ninth-graders. But we do have a national longitudinal study of eighth-graders—the NELS:88/2000—with transcripts, not imputations, projections, and dubious math. If we follow these eighth-graders, including high school dropouts, all the way through to age 26, ultimately 34 percent earned either an associate or bachelor's degree (see the full account offered in Appendix L, table L12). That percentage at least puts us in range of doing better. If we accept the putative (and utterly false) 18 percent, we risk abandoning all hope and effort.

"Attrition" versus "Persistence." When "attrition" is the governing term, we worry about students who (it appears) leave school or college, and seek explanations for departure that have included theories of organizational turnover (Bean 1983) and failures of academic and social integration (Tinto 1987). At the first sign of exit—even though the student may return—we turn to negativity. There has to be something wrong here, we say. The student was "at risk," the institution did not respond—we witness a cycle of blame.

When "persistence" is the governing term, we take our directions from students. What did they do that resulted in attainment? What structures of opportunity do we need to offer so that future students can follow the same paths? What do we think works? Can we test it out? This is a far more positive approach. This essay endorses it: Drop "attrition," embrace "persistence"!

"Retention" versus "Persistence." Institutions "retain"; students "persist." If our language is governed by "retention" all we see are institutions determined to hold on to students, keeping them in places that may be unproductive, at all costs, and for the sake of their public ratings. If our language follows student "persistence," on the other hand, we see those individuals making a series of rational choices that take advantage of the opportunities offered by institutions so as both to discover true interests and reach productive ends. Tinto would not object if the rhetoric of leaving an institution was turned into a saga of discovery. Students may go elsewhere; they may take extended time off from higher education; but ultimately they may judge the change as positive and not a result of failure (Tinto 1987, pp. 132–33). In the rhetoric of "retention," students are passive: Something is done to them, and that "something" assumes a deficit model. Under the rhetoric of "persistence" they are actors shaping their fate, with a model of success in mind. Wouldn't anyone rather have success?

"Pipelines" versus "Paths." As Bach et al. (2000) noted—and others have followed—there is no linear path to a degree, particularly for students who start out in community colleges. The default "pipeline" metaphor, used to describe presumably linear learning experiences and environmental sequences, is wholly inadequate to describe student behavior. Pipelines are unidirectional closed spaces, and under the "pipeline" metaphor students are passive creatures (as in "retention") swept along or dropping out of the space completely through leaks at the joints. But student behavior doesn't look like that at all: It moves in starts and stops, sideways, down one path to another and perhaps circling back. Liquids move in pipes; people don't.

At the high school level, for example, a student can acquire momentum in science through a combination of statistics and biology, on the one hand, or physics and calculus, on the other. These are different paths, but who is to say that, once in a four-year or community college, these students could not move in very different directions? The students entering a community college with the statistics and biology background thinking they were heading for further study in allied health fields could easily discover business and computer programming, and transfer to a four-year college to pursue an academic program in management information systems with both quantitative background and empirical habits of mind born of study in the life sciences. The paths to degrees offer many such intersections.

Under the "pipeline" metaphor, we look for easy (sometimes glib) causalities along a single line of explanation. "Paths," on the other hand, allow for multiple analyses and discoveries of tools that suggest (but do not predict) productive routes to education goals. This essay obviously endorses "paths."

Reiterations

Virtually all reviewers of drafts of this study recommended a concluding reiteration of its major themes and conclusions. Three configurations of themes and conclusions stand out in response:

First, there was a story about curriculum, the content of schooling, that was compelling in its secondary school dimensions in the original *Tool Box*, and is even more compelling now on both secondary and postsecondary stages. What you study, how much of it, how deeply, and how intensely has a great deal to do with degree completion. All of this is common sense, but requires equitable execution with emphasis on primary tools, which in this story means that:

- Secondary schools must provide maximum opportunity-to-learn, by which we mean not merely course titles, but course substance. If we seek better preparation for any kind of postsecondary education—occupational, professional or traditional arts and sciences—we have to ratchet up the challenge of content.

- Postsecondary institutions have got to be active players and reinforcers at the secondary school level—particularly in partnership with schools that are not providing or inspiring students—with opportunity to learn at those ratcheted-up levels of content. Pep talks, family visits, recruitment tours, and guidance in filling out application and financial aid forms are not enough.

- Indeed, the first year of postsecondary education has to begin in high school, if not by AP then by the growing dual enrollment movement or other, more structured current efforts (for examples, see Hughes, Karp, Fermin and Bailey 2005). If all traditional-age students entered college or community college with a minimum of 6 credits of "real stuff," not fluff, their adaptation in the critical first year will not be short-circuited by either poor placement or credit overload.

Second, this curriculum story, joined by nuances of attendance patterns that turn out to have significant leverage, continues into higher education. These features of the saga of degree completion are rarely attended to, and all provide tools to enhance completion rates.

- It's not merely getting beyond Algebra 2 in high school any more: The world demands advanced quantitative literacy, and no matter what a student's postsecondary field of study—from occupationally-oriented programs through traditional liberal arts— more than a ceremonial visit to college-level mathematics is called for.

- Academic advisers and counselors have to target every first-time student for at least 20 additive credits by the end of the first calendar year of enrollment. We saw the same consequences in the original *Tool Box*, though now we understand better that the chances of making up for anything less than 20 credits diminish rapidly in the second year. Community colleges have some special challenges here, given increasing rates of transfer among traditional-age students. With 6 credits of dual-enrollment course work, even part-time students can reach 20 credits in the first calendar year, and community colleges enroll the bulk of traditional-age part-time students.

- Excessive no-penalty withdrawals and no-credit repeats appear to do irreparable damage to the chances of completing degrees. This phenomenon was also observed in the original *Tool Box*. Twice advised, institutions might think very seriously about tightening up, with bonuses of increased access and lower time-to-degree.

- More than incidental use of summer terms has proven to be a degree-completion lever with convincing fulcrum. It's part of the calendar-year frame in which students are increasingly participating. Four-year and community colleges can entice students into fuller use of summer terms with creative scheduling.

Third, in contrast to their treatment in the mass of literature on academic progress, students are explicit, rather than implicit, in *The Toolbox Revisited.* They are respected adults playing large roles in their own destinies. What we call "variables" are not bloodless abstractions: they are signs of what students do; and our messages are about where and when the green lights and caution lights will flash along the paths toward degrees. While we trust that school and college actions will not leave them behind, they have equal responsibilities.

Legacy

These are limited beginnings of change in the terms of the enterprise with which any reader of this document is concerned. They are honest terms and do not pretend to predict, rather help us draw a background tapestry against which we can judge just how well we are doing for our children as they cross the cusp of adulthood. The terms derive from the story; the story derives from the wisdom of the U.S. Department of Education in establishing and maintaining its longitudinal studies; and our subsequent discussions and enlightenment derive from the leadership of the National Center for Education Statistics in executing those studies and providing us with archives of information that are the envy of other nations. All of this constitutes an unmatchable legacy.

APPENDIX B

Principal Features of the NCES Grade-cohort Longitudinal Studies

There are four grade-cohort longitudinal studies designed and conducted by the National Center for Education Statistics. Three of these have been completed:

- National Longitudinal Study of the High School Class of 1972 (NLS-72), started with a cohort of seniors in the spring of 1972, concluded in 1986;
- High School and Beyond, with a cohort of seniors in 1980, concluded in 1986, and another cohort of sophomores in 1980 (HS&B), concluded in 1993; and
- National Education Longitudinal Study of 1988, initiated with an eighth-grade class in 1988 (NELS:88), concluded in 2000.

The data from these studies are available in both public release and restricted (license required) form on CD-ROM, with electronic code books (ECBs) listing all variables, with descriptions and distributions.

The fourth, the Education Longitudinal Study of 2002 (ELS:2002), starting with a sample of 20,000 10th-grade students in the spring of 2002, is in progress.

Curtin, Ingels, Wu, and Heuer (2002) offer a figure with a temporal presentation of the four longitudinal studies,[56] highlighting their component and comparison points. Each of the studies begins with a national probability sample involving a stratified sample of schools and a random sample of students within the target grade in those schools. Schools in minority communities are over-sampled. In some cases, the samples are refreshed at later points in the longitudinal study (NELS:88 in 1990 and 1992)[57] and, in some cases, augmented at a later point (NLS-72 in 1973).

Each of these longitudinal studies includes a great deal more information than what is used in *The Toolbox Revisited.* Not all of them are comparable in terms of the depth with which various topics are explored. The surveys of the NLS-72 were focused wholly on students, whereas those

---

[56]Curtin, T.R., Ingels, S.J., Wu, S., and Heuer, R (2002). *National Education Longitudinal Study of 1988: Base-Year to Fourth Follow-up Data File User's Manual* (NCES 2003-323). Washington, DC: U.S. Department of Education, National Center for Education Statistics (http://nces.ed.gov/pubs2002/2002323.pdf, p.3).

[57]As Lucas and Berends (2002) remind us, the high schools attended by students in the NELS study are not a true representative sample. The reason stems from the decision to begin the longitudinal study in the eighth grade. When students move into high schools from the eighth grade (or, in some districts, from the ninth grade), it is impossible for the sampling framework to be based on high schools. Roughly 1,000 middle schools and junior high schools became 4,000 high schools by grade 10, and there was no way to follow the students into all 4,000 of those schools. So the NELS sample was refreshed in 10th and 12th grades to reflect the total enrolled population in those years (Ingels et al. 1994), and , by necessity, the refreshing was based in the high schools in which the vast majority of the existing NELS cohort students were enrolled.

of the subsequent longitudinal studies included parents, teachers, and secondary school administrators. The cognitive tests administered in the 12th grade to the NLS-72 cohort were administered in the 10th and 12th grades to subsequent cohorts, thus enabling measures of intellectual growth. High school course-taking for the NLS-72 was summarized and reported by the school, whereas for the HS&B/Sophomore cohort and NELS:88/2000 high school course-taking was derived directly from transcripts. And the postsecondary transcripts for the NELS:88/2000 were used to fill in missing information from the high school transcripts in that cohort. Labor market histories were far more detailed in the NLS-72 and HS&B/Sophomore cohort than they were for the NELS:88/2000. Military records exist for the NLS-72 but not for any subsequent study. Student financial aid information included an unobtrusive Pell Grant file for the HS&B/Sophomore cohort, and that for the NELS:88/2000 included data from the National Student Loan Data System (though this file requires more cleaning and reconstruction in order to be truly helpful).[58]

Lastly, the shift from paper-and-pencil survey response forms to computer-assisted telephone interviews (CATI) in the1990s constricted the range of questions asked (e.g., there was no time to ask students about reasons for changing majors, reasons for transferring from one college to another, and degrees of satisfaction with different aspects of postsecondary experience), whereas the NLS-72 paper survey forms covered these topics in some depth.

Nonetheless, the archives of these data sets are the richest we have to explore the nature of secondary and postsecondary education and its consequences in the early adult life histories of Americans over the past 30 years.

---

[58]See the brief discussion of financial aid data in the NELS:88/2000 in Adelman, C. *Principal Indicators of Student Academic Histories in Postsecondary Education, 1972-2000.* Washington, DC: U.S. Department of Education, 2004, p. 98.

APPENDIX C

Differences Between the High School & Beyond/Sophomore Cohort and NELS:88/2000 High School Record Variables, and Limited Imputation Procedures for the NELS:88/2000

The principal portions of the data sets in question are secondary school transcripts and allied information derived from survey questionnaires and computer assisted telephone interviews (CATI). The secondary school transcripts were collected and coded by the same contractor for both data sets, but the returns were very different. The High School & Beyond/Sophomore cohort began with a stratified national sample of secondary schools, all of which agreed to participate in the project and provide transcripts, access to teachers and administrators. The NELS:88/2000 began with a national stratified sample of schools with eighth grades, all of which agreed to participate in the project and provide appropriate information. As noted above in Appendix B, when students moved into high schools, the NELS sample was refreshed in10th and 12th grades to reflect the total enrolled population in those years (Ingels et al. 1998), and, by necessity, the refreshing was based in the high schools in which the vast majority of the existing NELS cohort students were enrolled. The analysis file created for this study includes the12th grade refreshed sample, but some of the high schools that were not part of the original stratified sample did not provide transcripts.

At the postsecondary level, on the other hand, the transcript return rate increased from 89 percent for the HS&B/So to 93 percent for the NELS:88/2000 (Curtin, Ingels, Wu, and Heuer 2002), and the proportion of postsecondary participants with complete records increased from 88 to 97 percent.

Editorial processes

The postsecondary transcript-based versions of both data sets were edited by the same person (the author of this study), and with the same rules, a feature that increases reliability at the price of intra-coder bias. If one thinks of two sets of archival documents: secondary and postsecondary transcripts for two cohorts, i.e., four data files, in only one did the editor actually see the paper documents submitted by institutions, namely, the postsecondary transcript files of the NELS. These artifacts contained information that allowed corrections and fill-ins for missing information on the secondary school transcript files, e.g., state location of high school, high school graduation date, high school diploma type, Advanced Placement course credits (by examination), and SAT and ACT test scores. Hence, the presentation of secondary school transcripts on the restricted file with the postsecondary transcript data (NCES CD#2003-402) is more accurate than it is on earlier NELS restricted files. After a year of use, a supplement to NCES 2003-402 was issued in June 2004, containing further refinement of both high school and college transcript-derived variables, in addition to new derived variables.

Missing data and limited imputation

The analysis files for both this study and *Answers in the Tool Box* used high school transcripts with complete records for at least grades 10–12. But the NELS:88/2000 transcript data, as well as test score data, fell short of the HS&Beyond/So coverage, even after preparation of the 2004 Supplement to the original NELS Postsecondary Files that included the second round of corrections and fill-ins of missing information on the high school transcripts.

Table C1. Unweighted percentage of 1982 and 1992 12th-graders missing precollegiate academic performance data

	HS&B/So	NELS:88/2000	After Supplement
Performance variables			
Curriculum measure	18%	14%	14%
Class rank/GPA	13	20	17
Senior test score	9	14	14
One or more measures	**18**	**24**	**21**

Class rank/GPA, the combined high school class rank/grade point average quintile, is the major problem in the comparison displayed in table C1. In both data sets this variable (called "CLSSRNKQ" for programming purposes) was constructed in the same way, but the input data initially yielded a far smaller universe for the NELS than was the case for the HS&B/So.

The construction of this variable begins with class rank, expressed as a percentile, for students whose high school graduating classes are greater than 10. Class rank was chosen for the base reference because it overrides variability in local grading practices. Not all high schools compute class rank, so for a significant percentage of students, this datum is missing. For these missing cases (as well as for the students from very small high schools), the variable construction turns to high school grade point average (where available, and only for students with three years or more of course work in all high schools attended). In both data sets, all known cases of high school GPA were weighted and set out in quintiles. The missing cases of class rank, by quintile, were then substituted by the GPA quintile (the correlation between the two quintile scales was .84).

However, there are two significant differences in data input between the HS&B/So and the NELS:88/2000. First, the HS&B/So grade point average was for academic courses only, whereas in the NELS, the GPA applied to all courses. Second, by the time of the NELS histories, some high schools evidently were indicating neither class rank nor cumulative GPA of

any kind on transcripts (either that or the original data entry for the NELS high school transcripts did not compute GPA). While 13 percent of the HS&B/So students were missing the combined CLSRANKQ variable, half again of that proportion (20 percent) of the NELS students lacked a CLSSRNKQ value (see Glossary for further details and citations).

This difference would have serious consequences in the replication of the original *Tool Box* hypotheses. The universe of NELS students with positive CLSSRNKQ values was initially smaller than those for the curriculum variable (HSCURRQ) and senior year test score (SRTSQUIN). Since the multivariate analyses of both *Tool Box* studies depend on positive values for all three variables, the composite variable built from a partition of the three would overestimate the value of CLSSRNKQ at the expense of the other two components. In preparing the analysis file for this study, plausible values for missing cases of CLSSRNKQ were imputed when values for both curriculum quintile (HSCURRQ) and test score quintile (SRTSQUIN) were positive and equal, e.g., both were in the third quintile. In these cases, CLSSRNKQ was assigned the same value as the other two variables. The impact of this imputation strategy lowered the unweighted missing cases of CLSSRNKQ from 20 to 17 percent, and the unweighted cases of NELS:88/2000 students missing one or more of the high school performance variables from 24 to 21 percent (see table C1).

Bias and potential imputation.

Even after this revision, a problem remained, and a multiple imputation procedure was followed (Herzog and Rubin 1983). In the original edited version of the NELS high school transcript data that appears on NCES data CD 2003-402 (March 2003), and modified by its June 2004 supplement, some 17.3 percent of the students were missing CLSSRNKQ, 13.8 percent were missing HSCURRQ, and 13.5 percent were missing SRTSQUIN. Under NCES statistical standards, CLSSRNKQ would have to be evaluated, since the proportion of students with non-missing values was less than 85 percent.[59]

The formula used to determine the nonresponse (i.e., missing) bias in these three variables was:

> A*(b-c) where A is the percent of students missing data, b is the percent of those missing data who did NOT earn a bachelor's degree, and c is the percent of those not missing data who did not earn a bachelor's degree.

To obtain the relative bias with respect to the estimate, the result of this formula is divided by b.

The initial nonresponse bias rates for the three variables were:

	Bias	Relative bias
HSCURRQ	0.015	0.021
CLSSRNKQ	0.034	0.049
SRTSQUIN	0.039	0.048

[59]See NCES 2002b.

In other words, for example, if the estimate for the curriculum variable was based only on those with positive values, it would overestimate the percent who did not earn bachelor's degrees by 2 percent. These are all small biases, and would not threaten tests of statistical significance. But the missing cases were less than random: Students who never entered postsecondary education by age 26 or 27 were overrepresented, and those who never graduated from high school or who were still enrolled in high school after the scheduled graduation of the class in 1992 would not show complete transcript records in1992.

In order to increase the number of students with positive and plausible values for all three components of the Academic Resources variable, another limited imputation was undertaken, focused on class rank/GPA. The first question identified, of all students who were in the 12th grade in 1992 and for whom the file showed positive values for both the curriculum (HSCURRQ) and test score (SRTSQUIN) variables:

1) those who also showed a positive quintile value for class rank/GPA (CLSSRNKQ), and were in the *same quintile* on all three measures.	16.6%
2) those who were in the same quintile on both curriculum and test score measures, also had a positive quintile value for class rank/GPA, but the rank of this quintile differed from the others by $\pm$ 1.	13.4
3) those who were in the same quintile on both curriculum and test score measures, but were missing class rank/GPA.	2.7
4) those who were missing class rank/GPA, and whose quintile positions on curriculum and test score measures differed by 1.	2.5
5) those who were in the same quintile on both curriculum and test score measures, also had a positive quintile value for class rank/GPA, but the rank of this quintile differed from the others by > 1.	5.8
6) those who were not in the same quintile on both curriculum and test score measures, whether or not class rank/GPA was missing.	59.0

The focus of imputation was on those members of groups 3 and 4 whose high school transcripts registered 12 or more academic Carnegie units. This small group was then examined for *prima facie* anomalies in variables such as postsecondary attendance, selectivity of first institution of attendance (if any), and postsecondary remedial work. There were none. An algorithm was then developed that assigned a value to CLSSRNKQ, as follows: (1) where HSCURREV = SRTSQUIN, the class rank/GPA quintile was assigned the same value; (2) where the difference between HSCURREV and SRTSQUIN was $\pm$1, CLSSRNKQ was assigned the lower value in half the cases, and the higher value in the other half.

The result reduced the proportion of missing ("nonresponse") cases of CLSSRNKQ from 17.3 to 15.8 percent. The nonresponse bias rates improved as follows:

	Before imputation	After imputation
Bias rate	0.034	0.019
Relative bias	0.049	0.026

The consequent reconstruction of Academic Resources

The proportion of students with non-missing values for all three components of the Academic Resources index rose from 70 to 72 percent as a result of the imputation described above. However small the increase, it required a recalculation of the comparative weights of the three components of Academic Resources, in the following steps:

a) A logistic regression was run with bachelor's degree attainment as the dependent variable, the three components as independent variables, and a universe limited to1992 12th-graders. The ratios of the standardized beta coefficients for each of the independent variables produce the weights for each variable in the composite. The changes between the earlier version of these weightings and the post-imputation version are small, but required, as table C2 shows.

Table C2. Differences in ratios of standardized betas for the three components of the Academic Resources composite, before and after limited imputation of missing class rank/GPA data for 1992 12th-graders

	Partition weight	
Component of Academic Resources	Before imputation	After imputation
Curriculum	41.9	42.4
Class rank/GPA	32.9	32.5
Senior-year test score	25.2	25.1

SOURCE: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

b) Each of the three components is then multiplied by its weight brought forward from the logistic model. So, for example, a student in the third quintile of HSCURRQ is credited with 1.272 points (3*0.424). The points are added, then weighted by the enhanced NELS high school transcript weight for those in the 12th grade in 1992 (F4F2HWT), then set out in quintiles of Academic Resources. The difference in distributions of the values of Academic Resources, before and after imputation, are indicated in table C3.

Table C3. Differences in distribution of 1992 12th-graders across the values of the Academic Resources composite variable, before and after limited imputation of missing class rank/GPA data

	Percent distribution of students	
Values of Academic Resources	Before imputation	After imputation
Missing	29.9	27.9
Highest quintile	14.3	14.6
2nd quintile	13.3	14.3
3rd quintile	14.2	14.7
4th quintile	13.9	13.6
Lowest quintile	14.3	14.9

APPENDIX D

Technical Issues

Accuracy of estimates and standard errors

There are different kinds of statistics in *The Toolbox Revisited*, and all of them are estimates derived from student samples. Two kinds of error occur when samples are at issue: errors in sampling itself, particularly when relatively small subpopulations (for example, American Indians) are involved; and nonsampling errors. Even in surveys as large as the three grade-cohort longitudinal studies used in this monograph, sampling errors can affect estimates of statistical significance.

Non-sampling errors are more serious. A good example of a non-sampling error would be the fact that transcripts are missing for some students in all three grade-cohort studies. The transcripts are missing either because the student did not tell the interviewer that he or she attended the school (and there were no transfer credits on another transcript to identify the school); the school refused to send the transcript; the school could not find the transcript; the information sent by the school was not really a transcript; or while the student may have enrolled at the school he or she never registered for courses and did not generate a record. In this case, we can mitigate the effect of missing transcripts by differential weighting of the population, and, indeed, for both the High School and Beyond/Sophomore and NELS:88/2000 files, the analyst is given a choice of weights, one of which is confined to students with complete records (see the discussion of weights and flags below). Weighting, though, will not address the panoply of nonsampling errors.

The effects of sampling and non-sampling errors ripple through databases. To judge the accuracy of any analysis, one needs to explicate and judge these effects. When the unit of analysis is the student, this is a straightforward issue because the original samples in the longitudinal studies consisted of students. For example, when questions are asked about the proportion of students who earned credits in an aggregate category of courses (e.g., table 21), the questions are about nonrepetitive behaviors of the students who were sampled. The descriptive comparisons in *The Toolbox Revisited* dealing with non-repetitive student behaviors require invocation of the Students'*t* statistic to determine whether the difference between two independent estimates is significant. The formula for computing Students' *t* values is:

$$t = \frac{(P_1 - P_2)}{(se_1^2 + se_2^2)}$$

where P_1 and P_2 are the estimates to be compared and se_1 and se_2 are the corresponding standard errors. In this case, if $t \geq 1.96$, one has a statistically significant difference at $p < .05$, a standard marker. For the judgments of statistical significance in all cross-tabulations in this document, an Excel template developed by MPR Associates for the production of reports to the National Center for Education Statistics, was used.

The formula becomes more complex, however, for multiple comparisons among categories of an independent variable such as race/ethnicity. For multiple comparisons, the critical value for *t* rises depending on the number of comparisons that can be made in the family of the independent

variable. For race/ethnicity presented in five categories, there are10 possible comparisons, so the significance level of each test must be $p \leq .05/10$ or $p \leq .005$. To determine the significance level of t values in any comparison of means or proportions, the result should be matched against standard published tables of significance levels for two-tailed hypothesis testing.

When estimates are not independent, a covariance term must be added to the Students' t formula

$$t = \frac{(P_1 - P_2)}{(se_1^2 + se_2^2) - 2(r)se_1se_2}$$

where r is the correlation between the two estimates. The determination of correlations requires a statistical software package, such as SAS or SPSS, and the invocation of proper weights for the comparison.

Because none of the longitudinal studies invoked in *The Toolbox Revisited* was based on a simple random sample of students, the technique for estimating sampling error involves a more complex approach known as the Taylor series method. To produce Taylor series standard errors, the estimates presented used AM, a program developed by Jon Cohen and associates at the American Institutes for Research under contract to the National Center for Education Statistics.

Flags and weights

Each of the grade-cohort studies used in this monograph carries a complex set of flags and weights to mark the populations for which estimates are to be generated. The selection of these flags and weights is very important for both the accuracy and meaningfulness of estimates.

For the postsecondary transcript sample of the High School and Beyond/Sophomore cohort (HS&B/So), the process was somewhat complex. Using the weights for the first follow-up survey (1982, the scheduled 12th-grade year for this cohort), three postsecondary transcript weights were developed. The first was based on a ratio of the sum of weights for all students in the 1982 panel who subsequently (in surveys of 1984, 1986 or 1992) claimed to have attended a postsecondary institution to the sum of weights for those for whom a transcript validating the claim was subsequently received. The ratio was then modified by factors derived from the stratification cells in the 1982 survey design to create multipliers that were applied to the raw weights for the students for whom transcripts were received or for whom postsecondary attendance was imputed from survey storylines. This is a generous formulation for all likely postsecondary participants.

The second High School and Beyond/Sophomore weight involved the same procedure as the first but a more restrictive ratio applied to those students for whom a true postsecondary transcript was received. These students are more than "likely" participants; they are "known participants." The third weight followed the same procedure as the second, but confined the population to only those students with complete postsecondary records (i.e., no missing transcripts). This weight is used in analyses of credit production and grades, since complete records are necessary for the analysis of both these features of student academic history. These weights are labeled PSEWT1, PSEWT2, and PSEWT3, respectively.

To accompany these weights for the comparisons that hold the population to students who were in the 12th grade in 1982, a special flag, SENRFLAG, was constructed from variables in the HS&B/So that described student status in 1982. Using the given flag for participation in the 1982 cohort sample would be insufficient and not wholly accurate because not all students were in the 12th grade in 1982, e.g., students who graduated early from high school in 1981. But there were also students who were labeled "early graduates" on the data set (and thus candidates for exclusion from a 12th-grade flag) whose high school graduation date was listed as 1982. Early graduates were excluded, and erroneously labeled "early graduates" were included in the population with SENRFLAG = 1. If these students were not participants in the 1982 panel (even if postsecondary transcripts were received) their weight = 0. Using the 1982 panel weight alone without this flag will not produce an accurate universe of 1982 12th-graders.

For all calculations of HS&B/So data in this document, SENRFLAG = 1, and the appropriate PSE weight invoked.

The weights and flags for the NELS:88/2000 are more complex, still, because the cohort, established in the eighth grade, was "refreshed" twice: first, to be representative of the census of 10th-graders in 1990, and second, to be representative of the census of 12th-graders in 1992. The weights deriving from the 1992 12th-grade refreshing are at the core of weights subsequently developed for the postsecondary transcript sample. The same three postsecondary weight types developed for the High School and Beyond/Sophomores were employed here, but in combination with the 12th-grade (second follow-up survey, or F2) weight and the student's presence in the final (2000) survey panel, F4. In addition, a set of weights based on the NELS high school transcripts in combination with the three postsecondary weight types also was developed when questions arise concerning the relationship between secondary school variables derived from high school transcripts and postsecondary variables derived from postsecondary transcripts.

The most frequently used NELS:88/2000 weights in *The Toolbox Revisited* are:

F4F2P2WT	For all known postsecondary participants who were 12th-graders in 1992.
F4F2HP3W	For all postsecondary participants with complete records who were 12th-graders in 1992 and for whom high school transcripts are also part of the file.
F4F2P3WT	For all postsecondary participants with complete records who were 12th-graders in 1992.

As in the case of the High School and Beyond/Sophomore cohort, a special flag was developed for 12th-graders in 1992. The existing flag on the NELS:88/2000 files excluded over 250 students who, in fact, were awarded high school diplomas in the spring of 1992 and who carry positive weights for the panel (the descriptive windows of the Electronic Code Book for the fourth follow up survey of 2000 offer no reasons or clues for this anomaly). These students are included in the flag, GRADE12A, used in this monograph.

The weighted Ns for samples used in a table are provided in the notes to the tables. Even if the same weight and flag is used on two tables, the weighted Ns may differ slightly because missing values in a particular variable are excluded from the calculations.

Multivariate analyses

For all multivariate analyses in this monograph, special procedures were employed in accordance with the complex sampling designs of NCES longitudinal studies. These procedures are in the spirit, though not exactly to the letter, of those discussed and recommended by Thomas and Heck (2001). Thomas and Heck recommended alternative ways of producing both regression models and their adjusted standard errors in a single step, as opposed to the two-stage procedure used in this study. The reader should be aware that the software employed in this study, AM, correctly estimates standard errors associated with complex, cluster samples.

For any model, an adjusted weight based on the population with non-missing values on all variables in the model was calculated, in the following steps:

1. A weight appropriate to the question was selected. For example, for determinants of transfer from a community college to a four-year college, the weight for NELS students with received postsecondary transcripts, F4F2P2WT, was chosen.
2. A simple tabulation of the dependent variable was then run for students who evidenced positive (non-missing) values for all variables in the model. Call this universe A. The selected weight was invoked.
3. The log of the program for step 2 produces both unweighted and weighted Ns for universe A.
4. The selected weight is then adjusted by what Thomas and Heck (2001) refer to as NORMWT, i.e., the weighted N / unweighted N of universe A.
5. The selected weight is then multiplied by the NORMWT, thus adjusting the effective sample size.
6. The example would look as follows:

   F4F2P2WT / (f4f2p2wtA / unweighted N for A configuration of variables)

7. The result becomes a variable in its own right, a weight with a name, e.g., COREWT1.

A root design effect (DEFT) reflects the effect of departures from simple random sampling, and in the methodology reports for the NELS:88/2000, is calculated for sub-populations on each of a selection of variables (Haggerty et al. 1996; Curtin, Ingels, Wu, and Heuer 2002). For any logistic model in *The Toolbox Revisited*, a DEFT based on the population with non-missing values on all variables in the model was calculated in order to adjust the standard errors produced by statistical packages such as SAS (used in the production of this study). The DEFT is calculated in three steps:

1. The requisite data for a simple standard error are produced by the same equation used for NORMWT, and set out as follows:

$$\sqrt{\frac{p(1-p)}{N}} = \text{s.e.}$$

2. A matching Taylor series standard error is produced by AM software with the same dependent variable and equation, with the population filtered by positive (non-missing) values for the same variables used in the equation in step 1. The Taylor series s.e. takes into account both stratum and primary sampling unit in combination with the weight selected, hence accounting for the complex sampling design.

3. The DEFT = Taylor Series s.e. / simple s.e.

Every discrete multivariate analysis has a unique DEFT. The DEFTs for the NELS:88/2000 are rather substantial, e.g., 1.83, reflecting not only the original sampling design in 1988 but also the successive "refreshings" of the sample in 1990 and (for the analyses in this monograph) in 1992.[60] They are used to adjust the standard errors in the multivariate analyses, and hence reduce the likelihood of overestimating the effects of independent variables. The effect of the DEFT also is reflected in the production of the *F* and *t* statistics, for which the formulas used are:

$$\left(\frac{\beta}{\text{s.e.} \times \text{DEFT}}\right)^2 = F$$

and

$$\sqrt{\frac{F}{\text{DEFT}^2}} = t$$

In the logistic models employed in *The Toolbox Revisited*, the level of significance of the *t* statistic—*p*—for a two-tailed test is determined by reference to a standard table of critical values of *t* that can be found in any statistics textbook.

Collinearity data

This study includes Appendix J with tolerance statistics for collinearity for all the logistic model tables in order to assure the reader that the independent variables included in the models do not exhibit a nearly perfect linear relationship, in other words, that they do not overlap to such an extent that analysis of each variable, taken singly, is impossible. There are sometimes situations in which one variable is part of the definition of another, e.g., family income in relationship to

[60]Curtin, Ingels, Wu, and Heuer (2002) report the mean DEFT for all students in the fourth follow-up (2000) survey of the NELS as 1.954 (p. 209). The range of DEFTs in *The Toolbox Revisited* is 1.76 to 2.19.

socioeconomic status or multi-institutional attendance in relation to transfer. In cases such as these, collinearity statistics are produced as by-products of Ordinary Least Squares regressions for the variables in the logistic models.

Of these by-products, tolerance is the statistic of choice: It measures how well one independent variable can be predicted by other independent variables in the model, and is equal to $1-R^2$ for that variable. Ideally one would want this predictive relationship to be close to 1. The literature (e.g., Belsley, Kun, and Welsch 1980) suggests that there are no hard and fast rules for determining collinearity using either tolerance or its inverse, variance inflation, but that, in general, a tolerance reading of .20 or less evidences collinearity problems. This study adopted a tolerance threshold of 0.50, i.e., any reading above that threshold indicates no serious collinearity problem. Any indication below that point required further investigation of the independent variable(s) in question through correlation matrices. If the variables in question were part of the constructs of other variables, a choice was made as to which variable would be dropped. Dropping independent variables is one of the recommended options when potential multicollinearity arises (Knight 2004).

APPENDIX E

Populations Included and Excluded From the Study Universe

The population subject to analysis in *The Toolbox Revisited* consisted of 1992 12th-graders who subsequently attended a four-year college at any time through December 2000, who earned their high school diploma by December 1996, who presented complete high school transcript records and a senior year test score, whose postsecondary records were complete, and whose socioeconomic status was known. But there are other students who participated in the 1992 NELS:88/2000 survey and who subsequently attended a four-year college at some time who are not part of this population principally because (a) one or more of these data elements were missing or (b) because they were not in the 12th grade in 1992.

It is natural to ask about the demographic characteristics of the students who are excluded from the analysis because they are missing data or because they were not in the 12th grade in 1992, compared with the demographic characteristics of the students who *are* included. In order to compare distributions of this comparative demography, we include all 1992 survey participants.

Considering those who attended a four-year college at some time but were nonparticipants because one or more of the key data elements were missing, key contrasts include:

- A higher proportion of minority students than white students;
- A higher proportion of students who were 20 years old or older in 1992 than those who were less than 20 years old;
- A higher proportion of students from the lowest third of family income distribution than those from higher income levels;
- A higher proportion of first-generation students than those whose parents had either some college or who had earned at least a bachelor's degree;
- A higher proportion of nonnative speakers of English than those from English monolingual backgrounds;
- A higher proportion of those with three or more siblings than those who were either only children or had one or two siblings;
- A higher proportion of those who became parents by age 20 than those who did not;
- A higher proportion of those who had been retained in grade at least once than those who were never held back; and
- A higher proportion of those who came from high schools in urban areas than those from suburban or rural areas.

Some 60 percent of this group was missing only one of the key data elements, but it was a very important one: a high school transcript.

Of nonparticipants because they were not in the 12th grade in 1992, we notice distinctively higher proportions by age (20 years or older), origin in a second language household (though not among nonnative speakers of English), and parental status, and among those who had been retained in grade and those who earned General Education Diplomas.

Table E1. Percentage distribution of participants in the 1992 survey of the NELS:88/2000 by participation status in *The Toolbox Revisited* universe, by demographic and schooling background characteristics

Characteristics	Participants in the universe of this study	Nonparticipants[a] who were 12th-graders in 1992	Nonparticipants[a] who were *not* 12th-graders in 1992
All students	77.8 (1.11)	20.6 (1.05)	1.6 (0.33)
By gender			
Male	76.5 (1.57)	21.3 (1.46)	2.2 (0.57)
Female	79.2 (1.35)	19.8 (1.34)	1.0 (0.22)
By race/ethnicity			
White	81.1 (1.08)	18.0 (1.07)	0.9 (0.20)
African-American	64.3 (4.44)	30.0 (4.04)	5.7 (2.72)
Latino	66.2 (4.11)	29.6 (3.99)	4.2 (1.19)
Asian	73.2 (5.09)	26.6 (5.09)	0.1 (0.09)
American Indian	53.6 (12.8)	43.1 (13.0)	2.4 (2.30)
By age in 1992			
Missing	48.5 (9.15)	51.5 (9.15)	#
20 or older	41.6 (8.56)	47.9 (9.52)	10.4 (4.86)
Under 20	79.2 (1.06)	19.3 (1.01)	1.5 (0.34)
By family income			
Missing	70.8 (3.02)	27.1 (2.55)	2.2 (1.24)
Highest third	81.5 (1.44)	17.3 (1.41)	1.2 (0.37)
Middle third	80.1 (1.79)	19.2 (1.79)	0.7 (0.17)
Lowest third	71.3 (1.74)	25.2 (2.60)	3.5 (1.12)
By postsecondary generational status			
Missing	66.2 (4.08)	33.4 (4.07)	0.4 (0.24)
First generation	73.7 (2.73)	23.8 (2.74)	2.5 (0.68)
Parents had some college	78.3 (1.72)	19.2 (1.60)	2.5 (0.74)
Parents earned bachelor's	81.2 (1.34)	18.1 (1.32)	0.7 (0.27)
By second language background			
Nonnative speakers	68.8 (3.78)	28.9 (3.73)	2.3 (0.81)
From second language households	68.3 (5.48)	22.5 (4.94)	9.2 (4.06)
Monolingual English	79.0 (1.12)	19.7 (1.08)	1.3 (0.35)

See notes at end of table.

Table E1. Percentage distribution of participants in the 1992 survey of the NELS:88/2000 by participation status in *The Toolbox Revisited* universe, by demographic and schooling background characteristics—continued

Characteristics	Participants in the universe of this study	Nonparticipants[a] who were 12th-graders in 1992	Nonparticipants[a] who were *not* 12th-graders in 1992
By number of siblings			
None	76.0 (4.37)	23.3 (4.39)	0.6 (0.31)
One or two	81.8 (1.15)	17.2 (1.13)	1.0 (0.24)
Three or more	71.8 (2.04)	25.5 (1.87)	2.7 (0.84)
By parenthood			
Parent by age 20	64.6 (5.38)	22.5 (4.07)	12.9 (4.62)
Not a parent by age 20	78.3 (1.10)	20.5 (1.07)	1.2 (0.25)
Held back in grade at least once			
Missing	59.2 (6.33)	38.5 (6.21)	2.3 (1.11)

GED	8.7 (2.56)	23.6 (6.49)	67.7 (7.10)

[a] Nonparticipants are defined as students who were either (a) missing data on senior year test score or socioeconomic status or both, (b) missing an in-scope high school transcript, (c) graduated from high school in January 1997 or later, (d) presented an incomplete postsecondary record, and/or (e) were not in the 12th grade in 1992.
[b] A tiny percentage who received a certificate of attendance was included with the GEDs.
Rounds to zero.
NOTES: Standard errors are in parentheses. Universe consists of students who participated in the 1992, 1994, and 2000 follow-ups of the NELS:88/2000 and who attended a four-year college at some time. Weighted N=1.45M.

APPENDIX F

Gradations of Academic Intensity of High School Curriculum

The following figure sets forth the 31 gradations (in descending value) of academic curriculum intensity and quality as used in the development of the Academic Resources index and variable for the NELS:88/2000 cohort. The figures in the boxes represent the minimum rounded number of Carnegie units required for the gradation on a given *row*. Where a cell is empty, there are no minimum requirements. Where a cell indicates "none" (for remedial math and remedial English), it means that no remedial work is allowed for that gradation. Where the cell for AP courses indicates zero, that means the student did not take any AP courses, not a minimum. For the NELS:88/2000 cohort, computer science was not nearly as widely offered as it is today. Therefore, computer-related credits were brought into play only to disaggregate lumps in the distribution. Total high school academic credits is an empirically-derived factor that comes into play only in the very lowest gradations.

The basic five-subject credit thresholds were constructed in the course of examining the edited, coded transcript data for students who were known high school graduates with graduation dates through Dec.31, 1996. The editorial process paid particular attention to all cases that showed less than 16 total high school credits. Where the evidence strongly suggested dissonance with other variables in the student's record, all transcript records from that student's *school* were examined. Where nonstandard credit metrics were found, they were adjusted with reference to state standards for high school graduation (Medrich, Brown, and Henke 1992), and major components (e.g., mathematics, English, etc.) multiplied or divided by as much as (but no more than) two. For example, when a group of students from the same high school showed 40–45 Carnegie units in a state that required 20 for an academic diploma, the editorial process cut those 40–45 units in half—across all subjects in which they were given. The editorial process also Windsorized cases of total Carnegie unit counts above 32, adjusting the major components down one-by-one, and dropped fragmentary transcripts with less than 6 Carnegie unit counts.

As noted in the parallel appendix in the original *Tool Box*:

> These gradations of academic intensity and quality are based on the history of one national high school class that was scheduled to graduate in 1982. The next graduating class for which we possess similar data is that of 1992. While the specific number of Carnegie units, APs, and remedial indicators might change, the basic form and principles of the gradations will probably not change. This presentation of the possibilities of high school curricular attainment is criterion-referenced: theoretically, *everybody* can reach gradation level #1. (p. 114)

The account of curriculum for the class of 1982 had 40 gradations. This account, for the class of 1992, has 31. One implication of the shrinking number of gradations is that, in fact, more students were moving up the academic intensity ladder, clustering at higher criterion-referenced levels.

Table F1 presents the actual mean number of Carnegie units earned in core academic fields, irrespective of the theoretical thresholds, for students in each of the five quintiles of academic intensity derived from the 31 more detailed gradations.

Figure 3. Curriculum components of the 31 gradations of the high school academic intensity measure of the NELS:88/2000, by Carnegie unit minimums

Grada-tion	English	Math	Science	Foreign Langs	Hist and Soc Stu	Highest Math	Remed Math	Remed English	APs	Computer Science	Total Academ Units

27	2.5	2.0	1.0		1.0		Net 0				

28	2.5	1.5	1.0		0.5		Net 1				
29	2.5	1.5	1.0		0.5						
30	2.0	1.0	0.5		0.5						
31											≥6

NOTES: (1) Net 1 means the sum of total mathematics credits minus remedial mathematics credits was 0.5 or less, i.e., if remedial math appeared at all on a student's transcript, it was a major presence; Net 0 means the sum of total mathematics credits minus remedial mathematics credits was more than 0.5, i.e. of remedial math appeared at all on a student's transcript, it was a minor presence.
(2) The figures in the cells for English, math, science, foreign languages, and history and social studies represent the minimum rounded number of Carnegie units required for the gradation on a given row. Where a box is empty, there are no minimum requirements.
(3) An asterisk in a cell for science credits indicates core laboratory science (biology, chemistry, and physics).
(4) The reference points for highest level of mathematics studied in high school are higher than Algebra 2 (>Alg2), Algebra 2 (Alg2), and less than Algebra 2 (<Alg2). Where there is no entry in the cell, there is no highest mathematics requirement for that row.
(5) Minimum requirements for total high school academic Carnegie units, e.g., =>12 and =>6, come into play only in the very lowest gradations of the curriculum distribution.
(6) When the distribution of students across these 31 levels is weighted and then aggregated to quintiles, the quintile breaks are as follows: 1–8 (highest quintile), 9–15 (2nd quintile), 16–20 (3rd quintile), 21–25 (4th quintile), and 26–31 (lowest quintile).

APPENDIX H

The Timing of Departure

When this narrative took up the topic of the second calendar year of student histories and pointed out that roughly one out of five of our subjects had become status dropouts by that point, the question naturally arose: What happens to all those students who leave after the first year—or even the first semester—when most attrition occurs? How does one account for them? We need to provide some corrective data in this excursion, since we considered status dropout status only in the context of the paradoxes of first-to-second year persistence.

With rare exceptions (e.g., Tinto 1987), most attrition studies are (a) short-term, as in first year to second year, without allowing for the fact that students who skip the second year may return in the third or fourth years, and (b) limited to attrition at the same institution, without allowing that the student who can no longer be found at Old Siwash may, in fact, be enrolled at Greentree Valley Community College. Students who leave one school and attend another one are not dropouts—they are most likely transfers. Tinto (1987) made that point a long time ago, and it should be obvious. If they are not transfers, they may be on temporary "excursions" or more sustained voyages that end in either fragments or "discovery" (Adelman 2004b).

Given the systemwide perspective and the length of a longitudinal study such as the NELS:88/2000, a more sophisticated question about withdrawal can be asked, looking backwards from the last month of the longitudinal study (December 2000):

> What percentage of traditional-age students who entered postsecondary education during this period are no longer enrolled—anywhere—and never completed a credential of any kind, by timing of the gap between their first month and last month of enrollment?

This question follows the student—wherever the student goes. It tells us who became a "status dropout" by age 26 or 27 (which does not preclude even these students from returning at a later moment). And it tells us *when* the student became a status dropout, setting up an inquiry concerning the reasons for departure that follows Tinto's (1988) common sense suggestion that these reasons change by point of departure. Table H1 sets forth these data for *all* 1992 12th-graders who entered postsecondary education, by type of institution first attended.

Yes, the highest attrition rate in postsecondary education occurs in the first year (Schutz and Malo 2003), but table H1 shows that the proportion of traditional-age students who leave in the first year and never return is not radically higher than the proportion of those who leave at later points in time, and differs by type of institution first attended. Consider the face validity of these data: The mean number of credits earned by students who ultimately became status dropouts, by period of departure, matches roughly what one would expect—half or less of the full-time norm for the period. Proportion, however, is not the ideal way to assess the phenomenon.

Event-history accounts of attrition offer a more enlightening approach (e.g., Ronco 1996; DesJardins, Ahlburg, and McCall, 1999). The driving force of event history is risk or hazard, as befits a methodology derived from medical history analyses (Singer and Willett 1991), as in:

given the patient's medical momentum and other configurations of the patient's life-style, demography, and environment, when is the patient at risk of dying (the ultimate censoring event) if the patient did not die last year? The flip side of risk in event history is survival. While the purpose of this study stops short of survival analysis, the first step involved in setting up risk modeling involves determining hazard probabilities, and these are instructive in light of the

Table H1. Percentage of 1992 12th-graders who entered postsecondary education and withdrew without completing any credential by December 2000, by timing of withdrawal and institution of first attendance

Withdrawal behavior and its timing	Institution of First Attendance: Four-year	Community college	Other sub-bacc[a]	Mean credits	**Percent of all**
Left postsecondary without a credential and did not return					
Left within 11 months of first enrollment	4.6 (0.59)	14.6 (1.13)	15.5 (2.77)	9.85 (0.54)	**8.9 (0.58)**
Left within 12–23 months	3.3 (0.41)	11.0 (1.32)	6.5 (1.50)	21.64 (0.99)	**6.7 (0.59)**
Left within 24–47 months	4.9 (0.41)	12.5 (1.11)	4.6 (1.05)	39.88 (1.62)	**7.9 (0.50)**
Left within 48–102 months and not enrolled in 2000	8.7 (0.73)	14.3 (1.23)	4.0 (1.62)	58.29 (2.68)	**10.6 (0.65)**
No credential but still enrolled in 2000	4.7 (0.52)	9.2 (0.94)	1.8 (0.85)	70.98 (3.56)	**6.4 (0.47)**
Earned credential	73.8 (1.09)	38.4 (1.67)	67.7 (3.55)	124.73 (0.90)	**59.5 (1.05)**

[a] Sub-baccalaureate institutions other than community colleges.
NOTES: Standard errors are in parentheses. Columns may not add to 100 percent due to rounding. "Credentials" can be certificates, associate degrees, or bachelor's degrees.
SOURCE: National Center for Education Statistics: NELS:88\2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

first-year performance variables used in our analysis. That is, if we start at the first month of the first term of attendance and, for each calendar year following that point, asked what percentage of students left the postsecondary system with no degree and had not returned to school by December 2000, changing the denominator for each year to the number of students who remained in the system, we have a "declining risk set" (Ronco 1996) that serves as a rough guideline for the timing of potential dropout. The annual metric is obviously more even than the time brackets chosen for table H1.

The "declining risk set" for this study is presented in table H2. To summarize: For all postsecondary students, the risks of becoming a status dropout are highest in the first year, decline through the fourth year, flatten out through the sixth year, and decline after that. For students who attended a four-year college at any time, the risks of becoming a status dropout are much lower across the temporal board, are slightly higher in the first year, drop and then flatten from the second year through the sixth, and drop again after that. This is only the first step—and hardly the final analysis—of event history, but is perhaps a more accurate way of describing the parameters for understanding the phenomenon of when students leave postsecondary education.

Table H2. Declining "hazard probabilities" for 1992 12th-graders who entered postsecondary education, by calendar year following first date of enrollment

	"Hazard probabilities" for leaving without a degree	
Departure timing for those who never returned by December 2000	All students	All who attended a four-year institution at any time
First calendar year	.102	.039
Second calendar year	.061	.029
Third calendar year	.048	.030
Fourth calendar year	.039	.027
Fifth calendar year	.037	.027
Sixth calendar year	.041	.029
Seventh calendar year	.031	.025
More than seven calendar years	.026	.020

SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

The reader of table H1 will note that community college beginners exit sooner than do students who started at four-year colleges, and are more likely to still be enrolled at the end of the longitudinal study period. While there is comparatively little variance in the pace of permanent dropout for students who started in community colleges when the periods between the first and the fourth year are considered, there is no question that beyond that point, attrition slows. The same cannot be said for the pace of status dropout for students who started in four-year colleges: The rate of permanent attrition appears to be stable over time, a finding slightly different from that of the "declining risk set" approach, and a product of the clumping of years in table H1. As for sub-baccalaureate institutions other than community colleges, which specialize in short-term certificate programs, the status dropout rate drops dramatically from the first year to the second and subsequent periods.

Advancing on Tinto's (1988) suggestion, Eaton and Bean (1995) hypothesize that the factors affecting attrition are different for first-year students who withdraw from higher education versus the factors that come into play for students who leave at later points in time. Unfortunately, Eaton and Bean could not investigate that hypothesis because their study was confined to first-year and second-year students at one institution (a public research university), and bracketed

only one year's account of retention/attrition (for a similar inquiry, see Patrick 2001). The NELS: 88/2000 data, on the other hand, offer 8.5 years and a myriad of institutional types in which to explore and detail the boundaries of the issue. As Ronco (1996) notes, the timing and duration of "enrollment events" is a critical framework for identifying factors associated with graduation, transfer, and stop-out—the three modes of "exit" from an institution.

Table H3 provides a framework for future consideration of the differential attrition hypothesis. The literature on the putatively sophisticated economic decisionmaking of adolescents with respect to entering higher education, even in the face of uncertainty of returns (Altonji 1993), can be extended to reasons for leaving a path to postsecondary credentials. As Beattie (2002) points out, human capital theory is not rigid: it recognizes something called individual taste or proclivity that may be only tangentially related to group membership (e.g., ethnicity, gender, family income). At the least, students already in the postsecondary system know that they will eventually be better off for their education efforts (or they wouldn't have been there in the first place). So, what did the students in our universe who did not complete a bachelor's degree program (and who were not still enrolled as degree candidates at the end of the 8.5 year period) tell us of their reasons for leaving, by period during which they became status dropouts?

Table H3. Reasons for leaving postsecondary education without credentials by timing of exit: 1992 12th-graders who entered postsecondary education by December 1996

	Percent offering these reasons for leaving postsecondary education				
Timing of withdrawal	**Finances**	**Job/ Military**	**Academic**	**Personal/ Family**	**Mood/ Lifestyle**
Left postsecondary without a credential and did not return					
Left within 11 months of first enrollment	19.7 (3.10)	14.8 (2.03)	5.9 (1.92)	31.5 (3.51)	25.9 (3.99)
Left within 12-23 months	25.2 (5.19)	11.0 (2.81)	5.6 (1.40)	42.6 (6.19)	12.7 (2.23)
Left within 24-47 months	19.4 (3.60)	17.4 (2.69)	3.6 (0.99)	35.2 (3.78)	20.5 (2.30)
Left within 48-102 months and not enrolled in 2000	17.8 (2.19)	18.9 (2.45)	7.7 (2.46)	29.3 (4.04)	21.2 (3.21)

NOTES: Rows will not add to 100.0 because (a) student responses to questions about reasons for departure are not mutually exclusive, and (b) a category for "other" is not included. Standard errors are in parentheses.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

When the NELS:88/2000 students were asked (in the spring of 2000) why they left school, they were offered a list of reasons (though only 17 percent of students responding to the question indicated more than one reason). As table H3 indicates, personal and family reasons for departure dominate all other reasons for students who left postsecondary education without a credential between the 12th and 47th month following the first month of enrollment. The same factor ranks at the top versus all other factors except mood/lifestyle for students who left in the first year and students who left after the fourth year. Strictly financial reasons are not as prominent in students' judgment as some contend. "Job/military considerations" might be considered "financial," but there is too much ambiguity in that category of response to leap to that conclusion. Some 6.6 percent (s.e. = 0.47) of the1992 12th-graders subsequently served in the military, but 14.9 percent (s.e. = 4.95) of status dropouts who cited financial reasons for leaving school had served in the military, and an identical 14.9 percent (s.e. = 3.84) who cited "job/military considerations" for leaving had served in the military. If the NELS files had offered a more complete labor market history, we might be able to resolve the ambiguities.

As a partial confirmation of these observations, consider the work of Li and Killian (1999), who surveyed 622 students of all ages and levels who left a large state flagship university in 1997 (present in the winter term but not the following fall) and elicited 45 discrete reasons for departure. First, Li and Killian discovered that 20 percent of these students were not really dropouts at all, rather either transfers to other institutions (principally for reasons of academic program or location) or stop-outs with intentions of returning. Of the remaining students, 43 percent left for academic reasons (e.g., didn't like the program, classes too large, poor performance), 34 percent left for personal reasons (e.g., unstated personal problems, location issues including homesickness, illness, "social" reasons), and 20 percent for financial reasons. Of the financial reasons, Li and Killian advise us that "individual patterns of money management, more than family income" may be responsible for financially-driven attrition (p. 12), and that if we are going to understand attrition at all so that student affairs officers can establish realistic efforts to address what is within the control of the institution to assist, we have to dig below the level of large-scale concepts of academic and social integration. There is a considerable range of reasons that students leave an institution, and, as Li and Killian point out, students usually have more than one reason for departure. We can't control homesickness; we can help students deal with money management.

As for academic reasons for departure, table H4 reveals that compared to those who earned bachelor's degrees, no one in the departure universe was performing very well, no matter when they left, and even though a tiny percentage (see table H3) cited academic reasons for walking away. Braxton, Brier, and Hossler (1988) argue that when students are asked about their reasons for withdrawal in post-hoc surveys, they offer "socially acceptable rationalizations." We should hence be appropriately wary of the percentage distributions in table H3. Given the low percentage of students who cited academic reasons, and GPAs and cumulative credits for the same students that can be described as, at best, marginal, there is some indirect support for this contention.

Table H4. Mean postsecondary GPAs of 1992 12th-graders who withdrew without completing any credential, by timing of withdrawal, and compared with GPAs of those who had not completed a credential but were still enrolled in 2000, and those who earned bachelors degrees by December 2000

Departure behavior and timing	Mean grade point average: In first calendar year of attendance	Through second calendar year of attendance	Entire undergraduate record
Left postsecondary without a credential and did not return			
Left within 1st 11 months of first enrollment	2.10 (0.091)	2.10 (0.091)	2.10 (0.091)
Left within 12–23 months	2.30 (0.057)	2.08 (0.058)	1.83 (0.100)
Left within 24–47 months	2.31 (0.049)	2.26 (0.046)	2.03 (0.060)
Left within 48–102 months	2.10 (0.059)	2.02 (0.054)	2.03 (0.050)
No credential, but still enrolled	2.14 (0.069)	2.08 (0.069)	2.19 (0.078)
Earned bachelor's degree	2.89 (0.015)	2.91 (0.014)	3.04 (0.011)

NOTE: Standard errors are in parentheses.

APPENDIX I

Course Categories Included in Aggregates for Participation Rates In the First Two Calendar Academic Years of Attendance

Aggregate	Course categories
College-level writing	English composition; technical writing; creative writing; advanced essay
Oral communications	Oral communications; public speaking/debate; voice
Computer-related	Introduction to computer science; introduction to computing; computer programming: general
Introductory biological sciences	General biology; human biology; cellular biology; zoology: general; botany: general
Introductory physical sciences	General chemistry; general physics; general geology
College-level mathematics	College algebra, liberal arts mathematics, finite mathematics, statistics, precalculus, calculus
Core history	Western civilization, world history, U.S. history surveys, European history 1789–present, Asian history, African history, Latin-American history
General psychology	[single course category]
Micro/macroeconomics	[single course category]
Humanities other than literature and foreign languages	Humanities: general; introduction to philosophy; ethics (philosophy); religious studies surveys; interdisciplinary humanities; arts/humanities
Literature	Literature: general; introductions to poetry, fiction, drama, non-fiction prose; English literature; American literature; Afro-American literature
Core social sciences	Anthropology: general; cultural anthropology; geography: general; introduction to political science; U.S. government; introduction to sociology
Visual/graphic arts	Visual communications; introduction to design; fine arts: introduction; art history; drawing
Foundation business	General business principles; business law/legal environment; introduction to accounting

APPENDIX K

So They Earned a Degree! Now, How Long Did It Take Them?

The second most frequently asked question about U.S. higher education concerns time to degree. Despite accumulating evidence over the past quarter-century, the normative benchmark for completing a bachelor's degree has remained at four elapsed academic years. Our ideal seems not only to get it over with, but to get it over with in normative time. An altruistic argument in favor of the normative is that when students finish in a timely manner, they make room for others, i.e., completion keeps the access channels open. Yet recipients of bachelor's degrees are adults who have made a variety of decisions concerning competing goals and obligations that often do not include finishing a degree in four years. For example, if one looks at all recipients of bachelor's degrees in 1999–2000, and asks when they commenced their studies and how old they were when the degree was awarded, one finds that 62.8 percent (s.e. = 1.5) of the 7.5 percent of bachelor's degree recipients who were over 40 in 2000 started out in postsecondary education before 1980. At a minimum, the elapsed time to degree for these people was 20 years (in fact, the average was over 27 years). Of the 9.2 percent (s.e. = 0.4) of degree completers who were between 30 and 39 in 2000, 73.3 percent (s.e. = 1.7) entered postsecondary education prior to 1990, so, at a minimum, the elapsed time to degree for these people was 10 years (in fact, the average was nearly 15 years).[61]

The key phrase for our purposes is "elapsed time," as that is the customary way of measuring time to degree. It is not surprising that the older the baccalaureate recipient, then more likely that student had taken at least two years off from higher education, and the more likely that their principal reason for doing so was "change in family status," as in becoming a parent and raising children. The reader might consider, in passing, when complaints are raised about excessive time to degree, whether our system of higher education should be "blamed" for providing the opportunity for adults with different life trajectories to return to school and complete degrees, even if the time between initial enrollment and degree award is 15 or more years. That is the practical meaning of elapsed time.

There is an obvious difference between elapsed and enrolled time. When DesJardins, Ahlburg, and McCall (2002) investigated factors leading to "timely graduation," they confined one of their universes to students who had never stopped out—not even for the one term this study allows stop-out without labeling the student a non-continuous enrollee.[62] If we followed this mode of analysis, we could focus in on student *uses* of enrolled time to determine what contributed to and what detracted from year-by-year progress. Knight (2002) includes types and timing of

---

[61] All data in this paragraph were generated from the National Center for Education Statistics: Baccalaureate and Beyond Longitudinal Study, 2000: Data Analysis System.

[62] The research here involved a "competing risks" model in which the histories of students who had never stopped out were compared to the histories of those who had stopped out, hence, embraced both elapsed and enrolled time.

remediation, majors and changes-of-major, course withdrawals and repeats, course failures, credit hours earned and grades in general education courses, hours per week working and studying, and first-year grade point average among variables reflecting different aspects of the uses of time.[63] Volkwein and Lorang (1996) took up the phenomenon of students with extended time-to-degree because they purposefully carried lighter credit loads. Why did they carry less than the 15 credit per semester norm for the institution that served as the site for this study? To enhance GPA (an objective which precipitated dropping difficult courses), and to generate more free time, some of which was for work or family responsibilities, or both. Some respondents also cited difficulty of enrolling in a course "at the time I wanted," a phenomenon familiar to anyone who has worked student registration lines.

We also know that many disciplines require credit hour production that, when translated into standardized semester metrics, exceed the 120 credits that would be produced by students who attended only during the regular academic year and carried a standardized full-time load of 15 credits per semester. In a survey of 91 public universities in all 50 states, Pitter, LeMon, and Lanham (1996) found combinations of university and program requirements ranging from 122–124 credits in social sciences, foreign languages, psychology, mathematics, and protective services, for example, to 130–142 credits in such fields as engineering, architecture, and health professions (e.g., nursing, physical therapy, etc.). They also confirm our observation of five-year bachelor's degree programs in pharmacy, for a noted case, with a median credit requirement of 161. Any requirement above 120 credits will either add time to degree or encourage students to (a) earn credits by examination, including Advanced Placement, (b) attend during summer terms, and/or (c) carry credit loads in excess of 15 per semester in order to graduate "on time".[64] As Garcia (1994) observed, whether the student is a community college transfer or a native student in a four-year college, the "basic recipe" for completing a bachelor's degree within the standard "templates for time-to-degree is to maintain continuous enrollment and to earn more than 30 semester units each academic year" (p. 8). Sounds simple, but the list of diverting phenomena is long, complex, and often best assessed for *indirect* effects, as Garcia has done, using path analysis.

What we learn from these studies of the uses of enrolled time in relation to normative models of time to degree is what to include in both descriptive and multivariate accounts of elapsed time—and elapsed time is the measure used in both the original *Tool Box* and *The Toolbox Revisited.* The descriptive statistics are offered to the reader in Appendix L, table L13, but some basic observations are worth repeating here. First, the mean elapsed time to degree for bachelor's recipients in the NELS:88/2000 was 4.58 calendar years, and the median time (which

---

[63]Knight's list for a "hypothesized model of effects upon total semesters elapsed" (Knight 2002, p. 6) also includes provisions for variables derived from student surveys that are parallel to those used in the National Survey of Student Engagement, e.g., in Kuh et al. 2001.

[64]The small number of NELS:88/2000 bachelor's recipients who completed the degree in three elapsed calendar years or less entered with a mean of 10.6 acceleration credits (s.e. = 2.81) and subsequently accumulated a mean of 12.2 credits during summer terms (s.e. = 1.94).

is probably more meaningful) was 4.24 calendar years.[65] Shorter time to degree is observable among students from the highest quintile of high school Academic Resources, students who first entered highly selective institutions, among those who brought more than four acceleration credits across the matriculation line, and among those who attended only one school. Considerably longer time to degree is observable among those who attended three or more schools, among both community college to four-year college and four-year-to-four-year transfer students, among those who took more than one remedial course, those who were not continuously enrolled, and those who majored in the physical sciences. Most of these relationships confirm common sense.

But it is the multivariate analysis that will tell us what counts, and that is the purpose of table K1. Table K1 presents a linear (Ordinary Least Squares) regression in which the dependent variable, time to degree, is set on a scale with four values: more than 6 calendar years, 5–6 years, 4–5 years, and less than 4 calendar years (which encompasses the normative four-year degree). With one exception, a dichotomous variable indicating whether the student ever engaged in a cooperative education or internship course, the independent variables selected were those previously explored and (in most cases) used in the logistic narrative of Part IV of this study. The statistically significant independent variables are highlighted in bold. How do we read the table? What do we see?

On reading the table: First, the R^2 indicates that this linear model accounts for half the variance in timing of bachelor's degree completion for the NELS:88/2000 cohort. That's a very convincing level. Second, the positive parameter estimates mark variables that add time to degree, while the negative parameter estimates indicate variables that shrink it. Third, the following variables did not meet the significance threshold for entering the model (set at $p < .05$): race/ethnicity, becoming a parent by age 20, multi-institutional attendance, and freshman year remediation.

There is no question of the major contributors to extended time to degree:

1. Excessive no-penalty course withdrawals (W) and no-credit repeats (NCR)—Damaging to degree completion, these are just as damaging to time to degree. Yes, we can keep students continuously enrolled, but if much of that enrollment is nullified by withdrawals and repeats, we have what Tinto calls retention without education. It's worse, though, because every seat at every available hour in every facility of an institution of higher education is at stake, and every seat marked with a W or NCR bars another student from sitting down. When the blocked seats reach a critical mass, general access is impeded as well. This observation is worth repeating.

---

[65]Broh (1991) presented an intriguing argument for an alternative time to degree calculation that began with the *median*, not the mean, and included students who had not finished the degree but who were still enrolled as degree candidates. In *The Toolbox Revisited*, the median for students who had completed degrees is 4.24 calendar years. Including students who had not earned degrees by December 2000 but who were still enrolled as bachelor's candidates, the median time to degree would be 4.49—very close to the mean of 4.58.

2. Transfer, both classic community college to four-year, and four-year to four-year—As previously noted, transfer often involves a hiatus in enrollment and extra effort to meet prerequisite requirements at the new institution.
3. Change of major—Garcia (1994) observed that the more times the student changed major, the greater the elapsed time to degree. Knight (2002, 2004a, 2004b) also includes multiple changes of major among the set of variables with significant impact on both enrolled and elapsed time.
4. Whether the student was ever part-time—Since our variable for part-time attendance was constructed partly with reference to course withdrawals that, in effect, produced lighter course loads, the result here backs up the conclusions of Volkwein and Lorang (1996).

Table K1. Ordinary Least Squares regression indicating factors influencing time-to-degree for 1992 12th-graders who earned bachelor's degrees by December 2000

And there is no question concerning which variables will contract time to degree: continuous enrollment and no remediation (the highest value of the "total remediation" variable). Socioeconomic status is a marginally significant contributor to lower time to degree, while the position of freshman year GPA quintile as a contributor to extended time to degree is somewhat puzzling.

Of those variables that were admitted to the linear model but failed to reach the threshold of statistical significance, enrollment in cooperative education or internship courses deserves special attention because it raises contrasting policy options with respect to influences on time to degree. Knight (2004b) observes that:

> Timely degree completion is not all that matters in terms of college student outcomes. Both analytical and student self-report evidence supports the fact that enrollment in cooperative education classes, involvement in internships, etc., while extending time-to-degree, significantly improves student learning and skill development, affective outcomes, career prospects, and the like. Significantly reducing time-to-degree could perhaps demand a trade-off against other long-term (and maybe more important) outcomes. (p. 14).

It turns out that the NELS:88/2000 baccalaureate students who engaged in cooperative education or internships or clinical externships did not take longer than others to complete degrees. But Knight is really asking readers to reflect on the principal objectives of conducting a baccalaureate enterprise. The modes of instructional delivery in professional and applied fields, in particular, often include carefully designed, graded experience in occupational environments, involving considerable time commitments that lie beyond the classroom. If we say to a school of engineering, "You can't offer cooperative education any more and cannot require more than 128 credits for a degree," what do we accomplish in terms of the quality of student learning and the quality of engineering graduates?

In contrasting spirit, if we observe institutions in which students can withdraw from courses, without penalty, as much as 10 weeks into a 14-week semester, a volume of withdrawals equivalent to 15 percent of all credits offered by the institution in a calendar year, and the average time to degree for native students at that institution to be well over five calendar years, we would accomplish a great deal by a tightening of course withdrawal policy. Here is a prime candidate for future research governed by quasi-experimental design: Find two comparable institutions (mission, size, demography, distribution of majors), one with lax withdrawal rules, the other with restrictive rules. The hypothesis, from everything learned in this data essay: An institution that restricts course withdrawal policy will witness higher graduation rates and shorter average time to degree.

Table L4. Descriptive relationship of number of credits earned in the first calendar year of attendance by 1992 12th-graders to highest degree earned by December 2000

	Highest degree earned by December 2000				
Number of credits in first year	None	Certificate	Associate	Bachelor's or higher	**Percentage of all students**
0–10	84.6 (1.44)	6.4 (0.98)	5.4 (0.88)	3.6 (0.75	**24.5 (0.94)**
11–19	63.9 (2.27)	4.9 (0.88)	12.0 (1.65)	19.2 (1.70)	**16.5 (0.73)**
20–29	27.5 (1.39)	3.8 (0.75)	8.4 (0.79)	60.3 (1.60)	**31.0 (0.83)**
30 or more	10.6 (0.86)	5.1 (0.66)	7.9 (0.83)	76.5 (1.31)	**27.9 (0.81)**
Among those who attended a four-year college at any time, number of credits earned in first year					
0–10	75.8 (3.15)	4.9 (1.50)	8.8 (2.18)	10.4 (2.11)	**12.4 (0.88)**
11–19	53.9 (2.82)	2.1 (0.55)	12.1 (2.22)	31.9 (2.51)	**14.1 (0.70)**
20–29	24.2 (1.39)	2.0 (0.79)	5.0 (0.62)	68.9 (1.59)	**38.8 (1.01)**
30 or more	8.4 (0.81)	0.6 (0.16)	3.4 (0.48)	87.6 (0.93)	**34.8 (0.94)**

NOTES: Standard errors are in parentheses. Rows may not add to 100.0 percent due to rounding. Weighted N for all 1992 12th-graders = 2.09M; for those who attended a four-year college at any time:1.47M.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

Table L5. Percentage distribution of enrollment intensity over six years (1995/96–2001) of students who started out in postsecondary education in 1995/96, by age as of December 1995

Age at entry	Enrollment intensity		
	Full-time only	Part-time only	Both full-time and part-time
All Students	47.0 (1.1)	12.2 (0.8)	40.7 (1.0)
Less than 21	51.8 (1.1)	4.4 (0.5)	43.8 (1.1)
21–23	40.0 (3.8)	18.7 (3.1)	41.3 (1.1)
24–29	30.2 (3.7)	35.5 (4.6)	34.3 (4.2)
30 and older	32.1 (3.1)	42.9 (3.5)	25.0 (2.8)

NOTES: Standard errors are in parentheses. Rows may not add to 100.0 percent due to rounding.
SOURCE: National Center for Education Statistics: Beginning Postsecondary Students Longitudinal Study, 1995/96–2001, Data Analysis System (NCES 2003-171).

As the reader will notice, about 48 percent of traditional-age students in the BPS longitudinal study of 1995/96-2001 told us that they attended part-time at some point in their undergraduate careers. In contrast, only 38 percent of the NELS:88/2000 postsecondary cohort indicated in their 2000 CATI interviews that they had attended part-time at any time. Are the two cohorts, three years apart in their modal starting date, that different? No.

NELS:88/2000:

Part-time by student report	37.7
Part-time by transcript evidence	9.7
Total part-time	47.4

BPS95/96–2001 students who started before they were 21:

Always part-time	4.4
Mixed full-time and part-time	43.8
Total part-time	48.2

So a dichotomous variable indicating whether the student *ever* attended part-time can be included in the logistic model in Step 5 (attendance patterns).

Table L6. Mean Carnegie unit credits earned in grades 10–12 by (a) all 1992 12th-graders and (b) by those of known socioeconomic status who attended a four-year college at any time and for whom high school transcript records and senior year test scores were complete

	Mean Carnegie units earned by:	
Category of earned credits	All 1992 12th-graders	All 1992 12th-graders who are the subjects of *The Toolbox Revisited*[a]
All high school credits	17.93 (0.09)	18.74 (0.09)
All academic credits	16.06 (0.09)	17.13 (0.09)
All vocational credits	1.28 (0.03)	1.01 (0.03)
English	4.11 (0.02)	4.18 (0.02)
Mathematics	3.39 (0.03)	3.61 (0.03)
Foreign language	1.98 (0.04)	2.31 (0.04)
Science	3.14 (0.03)	3.39 (0.03)
Social sciences	3.55 (0.03)	3.64 (0.03)

[a] These students are the same as those described under (b) in the title of this table.

NOTES: Standard errors are in parentheses. Weighted N for all 1992 12th-graders: 2.62M. Weighted N for 1992 12th-graders who graduated from high school by December 1996, attended a four-year college at any time, and were of known socioeconomic status: 1.41M.

Table L9. Percentage of 1992 12th-graders earning credits in college-level math courses, both in the first calendar year of attendance and cumulatively, by number of credits earned in college-level mathematics, and type and selectivity of first institution of attendance

Characteristics of first institution	Number of credits in all college-level math courses earned in the first calendar year of attendance: None	1-4	More than 4
Type of first institution			
Four-year	44.2 (1.20)	30.2 (1.02)	25.6 (0.98)
Community college	82.1 (1.22)	12.0 (1.00)	6.0 (0.75)
Other sub-baccalaureate	89.2 (2.72)	9.5 (2.70)	1.3 (0.51)
Selectivity of first institution			
Highly selective	25.1 (5.69)	26.9 (4.24)	48.0 (5.32)
Selective	26.9 (1.98)	32.0 (2.38)	41.1 (2,28)
Nonselective	51.3 (1.26)	30.1 (1.15)	18.6 (0.91)
Open-door	82.4 (1.17)	11.8 (0.96)	5.8 (0.73)
Not ratable	92.4 (2.51)	3.7 (2.09)	3.9 (1.42)

	Number of credits in all college-level math courses earned at any time in the undergraduate careers of students who earned more than 10 undergraduate credits[a]: None	1–4	5–9	More than 9
Type of first institution				
Four-year	23.2 (0.96)	26.3 (0.96)	28.9 (0.92)	21.5 (0.99)
Community college	52.8 (1.82)	21.4 (1.47)	16.1 (1.29)	9.6 (1.01)
Other sub-baccalaureate	79.1 (3.88)	12.4 (3.62)	6.1 (1.70)	2.4 (0.83)
Selectivity of first institution				
Highly selective	18.1 (5.44)	17.8 (3.53)	18.0 (3.34)	46.1 (5.33)
Selective	16.5 (1.74)	21.1 (2.21)	31.9 (2.13)	20.5 (2.16)
Nonselective	25.4 (1.02)	29.1 (1.14)	28.7 (1.09)	16.8 (0.94)
Open-door	54.2 (1.77)	21.2 (1.43)	15.6 (1.24)	9.1 (0.92)
Not ratable	88.0 (3.10)	2.7 (1.14)	7.9 (2.65)	1.4 (0.81)

[a] The "more than 10 undergraduate credits" criterion excludes incidental students.

NOTES: Standard errors are in parentheses. Rows may not add to 100.0 percent due to rounding. Weighted N for all 1992 12th-graders = 2.09M; for those who earned more than ten credits: 1.83M.

SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

Table L10. Logistic account of factors associated with bachelor's degree completion for 1992 12th-graders who attended a four-year college at any time, using second-year cumulative credits and second-year cumulative GPA

Variable	Parameter estimate	Adjusted standard error	*t*	*p*	Delta-p
Intercept	- 6.2118	.7595	4.63	.001	----
GPA through second year	**0.7585**	**.1826**	**2.37**	**.05**	**0.1672**
Credits through second year	**1.1780**	**.1054**	**6.34**	**.001**	**0.2597**

SES quintile	**0.2636**	**.0651**	**2.29**	**.05**	**0.0581**
Education expectations	0.5402	.2031	1.51	†	†
Academic Resources quintile	**0.3345**	**.0821**	**2.31**	**.05**	**0.0737**
Ever part-time	**-1.3259**	**.1611**	**4.66**	**.001**	**-0.2923**
Summer-term credits	**0.5273**	**.0929**	**3.29**	**.01**	**0.1162**
Race/ethnicity	-0.3327	.2186	0.86	†	†
Gender	-0.1998	.1574	0.72	†	†
Parenthood by age 20	-0.8960	.4535	1.12	†	†
Multiple institutions	-0.5354	.1874	1.62	†	†
Community college transfer	0.6251	.2151	1.65	†	†
First institution was selective	0.4008	.2248	1.01	†	†
College-level math in first year	0.2064	.1692	0.69	†	†
First-year remediation	0.2940	.1929	0.86	†	†

† Variables did not meet threshold criterion for statistical significance.

NOTES: Standard errors adjusted by root design effect = 1.71. Delta-p computed only for statistically significant variables (in bold). Universe consists of all 1992 12th-graders who participated in postsecondary education, whose records indicated positive values for all variables in the model, and whose transcript records were complete. Weighted N = 1.5M. $G^2 = 3477.1$; df=4759; $G^2/df = 0.73$; X^2 (df)= 2272.2 (17); p = 0.0001. Proportion concordant predicted probabilities = 90.4 percent.

SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

Table L11. Institutional attendance patterns of 1982 and 1992 12th-graders who subsequently earned more than 10 postsecondary credits[a]

Attendance characteristics	Class of 1982	Class of 1992
Number of schools attended		
One	46.9 (0.82)	43.5 (1.06)
Two	33.8 (0.75)	35.1 (0.93)
More than two	19.3 (0.63)	21.5 (0.84)
For those who attended more than one school:		
Attended in more than one state	39.5 (1.21)	35.7 (1.36)
Institutional combinations:		
Four-year only	38.9 (1.21)	27.5 (1.17)
Reverse transfer[b]	7.6 (0.60)	8.2 (0.76)
Community college transfer	18.1 (0.90)	22.1 (1.12)
Alternating/simultaneous[c]	10.2 (0.67)	13.8 (1.01)
Four-year student with incidental community college[d]	[e]	12.7 (0.90)
Four-year plus other sub-baccalaureate	4.9 (0.46)	1.8 (0.36)
Community college only	10.2 (0.69)	9.1 (0.71)
Community college and other sub-baccalaureate	5.3 (0.50)	3.0 (0.33)
Sub-baccalaureate trade school only	1.1 (0.22)	0.3 (0.20)
Other combinations	3.6 (0.51)	1.5 (0.31)

[a] The reason for excluding incidental students (those who earned 10 or fewer credits) is that they provide an insufficient history for judging multi-institutional attendance.
[b] Student began in four-year institution, did not earn a degree, and transferred to a community college.
[c] Student moved back and forth between four-year and two-year institutions, or attended two institutions at the same time, or did both.
[d] Student was based in a four-year institution, and earned 10 or fewer credits, principally during summer terms, from community colleges. This measure was not available in the High School & Beyond/Sophomore cohort transcript file.
[e] Category was not available in the High School & Beyond/Sophomore cohort transcript files (NCES 2000-194).
NOTES: Standard errors are in parentheses. Rows may not add to 100.0 percent due to rounding. Weighted N for those who earned more than ten credits: 1.83M.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

Table L12. Percentage distribution of final (December 2000) education status of 1988 eighth-graders, by type and timing of high school diploma (if any), and including those who did not earn high school diplomas

Secondary/postsecondary status	Percent
1) Earned standard high school diploma by July 1992 and	
Earned at least a bachelor's degree	29.1 (0.94)
Associate degree was highest earned credential	4.7 (0.28)
Certificate was highest earned credential	2.8 (0.24)
No degree, but still enrolled in 2000	4.6 (0.33)
No degree, not enrolled in 2000	23.6 (0.79)
Never entered postsecondary education	13.1 (1.10)
2) Earned standard high school diploma *after* July 1992 and	
Earned at least a bachelor's degree	0.2 (0.12)
Associate degree was highest earned credential	0.3 (0.14)
Certificate was highest earned credential	0.2 (0.04)
No degree, but still enrolled in 2000	0.4 (0.14)
No degree, not enrolled in 2000	1.9 (0.29)
Never entered postsecondary education	1.6 (0.23)
3) Earned GEDs or certificates of attendance and	
Earned at least a bachelor's degree	0.1 (0.03)
Associate degree was highest earned credential	0.2 (0.05)
Certificate was highest earned credential	0.4 (0.14)
No degree, but still enrolled in 2000	0.8 (0.22)
No degree, not enrolled in 2000	2.8 (0.38)
Never entered postsecondary education	3.9 (0.46)
4) Others	
Did not graduate from high school, but entered postsecondary	1.0 (0.42)
Did not graduate from high school, no postsecondary	6.7 (0.65)
Indeterminable high school graduation status	1.7 (0.37)

NOTES: Standard errors are in parentheses. Percent column may not add to 100.0 due to rounding. Weight used throughout this table is the F4BYWT with a base year (1988) flag. F4BYWT covers NELS:88/2000 students who were in both the base year (1988) sample and the 2000 follow-up survey sample. Weighted N=2.93M.
SOURCE: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement).

