Sent: Wednesday, July 11, 2007 12:51 PM
To: Lance Westerlund <westy@email.unc.edu>
Subject: Talks

Lance,
Here are my upcoming talks. You can edit these as you see fit to make them more "lively" or clear.
Thanks,
Jan

NIEHS Talk-July 12th National Institute of Environmental Health Sciences
Talk title: Game Plan for Success: How to turn Dreams into Reality
The fundamental theme of the talk is that success can be achieved through respect for ourselves and others in recognizing that our differences are our strengths. These differences complement one another and allow for self-development through reciprocity and partnership.

Attendees: Federal Employees of NIEHS and NIH

North Carolina Governor's School talk-July 25th
Title: Sports, Ethics and Society

Sports play a morally significant role in our society. It is often claimed that sports are a microcosm of society, but they are more than that. Sports not only reflect society they affect society. As such it is important that sports play a role in promoting sportspersonship, friendship and respect for others, by discouraging violence, cheating and drugs.

Graduate Student Orientation-August 16th
For incoming first year graduate students at UNC
Topic: Responsible Conduct in Research

Talk will address types of ethical issues graduate students might encounter, the nature of ethical decision making, and how that may be undermined.

Medical School Orientation for First Year Medical Students: August 29th
Talk will address types of ethical issues medical students might encounter, the nature of ethical decision making, and how that may be undermined.

October 16th at Texas A&M University
The address is to inaugurate a new initiative on ethics within their humanities center, the Melbern G. Glasscock Center for Humanities Research. This initiative intends annually to explore and promote round table discussions on "an ethical conundrum facing the Texas A&M community." I will begin initiate the first such discussion on college athletics. Conundrums presented within and by collegiate athletics provide an ideal jumping-off point for their broader ethics initiative.

****URGENT MESSAGE** Help Discover the Causes of Breast Cancer…Woman by Woman, Sister by Sister!** The Sister Study, a national research study to learn how the environment and genes affect the chances of getting breast cancer, is enrolling women who have never had breast cancer, aged 35-74 but whose sister had breast cancer. ***Because it is important for women from different ethnic groups and backgrounds to participate in the Sister Study so the results of the study will benefit everyone, the women needed most at this time are blue collar workers, African American women, Latinas, Native Americans, Asians and Pacific Islanders and all women over 55!*** If you are eligible, please call right now. If you are not eligible, please tell at least one woman you know is eligible to enroll now! To learn more or to order recruitment materials, please call 1-877-4SISTER (1-877- 474-7837, Spanish and English) or visit www.sisterstudy.org or www.estudiodehermanas.org

Subject: Afam tutor

Brent,
Do we have anyone who can tutor AFAM 101 -McMillan to work on the final exam study guide. I can do some, but I am not up on this stuff anymore!
Thanks,
Jan

To: Blanton, Brent S <blanton@uncaa.unc.edu>
Subject: Re: Afam tutor

I have given them some guidelines to study for the final to work on today in study hall. Then I emailed them to have them meet with me at 10 a.m. tomorrow morning in my office.
Thanks,
Jan

Memorandum

To: School/Department Receivers of Grade Rolls

From: Senora DeCosta, Assistant Registrar

Date: July 25, 2007

RE: Second Summer Session Grades

As you probably know by now, our office has moved. We are located in the curved building on the corner of Ridge Rd. and Manning Dr. on the third floor in suite 3100 SASB North. You may pick up your grade rolls on Wednesday, July 25 between 2:00 and 5:00.

For those of you on North campus, the A&S Dean's Office will allow each of you (departmental administrators only – no faculty) to place one envelope of grade rolls per day in their courier bag to us. All grade rolls **must be in envelopes** clearly marked for the Registrar's Office. The A&S Dean's Office is now located in Phillips Hall and the drop off point is room 19. Please see the memo to all teaching faculty for instructions about depositing grade rolls after our office is closed.

As always, I rely on your help to achieve a successful outcome for the grading period. I am available for any questions or suggestions; please contact me at senora@unc.edu or 962-0495. Thank you.

MEMORANDUM

TO: All Teaching Faculty

FROM: Senora DeCosta, Assistant University Registrar

DATE: July 25, 2007

RE: Second Summer Session Grades

Enclosed are the Official Class Rolls and Grade Reports for Second Summer Session 2007. These reports are due at the Office of the University Registrar, 3100 SASB North, no later than 72 hours after the scheduled time of the final examination. (See due dates below)

Compliance with the 72 hour deadline is important as it enables us to reliably determine academic eligibility information to report to school Deans. This enables them to assess whether or not a student may continue enrollment for the next term.

To facilitate the timely receipt and entering of grades, please follow these guidelines for returning Official Class Rolls and Grade Reports to the Office of the University Registrar:

- Exams are scheduled on Thursday, July 26 and Friday, July 27 and grade rolls are ***due by 4:00 PM*** on Monday, July 30.

  Courses that do not have final examinations are due by 4:00 PM on Monday, July 30.

- The Office of the University Registrar has moved. We are located on the third floor of the new SASB North, the curved building on the corner of Ridge Rd. and Manning Dr. When the Office of the University Registrar is closed, you may deposit your grade roll(s) in the dark green box marked "not a mail box", which is located on the loading ramp of the SASB North building (on Ridge Rd. just before Manning Dr. on the right side). If you cannot pull up to the ramp, there are several on-street parking spaces close by along the side of Ridge Rd. approaching Manning Dr. **This box has multiple users, so grade rolls must be in envelopes marked Registrar's Office**. A better option is to check with your department's grade roll administrator, who will also bring grades to our office.

- The Report For Assignment Of Temporary Grade Of AB Or IN To Undergraduates can be found on-line at:

http://regweb.unc.edu/resources/ab_report_form.pdf.

- Use only black or dark blue ink when completing and signing grade rolls. Adherence to this request is imperative, as pencil markings and other colors of ink do not duplicate very clearly. We must be able to microfilm our grade rolls for permanent storage and reference.

- Every registered student **must** have an appropriate grade designation (no blanks). If a student did not show up for the final examination or has not been attending classes, a grade of "AB" or "FA" must be assigned. Do not line through the name of a student you believe is not registered for your class. Assign that student an "AB" grade. This is the only action that will be recognized by our office. Nor should you write in the name of a student that you believe to be registered for your class. Appropriate actions will be taken when our office receives the official form governing the situation. **Only a Post-Semester Registration/Drop/Add Form can remove or add a student to a course after the Official Roll & Grade Reports have been generated for the semester.**

- Even if you know an undergraduate student has elected to take your course under the PS/D+/D/F option, you must assign the regular appropriate letter grade for their performance. The computerized grade table will convert grades of "C-" or better to "PS".

Refer to Registrar Procedures Memorandum (RPM) No. 24, for university grading policies and grade definitions at (http://regweb.unc.edu/resources/rpm24.php). Listed below are some tips and definitions to help you determine the appropriate grades to assign.

- All courses numbered 99 and below should use the undergraduate grading system, i.e., A, A-, B+, .., D, F.

- Grades assigned in courses numbered 100 through 199 depend upon the individual student classification. Students with undergraduate classifications should be assigned grades using the undergraduate grading system. **Please do not use + and – for any graduate student grade. Pluses (+) and minuses (-) are not valid for H, P, L grades. This consumes an extraordinary amount of time for our staff to mark through every incorrect + or – on the grade roll, before it can be sent to data entry. If you are assigning a graduate grade and would like to make note on the grade roll of a plus (+) or minus (-) associated with the grade, use the "Remarks" column.** Please use the following classification tables to help you determine the appropriate assignment of grades.

Undergraduate Classifications:

FR	Freshman
SO	Sophomore
JR	Junior
SR	Senior
FYR	Fifth Year (Pharmacy)
SPU	Special Undergraduate Non-degree
II	Inter-Institutional
SDS	Special Degree Seeking and Off-Campus Nursing Program
FX	Foreign Exchange

Graduate & Professional Classifications:

GD	Grad Doctoral
GM	Grad Masters
GPM	Grad Post Masters
GMD	Grad Masters then Doctoral
GPD	Grad Post Doctoral
SPG	Special Graduate Non-degree
1st	First Year MBA or Professional
2nd	Second Year MBA or Professional
3rd	Third Year Professional
4th	Fourth Year Professional
II	Inter-Institutional
FX	Foreign Exchange
SPP	Professional Non-degree
SDS	Currently used for Off-Campus Professional Pharmacy Program

Note: The classifications that start with "SP" (SPU, SPG, SPP) are used for non-degree students. Classifications that start with "G" (GD, GM, GMD, GPM, GPD) are graduate classifications. Classifications II and FX can be used for undergraduate or graduate students. Also, Continuing Studies post baccalaureate students (CS, SPG) are allowed to choose either the undergraduate or graduate grading system in courses numbered 100 through 199 for grade assignments. The student is supposed to inform the instructor at the beginning of classes as to their choice of grading system.

- The "FA" grade is assigned when an undergraduate student did not attend the final examination, and could not pass the course regardless of performance on the exam. This would be appropriate for an undergraduate student that never attended the course or has excessive absences in the course, as well as missing the exam.

- The "AB" grade is assigned when the student did not attend the final examination, and there is the possibility that the student could pass the course if the exam was taken. The "AB" is computed as an "F" grade in an undergraduate student's GPA. For undergraduate students, an "AB" grade is changed automatically to an "F*" if the grade is not cleared by the end of the next regular semester. For graduate students,

an "AB" will revert to an "F*" (administratively assigned grade) if the grade is not cleared within one year from the original examination.

- The "IN" grade is assigned when the student took the final examination but did not complete some other course requirement. The student could pass the course if the assignment was completed. The "IN" is computed as an "F" grade in an undergraduate student's GPA. For undergraduate students, an "IN" is changed automatically to an "F*" if the grade is not cleared by eight weeks into the next regular semester. For graduate students, an "IN" will revert to an "F*" (administratively assigned grade) if the grade is not cleared within one year from the original examination.

- The "SP" grade is assigned for undergraduate students participating in the first course(s) of an approved departmental Undergraduate Honors Program. The Honors Program usually runs for the duration of at least two semesters (Junior and/or Senior Honors/Research). A final permanent grade is not assigned until completion of the second and/or final course. When the final permanent grade is assigned for an Honors Program, any previously assigned grade(s) of "SP" must be changed to the appropriate permanent letter grade by an Official Grade Change Form.

  Note: "IN" and "AB" are temporary grades that can be reported on the Official Class Roll and Grade Report or on an Official Grade Change Form. Instructors can change temporary grades to permanent grades by completing the Official Grade Change Form within the specified deadlines. Once a grade has been changed to an "F*", a dean's signature is also required on the Official Grade Change Form.

For any questions about this material, you may contact me at senora@unc.edu or 962-0495. Thank you.

Subject: [philosophy-faculty] Meditation Study Recruitment

Susan,
Geoffrey Sayre-McCord recently agreed to have the Philosophy department participate in our study on the benefits of meditation, and specified that we should be in touch with you in order to contact the rest of the department. Please sent this information message out to the faculty and staff of the department to let them know about the study?

Thanks,
Alysson Light
Project Manager
Fredrickson Lab
Department of Psychology

Dear employees in Philosophy,

As you know, Philosophy regards the health of its employees as a top priority. With this in mind, we are pleased to offer you a unique and fee-free opportunity to explore the techniques of stress-relieving meditation.

Beginning in September, our department will participate in a study on the benefits of meditation that is led by psychology department researchers and funded by the U.S. National Institute of Mental Health. Participants will attend six weekly workshop sessions – held during lunch hours – and will be encouraged to establish a daily meditation practice using guided meditations provided on CD. Together with the workshop sessions, the guided meditations are designed to generate positive reactions and reduce stress, allowing participants to flourish in their professional and personal lives.

To be eligible to participate, you must be willing to be assigned at random to serve either in a group that participates in the meditation workshop this fall, or in a "waitlist" group that participates in the same meditation workshop offered in early 2008. The "waitlist" group provides key comparison data against which the researchers can discern the effects of meditation practice. You will also be asked to participate in various research activities, including some short questionnaire sessions, a one-minute daily reports, and two visits to a lab in Davie Hall. You will receive up to $165 in compensation for providing this information.

If you are interested in learning more, please visit http://dailystudy.org for further information and to volunteer. This is a free, world-class meditation workshop. We hope that you will find it useful.

Sincerely,

Geoff Sayre-McCord

"How breast cancer brought me back to life"

FM Reader Essay

By Lisa Boxill

Lisa and her fiance, Jim

"What the heck is that?" Every time I felt the hard lump in my breast, I knew what it could be, but for months I told myself it was nothing. I didn't have time for something so small and insignificant. I was a 32-year-old Harvard Law School grad at a big law firm in New York City. I spent days and nights reviewing legal contracts, catering to wealthy clients and griping with coworkers about our jobs. I wasn't very fulfilled by my work, but I knew the firm was an impressive place to be.

WEB EXTRA: Lisa's tips on how to help out a friend

I finally penciled a doctor's visit in to my schedule, and as soon as she felt my lump, a shadow flickered across her face. "I know you're being cool about this," she said, "but you really ought to get checked out further." I flipped through my date book, saying, "Well, I can't go until next month. I have two deals closing." She firmly responded, "No, I mean today." Somehow—call it luck—the radiologists squeezed me in for tests that afternoon. They were almost positive it was cancer.

Most of the day I had remained calm (or perhaps dazed), but now, when I actually heard the word cancer, reality flooded in. I felt confused and helpless. It was as if I'd been plucked from my lovely little world and plopped down into a place that looked the same but wasn't.I stood on a street corner and cried. I called my mom, my best friend and my boss. No one knew what to say.

The months that followed were a blur. I went on disability at work, since I wasn't able to serve clients around the clock. I had a lumpectomy, and then I was told that, as with many young patients, my cancer was aggressive and would require radiation and chemo. I was also chosen to participate in a promising drug research study.

My hair started falling out the week of NYC's big summer blackout. I hauled myself down 17 flights of stairs and, although totally beat from chemo, spent hours hanging out in a bar with friends. As we sat chatting and drinking with strangers, I forgot about my cancer for the first time, despite the handfuls of hair coming out around me.

That night, the world stood still, and I began to notice all the positive things in my life. About nine long, hard months later, I noted that my job maybe wasn't so positive. I loved law, but wasting hard-won hours poring over papers that meant nothing to me just didn't seem worth it anymore. I thought back on office bitch sessions, when we'd joke about staying 24 hours straight when "it's not like we're curing cancer," and it struck home. I didn't want to just rid myself of cancer now, I wanted to rid myself of all that was bringing me down in life.

don't press your luck

According to the Young Survival Coalition, approximately 11,000 women under the age of 40 will be diagnosed with breast cancer this year, and nearly 250,000 currently live with the disease. Since the cancer tends to be more aggressive, catching it early is very important.

Be familiar with your breasts, so you'll notice any changes.

So I made some decisions: One, to go back to school and study my real love, legal education, and two, to move closer to my support system, my family. I'm working toward a degree in library science at the University of North Carolina at Chapel Hill and hope to work in a law school library. Plus, I've also met the man I'll spend the rest of my life with. In an odd, bittersweet way, cancer gave me this—a bundle of renewed opportunities.

Last November, about a year and a half after being diagnosed, I was pronounced cancer-free. Since then, I've had moments when I fear cancer will return. I still need tests and must take hormonal drugs. It's a continuous battle. But for now, my life is where it should be. And despite what got me here, I still feel like one of the luckiest women in the world.

Receive a clinical breast exam every one to three years from ages 20 to 39.

Look out for these symptoms:
- Lump or mass in the breast
- Enlarged lymph nodes in the armpit
- Changes in breast size or shape
- Skin redness or scaliness
- Nipple pulling to one side or a change in direction
- Nipple change or discharge
- Dimpling or puckering

Tips from The University of Texas M.D. Anderson Cancer Center (www.mdanderson.org). For additional advice, visit www.youngsurvival.org.

WEB EXTRA: Lisa's tips on how to help out a friend

Web Extra: How to help out a friend

It's hard to know what to do when someone you care about is hit with a health crisis like cancer. You want to help, but you're not sure what she needs. Remember that your friend is in a whirlwind and may not know yet what she's going to need, or she might be uncomfortable asking. Instead of saying, "Let me know if you need anything" or asking "What can I do?" here are a few things you can do that will definitely be of help:

Hire a cleaning service for your friend, or come over and do chores yourself. While it's never fun, housekeeping becomes a huge burden when you're exhausted from chemo. In my case, I had to be extra careful with my arm after surgery because so many lymph nodes had been removed--I wasn't supposed wash dishes, lift anything heavy (even taking out the garbage!) or do anything rigorous like vacuuming.

If she's a close friend, offer to serve as her Information Distribution Contact. She may grow tired of explaining her diagnosis and progress repeatedly, and it can be overwhelming coming out of surgery and treatment while simulatneously keeping family and friends updated. If you offer to send out group emails and answer questions post first surgery or chemo, friends will quickly learn to look to you, rather than her, for information, thereby taking a burden off of her.

Offer to go for walks or exercise with her. Yes, some light exercise is often recommended during chemo! Don't push it, but she may enjoy the company on days when she's up to it.

Avoid giving heavily scented bath or beauty products. Not only can scents be nauseating during chemo, using an adored scent can forever ruin the scent for her, instantly recalling the nausea of chemo whenever she catches a whiff! This was true for me--even though I had been warned.

MORE TIPS

When you come to visit, bring food, but make it bland. Treating her to her

favorites seems like a great idea, but the aforementioned nausea and negatvie associations apply here, too. If you do bring food, make it something that's easy to clean up, of course.

❋ Babysit or take her kids for a day.

❋ Offer to drive and/or accompany her to and from chemo treatment and doctor's appointments. Take notes for her while she's talking to the doctor--it's just too much to remember.

❋ Offer to grocery shop or run errands.

❋ Magazine subscriptions make great gifts--especially the light, fun, guilty-pleasure kind.

❋ Get her a Netflix membership so she can watch any DVD she wants without having to go out and pick them up or worry about returning them.

❋ Amazon gift certificates are always nice. That way, she can choose her own reading material.

❋ A gift certificate for a day at the spa. If she's not up for it now, she can always use it to celebrate once she's feeling better.

❋ If you know her tastes, some comfy, cozy pajamas or bathrobe are nice. But don't be offended if she throws them out after her chemo is over--that negative association thing again.

❋ The hair loss thing is traumatic and she will probably be concerned about the way she looks. For that reason, offer to take her shopping for hats and scarves, as opposed to just buying them for her--she will probably want to choose her own.

❋ When the time is right, help her plan an end of treatment party or trip!

❋ Listen.

Welcome to the Center for Teaching & Learning's 20th Annual

ORIENTATION

for new graduate teaching assistants

THE DAY'S PROGRAM:

Saturday, August 18, 2007

9:30 A.M. – 10:00 A.M. **Registration and Continental Breakfast**
Student Union Brick Lobby

10:00 A.M. – 10:35 A.M. **Opening Plenary Session**,
Student Union Auditorium
Welcome
Larry Rowan, Director, CTL
Steve Allred, Executive Associate Provost
Overview of day's activities
Graduate Teaching Consultants (GTCs), CTL

10:35 A.M. – 10:45 A.M. **Proceed to Morning Sessions**
(see "Morning Workshop Sessions" for groups & room numbers. A map of the Student Union is on the back of this sheet)

10:45 A.M. – 12:00 P.M. **Morning Sessions**
Disciplinary groupings designed to foster discussion of teaching in undergraduate classes

12:00 P.M. – 12:45 P.M. **Pizza Lunch**
Student Union Gallery

12:45 P.M. – 2:45 P.M. **Afternoon Workshops**
Variety of topical workshops with invited speakers
(see ""Afternoon Workshop Sessions")

AFTERNOON WORKSHOP SESSIONS

Workshop Session I 12:45 P.M. – 1:40 P.M.

Developing and Evaluating Written Assignments
Student Union, Room 3209
For new instructors, evaluating student written assignments can be a challenging task. This workshop will address specific suggestions on ways to design written assignments as tools for student learning, to provide useful feedback to students, and to evaluate the assignments fairly, consistently, and meaningfully for students.
Center for Teaching and Learning (CTL) Staff

Communication in the Classroom
Student Union, Room 3205
Communication is an integral part of teaching and learning. Students and instructors benefit from clear and realistic expectations about classroom communication, regular checks for comprehension, and good rapport. This workshop on strategies to establish effective classroom communication will interest new and experienced instructors.
Center for Teaching and Learning (CTL) Staff

Helping Students Learn Through Research
Student Union, Room 3201
Mentoring is a critical aspect of scholarly growth and development. By facilitating connections between undergraduates and graduate students, the Office of Undergraduate Research (OUR) fosters the growth of graduate student mentors and undergraduates interested in research. This workshop will cover the OUR graduate-undergraduate research mentoring program and demonstrate how research can be a useful approach to learning for the undergraduate.
Pat Pukkila, Biology

Basic Classroom Strategies for International TAs
Student Union, Room 3206 A & B
Moving from one culture to another is an exciting challenge for a graduate student. Becoming a teacher in a different culture's classroom requires attention to the differences in the way students perform, materials are used, and learning is assessed. This workshop is designed to provide a brief overview of some of those differences that ITAs may need to be aware of as they begin to teach in the American classroom. Strategies for classroom management, material preparation, and self-assessment will be explored.
Brian Rybarczyk, Graduate School

Introduction to RefWorks: Organize Your Research and Simplify Your Life
R.B. House Undergraduate Library, Room 124
Teaching is stressful enough. Simplify your life by learning how to use RefWorks, a web-based bibliographic management program that can save you valuable time with both your research and your writing. In this workshop, you'll learn how to create your own personal database of citations, import citations from library databases, and format the bibliographies of your papers.
Jacqueline Solis, Academic Affairs Library

Academic Integrity
Student Union, Room 3203
To promote responsible citizenship, faculty and students should be clear about their roles in assuring that academic integrity and intellectual honesty frame their interactions in the classroom. Participants in this workshop will review the Honor Code and how this policy contributes to a class in which intellectual honesty and personal integrity are valued as shared ideals and as cornerstones for effective teaching and learning. We will also explore strategies for creating a shared understanding of expectations in the classroom.
Honor System Staff, Office of the Dean of Students

Workshop Session II 1:45 P.M. – 2:35 P.M.