Table L13. Mean elapsed time to bachelor's degree[a] for all 1992 12th-graders who earned the degree by December 2000, by demographics, academic background, and attendance pattern characteristics

Student characteristic	Mean elapsed calendar years to degree	Standard deviation	Standard error
All NELS:88/2000 bachelor's	4.58	1.098	0.028
By Academic Resources quintile			
Highest quintile	4.23	0.914	0.042
2nd quintile	4.63	1.089	0.045

Not rated	4.85	1.412	0.481
By number of acceleration credits			
None	4.67	1.105	0.034
1–4	4.46	1.006	0.083
5–8	4.38	1.005	0.081
9 or more	4.28	1.101	0.088

See notes at end of table.

Table L13. Mean elapsed time to bachelor's degree[a] for all 1992 12th-graders who earned the degree by December 2000, by demographics, academic background, and attendance pattern characteristics—continued

Student characteristic	Mean elapsed calendar years to degree	Standard deviation	Standard error
By number of schools attended			
One	4.30	0.825	0.034
Two	4.66	1.143	0.048
Three or more	5.04	1.254	0.063
By transfer status			
Community college to four-year	5.43	1.162	0.071
Four-year to four-year	5.09	1.197	0.060
No transfer	4.43	1.015	0.030
By continuity of enrollment			
Continuously enrolled	4.44	0.941	0.024
Noncontinuous	6.68	1.114	0.101
By number of remedial courses			
None	4.43	1.042	0.033
One	4.94	1.117	0.071
More than one	5.33	1.092	0.068
Bachelor's degree major			
Business	4.56	1.083	0.072
Education	4.72	1.193	0.088
Engineering/architecture	4.71	1.019	0.089
Math/computer science	4.45	0.915	0.161
Physical sciences	4.99	1.293	0.194
Biological sciences	4.41	0.998	0.063
Health sciences/services	4.66	1.131	0.081
Humanities	4.35	1.134	0.143
Fine and performing arts	4.61	1.183	0.144
Social sciences	4.50	1.062	0.058
Applied social sciences[b]	4.68	1.033	0.066

[a] From first true date of attendance to degree award date.
[b] Includes communications, public administration, criminal justice, social work, family and community services, and leisure studies and recreation.

GLOSSARY

VARIABLES AND THEIR CONSTRUCTION

This glossary serves not only to expand the definition of the variables considered for *The Tool-box Revisited*, but also to provide details on their construction and allied guidance for interpretation that the reader may find helpful. As in Part II of this study, the presentation follows the order of the seven steps of the logistic narrative.

Where the initial definition of the variables in Part II was simple and transparent, e.g., GENDER, no further elaboration is provided here. Nearly all these variables were either taken directly or derived from other variables on NCES 2003-402 and its June 2004 Supplement.

Step 1a: Demographic Background

NNSE (Nonnative speaker of English)—New in this analysis.

The most notable demographic change between postsecondary students from the High School Class of 1982 and those from the High School Class of 1992 was a doubling of those who not only came from households where English was a second language, but who themselves were users of the heritage language. More than half of both Asian and Latino postsecondary students were so classified (Adelman 2004a, table 1.3, p. 9).

IMMIG (Family immigrant status)—New in this analysis.

Allied to second language background is the immigrant status of families. A dichotomous variable, IMMIG, was created to indicate whether the student's parents were immigrants to the United States within the previous 10 years. Among those who attended a four-year college at any time, 27.5 percent (s.e. = 3.33) of Asian students and 8.8 percent (s.e. = 1.61) of Latino students came from recent immigrant families. The dichotomous variable did not meet the minimum *t* criterion for retention in the demographic logistic model. Nonresponse bias undermines this variable: Responses from nearly 15 percent of the NELS:88/2000 families are missing.

BROSIS (Number of siblings)—New in this analysis.

Some research has indicated that students from larger families have more difficulty entering and successfully participating in higher education (Stage and Hossler 1989; Leigh and Gil 2003; Perkhounkova, McLaughlin, and Noble 2004). The dichotomous variable, BROSIS, marks students with three or more siblings versus those with one, two, or none.

FIRSTGEN (First generation postsecondary student)—New in this analysis.

A dichotomous variable under which the criterion for first-generation status is that *neither* parent had attended a postsecondary institution. Parents' education status was reported by parents themselves, not by students. The discrepancy between students' understandings of their parents' education status and parental accounts was demonstrated in the original *Tool Box* (p. 36): For the High School Class of 1982, only 50 percent of the students with at least one parent who had

earned a bachelor's degree (but not a graduate degree) could correctly describe their parents' achievement. Parents' highest level of education is a key component of socioeconomic status, and the original *Tool Box* did not test it separately.

FAMINC (Family income)—New in this analysis.

Family income in 1991 (the year before NELS students were scheduled to be in the 12th grade) was reported by parents, and set in six bands with a fairly even distribution of all respondents across those bands. In 2005 dollars (adjusted for a Gross Domestic Product deflator[66] of 1.288), as shown in figure 4, these bands were:

Figure 4. 1991 family income bands used in the NELS:88/2000 in 2005 dollars

Income band	Income range ($000)
Highest	96.6 and higher
Second	64.4–96.5
Third	45.1–64.3
Fourth	32.2–45.0
Fifth	19.3–32.1
Lowest	Less than 19.3

SOURCES: National Center for Education Statistics: NELS:88/2000 Postsecondary Transcript Files (NCES 2003-402 and Supplement); *Budget of the United States Government: Historical Tables, Fiscal Year 2005*, table 10.1.

For purposes of our analysis, the bands were combined in pairs—highest two, middle two, and lowest two—to produce a trichotomy. This version is used in the Step1a logistic model (demographic characteristics only), along with FIRSTGEN, as one of the proxies for socioeconomic status.

NEWCHILD (Parenthood by age 20)—Carried forward from *Answers in the Tool Box.*

The variable, abbreviated as NEWCHILD, is a dichotomous marking of students (of either sex) who became parents by age 20. It was a powerful, negative, and consistently significant variable through all stages of the logistic story of the HS&B/So. A decade later, the rate of early parenthood had changed. For the entire cohort of the HS&B/So, 11.6 percent (s.e. = 0.43) became parents by age 20, a proportion that rose to 16.4 percent (s.e. = 0.92) for the NELS:88/2000. For those who ever entered a postsecondary institution, these percentages drop in half. Georges (2000) would remind us of the common sense that students who became parents by age 20 were not likely to enter college at all by that time. Indeed, 59.4 percent (s.e. = 2.30) of

[66]For the GDP deflator calculator, go to http://www1.jsc.nasa.gov/bu2/inflateGDP.html

the NELS:88/2000 participants who had children by 1994 did not enter any postsecondary institution by 2000, compared with 20.9 percent (s.e. = 0.89) of those who did not become parents by 1994.[67]

SESQUINT (Socioeconomic status quintile)—Carried forward from the original *Tool Box*.

In NCES longitudinal studies, socioeconomic status (abbreviated SES) is a composite index of family income, parents' highest level of education, prestige of parents' occupations, and the presence of items such as books, regular newspapers, and a computer in the student's household. Parents provide this information, and the 1992 parent interview was the primary source. The NELS:88/2000 files presented this index in centiles, as did the HS& Beyond/So file before it. To match quintile presentations of high school curriculum intensity, high school class rank/Grade Point Average, 12th-grade test score, and the composite variable, Academic Resources (see below), the centile scale was collapsed to quintiles. SES is an anchor of the education attainment literature, with recent studies enlightening our understanding of the complex ways students of different SES backgrounds experience higher education (e.g., Walpole 2003).

Step 1b: High School Background

EDUANTIC (Education anticipations)—Modified from *Answers in the Tool Box*.

In both the original *Tool Box* and *The Toolbox Revisited*, this is a composite variable describing the consistency and level of the student's education expectations, hence, goal commitment (Allen and Nora 1995). It departs considerably from measures of student education "aspirations" that are based on the student's answer to a single question at one moment in time. The variable was built from matched pairs of questions asked in grades 10 and 12. The High School & Beyond/Sophomore cohort surveys included six pairs of questions: highest level of education expected, planned dominant activity in the year following high school graduation, timing of college entry, choice of a two-year or four-year college as entry point, lowest level of education with which the student would be satisfied, and whether the student would be disappointed if he or she did not graduate from college.

The NELS:88/2000 version does not have as strong a base. Only two pairs of questions were asked in grades 10 and 12 that feed into the construction: highest level of education expected and timing of college entry.[68] In grade12 only, the respondent was asked what was the most likely type of postsecondary institution he or she would enter: four-year, two-year, or trade school, and the answer to this question also was used in building the variable. But the lack of parallelism

---

[67]These percentages are based on the entire panel of participants in 1992 who also participated in the 1994 and 2000 follow-up surveys.

[68]Georges (2000) used a similar level-of-expectations by consistency-of-expectations construct for parental visions of their children's future education in the NELS:88/2000 cohort. Parents were interviewed on this issue when students were in the eighth grade and again when students were scheduled to be in the 12th grade.

between the HS&B/So survey and the NELS:88/2000 lead to revisiting the NELS categories and applying stricter algorithmic standards to yield an education anticipations variable closer to the structure of its predecessor, as displayed in figure 5.

Even after this construction, the education anticipations variable required an adjustment. Unlike the quintile variables for curriculum, class rank/GPA, and senior year test score, in which meanings are linear, the five-level anticipations variable is categorical. For purposes of multivariate analysis, the five levels were reduced to three as follows: (1) consistently expected to earn a bachelor's degree; (2) raised expectations to the bachelor's degree between grades 10 and 12; and (3) either lowered expectations from the bachelor's level between grades 10 and 12 or never expected to earn a bachelor's degree. The result is still a categorical variable, but the reference point—expectations for earning a bachelor's degree—is now constant in all three values.

Figure 5. Comparison of the education anticipations composite variable in the High School & Beyond/Sophomore cohort and the NELS:88/2000: Changes in students' expectations between grade 10 and grade 12

HS& B/So	NELS:88/2000
Bachelor's consistent	Bachelor's consistent
Raised to bachelor's	Raised to bachelor's
Lowered from bachelor's to some college; associate consistent	Lowered from bachelor's to some college, inconsistent
Lowered to no degree; associate inconsistent	Raised to some college; consistent "some college"
No degree plans, don't know	Sub-baccalaureate, including high school diploma or less

SOURCES: National Center for Education Statistics: High School & Beyond/Sophomore cohort, NCES 2000-194; NELS:88/2000 Postsecondary Transcript Files, NCES 2003-402.

CLSSRNKQ (Class rank/GPA quintile)—Carried forward from the original *Tool Box*.

This variable is a composite of high school class rank and GPA quintile. In both the HS&B/So and NELS:88/2000 data sets the composite was constructed in roughly the same way. The construction is described in detail in Appendix C, but the key features are worth repeating here.

The construction of this variable began with class rank, expressed as a percentile, for students whose high school graduating classes were larger than 10. Class rank was chosen for the base

reference because it overrides variability in local grading practices,[69] and responds to the divergence between stable scores on standardized tests such as the SAT or ACT and rising GPAs among the college bound (College Board 1998). Not all high schools compute class rank,[70] so for a significant percentage of students, this datum is missing. For these missing cases (as well as for the students from very small high schools), the variable construction turns to high school GPA (where available, and only for students with three or more years of course work). Basing a percentage scale first on class rank, and filling in the missing values with available GPAs from a matched scale using an equipercentile concordance methodology (Houston and Sawyer 1991), weighting the combined scale and cutting it by quintiles solves some of the bias and validity problems that would result from relying on GPA alone.

SRTSQUIN (Senior year test score quintile)—Carried forward from the original *Tool Box*.

SRTSQUIN is the quintile version of a senior year test score. Comparing the HS&B/So to the NELS:88/2000, this variable had the least variation in construction among the precollegiate academic performance variables. In both data sets, composite scores on an "enhanced mini-SAT" given to survey participants in the 12th grade were set out in percentiles. For missing cases, ACT scores were first converted to the SAT scale using ACT's equipercentile concordance methodology (accounting for the 1989 revision of the ACT test battery), and a combined SAT/ACT variable constructed. Scores on this variable were set out in percentiles, and filled in for missing cases of the senior year test score percentile using the equipercentile concordance method. SRTSQUIN reduces the noise in the lumpy distribution with a quintile presentation. Despite these efforts, 14 percent of the students in the NELS:88/2000 database are missing a senior year test measure, compared to 9 percent in the HS&B/So (see Appendix C). It must be acknowledged that the construction of SRTSQUIN combines low-stakes test scores with high-stakes test scores, though it is unclear how that ultimately affects a quintile presentation.

HIGHMATH (Highest level of mathematics reached in high school)—Carried forward from the original *Tool Box*.

In the original construction of this variable in both the HS&B/So and NELS:88/2000 data sets, some editing of the original coding of high school mathematics courses was required in light of postsecondary transcript evidence. For example, if the original coding in 1992 judged the student's highest level of high school mathematics to be "geometry," and the student's postsecondary transcript record of 2000 showed enrollment and completion of "Calculus III" in the first semester of college, then it was obvious that the original coder did not know the

---

[69]Among the divergent policies found by the College Board (1998): (a) 9 percent of high schools do not use A-F or numeric grading systems; (b) 8 percent of high schools do not give credit for grades lower than C-; (c) 19 percent of high schools are in districts where grading systems vary; and (d) 43 percent of high schools exclude some courses when calculating GPA.

[70]In its survey of high school grading practices, the College Board (1998) found that 19 percent of high schools did not calculate class rank.

difference between "geometry" and "analytic geometry," and the student's high school record had to be adjusted accordingly. HIGHMATH is considered a categorical variable (as opposed to a continuous variable) because the distance between its levels cannot be judged as ordinal.

SCIMOM (High school momentum in science and mathematics)—New in this analysis.

This variable has three values: (1) A student who reached a level of math beyond Algebra 2 and who earned three or more Carnegie units in core laboratory science was labeled as having sufficient momentum in STEM (Science, Technology, Engineering, and Mathematics)-oriented fields to enhance that momentum even further in a postsecondary environment (whether or not they chose to do so). (2) Students who reached Algebra 2 but no higher, and accumulated more than 1.5 units of core laboratory science exhibited "modest" science momentum, and (3) those whose high school records fell short of "modest" on either the mathematics or science criteria were labeled "weak-to-minimal" in terms of science momentum. SCIMOM is one of three variables tested together as proxies for the combined measure of the academic intensity of a student's high school curriculum, HSCURRQ.

FLAN (Number of units of foreign language in high school)—New in this analysis.

This variable was developed as part of a configuration of proxies for academic curriculum intensity so that we could test the proxies against the consolidated academic curriculum index, HSCURRQ, described on pages 24–27 and in Appendix F. FLAN indicates the number of Carnegie units earned in high school foreign language study, and has five values: more than 3 units, from 2.01 to 3 units, from 1.01 to 2 units, from 0.1 to 1 unit, and 0 units. FLAN is one of three variables tested as proxies for HSCURRQ.

ADVANCE (Number of Advanced Placement courses)—New in this analysis.

This variable was constructed with three values based simply on the number of AP courses recorded: three or more, one or two, and none. It was tested, along with SCIMOM and FLAN, as a proxy for the consolidated academic curriculum index, HSCURRQ.

The identification of Advanced Placement course work in the NELS:88/2000 was a complex task.The version of the NELS:88/2000 high school transcripts to which researchers have referred in the past understates participation in AP courses, though it was difficult to say precisely by how much. Two proxy measures were employed to create the first version of an AP variable on the data file used in this study:[71] AP test scores recorded on the high school transcripts and AP entries on the postsecondary transcripts (which do not include test scores). These were combined to yield 7 percent of the NELS:88/2000 12th-graders, compared with the College Board's

[71]NCES CD 2003-402.

estimate of approximately 11 percent of 1992 12th-graders having taken AP courses.[72] Not everyone who takes AP courses takes AP examinations, and while that might explain some of the gap in the estimates, it still left an uncomfortable discrepancy between the NELS and College Board accounts of Advanced Placement volume.

In light of this low yield and anomalies in the data, a new approach was taken in the work that produced the 2004 Supplement to the original NCES 2003-402 files. Enough new cases of AP course taking (*not* courses labeled "honors" or just "advanced") were identified to raise the proportion of NELS 12th-graders with AP courses to 9.4 percent.[73]

Step 2: Postsecondary Entry

FIRST4 (First school attended was a four-year college)—Carried forward from *Answers in the Tool Box.*

The dichotomous variable indicating whether the first institution attended by the student was a four-year school was active in the original *Tool Box* account, but did not qualify for entry into the model in this replication. It is not clear why this should be the case. Some 81.9 percent (s.e. = 0.82) of the class of 1982 who attended a four-year college at any time started at a four-year college, versus 78.1 percent (s.e. = 1.04) of the class of 1992. There is no meaningful difference in those numbers.

DOCT (First school attended was a doctoral degree-granting institution)—Carried forward from the original *Tool Box.*

Another dichotomous variable indicating that the first institution attended by the student was not only a four-year college, but a doctoral degree-granting school. In the original *Tool Box*, this variable was admitted to the steps of the logistic model but was never statistically significant. In *The Toolbox Revisited* analysis, this variable did not qualify for entrance in the model, even though roughly similar percentages of students who attended a four-year college at any time started in a doctoral degree-granting institution (33.8 percent; s.e. = 1.06 for the HS&B/So versus 34.1 percent; s.e. = 1.11 for the NELS:88/2000).

---

[72]See indicator #14 in *The Condition of Education, 1999*. Washington, D.C.: National Center for Education Statistics, 1999, p. 56.

[73]This approach began by isolating students who were consistent in their claims to have taken an "advanced placement course," planned to take an AP test, and reported taking at least one AP test between 1990 and 1993. From this group, those for whom AP course work had already been recorded were dropped. The balance were first matched against the HIGHMATH variable. For students who reached calculus or precalculus, responses to another question as to whether they took the course to earn college credit were invoked. If the student responded positively, the record was credited with an AP course. College transcripts were also examined for foreign language study at advanced levels in the first year of attendance (along with more than 2 years of foreign language study in high school), etc. Where matches were found, the student record was credited with an AP course.

The variable indicating the selectivity of the first institution of attendance (SELECT) is, to a large extent, confounded with doctoral degree-granting status (55 percent of the NELS:88/2000 students who started at doctoral degree-granting institutions started at either selective or highly selective schools).

SELECT (Selectivity of first institution attended)—Carried forward from the original *Tool Box.*

A dichotomous variable indicating that the first institution attended by the student was either highly selective or selective.[74] Some 4.1 percent (s.e. 0.49) of the universe for this study started in highly selective institutions (e.g., Princeton, the University of California at Berkeley, and Harvey Mudd). Another 17.8 percent (s.e. = 0.98) began their postsecondary careers in selective institutions (principally flagship state universities such as Michigan-Ann Arbor, North Carolina-Chapel Hill, Wisconsin-Madison, and Texas-Austin). More than half of the universe of students in this study (56.3 percent; s.e. = 1.32) commenced study in nonselective four-year colleges, and 20.7 percent (s.e. = 1.19) in open-door institutions, a category that is just about identical to community colleges. For the previous cohort of students from the High School Class of 1982, selectivity of first institution had a modestly positive and statistically significant association with degree completion until the last step of that analysis, extended postsecondary performance. Readers interested in the distribution of first institutional selectivity by race/ethnicity, gender, and socioeconomic status are referred to Appendix L, table L3.

NODELAY (Direct entry to postsecondary education following high school)—Carried forward from the original *Tool Box.*

This dichotomous variable was built from a simple distinction: Among students for whom we know both the month and year of high school graduation and the month and year of a transcript-documented attendance in a postsecondary institution following high school graduation, is the difference (a) seven months or less, (b) 8–18 months, or (c) more than 18 months? The first of these options is regarded as "direct entry." Dual enrollment courses do not count in this determination. The student who graduates from high school in June has until the following January to enroll and be judged "no delay." To those who might question the seven month allowance and argue for four months, one would point to a small percentage of graduates with April commencement dates who would be judged late entrants in September under a four-month rule.

---

[74] Institutional selectivity in the postsecondary files of all three grade-cohort longitudinal studies conducted by the National Center for Education Statistics has five values: highly selective, selective, nonselective, open-door, and not ratable. The first three of these values were based on the selectivity cells developed by the Cooperative Institutional Research Project (CIRP) at UCLA for its annual survey (since 1966) of entering freshmen. Community colleges and area vocational-technical institutes (AVTIs) were assigned the value of "open-door." Theological seminaries, music conservatories, and sub-baccalaureate vocational schools were considered "not ratable."

ACCELCRD (Credits earned prior to high school graduation and by examination)—New in this analysis.

ACCELCRD sums all college credits earned by course work prior to high school graduation, along with credits earned by examination—including Advanced Placement, College Level Examination Program (CLEP), and institutional challenge exams (the majority of these—in the records of the NELS:88/2000—in foreign languages). Most of these credits were earned either prior to matriculation or during the first term of enrollment, though some were earned at later points in the student's undergraduate career. The ACCELCRD values were set at three levels: more than 4 credits, 1–4, and zero.

Step 3: First-year Performance

LOWCRED (Less than 20 additive credits earned in the first calendar year of attendance)— Carried forward from *Answers in the Tool Box.*

A dichotomous variable built on an analysis of the mean number of additive credits (those that count toward degrees) earned by all postsecondary students in the first calendar year following the date of first enrollment. The threshold at which this broad population began to earn any credentials (including certificates and associate degrees) was 20 credits (in the NELS:88/2000 population, 20.252 credits, to be precise; s.e. = 1.016). LOWCRED is an early momentum indicator with enduring consequences. As table L4 in Appendix L demonstrates, the more additive credits earned in the first year, the more likely a degree will be completed.

FRSHGRAD (Grade point average in the first calendar year of attendance)—Carried forward from the original *Tool Box.*

Grade point averages were determined for the first *full calendar year* of postsecondary attendance, and were then set out in quintiles. FRSHGRAD is a dichotomous variable that divides the highest two quintiles from the other three. For the history of the HS&B/So used in the original *Tool Box* study, the dividing line was 2.70. For that of the NELS:88/2000 used in *The Tool- box Revisited*, the line is drawn at 2.88. The difference reflects the general trend in GPAs of the two cohorts (see Adelman 2004a, table 6.1, p. 78).

FREM (Any remedial course work in the first calendar year of attendance)—New in this analysis.

FREM is a dichotomous variable marking students who took any remedial courses during the first calendar year of attendance. Three variations on first-year remediation were tried out in the process of arriving at this formulation: one that focused only on remedial reading, another on remedial math, and a third on all types of remediation. The dichotomous version of the latter was the only form that could meet the minimal statistical criteria for entrance into the stepwise logistic model and allow us to track any association of early remediation with degree completion.

Step 4: Financial Aid

In general, the NCES grade-cohort longitudinal studies have been weak on financial aid information, where as the event-cohort Beginning Postsecondary Students longitudinal studies have offered a panoply of financing data. For example, if we were to ask about grants or scholarships received in the first year of attendance (1995–96) for the BPS:95/96–2001 by traditional-age students who attended a four-year college at some time, we would find the information indicated in table Glossary-1.

We would know, too, that for those who received grants/scholarships in 1995/96, the amount constituted an average of 69.3 percent (s.e. = 1.0) of all aid received, and covered 33.4 percent (s.e. = 0.7) of the price of attendance for the 1995–96 academic year. We could easily break these averages out by type of institution first attended. And we would know more, as the BPS:95/96–2001 covers PLUS (Parent Loan for Undergraduate Students) loans, Perkins loans, Stafford loans (subsidized and unsubsidized), need-based aid by source, merit-aid by source, Pell grants, SEOG (Supplementary Educational Opportunity Grants) grants, and other types of financial aid. If the grade-cohort longitudinal studies such as the NELS:88/2000 had gathered even a third of this information, a much richer analysis would be possible—though not necessarily an analysis demonstrating a significant association of types, amounts, and ratios of financial aid to degree completion.

Table Glossary-1. Percentage of 1995/96 beginning postsecondary students 20 years old and younger who attended a four-year college at any time, and received grants or scholarships in 1995/96, by source and average amount of award, and bachelor's degree attainment rate by 2001

			Percent earning bachelor's degree by 2001	
Source of grant	Percent receiving grant	Average amount of grant	Received grant or scholarship	Did not receive grant or scholarship
All sources	54.6 (1.3)	$4506.00 (170.7)	59.8 (1.4)	49.1 (1.9)
Federal	23.2 (1.0)	1958.60 (34.0)	47.8 (1.9)	57.1 (1.4)
State	19.1 (1.0)	1757.40 (68.8)	58.6 (2.0)	54.0 (1.4)
Institution	31.9 (1.3)	4312.00 (208.0)	67.5 (1.7)	49.0 (1.5)
Other	16.1 (0.7)	1529.60 (73.5)	71.1 (2.0)	51.9 (1.4)

NOTE: Standard errors are in parentheses.
SOURCE: National Center for Education Statistics: Beginning Postsecondary Students Longitudinal Study, 1995/96–2001, Data Analysis System (NCES 2003-173).

Step 5: Attendance Patterns

FOURTRAN (Transfer from one four-year college to another)—New in this analysis.

The algorithm for classic transfer from a community college to a four-year college was fairly easy to construct. But to distinguish a true four-year-to-four-year college transfer required an indirect route. In the final survey of NELS longitudinal study (2000), respondents who attended any postsecondary institution(s) were asked whether they ever "transferred credits." One cannot equate the yes/no answer to that question with institutional transfer. One group of four-year-to-four-year transfers was easy to identify: those who started in a four-year college and earned a bachelor's degree from a different four-year college. The second group was defined by the following attendance characteristics: They started in a four-year college, attended at least two four-year colleges, earned more than 30 credits from four-year colleges, were *not* reverse transfers, and earned less than 20 credits from community colleges and other sub-baccalaureate institutions. For the most part, these students did not earn bachelor's degrees, but they accumulated an average of 85.6 credits (s.e.=3.57) from four-year colleges. Of those who did not earn a degree, 34.6 percent (s.e. = 4.17) were still enrolled and degree-candidates in 2000.

MULTINS (Student attended more than one postsecondary institution as an undergraduate)—Carried forward from *Answers in the Tool Box.*

MULTINS is a dichotomous variable indicating that the student attended more than one institution. This is a macro-vision of otherwise multidirectional student behavior. One might suspect that when MULTINS, TRANSFER, and FOURTRAN are in the same logistic model, at least one of these variables will evidence an unacceptable degree of collinearity. But within the context of the universe under study in *The Toolbox Revisited*, the correlation between community college transfer (TRANSFER) and MULTINS is 0.3363 and that between four-year-to-four-year transfer (FOURTRAN) and MULTINS is 0.3246. These are modestly positive, but not so high as to indicate collinearity problems. What that may mean is that the three independent variables are making distinctly different statements in the context of the logistic regressions in which they appear.

SUMMER (Number of credits earned during summer terms)—New in this analysis.

Attendance and credit generation during summer terms turned out to be a strong proxy for high-octane persistence among community college students (Adelman 2005a), and was, hence, brought into the model for the population of those who attended a four-year college at any time. The variable was set by three bands of the number of credits earned in this manner: more than 4, 1–4, and 0. Some 54.8 percent (s.e. = 0.92) of all 1992 12th-graders who continued their education earned credits in at least one summer term; 61.1 percent (s.e. = 0.96) of those who earned more than 10 credits did so, as did 63.2 percent (s.e. = 1.10) of the universe on which this essay focuses. Given the magnitude of those percentages, it is not so much the fact of using summer terms, but the volume of credit generation that should count.

PARTTIME (Was the student's enrollment intensity *ever* part-time?)—New in this analysis.

The original *Tool Box* declined to confront part-time status and its effects. If one is using transcripts as evidence, there are a number of problems in determining which students are part-

time and when. This issue deserves extended attention, with support drawn from very different data sources (see, e.g., O'Toole, Stratton, and Wetzel 2003). Even if one standardizes credits on a semester metric across over 3000 institutions in the NELS:88/2000 postsecondary transcript files, it is often difficult to know what is considered "part-time" in term X at institution Y in program Z. With over 60 percent of students earning credits in summer terms, we would be obligated to include such terms in an account of enrollment intensity, and the question, "What is 'full-time' in a summer term?" would have to be answered in each institution. In the last survey of the NELS:88/2000 cohort in 2000, students were asked whether they had ever "attended less than full time." Despite the ambiguity of the phrasing and students' understanding of what "less than full time means," student responses were accepted as the first stage of creating a variable indicating part-time status at some point in their careers. In their 1994 interviews, students were also asked about their enrollment intensity status at the first institution they attended. When they indicated part-time, that fact overrode any denial of part-time status in their 2000 interview. Proximate judgment supercedes retrospection.

The second stage in developing this rough proxy draws on the transcripts and the notion of reducing credit load to part-time status. To identify students who may start with a full-time schedule but reduce it to part-time intensity by withdrawing from courses, we take the average credit load per semester for bachelor's degree recipients—14.2 (average annual load of 30.8 minus the sum of summer-term credits, credits by examination, and dual enrollment credits divided by two)—and ask by what percentage that figure would have to fall to bring the student's credit load below the threshold for full-time status (12 credits). The answer is 16.2 percent. So for the sake of this crude proxy measure, it is assumed that students who withdrew from attempted credits at 16.2 percent rate or higher were—or became—part-time at some time. With that group added to students who indicated part-time status in the course of their 2000 interviews, the proportion of NELS students who were part-time at some time in the undergraduate careers was 47.4 percent—compared with 48.2 percent of traditional-age students in the BPS longitudinal study of 1995/96–2001 (for an account of enrollment intensity in both data sets, see Appendix L, table L5).

Step 6: Extended Postsecondary Performance

REMPROB (Nature and intensity of remedial work)—Carried forward from *Answers in the Tool Box.*

In both the original *Tool Box* and *The Toolbox Revisited*, REMPROB describes the nature and extent of a student's remedial course work without the boundary of the first calendar year of attendance. For that reason, when REMPROB is tried out in the logistic narrative at the stage of extended postsecondary performance, it replaces the freshman year remediation variable (FREM).

REMPROB is created by an if-then-else logic that starts with remedial reading as the most serious of remedial problems,[75] and works its logical steps as follows:

---

[75]For an elaboration of REMPROB in relation to student demographic backgrounds, high school performance, and degree attainment, see Adelman 2004a, pp. 87–94, and Wirt, et al. (2000), indicator 14, p. 52 and supplemental tables (p. 152).

1. Any remedial reading
2. Two or more remedial courses (not reading, and, if math, more than two)
3. One or two courses of remedial mathematics only
4. One remedial course (not reading, not math, thus leaving writing, language arts, and general basic skills)
5. No remedial course work

For the sake of presentation in the logistic sequence, REMPROB is a dichotomous variable in which remedial reading plus more than one remedial course falls on one side of the border, and all other remediation (including no remediation) on the other side. In the original *Tool Box*, REMPROB was admitted into the model, but did not reach the threshold of statistical significance. In *The Toolbox Revisited*, REMPROB did not meet the minimum statistical standard for entry into the model when it was invoked in Step 6.

TREND (Trend in student's grade point average)—Modified from previous presentation in the original *Tool Box*.

This variable describes the trend in a student's postsecondary grade point average (GPA), and applies only to those students with complete undergraduate transcript records and computable GPAs. In its original *Tool Box* version, two reference points were used: end of the first calendar year GPA, and final undergraduate GPA. From these two markers, one could observe whether GPA was rising, flat, or falling, using a ratio of final GPA to first-year GPA. Ratios in the .95 to 1.05 range were judged to indicate no change, with ratios above 1.05 indicating a rising GPA, and ratios below 0.95 indicating a falling GPA. For a slightly better set of markers, the NELS:88/2000 postsecondary transcript files thus added a variable for GPA two years after entry. With three points of reference, ratios are not invoked, rather relationships (greater, less than, or equal to)—and at three points in time. From the permutations of these relationships one can determine whether the trend was rising, flat/inconsistent, or falling.

CUMMATH (Number of credits earned in college-level mathematics)—New in this analysis.

This variable, setting out cumulative credits earned in college-level mathematics in three bands (more than four, 1–4, and 0) replaces the parallel variable for first-year college-level mathematics credits in the context of an extended postsecondary history account. The motivation for including this curriculum marker is the same: Even if postsecondary students do not concentrate their studies in science, technology, engineering, or mathematics/computer science (STEM), their quantitative background will be called upon (in business and the social sciences, in particular). Student academic momentum, it is hypothesized, will be as much enhanced by quantitative study on the post-matriculation side of education history as it was in secondary school.

CHANMAJ (Change of major)—New in this analysis.

If transcripts are our principal source of evidence, the only moment at which we are sure of a student's major is the moment of degree award. Sometimes, the NELS:88/2000 transcripts with no degree indicated a major, which was verified by hand-and-eye reading by two judges only when the transcript carried a minimum of 15 credits and the major field indicated carried a minimum of 12. But that still leaves a large swath of missing accounts of students' major. It is wholly possible, for example, that a student earning a B.S. in computer science changed majors

twice along the way, and in two different institutions. In the matter of major—and change-of-major—the transcript is not as credible as the student. So the last NELS survey in 2000 asked students whether they had changed majors at any time, but unfortunately did not ask "from what to what."

A dichotomous change-of-major variable was developed and tried out for this study. Basically, it took the universe of students who said they changed majors, and added to that universe community college transfer students who moved from general studies to a discrete major, and cases where the student presented two transcripts with no degrees but different majors. It also took student responses in 1994 to questions about their major at the first institution attended and that at the most recent institution attended. Where the student reported two different disciplinary majors, e.g. electrical engineering at the first institution and biology at the most recent institution, that, too, was marked as a change of major no matter what the student told interviewers in 2000. Unfortunately, all these steps created a collinearity problem with the TRANSFER variable, and CHANMAJ did not qualify for entrance into the logistic narrative. On the other hand, it was admitted and played a notable role in the linear account of time to degree (see Appendix J).

Step 7: Final Model

NOSTOP (Continuous enrollment)—Carried forward from *Answers in the Tool Box.*

Given the extended potential undergraduate periods of 12 years (National Longitudinal Study of the High School Class of 1972), 11 years (High School and Beyond/Sophomores), or 8.5 years (NELS:88/2000), it makes no sense to describe stop-out behavior as one semester or its equivalent. In all three NCES postsecondary transcript-based grade-cohort studies, non-continuous enrollment was defined as *more than* a one semester (or its equivalent, e.g., two quarters) stop-out period. In the dichotomous variable, NOSTOP, the student is considered continuously enrolled even with one semester (or two quarters) off. From the moment of its introduction, NOSTOP was the strongest independent variable in the logistic narrative of the original *Tool Box*.

WRPT Ratio (Ratio of non-penalty withdrawal and no-credit repeat grades to all grades received)—Carried forward from the original *Tool Box.*

In the original *Tool Box*, this variable was called the DWI (drops, withdrawals, and incompletes) index. DWI is not a wholly accurate acronym. What is really described is a ratio in which the number of courses from which the student withdrew without penalty *plus* those the student repeated is the numerator, and the total number of courses in which the student enrolled is the denominator. The ratio counts course attempts, not credits. Withdrawals without penalty are not the same as courses "dropped" within set periods that most colleges and community colleges mark for "drop-and-add." Courses "dropped" are not included in the ratio. Nothing here involves penalty grades. All cases at issue are noncredit grades. The variable WRPT ratio is dichotomous: On one side of the dividing line are students who withdrew from or repeated 20 percent or more of all courses in which they enrolled.

Subject: Parking at Kenan Football Center

Attach: TEXT.htm

As all of us are aware, parking on campus is at a premium, especially for visitors. We have only four (4) Visitor Parking spots for the Kenan Football Center. To help accommodate our visitors, recruits and their parents, high school coaches, and others please:

- Ask your visitors to try to limit their appointments to one hour or less if at all possible
- Explain they must sign in with our Receptionist upon arrival
- They will receive a temporary Permit allowing them to park in front of Kenan Football Center after you have confirmed their appointment
- If you have a visitor that will be here for more than one hour, encourage them to use the parking available in Rams Deck
- If you have scheduled appointments, it would be very helpful if you would advise our Receptionist the day of the appointment the name of your visitor and the time of their appointment
- If you are contacted about an appointment from someone that you may not have time to see or you do not want to see, please make our Receptionist aware of this so that no permit is issued

- Service Providers:

o Service providers should have Service Vehicle Permits to park in Service Vehicle designated spots

 If no Service Vehicle spots are available at the Football Center, they should park in Service Vehicle spots elsewhere on campus or the Rams Deck

o No Permits will be issued to service providers

 Try to make everyone who may visit the Football Center aware that the Bell Tower Deck is open to the public 5pm 7am Monday through Friday, and all day Saturday and Sunday. During these times, parking is free.

o Hopefully this parking option will help with after school and evening visitors, as well as recruits, parents, and coaches that visit on weekends.

Your anticipated cooperation will be greatly appreciated!

Subject: Avoid Disasters, Make Most of Crises

WHY DO SOME CRISES BECOME DISASTERS?
by Phil Cogan, Executive Vice president
Bernstein Communications, Inc.

Crisis: 1. A crucial or decisive point or situation; a turning point. 2. an unstable condition, as in political, social or economic affairs, involving an impending abrupt or decisive change.

Disaster: 1. An occurrence causing widespread destruction and distress; a catastrophe. 2. A grave misfortune. 3. Informal: A total failure.

In a now widely quoted speech during the 1950s, former president John F. Kennedy noted that "when written in Chinese, the word 'crisis' is composed of two characters. One represents danger and the other represents opportunity."

The maxim illustrates an important and often overlooked point; not all crises lead to disaster. While it is popular to assume that an individual or organization that finds itself "in crisis" is also "in trouble", it is not correct to further assume that the organization ultimately finds itself in the midst of a disaster. Why is that?

First, note that a crisis, as Kennedy observed, isn't automatically and by definition bad. A crisis is "a crucial or decisive point or situation", or "a turning point". Handled properly, it is an opportunity to demonstrate leadership, to navigate out of harm's way. Damage, destruction and distress are not inherent in the definition of crisis; they are components of what a crisis may become, namely a disaster.

Second, let's acknowledge that some organizations in crisis avoid disaster through plain old dumb luck, or if more intellectually palatable, because of fate.

But dumb luck or fate can't account for all instances of disaster avoidance. So what does?

Preparedness stands between crisis and disaster. Political educator Morton C. Blackwell said it succinctly: "In moments of crisis, the initiative passes to those who are best prepared. "

However, preparedness takes many forms. In studying some of these forms of preparedness we may learn why disasters -- grave misfortunes -- happen to some organizations in crisis, while bypassing or less severely affecting others.

Why Some Crises Become Disasters and Others Don't

1. Arrogance (version one): Bad things always happen to the other guy.

   It's human nature to assume that other organizations get into trouble because, well, they're either unlucky or made mistakes. It's also human nature to assume that the same things can't happen to you. End result: no crisis preparedness activities. Period.

2. Arrogance (version two): whatever happens can be handled.

   An aerospace company for whom I provided consulting services put it this way (and this is almost a word-for-word quote): "We hire seasoned professionals and pay them a lot of money. They don't need crisis plans; they just need to do their jobs." End result: no crisis preparedness. Period.

3. Lack of crisis plans, or inadequate crisis plans.

   Some organizations fail through an act of omission; they simply and completely fail to prepare crisis plans. Why? There are many reasons, none relevant in this discussion; they just don't prepare plans.

   Not much better off are their cousin organizations who, in an act of commission, have inadequate plans, sometimes which are nothing more than off-the-shelf, fill-in-the blank, computer-generated plans with little relevance to the organization's activities.

4. Ineffective crisis response training programs.

   Even great crisis plans are useless if the people who are expected to execute them aren't adequately trained. That means training, keyed to the plans, needs to be done by professionals with emergency prevention and response experience, needs to be done regularly, and needs to include new hires and those filling in for people who have departed the organization.

5. Failure to regularly test the adequacy of plans and training.

   How do we know if plans or training will prove adequate when a crisis occurs? Administering a written test, absurd as it sounds, might be better than what many organizations do to test their preparedness, which is nothing.

   Organizations serious about improving preparedness conduct tests ranging from simple "table top" emergency simulations to full-scale, "turn on the sirens and start the smoke machine"

field exercises. Such organizations are the opposite of the proverbial ostrich; rather than hiding their heads in the sand they want to know if they're going to fail, and they want to know when finding out does the greatest good: BEFORE the crisis.

6. Failure to regularly monitor the internal and external environments.

   It was in high school biology classes that many of us learned the fate of organisms that were unable to monitor the environments in which they lived. Unaware of changes in the environment, such as temperature, they often perished because they couldn't or didn't react. Similarly, a failure to detect the presence of predators and either leave the area, hide, or attack also threatened the organism's continued existence.

   Despite the well-known, elemental need to monitor the environment around us, many organizations today routinely ignore what's going on internally and externally to them. The advent of instantaneous global communications and the proliferation of media may make the task more difficult than in the past, but it does not make it any less necessary. Even organizations with the will to act cannot if they deny themselves access to the critical information needed to know WHEN to act.

7. Ignoring or failing to identify crisis warning signs and precursors.

   OK, let's suppose that you've established a very impressive program to monitor what's going on within and without your organization. Your people are generating reams of reports documenting almost everything that's being said, written and rumored about you.

   But he who has the thickest report doesn't necessarily win. More important than volume is ANALYSIS. What does it all mean? Are there trends evident, and if so, do those trends require action or response?

8. Implementing single disciplinary responses to multidisciplinary crises.

   Ever notice how a legal crisis rarely has implications limited to the law? Or how a school's handling of a grading controversy usually involves a range of issues involving parenting, educational policy, rules and regulations, labor unions and psychology? How environmental incidents involve science, land use laws, property rights, healthcare, victim rights and community activism? And notice how all of them seem to involve the media?

   It's no accident that effective and efficient crisis response comes from the creation and actions of effective and efficient crisis response TEAMS; teams made up of representatives of a wide-range of disciplines who, working together, can provide both a comprehensive multidisciplinary analysis of the crisis and a response plan to minimize its effects.

9. The magnitude or severity of the crisis overwhelms the available resources.

   No amount of preparedness guarantees an organization that no crisis will ever become a disaster. Having said that, though, there is ample evidence that establishes that sound crisis preparations almost always mitigate the effects of crises.

10. Crisis preparations focused on preparing for scenario-specific emergencies instead of creating response skills enabling responders to innovate as circumstances require.

    Crisis experts and those who have endured crises will both tell you: actual crises rarely, if ever, happen the way they're described in crisis plans and training. And aside from referring to checklists, phone numbers and resource listings, most people with crisis plans who have responded to crises will tell you that aside from looking at those lists they rarely used the plans.

    Good crisis plans, and the effective training that is based on those plans, should develop general capabilities that permit responders to innovate. Think of crisis plans and training as putting crisis tools into a responder's toolbox. When the time comes to face a crisis, an effectively trained and equipped responder will have the knowledge and skills necessary to know what crisis tools to use and when to use them.

That crisis will strike an organization at one or more points in its history is a given; that the crisis will become a disaster is not. Although not a guarantee of crisis immunity, a comprehensive crisis preparedness program is the best immunization against disaster. To do nothing is to gamble the organization's reputation, resources and future. It is not a good bet.

[Phil Cogan, besides being my executive v.p., was formerly deputy director of the Federal Emergency Management Agency's (FEMA) Office of Emergency Information and Public Affairs.

APPENDIX A

UNC Drug Testing Consent Form
Pursuant to
The University of North Carolina at Chapel Hill Department of Athletics
Statement of Policy Concerning
Substance Abuse Education, Testing, and Counseling Program
for Intercollegiate Athletics

The Board of Governors of The University of North Carolina has mandated that The University of North Carolina at Chapel Hill adopt mandatory testing of student-athletes for banned substances. The University of North Carolina at Chapel Hill has, therefore, adopted this Statement of Policy to comply with the Board of Governors' directive.

> I have read this Statement of Policy. I have been given an opportunity to ask any questions I may have had about the Policy. I understand the Policy and my responsibilities under it, and I have decided voluntarily to participate in the intercollegiate athletics programs to which this Policy applies. I consent to tests for banned substances administered pursuant to this Policy and I consent to notification of my parents or guardians under the circumstances outlined in this Policy.

_____
(Signature of Student-Athlete) (Date)

_____
(Name Printed)

_____
(Signature of at Least One Parent or Guardian, (Date)
if the Student-Athlete is Under Age 18)

HEALTH INSURANCE PORTABILITY AND ACCOUNTABILITY ACT (HIPAA) AUTHORIZATION

I authorize any physician, team doctor, or other health care provider who is affiliated with my university and from whom I have received health care treatment to disclose the following health information to a Faculty Representative or other authorized representative of the Atlantic Coast Conference:

> All information contained in any of my medical, psychiatric, psychological or other health care services records, including, but not limited to, any treatment records, notes, charts, summaries, reports, diagnoses, films, photographs, x-rays, sketches, diagnostic information, prescriptions, reports to or from third parties relating to my treatment in any way, and dates of service.
>
> I understand that the information in my health record may include information relating to sexually transmitted disease, acquired immunodeficiency syndromes (AIDS), or human immunodeficiency virus (HIV). It may also include information about behavioral or mental health services, and treatment for alcohol and drug abuse.

This health information may be disclosed to and used by the Atlantic Coast Conference for the purposes of determining my eligibility as a student-athlete under National Collegiate Athletic Association (NCAA) guidelines and for processing and considering my petition for waivers of Atlantic Coast Conference rules and NCAA waivers delegated to the Atlantic Coast Conference to administer.

This authorization shall be in force and effect until the completion of my eligibility as a student-athlete as determined under Atlantic Coast Conference rules and NCAA guidelines, at which time this authorization will expire.

I understand that I have the right to revoke this authorization, in writing, at any time by sending my written revocation to the Commissioner of the Atlantic Coast Conference and to the specific physician, team doctor or other health care provider who is affiliated with my university and from whom I have received health care treatment. I understand that the revocation will not apply to information that has already been released in response to this authorization and that my revocation of this authorization may, depending on the circumstances of the revocation, prevent me from obtaining a waiver of Atlantic Coast Conference or NCAA rules.

I understand that authorizing the disclosure of this health information is voluntary. I can refuse to sign this authorization. I also understand that the disclosure of this health information carries with it the potential for re-disclosure by the Atlantic Coast Conference or other recipients and may no longer be protected by federal or state law. However, I also understand that if I refuse to sign this authorization, my petition for waiver will not be processed.

Head Coaches & Athletics Staff Members

You will be receiving a hard copy of this email and the attachments via campus mail. As you know, NCAA Bylaw 13.3.1.2 states that, member institutions shall provide the information contained within the Graduation Rates, GSR, and APR reports to prospects at the earliest opportunity after the first arranged in-person encounter with a prospect.

NCAA Bylaw 13.3.2.2 states, member institutions shall provide to prospects the NCAA banned drug list, or the NCAA Web site address at which the list is located. This information must be provided to prospects at the earliest opportunity after the first arranged in-person encounter with the prospect. In no event shall an institution provide the information later than July 1 before the prospect's initial enrollment at the institution. For a prospect whose recruitment is initiated after July 1, the information must be provided at the earliest opportunity.

The NCAA banned drug list currently available is the 2006-2007 list. As soon as a 2007-08 list is made available we will send out that information.

Coaches are required to provide all prospects they are recruiting with information regarding initial eligibility standards. This must take place at the earliest opportunity after a coach begins recruiting a prospect. At the current time, we do not have a specific document with this information, however, detailed initial eligibility information is contained in the NCAA Guide to College-Bound Student-Athletes. This publication must be sent to all prospects via hard copy or electronic form. At this time, the 2007-2008 NCAA Guide for the College- Bound Student-Athlete is only available in hard copy on the NCAA website while the electronic version currently available is the 2006-2007 edition. Hard copies of the NCAA Guide for the College- Bound Student-Athlete may be purchased through the NCAA in packets of 25 for $11.00 if you desire. Otherwise, this information can be found on the J: Drive and is linked below.
(http://www.ncaa.org/library/general/cbsa/2006-07/2006-07_cbsa.pdf)

For your convenience, all documents required to be sent to prospects may also be found no the J Drive (J: -Compliance - Official Visits). Please share this information with your assistant coaches and members of your staff.

If you have any questions please contact Compliance.

NCAA Banned-Drug Classes
2006-2007

The NCAA list of banned-drug classes is subject to change by the NCAA Executive Committee. Contact NCAA education services or www.ncaa.org/health-safety for the current list. The term "related compounds" comprises substances that are included in the class by their pharmacological action and/or chemical structure. **No substance belonging to the prohibited class may be used, regardless of whether it is specifically listed as an example.**

Many nutritional/dietary supplements contain NCAA banned substances. In addition, the U.S. Food and Drug Administration (FDA) does not strictly regulate the supplement industry; therefore purity and safety of nutritional dietary supplements cannot be guaranteed. Impure supplements may lead to a positive NCAA drug test. The use of supplements is at the student-athlete's own risk. Student-athletes should contact their institution's team physician or athletic trainer for further information.

Bylaw 31.2.3. Banned Drugs

The following is a list of banned-drug classes**, with examples of substances under each class:**

(a) Stimulants:

amiphenazole
amphetamine
bemigride
benzphetamine
bromantan
caffeine[1] (guarana)
chlorphentermine
cocaine
cropropamide
crothetamide
diethylpropion
dimethylamphetamine
doxapram
ephedrine
(ephedra, ma huang)
ethamivan
ethylamphetamine
fencamfamine
meclofenoxate
methamphetamine
methylenedioxymethamphetamine
(MDMA, ecstasy)
methylphenidate
nikethamide
pemoline
pentetrazol
phendimetrazine
phenmetrazine
phentermine
phenylephrine
phenylpropanolamine (ppa)
picrotoxine
pipradol
prolintane
strychnine
synephrine
(citrus aurantium, zhi shi, bitter orange)
and related compounds

(b) Anabolic Agents:

anabolic steroids

androstenediol
androstenedione
boldenone
clostebol
dehydrochlormethyl-testosterone
dehydroepiandro-sterone (DHEA)
dihydrotestosterone (DHT)
dromostanolone
epitrenbolone
fluoxymesterone
gestrinone
mesterolone
methandienone
methenolone
methyltestosterone
nandrolone
norandrostenediol
norandrostenedione
norethandrolone
oxandrolone
oxymesterone
oxymetholone
stanozolol
testosterone[2]
tetrahydrogestrinone (THG)
trenbolone
and related compounds

other anabolic agents

clenbuterol

(c) Substances Banned for Specific Sports:

Rifle:

alcohol
atenolol
metoprolol
nadolol
pindolol
propranolol
timolol
and related compounds

(d) Diuretics:

acetazolamide
bendroflumethiazide
benzhiazide
bumetanide
chlorothiazide
chlorthalidone
ethacrynic acid
flumethiazide
furosemide
hydrochlorothiazide
hydroflumethiazide
methyclothiazide
metolazone
polythiazide
quinethazone
spironolactone
triamterene
trichlormethiazide
and related compounds

(e) Street Drugs:

heroin
marijuana[3]
tetrahydrocannabinol (THC)[3]

(f) Peptide Hormones and Analogues:

corticotrophin (ACTH)
human chorionic gonadotrophin (hCG)
leutenizing hormone (LH)
growth hormone(HGH, somatotrophin)
insulin like growth hormone (IGF-1)

All the respective releasing factors of the above-mentioned substances also are banned:

erythropoietin (EPO)
darbypoetin
sermorelin

(g) Definitions of positive depends on the following:

[1]for caffeine—if the concentration in urine exceeds 15 micrograms/ml.

[2]for testosterone—if the administration of testosterone or use of any other manipulation has the result of increasing the ratio of the total concentration of testosterone to that of epitestosterone in the urine to greater than 6:1, unless there is evidence that this ratio is due to a physiological or pathological condition.

[3]for marijuana and THC—if the concentration in the urine of THC metabolite exceeds 15 nanograms/ml.

NCAA Position on Nutritional Supplements

Many nutritional/dietary supplements contain NCAA banned substances. In addition, the U.S. Food and Drug Administration (FDA) does not strictly regulate the supplement industry; therefore, purity and safety of nutritional/dietary supplements cannot be guaranteed. Impure supplements may lead to a positive NCAA drug test. The use of supplements is at the student-athlete's own risk. Student-athletes should contact their institution's team physician or athletic trainer for further information.

NCAA Division I 2005 - 2006 Academic Progress Rate

Public Report

Institution: University of North Carolina, Chapel Hill Date of Report: 04/30/2007

This report is based on academic progress rate (APR) information submitted by member institutions for the 2003-04, 2004-05, and 2005 - 2006 academic years.

[Note: All information contained in this report is for three academic years only, unless otherwise noted. This may lead to very small sample sizes within certain groups. The NCAA anticipates reporting data only on the basis of a four-year rolling rate for all sports when four years of data are available.]

*In accordance with FERPA's interpretation of federal privacy regulations, data cells containing three or fewer student-athletes have been suppressed and are indicated by an * symbol.*

The following chart represents by sport APR averages for noted subgroups.

Sport (N)	Multiyear APR	Percentile Rank within Sport	Percentile Rank within All Sports	All Divison I	Public Institutions	Private Institutions	Football Bowl Subdivision	Football Championship Subdivision	Division I
By Sport - Men's									
Baseball (292)	988	90th-100th	70th-80th	934	923	957	936	933	931
Basketball (333)	993	90th-100th	80th-90th	927	917	947	922	930	932
Cross Country (304)	947	20th-30th	20th-30th	961	952	978	962	960	962
Football (239)	948	70th-80th	20th-30th	931	922	955	934	927	NA
Fencing (20)	1000	80th-90th	90th-100th	974	950	987	969	987	961
Golf (292)	950	30th-40th	30th-40th	962	956	974	967	957	962
Gymnastics (16)	NA	NA	NA	970	968	1000	969	1000	958

* Denotes data representing three or fewer student-athletes - In accordance with FERPA's interpretation of federal privacy regulations, these data are not available.
N/A = No APR
N = Number of teams reporting
Percentile Rank: 0 to 100; 0 = low, 100 = high
^ Denotes APR that does not subject the team to a contemporaneous penalty because the team is performing better than the institution's general student body or based on institutional, athletics and student resources.
+ Denotes APR that does not subject the team to contemporaneous penalties due to the squad-size adjustment. The "upper confidence boundary" of a team's APR must be below 925 for that team to be subject to contemporaneous penalties. Squad-size adjustments will be eliminated when the fourth year of APR data is collected, provided the team's multiyear cohort includes 30 or more student-athletes.
@ Denotes APR that does not subject the team to historical penalties due to the team's demonstrated academic improvement and favorable comparison based on other academic or institutional factors.
~ Denotes APR that does not subject the team to historical penalties due to the squad-size adjustment. The "upper confidence boundary" of a team's APR must be below 900 for that team to be subject to historical penalties. Squad-size adjustments will be eliminated when the fourth year of APR data is collected, provided the team's multiyear cohort includes 30 or more student-athletes.
% Denotes APR based on a one year cohort, not subject to a historical and/or contemporaneous penalty.
! Denotes APR based on a two year cohort, not subject to a historical penalty.

INFORMATION ABOUT THE GRADUATION-RATES REPORT

This information sheet and the 2006 NCAA Graduation-Rates Report have been prepared by the NCAA, based on data provided by the institution in compliance with NCAA Bylaw 30.1 and the Federal Student Right-to-Know and Campus Security Act. Each NCAA Division I college or university is required to distribute this sheet and the report to prospective student-athletes and parents, as specified in Bylaw 13.3.1.2.

The graduation-rates report provides information about two groups of students at the college or university identified at the top of the form: (1) all undergraduate students who were enrolled in a full-time program of studies for a degree, and (2) student-athletes who received athletics aid from the college or university for any period of time during their entering year. [Note: Athletics aid is a grant, scholarship, tuition waiver or other assistance from a college or university that is awarded on the basis of a student's athletics ability.]

The report gives graduation information about students and student-athletes entering in 1999. This is the most recent graduating class for which the required six years of information is available. The report provides information about student-athletes who received athletics aid in one or more of eight sports categories: football, men's basketball, baseball, men's track/cross country, men's other sports and mixed sports, women's basketball, women's track/cross country, and other women's sports. For each of those sports categories, it includes information in six self-reported racial or ethnic groups: American Indian or Alaska Native, Asian or Pacific Islander, Black, Hispanic, Non-Resident Alien, White, and Other (not included in one of the other six groups or not available) and the total (all seven groups combined).

A graduation rate (percent) is based on a comparison of the number (N) of students who entered a college or university and the number of those who graduated within six years. For example, if 100 students entered and 60 graduated within six years, the graduation rate is 60 percent. It is important to note that graduation rates are affected by a number of factors: some students may work part-time and need more than six years to graduate, some may leave school for a year or two to work or travel, some may transfer to another college or university, or some may be dismissed for academic deficiencies.

Three different measures of graduation rates are presented in this report: (1) freshman-cohort rate, (2) graduation-success rate (GSR) and (3) exhausted-eligibility rate. The freshman-cohort rate indicates the percentage of freshmen who entered during a given academic year and graduated within six years. The graduation success rate (GSR) adds to the first-time freshmen, those students who entered mid-year, as well as student-athletes who transferred into an institution. In addition, the GSR will subtract students from the entering cohort those who are considered allowable exclusions (those who either die or become permanently disabled, those who leave the school to join the armed forces, foreign services or attend a church mission), **as well as** those who would have been academically eligible to compete had they returned to your institution. The exhausted-eligibility rate indicates the percentage of student-athletes who used all of their athletics eligibility at this college or university and who graduated by August 2005.

1. Graduation-Rates Data. The box at the top of the graduation-rates report provides freshman-cohort graduation rates for all students and for student-athletes who received athletics aid at this college or university. Additionally, this box provides GSR data for the population of student-athletes. [**Note**: Pursuant to the Student-Right-to-Know Act, anytime a cell containing cohort numbers includes only one or two students, the data in that cell and one other will be suppressed so that no individual can be identified.]

    a. All students. This section provides the freshman-cohort graduation rates for all full-time, degree-seeking students by race or ethnic group. It shows the rate for men who entered as freshmen in 1999-00, and the four-class average, which includes those who entered as freshmen in 1996-97, 1997-98, 1998-99 and 1999-00. The same rates are provided for women. The total for 1999-00 is the rate for men and women combined, and the four-class average is for all students who entered in 1996-97, 1997-98, 1998-99 and 1999-00.

b. Student-athletes. This section provides the freshman-cohort graduation rates and also the GSRs for student-athletes in each race and ethnic group who received athletics aid. Information is provided for men and women separately and for all student-athletes.

c. Student-athletes by Sports Categories. This section provides the identified graduation rates as in 1-b for each of the eight sports categories. (The small letters indicate the value of N.)

d. Graduation Rates of Those Exhausting Eligibility. This section provides the graduation rates of student-athletes who entered during the 1990-91 through 1999-00 academic years and exhausted their eligibility at the college or university. The rate indicates the percentage who had graduated by August 2005.

2. Undergraduate Enrollment Data

a. All students. This section indicates the number of full-time, undergraduate, degree-seeking students enrolled for the 2004 fall term and the number of men and women in each racial or ethnic group.

b. Student-athletes. This section identifies how many student-athletes were enrolled for the 2004 fall term and the number of men and women in each racial or ethnic group.

c. Student-athletes by Sports Categories. This section provides the enrollment data as identified in 3-b for each of the eight sports categories.

Before you begin…

This Guide for the College-Bound Student-Athlete will lead you through a number of important topics, including your academic eligibility, amateurism eligibility, registration with the NCAA Initial-Eligibility Clearinghouse, financial aid and recruiting rules.

We addressed issues for three important groups of readers:

- High school students who hope to participate in college athletics at an NCAA college or university;
- Parents and legal guardians; and
- High school counselors and athletics administrators.

What is the NCAA?

The NCAA, or National Collegiate Athletic Association, was established in 1906 and serves as the athletics governing body for more than 1,280 colleges, universities, conferences and organizations. The national office is in Indianapolis, but the member colleges and universities develop the rules and guidelines for athletics eligibility and athletics competition for each of the three NCAA divisions. The NCAA is committed to the student-athlete and to governing competition in a fair, safe, inclusive and sportsmanlike manner.

The NCAA's membership includes:

- 326 active Division I members;
- 281 active Division II members; and
- 421 active Division III members.

One of the differences among the three divisions is that colleges and universities in Divisions I and II may offer athletics scholarships, while Division III colleges and universities may not.

What is the NCAA Initial-Eligibility Clearinghouse?

The NCAA Initial-Eligibility Clearinghouse (the clearinghouse) is an organization that works with the NCAA to determine a student's eligibility for athletics participation in his or her first year of college enrollment. Students who want to participate in college sports during their first year of enrollment in college must register with the clearinghouse.

Located in Iowa City, Iowa, the clearinghouse staff follows NCAA bylaws and regulations in analyzing and processing a student's high school academic records, ACT or SAT scores, and key information about amateurism participation, to determine the student's initial eligibility.

When to call the clearinghouse

Please contact the clearinghouse when you have questions like these:

- How do I register?
- I have forgotten my PIN. Can I get a new one?
- Some of my classes are not on my high school's list. How can I get a class added?
- My clearinghouse report shows I am missing some material. What is missing?
- Where do I send my transcripts?
- What do the codes on my clearinghouse report mean?
- I have been home schooled. What do I have to do to register?
- I am a high school counselor and I do not know my high school's PIN. Can I find out what it is?
- I am a high school administrator and want to add some core courses to our high school list. How do I do that?

When to call the NCAA

Please contact the NCAA when you have questions like these:

- What are the rules and regulations related to initial eligibility?
- What are the rules and regulations related to amateurism?
- What are the regulations about transferring from one college to another?
- What are the rules about athletics scholarships and how can they be reduced or canceled?
- I have a learning disability. Are there any other requirements for me?

Introduction

Dear Prospective Student-Athlete,

We designed this guide to help you and your family understand the National Collegiate Athletic Association rules for progressing from being a high school athlete to a student-athlete in college.

As you engage in college sports, you'll be inspired to develop an attitude of determination, teamwork, persistence and self-discipline. You will increase your appreciation of life-long education. Work closely with your high school counselors, recruiters and college admissions officers to prepare for your next important step as a collegiate student-athlete.

It's never too early to begin evaluating your wide range of college choices. Get all the information you need on how to choose a college wisely. NCAA institutions range from small schools to large universities, with varying commitments to financial aid and to athletics. The Association's members total more than 1,000 schools, and they are divided into three divisions.

You may qualify – by both your interest and your athletics performance – to become one of more than 360,000 students out of 15 million enrolled nationally in America's colleges and universities who combine education and athletics. Your likelihood of ultimate recruitment into professional leagues is small so, for almost all of you, your years as a student-athlete in college will be preparation for life. As our public service announcements say, "Almost all student-athletes are going pro in something other than sports."

Remember, good athletics is about winning at competition in games. Good academics combined with athletics is about winning in life. So, keep education as your top priority. This new phase of your life can be a wonderful experience that will result in a lifetime of friendships, memories and happiness. Without question, obtaining your college degree is absolutely crucial – to you and to us.

We wish you every success, on the field of play and in the classroom. Student-athletes are the center of our Association.

MYLES BRAND

NCAA President

Amateurism Eligibility Requirements

In response to the NCAA membership's concern about amateurism issues related to both international and domestic students, the clearinghouse will determine the amateurism eligibility of all freshman and transfer prospective student-athletes for initial participation at an NCAA Division I or II member institution. In Division III, certification of an individual's amateurism status is completed by each institution, not the clearinghouse.

If you plan to participate in intercollegiate athletics at an NCAA Division I or II institution in fall 2007 or thereafter, you must have both your academic and amateurism status certified by the clearinghouse before representing the institution in competition.

Beginning in 2006 when you register with the clearinghouse, you will be asked about benefits and activities that might impact your status as an amateur. [Note: If you register with the clearinghouse before the amateurism-related questions are added to the system, you will be asked to return to the clearinghouse Web site and answer the questions. You will not be charged a second registration fee for returning to answer these questions, but you will need the PIN number you created when you initially registered with the clearinghouse.] The information you provide about your athletics participation will be reviewed and a determination will be made as to whether your amateurism status should be certified or if a penalty should be assessed before certification. If a penalty is assessed, you will have an opportunity to appeal the decision.

The following precollegiate enrollment activities will be reviewed:

1. Contracts with a professional team.
2. Salary for participating in athletics.
3. Prize money.
4. Play with professionals.
5. Tryouts, practice or competition with a professional team..
6. Benefits from an agent or prospective agent.
7. Agreement to be represented by an agent.
8. Delayed initial full-time collegiate enrollment to participate in organized sports competition.

Additional information regarding NCAA amateurism rules is available on the NCAA's Web site (www.NCAA.org).

Questions About the Certification of Amateur Status

Who will be certified?
Every prospective student-athlete, both domestic and international, who is attending an NCAA Division I or II institution for the first time, must be certified by the clearinghouse. This includes prospective student-athletes who are transferring from any two- or four-year institutions (including international institutions) that are not members of NCAA Division I or II. Thus, if an individual wants to participate in athletics at an NCAA Division I or II institution, the prospective student-athlete must register with the clearinghouse and submit the appropriate documentation to receive a certification decision.

Do transfer prospective student-athletes also have to register with the clearinghouse?
Every prospective student-athlete who is attending an NCAA Division I or II institution for the first time must be certified by the clearinghouse.

When should I register with the clearinghouse?
Register for the clearinghouse at the beginning of your junior year in high school. The athletics participation section should be updated regularly so that institutions recruiting you will have up-to-date information about you. Be sure to send your high school transcript to the clearinghouse after you have completed at least six semesters of high school coursework.

Is there a registration deadline?
No. However, prospective student-athletes must be certified as an amateur before they may receive an athletics scholarship or practice or compete at a Division I or II institution.

Is there an additional fee to register with the clearinghouse because of the additional questions on athletics participation?
No, there is only one fee to register for the clearinghouse, which covers both the academic and amateurism certification. In addition, there is no reduction of the fee if the prospect does not need an academic certification (e.g., has already served an academic year in residence at a collegiate institution).

May I receive a fee waiver?
Yes, you are eligible for a waiver of the initial-eligibility certification fee if you have already received a fee waiver (not a state voucher) for the ACT or SAT. If you have not been granted a fee waiver by ACT or SAT, then you will NOT be eligible for a waiver of the certification fee. If you are seeking a waiver of the certification fee, you should confirm your eligibility with your high school counselor. Your high school counselor MUST submit an electronic fee waiver confirmation before your registration may be processed.

How often can I update my information?
You can update your information as often as you need until you request a final certification of your amateurism status. At that point, you will no longer be able to update your amateurism information.

Can I receive different amateurism certifications for Division I and Division II?
Yes. Division I and II have different rules, so it is possible that your certification status may be different for each division.

Who can help me complete the amateurism registration process?
Anyone can assist you in completing the process. However, when you have completed the registration process, YOU will be the only person allowed to submit the information to the clearinghouse.

Will a paper copy of the amateurism form be available?
No, the registration form will only be available on the NCAA Initial-Eligibility Clearinghouse Web site and must be completed online.

Questions Relating to the Athletics Participation Section of the Amateurism Clearinghouse

What if I enroll in an NCAA Division I or Division II institution and decide to participate in a sport other than one of the three I had listed on the amateurism clearinghouse registration form?
If you decide to participate in a sport other than the three you listed on the registration form, the institution in which you enroll will be responsible for certifying your amateurism status in that sport.

If I have been participating in events related to my sport for a significant period of time, what events do I need to list on the amateurism registration form?
You should include all events in which you participated, beginning with the ninth grade and thereafter.

Am I automatically ineligible if I violated the amateurism rules?
No. The clearinghouse will review your athletics participation history. If there are violations of the NCAA's amateurism rules, the clearinghouse may certify you with conditions, which must be fulfilled before you are eligible for competition. The conditions will be set based on which rule was violated and the severity of the violation. Such conditions may include repayment of money or sitting out of competition for a specified number of games, or both. In some cases, the clearinghouse may determine that the violations are such that permanent ineligibility for competition is the appropriate penalty.

Can I appeal a certification decision regarding my amateur status?
Yes. The NCAA has an appeals process in place if you choose to appeal the certification decision. You will need to work with an NCAA institution since all appeals must be filed by a member institution.

OVERVIEW OF NCAA DIVISIONS I AND II PRE-ENROLLMENT AMATEURISM BYLAWS

	Permissible in Division I? (Student-athletes first enrolling on or after August 1, 2002.)	Permissible in Division II? (Student-athletes first enrolling on or after August 1, 2001.)
Enters into a Contract with a Professional Team	No	Yes
Accepts Prize Money	Yes. If it is an open event, and does not exceed actual and necessary expenses	Yes
Enters Draft	Yes	Yes
Accepts Salary	No	Yes
Receives Expenses from a Professional Team	No	Yes
Competes on a Team with Professionals	No	Yes
Tryouts with a Professional Team Before Initial Collegiate Enrollment	Yes	
May receive actual and necessary expenses for one visit (up to 48 hours) from each professional team. Self-financed tryouts may be for more than 48 hours.	Yes	
Receives Benefits from an Agent	No	No
Enters into Agreement with an Agent (oral or written)	No	No
Delays Full-Time Collegiate Enrollment and Participates in Organized Competition [If you are charged with season(s) of competition under this rule, you will also have to serve an academic year in residence at the NCAA institution.]	**Tennis and Swimming & Diving:** Have one year after high school graduation to enroll full time in a collegiate institution or will lose one season of intercollegiate competition for each calendar year during which you continue to participate in organized competition. **All Other Sports:** Any participation in organized sports competition during each 12-month period after the student's 21st birthday and prior to initial full-time enrollment in a collegiate institution shall count as one year of varsity competition.	**All Sports:** Must enroll at the next opportunity (excluding summer) immediately after the date that your high school class normally graduates (or the international equivalent) or you will use a season of intercollegiate competition for each calendar year or sports season (subsequent to that date) in which you have participated in organized competition.

The chart above summarizes the Divisions I and II pre-enrollment amateurism rules. In order to assist you in understanding the rules, we have included the following definitions:

Definition of a Professional Team.

In Divisions I and II, a team is considered professional if it declares itself to be professional or provides any player more than actual and necessary expenses for participation on the team.

Actual and necessary expenses are limited to the following:

(a) Meals and lodging directly tied to competition and practice held in preparation for competition;

(b) Transportation (i.e., expenses to and from practice and competition, cost of transportation between home and the training/practice site at the beginning and end of the season);

(c) Apparel, equipment and supplies related to participation on the team;

(d) Coaching and instruction, use of facilities and entry fees;

(e) Health insurance, medical treatment and physical therapy; and

(f) Other reasonable expenses (e.g., laundry money).

Definition of Organized Competition.

In Division I, athletics competition is considered organized if any one of the following conditions exists:

(a) Competition is scheduled and publicized in advance;

(b) Official score is kept;

(c) Individual or team standings are maintained;

(d) Official timer or game officials are used;

(e) Admission is charged;

(f) Teams are regularly formed or team rosters are predetermined;

(g) Team uniforms are used;

(h) A team is privately or commercially sponsored; or

(i) The competition is either directly or indirectly sponsored, promoted or administered by an individual, an organization or any other agency.

In Division II, athletics competition is considered organized if any one of the following criteria are met:

(a) Any team or individual competition or training in which payment (including expenses) is provided to any participant;

(b) Any competition as a result of signing a contract for athletics participation;

(c) Any competition as a result of involvement in a professional draft;

(d) Any competition funded by a professional sports organization;

(e) Any competition funded by a representative of an institution's athletics interest that is not an open event; or

(f) Any practice with a professional athletics team (excluding a 48-hour tryout).

What are core courses?
For a definition of core courses, see information below. See your high school's core-course list at www.ncaaclearinghouse.net.

Academic-Eligibility Requirements

Division I

2006 - 2007

If you enroll in a Division I college between 2006 and 2007 and want to participate in athletics or receive an athletics scholarship during your first year, you must:

- Graduate from high school;
- Complete these 14 core courses:
  - 4 years of English
  - 2 years of math (algebra 1 or higher)
  - 2 years of natural or physical science (including one year of lab science if offered by your high school)
  - 1 extra year of English, math or natural or physical science
  - 2 years of social science
  - 3 years of extra core courses (from any category above, or foreign language, nondoctrinal religion or philosophy);
- Earn a minimum required grade-point average in your core courses; and
- Earn a combined SAT or ACT sum score that matches your core-course grade-point average and test score sliding scale on this page (for example, a 2.400 core-course grade-point average needs a 860 SAT).

Note: Computer science courses can be used as core courses only if your high school grants graduation credit in math or natural or physical science for them, and if the courses appear on your high school's core-course list as a math or science courses.

You will be a qualifier if you meet the academic requirements listed above. As a qualifier, you:

- Can practice or compete for your college or university during your first year of college;
- Can receive an athletics scholarship during your first year of college; and
- Can play four seasons in your sport if you maintain your eligibility from year to year.

You will be a nonqualifier if you do not meet the academic requirements listed above. As a nonqualifier, you:

- Cannot practice or compete for your college or university during your first year of college;
- Cannot receive an athletics scholarship during your first year of college, although you may receive need-based financial aid; and
- Can play only three seasons in your sport if you maintain your eligibility from year to year (to earn a fourth season you must complete at least 80 percent of your degree before beginning your fifth year of college).

Remember
Meeting the NCAA academic rules does not guarantee your admissions into a college. You must apply for admission.

Division I

2008 and Later

If you enroll in a Division I college in 2008 or later and want to participate in athletics or receive an athletics scholarship during your first year, you must:

- Graduate from high school;
- Complete these 16 core courses:
  - 4 years of English
  - 3 years of math (algebra 1 or higher)
  - 2 years of natural or physical science (including one year of lab science if offered by your high school)
  - 1 extra year of English, math or natural or physical science
  - 2 years of social science
  - **4** years of extra core courses (from any category above, or foreign language, nondoctrinal religion or philosophy);
- Earn a minimum required grade-point average in your core courses; and
- Earn a combined SAT or ACT sum score that matches your core-course grade-point average and test score sliding scale on page 9 (for example, a 2.400 core-course grade-point average needs a 860 SAT).

Note: Computer science courses can be used as core courses only if your high school grants graduation credit in math or natural or physical science for them, and if the courses appear on your high school's core-course list as a math or science courses.

Division II

2005 and Later

If you enroll in a Division II college in 2005 or later and want to participate in athletics or receive an athletics scholarship during your first year, you must:

- Graduate from high school;
- Complete these 14 core courses:
  - 3 years of English
  - 2 years of math (algebra 1 or higher)
  - 2 years of natural or physical science (including one year of lab science if offered by your high school)
  - 2 extra years of English, math or natural or physical science
  - 2 years of social science
  - 3 years of extra core courses (from any category above, or foreign language, nondoctrinal religion or philosophy);
- Earn a 2.000 grade-point average or better in your core courses; and
- Earn a combined SAT score of 820 or an ACT sum score of 68. There is no sliding scale in Division II.

Note: Computer science courses can be used as core courses only if your high school grants graduation credit in math or natural or physical science for them, and if the courses appear on your high school's core-course list as a math or science courses.

You will be a qualifier if you meet the academic requirements listed above. As a qualifier, you:

- Can practice or compete for your college or university during your first year of college;
- Can receive an athletics scholarship during your first year of college; and
- Can play four seasons in your sport if you maintain your eligibility from year to year.

You will be a partial qualifier if you do not meet all of the academic requirements listed above, but you have graduated from high school **and** meet one of the following:

- The combined SAT score of 820 or ACT sum score of 68; OR
- Completion of the 14 core courses with a 2.000 core-course grade-point average.

As a partial qualifier, you:

- Can practice with your team at its home facility during your first year of college;
- Can receive an athletics scholarship during your first year of college;
- Cannot compete during your first year of college; and
- Can play four seasons in your sport if you maintain your eligibility from year to year.

You will be a nonqualifier if you did not graduate from high school, or, if you graduated and are missing both the core-course grade-point average or minimum number of core courses and the required ACT or SAT scores. As a nonqualifier, you:

- Cannot practice or compete for your college or university during your first year of college;
- Cannot receive an athletics scholarship during your first year of college, although you may receive need-based financial aid; and
- Can play four seasons in your sport if you maintain your eligibility from year to year.

Division III

Division III does not use the NCAA Initial-Eligibility Clearinghouse. Contact your Division III college regarding its policies on financial aid, practice and competition.

Core Courses, Grade-Point Average, Tests & Special Conditions

The amateurism and academic rules on pages 5 through 11 will be used to determine whether you may participate in sports during your first year in college. These rules are not a guide for your admission to college. Each college has its own admission requirements. **Remember, meeting the NCAA academic rules does not guarantee your admission into a college. You must still apply for admission.**

Core Courses

A core course must:

- Be an academic course in one or a combination of these areas: English, mathematics, natural/physical science, social science, foreign language, nondoctrinal religion or philosophy;
- Be four-year college preparatory; and
- Be at or above your high school's regular academic level (no remedial, special education or compensatory courses).

Not all classes you take to meet high school graduation requirements may be used as core courses.

Check your high school's list of approved core courses at the clearinghouse Web site at www.ncaaclearinghouse.net or ask your high school counselor.

Grade-Point Average

How Your Core-Course Grade-Point Average is Calculated
The clearinghouse will calculate the grade-point average of your core courses on a 4.000 scale. The best grades from your NCAA core courses will be used. Grades from additional core courses you took will be used only if they improve your grade-point average.

The clearinghouse will assign the following values to each letter grade:

A – 4 points	**C – 2 points**
B – 3 points	**D – 1 point**

Special High School Grades and Grade-Point Average
If your high school uses numeric grades (like 92 or 93), those grades will be changed to your high school's letter grades (such as A or B). See your high school's grading scale by pulling up your school's list of approved core courses at www.ncaaclearinghouse.net.

If your high school uses plus and minus grades (such as A+ or B–), the plus or minus will not be used to calculate your core-course grade-point average.

If your high school normally "weights" honors or advanced courses, these weighted courses may improve your core-course grade-point average. Your high school must notify the clearinghouse of such weighting. To see if your high school has a weighted scale that is being used for calculating your core-course grade-point average, visit www.ncaaclearinghouse.net for an explanation of how these grade weights are handled.

ACT and SAT Tests

Test-Score Requirements

You must achieve the required score on an SAT or ACT test before your full-time college enrollment. You must do this whether you are a citizen of the United States or of a foreign country. You must take the national test given on one or more of the dates shown below.

National Testing Dates

SAT	ACT
October 14, 2006	September 16, 2006
November 4, 2006	October 28, 2006
December 2, 2006	December 9, 2006
January 27, 2007	February 10, 2007
March 10, 2007	April 14, 2007
May 5, 2007	June 9, 2007
June 2, 2007	

Taking Tests More than Once

You may take the SAT or the ACT more than one time. If you take either test more than once, you may use your best subscore from different tests to meet the minimum test-score requirements. Here is an example:

	Math	Verbal/Critical Reading	Total Score
SAT (10/06)	350	**470**	820
SAT (12/06)	**420**	440	860
Scores used	**420**	**470**	**890**

Your test score will continue to be calculated using the math and verbal/critical reading subsections of the SAT and the math, science, English and reading subsections of the ACT. **The writing component of the ACT or SAT will not be used to determine your qualifier status.**

IMPORTANT CHANGE:
All SAT and ACT test scores **must** be reported to the clearinghouse **directly** from the testing agency. Test scores will **not** be accepted if reported on a high school transcript.
When registering for the SAT or ACT, input the clearinghouse code of 9999 to make sure the score is reported directly to the clearinghouse.

Students With Disabilities: Special Conditions

A student with a disability must meet the same requirements as all other students, but is provided certain accommodations to help meet these requirements. **If you are a student with a diagnosed disability, you will need to let the NCAA know about your disability only if you plan on using core courses after your eighth semester of high school and you plan on attending a Division I college.**

To Document Your Disability

Send the following to the NCAA at the address found on page 2. Do not send this information to the clearinghouse:

- Copy of your professional diagnosis; and
- Copy of your IEP, ITP, 504 plan or statement of accommodations.

(One of the above documents should be dated within the last three years.)

Note: Please include home address, telephone number, student's social security number, and the year of the student's high school graduation.

Core Courses

If you are a high school student with a disability and have received help (for example, taken special classes or received extra time for tests) because of that disability, you are eligible for the following:

- You may use a course that your high school has designed for students with disabilities, if it appears on your high school's list of approved core courses.
- You may take core courses any time before your enrollment as a full-time student in college, even during the summer after your last high school year. Remember, for Division I, you must document your disability with the NCAA to receive this accommodation.

Nonstandard Tests

If you have a disability, you may also take a nonstandard test to satisfy test-score requirements. Follow these guidelines:

- Register for nonstandard testing as described by ACT or SAT, submitting a properly documented and confirmed diagnosis.
- Follow procedures governed by ACT or SAT. (The test may not be administered by a member of your high school athletics department or any NCAA school's athletics department.)
- If you take a nonstandard ACT or SAT, you may take the test on a date other than a national testing date, but you still must achieve the required test score.
- Your high school counselor can help you register to take a nonstandard test.

The GED

The General Education Development (GED) test may, under certain conditions, satisfy the graduation requirement, but it will not satisfy core-course grade-point average, or test-score requirements. Contact the NCAA for information about GED submission.

Home School

Home-schooled students who plan to enroll in a Division I or Division II college must register with the clearinghouse and must meet the same requirements as all other students.

Important
You pick your own PIN. Write your PIN down and keep it handy. You will need it when you are contacting the clearinghouse.

To register, go to www.ncaaclearinghouse.net. Click on **Prospective Student-Athletes**, then **Domestic Student Release Form**, and follow the prompts.

Eligibility Waivers

If you don't meet the academic requirements to be a qualifier, a waiver of the requirements may be filed on your behalf by an NCAA school. Contact the NCAA or the college you will attend for information about the waiver process.

Remember:
The clearinghouse does not use plus or minus grades when figuring out your core-course grade-point average. For example, grades of B+, B and B- will each be worth 3 quality points.

More Questions about Academic Requirements

Here are some questions you may still have after reviewing the previous sections.

Q: How do I know which courses are core courses?

A: You may view your high school's list of NCAA-approved core courses at www.ncaaclearinghouse.net. (On the **General Information** page of that Web site, select **List of Approved Core Courses**). Or, you can ask your high school counselor for the list.

Q: May courses taken in eighth grade satisfy core-course requirements?

A: No. Courses taken in eighth grade will not satisfy core-course requirements.

Q: What is the lowest grade that will be used for a course to count as a core course?

A: The lowest grade is D.

Q: How is my core-course GPA calculated?

A: Your core-course GPA is the average of your best grades achieved for all required core courses. If you have taken extra core courses, those courses will be used in your GPA, only if they improve your GPA.

Q: Will courses taken after my senior year meet core-course requirements?

A: **For Division I, no.** Only courses completed in grades nine through 12 will qualify as core courses for Division I. Courses taken in summer school after your fourth (senior) year cannot be used. If you are missing one or more core courses after high school graduation, you must return to your high school during its regular academic year to take any missing courses and you can't enroll in a Division I college until the fall of the following year. For Division I, you may also retake any core course during that additional year at the same high school and substitute the new grade earned in that repeated year to recalculate your grade-point average.
For Division II, yes. All core courses completed before your full-time enrollment at a Division II college may be used by the clearinghouse.
For Division I students with diagnosed disabilities, yes. If you have a properly diagnosed and documented disability, as described on page 13, you may use one or more core courses completed after high school but before full-time enrollment in college. See page 13 for more information.

Q: May independent-study, Internet and correspondence courses count as core courses?

A: Yes, if the following four conditions are met:
- The course meets core-course requirements (see pages 9 and 10);
- You and the instructor have access to each other during the course so that the instructor can teach, evaluate and provide assistance to you;
- Appropriate academic authorities evaluate your work according to the high school's academic policies; and
- The course is acceptable for any student to take and is placed on your high school transcript.

Q: Do pass-fail grades count?

A: Yes, these grades may satisfy your core-course requirements. The clearinghouse will assign your high school's lowest passing grade for a pass-fail class.

Q: May college courses count as core courses?

A: Yes, a college course may be used as a core course if it is accepted by your high school and if the course:
- Would be accepted for any other student;
- Is on your high school transcript (Division I only) Any college transcripts should also be sent to the clearinghouse, and
- Meets all other requirements for a core course.

Q: How are courses taken over two years counted?

A: A one-year course that is spread over a longer period of time is considered one course and will receive a maximum of one core-course credit. (Example: Algebra 1, spread over two years, would receive one unit of credit.)

Q: How does the NCAA treat courses similar in content?

A: Some approved core courses might be considered duplicates. That is, the content of one course is the same as that of another, even though the classes might have different titles. If you have taken two classes considered to be duplicates, you will receive only one core-course credit (typically for the course with the higher grade). Please ask your high school counselor if you have questions about duplicate courses.

Q: Do courses for students with disabilities count as core courses?

A: Yes. If you have a diagnosed disability, you may use courses designed for students with disabilities to meet NCAA core-course requirements. These courses must appear on the high school's list of approved core courses for a student to receive NCAA credit for the course. These courses must be similar in content and scope as a regular core course offered in that academic area. Check with your high school counselor.

Q: Will credit-by-exam courses meet core-course requirements?

A: No. Courses completed through credit-by-exam may not be used.

Q: Are vocational courses acceptable?

A: No. Traditional vocational courses (e.g., typing, auto mechanics, driver's education and health) are not acceptable.

Q: May my study in a foreign country help me meet core-course requirements?

A: If you attended a secondary school outside the United States for all or part of grades nine through 12, different evaluation procedures will be applied to your international education documents. You must register with the clearinghouse if you completed course work outside the United States and you must submit original-language documents with certified translations for clearinghouse evaluation.

Division I Worksheet

This worksheet is provided to assist you in monitoring your progress in meeting NCAA initial-eligibility standards. The clearinghouse will determine your official status after you graduate. Remember to check your high school's list of approved courses for the classes you have taken. Use the folowing scale:

A = 4 quality points; B = 3 quality points; C = 2 quality points; D = 1 quality points

English (4 years required)

Course Title	Credit	X	Grade	=	Quality Points (multiply credit by grade)
Example: English 9	.5		A		(.5 x 4) = 2
Total English Units					Total Quality Points

Mathematics (2 years required 2006–2007; 3 years required 2008 and after)

Course Title	Credit	X	Grade	=	Quality Points (multiply credit by grade)
Example: Algebra 1	1.0		B		(1.0 x 3) = 3
Total Mathematics Units					Total Quality Points

Natural/physical science (2 years required)

Course Title	Credit	X	Grade	=	Quality Points (multiply credit by grade)
Total Natural/Physical Science Units					Total Quality Points

Additional year in English, mathematics or natural/physical science (1 year required)

Course Title	Credit	X	Grade	=	Quality Points (multiply credit by grade)
Total Additional Units					Total Quality Points

Social science (2 years required)

Course Title	Credit	X	Grade	=	Quality Points (multiply credit by grade)
Total Social Science Units					Total Quality Points

Additional academic courses (3 years required 2006–2007; 4 years required 2008 and after)

Course Title	Credit	X	Grade	=	Quality Points (multiply credit by grade)
Total Additional Academic Units					Total Quality Points

Core Course GPA (14 credits required 2006–2007; 16 required 2008 and after)

Total Quality Points	Total Number of Credits	Core-Course GPA (Total Quality Points/Total Credits)

Division II Worksheet

This worksheet is provided to assist you in monitoring your progress in meeting NCAA initial-eligibility standards. The clearinghouse will determine your official status after you graduate. Remember to check your high school's list of approved courses for the classes you have taken. Use the folowing scale:

A = 4 quality points; B = 3 quality points; C = 2 quality points; D = 1 quality points

English (3 years required)

Course Title	Credit	X	Grade	=	Quality Points (multiply credit by grade)
Example: English 9	.5		A		(.5 x 4) = 2
Total English Units					Total Quality Points

Mathematics (2 years required)

Course Title	Credit	X	Grade	=	Quality Points (multiply credit by grade)
Example: Algebra 1	1.0		B		(1.0 x 3) = 3
Total Mathematics Units					Total Quality Points

Natural/physical science (2 years required)

Course Title	Credit	X	Grade	=	Quality Points (multiply credit by grade)
Total Natural/Physical Science Units					Total Quality Points

Additional year in English, mathematics or natural/physical science (2 years required)

Course Title	Credit	X	Grade	=	Quality Points (multiply credit by grade)
Total Additional Units					Total Quality Points

Social science (2 years required)

Course Title	Credit	X	Grade	=	Quality Points (multiply credit by grade)
Total Social Science Units					Total Quality Points

Additional academic courses (3 years required)

Course Title	Credit	X	Grade	=	Quality Points (multiply credit by grade)
Total Additional Academic Units					Total Quality Points

Core Course GPA (14 credits required)

Total Quality Points	Total Number of Credits	Core-Course GPA (Total Quality Points/Total Credits)

NCAA Initial-Eligibility Clearinghouse

The clearinghouse evaluates your academic record to determine if you are eligible to participate at a Division I or II college as a freshman student-athlete. (The clearinghouse is not the NCAA, but an organization that performs academic evaluations for the NCAA.)

Clearinghouse Contact Information

NCAA Initial-Eligibility Clearinghouse:
P.O. Box 4043
301 ACT Drive
Iowa City, IA 52243-4043

Package or overnight delivery:
301 ACT Drive
Iowa City, IA 52243-4043

Web address:
www.ncaaclearinghouse.net

Clearinghouse customer service
Representatives are available from 8 a.m. to 5 p.m., Central time, Monday through Friday.

U.S. callers (toll-free):	877/262-1492
International callers:	319/337-1492
Fax:	319/337-1556

Clearinghouse Registration

Complete the Student Release Form

To register with the clearinghouse, you must complete the Student Release Form (SRF), after your junior year, online, and send the clearinghouse the registration fee ($50 for domestic and $75 for international students). This SRF does two things:

- It authorizes each high school you have attended to send the clearinghouse your transcript, test scores, proof of graduation and other necessary academic information.
- It authorizes the clearinghouse to send your academic information to all colleges that request your eligibility status.

Online registration: The only method is to register online. Go online to www.ncaaclearinghouse.net. Select **Prospective Student-Athletes** and click on **Domestic Student Release Form** or **Foreign Student Release Form**. Complete the SRF form online, and include your credit or debit card information to pay the fee. Then follow instructions to complete the transaction.

Print a copy of your completed registration form and both Copy 1 and Copy 2 of the transcript release form. Sign the transcript release forms, and give both to your high school counselor.

When completing the SRF sections, please follow the step-by-step instructions outlined below.

Section I: Student Information
Enter all information accurately, including your Social Security number (SSN) and date of birth. This information must match exactly other data the clearinghouse receives for you (such as high school transcripts and requests from colleges seeking your eligibility status). Be sure you provide an e-mail address that will be active even after you complete high school.

Section II: High School You Now Attend
Enter the name, address and code number of the high school you now attend, along with your expected date of high school graduation. Get your high school code from your counselor or use the code look-up at www.ncaaclearinghouse.net. Click on **Prospective Student-Athletes**, then **List of Approved Core Courses**.

Section III: Schools You Previously Attended
If you have attended more than one school (including summer school) during grades nine, 10, 11 or 12, complete Section III. List all schools you previously attended, starting with the most recent. Make sure to include all schools, whether or not you received grades or credits. If you attended ninth grade in a junior high school located in the same school system in which you later attended high school, do not list the ninth-grade school. If you need to list more schools than space allows, use a separate sheet of paper.

Special instructions for Web users: If you need to enter more than six high schools, contact the clearinghouse at 877/262-1492. Or, once you've registered with the clearinghouse, select **Prospective Student-Athletes**, then **Registered Student Login**, then add information for the additional schools on your record.

Section IV: Personal Identification Number (PIN)
Create a personal identification number (PIN) of four digits (numbers between 0 and 9) that you can easily remember. Do not choose a PIN that might be easily guessed (like your birthday or street address). Record your PIN in the space provided below and keep it in a safe place.

PIN

Check your file status. Once you have submitted your SRF and PIN, you may check your status in one of two ways:

- Visit www.ncaaclearinghouse.net. On the home page, click on **Prospective Student-Athletes**, then **Registered Student Login** (enter your SSN and PIN).
- Call the clearinghouse customer service line at 877/262-1492.

If you have forgotten your PIN, fax or mail your new PIN choice to the clearinghouse, along with your name, address, SSN, date of birth and signature.

Section V: Clearinghouse Communication Method
The clearinghouse may communicate with you by e-mail or regular mail. This will include most correspondence and certification reports. **E-mail correspondence will require that you have submitted a valid e-mail address in Section I of your SRF.** You will need to indicate the option you prefer. We encourage you to select the e-mail option. E-mail will enable you to receive correspondence from the clearinghouse up to two weeks earlier than regular mail.

You may change your communication option or update your e-mail address at www.ncaaclearinghouse.net, or by writing or faxing the clearinghouse.

Section VI: Pay Your Fee (or submit fee waiver)
Your form will be eligible for processing only with payment of an application fee of $50 for domestic students or $75 for international students (or submission of a fee waiver if you have been granted a waiver). You must pay by debit or credit card.

You are eligible for a waiver of the registration fee only if you have already received a waiver of the ACT or SAT fee. Your SRF fee waiver section must then be completed by an authorized high school official and include the school seal. Your waiver may also be submitted online by an authorized high school official. If you have not yet been granted a fee waiver by ACT or SAT, you are not yet eligible for a waiver of the registration fee.

Section VII: Authorization Signature
Carefully examine the entire SRF to make sure you have completed it correctly, included your fee payment authorization and signed it. If you are younger than 18 years old, your parent or legal guardian also must sign.

You will be asked to verify your signature by checking a box to certify your identity. A similar check box and name field is also included for your parent or guardian, who must provide a signature if you are younger than 18.

Section VIII: SRF Completion by Your High School
Your high school will complete your registration by sending Copy 1, along with your high school transcript, to the clearinghouse. After graduation, but before your high school closes for the summer, your high school must send Copy 2 to the clearinghouse, along with a copy of your final transcript confirming your high school graduation.
Online registrants also will answer several questions about their amateur status and their past experiences in organized competition. It is important to answer these questions honestly to ensure that your amateur status can be determined.

Keep Track Of Your Courses, Units & Credits
Elsewhere in this guide are two tables to help you keep track of your completed core courses, units, grades and credits you received for them, plus your ongoing grade-point average. Generally, you will receive the same credit at the clearinghouse as you received from your high school. Examples are provided in the English and math sections of both worksheets:

1 trimester unit = 0.33 units
1 semester unit = 0.50 units
1 year = 1.0 unit

Keep Grade-Point Totals for Each Course
Determine your points earned for each course. Multiply the points for the grade by the amount of credit earned. Use the following scale unless your high school has a different scale on file with the clearinghouse:

A – 4 quality points
B – 3 quality points
C – 2 quality points
D – 1 quality point

Remember: The clearinghouse does not use plus or minus grades when figuring your core-course grade-point average. For example, grades of B+, B and B- will each be worth 3 quality points.

Examples of total quality point calculation:

- An A grade (4 points) for a trimester course (0.33 units):
  4 points x 0.33 units = 1.32 total quality points
- An A grade (4 points) for a semester course (0.50 units):
  4 points x 0.50 units = 2.00 total quality points
- An A grade (4 points) for a full-year course (1.00 units):
  4 points x 1.00 units = 4.00 quality points

Calculate Your Overall Grade-Point Average
To calculate your estimated core-course grade-point average, divide the total number of points for all your core courses by the total number of core-course units you have completed.

Note: Your calculation helps you keep track of your grade-point average. The clearinghouse will calculate your official core-course grade-point average once it has received your final transcript.

Example of core-course grade-point average calculation:
- 42 quality points and 14 core-course units
  42/14=3.000 grade-point average

Compare Your Core-Course Grade-Point Average to Division I or II College Requirements
You can check to see if you will meet the academic requirements listed on pages 9 through 11 of this guide by comparing these requirements to the core courses you have completed or are currently taking, and the core-course grade-point average you have calculated based on those core courses.
- If you lack core-course units, which is likely if you have not yet completed high school, make sure you enroll in and complete the courses you still need.
- If you complete more core-course units than you need, the clearinghouse will select the highest grades that meet initial-eligibility requirements to calculate your core-course grade-point average. Please note that it is still necessary to complete the required number of core-course units in each area (for example, two units of social science).
- Contact the clearinghouse staff toll-free at 877/262-1492 if you need help.
- Please talk to your parents or guardians and high school counselor if you have questions.

Check Your Status with the Clearinghouse
After you have registered with the clearinghouse, paid the fee and sent your transcript and SAT or ACT score(s), you may check your status.
- Online by following these simple steps:
  1. Go to www.ncaaclearinghouse.net;
  2. Click on **Prospective Student-Athlete**;
  3. Click on **Registered Student Login**; and
  4. Input SSN and PIN.
- Call customer service at 877/262-1492 from 8 a.m. to 5 p.m. Central time Monday through Friday.

Clearinghouse Questions
Here are some questions you may still have after reviewing the previous section.

Q: Do I have to register with the clearinghouse?
A: Yes. If you want to participate in Division I or II athletics as a freshman, you must register with the clearinghouse. See the first section of this guide for amateurism and academic-eligibility standards that apply to you.

If you have questions:
- Contact the clearinghouse staff toll-free at 877/262-1492; or
- Check the clearinghouse Web site: www.ncaaclearinghouse.net.

Q: Is clearinghouse certification the same as college admission?
A: No. Initial-eligibility certification from the clearinghouse does not guarantee your admission to any Division I or II college. You must apply for college admission separately. The clearinghouse only determines whether you meet NCAA requirements as a freshman student-athlete in a Division I or II college to be able to compete, practice and receive an athletics scholarship.

Q: May I send my academic information directly to the clearinghouse?
A: No. Transcripts must come to the clearinghouse by mail directly from the high school — not from you. Give Copies 1 and 2 of the transcript release form to the counselors at the high school you have attended.
Note: The clearinghouse will not accept faxed transcripts.

Q: Who may see my academic information?
A: The clearinghouse will provide eligibility information only to colleges that request your academic information. If no NCAA college requests your eligibility status, the clearinghouse may not process an eligibility-status certification.

Q: When is the best time for me to register with the clearinghouse?
A: Register after your junior year in high school. If you do not submit all required documents, your file will be incomplete and will be discarded after three years. After that time, you will need to re-register and pay your fee again.

Q: Is there a registration deadline?
A: No. However, you must be certified as a qualifier before you can receive an athletics scholarship or practice or compete at a Division I or II college during your first year of enrollment.

Q: What if I have attended more than one high school?
A: If you have attended multiple high schools since ninth grade, the clearinghouse must receive an official transcript for each school. Transcripts can come directly from each school or from the high school from which you are graduating. Check with your high school counselor.

Q: How may I arrange for the testing agency to send my scores directly to the clearinghouse?
A: When you register to take the ACT or the SAT, mark code "9999" so that the testing agency will send your scores to the clearinghouse. Test scores must be reported to the clearinghouse directly from SAT or ACT. The clearinghouse will not accept test scores reported on high school transcripts.

Questions to Ask as You Consider Colleges

You may want to ask your prospective college coaches the following questions as you consider colleges.

Athletics

1. **What positions will I play on your team?** It is not always obvious. Most coaches want to be flexible, so you might not receive a definite answer.
2. **What other players may be competing at the same position?** The response could give you an idea of when you can expect to be a starter.
3. **Will I be redshirted my first year**? The school's policy on redshirting may impact you both athletically and academically.
4. **What expectations do you have for training and conditioning?** This will reveal the institution's commitment to a training and conditioning program.
5. **How would you best describe your coaching style?** Every coach has a particular style that involves different motivational techniques and discipline. You need to know if a coach's teaching style matches your learning style.
6. **When does the head coach's contract end? How long does the coach intend to stay?** The answer could be helpful. Do not make any assumptions about how long a coach will be at a school. If the coach leaves, does this change your mind about the school/program?
7. **What are preferred, invited and uninvited walk-on situations? How many do you expect to compete? How many earn a scholarship?** Situations vary from school to school.
8. **Who else are you recruiting for my position?** Coaches may consider other student-athletes for every position.
9. **Is medical insurance required for my participation? Is it provided by the college?** You may be required to provide proof of insurance.
10. **If I am seriously injured while competing, who is responsible for my medical expenses?** Different colleges have different policies.
11. **What happens if I want to transfer to another school?** You may not transfer without the permission of your current school's athletics administration. Ask how often coaches grant this privilege and ask for an example of a situation in which permission was not granted.
12. **What other factors should I consider when choosing a college?** Be realistic about your athletics ability and the type of athletics experience you would enjoy. Some student-athletes want to be part of a particular athletics program, even if that means little or no playing time. Other considerations include coaching staff and style. Of course, the ideal is to choose a college or university that will provide you with both the educational and athletics opportunities you want.

Academics

1. **How good is the department in my major? How many students are in the department? What credentials do faculty members hold? What are graduates of the program doing after school?**
2. **What percentage of players on scholarship graduate?** The response will suggest the school's commitment to academics. You might want to ask two follow-up questions:

   1) What percentage of incoming students eventually graduate?

   2) What is the current team's grade-point average?
3. **What academic support programs are available to student-athletes?** Look for a college that will help you become a better student.
4. **If I have a diagnosed and documented disability, what kind of academic services are available?** Special academic services may help you achieve your academic goals.
5. **How many credit hours should I take in season and out of season?** It is important to determine how many credit hours are required for your degree and what pace you will follow to obtain that degree.
6. **Are there restrictions in scheduling classes around practice?** NCAA rules prevent you from missing class for practice.
7. **Is summer school available? If I need to take summer school, will it be paid for by the college?** You may need to take summer school to meet academic and/or graduation requirements.

College Life

1. **What is a typical day for a student-athlete?** The answer will give you a good idea of how much time is spent in class, practice, study and travel. It also will give you a good indication of what coaches expect.
2. **What are the residence halls like?** The response should give you a hint of how comfortable you would be in your room, in study areas, in community bathrooms and at the laundry facilities. Also ask about the number of students in a room, co-ed dorms and the rules governing life in the residence halls.
3. **Must student-athletes live on campus?** If "yes," ask about exceptions.

Financial Aid

1. **How much financial aid is available for both the academic year and summer school? What does your scholarship cover?**
2. **How long does my scholarship last?** Most people think a "full ride" is good for four years, but athletics financial aid is available on a one-year, renewable basis.
3. **What are my opportunities for employment while I am a student?** Find out if you can be employed in season, out of season or during vacation periods.
4. **Exactly how much will the athletics scholarship be? What will and will not be covered?** It is important to understand what college expenses your family is responsible for so you can arrange to pay those. Educational expenses can be paid with student loans and government grants, but it takes time to apply for these. Find out early so you can get something lined up.
5. **Am I eligible for additional financial aid? Are there any restrictions?** Sometimes a student-athlete cannot accept a certain type of scholarship because of NCAA limitations. If you will be receiving other scholarships, let the coach and financial aid officer know so they can determine if you may accept additional dollars.
6. **Who is financially responsible if I am injured while competing**? You need to understand your financial obligations if you suffer an injury while participating in athletics.
7. **Under what circumstances would my scholarship be reduced or canceled?** Coaches should be able to give you some idea of how players are evaluated from year to year and how these decisions are made. The institution may have a policy governing renewal of athletics aid. Ask if such a policy exists and read it.
8. **Are there academic criteria tied to maintaining the scholarship?** Some institutions add academic requirements to scholarships (e.g., minimum grade-point average).
9. **What scholarship money is available after eligibility is exhausted to help me complete my degree?** It may take longer than four years to complete a college degree program. Some colleges assist student-athletes financially as they complete their degrees. Ask how such aid is awarded. You may have to work with the team or in the athletics department to qualify for this aid.
10. **What scholarship money is available if I suffer an athletics career-ending injury?** Not every institution continues to provide an athletics scholarship to a student-athlete who can no longer compete because of a career-ending injury.
11. **Will my scholarship be maintained if there is a change in coaches?** A coach may not be able to answer this, but the athletics director may.

Information for Parents and Guardians

If you are the parent or legal guardian of a potential student-athlete, please pay special attention to the amateurism and academic eligibility and clearinghouse sections.

Amateurism and Academic Eligibility

If your child plans to compete, practice or receive an athletics scholarship at a Division I or II college, he or she must meet the eligibility requirements on pages 5 - 11 of this guide.

Clearinghouse Registration: Transcript and Test-Score Submissions

It is best for your son or daughter to register with the clearinghouse after completion of his or her junior year. Once registered, your son or daughter must ask the high school counselor or registrar to send his or her academic transcripts to the clearinghouse. ACT or SAT test score(s) also must be submitted to the clearinghouse. Your son or daughter must list the clearinghouse as a separate recipient of his or her ACT or SAT scores when he or she takes the test. The test scores must come directly from SAT or ACT. The clearinghouse will not accept test scores reported on the high school transcript.

The clearinghouse will typically review your son's or daughter's high school record and send a preliminary report to him or her, with notification of any missing requirements. A final report may be issued once your son's or daughter's high school submits a final transcript showing high school graduation. Please call the clearinghouse at 877/262-1492 if you have any questions.

How to Monitor Your Son's or Daughter's Eligibility

You may check the clearinghouse Web site at www.ncaaclearinghouse.net to make sure your son or daughter is taking approved courses. A list of core courses should have been submitted to the clearinghouse by your son's or daughter's high school. Check your son's or daughter's schedule before each year in high school to make certain that he or she is taking the required courses.

NCAA colleges may obtain information from the clearinghouse about your son's or daughter's status and progress only if his or her information is specifically requested by that college.

Financial Aid

If your son or daughter is academically eligible to participate in intercollegiate athletics and is accepted as a full-time student at a Division I or II school, he or she may receive athletics-based financial aid from the school. Division I or II financial aid may include tuition and fees, room and board, and books.

Division III institutions do not award financial aid based on athletics ability. A Division III college may award need-based or academically related financial aid.

A nonqualifier may receive only need-based financial aid (aid unrelated to athletics). A nonqualifier also may receive nonathletics aid from private sources or government programs (such as Pell grants). The college financial aid office can provide further information.

It is important to understand several points about athletics scholarships from Divisions I and II schools:

- All athletics scholarships awarded by NCAA institutions are limited to one year and are renewable annually. **There is no such award as a four-year athletics scholarship.**
- Athletics scholarships may be renewed annually for a maximum of five years within a six-year period of continuous college attendance. **Athletics aid may be canceled or reduced at the end of each year.**
- Athletics scholarships are awarded in a variety of amounts, ranging from full scholarships (including tuition, fees, room and board, and books) to very small scholarships (e.g., books only).
- The total amount of financial aid a student-athlete may receive and the total amount of athletics aid a team may receive can be limited. These limits can affect whether a student-athlete may accept additional financial aid from other sources. Ask financial aid officials at the college or university about any other financial aid your son or daughter might be eligible to receive, and how this aid impacts his or her athletics aid limit. **You must inform the college financial aid office about scholarships received from all sources, such as local civic or booster clubs.**

An athletics scholarship is a tremendous benefit to most families, but you should also have a plan to pay for college costs that are not covered by a scholarship (such as travel between home and school). You should also consider how you will finance your son's or daughter's education if the athletics scholarship is reduced or canceled.

National Letter of Intent

The National Letter of Intent (NLI) is a voluntary program administered by the Collegiate Commissioners Association, not by the NCAA. By signing an NLI, your son or daughter agrees to attend the institution for one academic year. In exchange, that institution must provide athletics financial aid for one academic year.

Restrictions are contained in the NLI itself. Read them carefully. These restrictions may affect your son's or daughter's eligibility.

If you have questions about the National Letter of Intent, visit the NLI Web site at www.national-letter.org or call 205/458-3013.

Agents

During high school, your son or daughter might be contacted by an agent who is interested in representing your son or daughter in contract negotiations or for commercial endorsements. Some agents may not identify themselves as agents, but may simply say they are interested in your son's or daughter's general welfare and athletics career. They may offer gifts or other benefits to you and your family.

NCAA rules do not prevent meetings or discussions with an agent. However, your son or daughter will jeopardize his or her eligibility in a sport if he or she agrees, verbally or in writing, to be represented by an agent while attending high school or college, regardless of whether the agreement becomes effective immediately or after his or her last season of college eligibility.

Your son or daughter will also endanger his or her college athletics eligibility if he or she, or your family, accepts benefits or gifts from an agent. If an individual contacts your son or daughter about marketing his or her athletics ability, be careful. If you have concerns, contact your high school coach, director of athletics or the NCAA.

Recruiting

See page 28 for a summary of recruiting rules and terms.

Scouting/Recruiting Services

During high school, your family might be contacted by a scouting/recruiting service. The NCAA does not sanction or endorse any of these services. Remember, a scouting/recruiting service cannot base its fee on the amount of a student's college scholarship. For example, it is impermissible for a recruiting/scouting service to offer a money-back guarantee. If you have any questions, please call the NCAA.

All-Star Contests—Basketball and Football

After your son or daughter completes high school eligibility, but before graduating, he or she may participate in two high school all-star football or basketball contests in each sport. If you have any questions, please call the NCAA.

Transfer Students

If your son or daughter transfers from a two-year or four-year college to an NCAA school, he or she must meet certain requirements before being eligible for practice, competition or financial aid at that college. Order the NCAA Transfer Guide by calling 888/388-9748 or download it from the NCAA Web site at www.NCAA.org. Call the NCAA if you have questions about transfer requirements.

Home School

Home-schooled students who plan to enroll in a Division I or Division II college must register with the clearinghouse, and must meet the same requirements as all other students.

After registering, the home-schooled student must send the following information to the clearinghouse:

- Standardized test score(s) must be on an official transcript from a traditional high school OR be sent directly from the testing agency;
- Transcript listing credits earned and grades (home-school transcript and any other official transcript from other high schools, community colleges, etc.);
- Proof of high school graduation;
- Evidence that home schooling was conducted in accordance with state law; and
- List of texts used throughout home schooling (including text titles, publisher and in which courses the text was used).

Details for High School Counselors and Athletics Administrators

Initial Eligibility

Why an Initial-Eligibility Clearinghouse?

NCAA colleges and institutions agree that it is important for all high school students to meet minimum academic standards to practice or compete in college athletics. The clearinghouse evaluates student courses, grades and test scores, to determine whether students meet NCAA minimum academic requirements. The NCAA membership is committed to academic success and graduation of its student-athletes.

NCAA Initial Eligibility and College Admission are Both Needed

Admission to an NCAA college or university is not the same as NCAA initial eligibility. Each institution decides which students to admit, based on its admissions criteria. Keep in mind that if a student-athlete meets NCAA initial-eligibility standards, that student still may not be admitted to the institution. Likewise, a student-athlete who gains admission to a college or university may not meet NCAA initial-eligibility standards.

Help Students Select Courses

Grades Eight–12

If students take a rigorous college-preparatory curriculum, they are more likely to be successful. Help your students select courses that:

- Meet high school graduation requirements;
- Adequately prepare them for rigorous college work; and
- Meet NCAA initial-eligibility requirements.

Grade 11

- Encourage students to take the ACT or SAT or both.
- When registering for the test, students mustshould select the clearinghouse (code 9999) as a score recipient.
- After completing grade 11, students who plan to participate in college sports at a Division I or II college should register with the clearinghouse. The clearinghouse registration form is available online at www.ncaaclearinghouse.net. **The student should not register before the end of the junior year,** because the clearinghouse cannot process a student's certification until it has received a transcript that shows at least six semesters.
- After the student registers, send the student's transcript to the clearinghouse. The transcript may be sent by regular mail or overnight delivery. **The clearinghouse will not accept faxed transcripts.**

Grade 12

- After graduation, review the student's transcript carefully. Make sure the transcript is accurate before you mail it. Once the clearinghouse receives a final transcript, it will not use an amended final transcript. Remember, faxed transcripts are not acceptable.
- You may check online the list of your graduating high school students who have registered with the clearinghouse, at www.ncaaclearinghouse.net. On the home page, click on **High School Administration**, then on **High School Administrator Login**. After logging in, click on **Graduation List Reports**.

Your High School's List of NCAA-Approved Core Courses

What is the list?

Each high school has its own list of NCAA-approved core courses. For the clearinghouse to use a course in a student's evaluation, the course on the transcript must be on your high school's list.

Where can I find my high school's list?

- Go to www.ncaaclearinghouse.net.
- Select **High School Administration**.
- Click on **List of Approved Core Courses**.
- Follow the prompts.

How can I update my high school's list?

- Go to www.ncaaclearinghouse.net.
- Select **High School Administration**.
- Click on **High School Administrator Login**.
- You will be required to input your high school six-digit code and your high school PIN. If your high school did not select a PIN, or you don't remember your high school PIN, see the login page for directions on how to obtain a PIN.
- After logging in, click on **Submit Core-Course Modifications**. From there, follow the prompts.

Why is this important?

- It is vital that your high school's list of approved core courses is kept up to date.
- This will ensure that your students are given appropriate credit by the clearinghouse for the courses they have taken.
- If you have not reviewed and updated your list in the past year, the eligibility of your students may be affected.
- You must review your list at least once per year.

Core-Course Requirements

Core Courses

A core course is a recognized college-preparatory course taught by a qualified instructor. The course must fulfill a graduation requirement in the appropriate academic area at your high school. Remedial or basic-level courses are not core courses. Your high school's list of approved core courses, once submitted to the clearinghouse, will be available for anyone who wishes to view it on the clearinghouse Web site at www.ncaaclearinghouse.net.

Eighth-grade courses. Eighth-grade courses do not satisfy initial-eligibility requirements.

Courses completed after high school graduation. Courses taken after a student's eighth semester (fourth year) of high school will not satisfy Division I initial-eligibility requirements. In contrast, for Division II, all core courses completed after high school, but before initial full-time enrollment in college, may meet NCAA requirements.

Pass-fail grades. Pass-fail grades may be used to satisfy initial-eligibility requirements, but will be given the high school's lowest passing grade.

Independent study and courses taught on the Internet. Independent-study and Internet courses may satisfy initial-

eligibility requirements if these courses meet core-course requirements. The instructor and student must have access to one another throughout the course, the student's work must be evaluated by appropriate authorities, and the course must appear on the student's high school transcript.

Credit-by-exam and vocational-school courses. Credit-by-exam and vocational-school courses do not satisfy initial-eligibility requirements.

Duplicate course work. If a student completes two classes that are considered to be duplicates (e.g., algebra I and algebra A/B), he or she will only receive core-course credit for one of the classes (typically the course with the higher grade).

Courses for students with disabilities. Students with disabilities may use courses specifically designed for such students. The course must be comparable to a core course in the mainstream curriculum and must appear on your high school's list of approved core courses.
Submit courses for students with disabilities online at www.ncaaclearinghouse.net.

ACT and SAT Scores

Test-score requirements. Students must achieve a required SAT or ACT score (See page 9 for the Division I grade-point average/test-score that corresponds with their core-course grade-point average sliding scale. See page 10 for the Division II requirements.). Students must take the tests under standard testing conditions on a national testing date before their initial, full-time enrollment at college. See the SAT Web site at www.collegeboard.com and the ACT Web site at www.act.org for national testing dates. Dates may also be found on page 12.

Calculation of highest score. If a student has taken the ACT or SAT more than once, that student's highest score from each subtest or subsection will be used to determine his or her score, provided all scores are submitted to the clearinghouse. See page 12 for an example.

NEW INFORMATION. All SAT and ACT test scores must be reported directly from the testing agency to the clearinghouse. The clearinghouse will not accept test scores reported on the high school transcript.

Nonstandard tests. Nonstandard tests are available for students with a diagnosed disability. Please visit the SAT or ACT Web sites for more information on registering for nonstandard tests.

Writing component. The writing component of the ACT and SAT will not be used by the clearinghouse to determine initial eligibility.

NCAA Core-Course Grade-Point Average

Calculation of core-course grade-point average. The NCAA core-course grade-point average is calculated using only those core courses that are accepted and appear on the student's clearinghouse certification report.

Grade values. The following grade values are used in determining a student's grade-point average:

A – 4 quality points
B – 3 quality points
C – 2 quality points
D – 1 quality point

If your high school uses plus and minus grades (such as A+ or B-), the plus or minus will not be used to calculate your core-course grade-point average.

Division I and II core-course grade-point average requirements. Students must achieve a minimum core-course grade-point average to compete at the Division I or II level. The core-course grade-point average for Division I students must correspond with the ACT or SAT score based on the core-course grade-point average and test-score qualifier index on page 9 of this guide. In Division II, a student-athlete must have a minimum core-course grade-point average of at least 2.000.

International students. If you have a student who has been educated in part at a international secondary school, it will be necessary to obtain transcripts from the international institution and send those transcripts and translations, along with the domestic transcript, to the clearinghouse. Students who graduate from high school in the United States will be evaluated under the same rules as all other domestic students.

Computer science reminder. The NCAA no longer accepts computer science courses, unless those courses receive graduation credit in mathematics or natural/physical science, and appear as such on the high school's list of NCAA-approved core courses.

Home school. Students who have been home schooled in whole or in part in grades nine through 12 must register with the clearinghouse. To determine what documents must be submitted to the clearinghouse, please visit the clearinghouse Web site at www.ncaaclearinghouse.net.

Clearinghouse Web Site Features

The following features are available to you as a high school administrator on the clearinghouse Web site.

- **Core-course modifications.** Submit revisions to your high school's core-course list.
- **Updates to clearinghouse contact data.** Update your school's contact name, graduation date, e-mail address, PIN or demographic data.
- **Graduation list reports.** Print a list of registered students from the current graduating class. After graduation, send the clearinghouse a final transcript with proof of graduation for each student on your roster.
- **Contact the clearinghouse.** E-mail inquiry to the clearinghouse is the easiest contact method.
- **Submit a fee waiver.** High school administrators may submit fee waiver verifications for eligible students only if the student received a fee waiver from SAT or ACT.

More information. For more information online, see the clearinghouse Web site at www.ncaaclearinghouse.net.

Recruiting Regulations

Introduction

College coaches must follow the rules outlined in this section. You are expected to follow these rules as well.

Recruiting Terms

Contact. A contact occurs any time a coach has any face-to-face contact with you or your parents off the college's campus and says more than hello. A contact also occurs if a coach has any contact with you or your parents at your high school or any location where you are competing or practicing.

Contact period. During this time, a college coach may have in-person contact with you and/or your parents on or off the college's campus. The coach may also watch you play or visit your high school. You and your parents may visit a college campus and the coach may write and telephone you during this period.

Dead period. The college coach may not have any in-person contact with you or your parents at any time in the dead period. The coach may write and telephone you or your parents during this time.

Evaluation. An evaluation is an activity by a coach to evaluate your academic or athletics ability. This would include visiting your high school or watching you practice or compete.

Evaluation period. The college coach may watch you play or visit your high school, but cannot have any in-person conversations with you or your parents off the college's campus. You and your parents can visit a college campus during this period. A coach may write and telephone you or your parents during this time.

Official visit. Any visit to a college campus by you and your parents paid for by the college. The college may pay the following expenses:

- Your transportation to and from the college;
- Room and meals (three per day) while you are visiting the college; and
- Reasonable entertainment expenses, including three complimentary admissions to a home athletics contest.
- Before a college may invite you on an official visit, you will have to provide the college with a copy of your high school transcript (Division I only) and SAT, ACT or PLAN score.

Prospective student-athlete. You become a "prospective student-athlete" when:

- You start ninth-grade classes; or
- Before your ninth-grade year, a college gives you, your relatives or your friends any financial aid or other benefits that the college does not provide to students generally.

Quiet period. The college coach may not have any in-person contact with you or your parents off the college's campus. The coach may not watch you play or visit your high school during this period. You and your parents may visit a college campus during this time. A coach may write or telephone you or your parents during this time.

Unofficial visit. Any visit by you and your parents to a college campus paid for by you or your parents. The only expense you may receive from the college is three complimentary admissions to a home athletics contest. You may make as many unofficial visits as you like and may take those visits at any time. The only time you cannot talk with a coach during an unofficial visit is during a dead period.

Recruiting Calendars

To look at recruiting calendars for all sports, go to www.NCAA.org.

Summary of recruiting rules for each sport—Division I

	RECRUITING METHOD	MEN'S BASKETBALL	WOMEN'S BASKETBALL	FOOTBALL	OTHER SPORTS
SOPHOMORE YEAR	Recruiting materials	• You may receive brochures for camps and questionnaires. • You may begin receiving recruiting materials June 15 after your sophomore year.	• You may receive brochures for camps and questionnaires.	• You may receive brochures for camps and questionnaires.	• You may receive brochures for camps and questionnaires.
	Telephone calls	• You may make calls to coach at your expense. • College may accept collect calls from you at end of year. • College coach cannot call you.	• You may make calls to coach at your expense only. • College coach cannot call you.	• You may make calls to coach at your expense only. • College coach cannot call you.	• You may make calls to coach at your expense only. • College coach cannot call you. • Ice Hockey—if you are an international prospect, a college coach may call you once in July after sophomore year.
	Off-campus contact	• None allowed.	• None allowed.	• None allowed.	• None allowed.
	Official visit	• None allowed.	• None allowed.	• None allowed.	• None allowed.
	Unofficial visit	• You may make an unlimited number of unofficial visits.	• You may make an unlimited number of unofficial visits.	• You may make an unlimited number of unofficial visits.	• You may make an unlimited number of unofficial visits.

Subject: Official Visit Weekend

Attach: TEXT.htm; Maryland Game - Official Visit Itinerary.xls; OVW 11-03 Player Profiles.xlsx

---

We have 8 official visits for this weekend. I've attached two files. The first is the general itinerary for the official visits this weekend. Each individual recruits' schedule will vary slightly depending on meeting times, arrival & departure times, etc. The second file includes 9 tabs across the bottom. The first tab is a listing of the 8 recruits and then each tab after that is a quick profile of each one. Please contact me if you have any questions.

OFFICIAL VISIT

November 3rd - November 5th, 2007

Traveling with:
Academic Interest:
Host:

SATURDAY - Novmeber 3rd, 2007

TIME	ACTIVITY
	Check in at Carolina Inn / Franklin Hotel
11:45 AM	Lunch at Spanky's with Beth Bridger and Cricket Lane
1:15 PM	Campus Tour (including Old Well Walk) / Building Tours
3:00 PM	On Field for Warm-ups
3:45 PM	Kickoff: North Carolina vs. Maryland
Halftime	Snacks in the Staff Room
Post Game	Locker Room Visit (2 recruits meet with Sports Med)
7:30 PM	Dinner in the 4th Floor Kenan Football Center Recruiting Room with Coaches
8:15 PM	Basketball Game at Smith Center
Post Game	Released to Hosts for the evening

SUNDAY - November 4th, 2007

TIME	ACTIVITY
8:45 AM	Wake Up
9:30 AM	Breakfast at Carolina Inn with Coaches
10:30 AM	Academic Meeting - Business School Rm #2500
11:30 AM	Position Meetings (2 recruits meet with Sports Med)

Good afternoon,

The information sent below is sent on behalf of Rob Higgins whom you all met during his presentation at the ACC Spring Meetings in Amelia.

-Michael

From: Rob Higgins [mailto:rhiggins@visittampabay.com]
Sent: Wednesday, June 04, 2008 10:45 AM
To: Kelly, Michael
Subject: ACC Football

ACC Football Coaches:

We hope all is well. We wanted to thank you for the opportunity to provide you with an update for the 2008 ACC Football Championship Game at this year's spring meetings. As we mentioned during our presentation, we hosted our annual Southeast High School Football Combine on May 24th at Raymond James Stadium. With 450 prospective student-athletes participating at the home of the next two ACC Football Championships, the event was a great success and another step towards the continued strong branding of your conference in our community. Each attendee was greeted with a Road to Tampa Bay flyer with each of your season schedules as well as ACC Football Championship signage. We wanted to pass along the results/stats of the combine to aid in your recruiting efforts (below). Please do not hesitate to contact me directly if you have any questions. Thanks.

Sincerely,

Rob Higgins

Executive Director

Subject: Official Visit Weekend - Boston College Game

Attach: TEXT.htm; BC Game Weekend - Official Visits.xlsx

We will be hosting 4 official visits this weekend. I've attached a file that has 8 tabs across the bottom. The first four tabs are the individual itineraries for each of the four recruits. The next 4 tabs are a brief profile on each. Please let me know if you have any questions at all.

Joe

MEMORANDUM

TO: The Board of Trustees
FROM: Holden Thorp HWT
DATE: August 19, 2009
RE: **U.S. News & World Report** Magazine Rankings

U.S. News has just come out with its annual "America's Best Colleges" rankings. We're fifth among the top public universities. That's the ninth time in a row we've kept that spot among the best public campuses, joining Berkeley (1st), UCLA and Virginia (tied for 2nd) and Michigan (4th). Overall, we're 28th among publics and privates, tied with Tufts and Wake Forest. We were 30th last year and tied with Tufts at 28th the previous year.

Key results include the good news that we posted our best score in faculty resources in a decade, moving to 35th overall from 50th since last year. This category factors in numbers such as class size, faculty compensation over two years and faculty credentials for a score that accounts for 20 percent of the overall ranking. We were also pleased to make the magazine's first-ever list of campuses with a strong commitment to undergraduate teaching. Among public campuses, we tied with Michigan for 6th and were 11th overall when included with the privates.

I would caution against reading too much into these rankings, which fluctuate based on small differences in the overall scores. The same 25 private and five public universities have held the top 30 spots in the U.S. News ranking for the last five years. The rankings are determined by both opinion survey responses and hard data tracking 15 indicators of academic quality – everything from graduation rates to faculty resources to alumni giving. Our overall score this year was 70 – 6 points behind Berkeley, within 2 points of UCLA and Virginia, and only 1 point behind Michigan. Our highest score in the last 11 years was 78, when we ranked 25th overall. Berkeley had an 83 that same year (2000) and ranked 20th overall.

Our prospective and current students, parents, alumni and friends pay attention to the U.S. News rankings, and we will continue to share the results with them. Being the fifth-ranked public university is a reminder that Carolina is among the top universities in America. It's great that we have a reason to be part of this conversation each year. The schools at the top of this list are great company to keep.

For your information, attached are background materials about the rankings, which will become public on the U.S. News Web site (usnews.com) and in the media tomorrow. The executive summary, advance news release and a chart developed by Lynn Williford in the Office of Institutional Research and Assessment detail how we compare with our public peers.

Please don't forward these materials. In return for receiving the rankings in advance, we have agreed not to disseminate them widely until tomorrow morning when the publication embargo ends. Let me know if you have any questions.

[1] Data reported to U.S. News & World Report in previous years

[2] Data based on fewer than 51 percent of enrolled freshmen

University of North Carolina at Chapel Hill Summary
U.S. News & World Report 2010 "America's Best Colleges" Rankings

- **5th best public university overall – 9th consecutive year**
  - UC-Berkeley remains 1st, followed by UCLA and Virginia (tied for 2nd) and Michigan (4th).
  - Carolina and these four campuses have traded or tied for the top 5 public spots for years.

- **28th overall (tied with Tufts and Wake Forest) among national universities**
  - Privates dominate the overall rankings because of how resources are weighted in the magazine's formula. (Peer assessment, 25%; graduation and retention rates, 20%; faculty resources, 20%; student selectivity, 15%; financial resources, 10%; alumni giving, 5%; and graduation rate performance, 5%).
  - The same 25 privates and 5 publics have appeared in the top 30 slots for the past 5 years.
  - Overall rankings for the 4 other top publics range from 21st (Berkeley) to 27th (Michigan).
  - UNC ranked 30th last year based on a 1-point drop in the overall ranking score (69 from 70). This year, Carolina's overall score is 70. By comparison, Berkeley's is 76.

- **Demonstrated excellence in areas that show we provide students with a high-quality liberal arts education.** Investments are based on campus priorities, including commitment to teaching, accessibility and affordability, retention and graduation rates, class sizes, as well as faculty resources.
  - Tied with Michigan for 6th among publics and tied for 11th overall for **"a strong commitment to teaching"** based on peer assessments of which campuses have faculty with an unusual commitment to undergraduate teaching.

- **Affirmed national leadership in student accessibility.**
  - 1st among all publics for the 5th consecutive year; 14th overall in *"Great Schools, Great Prices,"* based on academic quality and the net cost of attendance for a student receiving the average level of need-based financial aid.
  - 16th among publics for "least debt" and 24th for the second year in a row overall. Average student debt: $14,936 in the class of 2008; 32% of graduating seniors borrowed.
  - Carolina Covenant enrolled its 6th class this fall. Our study of the first class of Carolina Covenant Scholars shows the program helps students succeed academically. Spawned more than 90 similar programs nationwide.
  - Student selectivity remained 34th among all national campuses.

- **Maintained high marks for first-year retention and graduation rates.**
  - 97% first-year student retention rate up 1 point – comparable to results since 1999. The 4 other top publics remained at 96% or 97%.
  - 88% for the average 6-year graduation rate – up 5 percentage points. Results from the previous 5 years ranged from 80% to 83%. (U.S. News reports 6-year rates instead of 4-year rates. UNC's current 4-year rate is about 77%.)

- **Remained competitive with top public peers on key class size measures.**
  - 44% of UNC course sections enrolled fewer than 20 students – another key UNC measure of excellence. 4th behind Berkeley (60%), UCLA (54%) and Virginia (50%) among leading public peers.

- Only 11% of course sections enrolled 50 or more students; the best mark among the 4 other top public peers for the second year in a row.

- **Posted the best ranking in a decade for the category of faculty resources, extending overall progress since 2003.**
  - Ranked 35th overall – up from 50th last year and in 2007. Ranked 40th in 2006 and between 39th and 50th in the prior 3 years. Previous lows were 71st in 2003 and 2001.
  - The faculty resources category measures undergraduate class size; 2 academic years (2007-08 and 2008-09) of average total faculty compensation (salary and benefits) based on indexes compiled by a consultant and weighted for regional differences; student-faculty ratio; and % of faculty who are full time and have earned highest degree.
  - Overall progress with faculty resources since 2003 reflects results from funding available through the combination of state appropriations from the North Carolina General Assembly, as well as revenue from campus- and school-based tuition increases tied to enhancing academic quality.

- **Tied for 6th among the best undergraduate business programs.**
  - Kenan-Flagler tied for 6th with Texas at Austin and Virginia.
  - Based on peer survey among deans and faculty.
  - Specialties ranked include marketing and management, both 4th.

- **Listed among the "Programs to Look For."**
  - Cited for exemplary first-year experience (seminars and other programs regularly bringing small groups of students together with faculty and staff) and undergraduate research/creative projects.

News Release

ADVANCE COPY – NOT FOR DISTRIBUTION Aug. 19, 2009

Embargoed by U.S. News until 12:01 a.m. Thursday, Aug. 20, 2009

Carolina ranks as 5th best public university for 9th consecutive year

(Embargoed) CHAPEL HILL – The University of North Carolina at Chapel Hill ranks fifth among the nation's best public universities for the ninth consecutive year in the latest U.S. News & World Report magazine list.

The rankings appear in the 2010 edition of the "America's Best Colleges" guidebook and will be posted at www.usnews.com Thursday (Aug. 20) at 12:01 a.m.

UC-Berkeley ranked first among public universities, followed by UCLA and Virginia (tied for second), Michigan (fourth) and Carolina (fifth). Among public and private national universities, UNC ranked 28thth, tied with Tufts and Wake Forest universities. Other top public campuses ranked overall between 21st (Berkeley) and 27th (Michigan). Last year, UNC was 30th and tied for 28th the previous year with Tufts.

The rankings – dominated by private universities – are based in part on a formula using opinion survey responses about academic quality from peer campus presidents, provosts or admissions officials. Objective data cover 15 indicators of academic quality in areas such as student graduation and retention rates, faculty resources and credentials, class size, student selectivity, financial resources and alumni giving. Other U.S. News rankings assess affordability, commitment to undergraduate teaching (a new category this year), undergraduate business school programs and innovative undergraduate programs. UNC results included the following:

- 1st among public universities for the 5th consecutive year and 14th overall in **"Great Schools, Great Prices,"** based on academic quality, best value and the net cost of attendance for a student receiving average need-based financial aid in 2008-2009.

- 16th among publics for **"least debt"** and 24th – the same as last year – overall. Average student debt was $14,936 for UNC's class of 2008; 32 percent of graduating seniors borrowed.
- Tied with Michigan for 6th among publics and tied for 11th overall for **"a strong commitment to teaching"** based on peer assessments of which campuses have faculty with an unusual commitment to undergraduate teaching.
- 35th for **faculty resources** – UNC's best showing in this category over the past decade. That's up from 50th the last two years and 40th in 2006. This category, which counts 20 percent of the overall ranking, measures undergraduate class size; two years (2007-08 and 2008-09 academic years) of average total faculty compensation (salary and benefits) based on indexes compiled by a consultant and weighted for regional differences; student-faculty ratio; and percentage of faculty who are full time and have earned their field's highest degree. The other four top publics ranged from 35 (Virginia) to 74 (Michigan) in this category.
- A 97 percent average **first-year retention rate** – up 1 percent from last year and comparable to results since 1999.
- An 88 percent **average six-year graduation rate** – up 5 percentage points from last year. UNC's four-year rate is about 77 percent; U.S. News reports six-year rates.
- 44 percent of **course sections enrolled fewer than 20 students**, while 11 percent of **course sections enrolled 50 or more students**, the best mark among the top five publics.
- Tied for 6th among the **best undergraduate business programs**. Kenan-Flagler Business School tied for 6th with Texas at Austin and Virginia. Kenan-Flagler's marketing and management specialties both ranked 4th.
- Listed among the **"Programs to Look For,"** highlighting outstanding academic programs that lead to student success. Carolina was cited for exemplary first-year experience (seminars and other programs regularly bringing small groups of students together with faculty and staff) and undergraduate research/creative projects.

Attach: TEXT.htm

Coaches,

FYI: Beginning today, Sunday, November 29th, through Saturday December 19th is a Contact Period. You have unlimited calls to senior prospects during this time and do not have to record them.

Reminder: If there is a recruit that we are interested in having walk-on, we can only call him once before he is considered a 'recruited' student-athlete.

Joe

Subject: New Official Visit Approval Form

Attach: TEXT.htm; Official Visit Approval Form.pdf

Coaches,

Please note that we have made a very minor change to the Official Visit approval process. Effective immediately, if a prospect is flying to UNC for his/her official visit, you will be required to submit a copy of the prospect's flight itinerary with the Official Visit Approval Form.

The revised Official Visit Approval Form that makes note of this requirement is attached.

Thanks,
Amy

Corey,

I'll try to help with the answers that pertain to parking:

1. Project management will explain the details of construction schedule impacts, but an intercom is being installed at the parking gate so deliveries have access to the reinforced sidewalk. The intercom is an interim solution until the permanent road and access path is developed at the end of the project.

2. Project management.

3. On Saturday, August 14th, the project will remove the spaces along Bell Tower Drive and stripe 2 spaces for the Stone Center's visitors, 1 Service space, and 1 disability space. These spaces will be available on Monday, August 16th.

Let me know if I can help with any additional parking issues.

Cheryl

Subject: Re: UNC Bell Tower Newsletter - August 10, 2010

All,

As the Bell Tower Deck prepares to open on Monday, August 16th, there are a few concerns from the Kenan Football Center staff that need to be highlighted and resolved for a smooth transition:

1) Since the inception of this project, James Spurling has discussed with different members of the construction team access for delivery trucks to the Kenan Football Center's second floor kitchen. As of today, we have not received a definite answer as to how 18-wheeler delivery trucks will be able to make deliveries from Bell Tower Drive to the Kenan Football Center. We receive deliveries almost every day of the year from Coca-Cola, FedEx, UPS, Nike, Sysco and many others. They need to know the delivery procedure since stopping directly in front of the Kenan Football Center will impede entering/exiting traffic for the Bell Tower Deck.

2) Kenan Football Center trash containers' new placement is not accessible to our housekeepers/kitchen staff unless they use some form of transportation (golf cart, mini-truck, etc.) to haul trash to the containers. This negatively impacts productivity and efficiency. The spot designated beginning Monday, August 16th for these containers is not the original location in the initial construction plans.

3) No parking space has been assigned for Service Permit holders (University mail delivery, University repair trucks, etc.). This will cause serious traffic issues if the service vehicles decide to park in front of Kenan Football Center and impede entering/exiting traffic for the Bell Tower Deck.

All these concerns have been mentioned several times before but remain inadequately resolved. Your assistance in addressing/resolving these matters will be greatly appreciated. Do not hesitate to contact me for further discussion.

Thanks

Subject: RE: UNC Bell Tower Newsletter - August 10, 2010
Attach: TEXT.htm

Corey, thanks for meeting with us this morning. Below is a summary of our discussion with James, Cheryl, Debra, Mike, and Lindsey :

1. Sufficient space is available in front of the Football Center for tractor trailer (18 wheelers) to park and make its delivery. It was recommended that delivery avoid peak traffic hours. Parking the tractor trailer in front of the Center will not interfere with the 5 parking spaces (Head Football Coach and 4 Football Center Visitors). Other truck delivery will use the temporary Parking Deck entrance drive and the vehicular/pedestrian path in front of the Parking Deck to access the Football Center's second floor kitchen loading area. An intercom system will be installed at the Parking Deck entrance gate and be connected to the Football Center.

2. Locating the two Football Center's dumpsters adjacent to the second floor area was approved by Ray Lanier, OWRR. An appropriate paving surface will be installed to accommodate garbage trucks and other service and delivery vehicles.

3. Four designated parking (2 Stone Center visitors, 1 ADA and 1 Service) will be provided in front of the Football Center. The two existing dumpsters has been relocated to the south side of this area and will remain in its present location until the site work on the east side of the parking deck has been completed (before 9/18).

4. Old Bell Tower Drive will be a two lane road and the existing on-street parking will be eliminated as of Monday 8/16..

Thanks.

Subject: Welcome!

SMI Class of '05-06,

On behalf of Mike McGee, founder of SMI and Director of Athletics at the University of South Carolina, and the Executive Committee, I want to welcome you to the Sports Management Institute! I will be your host during your week in Chapel Hill and want you to know that you can call on me for any assistance. Jay Klompmaker, former professor at Kenan-Flagler and dissertation advisor to Dr. McGee on SMI, joins us in welcoming you. Jay will be your "host-for-fun" during the week and will be your first presenter.

Sports Management Institute is widely known as an excellent professional development experience. Its success is due to the partnership that the sponsoring universities have forged between their Athletics Departments and Business Schools. We are blessed at UNC Athletics to have an excellent partner in the Kenan-Flagler Business School.

Kara Sullivan is the Program Manager for Executive Education at Kenan-Flagler and will be the person that makes this experience run for you. She will be contacting you shortly with all the information that you need and will be available to answer any questions you may have about the logistics of your visit.

I am looking forward to meeting you and hosting for your week in Chapel Hill. John

Subject: IMPORTANT - NCAA High School Review

Hello All,
As many of you know, the NCAA has been reviewing the academic credentials of approximately 100 high schools in the country over the last few months. As a result of this review, on July 5, 2006 the NCAA released a listing of the high schools who have not been cleared for use in the NCAA's initial eligibility certification process as well as a listing of high schools who have been cleared for only prospects entering college in Fall 2006. Those schools approved only for Fall 2006 are subject to further review. The link below takes you to an article discussing this process, and the article contains a link to the list of high schools affected by this academic review. Please take a few moments to review this important information as it is possible that we could have prospects who are currently attending or have attended some of these high schools/prep schools.

http://www2.ncaa.org/portal/media_and_events/press_room/2006/july/20060705_high_school_review_rls.html

Thank you for your attention to this important matter. I am certain that we will be receiving follow-up information regarding this issue in the coming months which I will be forwarding to you.

Please feel free to contact me if you have any questions.

Thank you,
Susan

Subject: INFORMATIONAL: Student Stress Resources

November 5, 2003

Dear Faculty and Staff:

This letter is to serve as a reminder that final examination time can be an unusually stressful time for many students. Since you and your staff are in a position to observe students on a day-to-day basis, we urge you to use this close contact to be alert to students who might need support and assistance, and intervene with these students as you feel appropriate.

Below you will find a list of resources on this campus that are available to students to help them deal with these pressures. Some of these resources are available for direct referral while others are available for collaboration with you and your staff in trying to work with students. The continuing relationship that you have with students is a valuable vehicle through which those who are having difficulty can find assistance.

Sincerely,

Dean L. Bresciani, Ph.D.
Interim Vice Chancellor for Student Affairs

"The ABCDs of a Student-Athlete"

By: Ronda J. Norman

Besides hours of strenuous practice, exhilarating game days and long hours in the classroom, Carolina student-athletes develop numerous skills that often go unnoticed. With the help of Student-Athlete Services, the Tar Heels are not only focused on winning, but also on their ABCDs of success. These ABCDs include Advancing toward graduation, Building Character and Developing leadership, which is the mission of Student-Athlete Services.

The unit is headed up by John Blanchard, Senior Associate Athletics Director. Blanchard, who worked at Carolina from 1985-1999, went to the University of Minnesota for a time, and returned to Chapel Hill in 2001. He has observed numerous advancements in student-athlete services, which have benefited student-athletes as they learn to manage themselves.

"Coming back to Chapel Hill has been a great experience, because there is a new level of enthusiasm for developing Student-Athlete Services," says Blanchard. "Before, everything was limited to academic support and they were stretched to do everything in student services, which began to dilute academic support. It's been good to come back and start a new unit combining academic support and student development, along with related compliance efforts."

ACADEMIC SUPPORT:

Because advancing toward graduation is so important, the academic support component is the most prominent area of Student-Athlete Services With the largest staff and most resources, Director Robert Mercer leads UNC student-athletes in all areas of academic services, including academic counseling, structured study programs, learning skills development class and major selection, and monitoring of progress towards degree.

Blanchard, Mercer, and Susan Maloy, Assistant Athletics Director for Compliance, also work collaboratively with the academic counselors on initial and continuing eligibility academic progress, and graduation rates. Blanchard and

Maloy also coordinate admissions of student-athletes with the Office of Undergraduate Admissions.

The Academic Support Program for Student-Athletes provides the assistance for student-athletes that they are unable to receive during regular campus hours due to their time-consuming athletic schedule. Even though the academic support program benefits student-athletes, the staff actually reports to the University's College of Arts and Sciences, rather than the athletics department.

"We think it's valuable for our students to have more than just an athletic experience. We want them to have as much of a traditional experience on campus as they can," says Mercer.

Along with other Arts and Sciences support units, such as the Writing Center, Math Help Center, and Learning Center, the Academic Support Program provides supplemental instruction for several classes in the upcoming school year for student-athletes. Mercer has also raised the bar on the level of expertise with his staff by incorporating three learning specialists for the particular needs of student-athletes.

Because of the expectations and requirements placed on student-athletes by the University and the NCAA, Mercer and his colleagues, as well as some student-athletes themselves, feel strongly that time management is their biggest challenge. Blanchard has a slightly different take on time.

"Many believe the key to success is time management, but the reality is you don't manage time," says Blanchard. "The hands of the clock move at the same pace, 24-7. What you manage is yourself. That is the challenge."

STUDENT-ATHLETE DEVELOPMENT:

Dr. Cricket Lane was hired prior to the 2003-04 season as UNC's first Director of Student-Athlete Development. She has worked hard to transform the entire program. Corey Holliday, Assistant Athletics Director for Football Student-Athlete Development, has joined Dr. Lane in the effort, while concentrating on the football student-athletes. With this new structure, the Academic Support Program has been able to focus solely on academics, while Lane and Holliday

have concentrated on assisting student-athletes in leadership and character development, which is an intricate aspect of their ABCDs.

Dr. Lane has implemented new or revised programming that has transformed several key programs for UNC student-athletes. She has brought enhanced structure and increased student-athlete involvement in the Student-Athlete Advisory Council. The Carolina Outreach program has never been more active in the community and Life Skill Workshops are available covering a range of topics to meet the needs of student-athletesfacing the challenges of the highly competitive athletic and academic environment that Carolina offers. Topics vary from issues such as gambling, sexual violence, nutrition, and time and stress management. Holliday has arranged sessions specific to football student-athletes, such as seminars on how to handle agents and talks from former NFL players about the need to attain a college degree.

the Student-Athlete Advisory Council (SAAC), on which she and two other athletes from each team participate in a monthly forum with athletics department administrators to discuss issues of importance to student-athletes.

Through activities sponsored by Carolina Outreach, student-athletes are able to participate in a number of community service projects. Carolina Outreach sets up student-athlete visits to UNC Children's Hospital, collects food and other needy items during the holidays, and participates in Locks-of-Love, the Dance Marathon and Habitat for Humanity.

"People have no idea how many of our student-athletes that do community service," says Lane. "You often hear about the stars who are involved, but there are so many other athletes that talk to kids and play or read with them."

A project called Adopt-a-Classroom sends members from 16 teams to elementary schools on a weekly basis to read and tutor young students. **After athletic events, student-athletes gather to collect remaining food to take to a nearby Soup Kitchen through a program called College Wrap. (needs clarification)**

Carolina Athletics has recently become partners with Gatorade and the School of Public Health in an initiative aimed to combat childhood obesity called "Get Kids in Action." with,. The program is geared to get children active, although not necessarily through playing team sports. Last year, several of Carolina's student-athletes participated in field days at local elementary schools as a part of this program.

Despite all the successes in community activities, Lane is challenged with not being able to accommodate every program because of the large number of requests.

"It's so enlightening because so many people want the help of our athletes," says Lane. "They realize what great role models we have here and want them to come into the schools or community groups for activities."

These programs teach Carolina's student-athletes much more than community service. They are learning valuable leadership skills and aspects of teamwork.

Several student-athletes, including the field hockey team, recently worked side-by-side with a woman as they built her home through Habitat for Humanity.

"We're a bunch of field hockey girls," says Katy Tran, junior and starting goalie for the Field Hockey team. "You don't think we can hammer and build stuff, but we got out there and we did. It helps with the team aspect of everything and makes you appreciate what you have as an athlete here."

With student-athlete development programs such as these, the Tar Heels are able to make a positive impact on the community and be recognized for more than just their athletic performances. Each experience is training for the student-athletes to build character and develop into competitive leaders.

"The community knows what they see, but they do not know the real impact our athletes make in the community, nor the impact the community has on our athletes," Lane says.

Even with the tremendous strides made through the years, there is still more to come in the area of student-athlete services. The athletics department is implementing the Carolina Leadership Academy this fall, a groundbreaking new

initiative. This extensive training program will put a new face on student-athlete development.

Director of Athletics Dick Baddour worked with Blanchard to create the leadership development idea. Leadership training specialist Jeff Janssen will implement the program by establishing hands-on developmental workshops for student-athletes of all classes, coaches and athletic staff.

"We want to establish Carolina not only as a great school and a successful athletics program, but a national model for training and developing leadership skills,"says Baddour.

Baddour hit on the idea after a meeting with the head coaches in which the coaches stressed the importance of developing team leaders.

"The final piece in a championship team is leadership," says women's soccer coach Anson Dorrance, who with 18 national championships is one of the most successful coaches in collegiate history. "The most attractive type of leadership to me is the coach on the field. I want a driving verbal force who won't let standards slip. That's how teams with ordinary talent can win championships. Without leadership, even a team with great talent will struggle to become champions."

Blanchard, Lane, Mercer, and Holliday aspire to expand even more services for student-athletes, including career planning. It's part of the athletic department's understanding of the primary mission of the University as it relates to safeguarding the student-athlete experience.

"What we're trying to do with our leadership initiative, with student development programming, and academic advising is to help student-athletes develop the tools to manage themselves with highly demanding schedules in a highly competitive environment," says Blanchard. "Success in that area will eventually lead to success in all areas."

Sometimes it's as simple as ABCD.

Subject: Proposal for Second Summer Session

Robert, I just talked with Bobbi about your proposal to bring in athletes for the second summer session, now that the NCAA will allow you to foot the bill for this. Bobbi's first concern is that this program seems to be in competition with the Summer Bridge. I pointed out that it is not, since it can include athletes from out-of-state, and the Summer Bridge cannot. And your program will also offer some workshops and programs directed specifically to athletes. Her next concern was the courses that you propose that your students take. She believes that the students would benefit more from math and English courses. Engl 10 and Math 10 are both offered in the second session. Bobbi suggests that they take at least one of these and perhaps one of the other two courses that you mentioned yesterday, that is Afam and one EXXS. Her concern, and mine too, is that courses become identified with just athletes, and that a course have predominantly athletes in it. This is what I meant yesterday by my concern with perceptions of the program. But since you will have only about 20 students, and these will be spread out over a number of sections, we may not have a large concentration in any one class. Bobbi's ideas and concerns are real, and I think valid. So, I ask that you think about them and get back in touch with me. In re the three athletes that may qualify for Summer Bridge, and their not attending Summer Bridge but rather second summer session with these other student-athletes, both Bobbi and I think that they that will benefit more from Bridge. I know that it may be difficult for them in that they will see other players doing something different, but let's try it this way this summer. If you have not got their names to Jeanette, please do so and let's see if we cannot get this resolved soon. Also, don't forget that you need to talk to Carolyn Cannon about advising issues. Although I will be gone from May 5-15, I will be online. Let me hear from you. Fred

Dear Coaches,

I have recently been made aware of the following job opportunities for S-A's:

1. Pfizer Inc.- looking for pharmaceutical sales representatives in various areas. Hiring representatives are hoping to come on campus sometime in the next couple weeks to interview interested student-athletes. Ideally looking for students with GPA of 3.0 or higher (but please have S-A contact me if interested and does not have 3.0!). Please check out www.pfiser.com to learn more about the company and what it has to offer!

2. CRG Recruiters; Cintas Management- looking for students who would enjoy working in a blue/white collar field and would enjoy rotating job functions every 4 months. Manager is a former student-athlete from Duke. Please check out the more detailed description attached.

As always, please contact me with any students who have questions or concerns regarding the job search, resumes, interviewing, etc! I have flexible hours including the weekend that I am available to meet with S-A's.

Thank you for all of your cooperation and support!

Lindsey

Management Trainee

Cintas designs, manufactures, and implements corporate identity uniform programs, and provides entrance mats, restroom supplies, promotional products and first aid and safety products for over 550,000 businesses. Cintas is a publicly held company traded over the Nasdaq National Market under the symbol CTAS, and is a Nasdaq-100 company and component of the Standard & Poor's 500 Index. The company operates over 300 facilities in the U.S. and Canada, including 15 manufacturing plants and seven distribution centers. In addition to having more than five million people wear Cintas clothing each day, Cintas has achieved 36 consecutive years of growth in sales and earnings to date.

Job Description

Description

Cintas is currently looking for a Management Trainee to participate in an extensive, well-structured, two-year training program, designed to provide a strong knowledge of all aspects of our business, as well as the uniform and facility services industries overall. The Management Trainee program combines a series of rotations in various departments and classroom seminars, with the purpose of preparing the individual for what area best matches his or her interests, skills, and abilities. Upon completion of the program, the Management Trainee will be placed in a leadership position in one of several areas, such as Outside Sales, Production Management, Office Management, or Service Management. Driving a van or personal car is required in two of the rotations. The purpose is to prepare the Management Trainee for a General Management or equivalent Corporate or Director function within 5-7 years of experience with Cintas.

Qualifications

- A four year college degree
- A valid driver's license and a safe driving record (please note that candidates who

receive an offer of employment will be subject to a MVR check)
• The ability to do repeated bending, stretching and lifting

• Excellent interpersonal skills
• A strong ability to set and prioritize goals
• Ability to multi-task within a TEAM environment
• The willingness to work long hours in order to achieve required results
• A positive can-do attitude
• Strong motivation to succeed
• Co-op or internship experience in a Customer Service, Sales, Production, or Administrative role, a plus
• A business or otherwise related academic major, a plus
• A leadership/management role in campus or related extracurricular activities, a plus
• Availability to start within two weeks after offer made/accepted, a plus

Our Management Trainee partners enjoy:
• Competitive Pay
• 401(k)/Profit sharing/ESOP
• Medical, Dental and Vision Insurance Package
• Disability and Life Insurance Package
• Paid Vacation and Holidays
• Career Advancement Opportunities

Location: Raliegh, NC

Cintas Corporation is an EEO/Affirmative Action Employer M/F/D/V

Subject: Duke committee reports

Attach: judicialreport.pdf; lacrossereport.pdf

Attached are PDF copies of the Duke reports on the lacrosse program (25 pages) and the student judicial process (14 pages).

President Richard H. Brodhead Statement on Committee Reports
Committees examined lacrosse program, university disciplinary processes

Durham, N.C. -- In my April 5 letter to the Duke community, I outlined a series of steps the university would take in response to the controversy raised by the men□s lacrosse team party of March 13. Today I received reports from two of the five committees I announced. We have posted both of these reports on the special website for announcements related to the lacrosse situation.

The first committee, composed of faculty who are current or past members of the University□s Athletic Council, was asked to investigate the behavior of the men□s lacrosse team prior to March 13. They were not asked to investigate any of the events related to the criminal allegation, which is properly the responsibility of the Durham Police and the District Attorney. The committee□s task was to study the conduct of the men□s lacrosse team over the past several years to determine whether the team had a history of □outlier□ behavior and whether conduct violations had been addressed in appropriate ways. This committee was chaired by Professor James Coleman of the Duke Law School.

The second committee, consisting of faculty, students, and administrators from the Academic Council's Student Affairs Committee, was asked to look at

the way Duke deals with problems of student behavior and the applicability of our Community Standard to social life. This committee was chaired by Professor Prasad Kasibhatla of the Nicholas School of the Environment and Earth Sciences.

I encourage you to read these reports, and I am indebted to all who labored to produce them. We now have something we have lacked to date, namely, careful, evidence-based inquiries into student behavior and institutional process. I look forward to discussing the reports with members of the Academic Council and others in the days and weeks ahead. In the meantime, I would offer a few initial observations.

First, concerning the men□s lacrosse team. The Coleman committee□s report tells of a close-knit team that did well academically and excelled athletically but that was irresponsible in its repeated abuse of alcohol. The committee did not, however, find a pattern of racist behavior or sexual abuse. The picture that emerges is complex, with players praised as respectful to employees who worked near the team, and criticized for their inability to learn from multiple citations for inappropriate behavior.

The Coleman committee□s report will give us useful information as we consider the future of men□s lacrosse at Duke in the weeks ahead. In addition, we will begin immediately to improve communication between Student Affairs and the coaches in the area of disciplinary infractions and will clarify a code of conduct for Duke athletes so that it better reflects the role they play in representing the institution.

The committee investigating Duke□s judicial system concluded that the policies and practices governing on-campus and off-campus student behavior are different in ways that require review and refinement. They offer suggestions on how our student judicial system can be made more effective and urge greater involvement by the faculty. They note the recurring theme of irresponsible use of alcohol in many of the issues that come before the student judicial system. They also recommend that we integrate our administration of students□ academic and non-academic life.

I welcome these findings and recommendations. We will set to work this summer to address the recommendations involving clarification of policies and procedures. The committee□s comments on larger issues of student conduct are closely related to the work of the Campus Culture Initiative (CCI), another of the initiatives that I announced on April 5. Accordingly, I will bring the report to the CCI steering committee for its consideration.

Common to both reports is concern with the behavioral consequences of student drinking and how the university implements its policy on alcohol. I share these concerns and recognize that much inappropriate behavior by students is alcohol-related. We should have no illusions that it will be easy to address the issue of alcohol abuse, since this is a national issue on college campuses, one that often begins before students come to college. At the same time, the current situation gives Duke both an obligation and an opportunity to address this issue in a serious way. Most of all, we are committed to using this moment to find ways to educate our students about the meaning of the choices they make.

In closing, I want to express my gratitude to the committee members and most particularly the committee chairs, James Coleman and Prasad Kasibhatla, for taking on this important civic obligation. This campus community is deeply in their debt. I take pride in being part of a community whose members are willing to step forward in times of stress to do the work that needs doing. Our collective life will be better for their efforts.

AN EXAMINATION OF STUDENT JUDICIAL PROCESS AND PRACTICES

Report from

Academic Council Student Affairs Committee (ACSAC)

to

President Richard Brodhead

and

Prof. Paul Haagen, Executive Committee of the Academic Council

May 1, 2006

1. INTRODUCTION

1.1 Charge to the Committee

On April 4, 2006, the Academic Council Student Affairs Committee (ACSAC) was charged by Executive Committee of the Academic Council of Duke University to examine the student judicial process and practices. As stated in President Richard Brodhead's letter to the Duke community on April 5, 2006, the review was commissioned to address questions raised within the Duke and Durham communities about the way Duke deals with problems of student behavior and the applicability of the Duke Community Standard to social life. The charge specifically instructed ACSAC to answer the following questions:

- Do the Community Standard and the policies which apply to student behavior adequately convey Duke's values and behavioral expectations?
- Are there distinctions between on campus and off campus behaviors, and is Duke's approach to adjudication of those behaviors appropriate?
- Are there limitations in the policies which prevent various behaviors from being addressed appropriately and effectively?
- How has Duke responded when students face both criminal (or civil) charges as well as campus judicial charges? Has this created problems and should there be changes to our approach?
- Given the requirements of FERPA, how can both the Duke and Durham communities be better informed about disciplinary actions that are taken?

1.2 The Review Process

This review focuses on the judicial process as applicable to undergraduate students. ACSAC began its process of review by obtaining relevant information on Duke's official regulations and policies pertaining to the student judicial process from the Office of Student Affairs. The Committee also sought written input from various individuals on campus with some connection to the student judicial process. These include the heads/chairs of Office of Institutional Equity (OIE), Undergraduate Judicial Board (UJB), University Judicial Board, the Greek Judicial Board (GJB), Appellate Board, Academic Integrity Council (AIC), and Honor Council. Written input was also received from a subgroup of Trinity College Academic Deans, Stephen Bryan (Associate Dean of Students and Director of Judicial Affairs), and Brad Berndt (Assistant Athletic Director). Written input was also received from a number of Duke faculty members in response to a request directed to the members of the Academic Council through the Executive Committee of the Academic Council. In addition, phone interviews were conducted with Ms. Polly Weiss (Office of Institutional Equity), and Dr. Donna Lisker and Dr. Jean Leonard (Women's Center). Input was also received from the Board of the Duke University Black Alumni Connection (DUBAC), by the Concerned Citizens at Duke, 2 Duke parents, and 1 Duke alumnus.

The Committee also considered the views expressed by the community outside Duke. Letters were sent to Mr. John Dagenhart (President, Trinity Park Neighborhood Association), Ms. Risa Foster (ex-President, Trinity Heights Neighborhood Association), and Dr. Nancy Hill (President, Trinity Heights Neighborhood Association) requesting information specifically on unresolved issues relating to the process by which Duke deals with complaints about student misconduct from the residents of the respective neighborhoods. In response, the committee received letters from 2 residents of Trinity Heights and 7 residents of Trinity Park. Two of the Committee members also personally interviewed Ms. Risa Foster, who followed up by forwarding to the Committee several past email exchanges involving student misconduct in the Trinity Heights neighborhood.

Finally, the Committee received input from Durham city officials. The City Manager, Mr. Patrick Baker, and City Councilman Mr. Thomas Stith III and City Councilman Mr. Eugene Brown attended separate Committee meetings. In addition, the chair of the Committee participated in an interview with Captain Ed Sarvis of the Durham Police Department conducted by the committee exploring the lacrosse culture at Duke.

The information gathered during this process was examined and analyzed by the Committee. In particular, the following 8 committee members were involved substantially in the deliberations:

Aura Gimm, faculty, Biomedical Engineering
Prasad Kasibhatla (chair), faculty, Nicholas School of the Environment & Earth Sciences
Jacqueline Looney, Associate Dean for Graduate Student Affairs
Rachel Lovingood, graduate student, Department of Cell Biology
Marjorie McElroy, faculty, Economics
Caroline Haynes, faculty, Associate Dean for Medical Education, School of Medicine
Benjamin Ward, faculty, Philosophy
Gary Ybarra, faculty, Electrical and Computer Engineering

We present below background information relevant to the charge to the Committee and a summary of the key themes that emerged during our deliberations. We follow with a presentation of key findings that are the considered judgment of the Committee, and conclude with a list of recommendations that flow from these findings.