Leading Effective Discussion
Student Union, Room 3205
In order for discussions to be an efficient use of class time, they must be conducted with clear goals and a solid plan for achieving those goals. Effective discussions can increase students' retention skills, help students connect class concepts with previous experiences or with global issues, and enable students to achieve higher-order learning objectives.
Center for Teaching and Learning (CTL) Staff

Interactive Lecturing
Student Union, Room 3203
Interactive lecturing is a technique that includes the students as participants in the lecture, involving them intellectually. This workshop will review the techniques and strategies of this method.
Center for Teaching and Learning (CTL) Staff

Assessing/Evaluating Student Learning
Student Union, Room 3201
Integrating assessment strategies into instruction poses a challenge for many teachers. Moving beyond the general principles of assessing student learning, teachers in this seminar will explore how they can develop a course framework that blends learning objectives, teaching strategies, and assessment tools to achieve desired learning outcomes in a way that provides a systematic approach to assessment of learning.
Center for Teaching and Learning (CTL) Staff

Common Issues During the First Week of Class
Student Union, Room 3209
The beginning of class is a time of high expectations and excitement on the part of teachers and learners. Attention to some of the common things that dampen the excitement and enthusiasm can prevent a sharp decline in the emotional climate that is necessary to facilitate teaching and learning. Maintaining a steady state of interest, enthusiasm, and expectation is believed to be essential to an effective learning environment. This session will provide tips on how to maintain interest, enthusiasm and involvement at the beginning of class and throughout the semester.
Center for Teaching and Learning (CTL) Staff

Getting Beyond Wikipedia: Ten Ways the Library Can Help
R.B. House Undergraduate Library, Room 124
Tired of students citing Wikipedia for everything? Instructors often express frustration over students' unwillingness or inability to find scholarly or scientific books and journals for their assignments. The UNC Libraries offer a variety of services to help you and your students find, use, and evaluate information sources. We can work with you to design assignments, create customized BlackBoard course pages, or set up an instruction session to help students find the information they need. This workshop will inform you on these and other services and tools you can use to improve your students' learning.

SOME INFORMATION CONCERNING TEACHING

1. Honor Code: (http://honor.unc.edu/) We and the students are bound by the University's Honor Code. Among the things we are required to do is to report suspected cases of plagiarism rather than handle it ourselves.

2. Final exams times and dates are set (you can find the schedule on the web at: http://regweb.oit.unc.edu/calendars/finals069.php. The exam dates cannot be changed without written permission from a **Dean**, although students can ask to take the exam on a different date if, and only if, they have **3 in a 24 hour period**. If you want to give a take-home exam that must be approved by the Chair, and he must then give a written report to the Dean listing who has received the permission.

3. Final exams are required for all lower level undergraduate courses that we offer. How much weight these exams have in determining the final grade is up to the instructor, and one may have a take home portion of the exam. But there must be an in-class final.

4. Student Evaluations are required for each class and should be given out at end of semester. Evaluation forms are made available by Gucki as the end of the semester approaches.

5. The Syllabus is seen by the students as a kind of contract, so please do not add assignments that are not already announced on the syllabus and do not delete assignments that they may be regarding as offering a chance to improve their grades...

6. Teaching support is of course available from people in the Department, but it is also available from the University's *Center for Teaching and Learning* (http://ctl.unc.edu/), and from the Center for Instructional Technology (http://www.unc.edu/cit/), which supports Blackboard, Discussion Forums, list-servs for classes, etc.

7. A list of the students enrolled in your class(es) or section(s), an easy way to email them all, and photos of your students, are all available on Faculty/Staff Central at: https://www-s3.ais.unc.edu/sis/browser/operator_pass.html

8. Teaching duties:

    - 10-14 hours a week average, so be sure to organize your time to fit when you have heavy grading to do, and papers for your classes, etc.

    - You must hold posted office hours. Gucki will be sending out a form for these.

    - Attendance at classes is, of course, expected. If you are TAing and need to miss a section, be sure to let your faculty supervisor know and to get it covered. If you are teaching your own class and are going to miss it, try to get it covered. If this is not possible, then be sure to send an email to all the students letting them know the class will not meet. Send a copy to Gucki too..

9. If you have any problems with your sections or class, you should consult with people in the department (e.g. the TA Coordinator, Meg, or Jan or Doug or Jerry). Don't let things get to a critical point.

10. If you are teaching your own course, especially if it is for the first time, you should work closely with your faculty supervisor in constructing assignments and exams. Please ask him or her to look over your syllabus and to attend at least one class meeting.

11. Be aware of the student population and especially special populations, such as LD, athletes, seniors who are job hunting. Athletes will give you a form, in advance, letting you know when they will be missing class for a University sanctioned event.

12. Along with being aware of the student population be mindful of the diversity in the classroom and of our own perceptions. We want them to enjoy philosophy, so pay attention to how you come across verbally and physically.

13. Target average GPA for lower level undergraduate courses: (C+/B-)

14. You might want to consider asking that papers be handed-in in electronic form (as well as hard copy) so that you can use software to catch plagiarism. Ask Geoff for details if you are interested.

Hi Donald,
Jennie Dickson, our Program Assistant, forwarded me your email. I am sorry you can't make the Fellows luncheon, but I am very interested in discussing your new research program on virtues and vices of political leadership in liberal democracies. Would you be interested in arranging a workshop/seminar on the topic in the Spring that the Parr Center could sponsor or co-sponsor? Let's try to schedule a lunch early in the Fall term.

Looking forward to talking with you,
Jan

Geoff,
I will look back at our submissions and see what we did. I am surprised
by a couple that jump out -- 213, 215, 229, 285, 351, 384.

Hi Pat,
Okay- I misunderstood. Right now I have 3 people to ready to facilitate lunch seminars. We need to meet to discuss how you want these conducted and what topics you want addressed. One of our visitors has at least 2 topics she would like to discuss. Can we meet next week or early the following week with my program coordinator, Graduate RA and visiting Parr Faculty to set out a program? Wednesday the 22nd 10-12 2-4 or Thursday the 23rd anytime would work for me.

Thanks,
Jan

Hi Debbie,
With the addition of Stacey Waddell, I am now complete! I did not hear from Prof. Unks, but if he does respond, maybe we can just add him as well. What do you think?

Did you get enough grad students?

Jan

Subject: Re: professors removing people from class

We don't have a policy. What we can do, as we have done for some in the past, is put a restriction of "controlled enrollment" on the first day of classes that allowed the instructor to add students at his/her discretion. Some have used this method in the past, others don't want to--mainly those in the large classes. Perhaps we should discuss having such a policy at a department meeting. I think it is definitely worth doing. It works well for Psychology, because they have so many people trying to get in their classes--just like we do!

But we should ask Jay Smith if for the time being an individual instructor can adopt this by emailing the entire class.

PHIL 560 ETHICS BOWL Instructor: Jan Boxill

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation. The team sent to the Ethics Bowl competition will be selected from those registered in the course. Before the actual competition, a mock Ethics Bowl will be presented to the public and also to local high schools as part of the Philosophy Department's outreach program.

During a round, each team takes turns presenting its position on a case and critiquing another team's position on a different case. Teams must answer questions about their positions from a panel of judges. Judges assign scores based on logical consistency, clarity, focus and thoroughness. The presentations are evaluated on the following criteria:

Clarity and Intelligibility: Have you stated and defended your position in a way that is logically consistent and a reader/lister can clearly understand your line of reasoning?

Focus on Ethically Relevant Factors: Has you identified and discussed the ethically relevant factors?

Avoidance of Ethical Irrelevance: Has you stayed on track by avoiding preoccupation with issues that are not ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does your presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

The Intercollegiate Ethics Bowl (IEB) combines the excitement and fun of a competitive tournament with a valuable educational experience for undergraduate students.

The regional competition will take place November 17, 2007 and national in March. The course would be offered in the Fall to prepare students for the regional competition. The actual cases are sent out in mid September, so before that the students will look at previous year's cases and read material appropriate to cases in general, including ethical theory.

Before the actual competition, a mock Ethics Bowl will be presented to the public and also to local high schools as part of the Philosophy Department's outreach program.

During a round, each team takes turns presenting its position on a case and critiquing another team's position on a different case. Teams must answer questions about their positions from a panel of judges. Judges assign scores based on logical consistency, clarity, focus and thoroughness. The presentations are evaluated on the following criteria:

Clarity and Intelligibility: Have you stated and defended your position in a way that is logically consistent and a reader/lister can clearly understand your line of reasoning?

Focus on Ethically Relevant Factors: Has you identified and discussed the ethically relevant factors?

Avoidance of Ethical Irrelevance: Has you stayed on track by avoiding preoccupation with issues that are not ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does your presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

The Intercollegiate Ethics Bowl (IEB) combines the excitement and fun of a competitive tournament with a valuable educational experience for undergraduate students.

The regional competition will take place November 17, 2007 and national in March. The course would be offered in the Fall to prepare students for the regional competition. The actual cases are sent out in mid September, so before that the students will look at previous year's cases and read material appropriate to cases in general, including ethical theory.

PHIL 560 ETHICS BOWL Instructor: Jan Boxill

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation. The team sent to the Ethics Bowl competition will be selected from those registered in the course. Before the actual competition, a mock Ethics Bowl will be presented to the public and also to local high schools as part of the Philosophy Department's outreach program.

READINGS to be taken from the following:

Elements of Moral Philosophy, James Rachels
Being Good, Simon Blackburn
On Liberty, John Stuart Mill
Social Ethics: Morality and Social Policy, Thomas Mappes & Jane Zembaty, editors.

Other readings will be assigned as appropriate.

REQUIREMENTS:

I. CASE PREPARATION:

Each student will prepare a minimum of two cases. Each case involves:

1. 2-3 page paper setting out the argument with ethical implications.
2. Present argument to class- 5 minute presentation. Other students write a critique of the presentation with suggested revisions, readings, and research.
3. Revised paper based upon class presentation, discussion, and student critiques. Revised paper will also include an analysis of one aspect of the argument. 3-5 pages which will include bibliography and field research plans.
4. Present revised argument along with analysis: 5-7 minutes. Critiques.
5. Revised paper based on previous discussion. Revised paper will also include analysis of second aspect of the argument: 5-7 pages.
6. Present revised argument along with analysis: 5-7 minutes. Critiques
7. Revised paper based on previous discussion. Revised paper will include objections to your analysis.
8. Present revised argument: 5-7 minutes.
9. Revised paper with completed philosophical analysis: 12-15 pages
10. Oral presentation of completed analysis:
    8 minutes for presentation
    5 minutes for questions
    5-7 minutes rebuttal.

II. EXPERIENTIAL MENTORED RESEARCH STUDY:

1. For each case, students will contact appropriate units for essential background to investigate original problems and gain information regarding the case to be incorporated in the presentations and drafts. Throughout the experience, the work will be supervised and mentored by instructor and Parr Center Visiting Professor, who will assist students with setting appropriate goals. Research will also be assisted by the Parr Center graduate research fellow and the unit head or designate. [E.g. For legal cases, it would involve working with the DA office].

Expected minimum hours: 60

2. Three mock Ethics Bowl competitions: one to the Department/University, and two in local high schools as part of the Department's Outreach Program.

III. FINAL EXAM— TBD

GRADE: The final grade will be assessed as follows:

Papers:	30%
Presentations:	30%
Class participation &critiques:	20%
Final Exam:	20%

WEEKLY ASSIGNMENTS:

Week 1:	Readings: Rachels: Chapters 1- & Blackburn Chapters 1- Discuss readings and cases. Assign cases. Discuss appropriate research units.
Week 2:	Readings: Mill, On Liberty; Mappes One-two page reconstruction of the arguments of your cases Five minute oral presentation of the reconstruction Feedback and suggestions from class.
Week 3:	Re-write the reconstruction given the feedback from class. Prepare a bibliography of selected readings appropriate to your cases Present both the re-write and bibliography to the class. Receive student feedback and suggestions.
Week 4:	Annotated bibliography. 1-2 page showing the relevant facts of the case.
Weeks 5-8:	Presentations, discussions,
Week 9-11	Mock Ethics Bowl Competitions
Week 12:	In class discussions in preparation for National Competition.
Week 13:	National Ethics Bowl Competition
Week 14:	Debriefing and discussion of Ethics Bowl Competition; review for final exam.

Sample Cases:

Case #1

Dr. B., a Professor of Psychology at a large research institution, Ohio State University (OSU), has a long distinguished record of working with chimpanzees. In the 1970s, she taught chimps to communicate, first by using American Sign Language and later using graphic symbols. In the last decade, under her direction, two young chimps, Keeli and Ivy, have learned to count and to recognize simple written words. Another chimp, Bobby, has shown an uncanny ability to learn number sequences and even to fill in missing numbers in a sequence. She has learned that chimps can do simple arithmetic, behave similarly to preschoolers, and (along with humans) have the ability to perceive the knowledge state of a peer.

Dr. B., who has dedicated her entire professional life to the study of cognition in chimpanzees, has won international acclaim for her work and was named one of the top 50 women researchers in the nation by *Discover Magazine* in 2002. Her chimps have been featured on Discovery Channel. However, as funding to support the research center has been hard to come by in the last five years, the university decided to close the research center and send the chimps away. OSU abruptly seized the professor's laboratory on February 28, 2006, changed all the locks, and hired a truck to send all 12 primates (nine chimps and three monkeys) to Primarily Primates, a controversial Texas sanctuary. The university gave the sanctuary a $324,000 trust fund for the animal's care.

Dr. B. vigorously protested the decision. When a restraining order she filed failed to prevent the university from implementing its decision, Dr. B. chained herself to the center's gate to prevent the transport trucks from leaving. Her efforts were unsuccessful and one of the chimps, 25-year old Kermit, died during the 38-hour transport in early March. Bobby was found dead in his enclosure on April 20. One of the monkeys escaped and was never recovered. Dr. B sued OSU to win custody of the remaining chimps. PETA also joined the suit on behalf of the remaining seven chimps and two monkeys and in June a Texas judge ordered that an independent trustee should oversee the $324,000 funding to ensure that it be used to house and benefit the remaining OSU primates.

Case #2

Wisconsin State Representative Dan LeMahieu (R-Oostburg) was outraged when the University of Wisconsin-Madison's University Health Services (UHS) featured ads in the two student newspapers suggesting that students consider receiving prescriptions for emergency contraception (EC) prior to leaving for spring break. UHS services are available to any student at the UW-Madison, and as such they offer health expertise to students in the areas of medical treatment for illnesses and injuries, counseling for stress reduction, smoking cessation, nutrition, dermatology, sports medicine, as well as confidential testing and treatment of sexually transmitted diseases (STDs). Although a part of the state-funded University of Wisconsin System, the ads were paid for using student segregated fees which are not part of taxpayer dollars or academic tuition funds.

Following the publication of the ads, which were part of a series also advising students to protect themselves from sun exposure and limit their intake of alcohol, Representative LeMahieu initiated drafting legislation to ban any university health center in Wisconsin from advertising or distributing the morning-after pill (EC). LeMahieu contends, "I think it's offensive that the university is trying to tell young women to be prepared and to plan ahead so they can have

promiscuous activities on spring break. I don't think that it's the role of the university to promote that type of activity, and I believe that's what their ad is asking young people to do." LeMahieu also added that the UW should be "made aware" that many people who are paying state taxes do not appreciate the offensive advertisements.

On June 16, 2005, Wisconsin's State Assembly voted 49-41 in favor of a bill prohibiting University of Wisconsin System health centers from advertising, prescribing or dispensing emergency contraception, making it the first state in the country to move towards banning EC on all state college campuses.

Case #3

Near the end of its fall season, a top executive from the popular reality television competition, *Idol Starz*, appeared on the *Today Show* and revealed that the program's contestants either advanced or were cut based on producers' decisions rather than being selected through the program's public text-messaging voting system. The executive went on to state that the show's winners and losers were selected by producers on a round-by-round basis in the hopes that certain "controversial" or "questionable" choices would positively influence ratings, increase fervor for underdog candidates, and create a more developed fan-base which would return to view the show during both current and future seasons.

Given the show's popularity and viewers' commitment to their favorite contestants, the revelation led to a large public outcry condemning the show for dishonesty and false advertising. Many claimed to have been cheated and explained that the show had a responsibility to adhere to the public's decisions about which candidates they preferred. Given special attention during this debate was the show's slogan: "You vote. You decide. Who should be the next Idol Star?"

During ensuing interviews, the show's producers explained that their decisions were based on the fact that they were in the entertainment business and that certain unpredictable events helped to keep the audience invested in the show and provided increased entertainment value. They also argued that, more often that not, their decisions about who should advance or win were in line with the public's desires. When questioned about the program's slogan, one producer was quoted as saying, "Look at it carefully. There is a difference between telling someone to vote and decide who *should* be the next Idol Star and telling them that their votes *will* decide the next Idol Star."

Case #4

In a recent case, Florida authorities declined to file charges against a Miami Herald columnist for surreptitiously recording a phone call from a city commissioner who later committed suicide in the newspaper's lobby. Authorities cited the unusual circumstances that led to the taping as the basis for not filing charges against the columnist. These circumstances were not enough for the Miami Herald, who took immediate action to fire the columnist for violating a company policy that prohibited the taping of sources and interviewees without the subject's consent.

State laws related to the recording of phone calls and the courts interpretation of these laws vary widely in the United States. Many of these laws are intentionally written with ambiguous terms and interpretation is typically required on a case by case basis.

The firing of this popular columnist caused much protest around the world. Many members of the Herald staff signed a petition requesting the decision to fire the columnist be rescinded. The columnist was friends with the city commissioner, and the commissioner provided regular sources for stories to the columnist.

According to the columnist, the commissioner was despondent over public allegations about his sex life and the tone of his voice on the phone conversation was so alarming that the columnist impulsively decided to record the conversation. The tape records the columnist's attempts to calm the commissioner. Throughout their 20-minute conversation, the columnist attempted to steer the conversation to less volatile subjects in the hopes of lifting the commissioner's spirits. But the call ended with the commissioner still despondent. A few minutes later, the commissioner shot himself.

Following the suicide, the columnist told editors of the Miami Herald that he had been interviewing the commissioner earlier in the day and had recorded part of the conversation without the commissioner's consent.

After being fired, the columnist was quoted as saying "In a tense situation I made a mistake. The Miami Herald executives only learned about it because I came to them and admitted it. I told them I was willing to accept a suspension and apologize both to the newsroom and our readers. Unfortunately, the Herald decided on the death penalty instead."

The Miami Herald editors have taken the position that there must be an absolute prohibition of the paper's reporters taping conversations without a party's consent, and not just because it is against the law in Florida, as it is in many states. An executive of the Herald has stated that the policy is necessary to protect the paper's integrity, as well as to foster trust from news sources.

Journalists at the Miami Herald have pointed out that at least one other reporter surreptitiously taped an interview, but was not fired. The journalists also have also stated that there is no written policy on taping conversations and that any verbal policy on expectations of reporters is unclear. The Miami Herald responded to the alleged case of a previous surreptitious taping by saying "we understand this happened 18 years ago". They went onto state that the recent decision to fire the columnist was clearly guided by the environment in which journalists operate today; which is much more constrained in terms of the latitude given for violation of law and policy.

Case #5

Beginning in 2005, protests at funerals for military personnel killed in Iraq have been increasing – and have received much media attention. In particular, members of the Westboro Baptist Church, in Topeka, Kansas, have been especially visible and vocal at many of these military funerals. Reverend Fred Phelps and his protesters claim that U.S. military deaths in Iraq are because America tolerates homosexuals and that they are a sign of divine punishment for America's tolerance of homosexuality. For over a year now, members of this anti-gay church have been crisscrossing the United States, holding more than one hundred protests outside the funerals of U.S. soldiers killed in Iraq.

They wave placards with such expressions as: "You're Going to Hell," "Fag Vets, God Hates You," and "Thank God for IEDs" (the improvised explosive devices responsible for killing many military personnel in Iraq). Phelps contends that all American soldiers are guilty by association – because they are fighting in the service of the U.S. government.