2. BACKGROUND AND DISCUSSION

2.1 The Duke Community Standard (DCS)

The DCS is the University's honor code, and articulates the core values and principles of the institution. The DCS was adopted in the fall of 2003, following a review of the existing Honor Code by the Academic Integrity Council (AIC). It is important to note that, while the DCS is a statement of broad principles, the AIC was formed with the narrower goal of improving the climate of academic integrity on campus. The DCS states:
Duke University is a community of scholars and learners, committed to the principles of honesty, trustworthiness, fairness, and respect for others. Students share with faculty and staff the responsibility for promoting a climate of integrity. As citizens of this community, students are expected to adhere to these fundamental values at all times, in both their academic and non-academic endeavors.

First-year students commit to the principles of the DCS at the start of their studies at Duke by participate in a ceremonial signing of a pledge immediately following convocation. The pledge states:
Students affirm their commitment to uphold the values of the Duke University community by signing a pledge that states:
1. I will not lie, cheat, or steal in my academic endeavors, nor will I accept the actions of those who do.
2. I will conduct myself responsibly and honorably in all my activities as a Duke student.

All students reaffirm their commitment to the principles of the DCS by signing a statement to that effect upon the completion of every academic assignment. The reaffirmation statement states:
"I have adhered to the Duke Community Standard in completing this assignment."
[Student Signature]

The Bulletin of Information and Regulations emphasizes academic integrity in the context of the DCS. Specifically, the bulletin affirms that the DCS not only requires students to uphold the highest standards of academic integrity in their own endeavors, but also obligates students to not accept violations of academic integrity by others.

It is the view of the Committee that the DCS, in and of itself, articulates the core values of the University. However, the focus on academic endeavors in the presentation and affirmation of the DCS during the course of student life, combined with its historical basis, has resulted in the standard being perceived as primarily applicable to integrity in academic endeavors only. To the extent that the DCS is viewed as expressing general standards of behavior, it is perceived as applying principally to interactions within the University community only. It is worth noting that there is widespread agreement with regards to this assessment among the various University constituencies that provided input to the Committee.

2.2 University Judicial Policies and Judicial Process

The specific rules and regulations pertaining to student conduct are codified in the University judicial policies which are published in the Bulletin of Information and Regulations. The policies cover a comprehensive range of academic and non-academic endeavors, including but not limited to: Academic Dishonesty, Alcohol, Disorderly Conduct, Noise, and Sexual Misconduct. The Bulletin of Information and Regulations also details the judicial process involved in adjudicating allegations of student misconduct.

In terms of the Duke judicial process, all cases involving violations of University policy are within the jurisdiction of the Office of Judicial Affairs, which falls within the Division of Student Affairs. The Director of the Office of Judicial Affairs reports to the Dean of Students, who in turn reports to the Vice President for Student Affairs. It is worth noting that a significant fraction of disciplinary cases are resolved informally by Residence Coordinators. During the 2003-2005 period, approximately 70% of disciplinary cases were adjudicated in this manner.

The formal disciplinary process is described in detail in the Bulletin of Information and Regulations and can involve an administrative hearing, an Undergraduate Judicial Board hearing, or a Greek Judicial Board hearing. In practice, most cases involve administrative hearings in which a hearing officer determines responsibility and imposes sanctions if appropriate. Faculty involvement in the judicial process is in the form of participation in Undergraduate Judicial Board hearing panels.

When students are charged criminally, the Office of Judicial Affairs launches an investigation, typically upon receipt of a police report describing the arrest or citation. As stipulated in the Bulletin of Information and Regulations, the judicial process may run concurrent with criminal action. However, if a student requests that the university process be placed on hold until the criminal case is resolved, this request is usually granted. If an allegation is serious and represents a threat to the university community, interim actions may be taken, such as an interim suspension. A challenge to waiting is that the criminal case is often postponed (continued) in the courts, creating an indefinite delay for the University's disciplinary process. Request for postponement have been occasionally granted when the charges have been relatively minor and deferred prosecution has seemed likely.

The Committee's assessment is that the judicial policies are quite comprehensive in scope, and clearly identify conduct that is not in keeping with the core values articulated in the DCS. Nevertheless, there is a disconnect in the sense that the judicial policies are not viewed as being grounded in the DCS. Rather, the judicial policies are perceived as a list of prohibited behaviors which can result in University disciplinary actions. In addition, the Bulletin of Information and Regulations does not highlight and prioritize judicial polices in terms of their importance in relation to the behavioral values expressed in the DCS.

The Committee also notes that there is little faculty engagement in the judicial process, and inadequate reporting of disciplinary actions to faculty governance bodies such as Academic Council and advisory bodies such as Athletic Council. These deficiencies are symbolic of the pervasive disconnect between student academic and non-academic life.

2.3 Alcohol and Student Misconduct

A major issue in the context of this review is Duke's judicial philosophy related to the use and abuse of alcohol. Specifically, the Committee examined the role of alcohol in student misconduct as well as Duke's policies and approach to adjudicating alcohol-related misconduct. We provide below our perspective of the role of alcohol in student misconduct, and follow with a discussion of the extent to which Duke's judicial policies and practices are addressing these issues.

An initial perspective on the role of alcohol in student misconduct can be gained by examining the official disciplinary statistics published by the University. Comprehensive disciplinary statistics for 2003-2005 period are available on the Office of Judicial Affairs website. During this time period, of the 150-170 formal charges filed per year for non-academic judicial violations, 40-50% were specifically for violations of the alcohol policy. In addition, 350-400 student misconduct cases were handled by the Residence Coordinators each year, and a significant fraction of these involved alcohol use and abuse. Examination of the separate alcohol statistics summaries shows that roughly 300-350 violations of the alcohol policy come to the attention of the Office of Judicial Affairs every year. An examination of the judicial statistics related to off-campus misconduct during Fall 2005 is also revealing. Of the 126 violations, 107 were specifically for violation of the alcohol policy. It is worth noting that a majority of these violations arose from charges stemming from a special law enforcement campaign carried out by the North Carolina Alcohol Law Enforcement agency during the first weekend of the Fall 2005 semester. This strongly suggests that the actual number of alcohol policy violations is significantly higher than what is reflected in the official statistics. Finally, there are roughly 30-50 alcohol-related medical calls to DUPD/EMS every year; in general these numbers are not reflected in the disciplinary statistics due the health and safety amnesty clause in the alcohol policy. Furthermore, a perusal of the narrative record related to these calls reveals the severity of alcohol abuse, with a large fraction of cases involving repeated episodes of vomiting and loss of consciousness.

It is also clear that alcohol use and abuse is the major underlying factor in both off-campus and on-campus student misconduct. Conversations with the staff of the Women's Center reveal that alcohol is involved in 70-80% of the roughly 60 cases of sexual assault complaints that are received by the center per year. From an off-campus perspective, neighborhood residents and police are in broad agreement that alcohol abuse underlies most of the 'public nuisance' complaints against students. The same is true for misconduct in on-campus residences. Dean Bryan is categorical in his assessment that alcohol use and abuse is the major underlying factor in terms of student misconduct. This view is endorsed by the review Committee.

The review Committee also finds that there is inconsistent enforcement of the University alcohol policy. This inconsistency is most acutely manifested in the University's tolerance of large-scale violations of its alcohol policy at events such as Tailgate and Last Day of Classes. It is our understanding that these events, which are essentially 'sponsored' by the University, involve egregious violations of the alcohol policy that exceed in severity the violations that are generally adjudicated by the Office of Judicial Affairs. In effect, the University is violating its own written alcohol policies regarding group-sponsored social functions, which state in part
'*A group is responsible for reasonable monitoring of underage drinking and may be sanctioned if the lack of monitoring leads, or could lead, to unsafe/irresponsible behavior and/or community expectations violations. Additionally, groups are expected to ensure that unsafe/irresponsible behavior and/or violations of community expectations do not occur'.*

The Committee concludes that inconsistent enforcement of the University alcohol policy severely undermines its effectiveness.

2.4. Duke-Durham Issues Related to Student Misconduct

The Committee devoted a significant portion of its time to examining issues related to off-campus student misconduct, and Duke's role in dealing with such misconduct. We provide below our assessment of the defining characteristics of these issues and the extent to which Duke is addressing the concerns of the Durham community, and identify issues that remain to be addressed.

We begin by noting that the problem of off-campus student misconduct can generally be viewed as one that is geographically restricted in the sense that most complaints seem to involve the Trinity Height and Trinity Park neighborhoods off East Campus. The complaints typically involve misconduct that can be classified as 'nuisance' associated with large parties involving up to 150-200 students at so-called 'party-houses' in the residential neighborhoods. The typical 'nuisance' behaviors include noise, public urination, and general disorderly conduct. In addition, it is important to note that residents and city officials are uniformly of the opinion that the problem is generally confined to only a small percentage of the off-campus student community. City Councilman Eugene Brown characterized this as the 90/10 problem – 90 % of the problems caused by 10% of the students. Furthermore, the City Manager and City Councilmen expressed the Durham community's appreciation of the educational, economic, and cultural contributions of Duke to the city.

To place the problem of off-campus student misconduct in context, it is worth noting that Duke has a 3-year on-campus residency requirement for its undergraduate students, and has well developed policies related to on-campus residence life. Students who reside on campus must sign a Housing License prior to occupying an on-campus residence. The Bulletin of Information and Regulation states:

'Any conduct that reflects a serious disregard for the rights, health, safety, and security of other occupants of university housing will be reason for revocation of this license and/or disciplinary action'

In contrast, the Bulletin of Information and Regulations does not explicitly discuss behavioral expectations in relation to off-campus student life. The philosophical approach that has been adopted is that students living off-campus have the same rights and responsibilities, and are subject to the same law enforcement sanctions, as other adults in the broader community. Duke's current approach is to give students living off-campus greater freedom in terms of behavioral choices, and intervene judicially only in cases involving arrests/citations and repeated misconduct.

In light of the differences in off-campus and on-campus housing policies, there is a clear perception among the residents who contacted the Committee that Duke has not taken sufficient ownership the problem of off-campus student misconduct. Neighborhood residents complained about the lack of adequate response from the Duke administration to their complaints. One specific suggestion was that a hotline be established for residents to report student misconduct. City officials also indicated that the law enforcement actions that had been undertaken by the city had not acted as an adequate deterrent to such misconduct. The City Manager and City Councilmen we met with were unanimous in their view that it was time for Duke to take bold new steps to address neighborhood concerns about student behaviors. It was suggested that Duke consider the approach taken by Wake Forest University, where off-campus living privileges can be revoked as a disciplinary measure.

There is some, but not uniform, recognition by the community of the steps that Duke has already taken to address off-campus student misconduct. It is generally well known that Duke recently purchased a number of houses off East Campus, and it is believed that this will ameliorate the problem of 'party houses' to some extent. There seems little awareness of the fact that the Office of Student Affairs has recently hired a full-time staff person specifically devoted to off-campus student life. There is almost no recognition of Duke's change in judicial policy whereby all students receiving citations by the Durham Police are subject to Duke's formal disciplinary procedures.

It is the Committee's view that the University has taken noteworthy steps to address neighborhood concerns regarding off-campus student behaviors. However, the full impacts of these measures remain to be determined. The Committee did not find a compelling argument in support of a hotline to report student misconduct. Nevertheless, the Committee notes that behavioral expectations related to off-campus living have not been effectively articulated in the context of Duke's core values embodied in the DCS.

3. FINDINGS

3.1 Do the Community Standard and the policies which apply to student behavior adequately convey Duke's values and behavioral expectations?

3.1.1 The Duke Community Standard (DCS), and the policies that flow from it, articulate Duke's values and behavioral expectations in a broad sense for academic as well as non-academic endeavors

3.1.2 The DCS is however perceived by students and faculty alike to apply primarily to academic endeavors

3.1.3 The DCS, and the policies that flow from it, are further interpreted as applying primarily to interactions within the Duke University community, rather than as a set of principles of good citizenship that are applicable in the broader communities of which the students are a part

3.1.4 There is a lack of on-going education, modeling, and reinforcement of the broad values and behavioral expectations articulated in the DCS and the associated judicial policies

3.2 Are there distinctions between on campus and off campus behaviors, and is Duke's approach to adjudication of those behaviors appropriate?

3.2.1 On-campus and off-campus living experiences are important parts of undergraduate life and education at Duke

3.2.2 Off-campus and on-campus behaviors differ both in terms of the characteristics of events that result in student misconduct and in terms of the community that is impacted by the misconduct; alcohol abuse is however the major underlying factor in both off-campus and on-campus student misconduct

3.2.3 Duke's philosophical approach to adjudication also differs between off-campus and on-campus misconduct, with much less oversight of off-campus conduct; but attempts are underway to minimize these differences

3.2.4 Law enforcement efforts that have been undertaken by the city have not served as an adequate deterrent to off-campus student misconduct

3.2.5 The University has taken noteworthy steps, from both judicial and non-judicial perspectives, to address the problem of off-campus student misconduct; the full impact of these changes is yet to be determined

3.2.6 In sharp contrast to campus residence life, sufficient attention has not been paid to articulating and educating students about behavioral expectations related to off-campus living; this discrepancy is also manifested in the differences between on-campus and off-campus housing policies

3.3 Are there limitations in the policies which prevent various behaviors from being addressed appropriately and effectively?

3.3.1 While University judicial policies are quite comprehensive, they are not presented or perceived as being grounded in the Duke Community Standard other than for academic endeavors

3.3.2 Inconsistent enforcement of the University alcohol policy severely undermines its effectiveness

3.3.3 Furthermore, the judicial policies in general are skewed towards addressing issues involving interactions within the University community, and therefore do not appropriately and effectively address breaches of good citizenship standards involving the broader community

3.3.4 There is little and reluctant faculty engagement in the University judicial process, symbolizing the pervasive disconnect between the academic and non-academic spheres of University life

3.4 How has Duke responded when students face both criminal (or civil) charges as well as campus judicial charges? Has this created problems and should there be changes to our approach?

3.4.1 The current Duke judicial approach when students face both criminal (or civil) charges as well as campus judicial charges seems reasonable

3.5 Given the requirements of FERPA, how can both the Duke and Durham communities are better informed about disciplinary actions that are taken?

3.5.1 There is lack of adequate reporting to, and follow-up discussion with, faculty governance bodies such as Academic Council and advisory bodies such as Athletic Council about disciplinary policies and actions

3.5.2 There is little awareness in the broader community of judicial steps being taken by Duke to address off-campus student misconduct

3.5.3 There is a lack of lasting, non-crisis based engagement by Duke with the larger community concerning off-campus student behaviors

4. RECOMMENDATIONS

The Committee makes its recommendations regarding Duke University's judicial code, policies, and process in the wake of an acute event of student misconduct in an off-campus setting. However, we considered the event in the context of broader educational issues in designing our recommendations, and addressed the adequacy of the statement of values and expectations, the consistency of application of policies in on- and off-campus situations, limitations in the effectiveness of policies and judicial process, and the relationship between the judicial process and that of the legal system and between the University community and the Durham community at large. We endorse the University's efforts in recent years to articulate institutional values and expectations through the design of the Duke Community Standard, to build community relationships through the Duke-Durham Neighborhood Partnership and Office of Community Affairs, to partner with the Durham Police by increasing the role of Duke Police in the communities that surround campus, to gain more oversight of off-campus housing by acquiring properties that house students, and to clarify and more effectively enforce the University alcohol policy. We applaud the more recent Campus Culture Initiative as a means to involve more of the Duke community in conversation and deliberation about values and expectations. Our recommendations are aimed at systemic issues that we believe would extend and lend context to the changes already taking place to ensure that students graduate from Duke University fully prepared to be citizens of an increasingly global community.

We regard the Duke Community Standard (DCS) as a cornerstone of the identity of the University community, and as a critical, overarching statement of institutional values and intentions and a basis for judicial policies. We believe that the central tenet of the DCS should be good citizenship, and that the concept of community should be expanded to include the broader communities in which students interact, reside, or represent the University. Statements of expectations in academic and non-academic matters should flow from this broad tenet, rather than be affirmed separately. We are concerned that the current separate affirmation within the pledge suggests that academic matters are the primary focus of the DCS. In keeping with this more integrated approach under the broad concept of citizenship, we recommend that the ways in which the tenets of the DCS are communicated also be integrated, and that a single Bulletin (perhaps a Bulletin of Undergraduate Education, or BLUE) should incorporate both information on instruction and information on the critical policies that flow from the DCS. The dichotomy between academic and non-academic endeavors is also reflected in the University administration, with distinct academic and student life administrative structures. We recommend examination of the extent and consequences of this divide and consideration of a revised structure and ways to better emphasize an integrated educational experience governed by principles of good citizenship.

While changes in the statement of values and policies are important, we also believe that simply stating or pledging a set of values is only an initial step in internalizing and living them. We also recognize that, given the wonderful and growing diversity of the University community, the words used to state institutional values may not have the same

meaning for everyone. Therefore, we recommend that the DCS be a highlight of ongoing activities after orientation, including activities that challenge the students to grapple with the limits and tensions implied by the DCS and the differences in how others interpret the DCS. Faculty development around explicit modeling and reinforcement of the DCS will be important in this effort as will integration of these activities into academic and non-academic settings.

In order for students to remain aware of the DCS in all their activities, internalization of the standard must be deliberately and consistently promoted through the application and enforcement of policies that derive from the DCS. Inconsistency in the application of policies creates confusion, ambivalence, or cynicism about the validity of and commitment to the DCS. In this regard, we are especially concerned about the inconsistency of application of the alcohol policy. We recognize the complexity of developing and applying a policy that allows students to have 'formative experiences' in the responsible use of alcohol, encourages students to get help if they endanger themselves through using alcohol, and is consistent with the law. We also recognize that students who will go on to have serious problems with alcohol later in life are having 'formative experiences' on college campuses, and that most of the behaviors that cause students to come to the attention of the police, Durham community, and judicial process are alcohol-related. We therefore recommend a broad-based, Presidential-level initiative as part of the Campus Culture Initiative to explore ways to develop policies, educational programming, and a campus culture that consistently discourages the inappropriate use of alcohol.

With a DCS that broadens the definition of 'community', we believe that it would be appropriate to develop an explicit off-campus housing code that reflects the values stated in the DCS, to communicate that clearly at a mandatory meeting to students who register to live off-campus or to study away from Duke, and to implement systematic mechanisms for tracking and reporting disciplinary actions and legal actions against Duke students irrespective of their living circumstances. We recommend that information about such actions be communicated regularly with as much detail as FERPA allows to faculty governance bodies such as the Academic Council, advisory bodies such as the Athletic Council and ACSAC, and to appropriate bodies within the local community. Accurate information about trends in the frequency and magnitude of disciplinary issues and efficacy of current educational and enforcement efforts is key in designing strategies to improve and in engaging the local community in a reality-based partnership.

It is clear that the recent incident of off-campus misconduct by students, irrespective of the outcome of the sexual misconduct allegations, has damaged a still-fragile relationship between the University community and its neighbors, and has overshadowed the less often reported but no less dramatic positive activities of Duke students in Durham. While we recognize efforts by the Office of Judicial Affairs to be responsive to community concerns, we believe a more proactive initiative is needed to display the University's commitment to engage the community in helping to educate students about citizenship. In order to forge a more resilient relationship between the University and local community, we recommend the development of activities intended to introduce Duke students to their

neighbors, their neighbors' concerns, and the expectations of the community regarding citizenship. The disciplinary process for students engaging in misconduct in the community could include options for direct contact and negotiation with neighbors or community service. Regular meetings of stakeholders in this relationship could be convened to discuss problems and design proactive approaches to helping students living off-campus continue to internalize and exemplify the values of the DCS in the greater community.

In summary, we believe that the University needs to refine the Duke Community Standard and pledge to reflect the core principles of good citizenship as guiding activities in all settings, and then follow that refinement with ongoing, intentional activities to promote internalization of the DCS and policies that are consistent with the DCS and consistently applied. The dichotomy between academic and non-academic activities that is currently reflected in the structure of the DCS, bulletins, and the administrative structure should be diminished through integration of those structures in order to reflect that a Duke education encompasses academic and non-academic endeavors that prepare students to be exemplary citizens of the global community. Education in citizenship should continue as students live off-campus or study elsewhere, and the University needs to proactively engage the community in partnering with us to provide and reinforce this education.

The specific recommendations of the Committee are:

- *Modify the DCS so that the central tenet is good citizenship in relation to the University community as well as in relation to the broader communities of which the students are a part*

- *Develop a comprehensive set of programs to educate students about, explicitly model, repeatedly reinforce, and promote internalization of the institutional values articulated in the DCS*

- *Create a Bulletin of Undergraduate Education (BLUE), that would be a synthesis of the current Bulletin of Undergraduate Instruction and essential topics from the Bulletin of Information and Regulations, to give prominence to the integral role of the DCS in fulfilling the mission of Duke*

- *Develop and implement a Presidential-level initiative as part of the broader Campus Culture Initiative with the goal of tackling the major underlying problem of alcohol abuse*

- *Develop an off-campus housing code of conduct and judicial policies pertaining to off-campus living that reflect the values of good citizenship articulated in the DCS*

- *Minimize the disconnect between the academic and non-academic spheres of University life to emphasize that both spheres are integral parts of the general educational experience at Duke; as a first step, rethink the administrative structure to*

integrate student academic and non-academic life to better serve the broad educational mission of the University

- *Codify and implement systematic mechanisms for reporting on disciplinary actions, including Duke-Durham actions, to faculty governance bodies such as Academic Council and advisory bodies such as Athletic Council*

- *Explore creative alternatives to inculcate values of good citizenship in the context of off-campus student life, recognizing that learning to live productively in the global community outside of University walls is an integral part of a Duke education*

- *Convene a group of major stakeholders (university officials, off-campus student representatives, neighborhood residents, Duke and Durham police, and city officials) on a regular basis to discuss and develop pro-active approaches to issues related to off-campus student life, with the goal of partnering in educating students in how to live within the larger community*

REPORT OF THE LACROSSE AD HOC REVIEW COMMITTEE

TO : Richard H. Brodhead, President of Duke University
Paul H. Haagen, Professor of Law and Chair of the Duke University Academic Council

INTRODUCTION

1. The Charge to the Committee

On April 5, 2006, you jointly charged the Ad Hoc Committee as follows:

> . . . [T]o look into the behavior of members of the lacrosse team over the past five years, and specifically the record of both charges of inappropriate social conduct and criminal violations and of official Duke, community and team responses to that conduct and those violations. The Ad Hoc Committee should interview faculty members about classroom behaviors, and receive and take into consideration information from members of the Duke community or from any other knowledgeable source about the conduct of or respect for others shown by members of the team.
>
> The purpose of this review is not to establish the culpability of individual team members for particular instances of inappropriate behavior, but rather to determine whether there are patterns of behavior and inadequate responses to it, that should be addressed at the institutional level. Because there is an ongoing criminal investigation of allegations relating to events on the evening of March 13-14, and because the University must be careful not in any way to interfere or compromise that investigation, the Ad Hoc Committee will not consider any matters subsequent to and including March 13, 2006 that relate to the alleged criminal conduct.
>
> In conducting its review, the Ad Hoc Committee should consider the lacrosse team in comparison to other relevant groups at Duke. . . .

The Committee conducted its review consistently with this charge.

2. The process of the review.

The Committee conducted numerous interviews. For what we considered to be the most important interviews, as many of the members of the Committee as possible were present. Thus, all or a majority of the Committee were present for the following interviews:

<u>Administrators</u>
- Dr. Tallman Trask III, Executive Vice President
- Dr. Larry Moneta, Vice President for Student Affairs
- Sue Wasiolek, Assistant Vice President and Dean of Students
- Stephen Bryan, Associate Dean for Judicial Affairs
- Katherine (Kacie) Wallace, former Associate Dean for Judicial Affairs

- Eddie Hull, Dean of Residential Life and Housing
- Leonard Satterwhite, Senior Associate Director of Admissions

Duke Athletic Department

- Joe Alleva, Athletic Director
- Dr. Kathleen Smith, Chair, Duke Athletic Council
- Dr. Christopher Kennedy, Senior Associate Athletic Director
- Mike Pressler, former Coach of the Lacrosse team
- Brad Berndt, Associate Athletic Director for Academic Services

Police Officials

- Robert Dean, Director of the Duke University Police Department
- Captain Ed Sarvis, Durham Police Department[1]

Various combinations of members of the Committee also conducted numerous other interviews.[2] The additional individuals whom the Committee interviewed in this manner are set out in Exhibit 1.

On March 24, 2006, the entire Committee met with a self-described representative group of parents of current lacrosse players, at their request. The parents were accompanied by three female Duke undergraduates who made statements to the Committee. The Committee also received numerous unsolicited emails and letters from many generations of Duke alumni and from parents and friends of Duke lacrosse players expressing support for the lacrosse program and its coach, vouching for the integrity of the program, and pointing out the program's contributions to the University and to students who participate in the program.[3]

Two members of the Committee interviewed one member of the current lacrosse team, but only because he accompanied his mother to the interview. Although the parents with whom the Committee met encouraged the Committee to interview current members of the team, the Committee declined to do so. We decided that interviewing current members of the team would not contribute significantly to our review. Some members of the team likely would have declined any request for an interview for entirely understandable reasons.

---

[1] Captain Sarvis is the former Commander of District 2, which covers the neighborhoods adjacent to Duke's East Campus.

[2] With one exception, the Committee did not promise confidentiality to any of the individuals we interviewed, nor did any individual request confidentiality. The Committee did promise confidentiality to professors we surveyed about the behavior of lacrosse players in their classes. Nevertheless, this report does not unnecessarily attribute specific information or statements to individuals by name. Nor does the report discuss rumors or claims of misconduct for which the individuals reporting them could not provide any factual basis.

[3] The Committee eventually will make the emails and letters a part of the record of its review, under separate cover.

The Committee does not believe that it failed to interview any individual who might have provided information not otherwise available to the Committee that would have materially affected our findings.

Finally, the Committee reviewed documents and statistical information from numerous sources, including the Division of Student Affairs, the Athletic Department, the Duke University Police Department, and the Durham Police Department. We also obtained the public record relating to a criminal matter in the District of Columbia.

3. Lacrosse Culture

"Lacrosse culture" has received a great deal of media attention. In consequence, our committee is obligated to describe our understanding of the phenomenon in relation to the Duke University Men's Lacrosse team.

Duke Lacrosse has been described as having a "clannish" or "pack" culture that is distinct from other Duke athletic teams and organized groups on campus. Like other athletic teams, the strict discipline of training and play enforces community for a significant amount of time both in season and out of season. Lacrosse transfers this community to life off the sports field more fully and more visibly than other Duke teams for a variety of reasons. They are a small enough unit (in contrast to football) to have remarkable social coherence and they are a large enough unit (in contrast to golf) to be socially prominent as a group. The players' backgrounds contribute to that cohesiveness. The majority of the players come from middle-class, suburban families (there are a few players from both very wealthy and from working-class settings). Most members of the team are recruited from the northeast—New York, New Jersey and Maryland are the traditional centers of the sport; many of the players competed against one another in high school. Many of the athletes' families participate fully in their son's athletic events—lacrosse is distinctive for its parent-organized tailgates after lacrosse games, for example.

The lacrosse network may even extend, it seems, to post-graduation employment. Apparently more than other teams, many of the LAX players are second-generation players or have siblings who have played the sport at Duke. In other words, the cohesiveness of the Lacrosse team is an expression of a tightness of a broader order. The committee has not heard evidence that the cohesiveness of this group is either racist or sexist. On the contrary, the coach of the Duke Women's Lacrosse team has expressed her sense of camaraderie that exists between the men's and women's team; members of the men's team, for example, consistently come to the women's games. The current as well as former African American members of the team have been extremely positive about the support the team provided them. [4]

Although parents and Coach Pressler endorse lacrosse's social cohesion as good for individual members and for team performance, it does involve negative aspects. Bad alcohol-related behavior seems to be reinforced rather than mitigated by the group. Responsible senior

[4] The African American player from the 1970s said the only racial slurs that he encountered as a student came from fans of opposing teams.

leadership on the part of team captains seems to have been too often missing. Despite repeated and stern warnings from their coach and his imposition of significant punishments for unacceptable behavior, this behavior continued. The players and their families have expressed deep respect and admiration for Coach Pressler; why then, the Committee wondered, did the players persist in defying him and in failing to live up to his expectation of their conduct? The negative aspects of lacrosse cohesion is a serious problem that requires resolution. It was not, however, a problem that was ever adequately or fully brought to the attention of either Coach Pressler or the players' parents.

FINDINGS

In this section of the report we discuss the lacrosse team's performance at Duke in three areas: academic, athletic, and citizenship.

1. The members of the Duke Lacrosse team have been academically and athletically responsible students. In general, faculty who have had lacrosse players in their classes have not experienced disciplinary problems with the players. Over the last five years, however, many lacrosse players increasingly have been socially irresponsible consumers of alcohol. Their extensive record of repetitive misconduct should have alarmed administrators responsible for student discipline.

a. Academic and athletic performance.

The members of the lacrosse team generally have been academically responsible students.[5]

The Committee surveyed ten members of the Duke faculty in whose courses a significant number of lacrosse players have enrolled.[6] With one exception, those members of the faculty who have been able to identify lacrosse players in their classes report that the students have been engaged and "certainly have caused no problems." The professors report that the students appear to take their academic obligations seriously. Two of the professors told the Committee that when the players had to miss class, they appropriately notified the professor and completed any make-up work. One instructor thought the lacrosse players were willing to defend unpopular positions in class, but had not been disruptive in any way. The students were generally described as polite. Two professors noted that the players tended to "move as a group." One of these professors separated them in class, "simply because a 'team' in a classroom is a particular energy; but this is

---

[5] Team members also have volunteered for numerous community service activities, including Verizon Read with the Blue Devils, the Durham chapter of the Special Olympics, the Hurricane Katrina Relief Fund, the mentoring program at the Hope Valley Elementary School, the North Durham Little League, and in lacrosse clinics and camps for the Durham community.

[6] Brad Berndt, the Associate Athletic Director responsible for academic services, identified the professors whom we surveyed.

not different from other team members taking classes together." One professor mentioned that he did not remember "any race or gender related problem caused by this group in my class."[7] Several of the professors we contacted were not aware that they had lacrosse players in their classes. There have been no charges of academic misconduct against any member of the team.

One member of the faculty recently has been a prominent critic of lacrosse players who have enrolled in his course. The professor himself was a lacrosse player in college and a lacrosse coach. He has had many lacrosse players in his history course. Based upon his experience in the Spring of 2004, when he had ten lacrosse players in one of his courses, he wrote a letter to the Dean of Arts & Sciences complaining about the decline in classroom behavior of lacrosse players in particular and athletes in general. The professor's more recent statements about the behavior of lacrosse players have been significantly more negative than what he said in the letter he wrote in 2004. The Committee also spoke with the teaching assistant in the course. She did not think the lacrosse players intentionally intimidated other students, but thought they displayed aggressive body language in class.[8]

Lacrosse players also have performed well academically. In 2005, twenty seven members of the lacrosse team, more than half, made the Atlantic Coast Conference's Academic Honor Roll, more than any other ACC lacrosse team.[9] Between 2001 and 2005, 146 members of the lacrosse team made the Academic Honor Roll, twice as many as the next ACC lacrosse team. The lacrosse team's academic performance generally is one of the best among all Duke athletic teams.

The team also has distinguished itself athletically. Members of the 2005 team, for example, earned numerous honors on the field. The 2005 ACC Player, Rookie, and Coach of the Year were from Duke. The team also received several national honors.[10] The team lost in last year's NCAA championship game. This year's team was ranked second in preseason polls and was one of the favorites to win this year's national championship.

---

[7] The Committee interviewed a 1998 Duke graduate who reported that a lacrosse player had tried to intimidate her in a sociology class in 1995. The individual did not complain about the incident at the time. No other person contacted the Committee to report a specific negative classroom experience.

[8] The Committee also received a copy of an email written by another professor who complained about the past behavior of members of the baseball team in his course. He thought "professors ought to report such episodes to Duke higher administration more aggressively." He did not report any negative experience with lacrosse players.

[9] The Academic Honor Roll consists of athletes who have earned a 3.0 average in their courses.

[10] A list of the team's 2005 honors is attached as Exhibit 1.

By all accounts, the lacrosse players are a cohesive, hard working, disciplined, and respectful athletic team. Their behavior on trips is described as exemplary. Players clean the team bus before disembarking. Airline personnel have complimented them for their behavior. They observe curfews. They obey the team's no alcohol rule before games.[11] They are respectful of people who serve the team, including bus drivers, airline personnel, trainers, the equipment manager, the team manager, and the groundskeeper.[12]

Finally, the lacrosse program has a 100% graduation rate. Alumni of the program apparently contribute to the community after college.[13] We received letters of support for the team from two recently graduated former players who are presently serving in Iraq. A remarkable number of alumni are volunteer coaches for their local lacrosse teams. Many are employed in prestigious positions in business, law, and medicine.[14] As evidenced by their support of the current team, alumni of the lacrosse program and their families are fiercely loyal to each other, to the lacrosse program, and to Duke.

b. Social behavior

Paradoxically, in contrast to their exemplary academic and athletic performance, a large number of the members of the team have been socially irresponsible when under the influence of

---

[11] The members of the team are forbidden to drink alcohol within 48 hours prior to a game. Nor is alcohol served at the traditional tailgates organized by parents after the team's games, either at home or away.

[12] Both the groundskeeper and the equipment manager spoke about the players' respect for and appreciation of their efforts for the team. They described the members of the team as the best or among the best group of athletes they have served in their long tenures with Duke athletics. Although they give coach Pressler credit for instilling these values in his team, they emphasize that the players themselves are a "special group of young men."

The team's female manager for the last three seasons, a Duke senior, echoed these sentiments.

The equipment manager also mentioned how close the larger lacrosse community was. He said Coach Pressler asked him to put decals on the team's helmet one year to honor the deaths of two students associated with other lacrosse teams.

[13] Alumni from the classes of 1962 to 2005 sent a collection of biographies and personal statements to the Committee. The collection will be made part of the record of this review.

[14] The former coach of the team gave the Committee a list of the jobs his recent players obtained upon graduation, including the jobs that members of the class of 2006 have been offered. The list is attached as Exhibit 2.

alcohol. They have repeatedly violated the law against underage drinking. They have drunk alcohol excessively. They have disturbed their neighbors with loud music and noise, both on-campus and off-campus. They have publicly urinated both on-campus and off. They have shown disrespect for property. Both the number of team members implicated in this behavior and the number of alcohol-related incidents involving them have been excessive compared to other Duke athletic teams. Nevertheless, their conduct has not been different in character than the conduct of the typical Duke student who abuses alcohol. Their reported conduct has not involved fighting, sexual assault or harassment, or racist behavior.[15] Moreover, even the people who have complained about their alcohol-related misconduct often add that the students are respectful and appear genuinely remorseful when they are not drinking.

i. The record of non-academic misconduct

There is no single comprehensive record of the misconduct of Duke students. Nor does the University maintain an official record of the non-academic misconduct of athletes. The Committee therefore examined numerous sources of information in the course of its review. In addition, the Dean for Judicial Affairs compiled a fairly comprehensive list of lacrosse players' misconduct from several sources to which he had access. He also compiled a list of the disciplinary records of other selected Duke athletic teams for comparison with the lacrosse team. The Committee believes disciplinary record of lacrosse players over the last five years has been problematic, especially since the Fall of 2003.

The Committee prepared a chronology of the disciplinary record of the lacrosse team for the period beginning in the Fall of 2000 and ending on March 13, 2006, using data provided by the Dean of Judicial Affairs.[16] The chronology does not include all disciplinary incidents reviewed by the Committee, but it accurately reflects the nature of the players' misconduct over the period reviewed as well as the circumstances in which the conduct occurred.

During the 2000 - 2001, the 2001 - 2002, and the 2002 - 2003 academic years, there were very few disciplinary incidents reported for lacrosse players. See Tables 1, 2, and 3 below. In the Spring of those years, the season during which the team competes, even fewer incidents were reported. Of the incidents that were reported during this three-year period, all but four were

---

[15] Very little of the players' misconduct involved women. The one exception was an incident that in which a lacrosse player got into an animated argument with another male student at a local diner. During the course of the argument, the player brushed the other student's girlfriend with his hand. The woman told the Duke police that the physical contact had been accidental.

Another player was charged with assault in the District of Columbia in 2005. Although the incident was not labeled a "hate crime," there was an allegation that the altercation grew out of the victim's objection to being called "gay." See Exhibit 3. The charge in that case is pending.

[16] The chronology is attached as Exhibit 4. The names of the players have been replaced with randomly assigned numbers to preserve the confidentiality of information protected by law.

alcohol-related. The associated conduct of the alcohol related incidents included underage possession of alcohol and public urination. A single incident in the Fall of 2001 involved ten students in a dorm room playing a drinking game; three of the players received disciplinary citations. The players apparently were entertaining a high school student the team was trying to recruit. Two of the non-alcohol incidents involved four students who were cited for trying to remove banners from East Campus. The third incident involved three students hitting golf balls at a campus building; it is not clear whether the players had been drinking. The final non-alcohol incident involved a player smoking marijuana in his dorm room.

Table 1. Disciplinary Incidents (2000 - 2001 Academic Year)

	Fall	Spring	Year
Number of players[17]	2	1	3
Number of incidents	3	2	5
Type of charges	Underage Possession of alcohol Public urination (on-campus)	Theft of pizza Unlawful possession of fireworks	

Table 2. Disciplinary Incidents (2001 - 2002 Academic Year)

	Fall	Spring	Year
Number of players	6	2	8
Number of incidents	5	2	7
Type of charges	Underage Possession of alcohol Playing drinking game On-campus property damage Smoking marijuana in room	Attempted theft of banner Noise policy	

Table 3. Disciplinary Incidents (2002 - 2003 Academic Year)

	Fall	Spring	Year
Number of players	8	0	8

[17] When a player was involved in more than one incident in a semester, he is counted only once for that semester. When a player was involved in incidents in both the Fall and Spring, he is counted once in each semester.

Number of incidents	4	0	4
Type of charges	Alcohol Use Attempted theft of banner On-campus property damage Sending emails		

Beginning in the Fall of 2003, the number of disciplinary incidents involving lacrosse players and the number of lacrosse players cited in these incidents increased noticeably and the misconduct also extended into the Spring semester, the season in which they compete. See Tables 4, 5, and 6.

Table 4. Disciplinary Incidents (2003 - 2004 Academic Year)

	Fall	Spring	Year
Number of players	10	12	22
Number of incidents	9	7	16
Type of charges	Alcohol in dorm room Underage possession of alcohol Noise policy Fire safety in dorm Failure to appear for proceeding Public urination	Underage possession of alcohol Alcohol in dorm room Noise policy Providing false identification Drinking game in dorm room	

Table 5. Disciplinary Incidents (2004 - 2005 Academic Year)

	Fall	Spring	Year
Number of players	5	11	16
Number of incidents	4	6	10
Type of charges	Underage possession of alcohol Drinking Game in dorm room	Noise policy Suspicion of throwing water Accomplice to underage possession Fraudulent use of Duke student card Failure to comply with judicial order Possession of alcohol in dorm room	

Table 6. Disciplinary Incidents (2005 - 2006 Academic Year)

	Fall	Spring[18]	Year
Number of players	10	8	18
Number of incidents	7	3	10
Type of charges	Noise policy (on-campus) Noise ordinance (off-campus) Intoxication Open container of alcohol in car Underage possession of alcohol Public urination Unlawful entry into another student's room Destruction of property (on campus)	Suspicion of damaging property Noise ordinance (off-campus) Drinking party in dorm room	

Two factors appear to have contributed to the noticeable increase in documented incidents beginning in the Fall of 2003. In the Fall of 2002, Duke began to assign Resident Coordinators to the residential dorms. These coordinators lived in the dorms and were responsible for recording and handling administratively disciplinary incidents that occurred there. Eddie Hull, the Dean of Residence Life and Housing, told the Committee that the introduction of the Residential Coordinators greatly increased the eyes and ears monitoring the conduct of students in residential housing; before that, there were no adults with a supervisory function in the residential houses after 5:00 p.m. The Committee's chronology reflects the impact of this change. Of the incidents of misconduct during the 2003 - 2004 academic year, most were handled by the Residential Coordinators in the residential housing and were not immediately reported to the Office of Judicial Affairs. *See* Exhibit 4.

Another factor that likely contributes to the large number of lacrosse players cited for misconduct is their clannish nature. Dean Hull told the Committee that in the 2004 - 2005 academic year, for example, Residential Coordinators had on-going problems with the block of sophomores who lived in a single pod of the Edens Quad on West Campus. These students were responsible for an overwhelming number of the incidents 2004 - 2005. Sophomores also were responsible for most of the incidents during the 2003 - 2004 academic years, and have been responsible for a majority of the incidents during the current academic year.

[18] Through February 4, 2006.

The most common conduct for which disciplinary citations were issued involved drinking games in which several players living in the same residential hall participated. In addition, many of the incidents of misconduct occurred during periods when players did not have academic or athletic obligations, such as the period at the start of the school year after upperclass housing opened but before classes began, on weekends, during school breaks, and in May, after the academic year had ended when the players lived in unsupervised residential housing to complete the team's season.

The Committee also reviewed the records of the Duke Police relating to incidents involving lacrosse players. Although the Duke Police tries to inform the Office of Judicial Affairs of all student misconduct that it investigates, the Duke Police records included some incidents that were not included on the chart that the Dean of Judicial Affairs prepared for the Committee.[19] The nature of the conduct involved, however, was the same as the misconduct reported by the Office of Judicial Affairs, with slightly more conduct involving property damage.

The Committee reviewed the sixteen incidents involving lacrosse players that resulted in citations from the Durham police or agents of the Alcohol Law Enforcement agency.[20] All but two of the incidents involved typical alcohol related misconduct. None of the misconduct involved fighting, sexual assault or harassment, or racial slurs. Some of the incidents were included on the list that the Office of Judicial Affairs prepared for the Committee, but not all. This reflects the informality of the relationship between the University and the Durham Police;

---

[19] A chronology of the incidents investigated by the Duke Police is attached as Exhibit 5. The names of the students have been removed to protect the confidentiality of the records. We emphasize that this list has not been edited to remove incidents for which students ultimately were not held responsible or incidents for which a lacrosse player was suspected but ultimately not charged. Most of the incidents investigated by the Duke Police since 2002 involved alcohol related misconduct and property damage.

[20] The list of incidents was reported by the *News & Observer (Raleigh)* on March 28, 2006. The list is attached as Exhibit 6. The Committee did not remove the names of the players because the names were reported by the *News & Observer* and did not come from the university's records. The list contains three citations for which the student ultimately was found not responsible; two students were found not guilty by a judge and the citation in one case was dismissed on a legal technicality. The prosecution in most of the cases was deferred.

The Committee learned that Alcohol Law Enforcement agents and the Durham staged a crackdown on underage student drinking, which resulted in nearly 200 citations being issued to Duke students during the second week of the Fall 2005 semester. This crackdown is reflected in the Committee's chronology.

the police will report informally some off-campus misconduct, but reports are not made in a systematic way.[21]

The Committee also tried to determine the extent to which lacrosse players represented a distinct disciplinary problem in the neighborhoods surrounding Duke's East Campus. We believe the most reliable source of information about the off-campus behavior of lacrosse players was Durham Police Captain Ed Sarvis, the former commander of District 2, the district that includes Trinity Park, Trinity Heights, and Walltown. Risa Foster, the former President of the Trinity Heights Home Owners Association credits Captain Sarvis with the first successful effort to reduce the neighborhood disruptions caused by Duke students in District 2.

Captain Sarvis said the types of student behavior about which residents of District 2 complained included late-night noise and loud parties, excessive drinking, littering, public urination, and some damage to cars parked in the neighborhoods. None of the complaints related to physical assaults of any type.

When he became commander of District 2, Captain Sarvis tried to establish working relationships with Duke, with the students who rented houses in District 2, and with the parents of those students. He thinks some of his efforts yielded an improvement in student behavior in District 2.

Captain Sarvis said lacrosse players did not represent a special or unique problem in District 2; in fact, none of the houses rented by lacrosse players was among the worst of those whose loud parties attracted hundreds of disorderly Duke students on weekends. Although lacrosse players rented a large house at 1206 W. Markham, Captain Sarvis said it was not among the top 10 houses about which neighbors complained the most.[22] Nor did lacrosse players as a group stand out as the worst student offenders. Captain Sarvis said the fraternity-affiliated houses presented a greater challenge to police than any of the houses rented by athletes.[23] The

---

[21] The Committee also asked the Durham Police to inform it of any arrests that were recorded for Lacrosse players from 2000 until now. The Committee gave the Police the names of 90 players. The Department would indicate only whether it had arrested any of the players, and the nature of the alleged conduct. The Department had arrest records for 8 of the players. Virtually all of the cases were alcohol-related. According to the Department twelve charges were filed against the eight players: Vandalism, Drunk and Disorderly, Failure to Appear (2 cases),
Public Urination, Indecent Exposure, Underage Possession of Alcohol (3 cases),
Disorderly Conduct/Fighting and Possession of an Open Container of Alcohol in a Vehicle (2 cases).

[22] Captain Sarvis sent the Committee a list of the top ten rental houses that generated the most calls to the police in District 2 between 2003 and 2005. The list is attached as Exhibit 7.

committee senses that since the March 13th incident, some Trinity Park/Trinity Heights residents' legitimate frustrations with Duke students have been inappropriately attributed to lacrosse players.

ii. Lacrosse players compared to other athletes

The Committee asked the Office of Judicial Affairs to provide disciplinary histories for other athletic teams to which we could compare the lacrosse team's record. By all measures that we considered, the disciplinary record of the lacrosse team was noticeably worse that the records of all other athletic teams. A greater percentage of the lacrosse players had disciplinary records than the percentage on all but one other team.[24] A larger percentage of the lacrosse team have been involved in alcohol-related incidents than the percentage of players on all other teams.[25] However, the nature of the incidents in which the lacrosse players were involved did not differ from the nature of incidents in which other athletes were involved.

iii. An attempt to compare apples and apples

The University annually reports statistics relating to student misconduct. These statistics are not as comprehensive as the data examined by the Committee; far fewer incidents of student misconduct are reported. Therefore, in an effort to compare the conduct of lacrosse students to the conduct of Duke students generally, the Committee asked the Office of Judicial Affairs to breakout the cases of lacrosse players from the reports published on its website for the 2004 - 2005 academic year.[26]

---

[23] Captain Sarvis referred to rental properties as a "lacrosse house" or a "fraternity house" because those were the tenants; the reference did not mean that the misconduct that took place at the house was the exclusive fault of lacrosse players or fraternity members.

Captain Sarvis said that neighbors of Duke students who called the police often felt harassed afterward. This is consistent with the statement of Risa Foster who reported that two years ago tenants at 1206 West Markham harassed a lesbian couple who had complained to the police about their parties.

[24] The men's golf team had a higher percentage of its members with disciplinary records, but it is significantly smaller than the lacrosse team. The results for all Duke teams are set out in Exhibit 8.

[25] The disciplinary incidents involving athletes from selected teams are set out in Exhibit 9.

[26] The Office of judicial Affairs publishes three types of disciplinary reports. The Office publishes the disciplinary statistics for the undergraduate Judicial System, "Alcohol Statistics at a Glance," and "Off-campus Disciplinary Statistics." Theses reports can be found on the official website of the Duke Office of Judicial Affairs. http://judicial.studentaffairs.duke.edu/

The 47 students on the lacrosse team comprise 0.7 % of the 6,658 Duke students enrolled in the 2004/2005 academic year. For that year, the Office of Judicial Affairs formally handled matters involving 541 students. The Office adjudicated 142 of these cases; forty-five of the cases involved alleged academic misconduct and ninety-seven involved allegations of non-academic misconduct. None of the academic misconduct cases involved lacrosse students. Eleven of the 97 non-academic cases involved lacrosse players (11%). Ten of the cases were adjudicated administratively and one was adjudicated by the University Judicial Board. Five of the eleven cases involved alleged underage possession of alcohol. Four cases involved alleged violations of the Community Standard on alcohol. Two of the cases involved theft (use of another student's Duke card to make food purchases).

Eight of the eleven players with adjudicated cases were sophomores and three were freshmen. None of the lacrosse juniors or seniors was involved in any of the adjudicated cases. Eight of the players were first time offenders (6% of all first time offenders) and three were repeat offenders (15% of all repeat offenders). Six of the complaints against the lacrosse players came from University catering; five came from supervisors in residential housing. Seven of the eleven students were found guilty of at least one of the charges against them (6% of all students found guilty) and four students were acquitted of all charges (23% of all students acquitted).[29]

Four of the students found guilty were placed on disciplinary probation.[30] Three of the students were ordered to provide community service. Two of the students were ordered to apologize to those they had offended. Two students were ordered to participate in educational programs. And one student was given a suspended revocation of his housing license. These sanctions were typical of sanctions generally imposed on Duke students for similar conduct.

The Office of Judicial Affairs published statistics on alcohol-related incidents for the 2004 - 2005 academic year. The Committee asked the office to breakout lacrosse players from those data.[31] One of the two categories of statistics in which lacrosse players appeared related to the nine cases discussed above in which players were formally adjudicated. We were not able to breakout lacrosse players who were subjected to liquor law disciplinary referrals. None of the lacrosse players were involved in any alcohol-related medical calls.

Finally, the Office of Judicial Affairs published an "Off-campus Summary" of incidents in the Fall of 2005. The Office also broke out those data to identify cases involving lacrosse players.[32] The breakout shows the following:

---

[29] Only one of the lacrosse players appealed his conviction. The appeal was denied.

[30] Some students received more than one kind of sanction.

[31] The breakout is attached as Exhibit 10.

[32] The breakout is attached at Exhibit 11.

0.75 % (47/6244) Duke undergraduate students were lacrosse players in the Fall of 2005.

4% of the students listed in the chart were LAX players (8/201)
4% of the adjudicated students were LAX players (8/188)
4% of the administrative resolution cases were LAX players (8/187)

4% of total charges-responsible were LAX players (5/126)
2% of total alcohol policy cases were LAX players (2/187)
2% of underage possession cases were LAX players (2/92)
25% of the disorderly conduct cases were LAX players (1/4)
40% of the Other cases were Lax players (2/5)
50% of the noise ordinance cases were LAX players (1/2)
33% of the open container cases were LAX players (1//3)

4% of sanctions involved LAX players (6/138)
5% of warnings involved LAX players (5/106)
6% of written assignments involved LAX players (1/17)

5% of the Total charges-not responsible were LAX players
5% of cases involving alcohol policy were LAX players (4/75)
2% of alcohol-underage cases were LAX players (4/75)
21% of alcohol-unsafe behavior were LAX players (3/14)

* * *

In summary, the non-academic disciplinary record of the lacrosse team that the Committee examined deserved the full attention of the Division of Student Affairs and the Athletic Department. The Committee does not believe that either gave sufficient attention to the conduct.

2. Administrators responsible for the discipline of students were generally aware of the irresponsible conduct of lacrosse players associated with drinking. With the exception of the Office of Judicial Affairs, none of these administrators was especially alarmed by the conduct. Although some administrators claim that they communicated their concerns to Coach Pressler, there is no evidence that they adequately did so.

The most persistent concern of administrators in the Division of Student Affairs and the Athletic Department relating to the conduct of lacrosse players was with their prominent role in the fall Tailgate events, not the team's extensive disciplinary record. Although successive administrators in the Office of Judicial Affairs were generally aware that lacrosse players were often entangled in the disciplinary process, they did not take steps to determine the full extent of the record until the Fall of 2004. When the Dean for Judicial Affairs determined both the number of disciplinary charges against members of the lacrosse team and the number of lacrosse players against whom charges had been filed, various administrators discussed what to do about it. Eventually, administrators brought the disciplinary record of his players to the attention of Coach Pressler. But neither administrators in Student Affairs nor administrators responsible for the Athletic Department adequately conveyed to Coach Pressler any sense of alarm. Nor did the administrators responsible for the Athletic Department demand that Coach Pressler take extraordinary action to address the problem. Indeed, after advising Coach Pressler of his team's problematic disciplinary record, the Athletic Director extended the Coach's contract for an unprecedented three years.

a. Tailgate

There is no dispute among senior administrators in the Division of Student Affairs and the Athletic Department that their primary focus on the behavior of lacrosse players centered around the team's conduct at Tailgate events, not the disciplinary record of the team. Beginning about two years ago, representatives from the Student Affairs and the Athletic Department along with representatives of the Duke University police met to discuss how to control the outrageously excessive behavior of Duke students at Tailgate. In 2005, those meetings focused on getting the lacrosse and baseball teams to help; players from those teams are credited with starting the Tailgate tradition, and were among its most lusty participants.

Tailgate became a source of concern for Student Affairs after the University banned beer kegs from campus in 2001 - 2002. In reaction, students sought ways to circumvent the new policy. One response was to hold tailgate parties before football games. Originally these tailgates, lead by lacrosse and baseball players, were held just off campus, where students thought they could use kegs. The Vice President for Student Affairs appealed to the Athletic Director to get the baseball and lacrosse players to remove the kegs. In the Fall of 2003, the student tailgates had moved to the parking lots around the athletic fields and clashed with tailgate parties being held by opposing fans in the same locations; there also was other misbehavior,

including damage to cars, foul language, and excessive drinking. Eventually, Student Affairs intervened and assumed control over the event.[34]

The Executive Vice President told the Committee that in the summer of 2005, he put pressure on the Athletic Director to enlist the assistance of the baseball and lacrosse coaches to help moderate Tailgate. The Athletic Director met with the two coaches and requested their aid. He did not direct them to respond in any particular way. The baseball coach banned his players from the event. The lacrosse coach took a different approach.

Coach Pressler did not think it was appropriate to ban his team from an event generally open to Duke students and sponsored by Student Affairs. In the Fall of 2005, the group of administrators who monitored Tailgate decided to impose a time limit for the event, to encourage students to stop drinking and attend the football game. Coach Pressler took action that he thought would contribute to that goal. He ordered his players to leave Tailgate fifteen minutes before the football game, to meet him at the flagpole outside the football stadium, and then as a group to attend at least the first half of the game. Administrators in Student Affairs hoped other students would follow the lacrosse players out of Tailgate and into the game because of their prominence in the event.

Coach Pressler told the Committee that his team strictly obeyed his order and left the Tailgate and attended the game. This was corroborated by the assistant lacrosse coach and by the team trainer. Although other students followed the lacrosse players out of the first few Tailgates, they stopped doing so mid-way into the season.

The Vice President for Student Affairs concluded the effort to recruit the lacrosse players to help moderate Tailgate was a failure. He told the Committee, "Our request had been to recruit the team to help start the exodus from the tailgate and for them to help encourage others to head to the football game. That never happened." The failure, however, cannot fairly be blamed on either the lacrosse players or their coach.

The significance of the lacrosse team's behavior at Tailgate is reflected in the fact that the Athletic Director specifically mentioned it in his discussion with Coach Pressler when he renewed the coach's contract in June 2005. That was before Pressler put his Tailgate plan into effect. When the coach's contract was renewed, there was no mention of the team's disciplinary record. The Committee believes it is significant that the Coach's contract was extended for an unprecedented three years.

---

[34] Student Affairs established a fenced in location for the event and provided food and non-alcoholic beverages. Robert Dean, Director of the Duke Police, agreed that the area became a law-enforcement-free zone. Administrators from Student Affairs patrolled inside the fence and the Duke police remained outside the perimeter, directing traffic and occasionally warning students about public urination. The Dean of Students said administrators did not police the area for underage drinking; their goal was only to keep drunken students safe and alive.

Although Coach Pressler's response to the demand that he do something about Tailgate did not result in the goal set for students in general, it did result in a change in his team's behavior. The Dean of Students acknowledged that after Coach Pressler intervened in the Fall of 2005, the conduct of lacrosse players at Tailgate improved; the players dispersed at the designated end of the event and did not linger.

Although all of the officials whom we interviewed identified Tailgate as the signature event demonstrating the lacrosse team's excessive behavior, at best they seemed ambivalent about that behavior. The Vice President for Student Affairs, who attended the tailgates along with the Dean of Students, wrote that, "[t]he lacrosse section of the tailgate zone was generally one of the most 'energetic' and by the last game had grown to include a foam machine and foam pit for collective dancing. Actually, it was quite entertaining."

b. The response of administrators to the lacrosse team's disciplinary record

There is no question that the extensive disciplinary record of the lacrosse team came to the attention of administrators in the Fall of 2004. It is equally clear that, perhaps other than the Dean of Judicial Affairs, none of the administrators who knew about the record was alarmed about it or demanded that any extraordinary action be taken to address it.

The focal point of administrators' discussion of the lacrosse team's disciplinary record was a compilation of the record that the Dean of Judicial Affairs prepared in the Fall of 2004.[35] Immediately prior to preparing the document, the dean had estimated that "67% of the team has had a disciplinary history (either formally or informally resolved by RC's/Judicial Affairs)."

On September 8, 2004, before the team's disciplinary record had been compiled, Stephen Bryan, the Dean of Judicial Affairs, and Sue Wasiolek, the Dean of Students, and others met with the coach of the lacrosse team to discuss his players' behavior. The meeting was one of several Student Affairs had with athletic teams; it was not prompted by anything specifically relating to the lacrosse team. The administrators met with the coaches of the lacrosse, basketball, football, baseball and soccer teams. The meetings lasted an hour. As a preview of what he wanted to discuss with Coach Pressler, Bryan forwarded to Pressler an email he had received from a Residential Coordinator, detailing the misconduct of lacrosse players in residential housing, including the suspicion that two lacrosse players had assaulted another student off-campus.[36] Bryan said all of the coaches were supportive in the meetings, including the lacrosse coach. There was no follow up to any of the meetings.

After Bryan complied the lacrosse team's disciplinary record in October 2004, he circulated it among administrators in Student Affairs, and eventually it was sent to Tallman Trask, the Executive Vice President of the University. The report was never discussed at any

---

[35] The document prepared by the Dean for Judicial Affairs is attached as Exhibit 12.

[36] This suspicion was never confirmed. The student did not file charges against the suspected players.

Senior Leadership meeting of top University officials, although student conduct at Tailgate was discussed at such meetings. Nor was the report discussed among administrators in Student Affairs.

Although officials in Student Affairs were concerned about the lacrosse team's disciplinary record, none of them appeared to have been alarmed by it. The Dean of Students thought the players conduct was an "irritant," more because of the repetitiveness of their misbehavior than the nature of it. The Vice President of Student Affairs appeared more concerned about the behavior. He thought the team was getting away with things, but he also thought the individual cases had been handled appropriately by Judicial Affairs. He felt the collective significance of the conduct was not being addressed, but he did nothing to make that happen.[37]

Executive Vice President Trask did not think the report was particularly serious He learned from the documented history that lacrosse players liked to hang out as a group and drink beer. When they were caught three or four times a year, they were disciplined, but Trask suggested that the sanctions imposed were not sufficiently severe to act as a deterrent. Based upon that assessment, he did not feel it was necessary for him to intervene, beyond bringing the matter to Athletic Director Joe Alleva's attention.[38]

Before Trask met with Alleva in the late Fall of 2004, apparently no one else had spoken to Alleva about the lacrosse team's disciplinary record. Trask told Alleva there were too many infractions, but added that the record was not serious enough to warrant doing anything drastic to the lacrosse program. Trask showed Alleva a copy of the written disciplinary report, but, according to Alleva, did not give him a copy. Nor did Alleva ask for a copy.

Alleva subsequently met with Pressler to discuss his team's conduct. Pressler did not, at that time, see the written report detailing his team's disciplinary record. Alleva told the Committee that he warned Pressler that his team was "under a microscope." The Committee could not substantiate such a warning. Pressler denies that Alleva or anyone else told him that his team was out of control. Pressler acknowledged that Alleva told him about the meeting with

---

[37] In September 2004, in response to an email from Christoph Guttentag, Director, Office of Undergraduate Admissions, suggesting ways in which Admissions might have an impact on the lacrosse team's behavior, Moneta sent Guttentag and others a response proposing a "meeting for key stakeholders to discuss athlete and fan behaviors was warranted." Such a meeting was never held.

The Committee interviewed Leonard Satterwhite erwhhite, Senior Associate Director of Undergraduate Admissions to determine if the University had admitted lacrosse recruits with disciplinary records. In his six years working with admissions for lacrosse recruits, Satterwhite dealt with only two cases in which the recruits had a disciplinary record in high school. He did not think that was a particular problem for lacrosse recruits.

[38] Trask raised the matter with Alleva in his role as Alleva's informal supervisor.

Trask. Alleva told Pressler that his team's misconduct was a problem and he needed to deal with it. Alleva said none of the individual incidents was serious, but the frequency of incidents was a problem. Pressler said Alleva did not tell him that "you're on warning or else." Earlier this year, Alleva suggested to Pressler that he record whenever he disciplined his players for misconduct. Pressler told the Committee that he did so informally and that he notified Kennedy of what action he had taken.

Pressler saw the summary of his team's written disciplinary record for the first time in a meeting in June 2005, which was held to discuss his team's misconduct in the Southgate residential hall in May 2005. As a result of that conduct, Eddie Hull, Dean for Residential Life and Housing, banned the team from further use of the East Campus residential halls after the end of the school year. The team had stayed in dormitories during that period to complete their season.[39]

In response to seeing his team's written disciplinary record in June 2005, Pressler initiated a meeting with Bryan in July 2005 and asked Bryan to notify Pressler and Chris Kennedy whenever a member of his team was cited for any infraction.[40] Bryan subsequently sent Pressler and Chris Kennedy, the Senior Athletic Director, emails describing charges being filed against eight lacrosse players. According to Pressler, four of the charges were subsequently dismissed. Residential Coordinators gave the remaining four players oral warnings. The last email that Bryan sent to Pressler is dated November 14, 2005. After that date, Bryan did not notify Pressler of any additional infractions by his players. Pressler assumed that Bryan was filtering out incidents that did not warrant the coach's attention.

Within the last month, Coach Pressler was asked to annotate the list on non-suspendable charges that Bryan had prepared in October 2004 to indicate both the incidents about which he had been informed and the disciplinary actions that he had taken in response.[41] According to his notations, the coach was largely unaware of most of the incidents. With respect to the incidents of which he was aware, he took additional disciplinary action against either the individual involved, or the entire team when all of the players involved in an incident could not be identified. Most of the discipline imposed by the coach consisted of additional running. In one case, however, the Coach suspended two players from participating in the 2005 post-season, including play in the championship game. The players were not permitted to wear team uniforms or to sit with the team.

---

[39] The team also had damaged a dormitory in 2000, under the same circumstances. Hull told the Committee that after the meeting in June 2005, he thought the lacrosse team's conduct was building toward a train wreck. The Committee found nothing in the record prior to March 13, 2006, which reflects that any administrator felt that way.

[40] Bryan occasionally notified Pressler of player misconduct after their meeting in September 2004. But, it "wasn't until the summer of 2005 that [he] made a concerted effort to keep the coach informed of incidents involving his team. . . ."

[41] A copy of the annotated document is attached as Exhibit 13.

Despite their knowledge of the extensive disciplinary record of the lacrosse team, neither the Executive Vice President, the Vice President for Student Affairs, the Dean of Students, nor the Athletic Director followed up the actions they took in the Fall of 2004 to determine if anything had been done to address the problem. Other than the Dean for Judicial Affairs and Coach Pressler, after he was made aware of specific incidents of misconduct, no other administrator appears to have treated the lacrosse team's disciplinary record as a matter of serious concern.

3. The University's ability systematically to monitor and address non-academic and non-suspendable athlete misconduct (and student misconduct generally) is hampered by an approach that is informal to the point of being casual. The result is a process that is arbitrary and often ineffective.

The University is not able systematically to monitor or produce a full account of student conduct. Rather, it relies upon the informal relationships of administrators with each other and, in the case of athlete conduct, the relationship of administrators with coaches, to disseminate information that is critical to the performance of their responsibilities and essential if coaches are to be held responsible for the conduct of their players. The Committee was able to examine the full disciplinary record of the lacrosse team only because of the extraordinary effort of the Office of Judicial Affairs and the Duke Police Department, and with the cooperation of the Durham Police.

In this case, the Director of the Office of Judicial Affairs did not always timely know what disciplinary incidents had occurred in residential halls. A rule that residential coordinators report second disciplinary offenses to the Director was not always observed.

Although the Office of Judicial Affairs and the Duke Police meet regularly to discuss student misconduct, such discussions do not always result in the police reporting all incidents to the Office. Whether the Durham police reports information to the University depends upon who has the information and what relationship he or she has with a member of the Duke Police or an administrator in Student Affairs.

Without the Office of Judicial Affairs having ready access to all relevant information relating to student conduct, there is no way that senior administrators in the Division of Student Affairs or the Athletic Department can discharge their responsibilities. Even with information, however, currently there is no system in place that ensures it will be disseminated to administrators who need it.

The relationship between the Division of Student Affairs and the Athletic Department in dealing with the conduct of the lacrosse team has been based upon personal relationships, not formal systems. The Committee's review reveals the inadequacy of personal relationships as a means of structuring communications between Student Affairs and the Athletic Department. Until Stephen Bryan and Coach Pressler began to communicate directly in July 2005, there was no affective link between Student Affairs and the Athletic Department that permitted the

Department to monitor adequately the conduct of student athletes.

In the past, the Division of Student Affairs has relied primarily upon the personal relationships of the Dean of Students and the Associate Dean of Judicial Affairs to bring disciplinary problems to the attention of individual coaches. Neither the Athletic Director nor administrators to whom the coaches report are regularly included in the process.

The Committee interviewed several coaches as part of this review. All of the coaches agree that Duke athletes should be held to a higher standard of conduct than the standard to which students generally are held. But the coaches all believe strongly that it is unfair to hold them accountable for their players' failure to meet the higher standard if there is no process to ensure that they are notified of disciplinary incidents involving their players. The Committee agrees. The Committee was surprised to learn that most of the coaches do not know the extent to which their players are involved in the disciplinary system. Most assume that their players have not had serious disciplinary problems, but they admit they do not know.

The policy of the Division of Student Affairs is to notify coaches only when their players are charged with suspendable offenses. Even that is done informally, usually by the Dean of Students calling the coach on the telephone; it is never done in writing. Coaches are not routinely notified of non-suspendable offenses such as underage drinking, noise violations, or any of the long list of charges made against the lacrosse players. The Associate Dean for Judicial Affairs summed up the situation:

> . . . we have had no formal policy regarding coach notification, but we try to keep the coaches informed of incidents at least if there is an issue where suspension may result. [The Dean of Students] would often informally communicate these cases to the coach, which served to buffer [Judicial Affairs] from having to deal with coaches who wanted to press on potential outcomes."

4. The University's ability to deal fully with the problem of alcohol is undermined by its own ambivalence toward drinking and the conduct it spawns.

Alcohol is the single greatest factor involved in the unacceptable behavior of Duke students in general and members of the lacrosse team specifically, both on- and off-campus. Drunkenness is the cause of behaviors that represent a serious nuisance to the community and a source of significant personal danger for the student. The University's alcohol policy is reasonable, but it is inconsistently enforced and only ineffectually disciplined. The University's ambivalence is most obviously manifested in the University's tolerance of egregious violations of its own policies at events such as Tailgate and Last Day of Classes, as outlined in the Report of the Committee to investigate the Judicial Procedure. While the alcohol related misconduct by members of the lacrosse team is deplorable, the University is, by its lack of leadership in this area of deep concern, implicated in the alcohol excesses of lacrosse players and of Duke students more generally.

RECOMMENDATIONS

1. Continuance of the Men's Lacrosse Team with appropriate oversight

Although the pattern of misconduct in recent years by the lacrosse players is alarming, the evidence reviewed by the Committee does not warrant suspension of the sport at Duke University next year. While the committee does not find a pattern of egregious player misconduct suggesting that the lacrosse program should be suspended at Duke, the repetitive nature of certain behavioral problems observed in this case require strict oversight and monitoring of the conduct of players in order to correct behavioral problems when they arise.

2. Code of Conduct for Athletes

An explicitly articulated Code of Conduct should be developed for all Duke University athletes. It is clear from our interviews that it is uniformly considered a privilege and an honor to be an athlete at Duke University and a responsibility that cannot be taken lightly. All agreed that Duke athletes should be held to a higher standard than other Duke students. As one coach put it, the spotlight shines brighter on Duke athletes than on other students at Duke and we would add, as recent events have reminded us, it certainly shines intensely on Duke University.

3. Need for Improved Communication between Student Affairs and Athletics

There has been a pattern of inadequate communication within and between the Division of Student Affairs and the Athletic Department at Duke regarding student behavioral violations more generally, and an improved system of communication needs to be developed and implemented.

4. Need for a Clearly Articulated and Enforced Alcohol Policy

The university's own apparent ambiguity regarding underage alcohol consumption conveys inconsistent messages and confuses expectations regarding alcohol. Duke University has fostered a number of problems among its undergraduates, including lacrosse players, by its ambivalent policies toward underage and over-consumption of alcohol at Duke. This problem needs serious review and remediation within the University.

FOR IMMEDIATE RELEASE
UNC ATHLETIC COMMUNICATIONS
FEB. 13, 2007

DAILEY EARNS ALL-ACC ACADEMIC FOOTBALL HONORS

GREENSBORO, N.C. - University of North Carolina quarterback Joe Dailey earned a spot on the 2006 All-Atlantic Coast Conference Academic Football Team, as announced today by Commissioner John Swofford.
To be eligible for consideration, a player must have earned a 3.00 grade point average for the previous semester and maintained a 3.00 cumulative average during his academic career.
An African-American history major, Dailey transferred to North Carolina after two seasons at Nebraska. In his first year of eligibility at UNC, he played in 10 games and started seven, including the last five. He completed 112 of 195 attempts (.574) for 1,316 yards and seven touchdowns.
In Carolina's 45-44 win at Duke, Dailey completed 20 of 31 attempts for a season-high 253 yards, two touchdowns and one interception. He tossed a career-long 83-yard touchdown pass to Hakeem Nicks in the first quarter and had a 39-yard scoring pass to Brooks Foster.

THREE TAR HEELS NAMED TO ALL-ACC ACADEMIC FIELD HOCKEY TEAM

GREENSBORO, N.C. – Three North Carolina field hockey players have been named to the All-Atlantic Coast Conference Academic Team for 2006, announced Tuesday be the league. Heather Kendell, a junior in eligibility last season, was named to the squad for the second year and was joined on the 31-player list by freshmen Riley Foster and Brianna O'Donnell.
To be eligible for consideration, a student-athlete must have earned a 3.00 grade point average for the previous semester and have maintained a 3.00 cumulative average during her academic career.
Kendell, a forward/midfielder, is one of 13 players to repeat on the team after being named to the inaugural All-ACC Academic squad in 2005. An exercise and sport science major from Chapel Hill, she started 20 games last season for the Tar Heels, which finished the season 13-9.
O'Donnell, a goalkeeper, is a journalism major from Collegeville, Pa. Foster, a back, is a nursing major from Fort Worth, Texas. Both first-year players started all 22 games in 2006.

Coach Davis & Andre,

I have attached a copy of the community services opportunity I have so far this summer. I am sure this will grow. We are in the process of putting together visits to the Burn Unit. Just let me know if there's something that you want to set up.

Thanks,
Cricket

>>> "Butch Davis" <butchdavis@uncaa.unc.edu> 4/30/2008 11:10 AM >>>
Hi Cricket:

Coach explained what he's trying to do. I'm going to share this information (probably more than you wanted to know) as it may help you in providing the information he's requested.

Beginning with our summer session, we will be implementing a new discipline program/policy for our players. They will be charged points for discipline infractions (late to class, missed study halls, et.) and with each level of points reached, there will be corresponding progressive steps of discipline. By participating in certain community service opportunities, the players in jeopardy of suffering one of the more progressive steps of discipline, could "earn" points that would be credited to their "account". Therefore, he'd like individual, group, team options that would be available on an on-going basis.

If we could receive your list by next week, that would be great!

Hope this makes sense. Any questions, please let me know.

Coach Davis,

I am in the process of putting some projects together for the summer. I will have a list to you by next week. Are you looking for something the whole team can do or several smaller projects?

Thanks,
Cricket

Dear Cricket:

How are you? I hope you're doing well.

I wanted to ask if you have easy access to a comprehensive list of possible charity events that might be available for our players to participate in during the summertime, e.g., Habitat for Humanity, Children's Hospital (Flashes of Hope), 5 or 10K runs, Cancer awareness, Ronald McDonald House, SECU House, charity golf tournaments players could work, etc. Please either email a list or give me (or Andre Williams) a call to discuss.

I'd appreciate your help!

Coach Butch Davis

Football Lunch Agenda – 2008
[Steve & Robert's Draft Proposal]

8/29 - McNeese State
10/3 - U Conn
11/7 – GA Tech

12:00 – Guests arrive and get lunch

12:15 – While guests finish lunch, we show the video

12:25 – Robert introduces Guest Coaches and VIPs. Then, he introduces Steve

12:30 – Steve gives an overview of the goal of this event and introduces Coach Davis

12:35 – Coach Davis speaks to the group for approximately 10 minutes (or longer if he wants to take questions). When he finishes, Steve thanks him for joining us, and mentions explicitly that he is free to go back to his preparations for tomorrow's game.

12:50 – John talks about Carolina Leadership Academy

1:00 – Cricket talks about Student-Athlete Development

1:10 – Robert talks about the Academic Support Program

Other possible talks:
Compliance? – Faculty will be interested in hearing how much effort we spend on adhering to NCAA rules and avoiding situations where our athletes receive any sort of special treatment from boosters.

Kenan renovation plans? The August 13th University Gazette has an article titled: "Kenan Stadium to add suite and club seating by 2009 season." I think that we need to do some impression management to avoid the knee-jerk response that we are over-spending on football.

1:30 – Party over, optional tour of the Football Center. Offer guests a football poster or some other souvenir?

Subject: Football Academic Support Staff Meeting (Jan. 15th)
Attach: 2009 Spring.xlsx

Cynthia,

Coach Davis has requested a "Football Academic Support Staff Meeting", to review our team's Fall 2008 academic performance, on Thursday, January 15th in our 4th floor coaches conference room. A time for this meeting has not been officially scheduled, but I will make sure to inform you when it is determined. Please find below the obvious topics that we need to prepare to discuss.

In addition, Coach would like for you and your staff to attend our Team Meeting on Saturday, January 10th at 2:00 pm.

Topics of Discussion:

A. Academic Performance
1. General Overview
2. Probation Candidates
3. Academically Ineligible Candidates
4. Student-Athletes who still have incomplete courses
5. Student-Athlete who you consider to be at risk

B. Study Table
1. Freshmen Study Hall time/location (need to make sure afternoon study hall does not exceed 2:00 pm during Spring Practice)
2. Upperclassmen Study Hall time/location/student-athletes

C. Class Schedules
1. Need to look at student-athletes who may have classes after 1:00 pm

Best regards,

Andre

UNIVERSITY OF NORTH CAROLINA AT CHAPEL HILL

DEPARTMENT OF ATHLETICS

POLICY AGAINST HAZING AND INITIATION

The Department of Athletics at The University of North Carolina at Chapel Hill has established a Code of Conduct that applies to each student-athlete participating on an intercollegiate athletics team. This code requires respect for human dignity. The Department of Athletics believes that hazing demeans those who participate and is fundamentally incompatible with the standard of integrity expected by the University and its athletics program. In accordance with State of North Carolina law and University policy, hazing or initiations are strictly prohibited, whether or not the person has consented to participation in the activity. Thus, any student-athlete cannot be required, expected, or allowed to participate in any hazing activity for any reason.

Examples of such activities include, but are not limited to, a student-athlete being:

1. Yelled at, cursed or sworn at, humiliated, ridiculed, or physically or psychologically abused;
2. Forced or expected to participate in tattooing, piercing, head shaving, or branding;
3. Forced or expected to wear embarrassing clothing;
4. Forced or expected to drink alcohol;
5. Instructed to participate in calisthenics not related to required conditioning for the sport in which the student-athlete participates;
6. Required to act as personal servant to players;
7. Transported and abandoned;
8. Forced or expected to consume inappropriate concoctions;
9. Expected to associate only with specified people;
10. Required to conduct hunts or quests;
11. Forced to engage in public stunts or buffoonery;
12. Required to engage in or simulate sexual acts;
13. Threatened or physically restrained or abused (such as being held down, tied or taped up, or confined in a small place);
14. Required to appear nude or semi-nude in either public or private places; and/or
15. Expected to damage, destroy, or steal property.

The Department of Athletics is firmly committed to vigilant enforcement of this policy, and will promptly and thoroughly investigate any allegation of hazing or initiation. Should a violation be found, the student-athlete(s) involved will be expelled or suspended from the team for a specified time. The Department of Athletics expects captains, team leaders, and upperclass student-athletes to help insure that such activity not occur. Team sanctions will be imposed if it is determined that hazing was conducted by team members. In addition, the Dean of Students will be notified if the Department of Athletics determines that hazing or initiation has occurred.

Suspected incidents of hazing or initiation, as well as any related concerns, should be reported as soon as possible to either Dick Baddour, Director of Athletics; Larry Gallo, Senior Associate Athletics Director; or Beth Miller, Senior Associate Athletics Director. The Department of Athletics' phone number is (919) 962-6000.

Subject: Parking Reimbursements for Student-Athletes

Attach: TEXT.htm

Coaches,

As you may recall, there was some discussion early in the academic year regarding the possibility of reimbursing student-athletes for a portion of the cost of an on-campus parking spot, provided they successfully completed the application process (through the Parking

office), were selected to receive a space, and paid for that space themselves upfront.

If you have student-athletes who went through this process and obtained a campus permit, I am prepared to assist them in the next step of reimbursing them for an amount that will be based on each sports' playing season and the amount of academic year time spent at practice and competition.

To begin this process, the student-athletes will need to submit to me a copy of their receipt for the parking pass. The receipt should note their name, the parking lot in which they have a space, as well as the amount that they paid for the pass.

Once I get this information, I will use my (fairly convoluted) formula to determine the amount that we are able to give them in reimbursement. We will then have them complete an SAOF form to start the reimbursement process.

Please forward student-athlete names and receipts to me for those who qualify to take advantage of this. Keep in mind that this is ONLY for student-athletes who purchased passes for the entire academic year. We will NOT be reimbursing student-athletes for daily parking costs (e.g., Rams Head deck) that they might have incurred when choosing to drive onto campus for practice or competition.

Let me know if you have any questions!

Thanks,
Amy

Subject: Postgraduate Scholarship Opportunity

Attach: TEXT.htm; ACC POSTGRADUATE SCHOLARSHIP Flier.doc

Hello Seniors:

I trust this finds you all doing well and enjoying your last Fall Break as an undergraduate! This email is intended for all senior student-athletes that plan on attending graduate school within the next three academic years.

Please view the attachment regarding the ACC Postgraduate Scholarship opportunity. As a University, we are only allowed to nominate three student-athletes which means the administrators go through a selection process. If interested, it is essential that you send me, Spencer Welborn (welborn@uncaa.unc.edu), a copy of your resume and a cover letter by November 8, 2011.

Please see the attachment for more information.

ACC POSTGRADUATE SCHOLARSHIP
Are you interested in attending graduate school within the next three years? If so, you may be eligible to apply for the annual ACC Postgraduate Scholarship!
The ACC awards a $5,000 postgraduate scholarship for all selected winners of ACC Postgraduate Scholarship. The University of North Carolina is allowed to nominate three student-athletes for this particular award. Please see the criteria below:

To be eligible for consideration an applicant shall have:

1. Distinguished himself/herself academically with an overall minimum accumulative grade point average of 3.00

(a) Completed at least seven semesters; students engaged in undergraduate programs requiring more than four years for a baccalaureate degree shall be considered during their final year of intercollegiate athletic competition.

2. Performed with distinction as a member of a varsity team. Supporting information from coaches should comment on the standing of the nominee relative to others in the conference and nationally.

3. Conducted himself/herself, both on and off the field, in a manner, which has brought credit to himself/herself, his/her institution, intercollegiate athletics, and the ideals and objectives of higher education.