By Spring, 2006, twenty-eight states and Congress were rushing to pass laws to restrict protests outside military funerals. On May 17, 2006, Illinois Governor Rod Blagojevich signed a state law – "Let Them Rest in Peace Act" – that prohibits disruptive and inflammatory protesting 30 minutes before a funeral, during the service, and 30 minutes after a funeral while remaining 200 feet from the funeral site. This new Illinois law drew immediate scorn from Shirley Phelps-Roper, attorney for the Westboro Baptist Church: "The law is impotent. You've done nothing to change that God is killing your children and sending them home in body bags. Keep your big, fat snout out of our religion."

In the U.S. Congress, Representative Mike Rogers (R-Mich.) sponsored a House bill to address this matter. He said that he took up the issue after attending a military funeral in his home state, where mourners were greeted by "chants and taunting and some of the most vile things I have ever heard. Families deserve the time to bury their American heroes with dignity and in peace." On May 24, 2006, Congress passed legislation that would bar demonstrators from disrupting military funerals at national cemeteries.

The "Respect for America's Fallen Heroes Act" prohibits protests within 300 feet of the entrance of a national cemetery and within 150 feet of a road into the cemetery from 60 minutes before to 60 minutes after a funeral. Those violating the act would face up to a $100,000 fine and up to a year in prison. Senate Majority Leader Bill Frist (R-Tenn.) said that this act "will protect the sanctity of all 122 of our national cemeteries as shrines to their gallant dead. It's a sad but necessary measure to protect what should be recognized by all reasonable people as a solemn, private and deeply sacred occasion."

In response to this federal legislation, Phelps has said that Congress was "blatantly violating the First Amendment rights to free speech" in passing the bill. He said that he will continue to demonstrate but would abide by the restrictions. Constitutional experts are warning that protest restrictions – such as those passed in Illinois and in Congress – appear overly broad and are likely to be overturned if challenged in court. Eugene Volokh, a law professor at the University of California-Los Angeles and an authority on the First Amendment, said: "You can't treat speech as a breach of peace simply because it offends people. These protests are tremendously offensive and hard to ignore. But ignoring them or counter-protesting is unfortunately the only remedy the 1st Amendment allows." And, the American Civil Liberties Union has filed a lawsuit against a new Kentucky law, saying that it goes too far in limiting freedom of speech and expression. Additional lawsuits are expected to be filed.

U.S military veterans find Phelps' beliefs and actions particularly abhorrent, and in November, 2005, veterans' motorcycle groups began showing up at military funerals to oppose the protesters and to show support for the families of the deceased soldiers. Calling themselves the Patriot Guard Riders, these motorcycle groups have organized hundreds of counter-protesters to wave American flags and stand silently in front of the Westboro picketers, to pay respects to the fallen soldier, and to protect the soldier's family from disruptions.

Case #6

Alejandro Toledo, President of Peru, has launched a public campaign demanding that Yale University return to Peru Incan artifacts excavated at Machu Picchu in 1912. Yale professor Hiram Bingham III, guided by a native Peruvian, came upon the Incan city of Machu Picchu in 1911. Bingham secured backing from the National Geographic Society and support from Peru's government for archeological excavations at Machu Picchu in 1912 and again in 1914-15.

In October 1912, Bingham gained the Peruvian government's permission to bring to Yale for research the contents of 170 tombs in Machu Picchu. The decree allowed that Peru reserve the right to ask for the return of the objects.

By 1916, Peru, suspecting Bingham of secretly taking Incan gold, ended Bingham's work at Machu Picchu. The items taken to Yale from the 1914-15 excavations were loaned for only 18 months. Yale has refused several Peruvian requests for return of the artifacts.

Today, Yale claims that they have complied with the 1912 and the 1916 agreements, returning the objects to Peru during the 1920's. Yale sees no similar responsibility to return the items taken from earlier work. National Geographic Society records show that about half of the items were returned to Peru, with no mention of the remaining artifacts.

Luis Guillermo Lumbreras, the director of Peru's National Institute of Culture in Lima, claims that Yale has had 90 years to complete research on the objects, and now Peru wants the items returned. Peru elected its first indigenous president–Alejandro Toledo, who honored the nation's Incan heritage by holding part of his inauguration ceremony at Machu Picchu in 2001. In part due to his influence, Peru wants possession of the artifacts, which have formed the core of Yale's impressive, scholarly exhibition: *Unveiling the Mystery of the Incas*. After traveling to six cities and attracting over a million visitors, the exhibit now resides at Yale's Peabody Museum of Natural History in Connecticut.

The recent research of Yale professors Lucy Salazar and her husband Richard L. Burger, including extensive scientific analysis of burials, has provided the most reasonable explanation for the existence of Machu Picchu. Rather than supporting the earlier ideas of the city as a center for religious activity including the sacrifice of virgins, the professors' research has suggested that the city served as a simple country retreat from the Inca capital of Cuzco.

The number and kinds of artifacts taken to Yale from Machu Picchu is in dispute. Yale has offered to return some of the pieces to Peru, if Peru allows it to keep others at the Peabody Museum of Natural History, where Machu Picchu is the prize exhibit.

Case #7

In October of 2002, after the overdose of one of its workers, management at a Weyerhaeuser, a multinational corporation in the pulp and paper industry located in Valliant, Oklahoma, became concerned that employees were not following drug and safety regulations in its parking lot. Management decided to have the parking lot searched with gun and drug sniffing dogs. While the dogs found no drugs, they did find firearms in twelve vehicles, including shotguns and automatic weapons. The owners of these vehicles, including a 23-year veteran shift manager, were fired in the next two days.

Weyerhaeuser and many other businesses have had long standing bans on firearms brought into the plant in order to protect workers and prevent workplace violence. In 2002, Weyerhaeuser extended this ban to the parking lot. Many workers claim they were not told of the extension of the ban, though management claims they informed workers. Some of the fired workers have filed suits claiming they were not informed. The initial suit was thrown out, but the decision is being appealed.

Since this and other incidents, many states -- beginning with Oklahoma -- have enacted laws protecting workers who want to keep firearms in their cars. The latest state to consider such a law is Florida, home to Walt Disney World, which does not allow any of its 50,000+ employees to bring guns onto company property.

A number of corporations have joined federal lawsuits against these new state laws. These companies include ConocoPhillips (petroleum), Halliburton (energy), and the Nordam Group (aircraft manufacture). They state that they cannot provide a safe and secure workplace without the ban on guns in the parking lot, and they see state laws allowing guns as infringing on the right of private property owners to decide what is and is not allowed on their property. Even aside from their property rights, companies claim that the laws would disregard public safety. The Bureau of Labor Statistics Census of Fatal Occupational Injuries states that in 2004, there were 551 workplace homicides out of 5703 workplace fatalities. A study at the University of North Carolina claims that such killings are five times more likely to occur at workplaces that allow guns compared to those who do not.

The National Rifle Association (NRA) has been the primary champion of laws that allow workers to have guns in cars in company parking lots. The NRA claims that prohibiting lawful gun owners to keep guns in their car dramatically diminishes their right to own firearms and defend themselves. All 50 states allow the transportation of firearms for lawful purposes. The laws also restrict workers who may want to hunt or target shoot after work from engaging in these lawful activities. They also claim that one's car should enjoy the same protections that one's home enjoys with regards to being able to keep lawful weapons and immunity to unlawful searches.

The NRA claims that the state laws already have commonsense provisions in them that prevent abuse. For instance, anyone wanting to transport a firearm and park their car in a company lot must keep the automobile locked, and at no time is it permissible to take the firearm out of the car on company property. Against the property rights claims of business owners, the NRA claims that business owners are already under extensive federal, state, and local regulations about what they can do with their property and that striking down these state laws would allow companies to "micro-manage" the contents of an employee's automobile. The NRA also cites statistics that 84% of workplace murders are committed by strangers, and anyone determined to commit a crime will not be discouraged from bringing the gun onto company property by a company regulation prohibiting guns in parking lots.

Case #8

After several years of miscarriages, Edward and Susan turn to *in vitro* fertilization as a means of screening embryos for genetic defects. More than two years elapse, with all the attendant discomfort and expense, but finally an “acceptable” embryo is produced and implanted. To their joy, nine months later they are blessed by Michelle, an apparently happy, healthy baby.

They decide that they will not tempt fate by trying to increase their family, instead choosing to relish the raising of their daughter. Five years pass and they eagerly anticipate Michelle's starting kindergarten. They have elected to enroll her in a well-respected private school so as to realize her fullest potential. Part of the school's pre-entry preparation is an extremely thorough set of physical examinations. (The physical examinations are not done to screen for admission, but rather to anticipate potential health issues while the student is enrolled.)

To their horror, the examinations determine that Michelle has early symptoms of a particularly virulent form of *Acute Childhood Lymphoid Leukemia*. Nothing in the embryonic screening could have predicted its occurrence. They begin immediate conventional treatments which prove to be ineffective. At their oncologist's recommendation they enroll her in the nation's premier pediatric oncology program. She gives them the bad news that Michelle shows evidence of having Philadelphia chromosome-positive ALL. The most successful treatment involves hematopoietic stem cell transplantation from matching relatives. The oncology clinic tests both Edward and Susan, but finds neither of them compatible. Since neither of them (nor Michelle) has any siblings, it looks as if they will have to hope for a million-to-one chance of finding a well-matched unrelated donor.

While waiting in the lounge of the clinic, the mother of another child under treatment introduces herself and suggests that they do have another option – they could have another child, *via in vitro*, selecting among possible embryos for compatibility for transplant. Initially they are horrified at the idea of producing another child as a "biological stockpile" for Michelle, but the more they think about it the better the idea seems. After all, they really had wanted more children. The new child wouldn't be seriously injured by the procedure needed to provide Michelle with the transplant material she so desperately needs. Given their history of medical procedures needed to have Michelle, the screening required to make sure the new child would be a compatible donor is almost the same as if they were just having another child as a family expansion.

When they raise the possibility with Michelle's physician, she explains that the screening technology has improved sufficiently since Michelle's birth to guard against the new child's having the same disposition toward this disease. But, before she will go further, she tells them they must speak with the clinic's counselor. The counselor asks them to consider what their true motives are in proposing the conception of this second child, whether they would be treating her as a person or as an object and how they will explain to her the reason for her conception.

Case #9

After 25-30 years of service, ships are at the end of their sailing life and are sold as "End of Life Vessels" to be dismantled primarily to recover the valuable steel which makes up about 95% of the ship. Ship breaking (or ship demolition) is the process of dismantling the structure of an obsolete vessel for scrapping or disposal and includes a wide range of activities, from removing all gear and equipment to cutting down and recycling the ship's infrastructure. However, the only ones who profit from ship breaking are the ship owners. They extract an average of $1.9 million profit per "End of Life Vessel." Ship breaking is also a challenging and controversial process, due to the structural complexity of ships and the many environmental, safety, and health issues involved.

Ship breaking is dangerous and has the reputation of being one of the dirtiest jobs on earth. For minimal dollars a day, workers with little protective gear tear out pipes insulated with

asbestos, transformers covered with PCBs, and leaky diesel tanks. Until the late twentieth century, ship breaking took place primarily in port cities in developed countries – including the United States and Europe. Today, however, most ship breaking yards are in developing countries – especially India, China, Bangladesh, and Pakistan. This is due to rules dealing with lead paint and toxic substances. The industry was such a disgrace that, in 2000, Congress acted to stop U.S. registered ships from being sent overseas for scrap. Ship breaking remains an international environmental and labor concern - because ship breaking now occurs mostly in underdeveloped countries where working conditions and environmental impact are not regulated. Also, many ships being scrapped now were made before many international environmental laws were enacted.

In late 2005, a Virginia-based company, Bay Bridge Enterprises, visited the small coastal town of Newport, Oregon, and proposed opening a ship breaking plant on the banks of Yaquina Bay. The company offered up to 125 jobs paying $20 an hour. Their spokesperson indicated that the company had no environmental violations since they have been doing this work, and that they had zero lost-time injuries since 2001. Also, he noted that there is no large-scale ship breaking yard on the West Coast, and that there are about 60 ships anchored in a California bay – just waiting to be moved to a scrap yard. Therefore, there would be plenty of work available at a new ship breaking plant in Newport – for some time to come.

A strong coalition of interested parties in the Newport area emerged in opposition to this proposal. The "Friends of Yaquina Bay" were the group of people most responsible for rallying the community together to try to stop this ship breaking proposal. The Oregon Coast Aquarium and the Oregon State University Hatfield Marine Science Center – both located in Newport – also added major support to the effort to block the proposed plant. Some of the major issues raised by these opponents to the proposal included: the world-wide negative reputation of ship breaking; the safety of towing "ghost ships" (some with a length of up to 540 feet) from San Francisco Bay in California to Newport, Oregon; potential infestation of as many as 100 invasive species on the ships in California that are not in Yaquina Bay; toxins on and in the ships that would escape into the bay and the air, affecting the seafood industry – especially crabbing – as well as the fear of pollution runoff at the Hatfield Marine Science Center and the Oregon Coast Aquarium; and visual pollution. Yaquina Bay is a continentally Important Bird Area – with several endangered species present. There are 15 or more blue heron nests and other bird species on the tide flats near the proposed ship breaking site. The local tides extend 15 miles up the Yaquina River and thus the largest oyster farm in Oregon could be affected. Plus there is fear that money-spending tourists would not view these rusting ships as an asset to the beautiful Oregon coast.

On January 24, 2006, about 200 people packed a meeting room in Newport, Oregon, to hear Mr. Don Mann, general manager of the Port of Newport, announce that "some projects are a good fit, or not a fit at all. Bay Bridge's plan for a ship breaking facility in Yaquina Bay does not qualify in our test for a good fit." Thus, quite surprisingly, it seems, the ship breaking plan for Newport was ended. Mr. Mann continued: "This was not a good business deal for the company, or for the Port. I believe that the environmental issues could have been resolved, but our financial concerns could not be adequately addressed." The vast majority of persons at the meeting were very pleased with this decision.

While this issue was being considered by the town of Newport, Oregon, the office of the Port Commissioners received hundreds of telephone calls of concern – from all over the country. As one commissioner said: "We have gained much free advertising – for the port and

community. The whole world knows we're here. This issue is bringing this concern to Oregon, and to the nation." Bay Bridge's next move on the West Coast remains to be seen. The company is still looking for a possible Oregon or Washington port.

Case #10

Ardent R. Porter is an investigatory journalist with a respected Washington-area newspaper, *Capitol News Briefly*. As a reporter working in and around the D.C. area, Mr. Porter often relies on his long list of contacts in order to glean information that might be useful for the various articles he publishes on corruption within politics and government. By establishing relationships with individuals at all levels of government, Ardent has provided himself with valuable human sources that are often capable of providing him with names, tips, or other information that he could not extract from other channels. Furthermore, a few of Mr. Porter's key contacts are able to pass along hard-to-come-by information about questionable or downright illegal actions taken by government employees or agencies.

One such contact is Ian Stalwart, a mid-level agency administrator who works with individuals who do government "groundwork" as well as with high-level government bureaucrats. As a middleman of sorts, Ian is in a position uniquely suited to evaluating the actions of those who work both below and above him. One of Mr. Stalwart's responsibilities is to watch for and report any illegal activity that he might encounter. Mr. Stalwart takes this role very seriously and his responsibilities as a watchdog were what originally led him to seek out Ardent, a like-minded opponent of corruption and illegality within public service.

It so happened that Mr. Stalwart discovered that many individuals within his agency were working to cover up illegally-awarded, over-billed, or otherwise fraudulent government contracts awarded during the early months of the Iraq War, actions which were in violation of several federal laws, in addition to many agency standards. Upon presenting his discovery to his superiors, Mr. Stalwart was told to disregard his findings and to refrain from further discussing the subject. After pressing for a more sophisticated explanation, he was informed that the contracts in question had been deemed classified through appropriate agency and congressional channels and that because the contracts had been deemed to serve a compelling national security interest, it would be against agency policy (as well as illegal) to discuss them, regardless of any questionable procedural or substantive aspects.

Fully knowing that he was in violation of laws regarding the disclosure of classified information, Mr. Stalwart approached Mr. Porter and revealed everything he knew about the dubious contracts. He also provided Mr. Porter with the names of the individuals implicated in the cover-ups and the names of the administrators who had ordered him to remain silent.

After composing a lengthy and revealing story, Mr. Porter approached his editor about publishing the story, explaining the dilemma presented by the fact that much, if not all, of the story's core material was classified. Following a discussion about publishing the article by the paper's editorial board it was decided that the story would run in the paper's next issue.

Case #11

Students in schools of medicine, nursing, dentistry and veterinary medicine are required to observe actual surgeries (and other procedures) early in their educations as a preliminary exposure to the practices of their field. In fact, such study is thought to be essential in

confirming the students' choice of profession. Of course, the observation takes place with the informed consent of the patients (or their guardians). Many pre-medical, pre-nursing, pre-dentistry, and pre-veterinary programs, especially at schools with associated hospitals, are beginning to recommend (or even require) similar observation programs.

The State University Museum has one of the nation's premier exhibits of the history of medicine and allied fields. They include displays replicating Leonardo's anatomy studies, teaching materials from Charles University (in Prague) dating from the 16th century, 18th century "bleeding," and 19th century nutrition studies (among many other presentations).
One of the most popular offerings at the museum is the "surgery room" where films of common surgical procedures can be viewed. Like the student viewing in medical schools, the patients shown have given their informed consent. Not surprisingly, the most identifiable attendees are people who are considering having the operations shown in the pictures. The films have been "sanitized" so that excess gore is avoided, but the surgeries are shown in detail.

Dr. Suarez, curator of the museum and retired professor of neurosurgery, has proposed to the board that rather than using films, which are hard to make and quickly become outdated, observers should be allowed to observe actual, in process surgeries on persons who have consented. After all, the University Hospital is adjacent to the museum and access is convenient. The hospital's operating theaters are set up above the surgical floor but separated from the patient and surgical team by sound- and atmosphere-proof windows. Dr. Suarez suggests that such watching could become a significant educational revenue-generating operation. He points out that special exhibits commonly serve as important financial resources for museums.

When Dr. Suarez proposes this program to the Museum's board of directors, Katherine Osborn (one of the community members of the board) objects vigorously. Although Dr. Suarez's proposal clearly restricts participation to persons "15 and older," Ms. Osborn argues that teens, and perhaps others, will attend surgeries not as education but as entertainment. Her position is that such "exhibitions" will be little better than the "bum fights" and ultraviolent films that have gained popularity in recent years. Ms. Osborn claims that teens will watch surgeries as a replacement for the gore seen while attending the ***Halloween*** and ***Nightmare on Elm Street*** movies. Her claim is that such actions are exploitative more than educational.

Dr. Suarez responds that actual surgeries come nowhere near the gore commonly shown on TV and in the movies. He points out that we seldom know what motivates people to act as they do in the presence of human affliction. "Do people slow their cars when passing accidents in order to see whether they can help or to see blood and gore? How would we know? Even if an adolescent attended a surgery out of a desire to see gore, might the experience not shift his or her perspective, creating an interest in becoming a medical professional?"

Case #12

Politicians have crossed the floor, or switched parties for as long as political parties have been in place—famous switches include those of Strom Thurmond, Ronald Reagan, Condoleezza Rice, Howard Dean, Hilary Clinton and most recently, Joe Lieberman. In 2001, nine serving members of Congress had switched parties while in office. Various reasons are cited for changing parties, including ideological disagreement with one's current party and moving to improve power and legislative efficacy, among others. U.S. Representative Ralph Hall of the Fourth Congressional District in Texas cites both reasons.

Ralph Hall was first elected in 1980 as a Democrat and has been re-elected each succeeding year. Hall has made a reputation for himself as a rogue Democrat, willing to "cross the aisle" and vote with Republicans when he agreed with their position. He also has been an avid supporter of President Bush, opposed to Democratic bids to unseat him. But it was more than mere ideological agreement that encouraged a decision to switch parties in early 2004 before his bid for reelection.

As Hall stated in a January 2004 press release that announced his decision to switch parties, "This year I was denied requests for district appropriations because I was a Democrat who voted against the bill. I have always stated that … if being a Democrat hurt my district, I would either resign or switch parties." The bill to which he was referring was a "foreign operations bill" which, according to Hall, gave, "financial support to those countries that continue to vote against [the U.S.] in the United Nations."

Another motivation may be found in Hall's appreciation for being spared a potentially career devastating blow in the redistricting that cost many Democrats their seats in 2003. According to a CNN article, "…Hall's move comes after Republican state lawmakers in Austin spared him in a redistricting map that targets every other Anglo Democrat in the House. His district, based in the city of Tyler, was largely untouched by the GOP-drawn map, which is currently facing a Democratic court challenge."

PHIL 560 ETHICS BOWL Instructor: Jan Boxill

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation. The team sent to the Ethics Bowl competition will be selected from those registered in the course. Before the actual competition, a mock Ethics Bowl will be presented to the public and also to local high schools as part of the Philosophy Department's outreach program.

During a round, each team takes turns presenting its position on a case and critiquing another team's position on a different case. Teams must answer questions about their positions from a panel of judges. Judges assign scores based on logical consistency, clarity, focus and thoroughness. The presentations are evaluated on the following criteria:

Clarity and Intelligibility: Have you stated and defended your position in a way that is logically consistent and a reader/lister can clearly understand your line of reasoning?