In selecting recipients for this award:

1. The degree of the student□s athletic achievement shall be weighed at least equally with the degree of his/her academic performance.

2. Consideration shall also be given to his/her participation in campus activities other than academic and athletic in which he/she has demonstrated his/her qualities of leadership and has served as an example to his/her fellow students.
4. Applicants must be continuing academic work beyond the baccalaureate degree as a full-time graduate or professional student and have been judged capable of such study by his/her major professor, major department head or dean of the college in which he/she is enrolled. The recipients of the award must use all scholarship money within three academic years from the fall semester after selection.

If you are interested in applying for the ACC Postgraduate Scholarship, please send a resume and cover letter explaining your future plans to Spencer Welborn in the Academic Support Program by November 8, 2011. All applicants will be reviewed and decided on by a group of administrators.

Attach: TEXT.htm; ACC Internship 2011-12.doc; ACC Job Description - Futures Intern.pdf; Disney Job Description.doc; FOX Job Description.doc; Orange Bowl Job Description.doc; Sun Sports Digital Media Job Description.doc; Sun Sports Marketing Job Description.doc; Sun Sports Production Job Description.doc

Hello All:

Please read the attached flier for possible internship opportunities after graduation. The ACC Futures Program offers six internships to student-athletes from member institutions each academic year. To be eligible, you must complete all degree requirements and graduate in May 2012. The internship will begin the summer of 2012 and last 10 months with a $18,000 stipend. The internships are located in Greensboro, Orlando, Miami and Atlanta.

The ACC Futures Program offers internships in a variety of areas from productions, marketing, and event management. Please read the attached job descriptions and flier for more details regarding this opportunity.

If interested please send all requested material to Spencer Welborn by November 8, 2011.

ACC FUTURES INTERNSHIP

WHO: **WOMEN AND ETHNIC MINIORITIES**
WHAT: ACC FUTURES INTERNSHIP
WHEN: AUGUST 2012 – JUNE 2013
WHERE: GREENSBORO, NC: ORLANDO, FL: ATLANTA, GA: OR MIAMI, FL
STIPEND: $18,000 FOR 10-MONTH INTERNSHIP

THE ACC FUTURES INTERNSHIP PROGRAM

Atlantic Coast Conference, ESPN Wide World of Sports (formerly Disney), FedEx Orange Bowl, FSN South/SportSouth, Sun Sports/FSN Florida

PROGRAM DESCRIPTION

In August of 1995, the Atlantic Coast Conference joined with regional sports television networks Home Team Sports, now Comcast (Washington, DC), Sunshine Network (Orlando, FL), and FOX Sports Net South (Atlanta, GA) in a landmark six-year agreement to televise over 350 hours of special ACC programming annually. That agreement was renewed and expanded in 2001. Highlighting the yearly coverage is a live 22-game women's basketball package, 30-game men's basketball package, a live eight-game baseball package, overall coverage of 22 ACC Championship events, and the weekly ACC *Live* magazine highlight show. Cumulatively, the agreement provides the member institutions of the ACC the best broadcast of Olympic-sport television coverage in the country.

In November of 1997, the Atlantic Coast Conference and Disney's Wide World of Sports began their partnership when Disney hosted the 1997 ACC Men's Soccer Tournament. Disney has since hosted the 1998, 1999, and 2000 Baseball Blast, the 1998 ACC Outdoor Track and Field Championships, the 1998 ACC Women's Soccer Tournament, the 1999 ACC Volleyball Championship, and the 2001 ACC Spring Sports Festival.

As an additional aspect of the programming and event relationships, the five entities also committed to develop a special internship program for graduating minority student-athletes at Atlantic Coast Conference universities (currently only five). **Six interns will be selected each year**, with a start date of no earlier thanAugust 1. Two internships will consist of one year in the ACC Office in Greensboro, NC; one internship will consist of one year with FOX Sports Net South in Atlanta, GA; another internship will consist of one year with the Sunshine Network in Orlando, FL; and the final internship will consist of one year with Disney's Wide World of Sports in Orlando, FL. The intention of the programs is to provide the interns with a strong background in televised sports, athletics administration, or event management. The ultimate goal is to produce qualified candidates for employment in intercollegiate athletics, the television industry, or event management.

Selection of the six interns will be made by administrators from the Atlantic Coast Conference, Sunshine Network, FOX Sports Net South and Disney's Wide World of Sports.

CRITERIA

To be eligible for consideration, an applicant shall:

1. Be in good academic standing and scheduled to graduate by the conclusion of the spring semester of the current year. Special emphasis will be accorded by the Committee to outstanding overall academic achievement.

2. Have **lettered in a varsity sport** at his or her institution or **served as a student manager.**

3. Have declared his or her intention to enter into a career in athletics administration or television.

4. Have conducted himself/herself, both on and off the field, in a manner which brought credit to himself/herself, the institution, intercollegiate athletics, and the ideals and objectives of American higher education.

5. Interview in-person unless they receive prior approval from the conference office based on extenuating circumstances.

INTERESTED?

Please read the job descriptions of all available internships.

If you are interested in applying for the ACC Futures Internship Program, please send a resume and cover letter explaining your future plans to Spencer Welborn (welborn@uncaa.unc.edu) in the Academic Support Program by **November 8, 2011.**

In your cover letter, please indicate the following:

- Your future plans and how you feel the internship will better develop your skills
- Indicate the four internships that you are most interested and explain your ranking system of your choices.

All applicants will be reviewed and decided on by a group of administrators.

Send all Resumes/Cover Letters to:

Welborn@uncaa.unc.edu by November 8, 2011.

Disney Sports Job Description

Program Overview

Disney Sports Graduate Internship Program Overview
Established in 1996, the Disney Sports Graduate Internship Program provides an inclusive environment for graduate students, which centers on a variety of business practices in operating a sports complex. Supplementing their classroom studies, the twelve month internship provides a wide variety of practical learning and experiences.

Disney Sports Attractions, Inc. and its affiliates have numerous responsibilities that contribute to the success of their athletic events. Responsibilities include: programming, event management, marketing, merchandise, sponsorship, and facility operations at *ESPN Wide World of Sports*® Complex, as well as business planning and development for future growth of the complex and the sports business at the *WALT DISNEY WORLD*® Resort.

This environment provides the perfect laboratory for students in all aspects of sports to receive an integrated learning and working experience. No other location provides the diversity and magnitude of possibilities.

Eligibility Requirements

- Grade point average of at least 3.0
- Community involvement, volunteerism, and relevant experience
- Students will be selected based upon the recommendation of their college or university and personal interviews with representatives of Disney Sports.

Number of Positions Available
Each year Disney Sports will select thirty-five to forty interns for a period of 12 months.

Evaluations
We do not provide written evaluations from Disney Sports, however, we will complete any evaluations the school requires to be completed. If exams are part of a student's graduate requirements, proctoring is available through the Intern Program Manager.

Objectives

The goals of the Disney Sports Intern Program are to provide an inclusive environment for graduate students and special program students from across the country and the world to supplement their classroom studies with a wide variety of practical learning and working experiences. Disney Sports will work with colleges and universities to choose students based on established criteria and approved by the college.

Disney Sports Graduate Internship Program Curriculum

The ultimate goal of the program is to position the student as a top "draft pick" in the job market. After they have acquired the knowledge at their college or university, we will provide an environment for them to obtain real world experience.

Technical – Learning Component

The Disney Sports Graduate Intern Program will allow the student to learn from professionals in a real-world, work environment by partnering the student with professionals in the chosen disciplines who will serve as their mentor and teacher. The program will also include the educational component of classroom learning, group sharing, and on the job learning/training.

Leadership-Learning Component
Students will attend classroom-learning presentations once a month. Some presentations may be specifically tailored to the students, while others may be part of a combined learning program for all Disney Sports staff members.

The Disney Sports Graduate Internship program is designed as a twelve month sports management training program, with specific areas of focus for each quarter.

Quarter 1: Getting to know our world; focus on understanding the Disney Company and Disney Sports
Quarter 2: Exploring our world, refining skills & self discovery; focus on Sports Management
Quarter 3: Resume, networking & interviewing skills; focus on completing project work, building relationships
Quarter 4: Job opportunities, interviewing, & project work; focus on continued project and event work and job opportunities

The ACC Intern interviews are specifically being recruited for our Sports Event Management Team and Disney Created Sales Team. The following are the position descriptions:

Sports Event Management

- The intern will be mentored by the Sports Event Managers on the Disney Created Team, which creates, owns, and operates sporting events at *Disney's Wide World of Sports™* complex. They will learn the types of information the Sales Manager collects to determine the value of events, including the importance of both event profitability and strategic considerations, and observe event contract negotiations. The intern will be provided the opportunity to actively participate in the decision making process by assisting the Sports Event Manager in the following areas:
    - Researching existing events, gathering information on event history, merchandise sales, marketing tools, hotel forecasting, and sponsorship opportunities.
    - Conducting venue analysis and preparing logistics plans.
    - Assisting in event budget preparation and reconciliation.

- The intern will also be given the opportunity to observe and participate in the planning, organizing and managing of a variety of events in different sports at Disney Wide World of Sports Complex. The intern will be encouraged to fully participate in the management of events by assisting the Sports Events Managers in the following areas:
    - Interfacing with Facility Management and other Walt Disney World departments to insure that all requirements of the event are met.
    - Participate in client site visits and event itineraries.
    - Plan, implement, and execute events -- including setup, registration, guest communication, equipment inventory/ordering, labor planning, and post event recaps.
    - Hands on guest and client interaction in a high paced atmosphere.

Candidate should be detail oriented, able to multitask, willing to learn & go the extra mile, energetic, and take ownership of a project from start to finish.

Disney Created Sales

Intern(s) must have a passion for sports, prior playing and coaching experience is recommended but not a necessity. Intern(s) must be able to take initiative, be energetic, have a strong work ethic, be outgoing and be able to communicate with guests, staff, coaches and respective leader.

Sales Interns:

- Good knowledge of Field Sports including Soccer, Field Hockey, Lacrosse and Football.
- Have excellent computer skills including Excel, Word, PowerPoint, etc.
- Have financial experience with "Profit and Loss (P&L) statements.
- Be able to communicate via phone in a professional manner.

Generally, the intern will have the opportunity to observe the dynamics of choosing appropriate events for *ESPN's Wide World of Sports*® Complex. They will learn the types of information the Sales Manager collects to determine the value of events, including the importance of both event profitability and strategic considerations, and observe event contract negotiations. All interns will be provided the opportunity to actively participate in the decision making process by assisting the Sports Event Manager in the following areas:

- Researching existing events, gathering information on event history, merchandise sales, and sponsorship opportunities.
- Determine, based on event history, numbers, types and rate categories of hotel rooms to forecast for each event.
- Developing marketing plans and event itineraries.
- Conducting venue analysis and preparing logistics plans.
- Assisting in event budget preparation.

CABLE NETWORKS

POSITION DESCRIPTION

FOXSportsFlorida.com Digital Media Internship

Number of Positions Available: 1
Location: Ft. Lauderdale, FL

Company Overview

Sun Sports and FOX Sports Florida, part of Fox Sports, are regional networks that produce over 1000 live events per calendar year serving fans primarily in the state of Florida. Offering one of the most comprehensive regional sports TV schedules in the country, Sun Sports and FOX Sports Florida are home to Miami HEAT and Orlando Magic basketball, Florida Marlins and Tampa Bay Rays baseball, and Tampa Bay Lightning and Florida Panthers hockey, as well as, multi-sport coverage featuring the University of Florida and Florida State University.

FOXSportsFlorida.com is the web site servicing the networks, as well as the regional outlet for FOXSports.com.

This coveted internship provides an excellent environment for student-athletes to receive hands-on working experience in the sports/digital media industry.

Job Description

- Work in conjunction with the Digital Content Manager to create and implement an effective web strategy for FOXSportsFlorida.com.
- Communicate our weekly schedule of events with our support staffs in Houston and Los Angeles.
- Monitor news wires and post relevant stories for our teams.
- Edit/post/write original content for the site.
- Edit photographs and create graphics for use in our news stories.
- Create, upload, and program marketing elements for the site.
- Moderate live chats with regional talent and athletes.
- Assist the production department with creating web exclusive content.
- Meet with members of marketing, production, public relations, and sales in order to organize their contributions for the site.

Requirements

- Excellent written communication skills are essential. Journalism experience preferred.
- Good organizational and project management skills are needed.
- Must possess a working knowledge of sports including college football/basketball, MLB, NBA and NHL.
- Knowledge of Microsoft Office applications, including Word, Excel, and Outlook is necessary.
- Knowledge of Photoshop is preferred.
- Must have the ability to multi-task and work in a fast paced environment.

FOX Sports Florida / Sun Sports Florida Marketing Internship

Number of Positions Available: 1
Location: Ft Lauderdale, FL

Company Overview

FOX Sports Florida and **Sun Sports**, part of Fox Sports, are regional networks that produce over 1000 live events per calendar year serving fans primarily in the state of Florida. Offering one of the most comprehensive regional sports TV schedules in the country, **FOX Sports Florida** and **Sun Sports** are home to Miami HEAT and Orlando Magic basketball, Florida Marlins and Tampa Bay Rays baseball, and Tampa Bay Lightning and Florida Panthers hockey, as well as, multi-sport coverage featuring the University of Florida and Florida State University.

This coveted internship provides an excellent environment for students-athletes interested in all aspects of sports television to receive hands-on working experience in the industry, while making numerous contacts via networking opportunities with the college administrators plus executives in the MLB, NBA and NHL.

Job Description

- Working in conjunction with the Director of Marketing/Creative Services and the Marketing Manager on a marketing plan to promote both network brands and programming statewide.
- Implementing marketing commitments/elements of professional and collegiate broadcasting/marketing contracts with the HEAT, Magic, Lightning, Panthers, Marlins, Rays, UF and FSU to best position our brands and objectives with our properties including, but not limited to, promotions, presenting game sponsors, signage, special event marketing, on-site activations, promo spot production, joint merchandise opportunities, integrated sales efforts, client functions and community outreach.
- Conceptualize, compose, produce and edit specialty on-air promotions, radio spots, cross promotional materials, contest spots, client commercials, integrated sales marketing promotions and PSAs plus promote network programming through live reads, squeeze backs, elevators and lower thirds.
- Produce and execute promotional spots and/or commercials in conjunction with college and professional properties for branding, charities, and tune in messaging purposes.
- Managing event marketing. Ordering premium items for all network departments; schedule special events and receptions; and coordinate talent appearances.
- Work in conjunction with Affiliate Sales to present promotions and unique marketing opportunities to all cable and satellite systems in the state including bright house networks, Comcast and Direct TV.
- Assists in driving, compiling, and researching ratings for live sports events plus all existing original programming via network promotion, brand management, event marketing, on-air elements, spot production and web site exposure.
- Spearhead street and grass roots on-site marketing at FSU and UF football/basketball games plus NBA, NHL, MLB playoff games if necessary.

Requirements

- Good oral and written communication skills are needed.
- Good organizational and project management skills are needed.
- Knowledge of Microsoft Office applications, including Word, Excel, Powerpoint and Outlook is necessary. Knowledge of Photoshop is preferred.
- A working knowledge of sports including college football/basketball, MLB, NBA and NHL.
- The ability to multi-task and work in a fast paced environment is essential.

Production Internship

Number of Positions Available: 1
Location: Orlando, FL

Internship Overview

The intern will be involved in all aspects of planning, production, and daily operations for original programs airing on Sun Sports & FS Florida. The networks' production department creates a wide variety of programming, ranging from live professional and college game coverage, pregame and postgame coverage, and original magazine/profile style shows.

The intern's duties will include:

- Assist in show production -- log interviews and highlights, acquire b-roll video & pictures to support storylines, select music, etc.
- Coordinate production of weekly CFB game teases
- Assist in field production; work with feature producers and camera operators on event coverage and interviews
- Assist in content development, video shoots & edits of video content for company website & Social Media sites
- Participate in weekly planning meetings to coordinate ENG shoots & edits
- Regularly pitch content and segment ideas; help determine questioning and content for planned interviews, features, and shows
- Assist in writing and editing process, music cue reports & organization of tape & music libraries

The intern will also be given opportunities to observe and participate in various live sporting event production.

Company Overview

Sun Sports and **FSN Florida**, part of Fox Sports Net, are two regional sports networks serving fans primarily in the state of Florida. Offering one of the most comprehensive regional sports TV schedules in the country, **FS Florida** and **Sun Sports** are home to NBA's Miami HEAT and Orlando Magic, MLB's Florida Marlins and Tampa Bay Rays baseball, and NHL's Tampa Bay Lightning and Florida Panthers hockey, as well as multi-sport coverage featuring the Florida State University and University of Florida.

Sun Sports and FSN Florida also produce a variety of original programming to support our affiliated teams, "Inside the HEAT," "Inside the Lightning", "Inside the Magic," "Inside the Panthers" & "Inside the Rays" shows, which have garnered multiple Emmy awards.

This environment provides an excellent opportunity for students interested all aspects of sports television to receive hands-on working experience in the industry. The two networks produce over 1000 live events per calendar year.

Qualifications

Sun Sports/FS Florida aims to provide a positive environment for students to supplement their education with hands-on working experience in the television industry. This experience will prepare interns for a future career in sports television. Sun Sports / FS Florida works actively with colleges to ensure applicants meet necessary criteria set forth by the student's university.

Student Guidelines

Students will be selected for the internship based on an interview with a representative of Sun Sports / FSN Florida, letters of recommendation, and the student's passion and interest in starting a career in sports television. Our goal is for interns to learn through active participation in the television production process.

Are Your Athletes Well-Informed Regarding the Dangers and Legalities of Synthetic Drugs?

Spring has arrived! Hopefully you have successfully managed to Spring Forward, are enjoying all the March Madness that this time of year brings in intercollegiate athletics and feel confident that your student-athletes have or will experience a safe and enjoyable Spring Break. Unfortunately, it is a time of year we often hear from institutional clients about the increase in drug-related incidents among their student-athlete population. Many of these incidents are now involving the dangerous and common illegal designer street drug, K2. We want to ensure you have the most up-to-date information on the legality of this drug.

About one year ago the United States Department of Drug Enforcement Administration (DEA) made synthetic marijuana (commonly known as K2) illegal in all 50 states. As of March 1, 2012, the DEA extended the emergency ban for another 6 months because this designer drug continues to pose an imminent threat to public safety. Read here (http://www.mynewsletterbuilder.com/tools/refer.php?s=5840328879&u=26065777&v=3&key=02cf&skey=8486fc1ebf&url=http%3A%2F%2Fwww.justice.gov%2Fdea%2Fextension_of_temporary_placement_of_5_synthetic_cannabinoids_into_schedule1.pdf). In addition, it remains on the NCAA Banned Drug Classes List under the Street Drugs classification.

Even though synthetic marijuana is illegal, manufacturers are still spraying chemicals on plant material marked as "herbal incense," and are selling their product on the Internet and in retail outlets as a "legal" alternative to marijuana. In addition to K2, some of the brand names for synthetic marijuana include Spice, Blaze & Red X Dawn. Institutions must be aware of these messages and the possibility that student-athletes may be using synthetic drugs to avoid testing positive for marijuana. A testing panel that only includes marijuana (THC) will not detect K2.

The dangerous effects of these products are still being reported and seen by poison control centers, hospitals and law enforcement agencies across the US. According to Dr. David Kuntz, Executive Director of Analytical Toxicology at Clinical Reference Laboratory (CRL), some synthetic compounds have been known to be hundreds of times more potent than marijuana, with effects lasting for several hours to several days (Laboratory Testing of K2, Bath Salts, and Other Synthetic Drugs, Webinar presented February 8, 2012). Users are experiencing anxiety, elevated blood pressure, tachycardia, hallucinations, seizures, unconsciousness, tremors and numbness. Suicides and other use-related fatalities have been reported.

The DEA reports that this designer drug has become increasingly popular among teens and young adults. Results from the 2011 Monitoring the Future survey of high school students report 1 in 9 high school seniors (11.4%) reported having used synthetic marijuana in the past year second only to marijuana (Johnston et al, 2012). Read here (http://www.mynewsletterbuilder.com/tools/refer.php?s=5840328879&u=26065779&v=3&key=0221&skey=8486fc1ebf&url=http%3A%2F%2Fmonitoringthefuture.org%2F).

If your athletic department would like to know more about synthetic marijuana and other designer drugs, feel free to contact Drug Free Sport. If your institution is interested in testing for synthetic marijuana, we can help. Currently CRL is testing for the most common synthetic compounds and we are seeing a significant number of positives.

MEMORANDUM

TO: Football Staff Members

FROM: Clint Gwaltney

DATE: August 30, 2010

RE: Distribution of Tickets

Due to heightened concern by the NCAA regarding the distribution of tickets (complimentary, paid, etc.) by sport-specific staff members (including both coaches and administrators), the Department of Athletics is instituting a new policy by which identified staff members will be required to submit to the Ticket Office, in writing, the names of the individuals to whom they are providing their tickets to both home and away games. Please understand that this in no way restricts your ability to distribute your tickets as you choose, provided you do so in accordance with NCAA recruiting and extra benefit legislation.

This information should be submitted to Clint Gwaltney no later than 5:00 pm on the Monday following each game. For ease of submission, we have included below a form on which you are able to submit this information on a weekly basis.

We appreciate your cooperation as we increase our monitoring efforts in this area.

Date of Game:

Staff Member Name:

Complimentary Ticket Recipients:

Attach: TEXT.htm; image001.gif; image002.jpg; image003.gif

Coach,

It's my hope that this procedure and others will be better attended to as we enter our regularly scheduled meals during the week. I'm disappointed that this was an issue this afternoon as we reviewed and discussed the lunch door policy and procedure with Aramark just yesterday at our 1pm weekly meeting. It was noted that Jerry and/or Todd would ensure the side door entry was accessible.

I'll be sure to help keep an eye on compliance to this procedure. I have also contacted Aramark's director of Dining Services and asked that he specifically speak with his employees again and to take appropriate action if their performance is not acceptable.

As always, thank you for your support and feedback.

Subject: Brunch Food Service for Non-Football Students

Hello Jen:

In understand we are required to make the Training Table brunch available to all UNC students. To help prevent unauthorized diners/students total access to our facilities, we would like these individuals to use the exterior stairwell to the second floor. The second floor exterior doors should be unlocked when service is ready to begin (11am) and locked when service has concluded (1pm).

Since you, Jerry Greenwood, and Todd Utter all have a keys that work for this exterior door, please ensure that one of you unlocks and locks this door at the above noted times. With the crazy nature of James Spurling's schedule, this responsibility is best handled by you, Jerry and Todd.

Thank you in advance for your assistance.

Subject: SIGNING DAY

Folks,

First of all, I know that I have probably neglected some people in addressing this email, so if you know of anyone in your area who contributed to the overwhelming success of yesterday's SIGNING DAY webcast on www.tarheelblue.com , please forward this email to them ~ I would appreciate it very much.

I do not believe that I have ever witnessed a more impressive or a more classy production as I experienced yesterday. What a fantastic idea! Yesterday's activities speak volumes about the quality of people we have here at Carolina! Needless to say, all of your efforts contributed to the resounding success that Coach Davis and his entire staff experienced during their first of many "grand slam" signing days.

Thank you all for your efforts and enthusiasm with this production. There is no question in my mind that today, around the country, we are the envy of many institutions regarding what we did yesterday to make the 2007 Carolina Football Signing Day a most memorable occurrence.

I know we have many great Carolina moments in sport remaining during the 2006-2007 academic year, but I also know that we all can not wait to be in Kenan Stadium on September 1st !!

Thank you and GO HEELS !!

Regards,
Larry Gallo, Jr.

Butch,

Thanks for your note and kind invitation. I think the best we can do is to choose Aug 14. I'll be able to run over for a quick lunch and then I need to be at something from 1-2. When that's over, I can come join the practice for the last hour. Hope this is OK.

Thanks,

Holden

Dear Chancellor Thorp:

I hope this note finds you well and enjoying the transition into your new position.

When we last visited, we discussed the possibility of your stopping by our Training Camp. I wanted to follow-up and offer the following date options:

<!--[if !supportLists]-->* <!--[endif]-->Thursday, August 7th

<!--[if !supportLists]-->* <!--[endif]-->Thursday, August 14th

It would be my pleasure to have you join me at Kenan Football Center for lunch at 12n, followed by attending our practice at 1:30pm.

Please let me know at your earliest possible convenience if you are available to visit us on either of these dates. I look forward to hearing from you.

Best regards,

Coach Butch Davis

Subject: Agent Seminar

Andre,

Thank you so much for the wonderful Agent Seminar you put together for our football student-athletes and their parents/legal guardians. This program was by far the best that we have had at Carolina, and we appreciate all of your efforts. The comments that I heard from our players and parents/legal guardians regarding the program's presenters and its content were extremely positive.

To put it succinctly, this Agent Seminar was simply the best ~ it may me proud of what we as a department of athletics strive to do each and every day in caring for our student-athletes.

Thank you for a job very well done. You should be very proud of your organization of this program.

Take care and all the best!

Subject: THANK YOU!

Gentlemen,

Well, what does an old guy like me do when I wake up on a morning when for the first time in almost six months and I suddenly realize that we don't have a football game to look forward to? I say THANK YOU for the wonderful season and its experiences provided to many of us and to our fans by our football student-athletes and coaching/administrative staff!

You guys are simply the best to work with, and I cannot begin to express to you enough our appreciation and heartfelt thanks for the organizational qualities and professionalism you exhibited throughout the entire season, and especially during the last three weeks in preparation for the Meinke Car Care Bowl. The entire bowl experience was first class, and this can be attributed to all of you and your great efforts and perseverence.

We all will have to get accustomed to what we just experienced ~ Carolina and football bowl games are going to be synonymous for years to come.

Thank you, get some much deserved rest, and we appreciate you guys a ton! All the best!

Regards,
Larry

Gentlemen,

Well, what does an old guy like me do when I wake up on a morning when for the first time in almost six months and I suddenly realize that we don't have a football game to look forward to? I say THANK YOU for the wonderful season and its experiences provided to many of us and to our fans by our football student-athletes and coaching/administrative staff!

You guys are simply the best to work with, and I cannot begin to express to you enough our appreciation and heartfelt thanks for the organizational qualities and professionalism you exhibited throughout the entire season, and especially during the last three weeks in preparation for the Meinke Car Care Bowl. Corey, James, Karlton & Rick ~

I had the pleasure today to tour the Kenan Football Center and view first hand its renovations and additions. Needless to say, this project's results express loud and clear that there was great amount of foresight, planning, and care put forth by all involved.

I know that I can express with strong conviction that you four gentlemen are a huge part of the driving force behind this project's first class results! It is a facility that the University of North Carolina will be proud of for many years to come. I know that this construction has been a labor of love for all of you. Thank you so much for all that you continue to do for Carolina ~ I am privileged and pleased to be a member of Carolina Athletics, but most of all, I am glad that we all are on the same team ~ a team that is not about "I or me," but a team that is about "we and us."

GO HEELS AND THANK YOU!

Larry

P.S. I love the "close the deal room" just at one end of the 5th floor recruiting room ~ I think some of us saw this concept a few years ago at Clemson ~ "great stuff!"

Gentlemen,

It goes without saying that you don't prepare for postseason activities and a bowl game based upon whether you believe that you will win, lose, or tie.
Needless to say the bowl preparation orchestrated by all of you and your colleagues certainly adhered to this "philosophy."

You guys did everything first class, and your thoroughness and attention to details is unmatched. I believe many people think that bowl games and all associated activities just happen! Well, many of us know that is not the case.

I appreciate being associated with you and I am thankful that you all are true Tar Heels ~ the epitome of professionalism, dignity, and class!

Thank you for everything, and even though the game's final score was not what we all had been hopeful of, our football program continues to make great progress toward elite status due to the great leadership of Coach Davis and his entire football staff!

THANK YOU!

Take care and HAPPY NEW YEAR!

LSU vs. Carolina ~ September 4, 2010 ~ GO HEELS!

Each spring the Tenure and Promotion Committee arranges class visits for those up for review by the committee the following year. According to our records, that includes you. John and Al will visit you Copyright class and Richard and I will visit your Trademark class. We will all work with you to find a good time to visit. We typically like for the visitors to each sit in on two classes (preferably at the same time, but sometimes schedules don't work out). I'll leave it up to each visiting team and you to arrange some good times for the visits. It is also a good idea to send to the visitors in advance a copy of your syllabus and of any readings that are likely to be covered on the days of the visits.
The Committee will also arrange visits to your fall class. You will receive a letter from Dean Boger this summer outlining the timing and procedures for submitting your materials to the committee, but we wanted to go ahead and take care of spring class visits now.
If you have any questions, please be sure and let me know.

Subject: names of former student-athletes

Hello,
Thank you again for all the suggestions and ideas.
To date, here is the list of names of former student-athletes (faculty and staff) that now work at UNC:
Jim Dean
Mike Roberts
Joe Templeton
Sherry Salyer
Barbara Osborne
Layna Mosley
Gene Nichol
Debbi Stroman
Jan Boxill
Becca Battaglini
Sue Walsh
Jenn Kretchmar
Rick Steinbacher
Clint Wilhelm
Michelle Brown
Susan Maloy
Please let me know if you learn about any others (there may actually be more in Athletics/SAOF, Sports Medicine but we would have to evaluate if we want to include individuals from those groups).

Summary of October 2012 Leadership and Legislative Council Meetings

Below is a summary of activities from the October 2012 Leadership and Legislative Council Meetings. Please see the reports for each council for additional details on the items below. These reports are available on NCAA.org.

Leadership Council – October 11, 2012

Women's Basketball Recruiting Model

- The council discussed the subcommittee's women's basketball recruiting model recommendations and, with the exception of the earlier access (communication beginning September 1 of junior year of high school) and a proposal to allow all four coaches to be off-campus recruiting at the same time, the council supported the recruiting model in concept.
- The council noted that there appears to be support for not having a uniform start date for recruiting contact in all sports as proposed by the Rules Working Group and suggested the Rules Working Group reconsider this concept during its December in-person meeting.
- The council referred the women's basketball recruiting model back to the subcommittee and requested that they determine the best date for initial recruiting contact for women's basketball.

Men's Basketball Legislative Item

- The council recommended that the Board of Directors use its authority to adopt legislation to specify that in the sport of men's basketball, an institution shall not be charged with more than one recruiting opportunity per prospect on a given day, regardless of the number of contacts or number of athletically related activities observed that day.
- The council recommended that the Board of Directors consider applying the legislative change to all sports, including women's basketball.

Discussion of Transfer Issues.

- The council reviewed research data and background information on the history of the transfer regulations and agreed to focus on three areas: (1) Permission to contact, (2) One-time transfer exception and (3) Creating an academic nexus with the transfer regulations.
- The council encouraged the Leadership Council Transfer Issues Subcommittee to explore ways in which to develop additional disincentives for transfer activity as a means of changing behavior in the future.
- Such suggested disincentives could include the following: (1) Create a GPA standard for all transfers, with a failure to meet the standard resulting in the inability to receive aid and/or

practice in the year of residence, (2) Add a loss of a year of eligibility to the year-in-residence requirement or (3) In certain situations, impose a penalty (e.g., scholarship reduction) on institutions when a student-athlete departs (e.g., run off) and arrives (e.g., poached).

Miscellaneous Expense Allowance (e.g., $2000)

- The council agreed to request that the Board further define its desired goal in terms of the concept of a MEA, knowing the desired outcome will better position the Student-Athlete Well-Being Group, as well as the council, to develop alternative models for further consideration.

Rules Working Group

- The group expressed concern for the concepts related to the common start date for recruiting and proposals that may result in benefits going directly to high schools, AAU teams and/or certified events. As such, the council specifically requested the Rules Working Group reconsider Proposal Nos. 13-2 and 13-6.
- The council encouraged the membership to carefully review each of the Rules Working Group proposals and provide feedback to the working group prior to its December 17 in-person meeting.

Enforcement Working Group

- The council received a report of the final recommendations of the Enforcement Working Group that will be acted on by the Board of Directors during its October 30 meeting. The council noted its support for the recommendations.

Agents

- Due to the extended conversations relative to the Rules Working Group proposals, miscellaneous expense allowance and women's basketball recruiting model, the issue of agents was deferred until the January 2013 meeting.

Legislative Council - October 15-16

Championships/Sports Management Cabinet.

- The council received a presentation regarding student-athlete health and safety legislative recommendations. The council provided feedback and sought additional information regarding the student-athlete health and safety legislative recommendations. The Committee on Competitive Safeguards and Medical Aspects of Sport will review the feedback during its December meeting and will provide additional information for the council's review during its January 2013 meeting. During its January 2013 meeting, the council will determine whether to recommend that the Board of Directors adopt the proposals as emergency legislation or to consider the proposals in the next regular legislative cycle.

Legislative Review and Interpretations Committee (LRIC).

- The council approved the official interpretations (References: 7/30/12, Item No. 1 and 9/20/12, Item No. 1) recently issued by the Legislative Review and Interpretations Committee, as recommended. As a result of approving the September 20, 2012, official interpretation (Item No. 1), the council denied an appeal of that interpretation.
- The council declined to modify a previously approved official interpretation (Reference: 7/13/05, Item No. 1) related to the employment of basketball student managers at camps and clinics other than his or her own institution's camps or clinics.
- Finally, the council used its authority to modify two previous council-approved official interpretations as follows:

  a. Noncoaching Non-Sport Specific Staff Members Speaking at Events Involving Prospective Student-Athletes. (I) The Legislative Council determined that a noncoaching athletics department staff member who does not have sport-specific responsibilities (e.g., athletics director, compliance administrator, athletics academic counselor) may have direct contact with prospective student-athletes (or individuals yet to become prospective student-athletes) in conjunction with a speaking engagement related to NCAA rules, provided the event does not include a recruiting presentation and no recruiting conversations occur. Further, an institution may initiate such a speaking engagement, provided it does not occur during a dead period for any sport.
  [References: NCAA Division I Bylaws 13.1.8.1 (banquets or meetings at a prospective student-athlete's educational institution) and 13.1.8.2 (banquets or meetings at locations other than a prospective student-athletes educational institution); and an official interpretation (5/7/87, Item No. 14-c), which has been archived.]

  b. Coaches' Involvement in Local Sports Clubs – No Requirement to Count Evaluations. (I) The Legislative Council determined that a coaching staff member is not required to count evaluations for any observations of prospective student-athletes that occur while he or she is participating in permissible activities and acting on behalf of a local sports club (e.g., coaching or instructional activities, scouting future opponents).
  [References: NCAA Division I Bylaws 13.02.7 (evaluation) and 13.11.2.4 (local sports clubs); and an official interpretation (2/13/92, Item No. 4), which has been archived.]

Legislative Council Subcommittee for Legislative Relief – Injury/Illness of Family Member Waivers.

- The council approved the recommended guidelines for NCAA academic and membership affairs staff review of waiver requests of Bylaw 14.5.5.1 (four-year college transfers) when family injury or illness is part of the mitigation being presented for relief.

  - The new guidelines specify that relief may be provided if:
    (1) The reason for the transfer involves a medically documented life-altering/debilitating injury or illness (including mental illness) to a student-athlete's immediate family member (e.g., mother, father, sibling, child, legal guardian);
    (2) The new institution is within a 100 mile radius of the immediate family member's home; and

---

(3) The student-athlete demonstrates some regular ongoing care-giving responsibilities.

Student-Athlete Reinstatement – Key Items (Refer to Supplement No. 31 of Legislative Council materials for specific details of new guidelines).

- **Review of dollar-value withholding guidelines and restitution.** The NCAA Division I Committee on Student-Athlete Reinstatement reviewed and approved new dollar-value based withholding condition guidelines for student-athletes. The guidelines were adjusted to account for inflation. The committee reinforced that the adjusted withholding guidelines do not impact the committee guidelines for violations involving receipt of impermissible benefits from agents or prospective agents.
- **Development of guideline - new agent definition.** The committee reviewed the recent adoption of NCAA Division I Proposal 2011-23, which broadened the definition of an agent based on actions and activities in which the individual engaged, with the purpose of developing withholding condition guidelines for related violations. The committee determined the starting point for withholding will begin at permanent loss of eligibility and the presumption in these cases is that the prospective student-athlete or student-athlete had knowledge of the solicitation.

Other Legislative Issues and Actions.

- **Modification of Wording**. The council adopted a modification of wording (M-2012-3) to clarify that, prior to full-time collegiate enrollment, an individual may accept up to actual and necessary expenses for competition and practice held in preparation for such competition from a professional sports organization that sponsors the event.
- **Tabled Proposals**. The council reviewed two proposals that were tabled during its April meeting [Proposals No. 2011-84-A and 2011-85] and expressed preliminary support and agreed to take action on the proposals during its January 2013 meeting.

ATTACHMENT A

NCAA Division I Legislative Council Positions and Comments on NCAA Working Group on Collegiate Model – Rules Proposals

This attachment includes the Legislative Council's feedback and comments related to Rules Working Group proposals scheduled for consideration by the NCAA Division I Board of Directors in January 2013.

Proposal Number and Title	Intent	Feedback/Comments
RWG PROPOSAL NO. 2-1 -- PRINCIPLES FOR CONDUCT OF INTERCOLLEGIATE ATHLETICS -- COMMITMENTS TO THE COLLEGIATE MODEL	To establish the commitments to the collegiate model applicable to Division I institutions, as specified.	• General support for the shift from competitive equity to the commitment to fair competition, but some council members expressed concern that such a shift may widen the gap between those with significant resources and those with limited resources.
RWG PROPOSAL NO. 11-2 -- ATHLETICS PERSONNEL -- LIMITATIONS ON THE NUMBER AND DUTIES OF COACHES -- ELIMINATION OF RECRUITING COORDINATION FUNCTIONS	To eliminate legislation related to recruiting coordination functions that must be performed by head or assistant coaches.	General support. • Noted the potential impact on the proliferation of noncoaching staff members.
RWG PROPOSAL NO. 11-3-B -- ATHLETICS PERSONNEL -- LIMITATION ON SCOUTING OF OPPONENTS -- IN-PERSON SCOUTING PROHIBITED	To prohibit in-person scouting except for scouting future opponents participating in the same tournament at the same site or the same doubleheader event at the same site.	General support. • Noted current interpretations that permit a coach to attend contests of future opponents that involve a member of the coach's family would continue to apply.

Proposal Number and Title	Intent	Feedback/Comments
RWG PROPOSAL NO. 11-4 -- ATHLETICS PERSONNEL -- LIMITATIONS ON THE NUMBER AND DUTIES OF COACHES -- ELIMINATION OF LIMITATIONS ON NUMBER OF OFF-CAMPUS RECRUITERS AT ANY ONE TIME	To eliminate the limitations on the number of coaches who may recruit off campus at any one time.	General support. • Noted that, in bowl subdivision football and women's rowing, graduate assistant coaches would not be permitted to recruit off campus. • Noted ongoing review to potentially establish recruiting-person days in all sports. • Noted some concerns that at least one coach should remain on campus as a resource to current student-athletes, but recognized that each institution is in the best position to make such decisions. • Noted concern related to the work/life balance of coaches.
RWG PROPOSAL NO. 12-1 -- AMATEURISM -- DEFINITIONS AND APPLICATIONS -- ACTUAL AND NECESSARY EXPENSES	To establish a uniform definition of actual and necessary competition-related expenses.	General support. • Some concern expressed related to the application of "other reasonable expenses" to enrolled student-athletes. Suggested that examples or guidelines be provided to the membership.
RWG PROPOSAL NO. 12-2 – AMATEURISM – DEFINITIONS AND APPLICATIONS - CALCULATION OF ACTUAL AND NECESSARY EXPENSES	To specify that the calculation of an individual's actual and necessary expenses shall be based on expenses incurred during each calendar year (January – December), rather than on an event-by-event basis.	General support. • Noted potential application issues and the need for student-athletes to be educated appropriately. • Would apply to certifications requested for those enrolling on or after August 1, 2013.

Proposal Number and Title	Intent	Feedback/Comments

RWG PROPOSAL NO. 12-3 -- AMATEURISM -- DEFINITIONS AND APPLICATIONS -- LIMITED BENEFIT	To specify that prior to initial full-time enrollment at an NCAA institution, if an individual receives expenses from an otherwise permissible source (e.g., event sponsor, club team) that exceed his or her actual and necessary expenses by $300 or less, the eligibility of the individual shall not be affected; further, to specify that if a student-athlete engages in permissible outside competition and receives expenses from an otherwise permissible source (e.g., event sponsor, club team) that exceed his or her actual and necessary expenses by $300 or less, the eligibility of the student-athlete shall not be affected and the institution is not required to submit a self-report of the infraction.	• Some council members questioned whether the proposal would move Division I away from the amateurism principle.
		• Current student-athlete reinstatement policy does not require repayment for up to $300 over actual and necessary expenses.
		  ○ Some view the current process as appropriate to maintain the standard of amateurism.
		  ○ Others view the current process as bureaucratic and unnecessary.

RWG PROPOSAL NO. 12-4 -- AMATEURISM -- EXPENSES, AWARDS AND BENEFITS -- COMPETITION-RELATED EXPENSES FROM OUTSIDE SPONSOR	To permit an individual to receive actual and necessary expenses from an outside sponsor other than from an agent, a representative of an institution's athletics interests or a professional sports organization, as specified.	• Expressed concerns related to monitoring, particularly as it relates to local or community fundraising efforts that may involve boosters. • Noted that the legislation would extend the application from individual sports only to also include team sports.

Proposal Number and Title	Intent	Feedback/Comments
RWG PROPOSAL NO. 12-5 -- AMATEURISM -- PAYMENT BASED ON PERFORMANCE -- FROM AMATEUR TEAM OR EVENT SPONSOR	In sports other than tennis, to specify that an individual may receive payment based on performance or given on an incentive basis up to actual and necessary competition-related expenses from an amateur team or a sponsor of an event; further, in tennis, to specify that after initial full-time collegiate enrollment, an individual may accept prize money based on his or her place finish or performance in an athletics event.	General support.
RWG PROPOSAL NO. 12-6 -- AMATEURISM -- GENERAL REGULATIONS -- EXCEPTION FOR TRAINING EXPENSES -- GOVERNMENTAL ENTITIES	To specify that an individual may receive actual and necessary training expenses to cover developmental training, coaching, facility usage, equipment, apparel, supplies, comprehensive health insurance, travel, room and board that are provided by a governmental entity.	General support.
RWG PROPOSAL NO. 13-1 -- RECRUITING -- PROSPECTIVE STUDENT-ATHLETE -- STUDENT-ATHLETE ON SIGNING NATIONAL LETTER OF INTENT	To specify that an individual is no longer considered a prospective student-athlete once he or she signs a National Letter of Intent (NLI) (or, for an institution that does not use the NLI in a particular sport, the institution's written offer of admission and/or financial aid).	General support. • Recommends that the Rules Working Group consider extending the exception by which an individual would no longer be considered a prospective student-athlete for purposes of Bylaw 13 to those who sign the institution's written offer of admission and/or financial aid and those from whom institution receives a financial deposit in response to the institution's offer of admission.

Proposal Number and Title	Intent	Feedback/Comments
RWG PROPOSAL NO. 13-2 -- RECRUITING -- INITIAL DATE FOR COMMUNICATION AND IN-PERSON CONTACT	To specify that off-campus contact shall not be made with an individual (or his or her relatives or legal guardians) before the opening day of classes of his or her junior year in high school; further, to specify that communication (e.g., telephone calls, electronic communication) may begin with an individual on or after June 15 at the completion of his or her sophomore year in high school or the opening day of classes of his or her junior year in high school (as designated by the high school), whichever is earlier.	• Noted general support for a uniform date for initial contact and communication with prospective student-athletes for ease of monitoring, but concerns have been expressed by some sports that a uniform date may be too early. • Other dates for some sports may be appropriate. Earlier access not favored by the coaching community in all sports. • Noted that including the summer prior to September 1 of the junior year results in an additional cohort of prospective student-athletes that needs to be monitored.
RWG PROPOSAL NO. 13-3 -- RECRUITING -- DEREGULATION OF MODES AND NUMERICAL LIMITATIONS ON COMMUNICATION	To eliminate restrictions governing modes and numerical limitations on recruiting communication.	General support. • Noted student-athlete perspective that unlimited email and text messages may be sufficient and that unlimited telephone calls and other forms of communication may be intrusive. • Noted that prospective student-athletes and their families are in a position to control the amount of communication.

Proposal Number and Title	Intent	Feedback/Comments
RWG PROPOSAL NO. 13-4 -- RECRUITING -- ELIMINATION OF PUBLICATION OF ADMISSIONS AND GRADUATION DATA, BANNED DRUG LIST AND INITIAL-ELIGIBILITY STANDARDS	To eliminate the legislation related to publishing/providing admissions, graduation rates and NCAA Division I Academic Progress Rate data, banned drug list and initial-eligibility standards to prospective student-athletes.	General support.
RWG PROPOSAL NO. 13-5-B -- RECRUITING -- RECRUITING MATERIALS -- GENERAL CORRESPONDENCE ONLY	To prohibit sending or providing prospective student-athletes any printed recruiting materials other than general correspondence, as specified.	• Expressed a preference for Rules Working Group Proposal No. 13-5-A, which would eliminate the restrictions on recruiting materials. • Expressed concerns related to continued application of restrictions related to recruiting materials, including those on general correspondence and the restriction on attachments to electronic correspondence versus hyperlinks.
RWG PROPOSAL NO. 13-6 -- RECRUITING -- RECRUITING MATERIALS -- ADVERTISEMENTS AND PROMOTIONS -- PERSONALIZED PROMOTIONS PROHIBITED	To eliminate restrictions related to general advertising or promotional materials designed to solicit enrollment of prospective student-athletes, while maintaining prohibitions against personalized promotions.	General opposition. • Expressed concerns related to the potential that entities involved with the participation of prospective student-athletes (e.g., high schools, club teams) may seek to leverage advertisement income for access to prospective student-athletes. • Expressed concerns related to local decision making and management of expenses.

Proposal Number and Title	Intent	Feedback/Comments
RWG PROPOSAL NO. 13-7 -- RECRUITING -- PUBLICITY -- NO RESTRICTIONS AFTER COMMITMENT	To eliminate the restrictions on publicity related to a prospective student-athlete after he or she has signed a National Letter of Intent or the institution's written offer of admission and/or financial aid or after the institution has received his or her financial deposit in response to its offer of admission, as specified.	General support.
RWG PROPOSAL NO. 13-8 -- RECRUITING -- CAMPS AND CLINICS -- PROSPECTIVE AND ENROLLED STUDENT-ATHLETE EMPLOYMENT	To deregulate the camps and clinics employment legislation related to prospective and enrolled student-athletes, as specified; further; in football, to eliminate the participation prohibition on senior prospective student-athletes.	General support. • Noted potential issues related to a student-athlete operating his or her own camp or clinic. • Suggested review and adjustment of the effective date (either before or after summer). • Noted some concerns related to the numbers of football student-athletes who may wish to work at camps.
RWG PROPOSAL NO. 14-1 -- ELIGIBILITY -- ACADEMIC POLICIES AND INCONSEQUENTIAL LEGISLATION	To eliminate or modify specified Bylaw 14 regulations, including legislation that is directly supported by institutional academic policy.	General support. • Noted that a student-athlete will continue to be required to designate a degree entering his or her third year of enrollment to fulfill the percentage-of-degree requirement. The designation must be made pursuant to institutional policy.

Proposal Number and Title	Intent	Feedback/Comments
RWG PROPOSAL NO. 16-1 -- AWARDS, BENEFITS AND EXPENSES -- AWARDS -- AFTER INITIAL FULL-TIME ENROLLMENT AT THE CERTIFYING INSTITUTION	To specify that an institution, conference or the NCAA may provide an award to a student-athlete anytime after his or her initial full-time enrollment at the certifying institution.	General support.
RWG PROPOSAL NO. 16-2 -- AWARDS, BENEFITS AND EXPENSES -- EXPENSES TO RECEIVE NONINSTITUTIONAL AWARDS	To specify that a conference, an institution, the U.S. Olympic Committee, a national governing body or the awarding agency may provide actual and necessary expenses for a student-athlete to receive a noninstitutional award or recognition for athletics or academic accomplishments; further, to specify that actual and necessary expenses may be provided for the student-athlete's parents (or legal guardians), spouse or other relatives to attend the recognition event or awards presentation.	General support.
RWG PROPOSAL NO. 16-3 -- AWARDS, BENEFITS AND EXPENSES -- ACADEMIC AND OTHER SUPPORT SERVICES	To specify that an institution, conference or the NCAA may finance other academic support, career counseling or personal development services that support the success of student-athletes.	General support.

Proposal Number and Title	Intent	Feedback/Comments
RWG PROPOSAL NO. 16-4 -- AWARDS, BENEFITS AND EXPENSES -- MEDICAL AND RELATED EXPENSES AND SERVICES	To specify that an institution, conference or the NCAA may provide medical and related expenses and services to a student-athlete.	General support.
RWG PROPOSAL NO. 16-5 -- AWARDS, BENEFITS AND EXPENSES -- PERMISSIBLE BENEFITS -- STUDENT-ATHLETE'S RELATIVES OR INDIVIDUALS OF A COMPARABLE RELATIONSHIP	To revise all references to a student-athlete's "spouse," "parents," "family member" or "children" in Bylaw 16 to "relative or individual of a comparable relationship"; further, to permit a student-athlete's relative or individual of comparable relationship to receive benefits, as specified.	General support. • Noted that such a standard could result in a significant number of individuals meeting the standard and individuals being added or deleted from such a list on a regular basis. • Noted that the proposal's flexibility allows an institution to make reasonable judgments related to who is an individual of a comparable relationship. Reasonable judgments are those that are not contrary to the intent of the standard. • Suggested that the national office provide guidance to campus administrators to assist in making such judgments.
RWG PROPOSAL NO. 16-6 -- AWARDS, BENEFITS AND EXPENSES -- TEAM ENTERTAINMENT -- IN CONJUNCTION WITH PRACTICE OR COMPETITION	To specify that an institution, conference or the NCAA may provide reasonable entertainment to student-athletes in conjunction with practice or competition.	General support. • Expressed some concerns related to the general flexibility to provide entertainment in conjunction with practice as it relates to institutional management of expenses.

Proposal Number and Title	Intent	Feedback/Comments
RWG PROPOSAL NO. 16-7 -- AWARDS, BENEFITS AND EXPENSES -- EXPENSES PROVIDED BY THE INSTITUTION FOR PRACTICE AND COMPETITION AND NON-COMPETITIVE EVENTS	To specify that an institution may provide actual and necessary expenses to a student-athlete to represent the institution in practice and competition (including expenses for activities/travel that are incidental to practice or competition) and for a student-athlete to represent the institution in noncompetitive events (e.g., goodwill tours, media appearances, student-athlete advisory committee meetings).	General support.
RWG PROPOSAL NO. 16-8 -- AWARDS, BENEFITS AND EXPENSES -- NATIONAL TEAM TRYOUTS, PRACTICE AND COMPETITION	To specify that a student-athlete may receive actual and necessary expenses and reasonable benefits associated with national team practice and competition; further, to specify that an institution may provide actual and necessary expenses for an unlimited number of national team tryouts and championship events.	General support.

Head Coach Responsibilities Regarding Compliance with and Violations of NCAA Rules

What is a head coach's responsibility for ensuring NCAA violations do not occur within his/her program?

As of October 30, 2012, NCAA Division I Bylaw 11.1.2.1 will state that an institution's head coach is **presumed to be responsible for the actions of all assistant coaches and administrators who report, directly or indirectly, to the head coach**. A head coach shall promote an atmosphere of compliance within his or her program and shall monitor the activities of all assistant coaches and administrators involved with the program who report, directly or indirectly, to the coach.

If the NCAA enforcement staff alleges that a head coach violated Bylaw 11.1.2.1 as a result of his/ her involvement in a major/Level I or II violation(s), what could happen?

Pursuant to Bylaw 11.1.2.1, a head coach is presumed responsible for major/Level I and Level II violations (e.g., academic fraud, recruiting inducements) occurring within his or her program unless the coach can show that he or she promoted an atmosphere of compliance and monitored his or her staff. After August 1, 2013, if the Committee on Infractions finds that a head coach violated Bylaw 11.1.2.1, he or she may be suspended, pursuant to a show-cause order, for an entire season for Level I violations and half of a season for Level II violations. The number of contests that a head coach would be suspended from will depend on the severity of the violation(s) committed by his/her staff or the coach himself/ herself.

Are there secondary/Level III violations that may result in a suspension of a head coach?

Yes. Currently, for specific secondary violations that involve the sports of Division I men's basketball (e.g., camp employment) and football (e.g., impermissible recruiters) a head coach and assistant coaches may be suspended for committing secondary violations by the institution at the direction of the enforcement staff.

Beginning August 1, 2013, for **all sports**, suspensions of coaches for designated Level III recruiting violations will be released publicly by the enforcement staff. In addition, a history (most recent five years) of the coach's Level III violations will be made available to member institutions that request such information. The enforcement staff will identify, where possible, which Level III violations were self-reported by the head coach or his/her staff.

<u>Division I Men's Basketball</u>: Effective August 1, 2013, head coaches may be suspended for identified Level III violations committed by assistant coaches on or after August 1, 2013. The assistant men's basketball coach or staff member who commits the violation also would face suspension. The list of identified Level III violations as discussed with the National Association of Basketball Coaches (NABC) includes:

- In-person, off-campus contacts during a dead period [particularly during the National Letter of Intent (NLI) signing dead period].
- Exceeding the permissible number of opportunities with a prospective student-athlete.
- Intentional or significant game-day simulations and/or impermissible recruiting aids.
- Providing team gear or other inducements to prospective student-athletes.
- Violations that occur as a result of engaging nonscholastic third parties in the recruiting process.

- Collective recruiting violations and/or other intentional recruiting violations (e.g., multiple impermissible early phone calls, multiple impermissible contacts, providing inducements).
- Impermissible benefits to student-athletes or inducements to prospective student-athletes by third parties that the coaching staff knows about or is involved with.

Division I Football: Effective August 1, 2013, head coaches may be suspended for identified Level III violations committed by assistant coaches on or after August 1, 2013. The assistant football coach or staff member who commits the violation also would face suspension. The list of identified Level III violations as discussed with the American Football Coaches Association (AFCA) includes:

- In-person, off-campus contacts during a dead period (particularly during the NLI signing dead period).
- Exceeding the permissible number of contacts with a prospective student-athlete.
- Intentional or significant game-day simulations and/or impermissible recruiting aids.
- Providing team gear or other inducements to prospective student-athletes.
- Violations that occur as a result of engaging nonscholastic third parties in the recruiting process (e.g., prescheduled unofficial visits that are impermissibly funded, etc.).
- Collective recruiting violations and/or other intentional recruiting violations (e.g., multiple impermissible early phone calls, multiple impermissible contacts, providing inducements).
- Holding 7-on-7 events on an institution's campus and/or otherwise attending or being involved in nonscholastic events.
- Impermissible benefits to student-athletes or inducements to prospective student-athletes by third parties that the coaching staff knows about or is involved with.
- Providing a written offer of athletically related financial aid to a prospective student-athlete prior to August 1 of the prospect's senior year in high school.

Division I Women's Basketball: Effective August 1, 2013, head coaches may be suspended for identified Level III violations committed by assistant coaches on or after August 1, 2013. The assistant women's basketball coach or staff member who commits the violation also would face suspension. The list of identified Level III violations as discussed with the Women's Basketball Coaches Association (WBCA) includes:

- In-person, off-campus contacts during a dead period (particularly during the NLI signing dead period).
- Exceeding the permissible number of opportunities with a prospective student-athlete.
- Intentional or significant game-day simulations and/or impermissible recruiting aids.
- Providing team gear or other inducements to prospective student-athletes.
- Violations that occur as a result of engaging nonscholastic third parties in the recruiting process
- Collective recruiting violations and/or other intentional recruiting violations (e.g., multiple impermissible early phone calls, multiple impermissible contacts, providing inducements).
- Impermissible benefits to student-athletes or inducements to prospective student-athletes by third parties that the coaching staff knows about or is involved with.
- Providing a written offer of athletically related financial aid to a prospective student-athlete prior to August 1 of the prospect's senior year in high school.

Division I Sports other than Football and Basketball: Per the Working Group on Collegiate Model – Enforcement's direction, the enforcement staff is seeking feedback from coaches and sport associations affiliated with the NCAA regarding head coaches being suspended for identified Level III violations committed by assistant coaches on or after August 1, 2013. The following is the proposed list of Level III (secondary) violations:

- In-person, off-campus contacts during a dead period (particularly during the NLI signing dead period).
- Exceeding the permissible number of contacts with a prospective student-athlete.
- Intentional or significant game-day simulations and/or impermissible recruiting aids.
- Providing team gear or other inducements to prospective student-athletes.
- Violations that occur as a result of engaging nonscholastic third parties in the recruiting process (e.g., prescheduled unofficial visits that are impermissibly funded, etc.).
- Collective recruiting violations and/or other intentional recruiting violations (e.g., multiple impermissible early phone calls, multiple impermissible contacts, providing inducements).
- Impermissible benefits to student-athletes or inducements to prospective student-athletes by third parties that the coaching staff knows about or is involved with.
- Providing a written offer of athletically related financial aid to a prospective student-athlete prior to August 1 of the prospect's senior year in high school.

What can a head coach do to promote an atmosphere of compliance and monitor the activities of his or her staff?

The action plans described below may assist a head coach in promoting an atmosphere of compliance and monitoring the activities of his or her staff.

Action Plan: Communication

A head coach should demonstrate and document a commitment to compliance through ongoing communication with his or her athletics director, compliance staff and coaching staff. The outline below was created to assist a head coach with managing this dialogue.

- Meet with the chancellor or president to discuss his/her expectations for NCAA rules compliance.
- Meet with the athletics director to discuss his/her expectations for NCAA rules compliance. Suggested talking points:
  - Athletics director's philosophy and expectations on rules compliance.
  - Compliance resources for your program.
  - Program's shared responsibility with compliance staff.
  - Establish a plan in writing for continued dialogue with athletics director to discuss the institution's and program's compliance environment and expectations (e.g., regularly scheduled meetings with minutes, etc.).
- Meet with the compliance director to discuss his/her expectations for NCAA rules compliance. Suggested talking points:

- Compliance director's philosophy and expectations on rules compliance.
- Compliance resources for your program.
- Discuss compliance staff's and program's expectations for submitting rules interpretations and waiver requests, and determine how to best resolve any disagreements over the submission of such requests.
- Program's shared responsibility with compliance staff.
- Expectations for reporting actual and potential NCAA rules issues (e.g., immediate action; reporting lines).
- Establish a written plan for continued dialogue with compliance director to discuss the institution's and program's compliance environment and expectations (e.g., regularly scheduled meetings, etc.).
- Establish a written plan for ongoing dialogue between coaching staff and compliance staff to discuss key issues facing the sport and program (e.g., agents, initial eligibility, pre-enrollment amateurism, etc.).

- Meet jointly with the president, athletics director and compliance director to discuss the institution's and program's compliance environment and expectations.
- Meet with coaching and support staff to discuss head coach's expectations for NCAA rules compliance. Include a written document outlining the head coach's commitment to ethical conduct along with suggested talking points:
  - Program's ethical standards.
  - Expectations for reporting actual and potential NCAA rules issues (e.g., immediate action; reporting lines).
  - Review president's, athletics director's and compliance director's philosophy and expectations for rules compliance.
  - Expectations for regular communication between coaching staff and compliance staff.
  - Establish a plan for continued dialogue with staff to discuss the institution's and program's compliance environment and expectations (e.g., regularly scheduled meetings, etc.).
  - Establish ongoing dialogue with staff to review any issues involving prospective student-athletes and current student-athletes (e.g., agents, initial eligibility, pre-enrollment amateurism, etc.).

Action Plan: Monitoring

A head coach also should demonstrate a commitment to compliance through monitoring his or her staff's activities in consultation with the compliance staff. This may include staff meetings with agendas that specifically address compliance issues. The outline below was created to assist a head coach with managing his/her monitoring responsibilities.

- Actively look for red flags of potential violations. For example, if a prospective student-athlete takes an unofficial visit to campus, ask how the prospective student-athlete paid for the trip.
- Ask questions. For example, if a coach is suspicious of a third party or handler being involved in a prospective student-athlete's recruitment, ask questions of the coaching staff about the person. Emphasize the program's ethical standards, set the tone for what is and is not acceptable in dealing with third parties and keep a written record of the conversations.

- In consultation with the compliance director, create written procedures to ensure your staff is monitoring your program's rules compliance. Suggested procedures:
  - Assign a staff liaison(s) to the compliance staff.
  - Assign staff members to monitor specific areas of compliance (e.g., recruiting contacts, initial eligibility, amateurism, telephone contacts).
  - Regularly evaluate staff members to ensure their areas of compliance are monitored and that all responsibilities are executed in a timely manner.
  - Ensure that the entire program has adequate and ongoing compliance training and that there is a plan in place for discussion of important information.
  - Determine reporting lines for resolving actual and potential NCAA rules issues.
  - Determine reporting lines to alert compliance staff of issues involving prospective student-athletes and current student-athletes (e.g., agents, initial eligibility, pre-enrollment amateurism, etc.).
- Regularly solicit feedback from your staff members concerning their areas of compliance and the program's overall compliance environment in order to ensure that the monitoring systems are functioning properly. Ask the staff where the biggest areas for mistakes or ethical traps exist. Where is the grey area and how will the staff deal with it?
- Ensure that the program immediately notifies the compliance staff when concerns or red flags occur related to potential NCAA rules violations. A lack of immediate action by the head coach will be a significant factor in determining whether the head coach met the obligations imposed by Bylaw 11.1.2.1.

Additional Considerations: Documentation

A head coach should document the ways in which he/she has communicated and/or demonstrated a commitment to compliance and be able to produce documentation relating to the procedures in place for monitoring the program's rules compliance. Potential areas for documentation:

- Meetings with athletics director, compliance staff and coaching staff.
- Program's procedures for monitoring specific areas of compliance.
- Reports to compliance of actual and potential NCAA rules issues.
- Monitoring efforts undertaken by the program to ensure that the staff and student-athletes are complying with NCAA rules and compliance obligations.

Please note that the ultimate determination of whether a head coach has exercised proper control over his her program rests with the NCAA Committee on Infractions, and a failure to promote an atmosphere of compliance and/or failure to monitor determination will consider the unique facts and circumstances of each case. There is no way to set forth a checklist of items that will in all circumstances prevent a finding. Further, it is important that you consult with your athletics administration and compliance staff for additional guidance on how to tailor the best action plan for your institution.

Division I Committee on Infractions Case Precedent - NCAA Bylaw 11.1.2.1

The following information is a summary of some of the Division I Committee on Infractions case decisions that included a finding that the head coach failed to promote an atmosphere of compliance and/ or monitor compliance within his or her program and underscore how the action plans may be of use.

Key Takeaways

1. The head coach and staff have an obligation to report potential rules violations and actual rules violations to the administration.

    - Ask your staff about any red flags in a prospect's recruitment or a student-athlete's enrollment and immediately alert compliance.

2. The head coach has an obligation to ensure that his/ her program's monitoring systems are operating properly.

    - Ask your staff about any issues with the program's monitoring systems and alert compliance (e.g., timeliness, accuracy).

3. The head coach and staff have an obligation to consult with compliance staff to determine if their actions are consistent with NCAA rules.

    - Ask compliance staff before acting, especially in areas of grey.

4. The head coach and staff have an obligation to identify situations where circumstances could result in NCAA violations, alert compliance and monitor the situation closely.

Fact Scenarios: Bylaw 11.1.2.1 Violations

The following information summarizes some of the factors that were noted by the Committee on Infractions in public infractions reports when finding that the head coach failed to meet his responsibilities under Bylaw 11.1.2.1.

1. The head coach and staff knew that an agent/booster had a relationship with an elite prospect.

    - The head coach failed to alert the compliance staff and administration of possible improprieties between the agent/booster and prospect.

    - The head coach and staff knew of the prospect's limited financial resources and did not take any steps to determine whether the relationship between the prospect and agent/booster involved violations of NCAA legislation.

- The NCAA Committee on Infractions noted that Bylaw 11.1.2.1 does not require a head coach to investigate wrongdoing, but it does require the head coach to recognize potential problems, address them and report them to the athletics administration.

2. The head coach and staff knew that several incoming two-year institution transfer student-athletes were deficient academically and were taking numerous classes in a short period of time to meet eligibility requirements.

   - The head coach asked his staff only general questions about the prospects' progress and did not ask how the prospects were supporting themselves, how the prospects were traveling around town, how their classes were being paid for and how involved his staff was with the prospects.

   - The head coach failed to involve the compliance staff in monitoring the prospects' situations.

3. The head coach and staff encouraged a booster/high school coach to assist the program in recruiting and believed that the booster's employment as a high school coach superseded his status as a booster.

   - The head coach failed to consult with compliance to determine whether the booster's actions were permissible.

4. The head coach and staff were told that they could not have any involvement with an on-campus nonscholastic even, but the head coach provided the event operator with access to the program's boosters in order to solicit funding for the event.

   - The head coach failed to consult with compliance staff to determine if his interactions with the event operator posed any potential NCAA rules issues.

   - The head coach permitted his incoming assistant coaches to attend the event (during a quiet period) and failed to consult with compliance staff to determine if their attendance was permissible.

5. The institution's men's basketball program's telephone contacts were subject to heightened scrutiny due to past violations.

   - The men's basketball program's system for monitoring telephone contacts was not functioning properly because the coaches were submitting inaccurate information and were not submitting the logs in a timely manner.

   - The head coach had no knowledge that the system was not functioning, and when he was made aware that coaches were not submitting their logs in a timely manner, he failed to resolve the issue with his staff.

- The Committee on Infractions noted that promoting an atmosphere of compliance requires more than general comments about compliance responsibilities.

Fact Scenarios: Monitoring Expectations

The following information summarizes some of the monitoring considerations that were noted by the Committee on Infractions in public infractions reports that predate the adoption of Bylaw 11.1.2.1 (2005).

1. Institution failed to monitor a prospective student-athlete, who was living in the university's locale, the summer prior to initial enrollment.

   - The head coach failed to provide the institution with information about the prospect that would have facilitated the institution's monitoring efforts.

   - Effective rules compliance demands more than providing rules education and requires actually checking to see whether the staff complies with the rules.

2. A prospective student-athlete received impermissible housing from a current student-athlete the summer prior to initial enrollment.

   - The institution should have monitored the prospect's circumstances, particularly as it relates to lodging, because of the heightened possibility for rules violations.

   - The head coach should have inquired about the prospect's lodging and determined whether it was permissible.

3. A booster engaged in numerous impermissible contacts with a prospect and provided the prospect with $4,000 of cash payments while the prospect was residing in the locale of the institution during the summer prior to initial enrollment.

   - The monitoring efforts should have included rules education for the prospect, and the institution should have formally monitored the prospect's presence in the locale of the institution.

   - The prospect's status as an elite prospect should have created a heightened sense of awareness and prompted the institution to increase vigilance and closer monitoring.

4. An international student-athlete, who was a nonqualifer, received cash from the director of basketball operations in order to satisfy financial burdens.

   - The Committee on Infractions noted that when an international student-athlete is also a nonqualifer, who is ineligible to receive athletically related financial aid, the institution has a greater responsibility to monitor the student-athlete in order to avoid potential rules violations.

- Although the director of basketball operations concealed the payments and left no "paper trail," the institution does not avoid responsibility to monitor the situation since the institution had other information available to prompt an inquiry (e.g., nonqualifer, international student-athlete).

5. A booster assisted the men's basketball staff in its recruiting efforts by having impermissible recruiting contacts with prospective student-athletes.

- The Committee on Infractions noted that a head coach is expected to recognize potential NCAA violations and report them to the athletics administration.

- The head coach failed to recognize that the individual's promotion of the institution to prospects caused him to become a booster of the institution.

From: Laura Wurtz McNab, NCAA Associate Director of Enforcement <noreply@qemailserver.com>

To: Broome, Lissa L <lbroome@email.unc.edu>
Subject: EWG: Cooperative Principle Survey

Dear Selected NCAA Division I members:

In its October 2012 report to the Division I Board of Directors, the Enforcement Working Group shared recommended concepts and expectations regarding the cooperative principle. The working group is seeking your feedback regarding the cooperative principle concepts and recommendations in order to provide the Board with its final recommendations in April 2013. The October 2012 report and its attachments may be accessed at the following link.

http://www.ncaa.org/wps/myportal/ncaahome?WCM_GLOBAL_CONTEXT=/ncaa/ncaa/legislation+and+governance/working+groups/enforcement

NOTE: You will be prompted to sign in for this website. To register for the membership side of NCAA.org, click on the Membership Login button at the top right of NCAA.org. When the login field appears, click on the word Register to the right of where you would enter your email address. You must use an e-mail address from an NCAA member school or conference. Your password must be 6 to 12 characters in length. If you need assistance, please contact the NCAA at webhelpdesk@ncaa.org .

After reviewing the Cooperative principle - Attachment No. 5 (seven pages) to the October 2012 report, please complete a brief survey, which will provide important feedback to the Enforcement Working Group as to how to proceed with its recommendations to the NCAA Division I Board of Directors. The survey will be available until November 28, 2012.

It should only take 5 to 10 minutes to complete the survey. Please begin by following this link to the survey:

Take the Survey

Please note that the link above is a unique link and will work only for you. Do not forward it.

We greatly appreciate you taking the time to share your thoughts with us. Thank you!

Sincerely,

Laura Wurtz McNab
NCAA Associate Director of Enforcement/ liaison to the Working Group on Collegiate Model - Enforcement

Attach: Fwd_ Legislation Override_ Prohibition On In-Person Scouting.msg

---

Bubba and Lissa,
Attached is an email from Carlos regarding Proposal 11-3-B, prohibiting in-person scouting of opponents. I believe we were opposed to it, but the majority of ACC schools were in support. I don't know if our opposition is strong enough to submit an "override", but wanted to share this with you. Carlos also attached supporting letters from Men's and Women's Soccer, Men's Lacrosse, Women's Lacrosse, Field Hockey and Ice Hockey Coaches' Associations.
thanks,
~Beth

NCAA Override Procedures

NCAA Division I membership may override the adoption of legislation by the NCAA Legislative Council or the NCAA Board of Directors or the defeat of legislation by the Board of Directors. To call for such action, requests from at least 75 active Division I institutions (25 from the applicable subdivision for football-specific legislation) with voting privileges must be received in the NCAA national.

Override requests must be submitted electronically by using the Legislative Services Database for the Internet (LSDB*i*).

1. To access LSDB*i*, go to the NCAA Web site at www.ncaa.org.
2. Click on the "Membership Login" in the upper right-hand corner of the screen. Login to the membership side of www.ncaa.org using your previously established username and password. If you do not already have a username and password, click on "register" and follow the on-screen instructions. If you have forgotten your previously established password, click "Forgot your password?".
3. Click on "Governance" and then "Login to NCAA Business Apps."
4. On the NCAA Applications Authentication Service screen, enter the same email login ID and password used to log in to the membership side of NCAA.org.
5. Click on the link for LSDB*i* found on the My Applications tab within the Single-Source Sign-On System.
6. Click the "Proposals" tab.
7. Select "Institution/Conference Override Form" under the Forms section.
8. Complete Part A of the form by entering the author's name and title, email address and telephone number and selecting "Save Institution."
9. Select the proposals for which the institution would like to request an override vote and include comments.
10. Select "Submit to the NCAA."

Conferences may file requests for an override vote on behalf of their member institutions. To do so, the conference annually must submit to the Board of Directors its procedures to ensure that the chancellors or presidents have delegated this authority.

If at least 75 institutions (25 from the applicable subdivision for football-specific legislation) call for an override vote, the Legislative Council or Board of Directors will review its action. If the action is not changed, the matter will be set for a vote by the Division I membership. If 125 requests (50 from the applicable subdivision for football-specific legislation) for an override vote are received within 60 days after the adjournment of the Board's latest meeting, the affected legislation will be suspended until final action is taken by the membership.

Please contact Leeland Zeller at the NCAA national office if you have any questions.

IWLCA
Intercollegiate Women's Lacrosse Coaches Association

P.O. Box 1124
Grand Lake, Colorado 80447

January 11, 2013

To The NCAA Board of Directors:

On behalf of the Division I women's lacrosse coaches, the Intercollegiate Women's Lacrosse Coaches Association (IWLCA) is in agreement with the National Soccer Coaches Association of America (NSCAA) and the American Hockey Coaches Association (AHCA) in submitting a request that RWG Proposal 11-3-B, "to prohibit in-person scouting of opponents", be withdrawn from consideration for adoption.

Even though RWG-11-3-B states, *"In most cases, video of future opponents is readily available through institutional exchange, subscription to a recording/dubbing service or internet sites accessible to the general public",* this statement is more words that fact.

The facts are that the quality of video which is exchanged within Division I women's lacrosse varies greatly and in many instances simply subpar. The quality of the video equipment, camera location, videographer expertise, along with the many choices of exchange programs which are often determine by budgets instead of quality are just a few of the variables affecting the exchange process. This sincere lack of digital synergy is a reality for many coaches each and every week.

Additionally, restricting the ability of coaches to attend collegiate games within their own sport, on their own time, is something our coaches feel is detrimental to the growth of the game and their personal and professional development. With the immense growth of women's lacrosse and the coaching pool, the need for greater exposure to watch established programs compete is imperative.

In summary, the IWLCA again requests that RWG-11-3-B be withdrawn from consideration for adoption. The question of attending an intercollegiate contest should simply be an issue of a coach's individual choice regarding the use of their personal time and resources.

Thank you for your consideration, and for your efforts on behalf of intercollegiate athletics.

Sincerely,

Gothard Lane

Gothard Lane
Executive Director
Intercollegiate Women's Lacrosse Coaches Association

January 11, 2013

To The NCAA Board of Directors:

I am writing on behalf of the National Field Hockey Coaches Association to voice opposition to RWG Proposal 11.3B which would prohibit in person scouting of opponents.

When asked by the NCAA to solicit feedback from our members, we surveyed them and 88% of our members supported: 11.3A Deregulation of Scouting of Opponents which would deregulate the restrictions on scouting opponents. This option is best for field hockey and seems more closely aligned with the NCCA's new mission to reduce the volume of unenforceable rules.

Although much of our scouting is done through video interchange there are plenty of instances in which our coach's feel in person scouting is what's best for their team and game preparation.

In making your decision, please consider that the overall goal of the Rules Working Group was to deregulate and remove unenforceable rules. The NFHCA requests that the NCAA Board of Directors vote to defeat Proposal 11.3B so that field hockey coaches can continue to scout their opponents in person.

Thank you for attention to this proposal.

Regards,

Hilary Kuss, NFHCA, Assistant Executive Director

ATLANTIC COAST CONFERENCE

MEMORANDUM

February 15, 2013

SENT VIA EMAIL

TO: ACC Head Football Coaches

FROM: Brad Hostetter
Senior Associate Commissioner

SUBJECT: New NCAA Recruiting Rules

Commissioner Swofford requested that I advise you on the current status of the recruiting proposals recently adopted by the NCAA Board of Directors in January. We will also be able to discuss additional details on your regularly scheduled conference call Tuesday, February 19th at 11:00 a.m.

The NCAA Rules Working Group, chaired by Clemson President James Barker, has been working for over a year in an effort to minimize unnecessary and/or unenforceable NCAA rules. A few of the proposals have generated significant feedback within the football community since their adoption, including the elimination of rules that require phone calls to prospects to be from head or assistant coaches (Proposal 11-2). Two other adopted proposals generating conversation are the proposals to permit unlimited text messaging and phone calls (Proposal 13-3) and the deregulation of restrictions on recruiting materials (Proposal 13-5-A). A third proposal (Proposal 13-2) that would permit earlier access to prospects (July 1 following the sophomore year and contacts during the junior year of high school) has been tabled until the May 2013 Board of Directors meeting to allow for additional feedback from coaches associations. The adopted proposals are currently scheduled to become effective either July 1 or August 1, 2013 and would not be changed during a two-year period.

While the NCAA has not provided an official reaction to recent statements to the media by football coaches, I suspect that the NCAA staff may work with the Rules Working Group and/or the Board of Directors (chaired by Wake Forest President Nathan Hatch) to determine what options may exist at this point. I believe that there could be several options to consider, ranging from maintaining the current course to delaying implementation of single or select adopted changes. Because there would be several considerations for any possible option, it will be more beneficial to discuss this on the conference call, rather than list them here.

I look forward to updating you on Tuesday and hearing your thoughts on the current state of these changes.

cc: ACC Presidents

Topics of Discussion Related to RWG Proposals 11-2, 13-3, 13-5-A

RWG Proposal 11-2

Delay effective date for all sports. Recent feedback indicates significant concern with proliferation of athletics department staff as a result of this proposal. Delaying the effective date will allow the proposal to be considered with the broader issue of limits on non-coaching personnel during Phase II of the RWG process. Additionally, this will allow the Leadership Council's Football Recruiting Subcommittee to examine the issue and provide recommendations for that sport.

RWG Proposal 13-3

Option 1: Recent feedback has indicated a desire by the membership to examine 13-3 in conjunction with the on-going review of RWG Proposal 13-2 (initial date for recruiting communication and in-person contact) and recruiting calendars. Accordingly, **delaying the effective date for all sports** will allow the membership time to consider all of these issues together. Under this option, the membership would be subject to the current monitoring burdens in this area until a solution is reached on modifications to the proposal.

Option 2: **In all sports**, maintain current numerical limitations on recruiting communication, but eliminate restrictions governing modes of recruiting communication (e.g., maintain current telephone call limits and permit text messaging).

Option 3: **In the sport of football only,** delay the effective date to allow the Leadership Council's Football Recruiting Subcommittee to examine the issue and provide recommendations for that sport. **In all other sports,** the proposal will remain unchanged.

RWG Proposal 13-5-A

Option 1: **Delay effective date for all sports.** Recent feedback has indicated significant concern for the cost implications of deregulating the recruiting materials legislation. Delaying the effective date for all sports will provide the membership additional time to reconsider RWG Proposal 13-5-B or additional modifications to 13-5-A (e.g., maintaining current restrictions on athletics publications or game programs). Consequently, under this option the membership would be subject to the current monitoring burdens in this area until a solution is reached on modifications to the proposal.

Option 2: **Delay effective day for the sport of football only.** If the concerns referenced in option #1 relate primarily to football, this option would allow the membership to move forward with deregulating this area for all other sports while the Leadership Council's Football Recruiting Subcommittee further examines this issue.

In addition, the staff will issue a confirmation that the proposal does not impact Bylaw 13.2.1, which prohibits institutions from providing any tangible items to prospects that are not printed recruiting materials (e.g., CD, flash drive, Fathead wall graphic).

Subject:	INFORMATIONAL: Campus Bicycle Master Plan

UNC-CH Creates a Bicycle Master Plan

The University is developing a plan to shape the future of our campus biking environment.

We want you to participate!
Take our bicycle survey at http://go.unc.edu/Xg6q7. It'll only take 5 minutes.

Go to the bicycle master plan website at http://dps.unc.edu/bikeplan to comment on an interactive WikiMap located at http://go.unc.edu/d9Q3F and access other links of interest to the biking community.

The goals of the plan include:
* Making a safe place for everyone to ride - regardless of ability
* A bicycle network that will utilize both on- and off-street facilities through campus and link to off-campus routes
* Assessment of bicycle parking and other programs and policies to support bicycling
* Developing recommendations/projects for a connected bicycle network

The planning effort is led by Facilities Planning in partnership with Public Safety. The designer for the bike plan is Toole Design Group. The bicycle plan is being developed concurrently with one for the Town of Chapel Hill, so that there is seamless integration between the two plans.

Project Schedule
* Summer 2013: Obtain campus input through http://go.unc.edu/d9Q3F
* October 2013: Obtain input through campus open house
* December 2013: Plan complete

With your help, we can make UNC as good a place for biking as it is for basketball!

This email is sponsored by: Public Safety

Subject: Centers in self-study

Lissa and Gentlemen,
I have the unfortunate duty of writing a significant portion of the self-study report (please direct your rants about this process elsewhere; I more than feel your pain). We need a two-paragraph-or-so description of each of the centers. I understand that you are the respective directors—if I'm wrong on that, please let me know right away. I've pasted in below the paragraphs we had in the 2007 report. For each of these centers, I'd be very grateful if the directors would edit and update as necessary. David and Victor, would you please draft something comparable for Media and CLEAR?
There's no rush on this—I'm trying to get a very early start.
Thanks, and let me know if you have questions—
John

1. Center for Banking and Finance

Directed by Professor Lissa Broome, the Center for Banking and Finance was established in July 2000. It sponsors the North Carolina Banking Institute, a continuing legal education program and the *North Carolina Banking Institute* (a journal), both of which were founded in 1997. The journal publishes articles on cutting-edge issues of banking law and regulation written by law students; many articles are drawn from the national experts who speak each year at the Banking Institute. The Center's mission is to support the leadership role played by North Carolina-based financial institutions in the continual evolution of the national financial services industry. The Center provides a variety of support to banking lawyers nationwide.

Through its faculty and student research fellows, the Center for Banking and Finance provides top quality research and written materials on a pro bono or sponsored research basis. The Center has provided logistical and research support to the North Carolina Commissioner of Banks in various research efforts, including the commissioner's efforts to examine systematically and propose updates to the North Carolina banking statutes to ensure the effective, efficient and equitable regulation of banks and savings institutions. The Center advances the teaching of banking and finance both within the School and among practitioners. Since 1997, the Center has sponsored the annual Banking Institute which in recent years, has been held in Charlotte, the home to two of the nation's largest financial institutions. It also sponsors three other annual programs: *The Dan K. Moore Program in Ethics* (since 2002) with a focus on ethical issues of interest to corporate attorneys, *The Consumer Law and Consumer Credit Symposium* as part of the Festival of Legal Learning (since 2001) and *The North Carolina Bank Directors' College* with the North Carolina Office of the Commissioner of Banks (since 2002). The Center also sponsors the Director Diversity Initiative which is supported by external grants. The Initiative also sponsors an annual program, "Broadening Corporate Board Diversity: Earning a Board Seat."

2. Center for Civil Rights

The UNC Center for Civil Rights is committed to the advancement of civil rights and social justice, especially in the American South. It fosters empirical and analytical research, sponsors student inquiry and activities and convenes faculty, visiting scholars, policy advocates and practicing attorneys to confront legal and social issues of greatest concern to racial and ethnic minorities, to the poor and to other potential beneficiaries of civil rights advances. The Center engages in direct client representation as well as policy advocacy. Its advocacy focuses on education, housing and community development, economic justice and voting rights. The Center has a staff of eight and is directed by Clinical Professor of Law Julius L. Chambers; Professor of Law Charles E. Daye serves as the Center's Deputy Director. Ashley Osmond is the senior attorney and a search is underway to fill another full-time attorney position. There are also three attorney fellows on staff (recent law graduates) and an administrative assistant complete the staff.

The Center for Civil Rights produces a number of research materials and reports in addition to briefs and other legal documents. It has presented several important conferences such as *High Poverty Schooling in America: Lessons in Second-Class Citizenship* which brought together over 450 people to examine the best strategies to improve academic achievement, teacher quality and parental satisfaction in high poverty schools. Other conferences have focused on redistricting reform, school resegregation in North Carolina; mending the health care divide to eliminate disparities in access for minority and low income communities; and the historic exclusion of African American, Latino and other minority communities from the municipal boundaries of southern towns.

3. Center on Poverty, Work and Opportunity

Former Senator, John Edwards of North Carolina, brought the nation's attention to the issue of poverty during his first presidential campaign. He carried that work forward to the Center, which he founded in 2005 and directed until December 2006. Professor Marion Crain, who served as Deputy Director, became Director when Senator Edwards announced his candidacy for President of the United States. The Center is guided by an interdisciplinary Advisory Board made up of 18 distinguished professors from various schools and departments at UNC.

The Center's mission – to provide an interdisciplinary, nonpartisan forum to address issues of poverty and work – is exemplified by its activities. First, through speaker events and conferences, the Center raises the visibility of issues pertaining to the poor and provides an opportunity for scholars and thinkers from a variety of disciplines to present their research and connect with each other and practitioners in the field. Past events include a summit and two conferences, the most recent of which was held in November 2007, as well as numerous other panels and speakers covering such diverse topics as education, health, work and the aftermath of Hurricane Katrina.

Second, the Center has produced a number of publications that stimulate academic thought, incentivize further research and bring these important ideas to a larger audience. These include nine policy briefs that the Center commissioned in the fall of 2006; the publication of the proceedings of the Center's 2005 summit in *Employee Rights and Employment Policy Journal*; the Center's book, *Ending Poverty in America: How to Restore the American Dream*, a book whose powerful prescriptive essays are written by some of the nation's leading thinkers and policymakers; and the upcoming publication, in the spring of 2008, of the proceedings from the Center's latest conference in the *Georgetown Journal of Poverty Law and Policy*. The Center also received funding from the Park Foundation to produce a documentary about the working poor in America, and has chosen to focus this project on the invisible workers of the hospitality industry.

Lastly, the Center engages in partnerships, both within the university and with outside entities, in order to encourage an interdisciplinary approach and outreach. The New Orleans Recovery Initiative, undertaken in collaboration with other UNC departments and centers, is such a prototypical project, harnessing the talents of faculty and students at the university to assist the residents of New Orleans' District Six in their rebuilding effort after Hurricane Katrina.

4. Center on Law and Government

Created in 2006, the Center on Law and Government is directed by Professor Michael Gerhardt. It focuses on enriching both students' and the public's understanding of the skills required to address legal issues handled by non-judicial, public authorities. The Center coordinates several activities to broaden students' familiarity with how lawyers may contribute to the formulation of public policy. These activities include sponsoring public lectures by public officials other than judges and justices and providing real world, practical opportunities for students to work directly with federal and state legislators and executive officials. In all of its activities, the Center aims to enrich public discourse about legal decision making outside courts. One of its goals is to facilitate the participation of UNC law faculty as expert witnesses in legislative committee hearings or as pro bono consultants to state and federal legislators.

The Center not only spotlights this history but seeks to strengthen the public service commitment of the University, its faculty, students and graduates. The

School of Law has a number of renowned public law scholars who are knowledgeable about the areas in which public officials, other than judges, address legal issues. The Center provides opportunities for faculty experienced in public policy making to help to train students to work in the areas in which they have excelled. As the Center develops, it will provide opportunities for graduates working on public policy to share their expertise with current students. The Center will publicize the unique achievements of graduates working for and in the Congress, the White House, administrative agencies, Governors' offices, state legislatures, and federal and state agencies and departments.

Subject: [law_faculty] State Health Plan Changes for 2014

The State Health Plan will introduce a new health plan option – a consumer directed health plan with a state-funded health reimbursement account – and make significant changes to the current PPO 80/20 Standard plan. The Basic 70/30 plan will change only its name (to the Traditional 70/30 plan); no plan features or benefits will change.

For the 80/20 plan – which will now be called the Enhanced 80/20 plan -- changes include new and enhanced plan options, as well as surcharges on monthly premiums. The surcharges can be offset by wellness credits -- surcharges will be added to employee-only monthly premiums, and any wellness credits you earn can be used to reduce your monthly premium. Surcharges will not be added and credits cannot be earned for dependent coverage.

There are three ways to earn wellness credits towards your premium:

- attest to not smoking or participating in a cessation program
- designate a Primary Care Physician in the enrollment portal
- complete a Health Assessment prior to Oct. 31

The State Health Plan will credit the employee-only monthly premium for each of the above items. For example, if an employee completes the Health Assessment – but does not designate a Primary Care Physician and continues to smoke – they will still receive a partial wellness credit. To receive the full credit – a $50 reduction in your monthly premiums – you must complete all three wellness credit opportunities.
The Consumer Directed Health Plan (CDHP) is a high-deductible medical plan that includes a health reimbursement account (HRA) to help offset the deductible. After the deductible is met, the plan will pay 85 percent of in-network costs. The surcharges and wellness credits noted above will also apply to employee-only CDHP premiums.

What Can Employees Do Now?

- Health Assessment

Employees can take the health assessment now and it will apply to their enrollment in October. The assessment can be completed online (at www.myactivehealth.com/nchealthsmart) or by phone at 800-817-7044 (press option 2).

To take the assessment, you will need your current State Health Plan Subscriber ID. The assessment is a five-minute questionnaire about your medical history, lifestyle and preventive health. As part of the questionnaire, you will be asked your waist measurement, so you may want to have a tape measure handy.

By completing the assessment, you will learn about your risk for developing a chronic health condition, and receive personalized action items to improve overall health and well-being. As an added benefit, if you complete the assessment early, you increase their chances of winning a free iPad®. Now through October 2013, monthly drawings for an iPad® will be held for all eligible State Health Plan members who have completed their health assessment.

Employees can also designate a primary care physician for each covered member before enrollment begins. To do this, log in to https://unc.hrintouch.com and click on the Benefits icon, then click the View/Edit Information link under Section 1 Medical. The primary care provider edit link is listed under the Medical icon. Click the edit link and follow the prompts from there. You can change your primary care provider at any time. A primary care physician can also be set by calling BenefitFocus at 855-859-0966. In addition to the wellness credits, the State Health Plan will be introducing incentives to reduce copays and other costs for healthy choices…..more details to come.

Employee Communications
The State Health Plan will send information directly to employees' homes about the coming enrollment. This is expected to arrive in mid-September. In addition, both the August and September issues of HR Headlines will contain additional employee-focused information about the coming State Health Plan enrollment. We also plan to publish a special HR Headlines issue at the beginning of the enrollment period, which should help you get the word out to employees. We will, as always, send Formal Notice emails as well.

In early September, we will launch a special page on the OHR website with additional information, and we hope to make videos available on specific topics. Lastly, as noted above, Benefits will be holding informational sessions on campus. Dates and locations for those will be announced soon.
Best,
~Nadera

To: Broome, Lissa L <lbroome@email.unc.edu>
Subject: RE: Compliance Meetings

Hi Lissa –
Thank you for the note.
We haven't presented to SA's since we made the change to SAF policy. We have updated the slides for the meetings we had with six of our teams today.
Tom has been referencing the 40% reimbursement of the parking pass when he presents that portion. Along with the alarming figure that student-athletes received $47,000 in parking tickets last year!
I have forwarded Michelle the presentation. Lance presents the academic portion and believes it is up to date with ASPSA policies, but I would like Michelle's input any relevant changes she has made.
I spoke with Vince about the drug testing policy. Since it isn't finalized, we will approach the policy in the same manner as we previously had. Once it has been approved, we will distribute to all of our student-athletes via the ACS system so we can track that they all received it. We may also require them to acknowledge both the receipt of the document and all information contained therein.
See you Wednesday evening!

Subject: Compliance Meetings
Hi Marielle –
I was flipping through the squad meeting slides and noticed a couple of things:

- P. 18 – SAF fund. The reference is to clothing for full GIA Pell students. Didn't we change this to Pell students (dropping the full GIA requirement)?
- P. 19 – References portion of parking pass can be reimbursed. If the amount is 40% (that's what I remember), maybe you should say so since that might influence whether a student decides to buy a pass.
- P.24 – You might want to check with Michelle Brown and/or Spencer and Andrea (the new academic advisors working with student-athletes) about the sign-off requirement for dropping a class after 2 weeks. The advisor's signature might be required in addition to the counselor's signature. I'm not sure, but you should double-check if you haven't already done so.
- P. 25 – You might want to be sure Michelle Brown is in accord with this. I realize you are talking about the NCAA definition, but if ASPSA has any different rules, you may want to note them too.

On the outline of the topics to be covered at the evening sessions I saw the Drug Testing Policy. Just a few weeks ago, Joanna Cleveland was working on some changes to the policy. I think everyone in the group agreed with all the changes and the revision that she circulated (which generated some additional tweaks that we all agreed with). You should check with Bubba and/or Vince to be sure that Chancellor Folt has approved these changes to the policy. The policy provides that the AD and the Chancellor may make changes. I just want to be sure that Bubba got this before her and got her agreement.
Thanks,
Lissa

Carolina in the News

Here is a sampling of links and notes about Carolina people and programs cited recently in the media:

International Coverage

Obama's delicate path on race
Agence France-Presse (Wire Service)
...Obama's strategy was shrewd, according to Kareem Crayton, professor of political science at the University of North Carolina. "It's a rational decision, because most people in this country who are voters are not minorities. "In order to win, a candidate needs to reach out to both non-white and white voters alike," he said. But Crayton said that though America was now used to a black First Family, Obama's reticence on race is telling. "It highlights how intractable this issue of race is in political circles."
http://english.astroawani.com/news/show/obamas-delicate-path-on-race-20889

Cowan opens with a nice touch
The Sydney Morning Herald
...As to why he is still powerful, ESPN quotes one of his well-credentialled colleagues, Kevin Guskiewicz, a prominent University of North Carolina neuroscientist: "It's a question that many of us have asked, I mean, I really don't know." The significance is the possible culpability of the NFL in having someone of such little professional expertise in a position where he was most responsible for the welfare of so many players' brains.
http://www.smh.com.au/sport/the-fitz-files/cowan-opens-with-a-nice-touch-20130823-2sgxw.html

Dacia leads charge of emerging market cars in Europe
The Financial Times (United Kingdom)
..."It's the best example of a car developed for emerging markets that has been introduced in developed markets and has been a real success," said Professor Jan-Benedict Steenkamp, author of Brand Breakout, a study of emerging market brands that compete worldwide. "They were far ahead of any other car manufacturer." (Jan-Benedict Steenkamp is Knox Massey Distinguished Professor of Marketing in UNC's Kenan-Flagler Business School.)

National Coverage

Home or daycare? What's best for your kid?
The Chicago Tribune
...Still, on average, parents who use day care tend to have higher incomes and fewer kids than those who don't. They are "much more advantaged in almost every way," says Margaret Burchinal, a senior scientist in the Frank Porter Graham Child Development Institute at the University of North Carolina at Chapel Hill, who was also involved in the NICHD study.
http://www.chicagotribune.com/sns-wp-wp-slate-bc-parent22-20130822,0,6193589.story

Looking to Genes for the Secret to Happiness (Blog)
The New York Times
...Our genes may have a more elevated moral sense than our minds do, according to a new study of the genetic effects of happiness. They can, it seems, reward us with healthy gene activity when we're unselfish — and chastise us, at a microscopic level, when we put our own needs and desires first. To reach that slightly unsettling conclusion, researchers from the University of North Carolina and the University of California, Los Angeles, had 80 healthy volunteers complete an online questionnaire that asked why they felt satisfied with their lives.

Emeritus assisted living workers win $2.2 million settlement
Salon
Emeritus Senior Living, the country's largest assisted living company, has agreed to pay up to $2.2 million to settle claims that it routinely underpaid workers at dozens of its California facilities. ..."When it comes to the direct caregivers, you need to hire people who are dedicated to their work," said Sally Clark Stearns, a professor of health policy at the University of North Carolina Gillings School of Global Public Health. "To do that, you need to pay people sufficient wages to have a stable workforce."

Why My Wife and I Pulled Our Daughter Out of Soccer
The Huffington Post
..."Long-term (brain) damage may have less to do with the number of diagnosed concussions and perhaps more to do with the number of sub-concussive impacts to the head," according to Kevin Guskiewicz, a brain researcher at the University of North Carolina. To that point, the mound of research highlighting the dangers of soccer in general, and heading in particular, is growing larger.
http://www.huffingtonpost.com/ken-reed/why-my-wife-and-i-pulled-_b_3799186.html

A Russian Rite: Revisiting "The Rite of Spring" in Moscow
The Huffington Post
"What do you think of the theory of K and Kh?" asked Professor Severine Neff at a recent conference in Moscow. No, this was not a discussion of the periodic table or component proteins. It was simply an intriguing tangent for a musical event: "Anniversary of a Masterpiece: Centenary of The Rite," also known as "Reassessing The Rite Part II," an academic symposium at the Moscow Tchaikovsky Conservatory centered around the centennial of Stravinsky's ballet The Rite of Spring and a follow-up to last fall's acclaimed conference in Chapel Hill, NC.

Regional Coverage

Civil Rights Groups Call for Homeownership to Remain Available, Affordable
The Washington Informer (Washington D.C.)
...A recent joint study by CRL and the Center for Community Capital at the University of North Carolina found that among borrowers who took out a mortgage from 2004-2008 and were current through February of 2011, 60 percent of successful black mortgage borrowers would have been excluded if a 10 percent down payment had been required. A five percent down payment would have excluded 33 percent of successful black borrowers.

Speaker alleges Montclair's public schools are endangered
The Montclair News (New Jersey)
Montclair is the beachhead, and this is D-Day. That's what Walter Farrell, a professor of social work and a fellow in the Center for Urban and Regional Studies at the University of North Carolina at Chapel Hill, , said last night about the aims of the Broad Foundation, to a packed room of about 50 at the monthly meeting of the Montclair branch of the NAACP, held at the offices of Montclair Neighborhood Development Crop, 228 Bloomfield Ave..

State and Local Coverage

The Fiery Origins of Carolina Bays
The Coastal Review
..."Data negates they [Carolina Bays] were formed at the same time," said Anthony Rodriguez, associate professor of coastal geology at UNC's Institute of Marine Sciences in Morehead City. Rodriguez, along with then-graduate student Matt Waters and UNC associate professor, Michael Piehler, set out to study the origin and evolution of Lake Mattamuskeet, a conglomeration of multiple Carolina Bays in Hyde County on the Albemarle-Pamlico peninsula. Not only did they find no evidence linking these Carolina bays to a cosmic event such as the Younger Dryas extinction, but they also discovered that Lake Mattamuskeet is much younger, by at least 6,000 years, than Carolina bays were assumed to be.

Water monitoring report indicates high levels of bacteria in New Hanover Co. creeks
News 14 Carolina
One coastal county steps up their efforts to improve water quality. This week, New Hanover County released the 2012-2013 water monitoring report, and several creeks continue to show high levels of bacteria. ...Last year, the county reallocated some funds to try and find the source of the problem. They contracted with a marine sciences professor from UNC.

Why you should care about N.C.'s hospital transparency law
The Triangle Business Journal
This week, Gov. Pat McCrory signed a bill to increase hospital pricing transparency. Supporters and detractors mostly gave high level, pontificating responses, but one health care leader took a more nuanced analysis. UNC Health Care COO Dr. Brian Goldstein says that overall it's a "good thing for the public to know what hospitals charge, and what they get paid, for certain services." However he adds that he thinks the bill is "misnamed – or at least incompletely named."
http://www.bizjournals.com/triangle/blog/2013/08/why-you-should-care-about-ncs.html

UNC Health Care opens pelvic clinics in Raleigh, Hillsborough
The Triangle Business Journal
UNC Health Care has opened two clinics in Raleigh and Hillsborough focused on treating women suffering from pelvic disorders. The clinics are the only multidisciplinary care sites in North Carolina and are two of just a handful of clinics in the United States specializing in non-cancerous gynecological problems and female pelvic medicine, according to the health care system.
http://www.bizjournals.com/triangle/news/2013/08/22/unc-health-care-opens-pelvic-clinics.html

Unitary case documents due
The Daily Reflector (Greenville)
Today is the last day for attorneys to submit documents in the Pitt County Schools unitary status case that was heard in July. ...University of North Carolina Center for Civil Rights lawyer Mark Dorosin, the lead lawyer for the Pitt County Coalition for Educating Black Children which sued the school district, said both sides will wait until today to file their final findings of fact and conclusions of law.
http://www.reflector.com/news/unitary-case-documents-due-2141975
Vice Chancellor For Finance And Admin To Leave
WCHL-FM (Chapel Hill)
North Carolina's Vice Chancellor for Finance and Administration, Karol Kain Gray, announced Thursday she will leave the University in October. According to the Daily Tar Heel, Gray will work as the chief financial officer for Applied DNA Sciences, Inc. in New York. Gray is from Long Island and reportedly returning to New York for family reasons.

Carolina Performing arts pays tribute to gospel, fun, more
The Herald-Sun (Durham)
The Jazz at Lincoln Center Orchestra with Wynton Marsalis has always been a popular event in the Carolina Performing Arts season. In years past, the orchestra has sold out well before the date. This fall, conductor Damien Sneed and his choir, Chorale le Chateau, will join Marsalis and company when they present "Abyssinian: A Gospel Celebration," a performance of Marsalis' composition paying homage to the African-American church.

Issues and Trends

Public Colleges Endorse Obama Plans on Affordability and Accountability
The Chronicle of Higher Education
Public and state higher-education leaders gave their tentative approval to much of President Obama's proposals on Thursday to make colleges more accountable and affordable. After all, many of the ideas he presented are already being pursued at the state level. In a speech at the University at Buffalo, part of the State University of New York system, Mr. Obama recommended, among other things, Pell Grant "bonuses" for colleges that graduate many recipients of the grants and penalties for colleges with high dropout rates.

2013 NCBLJ Calendar – Volume 18				
Day	**Date**	**Time**	**Who**	**Action/Event**
Tuesday	8/20/2012	10:00 AM-Approximately 2:00 6:00 PM-Until	Staff & Editors	Orientation and Durham Bulls game. Meeting at the law school around 6 PM to carpool to the game.
Friday	8/23/2012	8:00 PM	Staff	Topic Proposals Due to Executive Editor
Sunday	8/25/2013	6:30 PM	Executive Board	Topic Assignment. Meeting location TBD.
Monday	9/2/2013	5:00 PM	Staff	Submit to assigned editors and Executive editor thesis, one-page outline, & DETAILED annotated source list (in Bluebook format)
Tuesday	9/3/- 9/4/2013	TBD	Staff & Editors	Meetings b/w Editors and Staff to review thesis, one page outline, annotated sources list
Thursday	9/5/2013	6:30 PM	Editors	Specialized Editing Workshop with Professor Broome
Monday	9/9/2013	5:00 PM	Staff	Submit to Editors Detailed Outline—sample available in orientation binders.
Wednesday	9/11/2013	6:30 PM	Staff & Editors	Writing Workshop and meetings b/w Editors and Staff to review Detailed Outline
Monday	9/16/2013	8:00 PM	Staff	Submit to Editors First Draft
Tuesday	9/17/2013	8:00PM	Editors	Submit to Executive Editor suggested batch based on reading of First Draft
Friday	9/20/2013	12:00 PM	Staff & Editors	Lunch meeting b/w Editors and Staff to review First Draft
Friday	9/27/2013	12:00 PM	Blue Batch	Submit to Editors Second Draft
Monday	9/30/2013	TBD	Blue Batch & Editors	Meetings b/w Editors and Blue Batch Staff to review Second Draft
Friday	10/4/2013	12:00 PM	Red Batch	Submit to Editors Second Draft
Monday	10/7/2013	TBD	Red Batch & Editors	Meetings b/w Editors and Red Batch Staff to review Second Draft
Tuesday	10/8/2013	12:00 PM	White Batch	Submit to Editors Second Draft
Wednesday	10/9/2013	8:00PM	Editors	Submit to Prof. Broome White Batch Second Draft
Friday	10/11/2013	8:00 PM	Blue Batch	Submit to Editors Third Draft
Monday	10/14/2013	8:00 AM	Editors	Submit to Prof. Broome Blue Batch Third Draft
Thursday	10/17/2013	TBD	Staff & Editors	Career Trek (details to follow)
Thurs-Fri	10/17-10/18/2013	NA	Staff & Editors	Fall Break
Sunday	10/20/2013	8:00 PM	Professor Broome	Return to White Batch Second Drafts
Mon-Tues	10/21-10/22/2013	TBD	Staff & Editors	Meetings b/w Editors and White Batch Staff to review Professor Broome comments on Second Draft
Wednesday	10/23/2013	8:00PM	Red Batch	Submit to Editors Third Draft
Sunday	10/27/2013	8:00PM	Professor Broome	Return Blue Batch Third Drafts
Monday	10/28/2013	8:00 AM	Editors	Submit to Prof. Broome Red Batch Third Draft
Mon-Tues	10/28-10/29/2013	TBD	Blue Batch & Editors	Meetings between Editors and Blue Batch Staff to review Prof. Broome comments on Third Draft
Sunday	11/3/2013	8:00 PM	Professor Broome	Return Red Batch Third Drafts
Mon-Tues	11/4/2013	TBD	Red Batch & Editors	Meetings b/w Editors and Red Batch Staff to review Professor Broome comments on Third Draft.
Monday	11/11/2013	8:00 PM	White Batch	Submit to Editors Publication Decision Draft
Wednesday	11/13/2013	8:00 PM	Blue Batch	Submit to Editors Publication Decision Draft
Monday	11/18/2013	8:00 PM	Red Batch	Submit to Editors Publication Decision Draft
Tuesday	11/26/2013	TBD	Editors	Preliminary Publication Decision. Meeting location TBD.

Suggested Topics

1. Topic Name: New Mortgage Rules Announced by the Consumer Financial Protection Bureau (CFPB)

Description: A paper could explore the new mortgage rules, how they will affect consumers, and how they will impact mortgage originators and mortgage servicers. The new rules cover topics such as: qualification and screening standards for loan originators, prohibition of steering incentives, prohibition of "dual compensation," prohibition of waiver of consumer rights, etc. Additionally, the author could identify what problem each change was targeting, and whether the rule is likely to remedy the problem, not remedy the problem, or create a new problem entirely. There are some questions whether the CFPB is extending the bounds of its delegated authority under Dodd-Frank.

2. Topic Name: The Consumer Financial Protection Bureau's (CFPB's) Fair Lending Guidance for Indirect Car Lenders.

**** PROFESSOR BROOME SUGGESTED TOPIC****

Description: The CFPB Bulletin provides that allowing car dealers to exercise discretion in marking up loan pricing might lead to lending price disparities made on a prohibited basis like race or sex. The CFPB also states that the "indirect lenders" (like the banks providing the auto dealer with the funds for financing the car purchase will be viewed as participating in any discriminatory pricing by the car dealers. There appear to be a whole host of issues with this bulletin (at least according to what I read in the Morrison & Foerster memo on the subject. A note could delve into some subset of those issues, depending on the author's areas of interest.

4. Topic: Office of the Comptroller of the Currency Revises Bank Appeals Process

Description: On June 7th, the OCC published revisions to its policy governing the manner by which banks may appeal agency decisions and actions. The revisions provide additional guidance on appealable matters and apply to national banks, federal savings associations, and federal branches and agencies. A note could examine why these new regulations were implemented and their potential effects on the appeals process. Of particular interest may be the change in scope of the role of the Ombudsman in the appeals process.

5. Topic Name: The Federal Energy Regulatory Commission: The Newest Bank Regulator

**** PROFESSOR BROOME SUGGESTED TOPIC****

Description: On July 30 FERC published its accord with JPMorgan Chase in which a unit of JPM will pay $410 million in fines and give backs to settle claims that the unit manipulated bids in the electricity market between 2010 and 2012. The banks claim that they were exploiting a loophole in the law, but FERC fined them based on an anti-manipulation rule that bans a scheme to defraud energy users.

  http://www.businessweek.com/articles/2013-07-17/ferc-flexes-regulatory-muscle-in-talks-with-jp-morgan

6. Topic Name: Financial Stability Oversight Council (FSOC) Designation of Nonbank Systemically Important Financial Institutions (SIFIs)

Description: The Financial Stability Oversight Council has already officially designated AIG and GE Capital as nonbank systemically important financial institutions, with Prudential Insurance and others likely to follow. An article could discuss the parameters for selection, the consequences for chosen entities, and the effect designation as a SIFI can have on the market position of nonbanks.

7. Topic Name: Office of the Comptroller of the Currency and the Federal Reserve adopt a final rule to heighten capital adequacy requirements and implement the Basel III framework.

Description: Under the final rule, minimum requirements will increase for both the quantity and quality of capital held by banking organizations. Consistent with the international Basel framework, the rule includes a new minimum ratio of common equity tier 1 capital to risk-weighted assets of 4.5 percent and a common equity tier 1 capital conservation buffer of 2.5 percent of risk-weighted assets that will apply to all supervised financial institutions. The rule also raises the minimum ratio of tier 1 capital to risk-weighted assets from 4 percent to 6 percent and includes a minimum leverage ratio of 4 percent for all banking organizations. In addition, for the largest, most internationally active banking organizations, the final rule includes a new minimum supplementary leverage ratio that takes into account off-balance sheet exposures. A student note could discuss implementation of the final rule and effects of the final rule on the banking industry.

Professor Broome's Note: This is a very large and complex topic. If someone wants to take it on, I would strongly suggest focusing on one aspect of the new capital requirements or some distinct and manageable sub-issue.

8. Topic Name: Overview of the Office of the Inspector General of the FDIC.

**** PROFESSOR BROOME SUGGESTED TOPIC****

Description: Most people are not aware of this Office and its function in reviewing bank failures that resulted in a loss to the FDIC. A note could place this office in context and discuss some of its recent work, including its Comprehensive Study on the Impact of the Failure of Insured Depository Institutions. Alternatively, a note could be more specific and review the Material Loss Reports of several recent bank failures or NC bank failures.

Sources:

- Official Website:
  http://www.fdicoig.gov/

9. Topic Name: The Future of Fannie Mae and Freddie Mac

Description: Fannie Mae and Freddie Mac have been under government control since 2008. There is much discussion over what should be the future of those institutions. The author should explore the creation and running of Fannie Mae and Freddie Mac and what led to their failure in 2008. The author should further examine how these institutions have been run since 2008, consider ideas in the current debate about the future of these institutions (i.e. whether they should be public or private), and what the pros and cons are of suggested reforms.

Professor Broome's Note: This is a broad topic, and should not be tackled unless you can come up with a discrete sub-issue.

10. Topic Name: Examination of Criminal Charges Stemming from the 2008 financial crisis.

Description: There have been relatively few convictions, or even pursuits thereof, for executives of financial institutions that were involved in the 2008 financial crisis. Often, it seems that lower-level mortgage originators are the only persons being punished. The author should explore what criminal actions have been pursued since 2008, against whom, and the outcomes of these actions. The author should then examine why certain individuals and entities faced charges, while others did not, and consider suggestions on how to make key players more accountable.

Professor Broome's Note: This topic is related to 11.

11. Topic Name: Getting Over Arthur Andersen: Coming to Terms with Indicting Corporations

Description: In 2002, the DOJ indicted Arthur Andersen, leading to the demise of a company with 28,000 employees. Since the Enron scandal there has been a clear policy against indicting major corporations. The DOJ will target individuals including top officers. In a pinch, they may even target a smaller subsidiary of a major company to limit the spread of the consequences. However, the current state of affairs has become unsustainable – we're running from our own shadow at this point. Many articles discussing the possibility of criminal liability for major corporates includes a paragraph on Andersen and often invokes the 28,000 employee figure; it's quickly becoming a mythic number. "Perhaps I should have seen that fanatic gleam, the quick response to a phrase, the magic sound of figures; Fifth Column, Third Force, Seventh Day." We need to get over it and come up with a rational approach for dealing with criminal behavior by major corporates. What is it?

Professor Broome's Note: This topic is related to 10.

12. Topic Name: United Kingdom Financial Services Act 2012

Description: A new financial regulation came into effect in the UK through the Financial Services Act 2012. Changes in the financial regulatory system include: (1) the Financial Conduct Authority and the Prudential Regulation Authority replaced the Financial Services Authority; (2) the Bank of England is to have overall responsibility for financial stability; and, (3) a new Financial Policy Committee of the Bank of England was created to assist the bank in achieving its financial stability objective. A note may examine significant changes to the UK regulatory structure as a result of the act and potential effects on financial services.

13. Topic Name: Jumpstart Our Business Startups Act (JOBS Act) and its impact on the banking community.

Description: The JOBS Act has started a growing trend among community banks in deregistering stock with the SEC. The JOBS Act increases the threshold for deregistration under the Securities Exchange Act to 1,200 shareholders from the previous threshold of 300 shareholders. Accordingly, community banks and bank holding companies with more than 300 but less than 1,200 shareholders are eligible to deregister with the SEC. A student note could investigate the rationale for this change under the Exchange Act and the implications on the banking industry, particularly whether less regulation of these community banks is advisable.

14. Topic Name: Impact of Increased Foreign Corrupt Practices Act Enforcement in Private Equity Investment

Description: FCPA enforcement has increased over the last few years. Now, the increase in enforcement is coming in the private equity investment field. Since the economic downturn, investment funds have relied on sovereign wealth funds to provide critical capital to their troubled investment firms. This increase in collaboration in Asia and Africa has exposed investment firms to bribery and FCPA risks. Of significant interest is how the private equity industry will be affected as a result of these risky investments.

15. Topic Name: Legalizing Money Laundering Abroad?

Description: In Argentina there is a financial crisis that is threatening to completely ruin the country. Through expropriations and contempt for international law they have pushed away normal allies and aligned themselves closer with Venezuela, Iran, and Cuba. They have recently passed a law that gives government sponsored amnesty to allow any amount of dollars from anywhere in the world to find a home in Argentina, with no questions asked. They justify this by expressing a need for hard currency. However, it appears that it is plagued by drug money and money launders. A student note could explore the effects of nations in crisis legalizing money laundering activities.

16. Topic Name: The "London Whale" Scandal

Description: JP Morgan reported trading losses from a series of derivative transactions involving credit default swaps. The initial loss estimate was only $2 billion, though the losses could actually total approximately $9 billion. Two former JP Morgan employees who allegedly helped hide the size of the so called "London Whale" will likely face criminal charges in the near future. This scandal has called firm risk management and internal controls into question and attracted significant public attention. The Senate held a hearing in March and termed the situation as a "Case history of derivative risks and abuses." A student note could examine the scandal from the perspective of criminal prosecution or regulatory oversight issues, among others.

17. Topic Name: The Effects of the Credit Card Accountability Responsibility and Disclosure Act of 2009

Description: In 2009 President Obama signed into law the Credit CARD Act of 2009 designed to "establish fair and transparent practices relating to the extension of credit under an open end consumer credit plan." Prior to the act, credit card companies (mainly big banks) were accruing enormous profits, substantially in the form of late fees and complex pricing structures that took advantage of consumers not understanding the complexities of the contract. The note could explore the explosion of credit card debt in America, the growth of bank's profits from credit card fees, what the CARD Act was designed to protect against, and whether the act was enough to protect consumers.

Many commentators have also argued that the law had little effect on credit card companies, but the normal downward pricing pressures from the recession has been the real reason there has been any improvement in consumer protection. The note could explore the statistics and explain whether or not the law actually helped consumers.

Furthermore, Elizabeth Warren has been a strong advocate for even more reform legislation.

Sources:

Professor Broome's Note: Topic would need to be narrowed and focused to avoid repeating articles that have already been written about the CARD Act. There are at least 2 articles published in the NCBI:

- Regina L. Hinson, Credit Card Reform Goes to College, 14 N.C. Banking Inst. 287 (2010).
- Jaclyn Rodriguez, The Credit CARD Act of 2009: An Effective but Incomplete Solution Evidencing the Need for a Federal Regulator, 14 N.C. Banking Inst. 309 (2010).

18. Topic Name: New EU Risk Retention Laws will likely affect cross-border transactions

Description: The European Banking Authority has recently released CRD IV designed to comply with Basel III requirements. CRD IV is a combination of Directives and Regulations. The way the risk retention rules are written, it is likely to affect current and future European investors in many of their investment holdings. The flip side is that US structured finance transactions will need to become CRD IV compliant in order to attract any European investor. This limits the marketability of structured finance transactions or the spread a manager may be able to acquire.

19. Topic Name: Virtual Currencies (this topic could be challenging, in terms of the degree of technical information in source documents)

Description: Regulators have targeted virtual currencies (particularly Bitcoins) and suggested stricter laws. Bitcoin is a distributed virtual currency that isn't controlled by any government. While it was initially popular for transactions of drugs and other illegal goods, its use has begun to enter the mainstream economy. Online there are lists of businesses that accept Bitcoin as payment; there are even lists of physical world merchants that accept Bitcoin for consumer goods and services. Bitcoin seems different from anything we've seen before. But that leaves open two questions when it comes to the law's treatment of Bitcoin. Is it really so different from anything we've addressed before that our current laws and regulations are inapplicable? Even if it is just that different, could our current laws and regulations be successfully repurposed to effectively manage the legal challenges presented by Bitcoin? FinCEN's regulatory guidance from last spring is an example of just such an attempt to fit Bitcoin into the legal framework we already have in place. New York's top banking regulator published a memo in August calling virtual currency the "virtual wild west for narcotraffickers and other criminals." The concern is that virtual currency exchangers were violating current New York regulations for money transmitters, which require posting collateral and periodic examinations.

20. Topic Name: Mobile Banking

Description: A student note could explore one or more of the issues that arise with the advent of mobile banking and mobile payment technology, for example: (1) regulators jostle for jurisdiction; (2) interaction with Articles 2 (Sales) and 3 (Negotiable Instruments) of the Uniform Commercial Code; and, (3) security concerns and application of anti-money laundering statutes.

21. Topic Name: SBA Financing in the Real Estate Context: A Viable Option, or a Repetition of Past Mistakes?

Description: Investors are starting to return to the real estate market in the search for good deals left untouched during the financial crisis. Some larger institutional investors are spinning out smaller investment units to take advantage of SBA financing options. Would these smaller units be interested in using SBA funds to take advantage of the resurgent real estate market? What are the particular challenges of SBA loans in this context?

Sources:

- CDC 504 loans, http://www.sba.gov/category/navigation-structure/loans-grants/small-business-loans/sba-loan-programs/real-estate-and-eq

22. Topic Name: SBA loans in the Bankruptcy Context: How Does Government Involvement Change Priority (can narrow to SARE cases if you want)?

Description: The Bankruptcy Code has an elaborate scheme for preference order, but the prevalence of SBA loans (to encourage risk-taking and small business growth) creates a somewhat different type of debtholder- the SBA. How will these loans be treated? Will the governmental agency get paid back before others? How are the courts treating this? How should the courts treat this?

Sources:

- SBA Loan Programs in general, http://www.sba.gov/loanprograms
- Commenter thread on declaring while holding the SBA note, http://www.sba.gov/community/discussion-boards/sba-loan-default-bankruptcy-option

- U.S. Court guide to Chapter 11, http://www.uscourts.gov/FederalCourts/Bankruptcy/BankruptcyBasics/Chapter11.aspx

Professor Broome's Note: I think the issue may be more the surprising result discussed in the B of A thread above. The borrower was an individual (not a business entity) and pledged his house as collateral for the SBA loan. Even though the SBA loan was discharged in the bankruptcy proceeding, the lien remained on the house. If this is true, it is interesting that the SBA could foreclose on the property when the underlying debt is discharged.

23. Topic Name: The American Airlines - US Air Merger: A Guide for the Uninitiated

Description: American Airlines is trying to get a reorganization approved, and part of that reorganization is a merger with U.S. Air. The reorganization has dipped into bankruptcy and has raised numerous issues. A student note could examine one or more issues related to the bankruptcy proceedings.

24. Topic Name: Eminently Reasonable: Using Eminent Domain on Underwater Mortgages to Force Writedowns

Description: A homeowner is underwater if he or she owes more on a mortgage than the home's current market value. While some such homeowners end up in foreclosure, others continue to pay on schedule. But by some accounts, the negative consequences of this dynamic spread past the contractual participants. Areas with high numbers of underwater homeowners suffer blight like conditions; communities struggle when a high percentage of the residents are underwater.

Prof. Robert Hockett at Cornell Law has proposed using eminent domain to take possession of the mortgage notes on these underwater homes. The note holder would be paid just under the fair market value of the home, the difference being accounted for with expected foreclosure costs. Then the home would be refinanced for the market value of the home (slightly above what was paid to the previous note holder) and the difference would go to the refinancing agent. The city of Richmond, California has decided to move forward with just such a plan.

This has angered a lot of very powerful people. Major banks and mortgage financiers have filed suit against the city seeking an injunction. The FHFA has threatened that communities that use eminent domain this way will be ineligible for FHFA mortgage insurance – as best I can tell this is a death-penalty level threat. It's possible I misunderstand the role of the FHFA, but I think this would bring residential sales to a stop in any community if the agency followed through.

Is this plan constitutional or does it violate the fair value clause? The banks opposed to this plan have argued that this unacceptably burdens interstate commerce, is that true? How much discretion does the FHFA have to make these threats and pursue policy? Will this plan work in recourse states? There's a thousand more directions this could take.

25. Topic Name: The Legacy of a Crisis: A Look Back at the Aftermath of the 2008 Recession

Description: It has been five years since the beginning of the sub-prime mortgage crisis and the resultant economic recession. In this time, much has been written about both the causes and the results of the global economic downturn that many countries are still feeling. A thorough analysis of the crisis and its aftermath would require two separate examinations. First, a compilation of opinions and analyses from experts in the field, both at the onset of the crisis and at the present, would provide a case study in how useful such "experts" are in diagnosing these economic conditions. Second, with the benefit of hindsight and a global perspective, perform a comparison of how different countries dealt with the recession within their own borders.

Professor Broome's Note: Extremely broad, although the first suggestion above about expert opinions on economic conditions is interesting. The second suggestion is extremely broad. I would suggest narrowing if you go this route.

26. Topic Name: The Student Debt Crisis in America: A Look at the Next Bubble, and Possible Solutions to Avoid It

Description: The current model of financing a college education in America has faced increasing scrutiny in the last few years. Recent developments surrounding the federal government's role in these education loans have brought to the forefront the issue of whether ensuring access to a college education should be a national priority. An analysis of the current cost of education vs. costs in earlier times, as well as a look at repayment rates and debt levels, would provide the context for an informed discussion. Another aspect of this discussion would be providing possible modifications and solutions to the current system, including the possibility of implementing newer methods of financing such as crowd-sourcing or micro-loans.

27. Topic Name: When the Party's Over, Who Pays the Bill: The Looming Issues Surrounding the Federal Reserve's Interest Rate and Inflation

Description: One of the Federal Reserve's responses to the recession of 2008 was to keep short-term interest rates at near-zero levels. Many pundits and analysts have predicted that this monetary strategy will have disastrous long-term consequences such as hyper-inflation and "stagflation." An analysis of this issue should include a review of the Fed's recent machinations, their desired results from these moves, and what actually has resulted from these interest rates. These results can then be compared to the predictions from industry observers, as well as similar results from past economic crises.

28. Topic Name: Social Media's effects on the Securities Industry

Description: The advent of social media has led to huge growth for businesses, entrepreneurs, and advertisers. However, it also presents problems in certain other industries, specifically in the securities field. Because of certain disclosure requirements, investment advisers, broker dealers, and executive officers have run into trouble with the use of social media. A student note could examine the interaction between social media and securities law and analyze the recent updates provided by the SEC regarding social media use.

29. Topic Name: Impact of 506(c) offerings on the securities industry

Description: Regulation D, 506(c) offerings are securities offerings that allow open advertisement and general solicitation, as long as they only sell to accredited investors. These new rules will be effective on September 23, 2013. The SEC has further proposed new rules that, among other things, require an SEC filing at the start of Rule 506 placements involving general solicitation, the inclusion of additional cautionary legends and disclosures in offering materials as well as a temporary (two-year) requirement to file general solicitation materials with the SEC. One problem with this type of Reg. D offering is that the issuer is required to prove that the investor is an accredited investor, qualified to purchase securities in such an offering. Many in the securities industry believe this new offering type will lead to an overwhelming increase in scam artists, and accordingly, increased incidences of fraud. Others believe the new offering will allow many small issuers to receive funding that was not previously available in the marketplace.

30. Topic Name: The Durbin Amendment

**** PROFESSOR BROOME SUGGESTED TOPIC****

Description: The Durbin Amendment was part of the Dodd-Frank Act. There's a comprehensive explanation of it here, http://www.nerdwallet.com/blog/banking/durbin-amendment-explained/. A recent development was that a Federal District Court Judge found that the Federal Reserve Board's rule implementing the Durbin Amendment and capping debit card transaction fees at 24 cents a transaction exceeded the Fed's statutory authority. This particular aspect of the Durbin Amendment is a moving target since the Federal Reserve Board may appeal the ruling. Nevertheless, it would be interesting to analyze the issues presented by the case and talk about what the result should be.

Sources:

- http://www.durbin.senate.gov/public/index.cfm/files/serve?File_id=4e5288ae-10ee-4c91-9fd7-db0ca14d1046

31. Topic Name: Section 1071 of the Dodd-Frank Act

**** PROFESSOR BROOME SUGGESTED TOPIC****

Description: Section 1071 of the Dodd-Frank Act, http://www.gpo.gov/fdsys/pkg/USCODE-2011-title15/pdf/USCODE-2011-title15-chap41-subchapIV-sec1691c-2.pdf, requires the CFPB to begin collecting certain business lending data for women and minority-owned businesses. The CFPB has not yet issued any rules, so a note could discuss the purpose behind this provision (was it to provide data to bring lawsuits based on impermissible discrimination, much like has been done with HMDA data in the mortgage loan area?) and how the CFPB should implement the provision. May be related in some ways to the Fair Lending Guidance for Indirect Car Lenders.

32. Topic Name: Interest Rate Swaps: Community Banks Ability to Circumvent Existing Regulation

Description: Despite the breadth and complexity of Dodd-Frank regulation of derivatives, there are comparatively few key regulations that affect an interest rate swap offered by a typical community bank. Existing regulations, according to many, can be mastered by a community bank. A student note could examine whether regulation needs to be implemented governing community banks to prevent such interest rate swaps.

33. Book Review:

Professor Broome's Note: An interesting exercise would be to focus on one or two events from the financial crisis and see how the various players who have written their own books view/remember/recount the same situation. For instance, Ben Bernacke (Fed Chair), Hank Paulson (then Treasury Secretary), and Sheila Bair (then head of the FDIC) have all written their own books. Do they tell the same or different stories? You could also compare to the contemporaneous news accounts of the particular event. Some possible events to focus on might be failure of Lehman Brothers, bail-out of AIG, Congressional approval of TARP funding and how it morphed from buying troubled assets to the government buying stock in banks, failure of Wachovia and purchase by Wells Fargo after Citibank's overture was shunted aside.

Some possible books to select from for a book review or if you are interested in this approach:

[Message was sent to entire Law School Community]
Dear Faculty and Administrative Assistants,
If you have an as yet unpublished Sakai course, please know that students are eagerly attempting to access their course materials!
Publishing is easy, the ' (Publish Now)' button is at the top of the left hand side menu. If you need help performing this task, or simply want it done for you, just send me an email.
Have a wonderful semester!

Subject: Update : Chancellor + Provost Meeting Rescheduled

Dear All,
I apologize that we've had great difficulty with setting a time for this meeting, but we've been at the mercy of the Chancellor's schedule. The meeting has once again been moved. It is now scheduled for Thursday, Aug. 29th at 10:30am. Since Jack's schedule is nuts the rest of the week, we'll go ahead with the planning meeting already scheduled for Monday morning at 11:30am. David, I hadn't had a chance to tell you about that meeting yet, but I nonetheless hope you can make it. Thanks.
Wishing you all great weekends-
Catherine

UNC Mass Mailing List

INFORMATIONAL: Study participants wanted for anal fissure study (18 and older and less than 75 years).

The UNC Center for Functional GI and Motility Disorders is now recruiting participants age 18 or older and ≤ 75to participate in a research study of a new drug named diltiazem for treating patients with anal fissure.
The study is 5 weeks long and requires 4 visits to the UNC CTRC clinic and a phone call visit.

You may be eligible to participate if you are over the age of 18 and less than 75 years, and diagnosed with an anal fissure that has not been treated recently. Participants will receive all tests associated with the study at no cost and will receive up to $425 for completing the study.
For more information about this trial, please contact: Renuka Kelapure(Renuka_kelapure@med.unc.edu)919-843-7892

This study (IRB #12-2219 received IRB approval from the UNC Office of Human Research Ethics on {1-10-13}.

Subject: INFORMATIONAL: Research opportunity for women who have had breast cancer

---

Dear UNC Community:

Have you or has someone you know been diagnosed with breast cancer and prescribed endocrine therapy pills (also known as anti-estrogen therapy), such as Tamoxifen or an Aromatase Inhibitor (e.g., Femara/Letroxole, Aromasin/Exemestane, or Arimidex/Anastrozole)?

UNC researchers want to understand how women make decisions about taking these drugs. In particular we are interested in hearing from African American women and women who decided NOT to take these medications or who stopped taking these medications early (before the end of the recommended 5 years).

The research study includes a 30-45 minute phone interview and an optional follow-up focus group for selected patients. Your participation will help us better design programs to support women with breast cancer as they make decisions about endocrine therapy. All participants receive $20 upon completion of the interview.

You may be eligible to participate if you:
-Have been diagnosed with early stage breast cancer
-Have estrogen receptor positive or progesterone receptor positive breast cancer
-Were prescribed endocrine therapy
-Either started taking these drugs and stopped, OR never started taking these drugs after they were prescribed

If you are interested and would like to find out if you are eligible to participate, please reply to this email or call Megan Roberts (919.966.7381, mclarker@unc.edu) or Diane Bloom (919.201.9975, bloom.diane@gmail.com).

The principal investigator for this research study is: Stephanie B Wheeler, PhD MPH, Department of Health Policy and Management & Lineberger Comprehensive Cancer Center

This research study has been approved by the University of North Carolina IRB (Biomedical IRB Approval Number, Date, Name: 12-1393, 08/19/2013, Conducting patient focus groups and provider interviews to understand endocrine therapy (ET) initiation and adherence among breast cancer survivors).

Subject: [law_faculty] Attendance tracking system
Attach: Attendance Tracking Tool Quick Guide - Faculty.docx

Hi all,

Attached is an instruction form on how to use the new attendance system. My apologies for it going out at the last minute; as you know, it's been one of the weeks.

The form is quite short, reflecting the ease of the program, and is worth a read. I'll just reemphasize that there are two main options if you choose to use the system: 1) require only that students use it to note an absence and, if you choose, a lack of preparation; 2) require that students affirmatively note days they are present or absent. Obviously, under either system and what we've done previously, there is the possibility that students will not report honestly (although the student version has an explicit warning that the system responses are covered by the honor code). So, if this is a concern, you will need to use other means to double-check responses (e.g., pass out a surprise sign in sheet in class, visual observations, etc.).

Please let me or Doug know if there are any problems or suggestions.

Thanks.

-Jeff

Using the Attendance Tracking Tool on My Carolina Law

Faculty can now track class attendance quickly and easily via My Carolina Law (MCL), using the new attendance tracking tool. Students can easily enter their attendance every day from the homepage of MCL (see page 3 for a screenshot of the student view). It is up to you whether you will require your students to log their attendance affirmatively each day (by selecting "Yes" or "Yes (Do Not Call on Me)") or only to log their absences (by selecting "No" or "No (Excused)").

After logging into https://my.law.unc.edu, click on the link for Class Attendance Management under Hot Topics (upper left column). You will be at this page:

Select the current semester and then select the course you'd like to track. Finally, click in the Class Date field and choose a date from the pop-up calendar.

The page will refresh automatically after you select a date and you will see a class roster below. You can sort the results by clicking on the "Attendance?" column (to reveal all the absences at the top of the list, for instance). By default, the page will display only 20 students at a time, but you can reveal all students on one page by selecting the option, " Show All Students On Single Screen." Any notes that students left for you will be displayed in the "Notes for Professor" column.

Class Attendance
Contracts (Law 204.2) - M. Weidemaier
Fall 2013
Monday, August 26, 2013

☑ Show Only Current Roster | ☐ Show All Students On Single Screen

1 2 3 4 5

Student	Attendance?	Notes for Professor	
Al-Zoubi, Sarah M.	(Not Entered)		
Anderson, Christina L.	(Not Entered)		
Armstrong, Melanie P.	(Not Entered)		
Asante, Nana	(Not Entered)		
Ball, Erin M.	(Not Entered)		
Barnett, Kevin E.	(Not Entered)		

(The "Show Only Current Roster "checkbox is intended for upper level courses during drop/add, since some students may wish to record their attendance prior to being officially enrolled in a course. Unchecking this box will reveal any such students' entries.)

If you wish to print a hard copy of the attendance for a given day or for the entire semester to date, use one of the export options below the roster:

Export Current Date's Class Attendance To Excel | Export All Class Attendance To Excel

You'll be prompted to save the file and can then open and print it from Excel.

Here is what the students see on the homepage of MCL:

They can enter their daily attendance quickly and easily from this homepage tool. If a student knows he or she will be absent at some date in the future, he or she can enter the information in advance by clicking View Complete Class Attendance and getting a monthly calendar view. Students can also print out a total class attendance record for all courses from the calendar view page. Students have received a separate handout that describes how they can use this new attendance tracking tool.

Also worthy of discussion is Dean Kent Syverud's proposal to solve the problem of the high cost of legal education by halving faculty compensation. He did not indicate if this included salaries of deans.

Why not abolish law schools altogether? For the price of a BarBri course, anyone can become a lawyer! Cheap and scary, as they say in Russia. :)

Hey, halving salaries may catch on across the board. More deflationary pressure is probably just what the economy needs!

Subject: RE: [law_faculty] Obama weighs in on legal education

---

Hello friends,

I don't want to impose on all of you with a post of any length, but I regret that the President has stepped into the debate the way he has. Standing on its own, the recommendation to cut law school to two years is not at all well considered. The President explained his reasoning:

"In the first two years, young people are learning in the classroom," Mr. Obama said. "The third year, they'd be better off clerking or practicing in a firm even if they weren't getting paid that much, but that step alone would reduce the costs for the student."

The cost of law school today is a big problem. But it's not the biggest and most basic problem, in my view. As those of you who follow my writing on this subject already know, What Matters Most right now is that there are way too many seats in way too many law schools, and thus many more new and recent law graduates than there are law jobs. See http://www.thefacultylounge.org/2012/11/what-matters-most-in-legal-ed-these-days.html; and http://www.thefacultylounge.org/2012/11/more-on-what-matters-most-or-paging-dr-pangloss.html.

So yeah, it would be really neat if people spent a year after law school "clerking or practicing in a firm." But most of them can't these days because there aren't anywhere close to enough positions. And if you cut the length of law school by one-third, you're just increasing (by quite a lot) the number of unemployed or underemployed new graduates who AREN'T getting useful practice experience, and are letting their time, effort and investment in law school lie fallow.

Are there ways of dealing with these problems? Sure, but they take planning, resources, and institutional and government support. Just cutting a year off law school is like burning the bridge you have (even if that bridge is being poorly used by a lot of travelers) and announcing it will be really great for anyone who manages to get to the other side of the chasm. One thing you might do is think about improving the bridge you have, as opposed to destroying it, congratulating yourself for saving everyone the toll you used to charge on that nasty old bridge, and wishing everyone the best with their journey.

Just one fella's rather tendentious views.

From:	nobody@notify.unc.edu on behalf of no_reply@unc.edu
Sent:	Sunday, August 25, 2013 8:16 PM
To:	Broome, Lissa L <lbroome@email.unc.edu>
Subject:	INFORMATIONAL: Library Welcome

Dear UNC faculty members,

Welcome back to campus! The Library staff and I look forward to working with you this year.

We invite you and your students to visit our newly redesigned website at http://library.unc.edu/. We've kept important research functionality, while also streamlining access to some of the most-used areas of the site and making it easier to explore the libraries. If you have questions or comments, we invite you to use the "Give Us Your Feedback" link at the bottom of the site.

It is also my pleasure to share with you the Library's new strategic plan, posted online at http://bit.ly/UNCLibStratPlan2013. This plan took shape through conversations with dozens of UNC faculty members, researchers, students, administrators, staff, and friends. We have identified as main themes: working with researchers at all levels throughout the research lifecycle; supporting transformative teaching and learning; and contributing to an informed and engaged community. We hope that the work of this plan will touch many of you in a positive and constructive way in the coming years.

Finally, we would like to remind you of some links that may be of immediate use to you at this point in the semester:

* If you have not already submitted your course reserves, here is how to do so: http://library.unc.edu/reserves/reserve-request-forms/

* Online tutorials that introduce your students to library research, including one about avoiding plagiarism, are here: http://library.unc.edu/instruct/tutorials/

* Librarians are ready to assist you and your students online and in person: http://library.unc.edu/ask/

With all best wishes for a great year,

Sarah Michalak
University Librarian and Associate Provost for University Libraries

This email is sponsored by: University Library

Subject: Reminder: James Dean wants to share "Student Athlete Initiative" with you

---

Hi there,

Here's a reminder that James (james_dean@unc.edu) invited you to a Dropbox shared folder called "Student Athlete Initiative" and left you this message:

"Colleagues - thanks for a great first meeting this week. This should allow you to access the Dropbox folder Student Athlete Initiative. There is one file in this box now, which is Debbi's draft framework for processes based on our initial meeting. She has already set up some initial interviews, and we will get back in touch when we are ready to meet again. This initiative will be announced tomorrow, so you may start to get some questions. All the best, Jim"

View folder

Enjoy!

Carolina in the News

Here is a sampling of links and notes about Carolina people and programs cited recently in the media:

International Coverage

Islamic scholars experience diversity of Muslim practices at U of T summer program
The Star (Toronto, Canada)
..."These are very real debates that we are having on the academic side, not only in the religious community," said Candace Nixon, an Islamic scholar at the University of North Carolina at Chapel Hill. "It's not so explicitly clear that particular verses mean different things." For Rahaya, the experience, though foreign at first, was ultimately eye-opening. "The idea behind that everybody is welcome, that we are the same — that's something that really touched me," she said.
http://www.thestar.com/news/gta/2013/08/25/islamic_scholars_experience_diversity_of_muslim_practices_at_u_of_t_summer_program.html

Impeach Obama: Red Meat For The Base, Or Do Republicans Have Evidence?
International Business Times
Recent talk from Republican senators and congressmen about impeaching President Barack Obama may serve just to rally the base while members are home on August recess, as a constitutional law expert says conservatives seem to be jumping the gun. ...Probably not, said Michael Gerhardt, a constitutional law professor at the University of North Carolina, Chapel Hill. "Being close to doing something wrong is not the same as doing something wrong," Gerhardt said. "When [Coburn] says perilously close, I guess he needs to be very clear about what he's talking about."
http://www.ibtimes.com/impeach-obama-red-meat-base-or-do-republicans-have-evidence-1397849

National Coverage

More padding the issue of concussions and better helmets
USA Today
...At the June annual meeting of the National Athletic Trainers' Association, University of North Carolina concussion researcher Kevin Guskiewicz told attendees said there is no such thing as a concussion-proof helmet. He said while Helmets prevent fractured skulls, he said, but the brain is still "sloshing around" after a hit. "So those neurons are still being stretched," Guskiewicz said, "86 billion neurons that we have in the human brain. ... There are no studies ... to show that in fact these devices (extra helmet padding) reduce concussion."
http://www.usatoday.com/story/sports/ncaaf/2013/07/30/concussions-college-football-nfl-guardian-caps/2601063/

Get Used to Embryo Adoption
Time
..."It was the idea that their child was walking around, and they couldn't ensure it was having a great life," says lead author Dr. Anne Drapkin Lyerly, an ob-gyn and associate director of the Center for Bioethics at the University of North Carolina at Chapel Hill. "If they couldn't raise that child, many felt that the responsible choice was to make sure they didn't become children in someone else's life. One woman told me, 'I'd rather have them destroyed than born.' "
http://ideas.time.com/2013/08/24/get-used-to-embryo-adoption/?iid=tsmodule

50 Years Later (Opinion-Editorial Column)
The New York Times
...Furthermore, there is some evidence that our schools are becoming more segregated, not less. A study this year by Dana Thompson Dorsey of the University of North Carolina at Chapel Hill found that "students are more racially segregated in schools today than they were in the late 1960s and prior to the enforcement of court-ordered desegregation in school districts across the country."

What Is Economics Good For? (Opinion-Editorial Column)
The New York Times
Recent debates over who is most qualified to serve as the next chairman of the Federal Reserve have focused on more than just the candidates' theory-driven economic expertise. They have touched on matters of personality and character as well. This is as it should be. (Alex Rosenberg is the R. Taylor Cole Professor of Philosophy and chair of the philosophy department at Duke University. ...Tyler Curtain is a philosopher of science and an associate professor of English and comparative literature the University of North Carolina at Chapel Hill.)

Students Lawyer Up
Inside Higher Ed
...Which is why a new law in North Carolina, the first of its kind, has them worried. The legislation, signed into law on Friday, guarantees any student at a public institution in the state the right to legal representation, at the student's expense, during campus judiciary proceedings. ...The law includes an exemption for academic charges such as plagiarism and for hearings where the panel issuing judgment is entirely student-run, as is usually the case at the University of North Carolina at Chapel Hill.

State and Local Coverage

A new world of sound
The Herald-Sun (Durham)
Grayson Clamp has lived in a silent world for three years, after he was born without hearing nerves in both ears. But after recent surgery at UNC, 3-year-old Grayson can now hear a dog barking. He can listen to his little brother beat a drum. He can hear the encouraging voices of his mother and father. Friday morning, U.S. Sen. Kay Hagan took a tour of UNC School of Medicine's CASTLE in Durham, also known as the Carolyn J. Brown Center for the Acquisition of Spoken Language Through Listening Enrichment.

Connecting The Dots On the News Roundtable
"The State of Things" WUNC-FM
...On the topic of civil rights, Omid Safi, Professor of Religious Studies at University of North Carolina at Chapel Hill, wanted to look back on the March on Washington, through a new lens. Safi analyzed Dr. Martin Luther King Jr. as a prophetic figure. "[Prophets] are supposed to challenge you and call you out... When it comes to Martin [Luther King], there's a reason we're interested in freezing him in that moment in 1963. We don't want to look at where he goes in the remaining five years of his life," said Safi.
http://wunc.org/post/connecting-dots-news-roundtable

At the table of brotherhood
The Herald-Sun (Durham)
... N.C. Sen. Floyd McKissick Jr. keeps a few framed photographs of his father on the wall of his law office along North Mangum Street. ...His father, with help from Thurgood Marshall, was the first black man to go to UNC Law School after successfully winning the case of Carmichael v. McKissick. He was a chairman of the Congress of Racial Equality and also fought many civil rights cases in court.

Small businesses lament end of NC tax deduction
The News & Observer (Raleigh)
...But while the tax break – which UNC Chapel Hill estimated to be a loss of $336 million a year – was designed to create jobs, it came the same year as 6,400 school employees lost their jobs to help balance the $20 billion state budget. And though the Senate initially capped income eligibility for the tax break, legislators later dropped it, making the deduction apply to roughly 460,000 business owners, including sole proprietors and active shareholders of S corporations, partnerships and limited liability companies.
http://www.newsobserver.com/2013/08/25/3136961/small-businesses-lament-end-of.html

UNC To Install Expansive Wi-Fi Network
WCHL-FM (Chapel Hill)
In a $3 million dollar initiative, all 46 of UNC's on-campus residence halls will have Wi-Fi access by the start of the Spring 2015 semester. Larry Hicks, Director of Housing and Residential Education, says the University will install 2,000 wireless access points that will provide coverage to 3.3 million square feet of residence hall space.
http://chapelboro.com/news/unc/unc-to-install-expansive-wi-fi-network/
Study provides demographic portrait of state's mental health workers
The Winston-Salem Journal
...According to a 2011 study by the Sheps Center for Health Service Research at UNC Chapel Hill, 28 counties do not have a resident psychiatrist, including Alleghany and Ashe.

Seventy counties do not have a child psychiatrist. Only six counties have geriatric psychiatrists, five have addiction psychiatrists and 13 have physicians that specialize in addiction and chemical dependency.

Seeing the Invisible: Desperate for dental work, an all-night wait (Opinion-Editorial Column)
The News & Observer (Raleigh)
At the end of July, the N.C. Dental Society's Missions of Mercy spearheaded a massive, two-day free clinic at the Crown Expo Center in Fayetteville. More than 200 dental professionals and nearly 500 other volunteers ensured that nearly 900 grateful souls received desperately needed extractions, fillings, dentures and cleanings – procedures that would have cost half a million dollars on the market. (Gene Nichol is Boyd Tinsley distinguished professor at the UNC School of Law and director of the school's Center on Poverty, Work and Opportunity.)
http://www.newsobserver.com/2013/08/24/3130709/desperate-for-dental-work-an-all.html

Issues and Trends

The legislature's 12.3 percent increase for out-of-state undergraduates is likely to cut applications (Opinion-Editorial Column)
The News & Record (Greensboro)
This looming increase in out-of-state college tuition is a head-scratcher. Is it about bringing tuition rates for UNC universities in line with other schools? Or is it all about raising money? Next fall, UNC-CH, N.C. A&T and two other public universities will have to raise out-of-state undergraduate tuition by a staggering 12.3 percent. All but two of the rest will have to raise out-of-state tuition by 6 percent. This increase was tucked into the budget that Gov. Pat McCrory signed into law last month.
http://www.news-record.com/opinion/columns/article_6240c72a-0c34-11e3-903a-001a4bcf6878.html

Permissiveness rampant (Letter to the Editor)
The News & Observer (Raleigh)
The sheer idiocy of certain aspects of our contemporary "culture" was highlighted by two Aug. 19 editorials: "Driving only" and "UNC's good call." Texting and talking on the phone while driving are in the category of driving while drunk as public hazards. Multi-sex sharing of college and university student housing defies all possibilities that student housing will provide a safe and sane atmosphere for students making the transition from home to the wider world. (Elizabeth S. Ryan, Chapel Hill)
http://www.newsobserver.com/2013/08/25/3130670/elizabeth-s-ryan-permissiveness.html

Study provides strongest clues to date for causes of schizophrenia
A new genome-wide association study (GWAS) estimates the number of different places in the human genome that are involved in schizophrenia, say researchers in the School of Medicine at the University of North Carolina at Chapel Hill. In particular, the study identifies 22 locations, including 13 that are newly discovered, that are believed to play a role in causing schizophrenia.

Subject: INFORMATIONAL: Adolescent Research Participants Needed

---

The University of North Carolina at Chapel Hill
Biomedical Institutional Review Board
IRB#: 12-1885
Renewal Approved: 8/20/2013

Research Study in Adolescents with (ACL) and without (Healthy) a History of ACL Injury are needed!

Title: The Effects of Anterior Cruciate Ligament Injury and Reconstruction on Lower Extremity Biomechanics and Symmetry in Adolescent Athletes

The UNC Department of Exercise and Sports Science is conducting a research study to examine lower extremity movement and loading patterns in adolescent athletes (between the ages of 12-18) after sustaining an ACL injury with or without meniscus involvement. In addition, Healthy physically active individuals between the ages of 12-18 with no prior history of knee injury are also needed for this research study.

Testing will be performed in a single testing session (~2 hours) in the Sports Medicine Research Laboratory on the UNC campus. A detailed motion analysis report regarding movement and loading will be provided to all subjects as well as key exercises to maintain or improve performance and prevent injury.
If you or someone you know meets the criteria for participation, please contact the primary investigator for more information and scheduling.
Eligibility criteria for this research study are as follows:

ACL Injured Subjects:
* Between the ages of 12-18 years old
* Sustained a unilateral (one side) ACL injury within the past 2 years
* Surgical Intervention ≥ 6 months ago
* Completed supervised rehabilitation
* Full medical clearance to participate in sport
o Currently participating in running, cutting, pivoting sports 2-3 times per week
* Have full medical clearance greater than 6 months ago
* No current symptoms (no redness, swelling, pain)
* No musculoskeletal injury within the past 6 months that limited physical activity for more than 2 days
* No known vestibular or balance disorder that would make it difficult to complete testing

Healthy Subjects:
* Between the ages of 12-18 years
* Currently participating in running, cutting, pivoting sports 2-3 times per week
* No previous history of knee injury
* No previous history of lower extremity surgery or fracture
* No musculoskeletal injury within the past 6 months that limited physical activity for more than 2 days
* No known vestibular or balance disorder that would make it difficult to complete testing

---

Vegetables such as broccoli, cauliflower, kale and cabbage are particularly rich in a plant chemical called sulforaphane (SFN) which boosts production of certain "defense" enzymes that increase the activity gene expression of antioxidant genes in the nose. In animals, the chemical protection from SFN helps prevent diseases associated with inflammation and cancer among others, and this is currently being studied in humans. Young broccoli sprouts have a particularly high level of SFN compared to other foods.

The purpose of this research study is to see if we can measure these changes in allergic, asthmatic volunteers treated with broccoli sprout homogenates (BSH) or a placebo homogenate. This will be done by obtaining a series of "nasal lavages" or rinses of the nose with salt water, as well as superficial biopsies of the inside lining of the nose, and collecting sputum cells from your lungs.. Using these samples, we will measure the amount of proteins and the amount of inflammation in the nose and and lungs and compare the results when you are given a broccoli sprout homogenate "shake" (high in SFN) or a placebo "shake" (which is low in SFN) during 3 days during 2 different study sessions.

Study requirements include:

* You must be between 18 and 50.
* You should be a healthy nonsmoker, and have allergies and mild asthma, but not require daily medications to control your asthma.
* You should not be pregnant or nursing.
* You should not have intolerance of or aversion to broccoli

Participation will up to 10 weeks, and will require 7 visits lasting 30 min to 3 -1/2 hours.

For additional information and a link to the study consent form, please go to http://www.med.unc.edu/cemalb/studies/

Interested individuals may send an email to marrt@med.unc.edu or call (919) 966-0759 to contact the study coordinator.

Subject:	INFORMATIONAL: Healthy women needed for pregnancy research study!

Are you or someone you know trying to get pregnant or about to start trying?

TIME TO CONCEIVE is a research study at the University of North Carolina at Chapel Hill that hopes to find a way to accurately measure a woman's fertility. Women between 18 and 44 years of age who are trying to become pregnant or about to start trying are eligible to participate in the study. Women are not eligible to participate if they or their partner have a history of infertility or fertility treatment.

Research study participants only need to attend ONE brief, on-site study visit in Chapel Hill or Raleigh. All other study activities are completed online.

Participants receive:
- Free pregnancy tests
- Free early pregnancy ultrasound
- Free online fertility tracker
- Monetary compensation for study activities

There are no medicines or pills to take and no changes to one's daily lifestyle or existing health care routine.

If you or someone you know might be interested in learning more about this study, you can visit our website at www.timetoconceive.org, call us at (919) 843-8246, or send an email to fertility@unc.edu with your name, phone number and times that you can be reached. All information will be kept strictly confidential.

We need your help! You can advance knowledge by simply sharing information about yourself while trying to get pregnant. Please share this message with friends or family.

The principal investigator for this study is Anne Z. Steiner, MD, MPH, Department of Obstetrics and Gynecology, University of North Carolina.

This study, Time to Conceive, and this message have received approval from the UNC Biomedical Institutional Review Board on 3/14/2008, study # 08-0423.

Subject: Tentative Outline for 8/29 Meeting with Chancellor Folt
Attach: 13Aug29.Chancellor&Provost.Outline.Draft1.docx

Dear Folks,
Here is a tentative outline of the proposed presentation to Chancellor Folt & Provost Dean that I promised earlier today. It is still very much subject to your suggestions and edits. It was very useful today for Kris to remind us that even very short, individualized presentations on all these points would make for a crowded, even an impossible, 90-minute presentation. We'll have to be ready on all issues on Thursday morning, but already ready to shift our direction and/or to jettison some issues to be sure of reaching others the Chancellor or the Provost might want to address in greater detail.
Allison has agreed to try to knit together portions of the PowerPoint for the UNC Campaign Committee presentation earlier this summer with some new visuals to augment the major written points, so that we'll have a handsome visual backdrop for the conversation we hope to encourage. Thanks for everyone's willingness to devote time in the coming days to this 'meet the chancellor' event.
Jack

Draft: 08/26/13

Outline of Presentation to Chancellor Carol Folt & Provost Jim Dean
UNC School of Law
Thursday, August 29, 2013, 10:30 am -12:00 pm

I. **Introduction** – Welcome; introduction of participants; format of the 90 minute conversation (JCB)

II. **Mission**: UNC Law's history, its broad impact on public and private life in North Carolina & the region, and its objective to become 'the finest truly public law school in the nation.' (CP & JCB)

III. **Centers & Institutes**: Initiatives that are exemplary of UNC Law's current scholarly, pedagogical, and policy objectives, including: the Center on Banking & Finance; the Center for Civil Rights; the Center for Law, Environment, Adaptation, and Resources; the Center on Media Law & Policy; the Center on Poverty, Work & Opportunity – plus Centers on Law & Government and the North Carolina Coastal Resources Law, Planning & Policy Center. (LB)

   A. The Center for Banking & Finance (LB)
   B. The Center for Media Law & Policy (DA)

IV. **The National Challenges Facing the Legal Profession, Law Schools, and Prospective Law Students**, including a decline in the demand for legal services, a decline in the demand for entering law graduates, even as tuition costs and average debt among law graduates have both grown dramatically in recent years (JCB)

V. **UNC Law's Strategy to Address the Current National Challenges**
   A. The Strategy to Recruit and Retain Strong Students (CP)
   B. The Strategy to Recruit and Retain an Outstanding Law Faculty (JH)
   C. The Strategy to Build a Meaningful International & LL.M. Programs (LB)
   D. UNC Law's Current Success in Reaching these Goals (JCB)

VI. **The Role of Curriculum Reform & Interdisciplinary Cooperation** in Meeting the School's Strategic Objectives (JH)

VII. **The Centrality of a New Law School Building in Meeting the School's Strategic Objectives** (JB & CP)

VIII. **The Need for Major Fundraising Efforts to Sustain the School's Goals** (KJ)

IX. **The Inevitable Political Challenges Posed by Civil Rights and Anti-poverty Initiatives** (JCB & CP)

X. **The Law School's Deservedly Strong National Reputation**, & the Challenge Presented By *US News* Metrics for All Public Law Schools (JH)

Subject: FORMAL NOTICE: University Teaching Awards

August 23, 2013

TO: Faculty, Staff and Students

FROM: Dr. Pam Joyner
University Teaching Awards Committee Chair

SUBJECT: Nominate an Outstanding Teacher, Mentor, or TA

Do you know of an outstanding teacher, mentor, or teaching assistant who has inspired you at Carolina? Who has helped you learn, grow, and become excited about your education? Who is an outstanding educator that deserves recognition?

Each year, UNC formally acknowledges the central role of teaching and mentoring by recognizing faculty, staff and students. The University Committee on Teaching Awards offers numerous awards based on nominations by members of our university community.

Please take a moment to think of those who are deserving of these awards and nominate them via the website: http://provost.unc.edu/teaching-awards.

Please submit all nominations online.

No individual may receive more than one award.

NOTE: YOUR NOMINATION MUST INCLUDE A LETTER TELLING US WHY THIS TEACHER DESERVES THE AWARD. IF ONLY A NAME IS SUBMITTED, IT IS INVALID AND CANNOT BE CONSIDERED.

You may address questions to me (919-962-0030/ pam_joyner@unc.edu or to Ms. Debbie Stevenson in the Office of the Provost: (962-7882 / debbie_stevenson@unc.edu).

The deadline for submitting nominations is October 1.

The committee will review the nominees, collect additional information about their teaching and recommend winners to the Chancellor. This year, we will select recipients for six types of awards:

Board of Governors Award for Excellence in Teaching: This award is given by the Board of Governors to a tenured faculty member on each UNC campus for excellent and exceptional teaching at the undergraduate level over a sustained period of time.

Distinguished Teaching Awards for Post-Baccalaureate Instruction: Four awards are given to faculty members for exceptional teaching of post-baccalaureate students.

Awards to Faculty for Excellence in Undergraduate Teaching: Five Tanner Awards, One Friday Award, and Two Sitterson Awards are given to full-time faculty members.

Tanner Awards to Graduate Teaching Assistants: Five Tanner Awards are given to graduate teaching assistants for excellence in undergraduate teaching.

Chapman Family Teaching Awards: Four Chapman Family Awards are given to full-time faculty members for excellence in undergraduate teaching.

Mentor Award for Lifetime Achievement: This award acknowledges lifetime contributions to teaching, learning and mentoring beyond the classroom and is not limited to traditional faculty. If you nominate someone for this award, please focus on his or her long-term impact on students.

Thank you for your help in rewarding excellent teaching at Carolina!

Subject: INFORMATIONAL: Performing Arts Special Activities Fund

---

2013-14 Performing Arts Special Activities Fund Application Information

What is the Performing Arts Special Activities Fund (PASAF)?

The PASAF supports projects and activities that provide quality performing arts that enhance the creative and cultural environment of our University community and have significant impact on life and learning at UNC.

Projects are supported in all areas of the performing arts. Priority is given to new and innovative projects. Projects that involve multiple units (departments, centers, curricula, programs, etc.) and that are inter-disciplinary are encouraged. We also encourage faculty and staff from all areas of the University to submit applications for projects that include a component of the performing arts in any area of teaching, research, or service.

Although the PASAF has no official maximum grant, awards are seldom made for amounts over $5,000. The PASAF may award partial grants. Previous PASAF funding does not guarantee support in any succeeding year. Funds must be expended in the 2013-2014 academic year.

Who may apply?

Students, faculty and staff from recognized academic or administrative units may apply for funding. If a unit proposes multiple projects, the unit head must prioritize the proposed projects.

Funding criteria:

* Artistic and programmatic quality
* Relationship of proposed activities to departmental priorities, area of study, or research
* Nature and extent of programmatic interpretation, education, or orientation efforts for the benefit of the proposed audience
* Extent of impact, including the number of people served and efforts to broaden and/or diversify your audience
* Extent to which the project serves multiple campus audiences
* Scarcity or availability of comparable services within the given area, i.e., extent to which the project fills a gap
* Managerial and fiscal competence, including the capability of the applicant to carry out the proposed activities

Projects eligible for funding:

The PASAF committee aims to support projects that demonstrate the highest level of artistic integrity. The list below provides examples of the types of projects that are eligible for funding. These are examples only, and funding is not limited to those listed.

* Visiting performing artist and artist-in-residence activities
* Public presentations and performances
* Commissions, premieres, and subsequent performances of new works
* Professional artistic development and training programs for performing artists, such as mentorship and career development activities
* Workshops, conferences, publications, professional development, technical assistance, networks, or on-line resources associated with performances
* Projects that bring together diverse campus and local communities or that reach new audiences

The following are not eligible for funding:

* Major expenditures for the establishment of new student organizations
* Expenditures that should reasonably be covered by department overhead
* Reserve funds
* Debt reductions
* Activities restricted to an organization's membership (funded activities must be open to the university and the broader community and promoted as such)
* Hospitality or entertainment costs for receptions, performances, or fundraising benefits
* Faculty or staff salaries
* Static exhibitions

Successful applicants will be asked to provide a brief report on outreach and impact following project implementation. To apply for support from the Performing Arts Special Activities Fund, submit a

written application of no more than 4 pages that includes the following:

* Goals and objectives of the project
* Project description
* Audience to be served, including number and demographic characteristics
* Overall impact to the arts at UNC-Chapel Hill
* Itemized budget, including personnel and non-personnel expenses, total project costs, costs for which PASAF support is requested, and other sources of support
* Department/Unit head's signature of approval. (Multiple requests from a single unit must be prioritized by the unit head.)

Submit applications to the following address by 5 PM September 20, 2013:

Carol Tresolini
Vice Provost for Academic Initiatives
Office of the Executive Vice Chancellor and Provost
104 South Building
CB #3000
UNC Campus

MEMORANDUM

TO: Carolina Law Faculty

FROM: Kris Jensen, Associate Dean of Advancement

DATE: August 26, 2013

SUBJECT: Charlotte Professionalism Dinner

Greetings from the Office of Advancement. We hope that you will make plans to join us for this year's Charlotte Professionalism Dinner on Wednesday, September 25th at 6 p.m. at the Charlotte City Club.

Each year, faculty are invited and encouraged to participate in this event. More than 75 lawyers and judges from the Charlotte area will join UNC law students and faculty who will travel to Charlotte to take part in dinner and discussion of an ethical problem (written by Professor Myers.) Charlotte is home to some of our most devoted alumni, some of the State's largest law firm employers, and some of its finest judges and public officials. The attendance of UNC Law faculty members would mean a lot to the visibility of, and support for, Carolina Law in Charlotte, especially in these difficult times.