Focus on Ethically Relevant Factors: Has you identified and discussed the ethically relevant factors?

Avoidance of Ethical Irrelevance: Has you stayed on track by avoiding preoccupation with issues that are not ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does your presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

The Intercollegiate Ethics Bowl (IEB) combines the excitement and fun of a competitive tournament with a valuable educational experience for undergraduate students.

The regional competition will take place November 17, 2007 and national in March. The course would be offered in the Fall to prepare students for the regional competition. The actual cases are sent out in mid September, so before that the students will look at previous year's cases and read material appropriate to cases in general, including ethical theory.

From: Jay Smith, Associate Dean for Undergraduate Curricula
RE: First Year Seminar proposals

For reasons of speed and efficiency, the offices of First Year Seminars and Undergraduate Curricula have decided to eliminate the first step in the FYS course submission process (i.e., the submission of a course proposal at the FYS web page.) Effective this semester, FYS proposals should be submitted with all other course proposals through the online course submission system at Faculty/Staff Central. For FYS that are to be offered in fall, 2008, please be sure to submit proposals by the traditional September 15 deadline.

DEPARTMENT OF PHILOSOPHY
UNDERGRADUATE CURRICULUM

Philosophy deals with some of the most enduring and challenging questions we face and our attempts to solve them: What do we know and how do we know it? Do we project our values onto the world or find them there? Do we invent mathematical truths or discover them? Are we responsible for what we do, or are we victims of our genetic endowment, environment, and upbringing? Are we complex animals or images of God, minds or molecules? What are goodness, truth, and beauty? Is there anything in the world besides matter in motion? Since almost everyone thinks about these problems, the Department of Philosophy has courses that are open to all students and a major that is as unrestrictive as possible. Students trained in philosophy traditionally do unusually well in such post-graduate exams as GRE and LSAT, making philosophy a good pre-professional humanities major.

Central Problems of Philosophy (Phil 101), Great Works of Philosophy (Phil 110), and Making Sense of Ourselves (Phil 112) are recommended as first courses for those wishing to examine a broad range of philosophical topics, problems, or historical figures. Other good starting points are: Introduction to Mathematical Logic (Phil 155), which deals with logic and the analysis of argument; Introduction to Ethics (Phil 160) which deals with moral thought and experience; and Philosophy of Science (Phil 150) which deals with the concepts, methods, and foundations of the biological and physical sciences

Courses numbered 100-299 have no prerequisites and may, for many, serve as suitable first courses in philosophy. Courses numbered 100-129 are general survey courses. Courses 130-299 are oriented toward particular problems or topics. Courses numbered 210-228 are in the history of philosophy. Courses 300-399 are designed for advanced undergraduates and majors and carry a prerequisite of one course in philosophy. Courses on the 400-level are for advanced undergraduates as well as graduate students.

A major in philosophy requires nine philosophy courses, one course in each of three of the following four areas:

- History of philosophy: Courses with second digit: 1,2
- Metaphysics, epistemology, philosophy of mind, philosophy of language: Courses with second digit: 3,4
- Logic and philosophy of science: Courses with second digit: 5
- Value theory: Courses with second digit: 6,7,8

Draft of new curriculum/January 10, 2003 version

No more than three (3) of the 9 courses may be at level 199 or below.

For a major with honors from the Philosophy Department, a student must have a 3.2 cumulative GPA, take nine courses as specified above, plus Honors courses 397 and 398. Department approval is required.

A minor in philosophy requires five courses, at least one course in each of the three of the four areas listed above. No more than three (3) may be from courses 199 or below.

Philosophy 155, Introduction to Logic, is recommended for all students who major or minor in philosophy.

Within this framework the Department works actively to help students plan a course of study suited to their particular goals, whether this is to complement some other major (say, in science or economics) with one in the Humanities, to design a general purpose Humanities major that is flexible yet challenging, to go on to law school (there is a Pre-Law concentration, with faculty and graduate student advisors), or to go on to graduate school in philosophy.

Exceptions to the requirements for the Major or Minor may be approved by the Director of Undergraduate Studies in philosophy. Students interested in pursuing a major or minor in philosophy should consult their advisers or the director of undergraduate studies in planning their program.

Courses

First Year Seminars: All fulfill the General College Philosophical Perspective

51 Who was Socrates? (3).Reeve. (GC Philosophical)

Approaches: Humanities

52 Reason and Religion at the Dawn of Modern Science (3).. Staff. (GC Philosophical)

Approaches: Humanities

53. Theories in Human Nature (3). Staff. (GC Philosophical)

Approaches: Humanities

54 Thinking about Time (3). Roberts. (GC Philosophical)

Foundations: Physical & Life Scienes

55 Paradoxes (3). Simmons. (GC Philosophical)

Foundations: Quantitative

56 Abortion (3). Bar-On. (GC Philosophical)

Approaches: Humanities

57 Race and Affirmative Action (3). B.Boxill. (GC Philosophical)

Approaches: Humanities

58 From Vengeance to Mercy: Dealing with Evil (3). Postema. (GC Philosophical)

Approaches: Humanities

63 Mind, Brain and Consciousness (3). Lycan. (GC Philosophical)

65 Philosophy through Mathematics (3). Resnik. (GC Philosophical)

Foundations: Quantitative

66 Ethics: Theoretical and Practical (3). Hill. (GC Philosophical)

Approaches: Humanities

67 Issues in a World Society: Sports and Competition (3). J. Boxill. (GC Philosophical)

Approaches: Humanities

76 Is "free will" an Illusion (3) Long. (GC Philosophical)

Approaches: Humanities

77 Moral Weakness and Conscience (3). Staff. (GC Philosophical)

Approaches: Humanities

78 Death as a Problem for Philosophy: Metaphysical and Ethical (3). Rosenberg. (GC Philosophical)

85 Reason, Religion, and Reality in the Copernican Revolution (3) Lange

General Introductory Courses

101 Introduction to Philosophy: Main Problems (3). What makes some things right and others wrong, and how can we tell the difference? What can we know about the world? Do we have free will? Fall and spring. Bar-On, Hofweber, Lycan, Neta, Prinz, Reeve, Roberts, Rosenberg, staff. (GC Philosophical)

change in description; APPROACHES: Humanities

101H Introduction to Philosophy: Main Problems (3). Honors. Fall and spring. Staff. (GC Philosophical) APPROACHES: Humanities

110 Introduction to Philosophy: Great Works (3). Philosophy is the love of wisdom. But what is wisdom? And what good does it do us to pursue wisdom? Can it improve our character? Can it make us more free? Neta, Prinz, Reeve. Fall and spring. Staff. (GC Philosophical)

change in description: APPROACHES: Humanities

112 Making Sense of Ourselves (3) An examination of some of the most influential attempts to understand human beings, their lives, and their moral and political values. Authors include: Plato, Aristotle, St. Matthew, Nietzsche, Darwin, Freud, Marx, and Rand. Reeve, staff. Fall and spring. (GC Philosophical)

Change in description: Approaches: Humanities

Topical Introductory Courses

134 Philosophy of Religion (Religion 134) (3). A philosophical inquiry into the problems of religious experience and belief, as expressed in philosophic, religious, and literary documents from traditional and contemporary sources. Fall and spring. Nord. (GC & A&S Philosophical

145 Language and Communication (Linguistics 145) (3). How are natural human languages different from other communication systems? How are languages related to the world and the mind? Fall or spring. Bar-On, Hofweber, Lycan, Prinz (GC & A&S Philosophical)

Change course description

150 Philosophy of Science (3). What is distinctive about the kind of knowledge called "science"? What is scientific explanation? How are scientific theories related to empirical evidence? Fall or Spring. Lange, Roberts. (GC & A&S Philosophical)

Change course description: Foundations: Physical & Life Sciences

154 Philosophy of the Social Sciences (3). How do social sciences explain human actions? Are there social facts over and above facts about various individuals? Do values enter into social science? Fall or spring. Lange. (GC & A&S Social Science)

Change course description: Approaches: Social & behaviorial Sciences

155 Introduction to Mathematical Logic (3). Introduces the theory of deductive reasoning, using a symbolic language to represent and evaluate patterns of reasoning. Fall and spring. Hofweber, Lycan, Neta, Prinz, Resnik, Roberts, Simmons, staff (GC & A&S Mathematical)

157 Logic and Decision Theory (3) A broader discussion of practical reasoning including inductive and deductive logic, which provides a good introduction to decision and game theory that is important for the social sciences, especially economics. Staff (GC Mathematical)

Change course title, description: Foundations: Quantitative REasoning

155H Introduction to Mathematical Logic (3). Honors. Fall and spring. Hofweber, Neta, Prinz, Resnik, Roberts, Simmons, staff. (GC & A&S Mathematical)

same as 155

160 Introduction to Ethics (3). Exploration of different philosophical perspectives about right and wrong, personal character, justice, moral reasoning, and moral conflicts. Readings drawn from classic or contemporary sources. Critical discussion emphasized. Fall and spring. B. Boxill, Hill, MacLean, Sayre-McCord, Wolf, staff. (GC Philosophical)

Change course description: Approaches: Humanities

Draft of new curriculum/January 10, 2003 version

160H Introduction to Ethics (3). Honors. Fall and spring. Staff. (GC Philosophical) Same as 160

163 Practical Ethics (3). Topics may include: war, medical ethics, media ethics, sexual ethics, business ethics, racism, sexism, capital punishment, and the environment. Fall and spring. J. Boxill, MacLean, staff. (GC Philosophical)

Change title, course description: Approaches: Humanities

164 Morality and Business (3). An examination of business ethics and the types of ethical dilemmas people may face in business practices.Fall or Spring, J. Boxill, staff. (A&S Philosophical)

Change course description; Approaches: Humanities

165 Bioethics (3). The ethical basis of issues arising in health care: e.g. patient rights, removing life support, euthanasia, abortion, use of human or animal subjects in experiments, genetic manipulation, cloning, stem cells. Fall and spring. Long, Walker, staff. (GC & A&S Philosophical)

Change course description: Approaches: Humanities

170 Social Ethics and Political Thought (3). Individual rights, social responsibility, legal authority, civil authority, civil disobedience, war and peace. Readings selected from classical and contemporary writings. Fall and spring. B. Boxill, J. Boxill, Hill, MacLean, Postema. (GC & A&S Philosophical)

Approaches: Humanities

170H Social, Ethics and Political Thought (3) Honors. Fall or Spring

174 African-American Political Philosophy (AFAM 174) (3). Race, identity, discrimination, multiculturalism, affirmative action and slave reparations in the writings of Walker, Delany, Douglass, Cooper, DuBois, King and Malcolm X. Fall or spring. Boxill. (A&S Philosophical; Cultural Diversity)

Change title & course description: Approaches: Humanities:

Connections: U.S.Diversity

174H African-American Political Philosophy (AFAM 174) (3) Honors. Fall or Spring

185 Introduction to Aesthetics (3). The nature of art and artworks and their aesthetic appraisal. Fall or spring. Staff. (GC & A&S Philosophical)

Change title, and description

190 Topics in Philosophy (**3**) Exploration and discussion of selected topics in philosophy. Fall or spring. Staff

new course

210 Ancient Philosophy (3). An examination of the basic writings of the pre-Socratics, Plato, and Aristotle, with a primary focus on ethics and politics. Epicureanism, Stoicism, Neoplatonism, and Greek Skepticism may also be considered. Fall or spring. Reeve, staff. (A&S Philosophical)

Change course description; Connections: World before 1750

220 Modern Philosophy (3). The writings of Descartes, Spinoza, Locke, Berkeley, Leibniz, and Hume on such questions as: Can we know that the things we see and touch are real? Can we know that it isn't all a dream? Prerequisite, one course in Philosophy. Fall or spring. Neta, Rosenberg (A&S Philosophical)

Change chourse description : Connections::North Atlantic

226 Continental Philosophy and Existentialism (3). A study of such nineteenth- and twentieth-century European philosophers as Kierkegaard, Nietzsche, Husserl, Heidegger, Jaspers, Sartre, Gadamer, Habermas, and/or Foucault. Staff. (A&S Philosophical)

Change title, course description: Connections: North Atlantic

228 American Philosophy (3). An exploration of the distinctively American approaches to philosophy from Jonathan Edwards to the present. B. Boxill. (A&S Philosophical)

Change course description: Connections: North Atlantic World

230 Experience and Reality (3). Is your mind different from your brain? Is time travel possible? What are cause and effect? What makes you today and yesterday the same person? Fall and spring. Bar-On, Hofweber, Lange, Lycan, Neta, Prinz, Roberts, Rosenberg, Simmons, staff. (GC and A&S Philosophical)

Course description change

230H Experience and Reality. Honors (3) Fall or Spring. Staff (GC & A&S philosophical)

266 Ethics of Sports (3). A conceptual and theoretical analysis of the moral significance of sport, concentrating on issues such as racism, sexism, gender equity, violence, and drug use. Fall or spring. J.Boxill. (A&S Philosophical)

Approaches: Humanities

272 The Ethics of Peace, War, and Defense (Political Science 272, Peace, War, and Defense 272) (3). The legitimacy of states; just war theory; pacifism; the ethics of revolution; terrorism; problems of war in an age of weapons of mass destruction; the moral conditions of peace. Fall or spring. B. Boxill, J. Boxill, MacLean. (A&S Philosophical)

Change course description; Approaches: Humanities

273 Social and Economic Justice (Sociology 273, Political Science 273) (3) Fall or spring. J. Boxill, staff. (A&S Philosophical)—not yet approved.

New course: Approaches: Humanities

275 Moral and Philosophical Issues of Gender in Society (WMST 275) (3). A survey of feminist perspectives on topics such as the meaning of oppression, sexism and racism, sex-roles and stereotypes, ideals of female beauty, women in the workplace, pornography, rape. Fall or spring. J. Boxill, Wolf, staff. (A&S Philosophical; Cultural Diversity)

Change title, course description; Approaches: Humanities

Connections: U.S. Diversity

275H Moral and Philosophical Issues of Gender in Society (WMST 275) (3). Honors. Fall or Spring

280 Morality and Law (3). Explores the best work in legal philosophy on such questions as: What is law? Does it serve justice or undermine it? Can punishment be justified? When is a person responsible? Fall and Spring. Postema, staff.(A&S Philosophical)

Change course description: Approaches: Humanities

290 Topics in Philosophy (**3**) Exploration and discussion of selected topics in philosophy. Fall or spring. Staff

295 Research in Philosophy (3) See director of undergraduate studies.

296 Independent Reading in Philosophy (3) See director of undergraduate studies.

299 Experimental (3). Experimental undergraduate course in philosophy.

New course

<u>Advanced Courses Note: Prerequisite, one course other than Philosophy 155</u>

330 Metaphysics (3). An examination of general theories of the nature of reality. What kinds of things exist? What are space, time, and causation? Are abstract entities (such as numbers) real? Fall or spring. Hofweber, Lycan, Neta, Roberts, Simmons. (A&S Philosophical)

Change course title & description

335 Theory of Knowledge (3). What is knowledge and how does it relate to belief, justification, and truth? What makes beliefs reasonable or irrational? Can skepticism be defeated? Fall or spring. Long, Lycan, Rosenberg. (A&S Philosophical)

Change course description

340 Philosophy of Mind (3). The mind-body problem, the nature of thinking, and the puzzles of consciousness and the qualitative character of felt experience. Fall or spring. Bar-On, Long, Lycan, Prinz, Rosenberg. (A&S Philosophical)

Change course description

345 Reference and Meaning (3). How does a noise or a mark on paper refer to something, or have a meaning? Fall or spring. Bar-On, Lycan, Prinz, Rosenberg. (A&S Philosophical)

Change course description

353 Philosophy of Cognitive Science (3) Philosophical questions raised by linguistics, computer science, cognitive psychology, and neuroscience. Topics may include the innateness of language, artificial intelligence, and the neural correlates of consciousness. Fall or spring. Bar-On, Prinz. (A&S Philosophical)

Change course description

Draft of new curriculum/January 10, 2003 version

356 Topics in Mathematical Logic (3). Topics may include the predicate calculus with identity and the metalogic of formal systems, modal logic, decision theory, alternative logics, probability and induction. Fall or Spring. Hofweber, Neta, Resnik, Simmons. (GC & A&S Mathematical)

Change title, course description: Foundations: Quantitive reasoning

357 Induction, Probability and Confirmation (3) Current accounts of evidence and observation, the confirmation of scientific theories, the logic of inductive reasoning, and the metaphysics and epistemology of chance. Fall or spring. Lange, Roberts.(A&S Philosophical)

Change title, description: Foundations: Quantitative

360 History of Ethics (3). Major developments in the history of moral philosophy, from Plato to Nietzsche. Philosophy 160 recommended. Fall or spring. Hill, MacLean, Sayre-McCord, Wolf. (A&S Philosophical)

Change course description: Approaches: Humanities

362 Contemporary Ethical Theory (3). Questions include: Is there moral truth? Is there a distinction between facts and values? Fall or spring. Hill, MacLean, Sayre-McCord, Wolf, staff. (A&S Philosophical)

Change course description: Approaches: Humanities

364 Ethics and Economics (3). Issues at the intersection of ethics and economics, including: value; the relation between values and preferences; rationality; the relevance to economics of rights, justice, and the value of human life. Prerequisite, one course in ethics (Phil 160, 163, or 170) or one course in Economics. Fall or Spring, D. MacLean, staff. (A&S Philosophical)

Change course description: Approaches: Humanities

368 Environmental Ethics (ENST 368) (3). The meaning of environmental values and their relation to other values; the ethical status of animals, species, wilderness, and ecosystems; the built environment; environmental justice; ecofeminism; obligations to future generations. Fall or spring. MacLean, staff. (A&S Philosophical)

Change course description: Approaches: Humanities

370 Political Philosophy (3). Advanced discussion of competing philosophical approaches to questions of justice, authority, freedom, rights, and the like

including Libertarianism, Liberalism, Communitarianism, Marxism, and Feminism. Fall or spring. J. Boxill, B. Boxill, MacLean, Postema, staff. (A&S Philosophical)

Change Course description: Approaches: Humanities

390 Seminar in Selected Topics (3). Intensive exploration and discussion of selected topics in philosophy. Fall or spring. Staff. (A&S Philosophical)

Change course description

395 Research in Philosophy (3) See the director of undergraduate studies of the department. Fall and spring. Staff

396 Directed Readings (3). See the director of undergraduate studies of the department. Fall and spring. Staff.

397 Colloquium for Philosophy Majors (3). Students will present papers on selected topics for critical discussion. Recommended for Philosophy majors in their junior year. Spring. Staff. Change course description:

Connections: Communication Intensive

399 Internship (3) Juniors. See director of undergraduate studies.

New course: Connections: Experiential Education

Courses for Undergraduates and Graduates

Note: Prerequisite for the following courses unless otherwise specified: Junior or senior status and one course other than Philosophy 155 or permission of instructor.

412 Plato (3). An examination of some representative works in the context of contemporary scholarship. Fall or spring. Reeve.

Change course description: Connections: World Before 1750

414 Aristotle (3). An examination of some representative works in the context of contemporary scholarship. Fall or spring. Reeve.

Change course description: Connections: World before 1750

Draft of new curriculum/January 10, 2003 version

421 Rationalism (3). An examination of the view of the Rationalist philosophers (Descartes, Spinoza, and Leibniz) that reasoning can give us knowledge of the world and of our place in it. Fall or spring. Neta, staff.

Change title, course description

422 Empiricism (3). An examination of the view of the the Empiricist philosophers (Locke, Berkeley, and Hume) that the only way to gain knowledge of the world is by means of the senses. Fall or spring. Neta, staff.

Change title, course description

423 Kant (3). An intensive introduction to Kant's accounts of space, time, concepts, perception, substance, causation, and the thinking self through a careful study of his masterwork, *The Critique of Pure Reason*. Fall or spring. Rosenberg.

Change course description

427 Hegel (3). In-depth study of Hegel's systematic philosophy emphasizing its roots in Kant's critical philosophy. Primary focus on *Phenomenology of Spirit*, supplemented by selections from the *Encylopedia* and *Philosophy of Right*. Postema

Change course description

428 History of American Philosophy (3). Transcendentalists, Pragmatists, Quine, Rorty, and others. Staff

Change course title & description

432 The Beginnings of Analytic Philosophy (3). Frege, Russell, Moore, and Wittgenstein. Hofweber, Lycan, Neta, Prinz, Rosenberg. *Prerequisites*: two courses in philosophy other than Philosophy 155.

Change course description

433 Current Issues in Analytic Philosophy (3). Recent work in epistemology and metaphysics. Bar-On, Hofweber, Lange, Neta, Prinz, Rosenberg. *Prerequisites*: two courses in philosophy other than Philosophy 155.

Change course description

435 Theory of Knowledge (3). Recent work on questions related to justification and rational belief, including the credibility of skepticism, the structure of knowledge, and the nature and accessibility of evidence. Fall or spring. Hofweber, Long, Lycan, Neta, Rosenberg, Simmons.

New course

437 Thought and World (3). A study of some attempts to form a comprehensive view of the world, taking into account developments in other branches of knowledge, including the sciences. Readings may include works by Bertrand Russell, C. I. Lewis, and W. V. O. Quine.

New course

440 Philosophy of Mind (3). An examination of Dualism, Behaviorism, the Identity Theory, and forms of Functionalism with special focus on the problems of mental aboutness. Bar-On, Long, Lycan, Prinz, Rosenberg. *Prerequisites*: two courses in philosophy other than Philosophy 155

Change description

445 Philosophy of Language (Linguistics 445). How does language represent? Does it mirror the structure of the world? Does it reflect the structure of the mind? Bar-On, Lycan, Prinz, Hofweber. *Prerequisites*: two courses in philosophy other than Phil 155. Phil 345 strongly recommended.

Change course description

450 Philosophy of Natural Sciences (3). Intensive examination of such metaphysical or epistemological problems concerning science as explanation, causation, confirmation, chance, observation, reduction, induction, natural law, space, time, anti-realism, experimentation, scientific revolutions and rationality, and feminism. Fall or spring. Lange, Roberts.

Change cour se title: Approaches: Physical & Life Sciences

451 Philosophy of Physics (3) Topics may include the nature of space and time, the ontological status of fields and energy, or causation and locality in quantum physics. Fall or Spring, Lange, Roberts. (A&S Philosophical)

Change course description: Approaches: Physical & Life Sciences

Draft of new curriculum/January 10, 2003 version

452 Philosophy of Biology (3). The logical structure of evolutionary theory, fitness, taxonomy, the notion of a living thing, reductionism, evolutionary explanations, teleology. Fall or Spring, Lange, Roberts. (A&S Philosophical)

Change course description: Approaches: Physical & Life Sciences

453 Philosophy of Psychology (3). Topics may include reasoning, the relationship between language and thought, concepts, moral cognition, and emotions. Fall or spring. Prinz. (A&S Philosophical)

Change course description: Approaches: Social & Behavorial Sciences

454 Philosophy, History, and the Social Sciences (3). The nature of historical explanation, structural and functional explanation, the weighing of historical testimony, the concept of meaning, normative judgments and predictions in the social sciences. Fall or spring. Staff. (A&S Philosophical)

Approaches: Social & Behavorial Sciences

455 Symbolic Logic (3). The logic and metalogic of the predicate calculus. Fall. Hofweber, Neta, Resnik, Simmons. Philosophy 155 strongly recommended for undergraduates.

Change course description: Foundations: Quantitative

456 Advanced Symbolic Logic (3). Alternative systems, modal and deontic logic, inductive logic, the grammar of formalized languages, paradoxes and the foundations of mathematics. Prerequisite, Philosophy 455 or permission of instructor. Hofweber, Neta, Resnik, Simmons.

Change cour se description: Foundations: Quantitative

459 Philosophy of Mathematics (3). Philosophical problems concerning logic and the foundations of mathematics. Fall or spring. *Prerequisites*: Philosophy 455. Hofweber, Resnik, Simmons. (A&S Philosophical)

460 Selected Topics in the History of Moral Philosophy (3). Examination of classic texts of Plato, Aristotle, Aquinas, Hobbes, Butler, Hume, Kant, and.Mill. Selections may vary from year to year. Fall or Spring. Hill, Sayre-McCord, Wolf. *Prerequisites*: two courses in philosophy other than 155. Philosophy 360 recommended.

Change course description: Approaches: Humanities

462 Contemporary Moral Philosophy (3). Fact and value, reason and morality, the nature of morality. Hill, MacLean, Sayre-McCord, Wolf. *Prerequisites:* two courses in philosophy other than Philosophy 155. Philosophy 362 recommended.

Change cour se description: Approaches: Humanities

463 Contemporary Moral and Social Problems (3). Environmental ethics, animal rights, abortion, euthanasia, pornography, racism, sexism, public versus private morality. B. Boxill, Sayre-McCord. *Prerequisites*: two courses in philosophy other than Philosophy 155.

Change course description: Approaches: Humanities

468 Risk and Society (3). An examination of topics concerning decision making under risk and uncertainty, including: the role of consent in social decisions regulating risk; ethics and cost-benefit. Spring. MacLean. (A&S Philosophical)

Change cour se description: Approaches: Humanities

470 Political Philosophy from Hobbes to Rousseau (3). Explores the foundations of justice and authority in the idea of contract or covenant, the nature of law, rights, liberty, and democracy in the work of Hobbes, Locke, Hume, Rousseau. B. Boxill, Postema.

Change course description: Approaches: Humanities

471 Hegel, Marx, and the Philosophical Critique of Society (3). An examination of central issues in social and political philosophy—alienation, exploitation, freedom, community, and the critique of liberal individualism—as they figure in the work of Hegel, Marx, Nietzsche, and others. Postema.

Change course title, description

Hi Don,
Lunch on Oct 2 would work for me. I may have Jennie join us as well.

Thanks,
Jan

Thanks. We now have to decide if we want him to serve as Chair, or keep
Julia Wood.
Also, I just talked with Prof. Unks, and he will serve on the BOG
committee to replace Jean DeSaix. He is not a good user of email, he
answers his phone at home, or we can always leave messages there: 967-6604.

I'm working on the other two today.
Jan

Tanner Award for Excellence in Undergraduate Teaching by Graduate Teaching Assistants

Finalist Review Form – Contact with Department Chair, student, faculty, etc, by phone or in person.

Award Finalist_____ Committee Member_____

Contact to Discuss Finalist_____ Date_____

I. Please comment on in-class teaching (style, innovations, use of technology, etc.)

II. What makes this person an excellent graduate student teacher? Why do you think this person was nominated for the Tanner TA award?

III. Are there mentoring activities that go on outside the classroom or laboratory?

IV. Is the nominee responsible for the structure and content of the course? Does the nominee communicate the material effectively? Give an example if you can.

V. If the nominee is a Teaching Assistant for a large class with recitations—how effective is the synchrony between the lecture and the recitations? Does the TA help explain the professor's lectures?

VI. How does the TA go above and beyond the class?

VII. How approachable is the nominee both in class and outside of class? Have you gone to see this nominee during office hours?

VIII. How comfortable does the nominee make you or other students feel in asking questions?

IX. In a word or short phrase, describe this person:

Debbie,
Can you make sure that Inger-Brody's title & affiliation is correct on the website. She said it is correct on our list, but not on the website.

Thanks,
Jan

Subject: Byrns

I just spoke with Ralph Byrns, and he will remain on the Mentor Committee, and withdraw from nominations. He says he is only eligible for one anyway.
So can you let Steve know and also send him the material.

Thanks,
Jan

Pat,
I know this is last minute, but could you print off the Darsee case that I have attached for tonight. It's 2 pages, but if you could print it back/front that would be good.
If not, no problem.

OVERLY ABITIOUS RESEARCHERS—FABRICATING DATA

1. Introduction

In recent years the National Science Foundation (NSF), the National Institutes of Health (NIH), the Public Health Services (PHS), the Office of Scientific Integrity (OSI), and various scientific organizations such as the National Academy of Sciences (NAS) have spent considerable time and effort in trying to agree on a definition of *scientific misconduct*. A good definition is needed in developing and implementing policies and regulations concerning appropriate conduct in research, particularly when federal funding is involved. This is an important area of concern because, although serious scientific misconduct itself may be infrequent, the consequences of even a few instances can be widespread.

Those cases that reach the public's attention can cause considerable distrust among both scientists and the public, however infrequent their occurrence. Like lying in general, we may wonder *which* scientific reports are tainted by misconduct, even though we may be convinced that relatively few are. Furthermore, scientists depend on each other's work in advancing their own. Building one's work on the incorrect or unsubstantiated data of others infects one's own research; and the chain of consequences can be quite lengthy, as well as very serious. This is as true of honest or careless mistakes as it is of the intentional distortion of data, which is what *scientific misconduct* is usually restricted to. Finally, of course, the public depends on the reliable expertise of scientists in virtually every area of health, safety, and welfare.

Although exactly what the definition of *scientific misconduct* should include is a matter of some controversy, all proposed definitions include the fabrication and falsification of data and plagiarism. As an instance of fraud, the fabrication of data is a particularly blatant form of misconduct. It lacks the subtlety of questions about interpreting data that pivot around whether the data have been "fudged", or "manipulated." Fabricating data is making it up, or *faking* it. Thus, it is a clear instance of a lie, a deliberate attempt to deceive others.

However, this does not mean that fabrications are easy to detect or handle effectively once they are detected; and this adds considerably to the mischief and harm they can cause. Two well-known cases illustrate this, both of which feature ambitious, and apparently successful, young researchers.

2. Background

Dr. John Darsee was regarded a brilliant student and medical researcher at the University of Notre Dame (1966-70), Indiana University (1970-74), Emory University (1974-9), and Harvard University (1979-1981). He was regarded by faculty at all four institutions as a potential "all-star" with a great research future ahead of him. At Harvard he reportedly often worked more than 90 hours a week as a Research Fellow in the Cardiac Research Laboratory headed by Dr. Eugene Braunwald. In less than two years at Harvard he was first author of seven publications in very good scientific journals. His special area of research concerned the testing of heart drugs on dogs.

3. The Darsee case

All of this came to a sudden halt in May 1981, when three colleagues in the Cardiac Research Laboratory observed Darsee labeling data recordings "24 seconds," "72 hours," "one week," and "two weeks." In reality, only minutes had transpired. Confronted by his mentor Braunwald, Darsee admitted the fabrication; but he insisted that this was the only time he had done this, and that he had been under intense pressure to complete the study quickly. Shocked, Braunwald and Darsee's immediate supervisor, Dr. Robert Kroner, spent the next several months checking other research conducted by Darsee in their lab. Darsee's research fellowships were terminated, and an offer of a faculty position was withdrawn. However, he was allowed to continue his research projects at Harvard for the next several months (during which time Braunwald and Kroner observed his work very closely).

Hopeful that this was an isolated incident, Braunwald and Kroner were shocked again in October. A comparison of results from four different laboratories in a National Heart, Lung and Blood Institute (NHLBI) Models Study revealed an implausibly low degree of invariability in data provided by Darsee. In short, his data looked "too good." Since these data had been submitted in April, there was strong suspicion that Darsee had been fabricating or falsifying data for some time. Subsequent investigations seemed to indicate questionable research practices dating back as far as his undergraduate days.

What were the consequences of John Darsee's misconduct? Darsee, we have seen, lost his research position at Harvard, and his offer of a faculty position was withdrawn. The National Institutes of Health (NIH) barred him from NIH funding or serving on NIH committees for ten years. He left research and went into training as a critical care specialist. However, the cost to others was equally, if not more, severe. Harvard-affiliated Brigham and Women's Hospital became the first institution NIH ever required to return funds ($122,371) because of research involving fraudulent data. Braunwald and his colleagues had to spend several months investigating Darsee's research, rather than simply continuing the work of the Cardiac Research Laboratory. Furthermore, they were severely criticized for carrying on their own investigation without informing NIH of their concerns until several months later. The morale and productivity of the laboratory was damaged. A cloud of suspicion hung over all the work with which Darsee was associated. Not only was Darsee's own research discredited, but insofar as it formed an integral part of collaborative research, a cloud was thrown over published research bearing the names of authors whose work was linked with Darsee's.

The months of outside investigation also took others away from their main tasks and placed them under extreme pressure. Statistician David DeMets played a key role in the NIH investigation. Fifteen years later, he recalls the relief his team experienced when their work was completed:[(50)]

For the author and the junior statistician, there was relief that the episode was finally over and we could get on with our careers, without the pressures of a highly visible misconduct investigation. It was clear early on that we had no room for error, that any mistakes would destroy the case for improbable data and severely damage our careers. Even without mistakes, being able to convince lay reviewers such as a jury using statistical arguments could still be defeating. Playing the role of the prosecuting statisticians was very demanding of our technical skills but also of our own integrity and ethical standards. Nothing could have adequately prepared us for what we experienced.
Braunwald notes some positive things that have come from the Darsee case. In addition to alerting scientists to the need for providing closer supervision of trainees and taking authorship responsibilities more seriously, the Darsee incident contributed to the development of guidelines and standards concerning research misconduct by PHS, NIH, NSF, medical associations and institutes, and universities and medical schools. However, he cautions that no protective system is able to prevent all research misconduct. In fact, he doubts that current provisions could have prevented Darsee's misconduct, although they might have resulted in earlier detection. Further, he warns that good science does not thrive in an atmosphere of heavy "policing" of one another's work.[(51)]
The most creative minds will not thrive in such an environment and the most promising young people might actually be deterred from embarking on a scientific career in an atmosphere of suspicion. Second only to absolute truth, science requires an atmosphere of openness, trust, and collegiality.
Given this, it seems that William F. May is right in urging the need for a closer examination of character and virtue in professional life.[(52)] He says that an important test of character and virtue is what we do when no one is watching. The Darsee case and Brauwald's reflections seem to confirm this. If this is right, then it is important that attention be paid to these matters before college, by which time one's character is rather well set.

Many who are caught having engaged in scientific misconduct plead that they were under extreme pressure, needing to complete their research in order to meet the expectations of their lab supervisor, to meet a grant deadline, to get an article published, or to survive in the increasingly competitive world of scientific research. Although the immediate stakes are different, secondary school science students sometimes echo related concerns: "I knew how the experiment should have turned out, and I needed to support the right answer;" "I needed to get a good grade;" "I didn't have time to do it right; there's so much pressure." Often these thoughts are accompanied by another--namely, that this is only a classroom exercise and that, of course, one will not fabricate data when one becomes a scientist and these pressures are absent. What the Darsee case illustrates is that it is naive to assume such pressures will vanish. So, the time to begin dealing with the ethical challenges they pose is now, not later (when the stakes may be even higher).

Hi Fred,
Yes, we are hosting a regional, and you can find all the information on our website: www.parrcenter.unc.edu
Go to "Center News & Events" and then click on "Mid-Atlantic Regional Intercollegiate Ethics Bowl"

Or you can see if this direct link works:
http://parrcenter.unc.edu/events/seminars/ethicsbowl/index.htm

Registration and all information is on this site.

Hope to see you November 17th.

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation. The team sent to the Ethics Bowl competition will be selected from those registered in the course. Before the actual competition, a mock Ethics Bowl will be presented to the public and also to local high schools as part of the Philosophy Department's outreach program.

During a round, each team takes turns presenting its position on a case and critiquing another team's position on a different case. Teams must answer questions about their positions from a panel of judges. Judges assign scores based on logical consistency, clarity, focus and thoroughness. The presentations are evaluated on the following criteria:

Clarity and Intelligibility: Have you stated and defended your position in a way that is logically consistent and a reader/lister can clearly understand your line of reasoning?

Focus on Ethically Relevant Factors: Has you identified and discussed the ethically relevant factors?

Avoidance of Ethical Irrelevance: Has you stayed on track by avoiding preoccupation with issues that are not ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does your presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

The Intercollegiate Ethics Bowl (IEB) combines the excitement and fun of a competitive tournament with a valuable educational experience for undergraduate students.

The regional competition will take place November 17, 2007 and national in March. The actual cases are sent out in mid September.

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

Hi Nancy,
How are you doing at Wake Forest. I must say I miss you here, but have had great contacts with the medical school people here. We have had some very successful collaborations, which will be on going.

I am writing for two reasons:
1. The Parr Center is hosting the Mid-Atlantic Regional Ethics Bowl competition. I seem to recall that you might be interested in seeing if a team from Wake Forest would send a team. The registration is filling up, so let us know.

2. For the regional competition, we will need judges. We would very much like for you to be a judge. I've attached a description of the Ethics Bowl and what is entailed. The regional is November 17th.

Thanks.
Hope all is going well.

Carlo,
How are you? Hope all is going well. Things are hopping here!!!
I am hoping that you will serve as a judge for the Ethics Bowl, and also I would like to ask you to solicit some other judges from the Mayor's office, City Council, Chamber, etc. I have contacted Aaron and will ask him to solicit others as well. I've attached a description which has the useful information about being a judge.

MID-ATLANTIC REGIONAL INTERCOLLEGIATE ETHICS BOWL
NOVEMBER 17TH, MURPHEY HALL, UNC CAMPUS
9 A.M.- 6

It's likely time to have lunch again, right? :)
Also, I sent in my application for the task force.

Thanks,
Jan

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. PHIL 396 Section 2 T 6:15-8 ETHICS BOWL Instructor: Jan Boxill

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation. The team sent to the Ethics Bowl competition will be selected from those registered in the course. Before the actual competition, a mock Ethics Bowl will be presented to the public and also to local high schools as part of the Philosophy Department's outreach program.

During a round, each team takes turns presenting its position on a case and critiquing another team's position on a different case. Teams must answer questions about their positions from a panel of judges. Judges assign scores based on logical consistency, clarity, focus and thoroughness. The presentations are evaluated on the following criteria:

Clarity and Intelligibility: Have you stated and defended your position in a way that is logically consistent and a reader/listener can clearly understand your line of reasoning?

Focus on Ethically Relevant Factors: Have you identified and discussed the ethically relevant factors?

Avoidance of Ethical Irrelevance: Have you stayed on track by avoiding preoccupation with issues that are not ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does your presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

The Intercollegiate Ethics Bowl (IEB) combines the excitement and fun of a competitive tournament with a valuable educational experience for undergraduate students.

The regional competition takes place in November and national in March. The course would be offered in the Fall to prepare students for the regional competition. The actual cases are sent out in mid September, so before that the students will look at previous year's cases and read material appropriate to cases in general, including ethical theory.

READINGS to be taken from the following:

Elements of Moral Philosophy, James Rachels – ordered & in bookstore
Being Good, Simon Blackburn
On Liberty, John Stuart Mill
Social Ethics: Morality and Social Policy, Thomas Mappes & Jane Zembaty, editors.

REQUIREMENTS:

I. CASE PREPARATION:

Each student will prepare a minimum of two cases. Each case involves:

1. 2-3 page paper setting out the argument with ethical implications.
2. Present argument to class- 5 minute presentation. Other students write a critique of the presentation with suggested revisions, readings, and research.
3. Revised paper based upon class presentation, discussion, and student critiques. Revised paper will also include an analysis of one aspect of the argument. 3-5 pages which will include bibliography and field research plans.
4. Present revised argument along with analysis: 5-7 minutes. Critiques.
5. Revised paper based on previous discussion. Revised paper will also include analysis of second aspect of the argument: 5-7 pages.
6. Present revised argument along with analysis: 5-7 minutes. Critiques
7. Revised paper based on previous discussion. Revised paper will include objections to your analysis.
8. Present revised argument: 5-7 minutes.
9. Revised paper with completed philosophical analysis: 12-15 pages
10. Oral presentation of completed analysis:
    8 minutes for presentation
    5 minutes for questions
    5-7 minutes rebuttal.

II. EXPERIENTIAL MENTORED RESEARCH STUDY:

1. For each case, students will contact appropriate units for essential background to investigate original problems and gain information regarding the case to be incorporated in the presentations and drafts. Throughout the experience, the work will be supervised and mentored by instructor and Parr Center Visiting Professor, who will assist students with setting appropriate goals. Research will also be assisted by the Parr Center graduate research fellow and the unit head or designate. [E.g. For legal cases, it would involve working with the DA office].

Expected minimum hours: 60

2. Three mock Ethics Bowl competitions: one to the Department/University, and two in local high schools as part of the Department's Outreach Program.

III. FINAL EXAM— TBD

GRADE: The final grade will be assessed as follows:

Papers:	30%
Presentations:	30%
Class participation &critiques:	20%
Final Exam:	20%

WEEKLY ASSIGNMENTS:

Week 1:	Readings: Rachels: Chapters 1- & Blackburn Chapters 1- Discuss readings and cases. Assign cases. Discuss appropriate research units.
Week 2:	Readings: Mill, On Liberty; Mappes One-two page reconstruction of the arguments of your cases Five minute oral presentation of the reconstruction Feedback and suggestions from class.
Week 3:	Re-write the reconstruction given the feedback from class. Prepare a bibliography of selected readings appropriate to your cases Present both the re-write and bibliography to the class. Receive student feedback and suggestions.
Week 4:	Annotated bibliography. 1-2 page showing the relevant facts of the case.
Weeks 5-8:	Presentations, discussions,
Week 9-11	Mock Ethics Bowl Competitions
Week 12:	In class discussions in preparation for National Competition.
Week 13:	National Ethics Bowl Competition
Week 14:	Debriefing and discussion of Ethics Bowl Competition; review for final exam.

Sample Cases:

Case #1

Dr. B., a Professor of Psychology at a large research institution, Ohio State University (OSU), has a long distinguished record of working with chimpanzees. In the 1970s, she taught chimps to communicate, first by using American Sign Language and later using graphic symbols. In the last decade, under her direction, two young chimps, Keeli and Ivy, have learned to count and to recognize simple written words. Another chimp, Bobby, has shown an uncanny ability to learn number sequences and even to fill in missing numbers in a sequence. She has learned that chimps can do simple arithmetic, behave similarly to preschoolers, and (along with humans) have the ability to perceive the knowledge state of a peer.