To simplfy the commute, we have arranged for a bus to take students and faculty to and from the event. If you choose this option, you can board the bus at 3:00 p.m. outside the law school in the upper lot by the Fountain. Faculty members that have participated in the event have found it to be enjoyable. We'd be grateful for your participation.

To RSVP, please contact Kelly Mann, alumni and donor relations coordinator, at kmmann@email.unc.edu or 919-445-0170.

Subject: RFP for Blurring Boundaries Workshop

We are writing to announce the 2014 Midyear Meeting Workshop, Blurring Boundaries in Financial and Corporate Law, being held at the Westin City Center Hotel, Washington, D.C., from June 7 through June 9, 2014. We also want to invite you to submit a proposal to participate in this two-day program, which is designed to explore the various ways in which the lines separating distinct, identifiable areas of theory, policy, and doctrine in business law have begun to break down. Specifically, we seek presentations for the plenary panel (and associated breakout discussions) that will focus on teaching and other pedagogical aspects of financial and corporate law in an era of blurred and blurring boundaries. Details about the program, including deadlines and instructions for the submission of proposals, are available here.

Save the date and submit a proposal! We look forward to seeing you at the workshop in June. More information will be available in coming months.

Subject: [generalfaculty] Call for nominations: 2014 UNC Distinguished Alumnus/a Awards/Deadline 9/20/13

To: All Faculty
From: UNC Office of Faculty Governance
Dear Colleagues,
The faculty's Committee on Honorary Degrees and Special Awards invites your nominations for **Distinguished Alumna and Alumnus Awards** to be presented at the October 12, 2014, University Day ceremony. These awards recognize UNC-Chapel Hill alumni/ae who have made outstanding contributions to humanity in any walk of life.
The deadline for submissions is **September 20, 2013**.
Nominees must be alumni of the University of North Carolina at Chapel Hill. This includes all persons who were registered for at least one full academic year as a student in residence in any college or school of the University. In general, anyone listed in the General Alumni Association's *Alumni Directory* is eligible except members of the University faculty, staff, and administration. They become eligible two years after separation from the University.
Full information about this award, including criteria, eligibility, and the process for submitting a nomination online, is available at the Distinguished Alumnus and Alumna Awards page of the Faculty Governance website.
If you have any questions, please contact our office.
Sincerely yours,
Joseph S. Ferrell
Secretary of the Faculty
jsferrel@email.unc.edu

Hispanics urged to perform skin self-exams, discuss cancer risk with physicians
More than three-quarters of Hispanics patients in North Carolina aren't performing skin self-exams (SSE) to detect possible skin cancers, and physicians need to do a better job of educating their patients about this potentially life-saving practice, say researchers in the School of Medicine at the University of North Carolina at Chapel Hill.
Study results were reported earlier this year in the Research Letters section of the Archives of Dermatology. [Nota: Una versión español de este comunicado de noticia llega tras la versión Inglés.]

Subject: NCBA e-bar

Tuesday, August 27, 2013 | Volume 13, No. 35

LEGAL COMMUNITY

Veto Effort Falls Short | Gov. McCrory signed House Bill 652 into law Friday, much to the disappointment of the NCBA which had sought to have the legislation vetoed. The new law removes the authority of the Judicial Standards Commission to issue public reprimands and vests all forms of public discipline in the Supreme Court. It also makes disciplinary hearings private, and keeps all case records confidential unless and until the Supreme Court decides to take disciplinary action.

Enacted Legislation | Speaking of new laws, the effective date for several bills enacted during the 2013-14 session of the General Assembly is this coming Sunday, Sept. 1. New laws with effective dates from July 1, 2013 to Jan. 1, 2014 are denoted in the accompanying link.

Swearing-In Ceremonies | As 1,270 applicants who completed the July 2013 bar exam await their results, local and judicial district bars are gearing up for swearing-in ceremonies. Bar groups in Cumberland County (Sept. 4), Mecklenburg County (Sept. 26) and Wake County (Sept. 23) already have their ceremonies set; let us hear from you if your bar association is holding a ceremony and send photos too.

IN THE OFFICE

Practice Management and Legal Tech Tips | The latest from Erik Mazzone, director of the NCBA's Center for Practice Management, includes rollout of the native RocketMatter Android app, tips on using HootSuite to effectively manage your social media efforts, and best practices on using categories and tags to organize your legal blog.

Twitter's Business Benefits | The general assumption is that Twitter is beneficial to small- and medium-sized businesses (SMBs), but how can you tell? Twitter Ads Research asked Market Probe International to survey 500 people over 18 years of age who follow SMBs on Twitter.

Building A Smarter New York Times | As insightful as the New Republic series on The New York Times is, it is also interesting to track how this item found its way into ebar. It begins with a blog post from Kevin O'Keefe about how "Law firms need to leverage stars and relationships, not content," which references "A tip for the New York Times: Monetize people and relationships, not content" from Mathew Ingram, who provides his own insight while referencing the New Republic's excellent series.

ACROSS THE PROFESSION

Ervin Announces | Judge Sam Ervin IV of the N.C. Court of Appeals has announced his intentions to run for a seat on the N.C. Supreme Court in 2014. Ervin will seek the seat currently held by Justice Mark Martin who is seeking to succeed Chief Justice Sarah Parker following her retirement. Judge Robert N. Hunter Jr. of the N.C. Court of Appeals has also announced his plans to seek the seat currently held by Justice Martin.

HELP Team | Lawyers Mutual has formed a HELP (Handling Emergency Legal Problems) Team to provide quick response in a crisis situation such as a medical emergency or unexpected death. Lawyers Mutual claims attorneys and outside counsel work together using their training and resources to guide lawyers through difficult times.

Mentoring Survey | Leanne Wight, president of the Frontenac Law Association in Kingston, Ontario, is conducting research on mentoring and seeks the input of American lawyers as the comparator group. The survey, which only takes about five minutes to complete, serves as a good reminder of the NCBA's mentoring program. Click here to learn more or to register as a mentor or mentee.

Erasing Criminal Records | Changing laws, coupled with the efforts of lawyers who are volunteering their services to help give people a second chance, have resulted in a drop in the number of North Carolinians with criminal records. NCBA members, including dozens of lawyers from Duke Energy and Parker Poe, are contributing to the cause.

Carolina in the News

Here is a sampling of links and notes about Carolina people and programs cited recently in the media:

National Coverage

2013 National Universities Rankings
Washington Monthly
The University of North Carolina at Chapel Hill was ranked 14th on this years list of top national universities.
http://www.washingtonmonthly.com/college_guide/rankings_2013/national_university_rank.php
Related Link:

State and Local Coverage

Mandated Program Leads To Drop In Domestic Violence
WUNC-FM (Chapel Hill)
Mothers who completed a mandated domestic violence program were more likely to end abusive relationships. That's according to new research out from the School of Social Work at UNC-Chapel Hill. The study looked at mothers who were mandated by courts or child services to take a 13-week program and learn methods on, parenting, self-advocacy and safety. ..."And that may be a bit of a motivator to say 'Okay this domestic violence situation isn't just impacting me, it's impacting my children, and I may need to do something different'," said Rebecca Macy, who led the study.
http://wunc.org/post/mandated-program-leads-drop-domestic-violence

UNC School of Nursing division chair named national nurse fellow
The Herald-Sun (Durham)
Cheryl B. Jones, associate professor and chair of the Division of Health Care Environments at UNC-Chapel Hill's School of Nursing, has been named one of just 20 Robert Wood Johnson Foundation Executive Nurse Fellows this year. Jones will participate in the three-year leadership development program designed to enhance nurse leaders' effectiveness in improving the U.S., health care system, according to a RWJ Foundation release.

Experts say Watauga elections board broke no law
WRAL-TV (CBS/Raleigh)
Experts in government law say the chairman of the Watauga County Board of Elections broke no state law when he asked that a heated discussion during a board meeting be dropped from the minutes. The Winston-Salem Journal reports that UNC School of Government Professor Frayda Bluestein said the board can limit the detail in the official minutes as it sees fit.

Kinnaird, Ginsburg get it exactly wrong on resignations (Opinion-Editorial Column)
The News & Observer (Raleigh)
Two senior women in public life recently made news with decisions about retirement. One, state Sen. Ellie Kinnaird, announced she is retiring midway through her term because she can't be effective in a legislature dominated by conservatives. The other, Supreme Court Associate Justice Ruth Bader Ginsburg, announced that she is not retiring; she will continue leading the bloc of four justices who regularly dissent from the work of the court's five conservatives. (Eric L. Muller is the Dan K. Moore Distinguished Professor at the University of North Carolina School of Law.)
http://www.newsobserver.com/2013/08/26/3139192/kinnaird-ginsburg-get-it-exactly.html

P.J. Hairston tells Daily Tar Heel he will play (Blog)
The News & Observer (Raleigh)
North Carolina athletic director Bubba Cunningham said recently that P.J. Hairston would play this season, but not in every game. And now we have the same from Hairston, the UNC junior guard who told the told the Daily Tar Heel, the UNC campus newspaper, that he will "be on the court" this season.
http://blogs.newsobserver.com/uncnow/pj-hairston-tells-daily-tar-heel-he-will-play

Issues and Trends

NC law allows university students facing discipline to hire an attorney
The News & Observer (Raleigh)
Public university students facing disciplinary charges may now hire an attorney to help them throughout the process, according to a new state law. The legislation, signed into law last week by Gov. Pat McCrory, could change the tenor of student conduct hearings at UNC system campuses across North Carolina. In the past, students could have an attorney advise them informally, but for the most part lawyers were barred from presenting evidence, cross examining witnesses or other direct representation during campus proceedings.
http://www.newsobserver.com/2013/08/26/3139796/nc-law-allows-university-students.html

UNC Strategic Plan Hurt By Budget Cuts
WCHL-FM (Chapel Hill)
The University of North Carolina's five-year Strategic Plan took a big hit with the approval of this year's budget by the N.C. Legislature. However, System President Tom Ross says the way in which the cuts were handed out will allow the individual campuses to protect its most vulnerable areas.
http://chapelboro.com/news/unc/unc-strategic-plan-hurt-by-budget-cuts/

LinkedIn launches university pages this month
The Herald-Sun (Durham)

LinkedIn, the professional networking website that helps you connect with old bosses, business acquaintances or new job opportunities, recently launched another subsection of its offerings – University Pages. According to Christina Allen, the LinkedIn director of product management, the personalized pages just for colleges and universities will allow students to explore higher ed options around the world and start their university social network before they even step foot on campus. Students also can find alumni and campus news on the new tool. Duke University and UNC-Chapel Hill both have their pages already up and running.

Subject: [law_faculty] DTH article on the President's comments about possibly making law schools two-year programs

---

Hi, all,
There's a Daily Tar Heel reporter trying to find another law professor or two to comment on Pres. Obama's suggestion that law school be reduced to two years. (He's spoken to a few profs, but would like a few other views, as well.) If anyone else has views on this and is willing to call him, his information is below.
Best,
Max

Dear Professor Eichner,
My name is Marshall Winchester, and I am a reporter with the Daily Tar Heel. I am emailing to ask whether it would be possible to schedule a phone interview with you this afternoon for an article we're doing this week, to obtain your perspective on the President's comments about the possibility of making law school programs two-year programs, instead of the traditional three-year duration.

Thanks,
Marshall Winchester

Subject:	INFORMATIONAL: Fall Child + Family Programs at NC Botanical Garden

---

Interested in children's + family nature/science activities this fall?http://ncbg.unc.edu/for-children-and-families/

The North Carolina Botanical Garden offers wonderful learning opportunities for children and families to connect with the natural world this fall, including:

Bluets: Preschoolers Exploring Nature! (ages 4-5)
Learning comes naturally for 4 and 5 year-olds during this fun-filled series that encourages exploration and fosters a sense of wonder for the natural world. Preschoolers will learn about the marvels of changing colors, flying seeds, and migrating animals through hands-on activities, nature walks, puppet shows, stories, crafts, and group play.

Blazing-Stars: Afterschool Nature Club (ages 6-8)
Why do some plants have thorns? How does a frog survive the freezing winter? Children will explore these questions and more during this after-school series focused on how different adaptations contribute to the success and survival of various plants and animals. Hands-on activities, environmental games, and crafts make learning fun and engaging.

Mosaic Workshop: Pollinators in the Garden (ages 8-12)
Local professional mosaic artist, Jeamette Brossart, will lead students in the design and creation of a pollinator-inspired mosaic for the children's Wonder Garden. Children will participate in the design, creation, and hands-on making with glass and tile.

Nature Illustration for Kids (ages 8-12)
Explore the art and science of the fall season in the gardens, forests, and wetlands during this unique class that combines nature illustration techniques and hands-on science learning. The class will spend time outdoors sketching, observing, and learning about the secret life of turtles, silk moth caterpillars, fall wildflowers, leaf color change, and more.

Nature Painting with Watercolor + Mixed Media (ages 8-12)
Students will explore themes in nature through observation and sketching. Ideas will be gathered outdoors and taken into our studio classroom. Finished paintings will be created using watercolor, pen & ink, watercolor pencils, collage, and other mixed media.

Magic in the Garden - Family Special Event (ages 4 & up w/ adult)
The young and young-at-heart are invited to join us for an enchanting morning of family fun! Build magical homes for fairies and elves using natural materials, craft your own fairy wings, plant a magical seed, and more.

The Art of Balance: Beauty in the Backyard (ages 6 & up w/ adult)
Participants will use natural materials to build their own mobile, suspended shapes and forms that rotate in space. Part of the process will include coming to an understanding of balance, in nature, in the home and in the community where we live and grow.

Subject: INFORMATIONAL: Study for healthy women - blood specimens needed

---

Reproductive Endocrinology at NC Women's Hospital

We are currently seeking healthy women to participate in a research study that offers monetary compensation.

You may be qualified if the following applies to you:
- Between the ages of 18-35
- Having regular menstrual cycles, every 25-35 days
- Not using birth control pills, hormonal contraceptives or IUD
- Not currently pregnant, or trying to become pregnant

This study involves 2 visits to our clinic: One consultation and one blood draw.

Endometriosis is a condition that causes the lining of the uterus to grow in other areas of the body. Symptoms from this may cause the individual severe pain, irregular bleeding, and infertility. Currently, the only definitive way to diagnose the condition is through laparoscopic surgery. The purpose of this research study is to identify biomarkers in the blood that may also be present in the lining of the uterus. By examining these systemic markers in healthy women, we can compare them to women suffering from endometriosis and analyze the correlation between the two. The goal of this study is to develop a blood test to diagnose endometriosis in a less invasive way. If you are interested in participating as a healthy subject, please feel free to contact us for more information at 843-8621, or uncreproductive@gmail.com.

Biomedical IRB study #12-2613 "Plasma and Serum Markers in Endometriosis;" approved 1/8/2013

Carolina in the News

Here is a sampling of links and notes about Carolina people and programs cited recently in the media:

State & Local Coverage
Conservationists' report links NC pellet mills with wetland clear-cutting
The News & Observer (Raleigh)
Sensitive wetland forests in northeastern North Carolina are threatened by Europe's voracious appetite for wood pellets, two environmental groups say in a new report that targets the Enviva pellet mill in Ahoskie. ...Alan Weakley, a UNC Chapel Hill ecologist who helped produce the forest maps, said these lands promote water quality and support a variety of wildlife."Hardwood wetland forests play a vital role in maintaining biodiversity in this eco-region, and increased industrial logging in these forests can have significant, negative impacts," Weakley, who heads the UNC Herbarium, said in a news release accompanying the report.
http://www.newsobserver.com/2013/08/27/3142262/conservationists-report-links.html

UNC Budget Close to Completion
Chapelboro.com
UNC Provost Jim Dean says University leaders are in the process of putting the final touches on this year's budget."We're on a fiscal year budget of July through June, but we can't really do our budgeting until the legislature does their budgeting, and then the General Administration does their budget," Dean says.
http://chapelboro.com/news/unc/unc-budget-close-to-completion/

Surging Water Warnings
UNC-TV/Science
... "The storm surge is almost always the most dangerous," says Rick Luettich, Director, The University of North Carolina Chapel Hill Institute of Marine Science. "If you are in a wind storm, there's a good chance you cab survive. If you are in a flooding event then you have many fewer options."
http://science.unctv.org/content/surging-water-warnings

Experts: Watauga elections board broke no law
The Citizen-Times (Asheville)
Experts in government law say the chairman of the Watauga County Board of Elections broke no state law when he asked that a heated discussion during a board meeting be dropped from the minutes. The Winston-Salem Journal reports that UNC School of Government Professor Frayda Bluestein said the board can limit the detail in the official minutes as it sees fit.
http://www.citizen-times.com/viewart/20130827/NEWS/308270023/Experts-Watauga-elections-board-broke-no-law
Theater companies to collaborate on King play
The Durham News
This fall, two of North Carolina's leading theater companies, PlayMakers Repertory Company and Triad Stage, will co-produce the regional premiere of "The Mountaintop" by Katori Hall. The play focuses on the last night in the life of Martin Luther King Jr.

Can commissioners turn their albatross into apartments for 20-somethings?
The Smoky Mountain News (Waynesville)
...So Haywood County, the town of Waynesville and the Haywood Advancement Foundation together commissioned the University of North Carolina School of Government to evaluate and recommend redevelopment options for the aging building, which affects both the county and town. ... "It is hard to know unless you put it out to the market," said William Lambe, director of UNC's Community and Economic Development Program. "We could test those waters."

Issues & Trends
Lost grant, sequestration taking toll on UNCG research funds
The Triad Business Journal
UNC-Greensboro saw a steep drop in the amount of research dollars brought to campus by outside sponsors in fiscal 2013 and also in the amount of money its faculty submitted proposals to win. According to a report prepared for UNCG trustees to review at their meeting Aug. 29, total awards for fiscal 2013 numbered 228, worth $27.1 million. That was down from 247 awards worth $47.8 million in fiscal 2012 and was the lowest number of awards and dollar value for any year included in the report, back to 2009.

NC students weighing in on voting controversy
The News & Observer (Raleigh)
The University of North Carolina Association of Student Governments, a student group representing all 17 state campuses, has passed a resolution denouncing the recent actions of newly installed Republican county board of elections in college towns. And they are urging the State Board of Elections to overturn the actions when they meet on September 3rd. The students are upset about the actions of the Watauga County Board of Elections in moving the voting place from Appalachian State University, and the Pasquotank Board of Elections in ruling that an Elizabeth City State University student was ineligible to run for city council because he did not meet the residency requirements.

UNCSA resumes search for chancellor

The Winston-Salem Journal

The search is back on for a new chancellor for the UNC School of the Arts. “We can't settle,” UNC System President Tom Ross said Tuesday in his address to the school’s search committee. “This institution is too valuable — not just to us, but to the country.” ...James Moeser, a former chancellor at UNC Chapel Hill, has served as interim chancellor since Aug. 1.

Researchers discover a potential cause of autism
Problems with a key group of enzymes called topoisomerases can have profound effects on the genetic machinery behind brain development and potentially lead to autism spectrum disorder (ASD), according to research announced today in the journal Nature. Scientists at the University of North Carolina School of Medicine have described a finding that represents a significant advance in the hunt for environmental factors behind autism and lends new insights into the disorder's genetic causes.

Subject: INFORMATIONAL: Healthy adolescents needed for research!

Researchers at UNC Chapel Hill are looking to recruit adolescent males between the ages of 15 and 18 and a caregiver to participate in a research study.

What is involved:

Each caregiver will be contacted via phone for an eligibility interview.

If eligible, each caregiver and adolescent will be invited for an approximately 4.5 hour visit at our offices in Carrboro.

During this visit, the adolescent and caregiver will complete interviews and questionnaires, as well as 3 computer-tasks: one for memory, one for recording brain waves ("EEG") while looking at pictures, and one for measuring where you look when seeing pictures.

Compensation for this visit is AT MINIMUM $60.

Study participation can also be completed in 2 shorter visits if necessary.

If you are interested in participating, or if you have any questions, please contact Stephanie Miller by replying to this email or by phone at (919)-533-9305.

This study was approved by the Biomedical IRB at UNC Chapel Hill (IRB# 11-1403) on 8/11/2011.

This email is sponsored by: Psychiatry

Subject: Charlotte Professionalism Dinner Invitation - Please Reply

---

Dear Professor Broome,
Greetings from down the road in the Advancement Office. I hope you are well. I am working with Kris Jensen, associate dean of advancement, and Dean Boger's office to fill the faculty slots for our upcoming Charlotte Professionalism Dinner on Wednesday, September 25. And yes, your name is on our list of preferred faculty facilitators. If your schedule allows, I hope that you will be able to join us. If you attend, we'll give you the tools to lead a discussion at your table of eight to ten. It has historically been quite easy, since judges, lawyers, and students usually jump into the conversation with little prompting but we would very much like to fill every one of our tables with one of you, our distinguished faculty. Details are below. Please let me know either way by reply email.

MEMORANDUM
TO: Carolina Law Faculty
FROM: Kris Jensen, Associate Dean of Advancement
DATE: August 26, 2013
SUBJ: Charlotte Professionalism Dinner
Greetings from the Office of Advancement. We hope that you will make plans to join us for this year's Charlotte Professionalism Dinner on Wednesday, September 25th at 6 p.m. at the Charlotte City Club.
Each year, faculty are invited and encouraged to participate in this event. More than 75 lawyers and judges from the Charlotte area will join UNC law students and faculty who will travel to Charlotte to take part in dinner and discussion of an ethical problem (written by Professor Myers.) Charlotte is home to some of our most devoted alumni, some of the State's largest law firm employers, and some of its finest judges and public officials. The attendance of UNC Law faculty members would mean a lot to the visibility of, and support for, Carolina Law in Charlotte, especially in these difficult times.
To simplify the commute, we have arranged for a bus to take students and faculty to and from the event. If you choose this option, you can board the bus at 3:00 p.m. outside the law school in the upper lot by the Fountain. Faculty members that have participated in the event have found it to be enjoyable. We'd be grateful for your participation.
To RSVP, please contact Kelly Mann, alumni and donor relations coordinator, at kmmann@email.unc.edu or 919-445-0170.
Best,

Kelly M. Mann

Intervention in Syria? Problems, Prospects, and Contexts

A Public Roundtable Discussion for Students and Citizens

Tuesday, September 3, 5:00-6:30pm

Nelson Mandela Auditorium, Fedex Global Education Center, UNC-Chapel Hil

<!--[endif]-->

Roundtable Discussion: "Intervention in Syria? Problems, Prospects, and Contexts"

Tuesday, September 3, 2013

5:00-6:30pm

Nelson Mandela Auditorium, FedEx Global Education Center, UNC

UNC faculty and members of the military will speak briefly at the beginning from their own specialty and experience, followed by a wide-ranging Q&A with the audience.

Panelists:

- Sarah Shields (History)
- Cemil Aydin (History)
- Michael Morgan (History)
- Mark Weisburd (Law)
- Ali Reza Eshraghi (Ph.D. student, Communication Studies)
- Patricia Sullivan (Public Policy)
- LTC Bob Curris (U.S. Army, currently a National Security Fellow at UNC)
- COL Richard Menhart (U.S. Army, currently a National Security Fellow at UNC)

Sponsored by the Curriculum in Peace, War, and Defense and the Carolina Center for the Study of the Middle East and Muslim Civilizations. For more information, please contact Shai Tamari at tamari@unc.edu.

Free parking available from 5:00pm at the McCauley Parking Deck under the Global Education Center (Pharmacy Lane). See here for directions.

Intervention in Syria?

A Public Roundtable Discussion for Students and Citizens

Tuesday, September 3, 5:00-6:30pm

Nelson Mandela Auditorium, Fedex Global Education Center, UNC-Chapel Hill

Sponsored by the Curriculum in Peace, War, and Defense and the Carolina Center for the Study of the Middle East and Muslim Civilizations

Sarah Shields

History

Sarah Shields is the Bowman and Gordon Gray Distinguished Term Professor at UNC. Her research interests include the impact of the League of Nations on the Middle East and the ways in which colonialism and notions of empire have shaped nationalism and identity politics in the Middle East. Her new book, *Fezzes in the*

River: Identity Politics and European Diplomacy in the Middle East on the Eve of World War II (Oxford University Press, 2011), is a social and diplomatic history of the contest between France and Turkey over the Sanjak of Alexandretta (1936–1940), an important coastal province. It analyzes tensions of nationalism, diplomacy, and international obligations. She also teaches courses on Israeli/Palestinian conflict and revolutions in the modern Middle East.

Cemil Aydin
History

Cemil Aydin is an associate professor for UNC's history department, with a M.A. from Istanbul University and a Ph.D. from Harvard. Aydin's interests focus on both Modern Middle Eastern History and Modern Asian history, with an emphasis on the Ottoman and Japanese Empires. He is particularly interested in historical processes that shape transnational racial and civilizational identities, such as Muslim, Asian, African. His research and publications offer new ways to understand the contemporary world order by describing the process of imperial era conflicts and decolonization. Other research and teaching interests deal with questions of internationalism and orientalism, and modern world history. He has taught courses on empires, nations, and revolutions.

Michael Morgan
History

Michael Morgan is an assistant professor for UNC's History Department, with a M.Phil. from the University of Cambridge and a Ph.D. from Yale. His research focuses on the international history of the twentieth century, especially the Cold War. Morgan's current project examines the origins of the 1975 Helsinki Final Act, a 35-country agreement that was a turning point in East-West relations and a landmark in the history of human rights. He teaches courses on the history of international relations since the seventeenth century, the history of human rights, and human rights in the modern world.

Mark Weisburd
Law

Weisburd, a native Arkansan, joined the Foreign Service after earning his undergraduate degree, and he served in East Pakistan/Bangladesh from 1971 to 1973. He resigned in 1973 to enter law school at Michigan, where he was a notes editor on the Michigan Law Review. From 1976 to 1981, he was an associate with the Washington, D.C., law firm of Wilmer, Cutler & Pickering. He teaches civil procedure, international law and a course on international human rights. He writes mainly in the area of international law at UNC.

Ali Reza Eshraghi
Ph.D. student, Comm. Studies

Ali Reza Eshraghi was a senior editor at several of Iran's reformist dailies. He is Iran's Project Manager at the Institute for War and Peace Reporting (IWPR) and a teaching fellow in the Department of Communication Studies at the University of North Carolina at Chapel Hill. During his more than 15-year career in journalism, Ali has published hundreds of articles and op-ed pieces in various Persian, Arabic and English media including The NY Times, CNN and Aljazeera. Ali is a Rotary Alumnus in World Peace and Conflict Studies. Formerly, he was a visiting scholar at UC Berkeley School of Journalism and The Institute of International Studies (IIS). He was also a research fellow at the Religion, Politics and Globalization Program at UC Berkeley. Ali studied Political Science and Islamic studies at Imam Sadiq University in Tehran.

Patricia Sullivan
Public Policy

Dr. Patricia Sullivan is an assistant professor in the Department of Public Policy and the Curriculum in Peace, War, and Defense at UNC, Chapel Hill. Dr. Sullivan's research explores the utility of military force as a policy instrument, the determinants of war outcomes, and the factors that affect leaders' decisions to initiate, escalate, or terminate foreign military operations. Her book, *Who Wins? Predicting Strategic Success and Failure in Armed Conflict,* was recently published by Oxford University Press.

LTC Bob Curris
U.S. Army, currently a National Security Fellow at UNC

Lieutenant Colonel Curris graduated from the University of Arkansas (Fayetteville) and holds and MBA degree from Webster University. LTC Curris served in several capacities in the 101st Airborne Division at Fort Campbell, KY and deployed with the 1st Armored Division in support of stability operations in Bosnia-Herzegovina. In 2001 LTC Curris transitioned into the Special Operations Forces as a Psychological Operations Officer and has deployed to multiple locations throughout the Middle East in this capacity.

COL Richard Menhart
U.S. Army, currently a National Security Fellow at UNC

Colonel Richard Menhart graduated from the California University of Pennsylvania in 1991. COL Menhart holds a Master's degree in Military Studies from the Marine Corps University. He has served in multiple units, including the 82nd Airborne Division, the 25th Infantry Division, the Joint Readiness Training Center, and the U.S. Army Special Operations Command (USASOC). His most recent assignment was as the Director of the Army Compartmented Element with USASOC.

To: Krause, Joan H
Subject: RE: Class observations

Hi Joan --

Deborah Gerhardt is on leave this fall and will be teaching two courses in the spring -- Copyright and Trademark Law. I believe she normally teaches these in the spring, so T&P should do the teaching visits this spring.

Rob Smith is teaching Evidence this fall and Criminal Law this spring. T&P should do the review in the spring, but you may want to schedule your informal review for Evidence this fall.

I have left a message for Kathryn Sabbath to see if she anticipates NOT teaching Civil Lawyering Process next fall. I'll let you know what I hear. Assuming she will be teaching that course next fall, T&P can review it then and you can do your informal review this fall.

Thanks for helping me focus on this issue.

Lissa

Sent: Thursday, August 22, 2013 10:34 AM
To: Broome, Lissa L
Subject: Class observations

Hi Lissa, I have a note in my calendar to check up on something regarding classroom observations for non-tenured faculty. Because Kathryn Sabbeth was on leave last Spring, we were not able to do an evaluation of a podium-style (rather than clinical supervision) class. I have in my notes that she's scheduled to teach this Fall, and I should plan a classroom visit. But that if she is going up for tenure next year (which I assume is the case), and if this is the only class we can evaluate this year, then perhaps under the two-year class review schedule Bob put in place P&T should do the evaluation instead. Before I muck everything up and either bombard Kathryn with evaluations or procure one that can't be used for P&T purposes, I wanted to check in with you.

On a related (but less time-sensitive) note, I assume P&T will be handling Deborah G.'s classroom visit for this year, in preparation for her going up next year as well?

Thanks,

Joan

New Clues to Causes of Autism Found
Newsday
A group of enzymes in the brain appears to be key to the activity of many genes linked to autism, a new study reveals. Experts hope the findings will shed light on the causes of autism, and possibly lead to new treatments. The study results, published online Aug. 28 in the journal Nature, hint that if disruptions in enzymes called topoisomerases occur during brain development, they might contribute to the development of autism spectrum disorders. The enzymes are found throughout the body, and their main job is to "untangle the knots" in cells' DNA so the cells can function and reproduce themselves normally, explained senior researcher Mark Zylka, an associate professor of cell biology at the University of North Carolina at Chapel Hill.

As Renters Move In, Some Homeowners Fret
The New York Times
A Loss of Community: Neighborhoods across the country are being transformed, as houses built for homeowners are turned into rental properties. Residents of one such community in Memphis, Tenn., discuss the changes. ... "When there are fewer homeowners, there is less 'self-help,' like park and neighborhood cleanup, neighborhood watch," said William M. Rohe, a professor at the University of North Carolina at Chapel Hill who has just completed a review of current research on homeownership's effects.

Are Introverts Smarter than Extroverts?
Huffington Post, David Hassell (blog)
Let's get this clear, introversion does not mean shyness. Shyness is a fear of social judgement. Our personality type determines and explains how we react to stimulus. Extroverts crave social stimulation, while introverts are at their best in quieter situations. ...In Western society, extroversion (properly, extraversion) is celebrated: the outgoing and enthusiastic nature of a person who gets things done and is a great communicator is considered an asset. Much of our public life is dominated by extraverts, such as Clinton and Thatcher, among others. In fact we're living in an "extrovert ideal:" in a University of North Carolina study, it was found that 96% of managers and executives display extravert characteristics.

Balancing Work and Study in the MATC Online Master's Program in Digital Media
PBS
College towns have a set of seasons all their own: the quiet shudder of the winter, the frenzied exodus of the spring, the lazy silence of the summer, and the excited buzz of the fall. Here in Chapel Hill, N.C., it's no different. And this fall, I too was eager to join my classmates in the place we have gotten to know one another: an online message board. As a student in the Master of Arts in Technology and Communications (MATC) program at the University of North Carolina...

What Will Spur the Next March on Washington?
LiveScience.com (website)
Fifty years ago, Martin Luther King, Jr., told a crowd of some 250,000 people thronging the Washington Monument that he had a dream. ... It's hard to predict what the next big one will be, but sociologists say it will take a network of organizations or a cause that resonates widely to mobilize people for such an event. "It's hard to ask the question of what the next 'March on Washington' will be without asking the question of what social movement would have such a profound impact on society," said Kenneth Andrews, a sociologist at the University of North Carolina at Chapel Hill who studies social movements.

Regional Coverage
Low Home Down Payment Builds Family Wealth
The Daily World (Atlanta, Ga.)
In the midst of varying proposals for housing reform, civil rights leaders are publicly calling for lawmakers to keep mortgage lending affordable and accessible. A recent letter jointly signed by the NAACP, National Urban League, National Council of LaRaza, National Fair Housing Alliance, the Haas Institute's John Powell, and the Center for Responsible Lending (CRL), reminded Capitol Hill lawmakers how low down payment mortgages enabled many low-wealth borrowers to become successful homeowners....A recent joint study by CRL and the Center for Community Capital at the University of North Carolina found that among borrowers who took out a mortgage from 2004-2008 and were current through February of 2011, 60 percent of successful Black mortgage borrowers would have been excluded if a 10 percent down payment had been required. A 5 percent down payment would have excluded 33 percent of successful Black borrowers.

Commissioners approve bond refinancing for Pardee Hospital
The Times-News (Hendersonville)
Henderson County commissioners approved a series of legal documents Wednesday to better position Pardee Hospital to adjust to a rapidly changing health care climate, including a bond order that will save the hospital $626,736 in interest over the next decade. By a 5-0 vote, commissioners approved a plan allowing Pardee to consolidate old debts into a new bond. ... By giving approval to the refinancing, commissioners put their final stamp on a memorandum of understanding and agreement the county signed with Pardee and the University of North Carolina Health Care Systems in April.

From Politico:

Ruling Provides Certainty, Benefits and Protections Under Federal Tax Law for Same-Sex Married Couples

WASHINGTON — The U.S. Department of the Treasury and the Internal Revenue Service (IRS) today ruled that same-sex couples, legally married in jurisdictions that recognize their marriages, will be treated as married for federal tax purposes. The ruling applies regardless of whether the couple lives in a jurisdiction that recognizes same-sex marriage or a jurisdiction that does not recognize same-sex marriage.

The ruling implements federal tax aspects of the June 26th Supreme Court decision invalidating a key provision of the 1996 Defense of Marriage Act.

Subject: [INFORMATIONAL] Social Skills Group for Teenagers (16+) and Young

---

We are pleased to announce the next session of our group-based social skills clinic for teenagers (16+) and young adults.

This clinical service consists of 8 hour-long weekly sessions, with the next session scheduled to begin in on Monday, October 7th at 4p. This clinic is offered through the Carolina Institute for Developmental Disabilities (101 Renee Lynne Court, Carrboro, NC 27510). All major insurance providers are accepted.

Sessions will be led by a clinical psychologist and trainee and will focus on improving social cognition and social skills. The class is open to those with a formal diagnosis that impacts their social abilities (such as an autism spectrum disorder or ADHD) as well as to those simply wishing to improve their social skills. Because much of the class relies on back-and-forth between class members, participants must have sufficient verbal skills to participate in a group setting. Sessions will have up to 12 participants.

Potential patients or caregivers please contact Twyla Peoples at 919-843-1529 or Twyla.peoples@cidd.unc.edu for more information about scheduling and registration.

Subject: mtg w/ Provost tomorrow

Lissa,
I need your advice. Joy Renner invited Jim to the Fac Athletics Cmte mtg on Tuesday, but he's booked solid and can't attend. She has now asked for a small bit of his time tomorrow. I don't know the context of your meeting w/ him tomorrow at 3pm, but wonder if she can join in? I completely understand if you say no and I haven't mentioned this to her. I was thinking of how to best utilize Jim's time and take care of you both. Please let me know how you feel about this and please feel free to say no because it will not bother me. Your meeting has gotten shifted around so much and I don't want to disturb your time w/ him again.

Subject: [INFORMATIONAL] Research Opportunity for Veterans

Are you a veteran who served in Iraq or Afghanistan? Or do you know someone who is?

UNC has a research study opportunity for OEF/OIF/OND Veterans who have traumatic brain injuries and posttraumatic stress disorder. This research study is being conducted by the Department of Psychiatry at the University of North Carolina-Chapel Hill, School of Medicine and is funded by the Department of Defense.

This research study involves Veterans using an iPod Touch to practice techniques for improving attention, memory, and planning skills.
Veterans will be paid $250, and a participating family member or friend will receive $100 for initial data collection at UNC. Afterward, there will be in-home support sessions to help Veterans practice these techniques. Six months later, Veterans will be paid another $250 and the family member another $100 for follow-up data collection at UNC.
Veterans will also get to keep their iPod Touch. after the research study is completed.

For more information or if you are interested in participating, please contact our office at 919-972-7461 or vetstudy@unc.edu.

IRB #: 11-1292

Subject: Class observations
Hi Lissa, I have a note in my calendar to check up on something regarding classroom observations for non-tenured faculty. Because Kathryn Sabbeth was on leave last Spring, we were not able to do an evaluation of a podium-style (rather than clinical supervision) class. I have in my notes that she's scheduled to teach this Fall, and I should plan a classroom visit. But that if she is going up for tenure next year (which I assume is the case), and if this is the only class we can evaluate this year, then perhaps under the two-year class review schedule Bob put in place P&T should do the evaluation instead. Before I muck everything up and either bombard Kathryn with evaluations or procure one that can't be used for P&T purposes, I wanted to check in with you.
On a related (but less time-sensitive) note, I assume P&T will be handling Deborah G.'s classroom visit for this year, in preparation for her going up next year as well?
Thanks,
Joan

Lissa and David,
What about scheduling a conference call sometime in September to go over the curriculum (i.e., establish responsibility for training modules, length, course agenda, compilation of manuals, printing, etc.)? Lissa, we had semi-modeled the training after the ABC's of Banking and if you have access to those materials, it would be helpful so that we can modify and/or add to the modules. That way, we wouldn't have to reinvent the wheel from square one.
The days in September that I cannot do it are September 4, 10, 11, 12, 13; 15-20 and 23-26. I am out of town those days. I am available on weekends if you wanted to schedule something. Thanks.

Subject: Planning Conference Call

Lissa and David,

What about scheduling a conference call sometime in September to go over the curriculum (i.e., establish responsibility for training modules, length, course agenda, compilation of manuals, printing, etc.)? Lissa, we had semi-modeled the training after the ABC's of Banking and if you have access to those materials, it would be helpful so that we can modify and/or add to the modules. That way, we wouldn't have to reinvent the wheel from square one.

The days in September that I cannot do it are September 4, 10, 11, 12, 13; 15-20 and 23-26. I am out of town those days. I am available on weekends if you wanted to schedule something. Thanks.

FDA, academia and industry team up to end hepatitis C
As doctors prepare to manage an influx of new hepatitis C patients and treatment options, a collaboration between academia, industry and the U.S. Food and Drug Administration is poised to deliver real-world data that can help doctors and patients optimize their treatment experience. A research consortium known as HCV-TARGET has joined forces with the FDA to share national data on how newly approved therapies for hepatitis C are used and managed in routine practice. The Hepatitis C Therapeutic Registry and Research Network, or HCV-TARGET, is led jointly by investigators at the University of North Carolina at Chapel Hill School of Medicine and University of Florida and is sponsored in part by multiple pharmaceutical companies.

Subject: INFORMATIONAL: Dental Implant Study

The GO Health Center is currently recruiting participants to take part in a dental implant research study.

You may be eligible to participate in this research study if you:
* are between the ages of 21 and 80
* do not require antibiotics prior to dental treatment
* are currently missing teeth on both sides of your lower jaw
* have implants as a future treatment need
* are not pregnant or nursing
* do not have active infectious diseases such as hepatitis, HIV or tuberculosis.

To learn how you can be in this research study or to become part of our patient registry, please visit our website at http://www.gohealthcenter.com or contact us at 919-537-3424.

*If you are currently a patient of any dental clinic within the UNC School of dentistry, please consult with your dental health provider prior to enrollment in this study.

Thank you for responding so quickly.
Is there anytime tomorrow (Friday) that I could have a few minutes to talk with him about the Athletics Working Group he has launched so I can share the information with the FAC? I know lots of folks are needing a piece of his time so I certainly understand if this is not possible. I am here tomorrow at 7:00 until 6 or 7 so I will work around any tidbit of time available. I teach from 9 to 12.
You already said Tuesday was packed but if he had a few minutes on Tuesday, I can work my schedule around his open time. Same hours 7 to 7.

Thanks for you assistance.

Dear Professor Broome,
Greetings from down the road in the Advancement Office. I hope you are well. I am working with Kris Jensen, associate dean of advancement, and Dean Boger's office to fill the faculty slots for our upcoming Charlotte Professionalism Dinner on Wednesday, September 25. And yes, your name is on our list of preferred faculty facilitators. If your schedule allows, I hope that you will be able to join us. If you attend, we'll give you the tools to lead a discussion at your table of eight to ten. It has historically been quite easy, since judges, lawyers, and students usually jump into the conversation with little prompting but we would very much like to fill every one of our tables with one of you, our distinguished faculty. Details are below. Please let me know either way by reply email.

MEMORANDUM
TO: Carolina Law Faculty
FROM: Kris Jensen, Associate Dean of Advancement
DATE: August 26, 2013
SUBJ: Charlotte Professionalism Dinner
Greetings from the Office of Advancement. We hope that you will make plans to join us for this year's Charlotte Professionalism Dinner on Wednesday, September 25th at 6 p.m. at the Charlotte City Club.
Each year, faculty are invited and encouraged to participate in this event. More than 75 lawyers and judges from the Charlotte area will join UNC law students and faculty who will travel to Charlotte to take part in dinner and discussion of an ethical problem (written by Professor Myers.) Charlotte is home to some of our most devoted alumni, some of the State's largest law firm employers, and some of its finest judges and public officials. The attendance of UNC Law faculty members would mean a lot to the visibility of, and support for, Carolina Law in Charlotte, especially in these difficult times.
To simplify the commute, we have arranged for a bus to take students and faculty to and from the event. If you choose this option, you can board the bus at 3:00 p.m. outside the law school in the upper lot by the Fountain. Faculty members that have participated in the event have found it to be enjoyable. We'd be grateful for your participation.
To RSVP, please contact Kelly Mann, alumni and donor relations coordinator, at kmmann@email.unc.edu or 919-445-0170.
Best,

Kelly M. Mann

Hi David and Jewell –
I am wide open on September 27th. It looks like that day works for everybody. Let's say 2:00, unless a different time is better.
I've attached our proposal and the Powerpoints from the ABCs of Banking Law. I don't know how helpful they will be since they are focused on legal issues, but they

may be a starting point for some of the modules. Of course, both of you probably have more relevant sessions you have done specifically for bank directors that would be helpful as well.
Take care,
Lissa

Lissa, we had semi-modeled the training after the ABC's of Banking and if you have access to those materials, it would be helpful so that we can modify and/or add to the modules. That way, we wouldn't have to reinvent the wheel from square one.
The days in September that I cannot do it are September 4, 10, 11, 12, 13; 15-20 and 23-26. I am out of town those days. I am available on weekends if you wanted to schedule something. Thanks.

[Message was sent to entire Law School Community]
Please see below and report to me or one of my staff if you happen to receive one of these bogus phone calls. Or, if you're up for it, start cross-examining these idiots and asking lots of probing questions about what organization they are actually working for, how they got your number etc etc.

Subject: [ctc] Telephone Phishing Scam on campus

Hello All,
We are hearing of a telephone phishing scam on campus. The profile seems to involve UNC-CH affiliates being called on the telephone and told that the caller is with "Microsoft Technical Support" or "ITS." Often, the caller states that they have received Microsoft OS error codes from the user's machine and they need to remotely access the user's machine to resolve those issues.
Of course, these are not legitimate telephone calls.
Thanks,
Kevin Lanning MSIS CISSP C|CISO

Subject: Lunch?

Hi Sarah and Dana – I would like to invite you both to lunch to introduce the two of you. Sarah is our rowing coach and Dana is a new faculty member at the law school. Dana rowed at Harvard and helped coach at Yale while she was attending law school there. I know Dana is interested in learning more about the rowing program at UNC.
Here are some dates that work for me for lunch. Let me know if any of these work for the two of you:
September 3, 10, 17, 20, 24, 27
Enjoy the long weekend.

GRADUATE LEARNING ASSISTANT OVERVIEW

AGENDA

- Overview of Position
- Pre-Service Training
- Ongoing Training and Support
- Reading Strategies
- Writing Strategies
- Learning Strategies
- Structure of Sessions
- Noticings
- Questions

OVERVIEW OF POSITION

- Part of the Learning Engagement and Enhancement Program
- Support academically underprepared and underperforming student-athletes in becoming goal-directed, strategic, and self-regulated learners
- Teach research-based reading, writing, and learning strategies
- Monitor and evaluate students' learning progress
- Maintain detailed reports and communicate clearly and consistently with learning specialists and academic counselors regarding students' learning progress
- Establish and maintain high expectations for students while also providing the encouragement and constructive feedback students need to feel supported
- Link students to resources (i.e. accessibility services, library services, Learning Center, Writing Center)
- Approximately six students per learning assistant

PRE-SERVICE TRAINING

- Facilitated by Bradley Bethel
- 4 days
- Included:
  - Examination of research on student-athletes
  - Analysis of research-based strategies for assisting student-athletes
  - Presentations on:
    - Self-Regulated Learning by Dr. Jeff Greene
    - Motivation and Learning by Dr. Judith Meece
    - Literacy Development by Dr. Leigh Hall
  - Research on and discussion of:
    - Learning disabilities
    - ADHD
    - Reading and Writing Strategies
    - Learning Strategies
    - Organization Strategies

ONGOING TRAINING AND SUPPORT

- Weekly team meetings consisting of:
  - Strategy sharing
  - Problem-solving
  - Discussions of resources
  - Analysis of research
  - Turning research into practice
- Observations with written feedback
- Constant availability for consultation and support

READING STRATEGIES

- Summarizing
- Questioning
- Identifying the Main Idea
- Drawing Inferences
- Creating Visual Images
- Building Vocabulary
- Making Connections

WRITING STRATEGIES

- Understanding the Assignment
- Brainstorming
- Outlining
- Drafting
- Revising
- Editing
- Publishing

LEARNING STRATEGIES

- PLAN
- Note-Taking
- Self-Evaluation
- Organizing and Transforming
- Goal-Setting and Planning
- Seeking Information
- Keeping Records and Monitoring Progress
- Environmental Structuring
- Self-Consequences
- Rehearsing and Memorization
- Seeking Assistance
- Reviewing Tests
- Reviewing Notes
- Reviewing Texts
- Time Management

STRUCTURE OF SESSIONS

- 50 – 60 Minutes
- 2-3 Sessions each week
- Check-in
- Establish goals for the session
- Review notes and previous assignments or readings
- Engage class materials and teach strategies to help students with current assignments or readings
- Determine tasks for students to complete independently and record in PASS book or Google calendar
- Identify goals and questions for student's next class

OBSERVED OUTCOMES

- Overall growth in student-athletes
- More self-regulation
- Higher Self-efficacy
- More motivation
- Better problem-solving skills
- Stronger reading and writing skills

QUESTIONS

Student Athlete Experience 2012-13

For FAC discussion – October 9, 2013

From Glynis Cowell, Barbara Osborne and John Stephens

I. Historical Background

NCAA Bylaw 6.3.2 Exit Interviews. The institution's director of athletics, senior woman administrator or designated representatives (excluding coaching staff members) shall conduct exit interviews in each sport with a sample of student-athletes (as determined by the institution) whose eligibility has expired. Interviews shall include questions regarding the value of the students' athletics experiences, the extent of the athletics time demands encountered by the student-athletes, proposed changes in intercollegiate athletics and concerns related to the administration of the student-athletes' specific sports.

Two different assessments of exiting senior student-athletes have been conducted on an annual basis: a group interview and a quantitative survey. In the past, John Blanchard has been in charge of overseeing the coordination of both the exit interview and the survey, with Cricket Lane responsible for engaging the student-athletes. The FAC has assisted the Athletic Department in these two efforts by: 1) FAC members participate with Athletic Department representatives (last year Mr. Baddour, Larry Gallo, John Blanchard, and Beth Miller) in the exit interviews and a FAC member is responsible for compiling and summarizing the exit interview notes; 2) a FAC member compiles and analyzes the survey data. The survey results and the interview information are shared with the FAC and suggested recommendations are offered.

A. The Group Interview

The interviews take place over lunch, provided by the Athletic Department, in or around the Academic Support Center for Student-Athletes, over a two-day period (usually Tuesday and Wednesday). They last a little over an hour, with student-athletes free to join and leave as their schedules permit. Both the FAC members and the Athletic Department representatives ask questions and the FAC members generally take notes. One FAC member per table agrees to compile that table's notes, generally sends the draft to the Athletic Dept. representatives and the other FAC members who participated at that table for approval, before sending them on to the FAC member who will compile notes from all tables. Until last fall, exit interviews were conducted once per academic year, usually at the end of February and/or the beginning of March. Last fall we conducted interviews in late November and again in late March in an attempt to include those fall sport seniors, some of whom graduated in December.

<u>Categories of Questions Asked in the Group Interviews</u>

Academic Experience at UNC – broad questions such as "Describe your academic experience at UNC. Do you feel you have received a good education?" and more specific: As an athlete, have you experienced any disadvantages with regard to academics? (include major, courses, career plans, etc., in discussion); coaches support your academic pursuits; experiences with the Academic Support Program and Academic Advising; witnessed or experienced academic dishonesty

Student Development at UNC – availability and quality of particular services (drug education seminars, community service opportunities, career development services, Carolina Leadership Academy)

Athletic Experience at UNC – coaches ability to teach/develop athletes; particular components of support (e.g., nutrition, psychologists), team climate and potential problems (e.g., hazing, alcohol/drug use; abusive relationships), equipment and facilities, ability to "go beyond the coach" with concerns to Athletics Administration

General - most positive aspects of your overall experience at UNC? What can be improved? If you could do it over again, would you choose Carolina? Would you choose to participate in your sport again?

B. Individual Surveys

Quantitative surveys have also been administered to all senior student-athletes at the end of their final season of eligibility. The surveys have been distributed through Cricket Lane's office in Student-Athlete Development. The surveys are anonymous, although the participant may choose to provide his/her name. The Athletics Department has transposed the data and a FAC committee member has completed the statistical analysis.

Questions Asked on the Quantitative Survey

Demographic data is collected. There are spaces for additional comments indicating strength(s)/positive and weakness(es)/negative. At the end, the student-athlete has the ability to request an in-person meeting with a member of the athletics administrative staff.

Likert-type data is collected on:

- Strength and conditioning
- Sports medicine
- Academic Support
- Student Athlete Development
- Coaching
- Administration

C. Strengths/Weaknesses/Comments on the Current System

Group Interviews

- Group interviews allow for more qualitative data; good conversation and exchange with FAC members and student-athletes
- Athletic department personnel participation/observation of the group interviews may suppress free sharing of opinions
- Group interviews as a research tool have inherent weaknesses (efficiency may require doing these in group settings, but this also might lead some students to be less forthcoming, and/or it might lead the conversation down a path that's the result of what one student starts with, rather than representing all participants more equally.
- Few FAC members have been able to participate in the interviews

- Comments/suggestions from Barbara, Glynis and John:
  a. In terms of the content, it might be useful to ask a bit more specifically about the academic opportunities available to student-athletes, e.g. were they able to take the courses or choose the major that they wanted; did they experience pressure to take some courses rather than others (not only an issue about courses at certain times or with labs, but getting to the more general concern that athletes are directed toward "easy" classes/profs).
  b. In terms of the team climate questions, it might make sense to break "diversity" down, as this could include issues related to race/ethnicity, sexuality and/or gender.

Student-Athlete Surveys

- Easier and more flexible to administer; allows for individual replies. Designed to be completed fairly quickly.
- Very low response rate lessens the reliability of the data
- Possibility that only the positive and negative perspectives are presented, while those who are more moderate/centrist don't bother to complete the survey
- Survey question(s) may not truly provide the information FAC needs to inform the faculty and advise the Chancellor
  - Do you know of others on your team who have cheated, plagiarized, or committed other forms academic misconduct?
  - Have you ever felt pressured to take a particular class, or not to take a particular class, in order to maintain your eligibility?
  - Have you received different treatment in a class -- either better or worse -- due to the fact that you are an athlete?
- Limited to seniors

II. Moving Forward

In examining the academic research related to student-athlete surveys, and also looking to see what peer institutions do, there is no magic formula. Some of the research indicates that surveys aren't worth the time or effort spent on them. Other institutions conduct personal interviews with each senior student-athlete – some of the interviews are conducted only by athletics department administrators, others are conducted by athletics department administrators and faculty, and at least one is conducted just by a faculty member. All indicate that this process is incredibly time consuming (1-2 or more hours per interview).

1. The Athletic Department will be revising the interview/survey for implementation in December 2012
   a) FAC October meeting – big picture: input on what kinds of information are most important to gather
   b) FAC November meeting – review/approve of revised process and instrument
2. What way(s) should FAC participate in assessing the student-athlete experience?

2011-12 Senior Student-Athlete Exit Survey Results
Summary Report from Barbara Osborne
First Draft 9/24/2012 – not for distribution

Background

In 2008 the exit survey instrument administered to all senior student-athletes at UNC was revised by a FAC subcommittee of Kathie Mullan Harris, Glynis Cowell, John Blanchard, and Cricket Lane based on input from the Faculty Athletes Committee and Athletic Department advisors to the FAC. The revised survey included new question items recommended by the NCAA (from their website) and retained some important items from the survey instrument used in prior years. The revised exit survey was first administered to senior student-athletes at UNC during the 2008-09 (n= 75) academic year and has been used each year since: 2009-2010 (N= 72), 2010-11 (N=59), and this year 2011-12 (N=46)..

The exit survey collects data on 34 questions related to academic and athletic experiences at UNC, along with demographic information, GPA, and a question that relates to reasons for choosing UNC (Appendix A - Survey). The survey also records student-athletes' academic major, sport, and allows for open-ended comments on the strengths and weaknesses of their experience as a student-athlete. Responses to each question item are in a 5 pt scale: 1) strongly disagree; 2) disagree; 3) neither agree or disagree; 4) agree; and 5) strongly agree. In processing the data from the surveys, numeric values of 1-5 were assigned for strongly disagree (1) through strongly agree (5), respectively.

Description of Sample

Forty-six senior student-athletes completed exit surveys during the 2011-12 academic year. The sample was almost evenly balanced between males (23) and females (22). More white/Caucasian athletes (30) than non-whites (15) completed the survey. The majority of senior student-athletes who completed the survey had participated in non-revenue sports (33) compared to only 13 revenue sport student-athletes. See **Appendix B** for the distribution of sports, followed by the distribution of academic majors (**Appendix C).**

Methods

Student-Athlete Recruitment and Response Rate

At the end of each season, Cricket Lane, Director of Student-Athlete Development, emails the survey and attends team meetings to administer the survey to all senior student-athletes on all sports teams, both revenue and non-revenue. In 2011-12, there were a total of 123 senior student-athletes; therefore the overall response rate was 37%.

Survey Scoring, Coding and Analysis

Survey items were scored 1=strongly disagree and 5=strongly agree. Generally, statements were worded in a "positive" manner such that higher scores indicate approval or satisfaction with the particular sports/academic program topic under question (e.g., strength and conditioning program, sports medicine, academic support program, coaching, etc.). Several items were not worded in a positive manner and are in **bold** #17-22 under Academic Support Program, and #30 under Coaching. As a result, lower scores were actually more desirable in just these cases. The wording of these items has remained consistent with previous surveys for comparability across time.

Not all of the student-athletes answered every question either out of choice or because the question was not applicable. The amount of missing data was negligible on any given item. The important exception was GPA which had 7 missing values.

Mean results were calculated for the overall sample of respondents and then were stratified by gender (male/female), race/ethnicity (white/non-white), and by athletes who participated in revenue/non-revenue sports. Significance tests for the difference between means were conducted using T-tests to test mean differences and a Chi Square to test differences in categorical proportions for all subgroup contrasts (e.g., gender, race, revenue/non-revenue); the shaded cells signify that the subgroup difference is statistically significant at a probability level of .05 or less in orange and p<.01 in blue.

Open-ended responses were compiled and coded by two independent coders.

Results

General Summary

Overall results from the 46 senior student-athletes who completed the exit surveys for the 2011-2012 academic year indicate a fairly positive view of their UNC experience in both athletics and academics. The average response for all positive items is greater than 4.0 (i.e., between agree and strongly agree on the 5pt scale). Strength and Conditioning was very favorably perceived with mean score of 4.525 for all questions in that section; Q1 availability of weight room and staff and Q3 condition and maintenance of weight room had the highest score (mean=4.7). Student-athletes also gave the highest score (mean=4.7) to the physician availability (Q5). Availability of the athletic trainers (Q6) also scored high (mean=4.6). The overall mean for the Sports Medicine section was 4.313. Student-Athlete Development services were also favorably received with an overall mean of 4.0. The Administration (mean=3.85), Coaching (mean=3.775) and Academic Support Programs (mean=3.7 for positively phrased questions) were viewed slightly less favorably, yet still in a positive manner.

Of the positively phrased questions, the lowest mean was 3.5 which is halfway between neutral and agreement. Q29 communication between coaching staff and academic staff had the lowest mean (mean=3.5). All of the questions with a mean of 3.6 were also in some way related to academics: Q14 level of support from academic support staff, Q15 accuracy of information/advising from academic support staff, Q16 tutors abiding by the Honor Code in providing assistance, and Q31 coach's support beyond athletics. The lowest reported item mean from the 2010-2011 academic year was 3.7. So down

Questions 17-22 in the Academic Support Program section inquired about the tension between athletics and academics for student-athletes. These questions were phrased in a negative manner, so lower scored indicate a more favorable response (i.e. a 1 response is strongly disagree that athletics impinges on academics). Mean responses to these items range from mean=2.4 (a rating between disagree and neutral) for Q17, reflecting a positive ability to select the academic major the student-athlete wanted to mean=3.4 (a rating between neutral and agree) for Q18, indicating a moderate inability to schedule the classes that the student-athlete wanted to take. Student-athletes were neutral (mean=3.0) whether participating in their sport leaves them too tired to pay attention in class (Q19), or that participation has negatively affected their grades (Q22). All other negatively phrased questions had means between 2.5 and 2.8, indicating that student-athletes value their academic performance (Q21), the coaching staff emphasizes the importance of academic achievement (Q30) and that athletics participation does not leave student-athletes too tired to do homework or prepare for class (Q20). These results are quite positive and suggest that responding student-athletes maintain a good balance between athletics and academics.

Subgroup Differences and Related Trends

Significant differences between all subgroups were found for two questions (Q19 and Q20). Females slightly disagreed that participating in sport left them too tired to pay attention in class or to do their homework (mean=2.5) while males slightly agreed (mean=3.2) that they were too tired to complete homework, and

somewhat agreed (mean=3.5) that they were too tired to pay attention in class. Similarly, white student-athletes slightly disagreed that participating in sport left them too tired to pay attention in class (mean=2.6) or to do their homework (mean=2.5) while non-whites slightly agreed (mean=3.4) that they were too tired to complete homework, and somewhat agreed (mean=3.7) that they were too tired to pay attention in class. Non-revenue sport student-athletes somewhat disagreed that participating in sport left them too tired to pay attention in class or to do their homework (mean=2.5) while revenue sport student-athletes somewhat agreed (mean=3.6) that they were too tired to do homework, and agreed (mean=4.2) that they were too tired to pay attention in class.

Gender differerences. Two other questions (Q21, Q30) indicated a significant difference based on gender. While females disagreed (mean=2.0) that athletic performance was more important than academic performance (Q21), males were neutral (mean=3.0). Females also somewhat disagreed that the coaching staff expected them to earn grades to remain eligible (Q30, mean=2.4) while males were neutral (mean=3.0). These gender differences may be explained by different values placed on academics between non-revenue and revenue sport student-athletes (discussed further in that section).

Differences by race/ethnicity. There were four questions that found significant differences based on race/ethnicity in addition to Q19 and Q20 discussed previously. White student-athletes looked more favorably upon the training techniques and safety in the strength and conditioning program (Q2) and in the development of individualized off-season strength and conditioning programs (Q4) than non-white student-athletes. Similarly, white student-athletes were more satisfied with the level of commitment displayed by the coaching staff to rules enforcement (Q32) and the overall conduct of the athletics administration regarding student-athletes (Q34).

Revenue/non-revenue sport differences were much more prevalent among student-athlete respondents in 2011-12. Overall student-athletes in revenue sports were less pleased with their experience that non-revenue sport student-athletes. Only the level of communication between sports medicine staff and coaches (Q12) scored significantly more positive for revenue sport student-athletes (mean=4.5) compared to those in non-revenue sports (mean=3.7). In addition to Q19 and Q20 reported previously, revenue sport student-athletes indicated that they were less likely to select the academic major they really wanted (Q17), their athletics performance is more important than their academic performance (Q21), and their grades have suffered due to their participation in sport (Q22) as compared to non-revenue sport student-athletes. Revenue sport student-athletes somewhat agreed (mean=3.5) that the coaching staff only expected them to earn grades that would keep them eligible (Q30) while non-revenue sport athletes somewhat disagreed (mean=2.4). Revenue sport athletes were also less satisfied with student-athlete development experiences (Q23, Q25, Q26) although their overall means were still favorable (mean=3.5). The level of commitment of the coaching staff to rules compliance (Q32) was rated lower by revenue sport student-athletes (mean=3.3), while non-revenue sport athletes were more satisfied (mean=4.3). Similarly, revenue sport student-athletes were more neutral toward the overall conduct of the athletics administration regarding student-athletes (Q34, mean=3.3) while non-revenue sport student-athletes were more pleased (mean=4.1).

Principal Reasons for Choosing Carolina

In the overall sample of senior student-athletes who completed the exit survey, the main reasons why student-athletes reported choosing to attend North Carolina were: academics (76.1%), followed facilities (73.9%) and social life (73.9%).

GPA

The average GPA for the senior student-athletes who responded to the exit survey in 2011-12 was 3.10, which was the same as reported for 2010-2011. Difference in GPA by gender were not statistically different. Student-athlete mean grade point average was significantly different based on race/ethnicity, with a reported mean of 3.3 for white student-athletes and a mean of 2.8 for non-white student athletes (n=39). There was also a statistically

significant difference between revenue and non-revenue sport student-athletes reported mean grade point average (revenue mean=2.6, non-revenue mean=3.3).

Student-Athlete Open-ended Comments

Space was provided for students-athletes to leave written comments on strengths/weaknesses related to their experience at UNC. The Carolina Leadership Academy was cited as a strength by 32% of the respondents. Other strengths acknowledged by student-athletes included the overall college/campus experience at UNC, team cohesion, athletic training, and support for injured student-athletes. Opinions about student-athlete services were mixed with 32% of respondents viewing it as a strength and 36% indicating it was a weakness. A perception of inequality in treatment between revenue and non-revenue sports was reported by 16% of respondents. Poor student-athlete coach relationships (12%), including coaching turnover, dissatisfaction with coach's attitude, and quality of coach were expressed by a few respondents. Poor communication between coaches and medical/athletics training staff was identified as a weakness, and one complaint was made about perceived gender bias in athletics training staff availability.

Overall Summary: In general, senior student-athletes who completed the exit surveys in 2011-2012 rated both the athletic and academic experiences at UNC quite favorably. It is likely that many of the significant differences reported between revenue and non-revenue sport student athletes are the lingering effects of the NCAA investigation and sanctions, and the heightened national and local press associated with the football and athletics program. In spite of these stressors, senior student-athletes were generally quite favorable about their time and experiences at UNC.

Scrutiny of the athletics program and subsequent investigations on campus have resulted in many changes in leadership, staffing, policies and procedures. Care should be taken in assuring that these changes result in improved experiences for student-athletes. Significant differences between non-revenue and revenue sport student-athletes' experiences should be minimized. Any differences related to emphasis on academic achievement should be eliminated, with all student-athletes positively valuing their education at UNC. Similarly, all student-athletes should be receiving the same messages regarding the importance of their education from the coaching staff.

Rough Draft – not for distribution

Appendix A - Survey

Sport: _____ Date of Evaluation: ____/____/____Your name (**OPTIONAL**): _____
Gender: Female_____ Male_____ Estimated GPA entering Spring 2009_____ Major_____
Race: Asian/Pacific_____ American Indian_____ Alaskan Native_____ Hispanic_____ Black/Non Hispanic_____ White_____ Other_____
Reason You Chose to Attend UNC: Academics_____ Specific sport program_____Coaches_____ Teammates_____ Facilities_____ Social Life_____

Thank you for agreeing to complete this **Student-Athlete Survey** regarding your experiences as a student-athlete (s/a) at the University of North Carolina. Your responses will be CONFIDENTIAL. Using the following scale, please rate your experiences as a UNC student-athlete. Please return this survey to Dr. Cricket Lane.

RATING:

Strongly Agree	Exemplary performance in all areas.
Agree	Surpasses the standards and performance expectations in many important areas.
Neutral	Good performance. Consistently meets standards and performance expectations in important areas.
Disagree	Performance does not meet expectations in some important areas; below expected levels. Improvement needed.
Strongly Disagree	Performance falls below expectations in many areas. Substantial improvement critical.

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree	N/A
STRENGTH & CONDITIONING (S & C)						
1. The weight room and its staff are available to me.						
2. The staff utilizes safe, effective and current training techniques.						
3. The weight room is in good condition and maintained well.						
4. The staff develops off-season programs with clear individual goals.						
SPORTS MEDICINE						
5. Sports medicine physicians are available to me.						
6. Sports medicine athletic trainers are available to me.						
7. I am pleased with the level of care I receive from sports medicine physicians.						
8. I am pleased with the level of care I receive from athletic trainers.						
9. I am pleased with the level of coverage by sports medicine at off-season practices and competition.						
10. I am pleased with the level of care received from sports medicine staff regarding rehab and athletically related issues.						
11. I am pleased with the level of communication between sports medicine staff and student-athletes.						
12. I am pleased with the level of communication between sports medicine staff and coaches.						
ACADEMIC SUPPORT PROGRAM						
13. The academic support staff is available to me.						
14. I am pleased with the level of support from the academic support staff.						
15. I am pleased with the accuracy of information/advisement I receive from the academic support staff.						
16. Tutors abide by Honor Code in providing academic assistance to						

	Strongly Agree	Agree	Neutral	Disagree	Strongly Disagree	N/A
student-athletes.						
17. **Participating in my sport has kept me from selecting the academic major I really wanted.**						
18. **Participating in my sport has kept me from scheduling courses that I wanted to take.**						
19. **Participating in my sport leaves me too tired or preoccupied to pay attention in class.**						
20. **Participating in my sport leaves me too tired to complete my homework or preparation for class.**						
21. **My athletic performance is more important to me than my academic performance.**						
22. **My grades have suffered due to my participation in my sport.**						
STUDENT-ATHLETE DEVELOPMENT						
23. The quality of my experience with s-a development was good.						
24. The student-athlete development staff was accessible to me.						
25. I am pleased with the level of support from the student-athlete development staff.						
26. I am pleased with the quality of personal development programs. (alcohol and other drug education)						
27. I am pleased with the quality of career development services.						
COACHING						
28. My head coach fostered a strong academic atmosphere.						
29. The coaching staff and the academics staff communicate well.						
30. The coaching staff expects me to just earn the grades needed to remain eligible.						
31. I am pleased with the level of coach's support of student-athletes beyond athletics.						
32. I am pleased with the level of commitment displayed by the coaching staff to adhere to NCAA, conference, and institutional rules.						
ADMINISTRATION						
33. The athletics administration is available to me.						
34. I am pleased with the overall conduct of the athletics administration regarding student-athletes.						

Please use the space below to make any additional comment s that you care to make about your team or your experience at Carolina.

Strength(s)/Positives:

Concerns/Weaknesses:

Do you wish to request an in-person meeting with a member of the institution's administrative staff? Yes_____No_____
If so, please contact the Athletic Department as soon as possible to schedule this meeting.

Thank you for taking the time to complete and return this survey to Dr. Cricket Lane
The results will be used to better serve student-athletes at the University of North Carolina

Senior Student-Athlete Exit Interviews, Fall 2011 and Spring 2012

Prepared by Glynis Cowell

Summary of Results

Overall, the student-athletes interviewed felt their academic and athletic experiences at UNC-CH were very positive. The majority agreed they made the right decision in attending this university and would choose to do so again as student-athletes. Their specific comments on a variety of issues are summarized in this report: academic experience including relationships with faculty, disadvantages of being a student- athlete, coaches' support of academic pursuits, experiences with the Academic Support and Academic Advising Programs, and knowledge of academic dishonesty; student development focused on services provided; athletic experience including instruction from coaches, support from Sports Medicine, team climate, equipment and facilities, and availability of Athletics Administration; and general comments regarding positive aspects of the overall experience and suggestions for improvement. The summary is followed by some recommendations based on these results.

I. Academic Experience

Overall experience. The majority of student-athletes interviewed were pleased with their academic experiences at UNC-CH and described them as positive and challenging with regard to balancing schedules. A few mentioned learning from adversity, and for the most part, feeling supported. Two others felt they could have been pushed more academically.

Relationships with faculty. While some expressed that it is difficult to be a student and an athlete, especially with regard to office hours, absences and missed exams due to competition, others described their relationships with faculty as good, indicating that in general, professors are supportive and accommodating. [Note: Steps are already being taken to clarify for faculty the University attendance policy.]

Disadvantages of student-athletes with regard to academics. Disadvantages with regard to class attendance were also mentioned here, along with the sense that academic expectations for some first-year student-athletes could be higher, based upon the level of preparation coming out of high school. Completing a major in Education is a challenge for student-athletes, as are internships. [Note: a subcommittee including members of FAC and representatives from the School of Education met in 2011-2012 and are developing a plan to make a major in Education possible for student-athletes.]

Coaches' support of academic pursuits. In general, student-athletes felt their coaches were encouraging and supportive of academics, although there were some differences among sports.

Academic Support. Comments were mixed regarding guidance received and there were some issues reported related to the tutoring program including availability and quality of tutors for specific courses.

Academic dishonesty. While they recognized that there is academic dishonesty among students in general, the consensus was that academic dishonesty is not a serious issue for student-athletes.

II. Student Development

Available services. Student-athletes voiced a variety of opinions regarding student development. For the most part, they were complimentary of the services. With regard to drug education seminars, many felt that focus should be on specific data/information and testimonials rather than on advice. Comments on community service opportunities were positive, citing a variety of experiences including working with Habitat for Humanity, serving in soup kitchens, acting as big buddies and making hospital visits. While some student-athletes stated they did not take advantage of career development services, primarily due to lack of time and/or of awareness of the resources, others felt it is a good resource that is becoming more visible and could perhaps take advantage of social media to publicize resources and events. The use of graduate athlete mentors was also discussed to promote career development. Comments were also positive regarding the Carolina Leadership Academy, with special praise for the Veteran Leaders Program.

III. Athletic Experience

Overall experience. The majority agreed they had a good experience as an athlete at UNC-CH. There was some discussion of issues caused by coaching changes and coaches' handling of student-athletes who lack commitment and a strong work ethic on and off the field.

Coaches: instruction and development. Those who responded indicated that coaches did teach the athletes their sport and helped them develop into better athletes.

Sports Medicine. Comments regarding doctors and trainers were varied but for the most part positive. Issues expressed involved uneven coverage across teams, a large team that had only 1 head trainer and 2 graduate assistants who could not meet all the needs of those student-athletes, coaches overriding a trainer's guidance, and some disagreement with how the research on concussions impacts play. Comments were favorable with regard to the strength and conditioning staff and the nutrition program. Concerning the sports psychologists, student-athletes indicated that some teams may not be aware of this service while others could have taken advantage of the resource if it were more positively viewed and more readily available. The suggestion was made that the sports psychologists meet individually with teams.

Team climate with respect to diversity, hazing, gambling, alcohol and other drugs. A few student-athletes shared specific comments: one regarding a positive team experience with an openly gay/lesbian team member, and two negative remarks involving separate racial groups within a team and a hazing issue that was addressed by the Athletic Department and the Dean of Students. Beyond a mention of small-scale poker, there were no issues regarding gambling. Comments about alcohol and other drugs suggested that alcohol is readily available but use varies by team and the individuals on a team.

Equipment and facilities. Most student-athletes who responded reported issues with facilities. The women's tennis facility is off campus which affects attendance. The suggestion was made to hold one or two home matches at the Cobb courts. The rowing team holds "home" meets on Lake Wheeler and for practice and training they share space with the public at University Lake where bathrooms are sometimes locked, racks do not fit all kinds of boats and the lake is too small for a full race. The fencing team has reportedly had one home meet in four years. According to one student athlete, EXSS classes

have a 2-mile run while the team is practicing and people from the community also run on the track during practice. Also mentioned was the lack of coverage by the DTH of some teams.

Availability of Athletics Administration. While several student-athletes felt they could contact the Athletics Administration with issues, and some already had, to others it did not appear to be clear whom to contact. A suggestion was made that administrators could travel to competition once or twice so student-athletes could get to know them.

IV. General Comments

Most positive aspects of overall experience. There were numerous positive aspects mentioned by the student-athletes. There were multiple comments on the atmosphere of Carolina athletics, including excellence, camaraderie and pride. There were also several comments regarding the Carolina Leadership Program, team relationships, development as an athlete, time management, networking with coaches and others and the Academic Support Program and staff. Other positive comments involved training facilities, including for non-revenue sports, history professors, perspective on life and life lessons.

Suggestions for improvement. The comments included a need for more information for graduate school and an earlier start with career services; more equitable investment in facilities across sports; coaching issues involving managing internal conflicts, balancing influence and power among physicians, trainers, and coaches, and the need for a workshop for coaches on how to communicate with female student-athletes about weight; more out-of-state travel for the track team and a home meet for the fencing team; and clarifying for student-athletes the 20-hour per week rule—what is included in those 20 hours.

Perceived constraints of being an athlete. There were few responses for this category, perhaps because they had already voiced their opinions in responding to previous questions, however study abroad was not possible for one and a lack of time to focus on post-graduation plans was an issue for another.

Decision to attend UNC and as a student-athlete. The majority agreed they would choose to attend UNC again and as a student-athlete. One group was asked to share their best moments at UNC and also what they would do differently if they could. Best moments ranged from personal reflections regarding family, to spending time with teammates, to playing in championships. Comments regarding what they would do differently included taking greater advantage of academics and campus activities, thinking more on his/her own and placing less trust in advising and in one case, coaches.

Additional comments. One student-athlete shared that he/she had the great opportunity of entering as a walk-on and leaving as a scholarship athlete. Another mentioned that the student-athletes who participate in the exit interviews are generally those who have taken advantage of resources.

Recommendations to consider

1. Explore new ways to continue to foster the relationship between athletics and academics.
2. Continue to encourage academic excellence for student-athletes among coaches and teams.
3. Clearly define and communicate to student-athletes the roles of ASPSA (Academic Support Program for Student Athletes) academic counselors and academic advisers in the Academic Advising Program.
4. Consider revising drug education seminars to include more specific data and testimonials.

5. Continue to publicize career development, perhaps using social media as a means to communicate this type of information. Consider the feasibility of using student-athletes who have already graduated as mentors to promote career development as well as networking.
6. Clarify the roles of coaches, team physicians, and trainers with regard to injuries and when a student-athlete may return to play.
7. Review the coverage of trainers across teams and expand where needed, if possible.
8. Consider expanding the Sports Psychology program and invite psychologists to make team visits to explain their roles.
9. Continue to educate teams with respect to diversity. Train coaches on to how to best handle issues and internal conflicts involving this and other situations, should they arise.
10. With regard to athletic facilities, consider holding home tennis matches at the Cobb courts once or twice a season, hosting a home meet for the fencing team, limiting track use to team only during practice, and working with the DTH to publicize all athletic events and teams. Also investigate whether any improvements can be made with regard to facilities for the rowing team.
11. Promote visibility of Athletic administrators and their connections with teams at team meetings, practice and competition.

Procedural notes. The interviews that yielded the data summarized in this report were conducted with four different groups of senior student-athletes on November 29 and November 30, 2011, and again on March 26 and March 27, 2012. The 37 student- athletes (20 female) participate in 14 different sports: baseball (2), fencing (3), field hockey (2), football (6), women's golf (1), gymnastics (1), men's lacrosse (1), rowing (5), men's soccer (1), women's soccer (1), softball (1), swimming and diving (5), men's tennis (1), women's tennis (1) and track & field (6). The majors listed for these student-athletes were: African American Studies (1), Anthropology (1), Art (1), Biology (2), Business (1), Chemistry (1), Communication Studies (7), Economics (3), English (2), Exercise and Sports Sciences (9), History (2), Journalism (6), Mathematics (2), Pharmacy (1), Political Science (2) and Psychology (2). The interviews covered student-athletes' academic experiences, student development, and athletic experiences. The interviews were conducted by members of the Faculty Athletics Committee (Byers, Cowell, Foster, Reznick and Stephens) and athletic administrators (Blanchard, Cunningham, Gallo, Lane and Miller).

Today at Carolina Law: Sunday, September 1, 2013

No events are scheduled for today.

ONGOING SIGNUPS & OPPORTUNITIES

- Register for North Carolina Law Review Symposium: Health Care Decisions in the New Era of Health Care Reform (Signup ends 10/2/2013)

Subject: Expand Your Knowledge: CLE Connection September 2013

Your monthly guide to ABA Business Law Section CLE.

ABA Business Law Section CLE

REMOTE CLE

What Every Business Lawyer Should Know About Bankruptcy
Date: September 6, 2013
Time: 11:00 a.m. - 12:30 p.m. Eastern
Credits: 1.5 requested
Tuition: $95
The program will provide intermediate-level discussion of bankruptcy law issues that arise in general business law practice.

Current and Future Impact of the Supreme Court's DOMA Decision
Date: September 10, 2013
Time: 1:00 p.m. - 2:30 p.m. Eastern
Credits: 1.5 requested
Tuition: $125
Hear from our distinguished panel on an in-depth look at the Supreme Court's Windsor decision, its impact and what to expect over the coming years.

Worker Classification: What's New and What You Need to Do
Date: September 12, 2013
Time: 1:00 p.m. - 2:30 p.m. Eastern
Credits: 1.5 requested
Tuition: $125
Improper classification of workers as independent contractors instead of employees causes a myriad of problems for employers, including potential problems under the Affordable Care Act. With the focus on employee classification for purposes of healthcare reform and the updates to the Voluntary Classification Settlement Program (VCSP) made in December of 2012, there has been a renewed focus on how companies should be classifying their workers.

A Primer on UCC Articles 8 & 9 by Steve Weise
Date: September 18, 2013
Time: 1:00 p.m. - 2:30 p.m. Eastern
Credits: 1.5 requested
Tuition: $95
This program is designed for attorneys with a general practice that need to keep current with substantive changes and developments in the UCC that affect daily business practices.

Basel III: Regulatory Capital in a Whole New World
Date: September 20, 2013
Time: 12:00 p.m. - 1:30 p.m. Eastern
Credits: 1.5 requested
Tuition: $125
This program will analyze the impact of these rules on the U.S. credit risk framework and evaluate their long term effects on the U.S. financial industry as well as its competitive standing in the international community.

IN-PERSON CLE

Health and Welfare Benefit Plans 2013
Date: September 26-27, 2013
Registration: $795
Credits: 14.4 expected
Location: Arlington, VA
Hotel: The Ritz-Carlton, Pentagon City

Consumer Financial Services Basics 2013
Date: September 30 - October 1, 2013
Registration: $1095
Credits: 13.8 expected
Location: Baltimore, MD
Hotel: Francis King Carey School of Law

ERISA Basics
Date: October 16-18, 2013
Registration: $800
Credits: 16.8 expected
Location: Chicago, IL
Hotel: Westin Chicago River North

LLCs, Partnerships and Unincorporated Entities Institute
Date: October 17-18, 2013
Registration: $225
Credits: 12 expected
Location: Arlington, VA
Hotel: Le Meridian/Waterview Conference Center

Securities Fraud 2013
Date: October 24-25, 2013
Registration: $950
Credits: 9.2 expected
Location: New Orleans, LA
Hotel: Westin New Orleans Canal Place

Business Bankruptcy Committee Meeting
Date: October 30 - November 2, 2013
Registration: $145
Credits: 10 expected
Location: Atlanta, GA
Hotel: Atlanta Marriott Marquis

Red Flags, Money Laundering, and Ethics Opinion 463
Date: September 25, 2013
Time: 1:00 p.m. - 2:30 p.m. Eastern
Credits: 1.5 requested
Tuition: $95
Ethics credit requested.