Dr. B., who has dedicated her entire professional life to the study of cognition in chimpanzees, has won international acclaim for her work and was named one of the top 50 women researchers in the nation by *Discover Magazine* in 2002. Her chimps have been featured on Discovery Channel. However, as funding to support the research center has been hard to come by in the last five years, the university decided to close the research center and send the chimps away. OSU abruptly seized the professor's laboratory on February 28, 2006, changed all the locks, and hired a truck to send all 12 primates (nine chimps and three monkeys) to Primarily Primates, a controversial Texas sanctuary. The university gave the sanctuary a $324,000 trust fund for the animal's care.

Dr. B. vigorously protested the decision. When a restraining order she filed failed to prevent the university from implementing its decision, Dr. B. chained herself to the center's gate to prevent the transport trucks from leaving. Her efforts were unsuccessful and one of the chimps, 25-year old Kermit, died during the 38-hour transport in early March. Bobby was found dead in his enclosure on April 20. One of the monkeys escaped and was never recovered. Dr. B sued OSU to win custody of the remaining chimps. PETA also joined the suit on behalf of the remaining seven chimps and two monkeys and in June a Texas judge ordered that an independent trustee should oversee the $324,000 funding to ensure that it be used to house and benefit the remaining OSU primates.

Case #2

Wisconsin State Representative Dan LeMahieu (R-Oostburg) was outraged when the University of Wisconsin-Madison's University Health Services (UHS) featured ads in the two student newspapers suggesting that students consider receiving prescriptions for emergency contraception (EC) prior to leaving for spring break. UHS services are available to any student at the UW-Madison, and as such they offer health expertise to students in the areas of medical treatment for illnesses and injuries, counseling for stress reduction, smoking cessation, nutrition, dermatology, sports medicine, as well as confidential testing and treatment of sexually transmitted diseases (STDs). Although a part of the state-funded University of Wisconsin System, the ads were paid for using student segregated fees which are not part of taxpayer dollars or academic tuition funds.

Following the publication of the ads, which were part of a series also advising students to protect themselves from sun exposure and limit their intake of alcohol, Representative LeMahieu initiated drafting legislation to ban any university health center in Wisconsin from advertising or distributing the morning-after pill (EC). LeMahieu contends, "I think it's offensive that the university is trying to tell young women to be prepared and to plan ahead so they can have promiscuous activities on spring break. I don't think that it's the role of the university to promote that type of activity, and I believe that's what their ad is asking young people to do." LeMahieu also added that the UW should be "made aware" that many people who are paying state taxes do not appreciate the offensive advertisements.

On June 16, 2005, Wisconsin's State Assembly voted 49-41 in favor of a bill prohibiting University of Wisconsin System health centers from advertising, prescribing or dispensing

emergency contraception, making it the first state in the country to move towards banning EC on all state college campuses.

Case #3

Near the end of its fall season, a top executive from the popular reality television competition, *Idol Starz*, appeared on the *Today Show* and revealed that the program's contestants either advanced or were cut based on producers' decisions rather than being selected through the program's public text-messaging voting system. The executive went on to state that the show's winners and losers were selected by producers on a round-by-round basis in the hopes that certain "controversial" or "questionable" choices would positively influence ratings, increase fervor for underdog candidates, and create a more developed fan-base which would return to view the show during both current and future seasons.

Given the show's popularity and viewers' commitment to their favorite contestants, the revelation led to a large public outcry condemning the show for dishonesty and false advertising. Many claimed to have been cheated and explained that the show had a responsibility to adhere to the public's decisions about which candidates they preferred. Given special attention during this debate was the show's slogan: "You vote. You decide. Who should be the next Idol Star?"

During ensuing interviews, the show's producers explained that their decisions were based on the fact that they were in the entertainment business and that certain unpredictable events helped to keep the audience invested in the show and provided increased entertainment value. They also argued that, more often that not, their decisions about who should advance or win were in line with the public's desires. When questioned about the program's slogan, one producer was quoted as saying, "Look at it carefully. There is a difference between telling someone to vote and decide who *should* be the next Idol Star and telling them that their votes *will* decide the next Idol Star."

Case #4

In a recent case, Florida authorities declined to file charges against a Miami Herald columnist for surreptitiously recording a phone call from a city commissioner who later committed suicide in the newspaper's lobby. Authorities cited the unusual circumstances that led to the taping as the basis for not filing charges against the columnist. These circumstances were not enough for the Miami Herald, who took immediate action to fire the columnist for violating a company policy that prohibited the taping of sources and interviewees without the subject's consent.

State laws related to the recording of phone calls and the courts interpretation of these laws vary widely in the United States. Many of these laws are intentionally written with ambiguous terms and interpretation is typically required on a case by case basis.

The firing of this popular columnist caused much protest around the world. Many members of the Herald staff signed a petition requesting the decision to fire the columnist be rescinded. The columnist was friends with the city commissioner, and the commissioner provided regular sources for stories to the columnist.

According to the columnist, the commissioner was despondent over public allegations about his sex life and the tone of his voice on the phone conversation was so alarming that the columnist impulsively decided to record the conversation. The tape records the columnist's attempts to calm the commissioner. Throughout their 20-minute conversation, the columnist attempted to steer the conversation to less volatile subjects in the hopes of lifting the commissioner's spirits. But the call ended with the commissioner still despondent. A few minutes later, the commissioner shot himself.

Following the suicide, the columnist told editors of the Miami Herald that he had been interviewing the commissioner earlier in the day and had recorded part of the conversation without the commissioner's consent.

After being fired, the columnist was quoted as saying "In a tense situation I made a mistake. The Miami Herald executives only learned about it because I came to them and admitted it. I told them I was willing to accept a suspension and apologize both to the newsroom and our readers. Unfortunately, the Herald decided on the death penalty instead."

The Miami Herald editors have taken the position that there must be an absolute prohibition of the paper's reporters taping conversations without a party's consent, and not just because it is against the law in Florida, as it is in many states. An executive of the Herald has stated that the policy is necessary to protect the paper's integrity, as well as to foster trust from news sources.

Journalists at the Miami Herald have pointed out that at least one other reporter surreptitiously taped an interview, but was not fired. The journalists also have also stated that there is no written policy on taping conversations and that any verbal policy on expectations of reporters is unclear. The Miami Herald responded to the alleged case of a previous surreptitious taping by saying "we understand this happened 18 years ago". They went onto state that the recent decision to fire the columnist was clearly guided by the environment in which journalists operate today; which is much more constrained in terms of the latitude given for violation of law and policy.

Case #5

Beginning in 2005, protests at funerals for military personnel killed in Iraq have been increasing – and have received much media attention. In particular, members of the Westboro Baptist Church, in Topeka, Kansas, have been especially visible and vocal at many of these military funerals. Reverend Fred Phelps and his protesters claim that U.S. military deaths in Iraq are because America tolerates homosexuals and that they are a sign of divine punishment for America's tolerance of homosexuality. For over a year now, members of this anti-gay church have been crisscrossing the United States, holding more than one hundred protests outside the funerals of U.S. soldiers killed in Iraq.

They wave placards with such expressions as: "You're Going to Hell," "Fag Vets, God Hates You," and "Thank God for IEDs" (the improvised explosive devices responsible for killing many military personnel in Iraq). Phelps contends that all American soldiers are guilty by association – because they are fighting in the service of the U.S. government.

By Spring, 2006, twenty-eight states and Congress were rushing to pass laws to restrict protests outside military funerals. On May 17, 2006, Illinois Governor Rod Blagojevich signed a

state law – "Let Them Rest in Peace Act" – that prohibits disruptive and inflammatory protesting 30 minutes before a funeral, during the service, and 30 minutes after a funeral while remaining 200 feet from the funeral site. This new Illinois law drew immediate scorn from Shirley Phelps-Roper, attorney for the Westboro Baptist Church: "The law is impotent. You've done nothing to change that God is killing your children and sending them home in body bags. Keep your big, fat snout out of our religion."

In the U.S. Congress, Representative Mike Rogers (R-Mich.) sponsored a House bill to address this matter. He said that he took up the issue after attending a military funeral in his home state, where mourners were greeted by "chants and taunting and some of the most vile things I have ever heard. Families deserve the time to bury their American heroes with dignity and in peace." On May 24, 2006, Congress passed legislation that would bar demonstrators from disrupting military funerals at national cemeteries.

The "Respect for America's Fallen Heroes Act" prohibits protests within 300 feet of the entrance of a national cemetery and within 150 feet of a road into the cemetery from 60 minutes before to 60 minutes after a funeral. Those violating the act would face up to a $100,000 fine and up to a year in prison. Senate Majority Leader Bill Frist (R-Tenn.) said that this act "will protect the sanctity of all 122 of our national cemeteries as shrines to their gallant dead. It's a sad but necessary measure to protect what should be recognized by all reasonable people as a solemn, private and deeply sacred occasion."

In response to this federal legislation, Phelps has said that Congress was "blatantly violating the First Amendment rights to free speech" in passing the bill. He said that he will continue to demonstrate but would abide by the restrictions. Constitutional experts are warning that protest restrictions – such as those passed in Illinois and in Congress – appear overly broad and are likely to be overturned if challenged in court. Eugene Volokh, a law professor at the University of California-Los Angeles and an authority on the First Amendment, said: "You can't treat speech as a breach of peace simply because it offends people. These protests are tremendously offensive and hard to ignore. But ignoring them or counter-protesting is unfortunately the only remedy the 1st Amendment allows." And, the American Civil Liberties Union has filed a lawsuit against a new Kentucky law, saying that it goes too far in limiting freedom of speech and expression. Additional lawsuits are expected to be filed.

U.S military veterans find Phelps' beliefs and actions particularly abhorrent, and in November, 2005, veterans' motorcycle groups began showing up at military funerals to oppose the protesters and to show support for the families of the deceased soldiers. Calling themselves the Patriot Guard Riders, these motorcycle groups have organized hundreds of counter-protesters to wave American flags and stand silently in front of the Westboro picketers, to pay respects to the fallen soldier, and to protect the soldier's family from disruptions.

Case #6

Alejandro Toledo, President of Peru, has launched a public campaign demanding that Yale University return to Peru Incan artifacts excavated at Machu Picchu in 1912. Yale professor Hiram Bingham III, guided by a native Peruvian, came upon the Incan city of Machu Picchu in 1911. Bingham secured backing from the National Geographic Society and support from Peru's government for archeological excavations at Machu Picchu in 1912 and again in 1914-15.

In October 1912, Bingham gained the Peruvian government's permission to bring to Yale for research the contents of 170 tombs in Machu Picchu. The decree allowed that Peru reserve the right to ask for the return of the objects.

By 1916, Peru, suspecting Bingham of secretly taking Incan gold, ended Bingham's work at Machu Picchu. The items taken to Yale from the 1914-15 excavations were loaned for only 18 months. Yale has refused several Peruvian requests for return of the artifacts.

Today, Yale claims that they have complied with the 1912 and the 1916 agreements, returning the objects to Peru during the 1920's. Yale sees no similar responsibility to return the items taken from earlier work. National Geographic Society records show that about half of the items were returned to Peru, with no mention of the remaining artifacts.

Luis Guillermo Lumbreras, the director of Peru's National Institute of Culture in Lima, claims that Yale has had 90 years to complete research on the objects, and now Peru wants the items returned. Peru elected its first indigenous president–Alejandro Toledo, who honored the nation's Incan heritage by holding part of his inauguration ceremony at Machu Picchu in 2001. In part due to his influence, Peru wants possession of the artifacts, which have formed the core of Yale's impressive, scholarly exhibition: *Unveiling the Mystery of the Incas*. After traveling to six cities and attracting over a million visitors, the exhibit now resides at Yale's Peabody Museum of Natural History in Connecticut.

The recent research of Yale professors Lucy Salazar and her husband Richard L. Burger, including extensive scientific analysis of burials, has provided the most reasonable explanation for the existence of Machu Picchu. Rather than supporting the earlier ideas of the city as a center for religious activity including the sacrifice of virgins, the professors' research has suggested that the city served as a simple country retreat from the Inca capital of Cuzco.

The number and kinds of artifacts taken to Yale from Machu Picchu is in dispute. Yale has offered to return some of the pieces to Peru, if Peru allows it to keep others at the Peabody Museum of Natural History, where Machu Picchu is the prize exhibit.

Case #7

In October of 2002, after the overdose of one of its workers, management at a Weyerhaeuser, a multinational corporation in the pulp and paper industry located in Valliant, Oklahoma, became concerned that employees were not following drug and safety regulations in its parking lot. Management decided to have the parking lot searched with gun and drug sniffing dogs. While the dogs found no drugs, they did find firearms in twelve vehicles, including shotguns and automatic weapons. The owners of these vehicles, including a 23-year veteran shift manager, were fired in the next two days.

Weyerhaeuser and many other businesses have had long standing bans on firearms brought into the plant in order to protect workers and prevent workplace violence. In 2002, Weyerhaeuser extended this ban to the parking lot. Many workers claim they were not told of the extension of the ban, though management claims they informed workers. Some of the fired workers have filed suits claiming they were not informed. The initial suit was thrown out, but the decision is being appealed.

Since this and other incidents, many states -- beginning with Oklahoma -- have enacted laws protecting workers who want to keep firearms in their cars. The latest state to consider such a law is Florida, home to Walt Disney World, which does not allow any of its 50,000+ employees to bring guns onto company property.

A number of corporations have joined federal lawsuits against these new state laws. These companies include ConocoPhillips (petroleum), Halliburton (energy), and the Nordam Group (aircraft manufacture). They state that they cannot provide a safe and secure workplace without the ban on guns in the parking lot, and they see state laws allowing guns as infringing on the right of private property owners to decide what is and is not allowed on their property. Even aside from their property rights, companies claim that the laws would disregard public safety. The Bureau of Labor Statistics Census of Fatal Occupational Injuries states that in 2004, there were 551 workplace homicides out of 5703 workplace fatalities. A study at the University of North Carolina claims that such killings are five times more likely to occur at workplaces that allow guns compared to those who do not.

The National Rifle Association (NRA) has been the primary champion of laws that allow workers to have guns in cars in company parking lots. The NRA claims that prohibiting lawful gun owners to keep guns in their car dramatically diminishes their right to own firearms and defend themselves. All 50 states allow the transportation of firearms for lawful purposes. The laws also restrict workers who may want to hunt or target shoot after work from engaging in these lawful activities. They also claim that one's car should enjoy the same protections that one's home enjoys with regards to being able to keep lawful weapons and immunity to unlawful searches.

The NRA claims that the state laws already have commonsense provisions in them that prevent abuse. For instance, anyone wanting to transport a firearm and park their car in a company lot must keep the automobile locked, and at no time is it permissible to take the firearm out of the car on company property. Against the property rights claims of business owners, the NRA claims that business owners are already under extensive federal, state, and local regulations about what they can do with their property and that striking down these state laws would allow companies to "micro-manage" the contents of an employee's automobile. The NRA also cites statistics that 84% of workplace murders are committed by strangers, and anyone determined to commit a crime will not be discouraged from bringing the gun onto company property by a company regulation prohibiting guns in parking lots.

Case #8

After several years of miscarriages, Edward and Susan turn to *in vitro* fertilization as a means of screening embryos for genetic defects. More than two years elapse, with all the attendant discomfort and expense, but finally an “acceptable” embryo is produced and implanted. To their joy, nine months later they are blessed by Michelle, an apparently happy, healthy baby. They decide that they will not tempt fate by trying to increase their family, instead choosing to relish the raising of their daughter. Five years pass and they eagerly anticipate Michelle’s starting kindergarten. They have elected to enroll her in a well-respected private school so as to realize her fullest potential. Part of the school’s pre-entry preparation is an extremely thorough set of physical examinations. (The physical examinations are not done to screen for admission, but rather to anticipate potential health issues while the student is enrolled.)

To their horror, the examinations determine that Michelle has early symptoms of a particularly virulent form of *Acute Childhood Lymphoid Leukemia*. Nothing in the embryonic screening could have predicted its occurrence. They begin immediate conventional treatments which prove to be ineffective. At their oncologist's recommendation they enroll her in the nation's premier pediatric oncology program. She gives them the bad news that Michelle shows evidence of having Philadelphia chromosome-positive ALL. The most successful treatment involves hematopoietic stem cell transplantation from matching relatives. The oncology clinic tests both Edward and Susan, but finds neither of them compatible. Since neither of them (nor Michelle) has any siblings, it looks as if they will have to hope for a million-to-one chance of finding a well-matched unrelated donor.

While waiting in the lounge of the clinic, the mother of another child under treatment introduces herself and suggests that they do have another option – they could have another child, *via in vitro*, selecting among possible embryos for compatibility for transplant. Initially they are horrified at the idea of producing another child as a "biological stockpile" for Michelle, but the more they think about it the better the idea seems. After all, they really had wanted more children. The new child wouldn't be seriously injured by the procedure needed to provide Michelle with the transplant material she so desperately needs. Given their history of medical procedures needed to have Michelle, the screening required to make sure the new child would be a compatible donor is almost the same as if they were just having another child as a family expansion.

When they raise the possibility with Michelle's physician, she explains that the screening technology has improved sufficiently since Michelle's birth to guard against the new child's having the same disposition toward this disease. But, before she will go further, she tells them they must speak with the clinic's counselor. The counselor asks them to consider what their true motives are in proposing the conception of this second child, whether they would be treating her as a person or as an object and how they will explain to her the reason for her conception.

Case #9

After 25-30 years of service, ships are at the end of their sailing life and are sold as "End of Life Vessels" to be dismantled primarily to recover the valuable steel which makes up about 95% of the ship. Ship breaking (or ship demolition) is the process of dismantling the structure of an obsolete vessel for scrapping or disposal and includes a wide range of activities, from removing all gear and equipment to cutting down and recycling the ship's infrastructure. However, the only ones who profit from ship breaking are the ship owners. They extract an average of $1.9 million profit per "End of Life Vessel." Ship breaking is also a challenging and controversial process, due to the structural complexity of ships and the many environmental, safety, and health issues involved.

Ship breaking is dangerous and has the reputation of being one of the dirtiest jobs on earth. For minimal dollars a day, workers with little protective gear tear out pipes insulated with asbestos, transformers covered with PCBs, and leaky diesel tanks. Until the late twentieth century, ship breaking took place primarily in port cities in developed countries – including the United States and Europe. Today, however, most ship breaking yards are in developing countries – especially India, China, Bangladesh, and Pakistan. This is due to rules dealing with lead paint and toxic substances. The industry was such a disgrace that, in 2000, Congress acted to stop U.S. registered ships from being sent overseas for scrap. Ship breaking remains an international environmental and labor concern - because ship breaking now occurs mostly in

underdeveloped countries where working conditions and environmental impact are not regulated. Also, many ships being scrapped now were made before many international environmental laws were enacted.

In late 2005, a Virginia-based company, Bay Bridge Enterprises, visited the small coastal town of Newport, Oregon, and proposed opening a ship breaking plant on the banks of Yaquina Bay. The company offered up to 125 jobs paying $20 an hour. Their spokesperson indicated that the company had no environmental violations since they have been doing this work, and that they had zero lost-time injuries since 2001. Also, he noted that there is no large-scale ship breaking yard on the West Coast, and that there are about 60 ships anchored in a California bay – just waiting to be moved to a scrap yard. Therefore, there would be plenty of work available at a new ship breaking plant in Newport – for some time to come.

A strong coalition of interested parties in the Newport area emerged in opposition to this proposal. The "Friends of Yaquina Bay" were the group of people most responsible for rallying the community together to try to stop this ship breaking proposal. The Oregon Coast Aquarium and the Oregon State University Hatfield Marine Science Center – both located in Newport – also added major support to the effort to block the proposed plant. Some of the major issues raised by these opponents to the proposal included: the world-wide negative reputation of ship breaking; the safety of towing "ghost ships" (some with a length of up to 540 feet) from San Francisco Bay in California to Newport, Oregon; potential infestation of as many as 100 invasive species on the ships in California that are not in Yaquina Bay; toxins on and in the ships that would escape into the bay and the air, affecting the seafood industry – especially crabbing – as well as the fear of pollution runoff at the Hatfield Marine Science Center and the Oregon Coast Aquarium; and visual pollution. Yaquina Bay is a continentally Important Bird Area – with several endangered species present. There are 15 or more blue heron nests and other bird species on the tide flats near the proposed ship breaking site. The local tides extend 15 miles up the Yaquina River and thus the largest oyster farm in Oregon could be affected. Plus there is fear that money-spending tourists would not view these rusting ships as an asset to the beautiful Oregon coast.

On January 24, 2006, about 200 people packed a meeting room in Newport, Oregon, to hear Mr. Don Mann, general manager of the Port of Newport, announce that "some projects are a good fit, or not a fit at all. Bay Bridge's plan for a ship breaking facility in Yaquina Bay does not qualify in our test for a good fit." Thus, quite surprisingly, it seems, the ship breaking plan for Newport was ended. Mr. Mann continued: "This was not a good business deal for the company, or for the Port. I believe that the environmental issues could have been resolved, but our financial concerns could not be adequately addressed." The vast majority of persons at the meeting were very pleased with this decision.

While this issue was being considered by the town of Newport, Oregon, the office of the Port Commissioners received hundreds of telephone calls of concern – from all over the country. As one commissioner said: "We have gained much free advertising – for the port and community. The whole world knows we're here. This issue is bringing this concern to Oregon, and to the nation." Bay Bridge's next move on the West Coast remains to be seen. The company is still looking for a possible Oregon or Washington port.

Case #10

Ardent R. Porter is an investigatory journalist with a respected Washington-area newspaper, *Capitol News Briefly*. As a reporter working in and around the D.C. area, Mr. Porter often relies on his long list of contacts in order to glean information that might be useful for the various articles he publishes on corruption within politics and government. By establishing relationships with individuals at all levels of government, Ardent has provided himself with valuable human sources that are often capable of providing him with names, tips, or other information that he could not extract from other channels. Furthermore, a few of Mr. Porter's key contacts are able to pass along hard-to-come-by information about questionable or downright illegal actions taken by government employees or agencies.

One such contact is Ian Stalwart, a mid-level agency administrator who works with individuals who do government "groundwork" as well as with high-level government bureaucrats. As a middleman of sorts, Ian is in a position uniquely suited to evaluating the actions of those who work both below and above him. One of Mr. Stalwart's responsibilities is to watch for and report any illegal activity that he might encounter. Mr. Stalwart takes this role very seriously and his responsibilities as a watchdog were what originally led him to seek out Ardent, a like-minded opponent of corruption and illegality within public service.

It so happened that Mr. Stalwart discovered that many individuals within his agency were working to cover up illegally-awarded, over-billed, or otherwise fraudulent government contracts awarded during the early months of the Iraq War, actions which were in violation of several federal laws, in addition to many agency standards. Upon presenting his discovery to his superiors, Mr. Stalwart was told to disregard his findings and to refrain from further discussing the subject. After pressing for a more sophisticated explanation, he was informed that the contracts in question had been deemed classified through appropriate agency and congressional channels and that because the contracts had been deemed to serve a compelling national security interest, it would be against agency policy (as well as illegal) to discuss them, regardless of any questionable procedural or substantive aspects.

Fully knowing that he was in violation of laws regarding the disclosure of classified information, Mr. Stalwart approached Mr. Porter and revealed everything he knew about the dubious contracts. He also provided Mr. Porter with the names of the individuals implicated in the cover-ups and the names of the administrators who had ordered him to remain silent.

After composing a lengthy and revealing story, Mr. Porter approached his editor about publishing the story, explaining the dilemma presented by the fact that much, if not all, of the story's core material was classified. Following a discussion about publishing the article by the paper's editorial board it was decided that the story would run in the paper's next issue.

Case #11

Students in schools of medicine, nursing, dentistry and veterinary medicine are required to observe actual surgeries (and other procedures) early in their educations as a preliminary exposure to the practices of their field. In fact, such study is thought to be essential in confirming the students' choice of profession. Of course, the observation takes place with the informed consent of the patients (or their guardians). Many pre-medical, pre-nursing, pre-dentistry, and pre-veterinary programs, especially at schools with associated hospitals, are beginning to recommend (or even require) similar observation programs.

The State University Museum has one of the nation's premier exhibits of the history of medicine and allied fields. They include displays replicating Leonardo's anatomy studies, teaching materials from Charles University (in Prague) dating from the 16th century, 18th century "bleeding," and 19th century nutrition studies (among many other presentations).
One of the most popular offerings at the museum is the "surgery room" where films of common surgical procedures can be viewed. Like the student viewing in medical schools, the patients shown have given their informed consent. Not surprisingly, the most identifiable attendees are people who are considering having the operations shown in the pictures. The films have been "sanitized" so that excess gore is avoided, but the surgeries are shown in detail.

Dr. Suarez, curator of the museum and retired professor of neurosurgery, has proposed to the board that rather than using films, which are hard to make and quickly become outdated, observers should be allowed to observe actual, in process surgeries on persons who have consented. After all, the University Hospital is adjacent to the museum and access is convenient. The hospital's operating theaters are set up above the surgical floor but separated from the patient and surgical team by sound- and atmosphere-proof windows. Dr. Suarez suggests that such watching could become a significant educational revenue-generating operation. He points out that special exhibits commonly serve as important financial resources for museums.

When Dr. Suarez proposes this program to the Museum's board of directors, Katherine Osborn (one of the community members of the board) objects vigorously. Although Dr. Suarez's proposal clearly restricts participation to persons "15 and older," Ms. Osborn argues that teens, and perhaps others, will attend surgeries not as education but as entertainment. Her position is that such "exhibitions" will be little better than the "bum fights" and ultraviolent films that have gained popularity in recent years. Ms. Osborn claims that teens will watch surgeries as a replacement for the gore seen while attending the ***Halloween*** and ***Nightmare on Elm Street*** movies. Her claim is that such actions are exploitative more than educational.

Dr. Suarez responds that actual surgeries come nowhere near the gore commonly shown on TV and in the movies. He points out that we seldom know what motivates people to act as they do in the presence of human affliction. "Do people slow their cars when passing accidents in order to see whether they can help or to see blood and gore? How would we know? Even if an adolescent attended a surgery out of a desire to see gore, might the experience not shift his or her perspective, creating an interest in becoming a medical professional?"

Case #12

Politicians have crossed the floor, or switched parties for as long as political parties have been in place—famous switches include those of Strom Thurmond, Ronald Reagan, Condoleezza Rice, Howard Dean, Hilary Clinton and most recently, Joe Lieberman. In 2001, nine serving members of Congress had switched parties while in office. Various reasons are cited for changing parties, including ideological disagreement with one's current party and moving to improve power and legislative efficacy, among others. U.S. Representative Ralph Hall of the Fourth Congressional District in Texas cites both reasons.

Ralph Hall was first elected in 1980 as a Democrat and has been re-elected each succeeding year. Hall has made a reputation for himself as a rogue Democrat, willing to "cross the aisle" and vote with Republicans when he agreed with their position. He also has been an avid supporter of President Bush, opposed to Democratic bids to unseat him. But it was more

than mere ideological agreement that encouraged a decision to switch parties in early 2004 before his bid for reelection.

As Hall stated in a January 2004 press release that announced his decision to switch parties, "This year I was denied requests for district appropriations because I was a Democrat who voted against the bill. I have always stated that … if being a Democrat hurt my district, I would either resign or switch parties." The bill to which he was referring was a "foreign operations bill" which, according to Hall, gave, "financial support to those countries that continue to vote against [the U.S.] in the United Nations."

Another motivation may be found in Hall's appreciation for being spared a potentially career devastating blow in the redistricting that cost many Democrats their seats in 2003. According to a CNN article, "…Hall's move comes after Republican state lawmakers in Austin spared him in a redistricting map that targets every other Anglo Democrat in the House. His district, based in the city of Tyler, was largely untouched by the GOP-drawn map, which is currently facing a Democratic court challenge."

ETHICS BOWL CASES—2006

Case #1

Dr. B., a Professor of Psychology at a large research institution, Ohio State University (OSU), has a long distinguished record of working with chimpanzees. In the 1970s, she taught chimps to communicate, first by using American Sign Language and later using graphic symbols. In the last decade, under her direction, two young chimps, Keeli and Ivy, have learned to count and to recognize simple written words. Another chimp, Bobby, has shown an uncanny ability to learn number sequences and even to fill in missing numbers in a sequence. She has learned that chimps can do simple arithmetic, behave similarly to preschoolers, and (along with humans) have the ability to perceive the knowledge state of a peer.

Dr. B., who has dedicated her entire professional life to the study of cognition in chimpanzees, has won international acclaim for her work and was named one of the top 50 women researchers in the nation by *Discover Magazine* in 2002. Her chimps have been featured on Discovery Channel. However, as funding to support the research center has been hard to come by in the last five years, the university decided to close the research center and send the chimps away. OSU abruptly seized the professor's laboratory on February 28, 2006, changed all the locks, and hired a truck to send all 12 primates (nine chimps and three monkeys) to Primarily Primates, a controversial Texas sanctuary. The university gave the sanctuary a $324,000 trust fund for the animal's care.

Dr. B. vigorously protested the decision. When a restraining order she filed failed to prevent the university from implementing its decision, Dr. B. chained herself to the center's gate to prevent the transport trucks from leaving. Her efforts were unsuccessful and one of the chimps, 25-year old Kermit, died during the 38-hour transport in early March. Bobby was found dead in his enclosure on April 20. One of the monkeys escaped and was never recovered. Dr. B sued OSU to win custody of the remaining chimps. PETA also joined the suit on behalf of the remaining seven chimps and two monkeys and in June a Texas judge ordered that an independent trustee should oversee the $324,000 funding to ensure that it be used to house and benefit the remaining OSU primates.

Case #2

Wisconsin State Representative Dan LeMahieu (R-Oostburg) was outraged when the University of Wisconsin-Madison's University Health Services (UHS) featured ads in the two student newspapers suggesting that students consider receiving prescriptions for emergency contraception (EC) prior to leaving for spring break. UHS services are available to any student at the UW-Madison, and as such they offer health expertise to students in the areas of medical treatment for illnesses and injuries, counseling for stress reduction, smoking cessation, nutrition, dermatology, sports medicine, as well as confidential testing and treatment of sexually transmitted diseases (STDs). Although a part of the state-funded University of Wisconsin System, the ads were paid for using student segregated fees which are not part of taxpayer dollars or academic tuition funds.

Following the publication of the ads, which were part of a series also advising students to protect themselves from sun exposure and limit their intake of alcohol, Representative LeMahieu initiated drafting legislation to ban any university health center in Wisconsin from advertising or distributing the morning-after pill (EC). LeMahieu contends, "I think it's offensive that the university is trying to tell young women to be prepared and to plan ahead so they can have promiscuous activities on spring break. I don't think that it's the role of the university to promote that type of activity, and I believe that's what their ad is asking young people to do." LeMahieu also added that the UW should be "made aware" that many people who are paying state taxes do not appreciate the offensive advertisements.

On June 16, 2005, Wisconsin's State Assembly voted 49-41 in favor of a bill prohibiting University of Wisconsin System health centers from advertising, prescribing or dispensing emergency contraception, making it the first state in the country to move towards banning EC on all state college campuses.

Case #3

Near the end of its fall season, a top executive from the popular reality television competition, *Idol Starz*, appeared on the *Today Show* and revealed that the program's contestants either advanced or were cut based on producers' decisions rather than being selected through the program's public text-messaging voting system. The executive went on to state that the show's winners and losers were selected by producers on a round-by-round basis in the hopes that certain "controversial" or "questionable" choices would positively influence ratings, increase fervor for underdog candidates, and create a more developed fan-base which would return to view the show during both current and future seasons.

Given the show's popularity and viewers' commitment to their favorite contestants, the revelation led to a large public outcry condemning the show for dishonesty and false advertising. Many claimed to have been cheated and explained that the show had a responsibility to adhere to the public's decisions about which candidates they preferred. Given special attention during this debate was the show's slogan: "You vote. You decide. Who should be the next Idol Star?"

During ensuing interviews, the show's producers explained that their decisions were based on the fact that they were in the entertainment business and that certain unpredictable events helped to keep the audience invested in the show and provided increased entertainment value. They also argued that, more often that not, their decisions about who should advance or win were in line with the public's desires. When questioned about the program's slogan, one producer was quoted as saying, "Look at it carefully. There is a difference between telling someone to vote and decide who *should* be the next Idol Star and telling them that their votes *will* decide the next Idol Star."

Case #4

In a recent case, Florida authorities declined to file charges against a Miami Herald columnist for surreptitiously recording a phone call from a city commissioner who later committed suicide in the newspaper's lobby. Authorities cited the unusual circumstances that led to the taping as the basis for not filing charges against the columnist. These circumstances were not enough for the Miami Herald, who took immediate action to fire the columnist for violating a company policy that prohibited the taping of sources and interviewees without the subject's consent.

State laws related to the recording of phone calls and the courts interpretation of these laws vary widely in the United States. Many of these laws are intentionally written with ambiguous terms and interpretation is typically required on a case by case basis.

The firing of this popular columnist caused much protest around the world. Many members of the Herald staff signed a petition requesting the decision to fire the columnist be rescinded. The columnist was friends with the city commissioner, and the commissioner provided regular sources for stories to the columnist.

According to the columnist, the commissioner was despondent over public allegations about his sex life and the tone of his voice on the phone conversation was so alarming that the columnist impulsively decided to record the conversation. The tape records the columnist's attempts to calm the commissioner. Throughout their 20-minute conversation, the columnist attempted to steer the conversation to less volatile subjects in the hopes of lifting the commissioner's spirits. But the call ended with the commissioner still despondent. A few minutes later, the commissioner shot himself.

Following the suicide, the columnist told editors of the Miami Herald that he had been interviewing the commissioner earlier in the day and had recorded part of the conversation without the commissioner's consent.

After being fired, the columnist was quoted as saying "In a tense situation I made a mistake. The Miami Herald executives only learned about it because I came to them and admitted it. I told them I was willing to accept a suspension and apologize both to the newsroom and our readers. Unfortunately, the Herald decided on the death penalty instead."

The Miami Herald editors have taken the position that there must be an absolute prohibition of the paper's reporters taping conversations without a party's consent, and not just because it is against the law in Florida, as it is in many states. An executive of the Herald has stated that the policy is necessary to protect the paper's integrity, as well as to foster trust from news sources.

Journalists at the Miami Herald have pointed out that at least one other reporter surreptitiously taped an interview, but was not fired. The journalists also have also stated that there is no written policy on taping conversations and that any verbal policy on expectations of reporters is unclear. The Miami Herald responded to the alleged case of a previous surreptitious taping by saying "we understand this happened 18 years ago". They went onto state that the recent decision to fire the columnist was clearly guided by the environment in which journalists operate today; which is much more constrained in terms of the latitude given for violation of law and policy.

Case #5

Beginning in 2005, protests at funerals for military personnel killed in Iraq have been increasing – and have received much media attention. In particular, members of the Westboro Baptist Church, in Topeka, Kansas, have been especially visible and vocal at many of these military funerals. Reverend Fred Phelps and his protesters claim that U.S. military deaths in Iraq are because America tolerates homosexuals and that they are a sign of divine punishment for America's tolerance of homosexuality. For over a year now, members of this anti-gay church have been crisscrossing the United States, holding more than one hundred protests outside the funerals of U.S. soldiers killed in Iraq.

They wave placards with such expressions as: "You're Going to Hell," "Fag Vets, God Hates You," and "Thank God for IEDs" (the improvised explosive devices responsible for killing many military personnel in Iraq). Phelps contends that all American soldiers are guilty by association – because they are fighting in the service of the U.S. government.

By Spring, 2006, twenty-eight states and Congress were rushing to pass laws to restrict protests outside military funerals. On May 17, 2006, Illinois Governor Rod Blagojevich signed a state law – "Let Them Rest in Peace Act" – that prohibits disruptive and inflammatory protesting 30 minutes before a funeral, during the service, and 30 minutes after a funeral while remaining 200 feet from the funeral site. This new Illinois law drew immediate scorn from Shirley Phelps-Roper, attorney for the Westboro Baptist Church: "The law is impotent. You've done nothing to change that God is killing your children and sending them home in body bags. Keep your big, fat snout out of our religion."

In the U.S. Congress, Representative Mike Rogers (R-Mich.) sponsored a House bill to address this matter. He said that he took up the issue after attending a military funeral in his home state, where mourners were greeted by "chants and taunting and some of the most vile things I have ever heard. Families deserve the time to bury their American heroes with dignity and in peace." On May 24, 2006, Congress passed legislation that would bar demonstrators from disrupting military funerals at national cemeteries.

The "Respect for America's Fallen Heroes Act" prohibits protests within 300 feet of the entrance of a national cemetery and within 150 feet of a road into the cemetery from 60 minutes before to 60 minutes after a funeral. Those violating the act would face up to a $100,000 fine and up to a year in prison. Senate Majority Leader Bill Frist (R-Tenn.) said that this act "will protect the sanctity of all 122 of our national cemeteries as shrines to their gallant dead. It's a sad but necessary measure to protect what should be recognized by all reasonable people as a solemn, private and deeply sacred occasion."

In response to this federal legislation, Phelps has said that Congress was "blatantly violating the First Amendment rights to free speech" in passing the bill. He said that he will continue to demonstrate but would abide by the restrictions. Constitutional experts are warning that protest restrictions – such as those passed in Illinois and in Congress – appear overly broad and are likely to be overturned if challenged in court. Eugene Volokh, a law professor at the University of California-Los Angeles and an authority on the First Amendment, said: "You can't treat speech as a breach of peace simply because it offends people. These protests are tremendously offensive and hard to ignore. But ignoring them or counter-protesting is unfortunately the only remedy the 1st Amendment allows." And, the American Civil Liberties Union has filed a lawsuit against a new Kentucky law, saying that it goes too far in limiting freedom of speech and expression. Additional lawsuits are expected to be filed.

U.S military veterans find Phelps' beliefs and actions particularly abhorrent, and in November, 2005, veterans' motorcycle groups began showing up at military funerals to oppose the protesters and to show support for the families of the deceased soldiers. Calling themselves the Patriot Guard Riders, these motorcycle groups have organized hundreds of counter-protesters to wave American flags and stand silently in front of the Westboro picketers, to pay respects to the fallen soldier, and to protect the soldier's family from disruptions.

Case #6

Alejandro Toledo, President of Peru, has launched a public campaign demanding that Yale University return to Peru Incan artifacts excavated at Machu Picchu in 1912. Yale professor Hiram Bingham III, guided by a native Peruvian, came upon the Incan city of Machu Picchu in 1911. Bingham secured backing from the National Geographic Society and support from Peru's government for archeological excavations at Machu Picchu in 1912 and again in 1914-15.

In October 1912, Bingham gained the Peruvian government's permission to bring to Yale for research the contents of 170 tombs in Machu Picchu. The decree allowed that Peru reserve the right to ask for the return of the objects.

By 1916, Peru, suspecting Bingham of secretly taking Incan gold, ended Bingham's work at Machu Picchu. The items taken to Yale from the 1914-15 excavations were loaned for only 18 months. Yale has refused several Peruvian requests for return of the artifacts.

Today, Yale claims that they have complied with the 1912 and the 1916 agreements, returning the objects to Peru during the 1920's. Yale sees no similar responsibility to return the items taken from earlier work. National Geographic Society records show that about half of the items were returned to Peru, with no mention of the remaining artifacts.

Luis Guillermo Lumbreras, the director of Peru's National Institute of Culture in Lima, claims that Yale has had 90 years to complete research on the objects, and now Peru wants the items returned. Peru elected its first indigenous president–Alejandro Toledo, who honored the nation's Incan heritage by holding part of his inauguration ceremony at Machu Picchu in 2001. In part due to his influence, Peru wants possession of the artifacts, which have formed the core of Yale's impressive, scholarly exhibition: *Unveiling the Mystery of the Incas.* After traveling to six cities and attracting over a million visitors, the exhibit now resides at Yale's Peabody Museum of Natural History in Connecticut.

The recent research of Yale professors Lucy Salazar and her husband Richard L. Burger, including extensive scientific analysis of burials, has provided the most reasonable explanation for the existence of Machu Picchu. Rather than supporting the earlier ideas of the city as a center for religious activity including the sacrifice of virgins, the professors' research has suggested that the city served as a simple country retreat from the Inca capital of Cuzco.

The number and kinds of artifacts taken to Yale from Machu Picchu is in dispute. Yale has offered to return some of the pieces to Peru, if Peru allows it to keep others at the Peabody Museum of Natural History, where Machu Picchu is the prize exhibit.

Case #7

In October of 2002, after the overdose of one of its workers, management at a Weyerhaeuser, a multinational corporation in the pulp and paper industry located in Valliant, Oklahoma, became concerned that employees were not following drug and safety regulations in its parking lot. Management decided to have the parking lot searched with gun and drug sniffing dogs. While the dogs found no drugs, they did find firearms in twelve vehicles, including shotguns and automatic weapons. The owners of these vehicles, including a 23-year veteran shift manager, were fired in the next two days.

Weyerhaeuser and many other businesses have had long standing bans on firearms brought into the plant in order to protect workers and prevent workplace violence. In 2002, Weyerhaeuser extended this ban to the parking lot. Many workers claim they were not told of the extension of the ban, though management claims they informed workers. Some of the fired workers have filed suits claiming they were not informed. The initial suit was thrown out, but the decision is being appealed.

Since this and other incidents, many states -- beginning with Oklahoma -- have enacted laws protecting workers who want to keep firearms in their cars. The latest state to consider such a law is Florida, home to Walt Disney World, which does not allow any of its 50,000+ employees to bring guns onto company property.

A number of corporations have joined federal lawsuits against these new state laws. These companies include ConocoPhillips (petroleum), Halliburton (energy), and the Nordam Group (aircraft manufacture). They state that they cannot provide a safe and secure workplace without the ban on guns in the parking lot, and they see state laws allowing guns as infringing on the right of private property owners to decide what is and is not allowed on their property. Even aside from their property rights, companies claim that the laws would disregard public safety. The Bureau of Labor Statistics Census of Fatal Occupational Injuries states that in 2004, there were 551 workplace homicides out of 5703 workplace fatalities. A study at the University of North Carolina claims that such killings are five times more likely to occur at workplaces that allow guns compared to those who do not.