The CFPB & State Attorneys General: A New Age for Consumer Financial Protection
Date: September 25, 2013
Time: 1:00 p.m. - 2:30 p.m. Eastern
Credits: 1.5 requested
Tuition: $95
Is the Consumer Financial Protection Bureau (CFPB) just another "ho-hum" federal agency or the beginning of a "new age" for consumer financial protection?

Private Company M&A: A Potpourri of Practical Pointers
Date: September 27, 2013
Time: 1:00 p.m. - 2:30 p.m. Eastern
Credits: 1.5 requested
Tuition: Free for Section members
This program will cover an abundance of mergers and acquisitions subjects including: reverse and forward triangular mergers; the unintended meanings of "indemnify" and "survive"; "knowledge" qualifications; fraud exceptions and non-reliance clauses; "fair presentation" of financial statements; antitrust risk allocation; legal opinions; and more.

Executive Compensation
Date: November 4-5, 2013
Registration: $995
Credits: 11.9 expected
Location: New York, NY
Hotel: Executive Conference Center

Banking Law Committee Meeting
Date: November 7-9, 2013
Registration: $260
Credits: 9 expected
Location: Washington, D.C
Hotel: Ritz-Carlton Washington

Negotiating Business Acquisitions 2013
Date: November 14-15, 2013
Registration: $800
Credits: 12.8 expected
Location: Las Vegas, NV
Hotel: Wynn Las Vegas and Encore Hotel

Business Law Section Fall Meeting
Date: November 22-23, 2013
Registration: $300
Credits: 10 expected
Location: Washington, D.C.
Hotel: Ritz-Carlton Washington

Consumer Financial Services Committee Meeting
Date: January 10-14, 2014
Registration: $275
Credits: 13 expected
Location: Park City, UT
Hotel: Canyons Resort

Cyberspace Law Institute & Winter Working Meeting
Date: January 31 - February 1, 2014
Registration: $300
Credits: 4 expected
Location: Denver, CO
Hotel: Four Seasons Hotel
Registration is not yet available

Derivatives and Futures Law Committee Meeting
Date: February 6-8, 2014
Registration: $415
Credits: 11 expected
Location: Naples, FL
Hotel: Ritz-Carlton Golf Resort
Registration is not yet available

While clearly biased I would also suggest NACBA's website nacba.org (I'm currently its president) and my own blog- ncbankruptcyexpert.com. (You'll see that I recently posted about an article by one of your editors, who was off in his comments on a few aspects of bankruptcy law.)

You should also consider including credit slips and mandelmanmatters.

The Ch. 13 Trustee's organization (NACTT) also has a blog with regular case updates.

From a more consumer creditor's perspective, the U.S. Foreclosure Network (USFN) publishes articles that are rather good.

Hi Ed – Thanks for the suggestion. Frankly, we haven't looked at that page recently and your recommendation is a good one. When we update our web pages this summer, I will make a note to add in links to the Center for Responsible Lending and the National Consumer Law Center. If you have other recommendations to add to this list, I would welcome them.
Thanks for reading the Banking Institute Journal. We appreciate your support and hope you will consider becoming a subscriber. We have a special issue slated to come out this fall presenting edited remarks and papers from a February conference we co-sponsored with several other schools. The focus was The Political Economy of Financial Regulation. Videotapes of the sessions of our conference on "The Political Economy of Financial Regulation" are now available at the following weblink:

Dear Prof. Broome,
Every year, I avidly read, online admittedly, the North Carolina Banking Institute Journal, particularly as it is the only review of which I am aware banking, finance and bankruptcy issues with a concentration on North Carolina. The Journal has a very broad scope, but on looking through the rest of the Center's website, the Resources & News section is dominated by blogs and such from large firms (or what we in the consumer bankruptcy field call "Tall Building Lawyers".) What is required to have consumer bankruptcy focused blogs included on this list?

Subject: [law_faculty] Sad News: Death of Harry Groves

[Message was sent to entire Law School Community]

Dear Friends,

I am sad to report the death of Harry Edward Groves on August 24, 2013, at the age of 91, news that I learned only in Sunday's Raleigh *News & Observer*. Harry was an active member of our faculty and a Henry Brandis Professor of Law at UNC Chapel Hill from 1981 through 1986. He built a remarkably varied and distinguished legal career in law practice, law teaching, governmental service, and academic administration, serving not only as a chaired professor at Carolina Law, but as Dean of North Carolina Central School of Law and leader of two other law schools and a university. In recent years, as many of you know, Harry was a resident at Carolina Meadows, where he was a frequent luncheon or dinner companion of Bill Aycock. I saw them both for lunch in early May. Harry was his characteristically modest but urbane self in conversation, asking about changes at Carolina Law and comparing them to his own experiences as Dean of the Law Faculty at the University of Malaya, Singapore in the 1960s.

Harry was born in Manitou Springs, Colorado in 1921. One of the few African Americans in his class, he graduated as valedictorian and earned a full scholarship to the University of Colorado, where he graduated Phi Beta Kappa, with a BA degree *cum laude* in 1943. He entered the United States army as a second lieutenant, serving as an artillery officer in the European theatre until the close of World War II. Thereafter, he began a master's degree in educational administration at the University of Chicago, but decided instead to move into the J.D. program at the University of Chicago School of Law, from which he graduated in 1949. He earned a Ford Foundation Fellowship to study at Harvard, where he conceived a lifelong interest in constitutional law, especially the constitutional law of Asian and emerging nations.

Harry came to North Carolina as an associate professor at North Carolina College School of Law from 1949-51, but reentered active military service in 1951-52, as a captain in the Judge Advocate General's Corp for the 82d Airborne in Ft. Bragg, while simultaneously winning election to the Fayetteville City Council, a remarkable achievement in the pre-*Brown v. Board* era. After four years of private law practice in Fayetteville from 1952-56, Harry was named Dean of Texas Southern University School of Law in Houston, Texas. After four years as dean, he moved to Singapore in 1960, where he became a member of the law faculty and eventually dean of the law faculty at the University of Malaya. There followed visits in 1964 as a professor of law at the University of Washington, the University of Utah, the University of Cincinnati, the University of North Carolina (in 1970), and the University of Dayton, as well as a three-year term, from 1965-68, as President of Central State University at Wilberforce, Ohio.

Harry returned to North Carolina in 1976 for a five-year term as Dean of North Carolina Central School of Law. In 1981, he returned to teach at Carolina Law, accepting the Henry Brandis Professorship. In 1986, the year of his formal retirement at 65, the North Carolina Bar Association awarded him its prestigious Judge John L. Parker Award. His formal retirement brought no rest; instead, Harry served as a visiting professor at the law schools of Memphis State University, the University of Minnesota, and Wake Forest University. In 1991, the National Bar Association inducted him into its Hall of Fame.

The University of North Carolina has received and catalogued 2500 items of Harry Groves' papers in its collection, including papers related to his ongoing interest in the constitutional development of Malaysia, as well as his concern for affirmative action and the future of African American institutions. Harry was a man of warmth and grace, who easily bore the sophistication and erudition he had gained as a citizen of the world. He nonetheless manifest great and continuing interest in Carolina Law and its future. He was a wonderful member of our faculty, and those who knew him will miss him greatly.

He is survived by his only son, Sheridon Graves, three grandchildren, and five great-grandchildren. His dear wife of 61 years, Evelyn, died on August 24, 2011, two years to the day prior to Harry's death last week. A memorial service will be held in the Carolina Meadows Auditorium on what would have been Harry's 92d birthday, Wednesday, September 4th. I will share further details as they become available.

Jack

Subject: 1A FAR Annual Conference - Seats/rooms are still available

Many thanks to those of you who have already registered. If you have not yet registered, space is still available! Come join other FBS FARs for the 1A FAR Annual Meeting, which is set for Sept. 22-23 in Dallas. This year's program includes:

- Presentations by NCAA President Mark Emmert, President Lou Anna Simon from Michigan State University, who chairs the NCAA Board's Executive Committee, and NCAA national SAAC President, Maddie Salamone – a student-athlete from Duke.
- Dr. Lou Marciani and Dr. Stacey Hall of the National Center for Spectator Sports Safety and Security at the University of Southern Mississippi will address techniques, strategies, and solutions to mitigate the safety and security risks inherent in collegiate sports venues.
- ESPN analyst Jay Bilas will offer his unique perspectives on college basketball, college athletics, and today's student-athletes.
- A panel will provide perspectives on the differences between coach and student-athlete conduct and treatment versus conduct and treatment of students by faculty members in general.
- Dr. Brian Hainline, the NCAA's new Chief Medical Officer will discuss his agenda and goals for the NCAA Sport Science Institute on issues ranging from concussions, to substance abuse, to other issues pertaining to our student-athlete's physical and mental development and wellness.
- Opportunities to interact and socialize with your FAR peers from around the country!

To register, go to http://www.d-1a.com/annual-meeting-registration.htm and sign up now. When you've finished registering, you can send your registration fee to: Amy Hart, D-1A AD Assoc., 920 Main Street, Suite 100, Grapevine, TX 76051. A copy of the full program is attached.

EVENTS AT UNC LAW

Domestic Violence Advocacy Project Interest Meeting

Tuesday, September 3, 12:00-1:00 p.m., Room 5046

Come learn more about our upcoming events, pro bono projects (for all years), and how to get involved with DVAP this year! Refreshments will be provided.

Public Interest Mentor Program Kickoff Meeting

Tuesday, September 3, 12:00-1:00 p.m., Room 4085

This is the initial meeting of the 2013-2014 Public Interest Mentor Program. Mentors and mentees will meet each other and learn about the resources available to support them on their path to a public interest career. For more information, contact Adrienne Allison, Public Interest Career Counselor.

Education Law and Policy Society Meet and Greet

Tuesday, September 3, 12:00-1:00 p.m., Room 5048

Come to our welcome back Meet and Greet event! Drop in anytime between 12 p.m. and 1 p.m. to meet the ELPS board members and participants. Find out more about ELPS and sign up for some education law-related pro bono projects.

Carolina Public Interest Law Organization (C-PILO) Welcome Meeting

Wednesday, September 4, 12:00-1:00 p.m., Room 4085

C-PILO helps provide grants to students who accept summer internships in the public sector that are low-or non-paying; facilitates a network of support for students interested in pursuing public interest law; exposes the law school community to public interest law; and encourages students to pursue careers in the public sector. Come to the welcome meeting to learn how you can get involved!

Death Penalty Project Interest Meeting

Wednesday, September 4, 12:00-1:00 p.m., Room 5042

Come learn more about the Death Penalty Project. We are an organization that was founded for the purpose of fostering a community that is more conscious of the effect of the death penalty on society. We will begin working on outreach, planning events, and organizing pro bono opportunities. Please bring your own lunch!

American Civil Liberties Union (ACLU) First Meeting

Thursday, September 5, 12:00-1:00 p.m., Room 5046

The Carolina Law ACLU promotes discussion and awareness of civil liberties issues with the goal of safeguarding the civil liberties of members of the community. UNC Law ACLU is a chapter of the American Civil Liberties Union of North Carolina, which is an affiliate of the American Civil Liberties Union

Child Action General Interest Meeting

Thursday, September 5, 12:00-1:00 p.m., Room 4004

Child Action will be hosting a general interest meeting for those interested in learning more about pro bono opportunities available through the organization, particularly the Guardian Ad Litem Program and the Mock Trial with the School of Social Work.

Teen Court General Interest and Welcome Meeting

Thursday, September 5, 12:00-1:00 p.m., Room 4085

Please join us to learn more about our organization and how you can get involved. Pizza will be served. If you are unable to attend but would like more information, please email

Media Law Society General Interest Meeting

Friday, September 6, 12:00-1:00 p.m., Room 4082

Interested in Media Law? Come join the UNC Media Law Society for a General Interest meeting and enjoy a free lunch on us! We will introduce the board members, discuss what media law is, and give you information on our upcoming events -- including First Amendment Day, networking events, and a media law movie night!

Environmental Law Project Symposium Research Training

Friday, September 6, 12:00-1:00 p.m., Room 3049

Professor Hornstein will give students a brief introduction to environmental law research. This is for students who have signed up with the Environmental Law Project to write a paper for the symposium.

CAREER CORNER

U.S. Navy JAG Information Session

Wednesday, September 4, 12:00-1:00 p.m., Room 4004

A U. S. Navy JAG Corps representative will provide information for students who are interested in applying for summer or full time positions. Learn about the application process and what it is like to practice law as a Navy JAG attorney. Contact Samara Reynolds with questions.

Reminder: Equal Justice Works Conference & Career Fair Registration is Now Open!

Students can now register and apply for interviews at the EJW Career Fair (**October 25-26, 2013**). If you wish to interview at EJW, you must register and apply no later than 6 p.m. EST on Thursday, September 12. (If you wish to only attend the informal Table Talk periods or the workshop sessions, you can register until Friday, October 11.) DO NOT wait until the last minute to register and apply! Join the CDO for an information session about the Conference & Career Fair on August 27 (Room 5052).

3L Public Interest Job Search Group

Over the next several months, the Career Development Office will be providing a unique opportunity for 3Ls seeking public interest and government employment to gather in small-group sessions to provide peer-to-peer job search support. If you are interested in participating, please complete the group survey by **Friday, September 13** to give us feedback about what you hope to gain from a job search group. Contact Adrienne Allison or Samara Reynolds with any questions.

SUMMER AND POST-GRADUATE EMPLOYMENT OPPORTUNITIES

Upcoming Government Deadlines

Below is a *sampling* of upcoming deadlines for federal government honors programs (3Ls) and summer 2014 internship programs (2Ls). Information about each program can be found on individual department websites, as well as in the Government Honors and Internship Handbook online. If you have questions, need application assistance, or would like to be added to the govcareers email list for relevant announcements, please contact Samara Reynolds, Government Career Counselor in the CDO.

Postgraduate Positions (3L)

- Department of Justice (DOJ) Honors Program: September 3
- Department of the Interior (DOI) Honors Program: September 5
- Department of Homeland Security (DHS) Honors Program: September 15
- Air Force JAG: September 15 first deadline (also 11/15 and 3/15)
- Federal Trade Commission (FTC) Honors Program: September 15
- Comptroller of the Currency (OCC) Chief Counsel's Honors Program: September 16
- Consumer Financial Protection Bureau (CFPB) Honors Program - September 17
- Internal Revenue Service (IRS) Honors Program: Rolling

Summer 2014 Positions (2L)

- Department of Justice (DOJ) Internship: September 3
- Securities and Exchange Commission (SEC) Summer Program: September 6
- Central Intelligence Agency (CIA) Internship: September 15
- Department of Health and Human Services (DHHS) OIG Externship/Internship: September 16
- Department of Education Internship: Rolling
- Internal Revenue Service (IRS) Internship: Rolling
- Federal Communications Commission Internships (various Bureaus): Rolling

- U.S. Copyright Office Internship: Rolling
- Department of Commerce National Oceanic & Atmospheric Administration Internship: Rolling
- National Labor Relations Board (NLRB) Internships: Rolling

Don't forget to check PSJD and Symplicity for new public interest job postings.

OTHER PUBLIC INTEREST EVENTS

Roundtable Discussion: Intervention in Syria? Problems, Prospects, and Contexts

Tuesday, September 3, 5:00-6:30 p.m., FedEx Global Education Center, Nelson Mandela Auditorium (main campus)

University of North Carolina at Chapel Hill faculty and members of the military will speak briefly at the beginning from their own specialty and experience, followed by a wide-ranging Q&A with the audience. UNC Law Professor Mark Weisburd will take part in this discussion.

Sponsored by the Curriculum in Peace, War, and Defense and the Carolina Center for the Study of the Middle East and Muslim Civilizations. For more information, please contact Shai Tamari.

Free parking available from 5:00 p.m. at the McCauley Parking Deck under the Global Education Center (Pharmacy Lane).

Kenan-Flagler Dean's Speakers Series: Bill Johnson, President and CEO of the Tennessee Valley Authority

Thursday, September 19, 5:30 p.m., Koury Auditorium, Kenan-Flagler Business School

Appointed by the TVA board of directors in November, 2012, Johnson is responsible for leading the nation's largest public utility toward its vision of low-cost and cleaner energy.

Please RSVP to this free lecture. Free parking will be available in only the business school parking deck.

If you have questions about this event, please contact Katie Hall.

UNC Law Review Symposium: Health Care Decisions in the New Era of Health Care Reform

Friday, October 4, 9:00 a.m.-5:00 p.m., Kenan Center, Kenan-Flagler Business School

This symposium will consider both the promise and limitations of recent reform efforts, highlighting the important issues that are likely to emerge as the health care system tries to improve decision making.

Those interested in attending the Symposium can find more information and register online by October 2. If you have any questions or concerns please feel free to email

CURRENT PRO BONO OPPORTUNITIES

Projects are posted on the Pro Bono Board near the mailboxes and are listed online at http://www.law.unc.edu/studentlife/probono/projects/. Students can sign up for projects on the Pro Bono Board or email [illegible]@gmail.com.

Pro Bono Program Annual Report

Learn more about UNC Law's Pro Bono Program and its accomplishments in the past school year in the 2012-2013 annual report. Check the Pro Bono Board and website along with this newsletter for ways to get involved this year!

To add items or provide feedback, please contact Sylvia Novinsky, Assistant Dean for Public Service Programs, or [illegible] Public Service Fellow.

Subject: [INFORMATIONAL] UNC Home Football Parking & Transportation Informa

---

ATTENTION UNC STUDENTS, STAFF, AND FACULTY:

Certain lots are RESERVED for University of North Carolina home football games beginning this Saturday (September 7) and according to the following home game schedule:

- Sept. 7 vs. Middle Tennessee State (12:30 p.m.)
- Sept. 28 vs. ECU (time, t.b.a.)
- Oct. 17 vs. Miami (Thursday Night Game)
- Oct. 26 vs. Boston College (time, t.b.a.)
- Nov. 9 vs. Virginia (time, t.b.a.)
- Nov. 23 vs. Old Dominion (time, t.b.a.)
- Nov. 30 vs. Duke (time, t.b.a.)

On home football Saturdays, vehicles must be removed from designated reserved lots or risk being ticketed ($50 fine) and towed ($90 - $100 fee). On these days, PLEASE DO NOT park your vehicle in the reserved game lots. If your vehicle is parked in a reserved football lot (see the link referenced below) on a home football Saturday, it will automatically be ticketed and / or towed beginning at 8 a.m. Alternate parking is available for employees, students, and hospital patients / visitors.

NOTE: Separate communication will be sent out detailing parking and transit operations prior to the October 17 Thursday night home football game versus Miami.

To see the list of lots reserved on football home game days or for a list of alternate parking areas, visit the following link:

http://bit.ly/TjZ3wk

...or look for the link to UNC Home Football Game Parking and Transportation from the main Public Safety homepage:

http://www.unc.edu

Most student residential lots will be used for football parking this year. Therefore, non-weekday permit holders should check the signs closely and look for updates about alternate parking. Additionally, most of the traditional first-come, first-served weekend student parking areas (as well as other parking lots) will require a valid game day permit this season.

The Dogwood Deck will remain available for patients and visitors on home game days.

South Road will be restricted beginning four (4) hours prior to game time and through egress and will run one-way from Columbia Street eastward toward Country Club Road beginning after half-time. The restriction includes taxi companies and delivery vehicles. Only valid permits, buses, and emergency vehicles will be allowed onto South Road.

Raleigh Street from Cameron Avenue to South Road will be restricted during ingress and egress beginning four (4) hours prior to game time. Only valid permits, buses, and emergency vehicles will be allowed onto Raleigh Street from Cameron Avenue toward South Road. Like the South Road restriction, non-permitted delivery vehicles and taxi companies will be prohibited.

Ridge Road will be restricted from the Manning Drive intersection beginning four (4) hours prior to game time and continuing through the end of egress. Only valid permits, buses, and emergency vehicles will be allowed onto Ridge Road from Manning Drive. Beginning 30-minutes prior to the end of the game, the Country Club end of Ridge Road will also be restricted.

UNC Public Safety strongly encourages football fans to park and ride to Kenan Stadium for home games. Park and ride bus service is offered from the NC 54 Friday Center Lot and from the Dillard's end of University Mall beginning three (3) hours prior to a scheduled home game kick-off.

Park and ride service is also available from the Jones Ferry Road and Southern Village lots beginning ninety (90) minutes prior to game time.

Parking in these areas is free, and round-trip service is $5.00 on these routes.
Patrons planning to seek public parking on campus should arrive no later than one (1) hour prior to game. The public parking locations fill quickly and are sometimes reserved for other special events. Unless otherwise reserved, this year's public parking locations include: (1) Manning Lot, (2) Jackson Deck, (3) Cardinal Deck, (4) South Chiller Lot, and (5) the Cameron-Graham Lot across from the Power Plant on Cameron Avenue.

If you have questions concerning event parking, please call UNC Public Safety at (919) 962-3951. For further information on transportation and parking for scheduled events on campus, log onto the Public Safety website at:

http://www.dps.unc.edu

...and visit the Events link.

Further game day information is broadcast on the Traveler's Information System station on game days at 1610 AM in the immediate campus area. Also, for late-breaking bulletins, "Like" the "UNC Department of Public Safety" Facebook page, or follow us on Twitter at "@UNCDPS."

Thank You,
UNC Public Safety

Hello,

I know that Dana Galin was working on the webpage. Harold asked that the page be taken off the Center website. Dana complied and is working on fixing it. I will mention the staff portion to her.

Thank you for pointing it out. Throughout the year, we plan on updating the website and making major changes to it.

Subject: PIM event and resource update: Monthly

Dear Lissa Broome

Below is a digest summary of resource updates on topics that you have selected in the CFE's Professional Interests Manager (PIM).

Best,
CFE Staff

RESOURCE UPDATE

- ***Foundation Grant Funding*** (Event)
  Foundations are quite different from federal agencies. While a good idea is important, foundations look for ideas that produce impact. In this workshop, Dr. Robert Lowman, Associate Vice Chancellor for Research, discusses how to identify promising foundations. The presentation details how to learn about foundations' interests, their leadership, and their operations. It will be on Wednesday, August 14, 2013, 1:00-4:30pm.
  Interest(s) associated with this resource: General grant writing assistance
  Sponsor/Source: Office of the Vice Chancellor for Research
  Contributor: Sohini Sengupta
  Contributor's Department: Center for Faculty Excellence

- ***Grant Writing at the Next Level*** (Event)
  Dr. Robert Lowman, Associate Vice Chancellor for Research, will be conducting a workshop designed to take your skills to the next level so you can improve your success rate and prepare for larger scale awards. You already have some research funding, and you understand the basics when it comes to grant writing. The workshops will be on September 18, 2013, 1:00 p.m. - 4:30 p.m., Rosenau Hall, Room 133. For faculty only.
  Interest(s) associated with this resource: General grant writing assistance
  Sponsor/Source: Office of the Vice Chancellor for Research
  Contributor: Sohini Sengupta
  Contributor's Department: Center for Faculty Excellence

- ***The 12 Keys to Successful Grantwriting*** (Event)
  Dr. Robert Lowman, Associate Vice Chancellor for Research, will be conducting a workshop that presents twelve key concepts related to success in grant writing. Designed for the grant writer with limited experience, this workshop starts from the premise that nothing succeeds like a good idea. It stresses the importance of planning, and presents the sponsor as a potential ally, not an adversary. This workshop is appropriate for faculty members and post-doctoral fellows in any discipline. Space is limited. Registration is required.
  Interest(s) associated with this resource: General grant writing assistance
  Sponsor/Source: Office of the Vice Chancellor for Research
  Contributor: Sohini Sengupta
  Contributor's Department: Center for Faculty Excellence

To: Johnson, Shelley H
Subject: Coach Onboarding

Hi Shelley –

I was just reading through the material you distributed at the Coaches' meeting on onboarding coaches (great program) and saw a couple of things that you might want to clean up the next time you revise the documents:

- Page 1 reference to Tarheelblue.com should now be goheels.com
- Page 3 Admissions. The line item says Vince, but the text says John.
- Page 4 FAR. My title has been changed to Wells Fargo (from Wachovia) Professor of Banking Law. You could also delete the sentence about how I will specify my role and add after the sentence that beings with "Generally speaking," – She serves as an advisor to the Chancellor and the Director of Athletics and as a liaison to the faculty, helps to ensure academic integrity and compliance with ACC and NCAA rules, and assists in promoting a positive student-athlete experience at the University.

Thanks for preparing a very thoughtful process for new coaches to become introduced to the University and to UNC Athletics.

Lissa

Subject: [INFORMATIONAL] Struggling with your weight? Are you looking for

---

Researchers at UNC's Department of Nutrition want to compare diets in an 18-month weight loss research study. The FRESH Start Study is currently recruiting 18 to 40 year olds, who are overweight (BMI>30) and otherwise healthy. Please go to http://FreshStartStudy.com to see if you may be eligible to participate in the FRESH (Finding Real Eating Solutions for Health) Start Study.

Research Study Benefits Include:
* Private nutrition counseling sessions(in-person and by phone)
* Group nutrition workshops conveniently located at Eastowne Office Park
* Cooking demonstrations, food tastings, and recipes
* Gift bags containing healthy foods
* Possible weight loss
* You will not be asked to take any medication

Compensation is a total of $300, provided at 6 months ($50), 12 months($50), and 18 months ($200).

For more information, please call Chandra at: (919) 408-3320, ext. 27 or send an email to freshstart@unc.edu

Subject: [INFORMATIONAL] Therapy Group for Children with High-Functioning A

As part of a TEACCH research study, Chapel Hill TEACCH Center is offering a new intervention program for children ages 8-14 with high-functioning autism and anxiety. "Fighting Worries and Facing Your Fears" is a group intervention model aimed at teaching both children and their parents strategies to cope with anxiety and fears.

Participation will involve an initial screening visit to the Chapel Hill TEACCH Center located in Carrboro, NC where you and your son or daughter will complete some questionnaires and assessments. If your son or daughter qualifies, you will be invited to participate in a 14-week intervention called "Fighting Worries and Facing Your Fears." The intervention sessions will be for the children and at least 1 parent and will be led by Chapel Hill Clinic therapists. At the end of the 14-week intervention, we will ask the parents to participate in a follow-up interview. Compensation will be provided to the family for participating in the screening sessions at the beginning and at the end of the intervention. The fee for group intervention sessions at TEACCH is $25 per session, for a total cost of $350 for this intervention package. Families that are unable to afford the full cost of the intervention may submit a financial assistance application.

If you are interested in participating in this research study, or have any questions, please contact our Project Coordinator, Allison Meyer, at (919)-843-5259 or TEACCH_Research@med.unc.edu. Please know that your participation in this research study is completely voluntary and confidential.

Subject: [INFORMATIONAL] Who Says Teens Can't Be Mindful?

UNC now offers a mindfulness class for adolescents, ages 11-18. Based on Mindfulness-Based Stress Reduction (MBSR) and tailored to adolescents, the empirically-based curriculum for this course, entitled Learning to BREATHE, was developed by mindfulness expert/clinical psychologist Dr. Patricia Broderick and has been endorsed by Jon Kabat-Zinn.

Research in mindfulness indicates that this program may help students improve focus, enhance self-confidence, and provide a basis for developing positive coping and time-management skills.

COURSE INFORMATION:
-Orientation (FOR TEENS AND PARENTS): September 24, 2013 @ 6:15pm

-Course Dates: Tuesdays, September 24 - October 29, 2013

-Time: 6:00pm–6:30pm (free pizza); 6:30pm-8:00pm Class

-Location: Eno River Unitarian Universalist Fellowship, 4907 Garrett Rd., Durham, NC

Registration Fee: $295

Subject: Rawlings panel report on athletics and University response

Please share with faculty groups as appropriate.

The University today released a report examining the role of athletics in campus life produced by a distinguished panel of national leaders in higher education and athletics. Then Chancellor Holden Thorp asked the panel, chaired by Hunter Rawlings, president of the Association of American Universities, to make recommendations for UNC-Chapel Hill and to provide ideas for other universities in addressing a challenging issue for all of higher education.

Carolina has implemented or is addressing numerous recommendations in the panel's report through existing policies, practices or current initiatives. You may read the panel's report and the University's response at http://www.rawlingspanel.web.unc.edu.

Subject: [INFORMATIONAL] Breast cancer Survivors needed for research study!

Are you or someone you know a breast cancer survivor?

The Step by Step research study is currently recruiting breast cancer survivors for a 12-week online study. The study is designed for those breast cancer survivors who have completed treatment and who want to start a gentle walking routine. All program components are delivered via email and designed to motivate participants to reach their exercise goals.

The Step by Step research study may be right for you if you:

*Are a breast cancer survivor
*Have completed treatment
*Want to start a gentle exercise program
*Willing to wear a free FitBit for 12 weeks

To learn more, visit: http://stepbystepstudy.org or email us at: stepbystep@unc.edu. This study has been approved by the University of North Carolina IRB (IRB# 13-2370) on July 23, 2013.

Brown Bag Lunch Series on
THE CROSSROADS OF STUDENT SUCCESS: ACADEMICS, WELLNESS AND ENGAGEMENT
Fall 2013 Schedule
All lunches are from 12 noon – 1:30 p.m. in Hanes Hall Room 239

September 6th
Notes on IX at UNC
with Ew Quimbaya-Winship, Student Complaint Coordinator/Deputy Title IX Officer
A brief overview of recent federal guidelines around harassment and sexual violence issued to higher education institutions will be provided. Carolina's response to these evolving expectations will be discussed. As well, Ew will provide an update on the work accomplished by the Title IX task Force over the summer; how students, faculty and staff are being encouraged to report and what the current reporting process is for individuals at UNC; and the conversation will end with a few thoughts and questions that will explore areas for growth.

October 11th
A Discussion About College Students with ADHD/LD
with Theresa Maitland, Coordinator, Academic Success Program
College students with ADHD/LD are the largest and fastest growing population of disabled students at UNC-Chapel Hill and on other campuses. While this is good news for these students, research suggests that they may be at greater risk. They maybe more likely to have lower retention and graduation rates, take longer to graduate as well as experience significant academic, emotional and/or social problems in college. Although seeking services can enhance their success, these students are notorious for not accessing resources (e.g. studies suggest less than 20% of college students with ADHD/LD actually use help). At this Brown Bag Lunch we will discuss the common issues these students encounter in college and resources available at UNC. The "warning signs that may signal that a student has an undiagnosed attentional or learning disability will be discussed and existing options for obtaining an evaluation. We will also brainstorm effective ways to communicate with students to facilitate their awareness and use of resources.

November 15th
The Student-Athlete Experience
with Jenn Townshend, Associate Director of the Center for Student Success and Academic Counseling, and Spencer Welborn, Assistant Dean, Academic Advising
Athletics play a significant role at Carolina. But how many of us know what it is really like to be a student athlete? This session will highlight the demands of the day-to-day and in-season/out-of-season schedules of our student-athletes. We will look at factors that impact their college experience, their academic performance, their course choices and their ability to take advantage of high-impact opportunities such as research, internships and service learning. Considerations of their responsibilities in representing their team, their university and in some cases even their home countries will be explored, along with a discussion of the support services provided by the University.

December 13th
Mindfulness and Meditation for Ourselves and Our Students
with Dr. Dan Darnell, Psychologist, Counseling and Psychological Services
It's the end of the semester and the winter holidays are approaching! It's a perfect time for a presentation and discussion about what mindfulness is and how living mindfully enhances well-being. We will also talk about ways to meditate and what a regular practice of meditation can do for you.

Subject: Future Tournament Hotel Preference Request

ACC

TO: Women's Basketball Committee

FROM: Nora Lynn Finch

CC: Commissioner Swofford, Head Coaches, Brad Hecker, Alyssa Duke, Charlene Curtis, Amy Ufnowski

SUBJECT: Request for 2015-2017 Tournament Hotel Preferences (October 15 deadline)

DATE: September 3, 2013

One of our Women's Basketball Committee meeting agenda topics that we did not address two weeks ago, but which requires your immediate attention, is the selection of team hotels for future conference tournaments. Please discuss the hotel options with your head coach as quickly as possible, and please reply by email to me with a copies to Brad and Alyssa at your earliest convenience. Please note our deadline of October 15 to formally reply.

The protocol will be to assign team hotels for three (3) consecutive years (2015, 2016, and 2017).

- We will collect each institution's top five (5) preferences, in rank order.
- Teams will be assigned to hotels relative to your rankings.
  - If only one team (Team A) selects Hotel 1 as its #1 choice, Team A will be assigned to Hotel 1.
  - There are several hotels to which multiple teams will be assigned.
    - If Team B also ranks Hotel 1 as its first choice, and Hotel 1 is designated to host 2 teams, then Teams A and B would be assigned to Hotel 1 without a drawing if they are the only 2 teams ranking Hotel 1 as their first choice.

- Following the scenario above, if 3 or more teams select Hotel 1 as #1, the names of all of those teams will be put into a bowl.
    - The women's basketball staff will draw 2 teams from the bowl.
    - The names of the teams not drawn will be returned to the unassigned group but will not be considered for an assignment until all #1 rankings have been assigned.
        - VERY IMPORTANT NOTE: All #1 rankings will be considered as a group before any #2 rankings are considered.
            - If your #1 choice is not assigned to you, you will not be eligible for an assignment until all #1 choices have been honored.
        - If your team is not assigned your #1 choice, it is possible that you will "lose out" on opportunities to be assigned your #2 choice (or #3 or #4) if other teams list your second, third, etc. preferences as their #1 preferences.
- The women's basketball staff will conduct blind draws of the teams for the hotels as necessary when there are multiple numeric (the same rank order number) requests for the same property until all teams have been assigned a hotel.
- If you fail to qualify for one of your five (5) preferred properties, I will call you to discuss your options.

- At this time, there is no Conference policy prohibiting pep bands from staying at your team hotel provided the team sharing your hotel approves; the Committee will be asked to consider pep band hotel policies for the 2015-2017 tournaments on a future conference call.

Hotels that have indicated a willingness to host more than one team follow:

- Airport Marriott (2)
- Embassy Suites (2)
- Grandover Resort (2)
- Greensboro Downtown Marriott (2)
- Proximity Hotel (2)
- Sheraton Four Seasons (5 teams assigned for 2014 – can host more)

If you wish to discuss the selection protocol and/or any of the particular amenities or locations of any of the properties listed, please call Brad (336-369-4670) or me.

As you know, our contract with the Greensboro Coliseum includes the 2014 and 2015 ACC Women's Basketball Tournaments. At the 2012 Spring Meeting, the Women's Basketball Committee and head coaches overwhelmingly supported the continuation of the tournament in Greensboro. Therefore, the Conference has engaged Evan Appel to assist Jeff Elliott, Ben Tario, and me in preparation of discussions with Matt Brown and Scott Johnson with the goal of arriving at a mutually arranged continuation. Should those anticipated plans be disrupted, the hotel assignments will obviously be voided for non-applicable years.

Thank you for helping us with the process!

Hello Dana and Lissa,
I would love to get together!
I am free those 3 days as well, however the 17th is the best for me (I can make any of them work though).
Thanks,
Sarah

Subject: Lunch?

Hi Sarah and Dana – I would like to invite you both to lunch to introduce the two of you. Sarah is our rowing coach and Dana is a new faculty member at the law school. Dana rowed at Harvard and helped coach at Yale while she was attending law school there. I know Dana is interested in learning more about the rowing program at UNC.
Here are some dates that work for me for lunch. Let me know if any of these work for the two of you:
September 3, 10, 17, 20, 24, 27
Enjoy the long weekend.

Subject: Future Tournament Hotel Preference Request
Importance: High

TO: Women's Basketball Committee

FROM: Nora Lynn Finch

CC: Commissioner Swofford, Head Coaches, Brad Hecker, Alyssa Duke, Charlene Curtis, Amy Ufnowski

SUBJECT: Request for 2015-2017 Tournament Hotel Preferences (October 15 deadline)

DATE: September 3, 2013

One of our Women's Basketball Committee meeting agenda topics that we did not address two weeks ago, but which requires your immediate attention, is the selection of team hotels for future conference tournaments. Please discuss the hotel options with your head coach as quickly as possible, and please reply by email to me with a copies to Brad and Alyssa at your earliest convenience. Please note our deadline of October 15 to formally reply.

The protocol will be to assign team hotels for three (3) consecutive years (2015, 2016, and 2017).

- We will collect each institution's top five (5) preferences, in rank order.
- Teams will be assigned to hotels relative to your rankings.
    - If only one team (Team A) selects Hotel 1 as its #1 choice, Team A will be assigned to Hotel 1.
    - There are several hotels to which multiple teams will be assigned.
        - If Team B also ranks Hotel 1 as its first choice, and Hotel 1 is designated to host 2 teams, then Teams A and B would be assigned to Hotel 1 without a drawing if they are the only 2 teams ranking Hotel 1 as their first choice.
    - Following the scenario above, if 3 or more teams select Hotel 1 as #1, the names of all of those teams will be put into a bowl.
        - The women's basketball staff will draw 2 teams from the bowl.
        - The names of the teams not drawn will be returned to the unassigned group but will not be considered for an assignment until all #1 rankings have been assigned.
            - VERY IMPORTANT NOTE: All #1 rankings will be considered as a group before any #2 rankings are considered.
                - If your #1 choice is not assigned to you, you will not be eligible for an assignment until all #1 choices have been honored.
            - If your team is not assigned your #1 choice, it is possible that you will "lose out" on opportunities to be assigned your #2 choice (or #3 or #4) if other teams list your second, third, etc. preferences as their #1 preferences.
    - The women's basketball staff will conduct blind draws of the teams for the hotels as necessary when there are multiple numeric (the same rank order number) requests for the same property until all teams have been assigned a hotel.
    - If you fail to qualify for one of your five (5) preferred properties, I will call you to discuss your options.
- At this time, there is no Conference policy prohibiting pep bands from staying at your team hotel provided the team sharing your hotel approves; the Committee will be asked to consider pep band hotel policies for the 2015-2017 tournaments on a future conference call.

Hotels that have indicated a willingness to host more than one team follow:

- Airport Marriott (2)
- Embassy Suites (2)
- Grandover Resort (2)
- Greensboro Downtown Marriott (2)
- Proximity Hotel (2)
- Sheraton Four Seasons (5 teams assigned for 2014 – can host more)

If you wish to discuss the selection protocol and/or any of the particular amenities or locations of any of the properties listed, please call Brad (336-369-4670) or me.

As you know, our contract with the Greensboro Coliseum includes the 2014 and 2015 ACC Women's Basketball Tournaments. At the 2012 Spring Meeting, the Women's Basketball Committee and head coaches overwhelmingly supported the continuation of the tournament in Greensboro. Therefore, the Conference has engaged Evan Appel to assist Jeff Elliott, Ben Tario, and me in preparation of discussions with Matt Brown and Scott Johnson with the goal of arriving at a mutually arranged continuation. Should those anticipated plans be disrupted, the hotel assignments will obviously be voided for non-applicable years.

Thank you for helping us with the process!

Subject: [INFORMATIONAL] Title IX Coordinator Open Forums

FROM: Title IX Coordinator Search Committee

The Title IX Coordinator reports to the Equal Opportunity/ADA/Title IX Officer with a dotted-line report to the Chancellor, and has primary responsibility for oversight of the University's Title IX efforts. The Title IX Coordinator will assist the University of North Carolina at Chapel Hill in achieving its goals of providing an open, diverse and inclusive learning and working environment by monitoring the University's compliance with Title IX regulations and requirements.

The search committee for the Title IX Coordinator position is pleased to announce that three candidates have accepted our invitation for campus interviews. The following open forums have been scheduled for a presentation and question and answer session. This is an opportunity for the campus community to interact with the candidates and provide feedback as a part of the interview process.

Ms. Crystal Coombes: Sept. 9, 2013, 3:00 – 4:00 p.m., FPG Student Union – Room 3408

Mr. Howard Kallem: Sept. 13, 2013, 3:00 – 4:00 p.m., FPG Student Union – Room 3408

Ms. Jayne Grandes: Sept. 18, 2013, 3:00 – 4:00 p.m., FPG Student Union – Room 3408

The topic for each forum will be "What are the biggest Title IX challenges colleges and universities face today and what best practices do you recommend for addressing these challenges? What strategies would you suggest for Title IX prevention and education on campus and what experience do you have with these initiatives?"

We hope you will join us and take the time to complete a short evaluation form after their visits. Your opinions will be invaluable to the committee members in preparing a report for the Interim Director of the Equal Opportunity/ADA Office.

The position description, cv/resumes and evaluation form for the selected candidates are available on the following website: http://equalopportunity-ada.unc.edu/title-ix/title-ix-coordinator-search/.

This message is sponsored by: Equal Opportunity/ADA Office

Tuesday, Sept. 3, 2013 | Volume 13, No. 36

LEGAL COMMUNITY

Wills for Military | The NCBA YLD will hold its first Wills for Military event in Charlotte on Saturday, Sept. 28, from 9 a.m. to 5:30 p.m. (last appointment 4 p.m.) at the Charlotte Campus of DeVry University, located at 2015 Ayrsley Town Blvd. Patterned after YLD's Wills for Heroes program, Wills for Military provides free estate planning documents for service personnel and their families. Volunteer now!

Wills for Heroes | Volunteers are also needed for the first Wills for Heroes clinic of the new bar year, which will be held Saturday, Sept. 14, from 9 a.m. to 4:30 p.m. (last appointment 3 p.m.) at the Wake Tech Public Safety Education Campus, located near Garner at 321 Chapanoke Road, Raleigh.

Firm Changes Name | Hutchens, Senter, Kellam & Pettit, P.A., is now known as Hutchens Law Firm. The firm has a new name and logo, but its partnership and legal name are unchanged. Hutchens has a combined 32 NCBA members at its Fayetteville, Charlotte and Wilmington offices.

In Memoriam | Henry Little "Buck" Kitchin of Southport died Aug. 29 at the age of 74. He practiced law in Rockingham from 1970-2010 with the firm now known as Kitchin, Neal, Webb, Webb & Futrell. A memorial service will be held on Saturday, Sept. 7, at 2 p.m. at St. Philip's Episcopal Church in Southport, preceded by visitation at 12:30 p.m. at the church's Chapel of the Cross. Charles B. Hunt of Raleigh died Aug. 29 of natural causes at the age of 30. He practiced with McGuireWoods and was serving as president of the Wake County Bar Association's Young Lawyers Division at the time of his death. A celebration of life service will be held Friday, Sept. 6, at 11 a.m. at Berean Baptist Church, 2400 E. Millbrook Road, Raleigh. James Thomas Oxendine of Salisbury died Aug. 28 at the age of 47. He practiced in Salisbury for more than 20 years.

IN THE OFFICE

Law Practice Matters | Need some advice on generating content for your legal blog or law firm website? LinkedIn page need some help? Could your firm benefit from outsourcing? Erik Mazzone, director of the NCBA's Center for Practice Management, has the answers to these questions and more at Law Practice Matters.

Effective Communication? | Robert Ambrogi of Robert Ambrogi's LawSites wants to know how effective or ineffective bar associations are in communicating and connecting with their members. If you'd like to participate in this "unscientific research," drop Bob an email or message him on Twitter. While you're at it, we'd like to know too.

ACROSS THE PROFESSION

Inman's in | Special Superior Court Judge Lucy Inman of Wake County will seek Judge Robert C. Hunter's seat on the N.C. Court of Appeals in 2014. Judge Hunter, of Marion, has announced that he will retire at the end of his current term.

Opinions Filed | The N.C. Court of Appeals filed new opinions today. New N.C. Supreme Court opinions filed Aug. 28 are also accessible via this link.

Rails-to-Trails | When Congress created the Rails-to-Trails program in 1983, little thought was given to the legal liability associated with converting unused railroad tracks into recreational trails. Now that the federal government has shelled out $49 million in the past year alone to the owners of land abutting the trail, and with 8,000 claims pending, folks are beginning to notice.

Moderate 5 hours a week exercise doesn't up risk of knee osteoarthritis
Hong Kong Herald (ANI)
Aug. 30
Engaging in moderate physical activity up to two and a half hours a week does not increase the risk of developing knee osteoarthritis over a 6-year follow-up period in adults age 45 and older, a new study has revealed. ... Joanne Jordan, MD, MPH, senior study author and director of the Thurston Arthritis Research Center in the University of North Carolina School of Medicine, said that moderate physical activities are those that produce some increase in heart rate or breathing, like rapid walking.
UNC Release:

Breaking the Ice: A B-School Primer on Making Faculty Friends
Aug. 30
Once upon a time students brought an apple for their teachers to start their relationships off on the right foot. An apple might not be the right approach for MBA students at the start of the school year, but they should try to reap the benefits of a strong rapport with their professors. Here, professors and students share their tips on how to maximize these relationships. ... Rather than waiting until you're struggling with something, be proactive about getting in touch, says Sridhar Balasubramanian (known to his students as Dr. B), a marketing professor at UNC's Kenan-Flagler Business School. Reach out to professors in person, on LinkedIn (LNKD), and even in the summer, he adds. ...

Ancient Samson Mosaic Uncovered In Israeli Synagogue; Beautiful Art Fascinates Scholars
The Huffington Post
Aug. 31
Beautifully preserved mosaics unearthed in a fifth-century Israeli synagogue have intrigued religious scholars with their depictions of both Biblical and possibly non-Biblical figures.
The stunning artwork was discovered as part of an ongoing excavation at a synagogue in Huqoq, an ancient Jewish village in Israel's lower Galilee. A team has been working at the site since 2011, led in part by Jodi Magness, a distinguished professor of religious studies at the University of North Carolina at Chapel Hill.

Professor: Booker admitted to inventing stories about drug-dealer friend
The Washington Post
Aug. 29
The conservative National Review reports that a Rutgers University professor says Cory Booker admitted to him that a drug-dealing friend that Booker has frequently talked about on the campaign trail was an invented character. Booker in the past has regularly talked about a drug-dealer named "T-Bone," but questions were raised years ago — and are being raised again now that Booker is likely to become a U.S. senator — about whether that person actually exists. ...Walter C. Farrell, a professor of social work at the University of North Carolina, tells me that he has long had ties to Newark and, upon hearing Booker recount his experiences with T-Bone, set out to look for him. ...

Panel proposes changes for academic-athletic balance at UNC
The News & Observer (Raleigh)
Sept. 3
By Jane Stancill
A panel of experts has recommended 28 changes and new approaches that could better balance academics and athletics at UNC-Chapel Hill, following several years of bruising scandals. The panel, chaired by Hunter Rawlings, president of the Association of American Universities, suggested reforms in administrative oversight, financial transparency and autonomy of university officials when it comes to admissions, tutoring and other academic matters.

Agricultural biotech startup AgBiome gears up
Herald-Sun (Durham)
Sept. 1
Trooping from farm-to-farm in North Carolina and around the Midwest, employees from Durham-based AgBiome gathered samples of plant roots, leaves and soil from fields of crops such as soybeans and corn earlier this year. "It's just like looking at the ocean, but it's fields," said Dan Tomso, chief scientific officer for AgBiome. ...The company is up to 15 employees now, Tomso said, and is expected to employ 25 by the end of the year. The company moved into office space in January in the Research Triangle Park. ...The company leases greenhouse space at the University of North Carolina at Chapel Hill. ... Jeff Dangl, one of AgBiome's founders and a biology professor at UNC-Chapel Hill, said advancing DNA sequencing technology is a "huge driver" for the company.

Issues & Trends

Poli Sci Professor Producers

Inside Higher Ed

Sept. 3

Last year, a study in Georgetown Public Policy Review exposed the extent to which a relatively small number of graduate programs in political science dominate placement in Ph.D.-granting departments. The study looked at the 116 universities ranked by U.S. News & World Report for political science graduate programs, and examined where all of the tenure-track or tenured faculty members earned their doctorates. The top four institutions in the magazine's rankings of departments -- Harvard, Princeton and Stanford Universities and the University of Michigan -- were the Ph.D. alma maters of 616 of the political scientists at the 116 universities (roughly 20 percent of the total). The top 11 institutions were collectively responsible for the doctoral education of about half of those in tenured or tenure-track positions at the 116 universities.

On Saturday, the author of that study -- Robert L. Oprisko of Butler University -- presented expanded findings here at the annual meeting of the American Political Science Association. The paper argues not only that some departments may have more historical dominance but that others may be on the rise right now (judging from the number of assistant professors they have placed). ...For example, the University of North Carolina at Chapel Hill and Cornell University are 12th and 13th, respectively, on the list in terms of number of Ph.D. alumni in political science working as tenured or tenure-track faculty members at research universities. But they have more placements of assistant professors than does the University of Chicago (ranked 5th).

Despite Obamacare, most Triangle hospitals profiting

Triangle Business Journal (blog)

Aug. 30

When taken together, the Triangle's four biggest hospitals had a very healthy year financially. Combined, they posted operating income of $267 million and net income of $569 million, according to preliminary financial reports. On the whole, figures are roughly comparable with last year, but each hospital performed very differently from the previous year. Consider UNC Hospitals. Two years ago it posted an operating loss of $58 million, whereas last year it posted operating income of $65 million, a $123 million swing. Conversely, the Duke University Health System saw operating income decrease from $256 million in 2012, to $184 million in 2013.

Moderate 5 hours a week exercise doesn't up risk of knee osteoarthritis
Hong Kong Herald (ANI)
Aug. 30
Engaging in moderate physical activity up to two and a half hours a week does not increase the risk of developing knee osteoarthritis over a 6-year follow-up period in adults age 45 and older, a new study has revealed. ... Joanne Jordan, MD, MPH, senior study author and director of the Thurston Arthritis Research Center in the University of North Carolina School of Medicine, said that moderate physical activities are those that produce some increase in heart rate or breathing, like rapid walking.

Ancient Samson Mosaic Uncovered In Israeli Synagogue; Beautiful Art Fascinates Scholars
The Huffington Post
Aug. 31
Beautifully preserved mosaics unearthed in a fifth-century Israeli synagogue have intrigued religious scholars with their depictions of both Biblical and possibly non-Biblical figures.
The stunning artwork was discovered as part of an ongoing excavation at a synagogue in Huqoq, an ancient Jewish village in Israel's lower Galilee. A team has been working at the site since 2011, led in part by Jodi Magness, a distinguished professor of religious studies at the University of North Carolina at Chapel Hill.

Subject: [law_faculty] Harry Groves's Memorial Service, and Paul Hardin's 2011 Reflections on Harry's Career

---

Dear Friends,
I promised more information about the memorial service for Henry Brandis Emeritus Professor Harry E. Groves, who died at Carolina Meadows on Saturday, August 24, 2013. Paul Hardin has graciously shared word that a service will be held tomorrow, Wednesday, September 4th at 2:00 pm at the Carolina Meadows Auditorium. Ken Broun and I will be leaving from my office about 1:20 to attend the service; we'd be happy to give a ride to anyone else who'd like to attend.
I'm attaching a most interesting tribute to Harry written by our colleague Paul Hardin, who interviewed Harry in November of 2011 after he had delivered a talk to a Carolina Meadows group. Among the details Paul shares with his readers: Harry was the author of six books and 30 law review articles; and he was one of the principal draftspersons of the statutes that authorized and regulated continuing care communities such as Carolina Meadows and Carol Woods, now widely imitated throughout the United States. Thanks to you, Paul, for this warm and personable account.
Jack

Subject: Harry Groves speaks on "Race in a Changing Triangle: A Memoir"

Harry Groves speaks on "Race in a Changing Triangle: A Memoir"

Nov 26, 2011

From resident PR Committee member Paul Hardin:

Dr. Harry Groves, one of the first presidents of the Residents Association at Carolina Meadows, spoke to a packed house recently in the Gallery at The Fairways. His chosen topic was "Race in a Changing Triangle: A Memoir," and he spoke from his personal experience in two separate sojourns in Durham: the first, two years of teaching law at North Carolina Central University, 1949-51.

Dr. Harry Groves, left, speaks with Paul Hardin. Photo by Joe Mengel.

Those of us in the audience who had known Durham in 1949-51 were amazed at the clarity of the verbal picture Dr. Groves painted of Pettigrew and Fayetteville streets, the three prominent black-owned and managed businesses near that intersection that set Durham apart from other North Carolina cities, and the impressive black residential section of Durham convenient to those businesses and to the College. He described in some detail two of the more prominent residences: the first, occupied by a medical doctor and his family; the second by a vice president of the North Carolina Mutual Life Insurance Company and his family. The larger of the two houses sold for $50,000, a stunning illustration of the low cost/value of real estate in that black neighborhood in the 1950s.

Other establishments of that time and in that part of Durham were a movie house, hotel, two doctors' offices, one lawyer's office, a beauty shop, a barber shop, and a cafe, which, Dr. Groves now recalls, served good meals to the all-black neighborhood. There was also a weekly newspaper that published news of interest to black persons, and even a hospital, Lincoln Hospital, then serving only blacks, now still in existence and serving as a clinic for poor persons of all races.

In that first period of the Groves's residency in Durham, all neighborhood entertainment was in the homes of residents, since there was no access for blacks to public restaurants and other entertainment facilities. All black children went to the same school and their families to the same segregated churches. Neither Harry nor Evelyn Groves ever met in those days a white person who had education comparable to theirs, and there was virtually no social relationship between educated whites and blacks. Harry recalls that they had polite relationships with whites who worked at Sears or other stores and as service representatives in the telephone company and other utilities.

As noted earlier, Harry's and Evelyn's first stay in Durham was for only two years. They came back 23 years later to a very different Durham and in very different circumstances. Harry, who had had a distinguished interim career as a military and civilian lawyer, college dean, and college president, was now Professor of Law and Dean of the Law School at North Carolina Central University. Obviously, his access to both black and white communities in Durham was much better than in his days as a very young law teacher.

Durham had changed also. Central had become a significant institution, and that was both a cause and effect of easier social and educational relationships between educated blacks and whites in Durham. The elite homes along Fayetteville Street had become older, of course, but they had not become a ghetto. At Central, Dr. Groves continued his scholarly career, which now includes authorship of six books on constitutional law and more than 30 journal articles. He also holds the title of Professor Emeritus at UNC Law School.

Although Harry modestly did not mention it in his memoir, he is North Carolina's most prominent legal expert on Continuing Care Retirement Communities. In the words of his friend Bill Aycock, Harry practically "wrote the book" on this industry of which Carolina Meadows is a sterling example. His legal expertise is only half of that story. He and Evelyn also had the experience of living in two such communities. They first moved into Carolina Meadows in 1989, later moved to a similar retirement community in the District of Columbia, remained there for several years, and, happily for us, came back to the Meadows in 2006.

The entire Carolina Meadows community was deeply saddened when Harry's beloved Evelyn lost her battle with a long illness just a few weeks ago. Harry remains with us as a revered elder statesman, our most learned legal authority on Continuing Care Retirement Communities, and a man with countless friends and admirers.

Subject: INFORMATIONAL: Research Study

This email was approved by the UNC Office of Human Research Ethics Biomedical IRB on 5/15/2013. IRB Study # 13-0005.

The UNC Department of Psychiatry is currently seeking people who have a diagnosis of major depressive disorder, without psychotic symptoms, to participate in a research study. The purpose of the study is to determine if adding asenapine to an antidepressant in patients who have a diagnosis of Major Depressive Disorder without psychosis, who have not fully responded to at least 6 weeks of treatment with the antidepressant alone, results in improvement of depressive symptoms.

Patients may qualify if they:
*are 18-65 years of age
*have a diagnosis of Major Depressive Disorder without Psychotic Symptoms
*continue to have depressive symptoms even though they are being treated with an antidepressant

The study will last 6 weeks, and visits will take place at the UNC STEP Research Clinic at the North Carolina Psychiatric Research Center (NCPRC) in Raleigh.

Study-related benefits include study medication and related psychiatric care at no cost. Subjects will be compensated for time and effort.

If you are interested in learning more about the study, or to make a referral, please contact Joy Watson at 919-733-5229 or JNWatson@unch.unc.edu.

Subject: [INFORMATIONAL] Hypertension Treatment Study

Do you have high blood pressure? Are you not currently taking medication to control your blood pressure?

Researchers from the UNC School of Medicine are conducting a study to examine the effect of using plasma renin levels to guide medication treatment for hypertension. Plasma renin is an enzyme in the blood that plays a role in the regulation of blood pressure. By determining whether your plasma renin levels are high or low (with a blood draw), we may be able to determine your hypertension subtype and get your blood pressure under control more quickly, and with fewer medications.

You may be eligible to participate if:

- You have a recent blood pressure measurement (from a doctor's office or hospital visit) of greater than or equal to 160 systolic OR greater than or equal to 100 diastolic
- You are 18 years of age or older
- You are not currently taking any blood pressure medications
- You are not currently pregnant or trying to become pregnant
- You do not have diabetes (requiring medication), coronary artery disease or kidney disease
- You have no known allergies to sulfonamide
- You have no history of gout

If you choose to participate, you will receive free medication to treat your high blood pressure (standard, approved drugs) and a home blood pressure monitor to keep.

If you would like more information, please contact Emily Olsson at (919)843-5234, or email emolsson@unc.edu.

Subject: Lunch?

Hi Sarah and Dana – I would like to invite you both to lunch to introduce the two of you. Sarah is our rowing coach and Dana is a new faculty member at the law school. Dana rowed at Harvard and helped coach at Yale while she was attending law school there. I know Dana is interested in learning more about the rowing program at UNC.
Here are some dates that work for me for lunch. Let me know if any of these work for the two of you:
September 3, 10, 17, 20, 24, 27
Enjoy the long weekend.

Subject: [law_faculty] Changes in assigned duties in the Finance Office

---

[Message was sent to entire Law School Community]
Faculty,
Good morning. Due to the recent resignation of Melisa Campbell in the Finance Office we have done some restructuring of the office and realigned many of the duties. I wanted to share these changes and update you with contact information for questions regarding our various functions.
Robin Council will now serve as Accountant in the Finance Office and will have responsibility for all Law Foundation activities as well as monthly financial reports.
Sakita Williams will continue to serve as Lead Accounting Technician and will continue to have responsibility for monthly reporting of Professional Development balances. Sakita will also have responsibility for all PRF's for units 19 and 74 as well as all travel and CABS related requests. Sakita will also now be the primary contact for all direct charges (ITS, Telecom, Parking, Carolina Inn, etc.) for the School of Law.
Teresa Dong will continue in her role as Accounting Technician and will still process all PRF's (excluding units 19 and 74). Teresa will be assuming the responsibility of processing all cash/check and credit card deposits in addition to processing all p-card transactions.
We will be updating the Finance Policy and Procedure section on My Carolina Law shortly to reflect the new contact information for the various functions in our office. If you have any questions in the meantime please let me know. Jen

ABOUT CAROLINA LAW IN THE NEWS

Carolina Law in the News is a weekly newsletter published by the communications office at UNC School of Law to provide a compilation of select external media references about the school. The newsletter is published each Tuesday. Please submit additional links to law_news@unc.edu. Deadline is 10 a.m. each Monday.

Please note some news services require a subscription.

NEWS

UNC Roundtable Discussion Focuses on Syria

Chapelboro.com - Chapel Hill, NC - 9/2/13

Panel member, Professor Mark Weisburd, is a specialist in international law, and teaches civil procedure, international law and a course on international human rights for the UNC School of Law. Weisburd said that using force to prevent war crimes, or to punish a country for war crimes, is not contemplated by the U.N. Charter. He added that in situations such as this, it is often a case of conflicting rationales of the responsibility to intervene, versus adhering to the Charter.

UNC Panel Explores Moral Monday

The Daily Tar Heel - Chapel Hill, NC - 8/30/13

Law professor Kareem Crayton explained that the Voting Rights Act was passed in 1965 in response to tactics used against blacks at the polls, including voter intimidation, poll taxes and literacy tests. The problems were most common in Southern states.

Some at UNC Question Obama Law School Plan

The Daily Tar Heel - Chapel Hill, NC - 8/30/13

Jack Boger, dean of the UNC School of Law, said he believes Obama's comments stemmed from seeing the difficulty of placing law school graduates in jobs and the high costs of legal education. He said UNC's program has not significantly raised tuition - while other public law schools such as the University of California at Berkeley have increased tuition by as much as 50 to 100 percent in recent years.

Kinnaird, Ginsburg Get It Exactly Wrong On Retirements

News and Observer - Raleigh, NC - 8/27/13

Eric L. Muller is the Dan K. Moore Distinguished Professor at the University of North Carolina School of Law.

Impeach Obama: Red Meat for the Base, or Do Republicans Have Evidence?

International Business Times - New York, NY - 8/25/13

Probably not, said Michael Gerhardt, a constitutional law professor at the University of North Carolina, Chapel Hill. "Being close to doing something wrong is not the same as doing something wrong," Gerhardt said. "When [Coburn] says perilously close, I guess he needs to be very clear about what he's talking about." The professor added that impeachment is not meant to be used as a substitute for elections.

At the Table of Brotherhood

Herald-Sun - Durham, NC - 8/24/13

His father, with help from Thurgood Marshall, was the first black man to go to UNC Law School after successfully winning the case of Carmichael v. McKissick. He was a chairman of the Congress of Racial Equality and also fought many civil rights cases in court.

Federal Judge Overturns Phila. Man's 1992 Murder Conviction

Daily News - Philadelphia, PA - 8/23/13

"Today is a victory for justice," one of the attorneys, Ryan Guilds '97, said in a statement. "For the lawyers on this case, many of whom have spent nearly their entire professional lives working on behalf of Mr. Dennis, today's ruling is an indescribable professional triumph. For Mr. Dennis, it is even more - it is an affirmation of his innocence and a chilling reminder that he has spent over two decades on death row for a crime he did not commit."

Additional news items can be submitted to law_news@unc.edu. Deadline is 10 a.m. Monday.

Subject: [FORMAL NOTICE] Thursday Night Football Game

TO: Deans, Directors and Department Chairs;
HR Officers

FROM: Brenda Richardson Malone, Vice Chancellor for Human Resources

On Thursday, Oct. 17, the North Carolina Tar Heels will host the Miami Hurricanes for a nationally televised football game at Kenan Stadium, starting at 8 p.m. This Thursday night game, which will occur during Fall Break, is expected to attract a large crowd of fans on campus, starting in the afternoon.

As communicated last spring, the University *will not* alter the workday or close early. However, due to the expected increase in traffic on campus beginning in mid-afternoon, we do advise departments and supervisors to be as flexible as possible in allowing employees to choose to work a flexible schedule and avoid traffic and inconvenience.

The Athletics Department and Department of Public Safety will provide additional information about the event, specifically regarding parking and transportation details and events in Chapel Hill, closer to the date of the game.

Employees who choose not to work their regularly scheduled hours on Oct. 17 because of this special event must make up the time or code leave for those hours. Several options will allow employees to be paid for these hours without undue hardship:

-- Employees can work the additional hours during that week, with management's approval, by either coming in early, staying late, working a reduced lunch break or some combination of the above on the other four days in that same workweek (Oct. 14, 15, 16, 18).

-- Employees can use available FY14 leave to cover the time. FY14 leave must be used before compensatory, vacation or bonus time.

-- If FY14 leave is not available, employees can use any accrued compensatory time, or available vacation or bonus leave, to cover the hours if they prefer.

Second- and third-shift employees will be expected to work their usual schedule unless they follow their usual leave procedures.

For additional information about work time and leave options, contact your School/Division HR Office.

Subject: [INFORMATIONAL] Call for Nominations Burroughs Wellcome Fund 2013 Career Awards for Medical Scientists

---

The Career Awards for Medical Scientists (CAMS) is a reformulation of the BWF's Career Awards in the Biomedical Sciences (CABS), which provided similar bridging postdoctoral and initial faculty support to researchers in the basic biomedical sciences, including researchers who held the PhD only. The NIH introduced the new K99/R00 Pathway to Independence awards that provide bridging support similar to that of the CABS program. In response, the BWF CAMS program is focused on increasing the number of physician-scientists and keeping them in research. Candidates should have an M.D., D.D.S., D.V.M., or equivalent clinical degree. Proposals must be in the area of basic biomedical, disease oriented, translational, or molecular, genetic, or pharmacological epidemiology research.

As a general guideline, candidates should not be more than 120 months (10 years) past their most recent doctorate. Candidates must be committed to a full-time career in research and be citizens or permanent residents of the U.S. or Canada.

BWF acknowledges that most postdoctoral level researchers will move to new institutions to begin their independent research careers, and awardees may request to have their award transferred. Approval will be based on whether the move will enhance the awardee's scientific growth and development.

The University may nominate five candidates for this award. Nomination of women and candidates from underrepresented minorities is particularly encouraged. Due to the limitation on submissions, central coordination of the university's nominations for this award is necessary.

For additional information, visit the web page for this award at http://www.bwfund.org/pages/188/Career-Awards-for-Medical-Scientists/
which includes a link to the Burroughs Wellcome Fund's award website.

To nominate a candidate for the Career Awards for Medical Scientists program, please send the following materials to the Office of Postdoctoral Affairs at opa@unc.edu (no hard copies, please):

1) A nomination letter from the candidate's postdoctoral advisor, addressed to Dr. Mark Heise;
2) A current copy of the candidate's curriculum vitae;
3) Three names of potential internal reviewers who could speak
Knowledgably about the nominee's research and three names of external references
4) A summary of up to two pages of the research plan that would be
proposed to the Burroughs Wellcome Fund. In accordance with material requested from the BWF, the summary should address the scope and significance of the postdoctoral research and the work planned for faculty years. (To be submitted before the final October 1, 2012 deadline)

We must have your nominations by Thursday, September 19th to be considered for the October 1 deadline.

If you have questions or need assistance, contact Dr. Sibby Anderson Thompkins, director of the Office of Postdoctoral Affairs, at sibby@email.unc.edu. Again, please share this announcement with faculty in your unit who may wish to make a nomination.

Subject: [INFORMATIONAL] 2014 Carolina Summer Reading Program Book Nominations

---

Dear Carolina community members:

With the enthusiasm of a new fall semester still fresh, it seems too early to begin thinking about next summer and next fall. Yet, the 2014 Carolina Summer Reading Program Book Selection Committee--comprised of faculty, staff, and students--will soon begin the process of selecting the 2014 Carolina Summer Reading Program book.

We invite all members of the UNC-Chapel Hill community to recommend books for our consideration. Criteria for book selection include the following desirable qualities:

• Intellectually stimulating: stretching students' minds, causing students to think about things they might not have thought about previously.
• Enjoyable, engaging, relatively short, and of current interest.
• Able to provoke interesting discussion.
• Appropriate for the level of maturity of incoming students.
• Having a theme or topic applicable to students' lives (for example, societal, political, or ethical issues).

Do you have a favorite book that meets these criteria? What book do you think will stimulate critical discussion among incoming Carolina students? To make your suggestion, visit the Carolina Summer Reading Program website: http://summerreading.web.unc.edu. Full consideration will be given to all book recommendations received by Monday, September 30, 2013.

Thank you for participating in this exciting and intellectually stimulating program.

Minrose Gwin
Chair, 2014 Summer Reading Program Book Selection Committee
Kenan Eminent Professor of English

Subject: [INFORMATIONAL] Research participants needed for The Effects of an Acute Integrative Therapeutic Approach to Altering Lower Extremity Movement Patterns

---

The UNC Department of Exercise and Sports Science is conducting a research study to examine lower extremity movement and loading patterns in healthy young adults (between the ages of 18-26) before and after a brief exercise intervention. More specifically, leg flexibility and 3D movement patterns will be assessed before and after instruction on how to perform certain exercises. Additionally, a taping intervention will also be performed to assess how it may alter movement.

Two separate visits to the Sports Medicine Research Laboratory would be required. The first is a screening session to determine if you meet the inclusion criteria (15 minutes). Two measurements would be taken that will determine if you meet the requirements. Then a second session would be necessary for data collection (2 hours). The data collection session includes performing a variety of flexibility assessments as well as 3D motion analysis. The motion analysis component includes a variety of very sport specific exercises, including squats, lunges, jump landings, and single leg cutting.

If you or someone you know meets the criteria for participation, please contact one of the investigators for more information and scheduling. Eligibility criteria for this research study are as follows:

Inclusion Criteria:
*Between the ages of 18-26 years old
*Prior experience playing sports (high school, collegiate) that incorporate jumping, cutting, pivoting, side-stepping movements such as in soccer, basketball, lacrosse, football, etc...
*Currently physically active
30 minutes of moderate level physical activity (running, sports) at least 3 times per week
*No history of lower extremity surgery
*No musculoskeletal injury within the past 6 months that limited physical activity for more than 2 days

Additional eligibility criteria are determined during the initial 15-minute screening session.

National Coverage
Almost half of college trainers feel compromised by coaches
NFL.com
By Bill Bradley, contributing editor
Sept. 4
Athletic trainers have been in demand over the past few years, with the rush of states passing youth concussion laws and guidelines for sideline protocols. But new research suggests that the medical staffs responsible for protecting college athletes often don't have the authority to do so. …The survey findings disturbed Kevin M. Guskiewicz, a leading concussion researcher from the University of North Carolina at Chapel Hill. "Any institution that places a coach in a supervisory role over the athletic trainer or allows a coach to put pressure on medical decisions is just asking for trouble," he says. …

Presidential Control Is Not Dead
Inside Higher Ed
Sept. 4
As president of the Association of American Universities, Hunter Rawlings is well aware of the fate met by numerous reports urging reform in college athletics: recommendations, however sound and well thought-out, go nowhere in the face of pressure to keep recruits coming and cash flowing to big-time sports programs. But this time is different, he insisted Tuesday while announcing the suggestions of a panel he chaired at the request of former University of North Carolina Chancellor Holden Thorp, who sought advice on how UNC and its peers might "tackle what most agree is a challenging issue for all of higher education."

Scientists to sequence hundreds of newborns' genomes
Nature.com News Blog
Sept. 4
Hundreds of American babies will be pioneers in genomic medicine through a $25 million programme to sequence their genomes soon after they are born. Backers of the Genomic Sequencing and Newborn Screening Disorders research programme, unveiled today, say that it will test how useful and ethically sound it is for parents to know about their child's comprehensive genetic makeup at birth and through childhood. …Cynthia Powell at the University of North Carolina at Chapel Hill will lead a team that will report genetic defects relevant to sick babies' diagnoses. …

Research may prevent ACL damage in women
WKAV-TV (Oregon)
Sept. 3
Women are two to eight times more likely than men to suffer a debilitating tear of the anterior cruciate ligament (ACL) in the knee and a new study suggests that a combination of body type and landing techniques may be to blame. In two new studies recently published online in the Journal of Athletic Training, lead author Marc Norcross of Oregon State University documents how women who were asked to undergo a series of jumping exercises landed more often than men in a way associated with elevated risk of ACL injuries. ...Researchers from University of North Carolina at Chapel Hill and Greensboro contributed to this study.
http://www.kval.com/news/tech/ACL-injuries-may-be-prevented-by-different-landing-strategy-222199061.html

State & Local Coverage

Johnston Health has started on its $50 million expansion project.
Triangle BizBlog
Triangle Business Journal
Sept. 4
Johnston Health will break ground on its $50 million expansion project in Clayton this morning, a project that will move 50 inpatient beds to the facility and could improve the hospital's financial performance. ...In projections submitted to state regulators, JMC-Clayton would add $22 million of net patient revenue just from inpatient services. ...Those projections were made before Johnston Health announced it would negotiate a partnership with UNC Health Care.

Consolidation recommended for health, social services departments; New Hanover board to hear presentation
PortCityDaily.com (Wilmington)
Sept. 3
After months of discussion and study by a group of medical professionals and county staff, New Hanover County is set to decide whether to merge its health and social services departments into a consolidated human services agency. Specifically, the boards of health and social services would sign a memorandum of understanding that would grant operational oversight to the county manager, with the boards retaining their rulemaking, policymaking and advisory functions. ... But County Manager Chris Coudriet, in his official recommendation to the county board of commissioners, says the memorandum of understanding approach is not allowable under state statutes, according to the **UNC School of Government**.

International

International Business Times (Australia)
Panel Led by North Carolina: 'Sit out at-risk Freshmen'
Sept. 4
If a panel formed by North Carolina would have its way, freshmen athletes granted special academic consideration would have to sit out their first year. The panel, formed in the wake of an academic fraud scandal that led to the resignation of UNC's chancellor, made the "redshirt freshman" recommendation on top of others, covering academic support and athletic expenses.

Report Proposes 28 Ideas for Improving College Sports
The Chronicle of Higher Education
Sept. 4
A new report that comes in response to scandals at the University of North Carolina at Chapel Hill could provide a road map for college-sports leaders hoping to strengthen ties between academics and athletics.The report, which was released on Tuesday, details 28 ideas for shoring up such areas as governance, finance, and admissions as they relate to big-time sports. Among other things, the document proposes clearer lines of responsibility throughout the athletic department, stricter controls on outside influences, and greater limits on the hours that students spend on sports.

North Carolina panel pushes reforms to college athletics
The Associated Press Sporting News
Sept. 3
A panel created by the University of North Carolina at Chapel Hill says the Tar Heels and other schools should require academically at-risk students to sit out of games during their first year. The panel was reviewing the balance between academics and athletics at UNC, which has faced a series of athletics-related scandals over the past three years. Its report, released Tuesday, issued 28 recommendations to the school covering everything from improved oversight and academic support for athletes to maintaining "responsible" spending for athletics operations.

Panel proposes changes for academics-athletics balance at UNC

The News & Observer (Raleigh)

Updated for Sept. 4

Conference spending caps on sports teams. An end to freshman eligibility for at-risk student-athletes. A reduction in practice time demands. Mandatory education for coaches on the university's academic standards.These are some of the 28 recommendations from an outside panel that has studied how to better balance academics and athletics at UNC-Chapel Hill, a campus that has been rocked by scandal during the past few years.

Subject: [newsclips] Whirligig art display opens Thursday w/reception @ 6 p.m.; exhibit continues through Oct. 3

UNC Event Brief

For immediate use: Wednesday, Sept. 4, 2013

Whirligig art display opens Thursday at UNC, continues through Oct. 3

Whirligigs of the late North Carolina folk artist Vollis Simpson will be on display Sept. 5 to Oct. 3 at the Hanes Art Center at the University of North Carolina at Chapel Hill.

The exhibit opens with a reception at 6 p.m. Thursday (Sept. 5) in the John and June Allcott Gallery. Gallery hours are 8 a.m. to 5 p.m., Monday through Friday. The free exhibition is sponsored by the art department in UNC's College of Arts and Sciences.

Visitors will see whirligigs from Simpson's collection that range from table-top size to about 5 feet tall. Simpson's larger-than-life whirligigs, originally located in a field beside his home in Wilson County, tower 50 feet or more above the ground.

Simpson died last June at the age of 94. His whirligigs are being taken down and restored, and will have a new home at the Vollis Simpson Whirligig Park in downtown Wilson, which is expected to open in November. UNC alumni are involved in the restoration efforts. Read more and watch a video about these efforts at http://college.unc.edu/2012/09/14/whirligigs/.

Websites: www.wilsonwhirligigpark.org and http://art.unc.edu.

Subject: [INFORMATIONAL] Have a sustainability idea that needs some additional support?

Do you have an idea for a sustainability-related campus initiative, program, or project? Need some help identifying the next steps or overcoming existing barriers?

The Sustainability Advisory Committee invites students, faculty, and staff to share innovative ideas to help advance campus sustainability. The Committee will review project proposals and provide direct guidance and feedback to promising, feasible initiatives. At a minimum, the Committee can facilitate and foster connections across disciplines and departments to broaden collaboration and support.

The Sustainability Advisory Committee recommends long-term sustainability goals for the University and the means to achieve them and advises the Executive Vice Chancellor and Provost and the Vice Chancellor for Finance and Administration. Committee members broadly represent all campus constituencies; provide expertise in planning, operations, finance, academics, research, and student life; and bring familiarity with many aspects of sustainability.

Ideas and initiatives should advance knowledge of a sustainability-related topic or have a positive impact on campus practices and/or individual behaviors. Initiatives should seek to improve quality of life and/or reduce university costs and environmental impact and encourage collaboration between departments or organizations.

Send a short description (no more than 500 words) of the initiative that you think would advance sustainability on campus to sustainability@unc.edu. Submittals received by September 22 will be considered at the next Committee meeting. Late applications will be considered in the order they are received. Each submittal should focus on one specific initiative, but individuals and organizations are free to submit as many proposals as they wish. Members of the Committee, and key individuals as needed, will review submittals. Sponsors of selected proposals will be invited to present more detail about their ideas at a future Committee meeting.

Submittal should include:

- Information about submitter (contact information); role on campus (staff, student, faculty); and any relevant affiliation (campus organization, division, academic department)
- Potential impacts that would result from the proposed initiative or project, including potential

cost savings

- Champion for idea if identified (e.g. student group, faculty member, department)
- Key stakeholders that would benefit
- Key barriers to implementation if known (e.g. existing policies, lack of funding, lack of coordination, etc.)
- Estimated implementation and operating costs, if known
- Timeframe and duration of project

This message is sponsored by: Sustainability Office

Lissa
Thanks for forwarding. Some interesting information and suggestions included in the report. Let me know if you all would like this to be a part of the agenda for any of the groups or for the Joint Meeting this fall. If you think it is best to wait until the winter or spring after you've had time to think through some of this, that works too. Commissioner and I haven't had a chance to talk about it yet but I will make sure he has a copy, if he doesn't already.
Thanks again.

Subject: RE: Items for October Meeting
Thanks Lissa. Jean Frankel, the NCAA consultant working on the governance review, will attend the meeting and facilitate a discussion on the first morning. That likely will cover the Division IV and January Convention discussions -- or at least kick start those. We will also have someone, likely Erik Albright, there to provide an update on NCAA legal items such as O'Bannon/EA.
The MEA continues to be on the backburner from a process standpoint, though the media continues to talk about it. It is my understanding that there isn't expected to be any formal recommendation or feedback requests from the group until the governance structure is near completion. I will put this on the Joint agenda, though, and give everyone the opportunity to share any current thoughts.

Hi Brad – In case these items are not already on the agenda for our October meeting, here are some things that we would like to have included. Bubba and I spoke briefly about these. He and Beth might have others too.

- Status of MEA/stipends and the conference position
- Discussions regarding a "Division IV" of the NCAA for the largest schools and the conference positions
- Update on O'Bannon case and affiliations of NCAA, conferences, and schools with EA Sports
- Update on what is likely to be discussed at January NCAA Convention re governance

Thanks,
Lissa

[Message was sent to entire Law School Community]
There was a fiber line cut between here and Charlotte yesterday, sometime around 5:30pm. This affected much campus traffic at the time and seems to have created a slight backlog for e-mail delivery. Some of you may have received notices indicating a delay in message delivery last night because of this. You should not have to re-send any messages that got delayed. I believe that the issue has been resolved and all messages WILL get (or have already been) delivered.

Meanwhile, in related news, there is this...

Thank you!
You are correct. I wanted to get the MFB SA's done since they compete Saturday.
The other SA has a separate issue pending that will also require a request to the NCAA. That one will be submitted soon.

Hi Marielle – I approved the request to the NCAA, but noticed that it did not cover one of our other student-athletes who also tweeted. Are you just confining it to the players with competition coming up immediately?
Thanks,
Lissa

RE: Notice of IRB Exemption
Exemption Category: 2.Survey, interview, public observation
Study #: 13-1380

Study Title: Athletic Performance Piece

This submission has been reviewed by the Office of Human Research Ethics and was determined to be exempt from further review according to the regulatory category cited above under 45 CFR 46.101(b).

Study Description:

Purpose: The Purpose of this project is to create a performance piece that tells the story of student-athletes at UNC-CH during the current cloud surrounding the athletic department. The project will examine how all student-athletes and faculty have been affected in the recent athletic/academic culture.

Participants: Student-Athletes, Faculty and Dramatic Arts students

Procedures (methods): Interviews with student-athletes and faculty will be conducted and that information will be used to create a theatrical play performed by dramatic art majors