The National Rifle Association (NRA) has been the primary champion of laws that allow workers to have guns in cars in company parking lots. The NRA claims that prohibiting lawful gun owners to keep guns in their car dramatically diminishes their right to own firearms and defend themselves. All 50 states allow the transportation of firearms for lawful purposes. The laws also restrict workers who may want to hunt or target shoot after work from engaging in these lawful activities. They also claim that one's car should enjoy the same protections that one's home enjoys with regards to being able to keep lawful weapons and immunity to unlawful searches.

The NRA claims that the state laws already have commonsense provisions in them that prevent abuse. For instance, anyone wanting to transport a firearm and park their car in a company lot must keep the automobile locked, and at no time is it permissible to take the firearm out of the car on company property. Against the property rights claims of business owners, the NRA claims that business owners are already under extensive federal, state, and local regulations about what they can do with their property and that striking down these state laws would allow companies to "micro-manage" the contents of an employee's automobile. The NRA also cites statistics that 84% of workplace murders are committed by strangers, and anyone determined to commit a crime will not be discouraged from bringing the gun onto company property by a company regulation prohibiting guns in parking lots.

Case #8

After several years of miscarriages, Edward and Susan turn to *in vitro* fertilization as a means of screening embryos for genetic defects. More than two years elapse, with all the attendant discomfort and expense, but finally an "acceptable" embryo is produced and implanted. To their joy, nine months later they are blessed by Michelle, an apparently happy, healthy baby.
They decide that they will not tempt fate by trying to increase their family, instead choosing to relish the raising of their daughter. Five years pass and they eagerly anticipate Michelle's starting kindergarten. They have elected to enroll her in a well-respected private school so as to realize her fullest potential. Part of the school's pre-entry preparation is an extremely thorough set of physical examinations. (The physical examinations are not done to screen for admission, but rather to anticipate potential health issues while the student is enrolled.)

To their horror, the examinations determine that Michelle has early symptoms of a particularly virulent form of *Acute Childhood Lymphoid Leukemia*. Nothing in the embryonic screening could have predicted its occurrence. They begin immediate conventional treatments which prove to be ineffective. At their oncologist's recommendation they enroll her in the nation's premier pediatric oncology program. She gives them the bad news that Michelle shows evidence of having Philadelphia chromosome-positive ALL. The most successful treatment involves hematopoietic stem cell transplantation from matching relatives. The oncology clinic tests both Edward and Susan, but finds neither of them compatible. Since neither of them (nor Michelle) has any siblings, it looks as if they will have to hope for a million-to-one chance of finding a well-matched unrelated donor.

While waiting in the lounge of the clinic, the mother of another child under treatment introduces herself and suggests that they do have another option – they could have another child, *via in vitro*, selecting among possible embryos for compatibility for transplant. Initially they are horrified at the idea of producing another child as a "biological stockpile" for Michelle, but the more they think about it the better the idea seems. After all, they really had wanted more children. The new child wouldn't be seriously injured by the procedure needed to provide Michelle with the transplant material she so desperately needs. Given their history of medical procedures needed to have Michelle, the screening required to make sure the new child would be a compatible donor is almost the same as if they were just having another child as a family expansion.

When they raise the possibility with Michelle's physician, she explains that the screening technology has improved sufficiently since Michelle's birth to guard against the new child's having the same disposition toward this disease. But, before she will go further, she tells them they must speak with the clinic's counselor. The counselor asks them to consider what their true motives are in proposing the conception of this second child, whether they would be treating her as a person or as an object and how they will explain to her the reason for her conception.

Case #9

After 25-30 years of service, ships are at the end of their sailing life and are sold as "End of Life Vessels" to be dismantled primarily to recover the valuable steel which makes up about 95% of the ship. Ship breaking (or ship demolition) is the process of dismantling the structure of an obsolete vessel for scrapping or disposal and includes a wide range of activities, from removing all gear and equipment to cutting down and recycling the ship's infrastructure. However, the only ones who profit from ship breaking are the ship owners. They extract an average of $1.9 million profit per "End of Life Vessel." Ship breaking is also a challenging and controversial process, due to the structural complexity of ships and the many environmental, safety, and health issues involved.

Ship breaking is dangerous and has the reputation of being one of the dirtiest jobs on earth. For minimal dollars a day, workers with little protective gear tear out pipes insulated with asbestos, transformers covered with PCBs, and leaky diesel tanks. Until the late twentieth century, ship breaking took place primarily in port cities in developed countries – including the United States and Europe. Today, however, most ship breaking yards are in developing countries – especially India, China, Bangladesh, and Pakistan. This is due to rules dealing with lead paint and toxic substances. The industry was such a disgrace that, in 2000, Congress acted to stop U.S. registered ships from being sent overseas for scrap. Ship breaking remains an international environmental and labor concern - because ship breaking now occurs mostly in underdeveloped countries where working conditions and environmental impact are not regulated. Also, many ships being scrapped now were made before many international environmental laws were enacted.

In late 2005, a Virginia-based company, Bay Bridge Enterprises, visited the small coastal town of Newport, Oregon, and proposed opening a ship breaking plant on the banks of Yaquina Bay. The company offered up to 125 jobs paying $20 an hour. Their spokesperson indicated that the company had no environmental violations since they have been doing this work, and that they had zero lost-time injuries since 2001. Also, he noted that there is no large-scale ship breaking yard on the West Coast, and that there are about 60 ships anchored in a California bay – just waiting to be moved to a scrap yard. Therefore, there would be plenty of work available at a new ship breaking plant in Newport – for some time to come.

A strong coalition of interested parties in the Newport area emerged in opposition to this proposal. The "Friends of Yaquina Bay" were the group of people most responsible for rallying the community together to try to stop this ship breaking proposal. The Oregon Coast Aquarium and the Oregon State University Hatfield Marine Science Center – both located in Newport – also added major support to the effort to block the proposed plant. Some of the major issues raised by these opponents to the proposal included: the world-wide negative reputation of ship breaking; the safety of towing "ghost ships" (some with a length of up to 540 feet) from San Francisco Bay in California to Newport, Oregon; potential infestation of as many as 100 invasive species on the ships in California that are not in Yaquina Bay; toxins on and in the ships that would escape into the bay and the air, affecting the seafood industry – especially crabbing – as well as the fear of pollution runoff at the Hatfield Marine Science Center and the Oregon Coast Aquarium; and visual pollution. Yaquina Bay is a continentally Important Bird Area – with several endangered species present. There are 15 or more blue heron nests and other bird species on the tide flats near the proposed ship breaking site. The local tides extend 15 miles up the Yaquina River and thus the largest oyster farm in Oregon could be affected. Plus there is fear that money-spending tourists would not view these rusting ships as an asset to the beautiful Oregon coast.

On January 24, 2006, about 200 people packed a meeting room in Newport, Oregon, to hear Mr. Don Mann, general manager of the Port of Newport, announce that "some projects are a good fit, or not a fit at all. Bay Bridge's plan for a ship breaking facility in Yaquina Bay does not qualify in our test for a good fit." Thus, quite surprisingly, it seems, the ship breaking plan for Newport was ended. Mr. Mann continued: "This was not a good business deal for the company, or for the Port. I believe that the environmental issues could have been resolved, but our financial concerns could not be adequately addressed." The vast majority of persons at the meeting were very pleased with this decision.

While this issue was being considered by the town of Newport, Oregon, the office of the Port Commissioners received hundreds of telephone calls of concern – from all over the country. As one commissioner said: "We have gained much free advertising – for the port and community. The whole world knows we're here.

This issue is bringing this concern to Oregon, and to the nation." Bay Bridge's next move on the West Coast remains to be seen. The company is still looking for a possible Oregon or Washington port.

Case #10

Ardent R. Porter is an investigatory journalist with a respected Washington-area newspaper, *Capitol News Briefly*. As a reporter working in and around the D.C. area, Mr. Porter often relies on his long list of contacts in order to glean information that might be useful for the various articles he publishes on corruption within politics and government. By establishing relationships with individuals at all levels of government, Ardent has provided himself with valuable human sources that are often capable of providing him with names, tips, or other information that he could not extract from other channels. Furthermore, a few of Mr. Porter's key contacts are able to pass along hard-to-come-by information about questionable or downright illegal actions taken by government employees or agencies.

One such contact is Ian Stalwart, a mid-level agency administrator who works with individuals who do government "groundwork" as well as with high-level government bureaucrats. As a middleman of sorts, Ian is in a position uniquely suited to evaluating the actions of those who work both below and above him. One of Mr. Stalwart's responsibilities is to watch for and report any illegal activity that he might encounter. Mr. Stalwart takes this role very seriously and his responsibilities as a watchdog were what originally led him to seek out Ardent, a like-minded opponent of corruption and illegality within public service.

It so happened that Mr. Stalwart discovered that many individuals within his agency were working to cover up illegally-awarded, over-billed, or otherwise fraudulent government contracts awarded during the early months of the Iraq War, actions which were in violation of several federal laws, in addition to many agency standards. Upon presenting his discovery to his superiors, Mr. Stalwart was told to disregard his findings and to refrain from further discussing the subject. After pressing for a more sophisticated explanation, he was informed that the contracts in question had been deemed classified through appropriate agency and congressional channels and that because the contracts had been deemed to serve a compelling national security interest, it would be against agency policy (as well as illegal) to discuss them, regardless of any questionable procedural or substantive aspects.

Fully knowing that he was in violation of laws regarding the disclosure of classified information, Mr. Stalwart approached Mr. Porter and revealed everything he knew about the dubious contracts. He also provided Mr. Porter with the names of the individuals implicated in the cover-ups and the names of the administrators who had ordered him to remain silent.

After composing a lengthy and revealing story, Mr. Porter approached his editor about publishing the story, explaining the dilemma presented by the fact that much, if not all, of the story's core material was classified. Following a discussion about publishing the article by the paper's editorial board it was decided that the story would run in the paper's next issue.

Case #11

Students in schools of medicine, nursing, dentistry and veterinary medicine are required to observe actual surgeries (and other procedures) early in their educations as a preliminary exposure to the practices of their field. In fact, such study is thought to be essential in confirming the students' choice of profession. Of course, the observation takes place with the informed consent of the patients (or their guardians). Many pre-medical, pre-nursing, pre-dentistry, and pre-veterinary programs, especially at schools with associated hospitals, are beginning to recommend (or even require) similar observation programs.

The State University Museum has one of the nation's premier exhibits of the history of medicine and allied fields. They include displays replicating Leonardo's anatomy studies, teaching materials from Charles University (in Prague) dating from the 16th century, 18th century "bleeding," and 19th century nutrition studies (among many other presentations).
One of the most popular offerings at the museum is the "surgery room" where films of common surgical procedures can be viewed. Like the student viewing in medical schools, the patients shown have given their informed consent. Not surprisingly, the most identifiable attendees are people who are considering having the operations shown in the pictures. The films have been "sanitized" so that excess gore is avoided, but the surgeries are shown in detail.

Dr. Suarez, curator of the museum and retired professor of neurosurgery, has proposed to the board that rather than using films, which are hard to make and quickly become outdated, observers should be allowed to observe actual, in process surgeries on persons who have consented. After all, the University Hospital is adjacent to

the museum and access is convenient. The hospital's operating theaters are set up above the surgical floor but separated from the patient and surgical team by sound- and atmosphere-proof windows. Dr. Suarez suggests that such watching could become a significant educational revenue-generating operation. He points out that special exhibits commonly serve as important financial resources for museums.

When Dr. Suarez proposes this program to the Museum's board of directors, Katherine Osborn (one of the community members of the board) objects vigorously. Although Dr. Suarez's proposal clearly restricts participation to persons "15 and older," Ms. Osborn argues that teens, and perhaps others, will attend surgeries not as education but as entertainment. Her position is that such "exhibitions" will be little better than the "bum fights" and ultraviolent films that have gained popularity in recent years. Ms. Osborn claims that teens will watch surgeries as a replacement for the gore seen while attending the ***Halloween*** and ***Nightmare on Elm Street*** movies. Her claim is that such actions are exploitative more than educational.

Dr. Suarez responds that actual surgeries come nowhere near the gore commonly shown on TV and in the movies. He points out that we seldom know what motivates people to act as they do in the presence of human affliction. "Do people slow their cars when passing accidents in order to see whether they can help or to see blood and gore? How would we know? Even if an adolescent attended a surgery out of a desire to see gore, might the experience not shift his or her perspective, creating an interest in becoming a medical professional?"

Case #12

Politicians have crossed the floor, or switched parties for as long as political parties have been in place—famous switches include those of Strom Thurmond, Ronald Reagan, Condoleezza Rice, Howard Dean, Hilary Clinton and most recently, Joe Lieberman. In 2001, nine serving members of Congress had switched parties while in office. Various reasons are cited for changing parties, including ideological disagreement with one's current party and moving to improve power and legislative efficacy, among others. U.S. Representative Ralph Hall of the Fourth Congressional District in Texas cites both reasons.

Ralph Hall was first elected in 1980 as a Democrat and has been re-elected each succeeding year. Hall has made a reputation for himself as a rogue Democrat, willing to "cross the aisle" and vote with Republicans when he agreed with their position. He also has been an avid supporter of President Bush, opposed to Democratic bids to unseat him. But it was more than mere ideological agreement that encouraged a decision to switch parties in early 2004 before his bid for reelection.

As Hall stated in a January 2004 press release that announced his decision to switch parties, "This year I was denied requests for district appropriations because I was a Democrat who voted against the bill. I have always stated that … if being a Democrat hurt my district, I would either resign or switch parties." The bill to which he was referring was a "foreign operations bill" which, according to Hall, gave, "financial support to those countries that continue to vote against [the U.S.] in the United Nations."

Another motivation may be found in Hall's appreciation for being spared a potentially career devastating blow in the redistricting that cost many Democrats their seats in 2003. According to a CNN article, "…Hall's move comes after Republican state lawmakers in Austin spared him in a redistricting map that targets every other Anglo Democrat in the House. His district, based in the city of Tyler, was largely untouched by the GOP-drawn map, which is currently facing a Democratic court challenge."

ETHICS BOWL COMPETITION SCHEDULE
DRAFT

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.	Registration information for all teams
9:00 a.m	Welcome

MORNING SESSIONS

9:30-10:30	Round I Eight sessions with 2 teams competing
10:30-11	Break
11:00-12	Round II Eight sessions with 2 teams competing Eight teams advance to Round III
12-1	Lunch

AFTERNOON SESSIONS

1:00-2:00	Round III Four sessions Four teams advance
2:00-2:30	Break
3:30-4:30	Round IV Two sessions Two teams advance
4:30-5:00	Break
5:00-6:00	Championship Round

Note: For each session: Three-judge panel; a moderator and timer

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

- **RULES FOR THE NATIONAL CHAMPIONSHIP OF THE INTERCOLLEGIATE ETHICS BOWL (2007)**

PROCEDURAL RULES:

1. In an Ethics Bowl match each team will be questioned by a moderator on a case. On or about January 16, 2007 each team will receive fifteen (15) cases. Each of the cases will be 1 to 2 pages in length. The cases on which teams will be asked questions at the Ethics Bowl will be taken from these fifteen cases. The teams will not know in advance which of the cases they will be asked about at the Ethics Bowl or what the questions will be. JUDGES AND MODERATORS WILL ALSO RECEIVE THE FIFTEEN CASES ON OR ABOUT JANUARY 16, 2007. LIKE THE TEAMS, THEY WILL RECEIVE COPIES OF THE CASES BUT NOT COPIES OF THE QUESTIONS. THE JUDGES AND MODERATORS, LIKE THE TEAMS, WILL NOT BE INFORMED IN ADVANCE OF THE SPECIFIC CASES TEAMS WILL BE ASKED ABOUT AT THE ETHICS BOWL.
2. Teams can be any size but only 5 or fewer can be active participants at any time. Substitutions cannot be made once the initial 5 or fewer are seated and ready for action. Substitutions CANNOT be made once the case is announced. Team members must be undergraduates.
3. During competition books and notes will not be allowed, however, scrap paper to jot down thoughts is permissible. The teams will be given a copy of the case and the question to which they must respond.
4. The Moderator will indicate the case with which the team that goes first (hereinafter Team 1) will deal, and then read Team 1's question about the case. (The Moderator will not read aloud the entire case).
5. Team 1 will then have one minute to confer, after which one spokesperson for the team may use up to ten (10) minutes to respond to the Moderator's question.
6. The opposing team (hereinafter Team 2) receives one minute to confer, and then may use up to five minutes to comment about Team 1's answer to the Moderator's question. The commentary may include the posing of a question to Team 1. More than one team member may contribute to the commentary, but only one team member may speak at a time.
7. Team 1 receives one minute to confer and then may use up to five minutes to respond to Team 2's commentary. More than one team member may respond to the commentary, but only one team member may speak at a time.
8. The judges then may ask questions to Team 1. EACH JUDGE MAY ASK NO MORE THAN ONE QUESTION WITH A BRIEF FOLLOW-UP QUESTION. THE ENTIRE PERIOD FOR JUDGES QUESTIONS SHALL LAST NO MORE THAN TEN (10) MINUTES. Before asking questions the judges may confer with one another to discuss briefly areas that they want to cover during the question period. Different team members may respond to the questions of different judges. Teams may huddle briefly to discuss their answers to the judges' questions.
9. The judges will evaluate Team 1 and Team 2 on score sheets provided to them (see scoring rules below). AT THIS POINT, HOWEVER, THE JUDGES WILL NOT ANNOUNCE TO THE TEAMS THE SCORES THEY HAVE GIVEN THEM.
10. Team 1 and Team 2 will reverse roles for a second round with a different case.
11. At the close of the second round the Moderator will ask the judges to announce the teams' scores for the match (**see scoring rules below**).

SCORING RULES:

12. Judges shall evaluate the responses of teams solely in terms of the following criteria:

    Clarity and Intelligibility - Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

    Avoidance of Ethical Irrelevance: Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

    Identification and Discussion of Central Ethical Dimensions: Did the team's presentation clearly identify and thoroughly discuss the central ethical dimensions of the case?

    Deliberative Thoughtfulness: Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with the team's position?
13. The judges will score each team as follows:

    0-40 for a team's answer to the Moderator's question (40 best); In evaluating a team's answer the judges will give the team a score of 0-10 relative to each of the four evaluation criteria indicated above and total the sum.

    0-10 for the opposing team's commentary (10 best);

    0-10 for the response to the opposing team's commentary, and for the response to the judges questions, by the team that answered the Moderator's question (10 best).

    Both in evaluating a team's commentary, and the other team's response to the commentary, the judges will take into account the four evaluation criteria indicated above, but give the teams an overall score, rather than a separate point score relative to each of the criteria.
14. The top eight teams in the competition will be determined in the following way

    <u>Morning Competition:</u>

    Teams will be ranked based on a) the number of wins, followed by b) the number of ties, followed by c) the total points awarded by judges. Thus, all teams with three wins will rank ahead of all teams with two wins. All teams with two wins will rank ahead of all teams with one win. Within rankings, a team with more ties ranks above a team with fewer ties. Finally, for teams with the same number of wins and ties, a team with a higher point differential would rank above a team with a lower point differential.

For example:

TEAM	WINS	TIES	POINTS	RANK
School R	3 wins	0 ties	12 point differential	1st
School M	3 wins	0 ties	10 point differential	2nd
School B	2 wins	1 tie	15 point differential	3rd
School S	2 wins	0 ties	-8 point differential	4th
School H	1 win	2 ties	-6 point differential	5th

REGIONAL ETHICS BOWL RULES:

- **Rules variations in regional bowls:**

Regional bowls are expected to use the national bowl's rules, guidelines, and scoring rubric, with the following exceptions:

a. Regional bowls are not required to conduct a straight elimination match of the top scoring teams in the three morning matches, as provided for under the national rules. However, regional bowls must adopt scoring rules that enable them to rank teams from top to bottom.

b. Under certain conditions other alterations will be allowed, such as the following: Minor adjustments to timing and other rules are allowed without prior approval, but require notification to the IEB Executive Board, and, where appropriate, post-bowl reports about the effects of these adjustments. Preapproved variations include:

1. initial presentations may run from 7 to 12 minutes.
2. commentary on initial presentations may run from 5 to 8 minutes.
3. ratio of presenting team to opposing team scores may not exceed 5:1.
4. judges' Q&A need not be restricted to one Q and one follow-up;
5. Judges' Q&A may be expanded from 10 to 15 minutes.
6. response to commentary may be shortened in favor of lengthening the judges' Q&A period.
7. rules regarding the number of members of a team that may speak during any particular part of the round may be changed without prior consent.

For complete eligibility and rules go to the Ethics Bowl website:

http://ethics.iit.edu/eb/IEBRules06_07.html

PHIL 396 Section 2 T 6:15-8 ETHICS BOWL Instructor: Jan Boxill

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation. The team sent to the Ethics Bowl competition will be selected from those registered in the course. Before the actual competition, a mock Ethics Bowl will be presented to the public and also to local high schools as part of the Philosophy Department's outreach program.

During a round, each team takes turns presenting its position on a case and critiquing another team's position on a different case. Teams must answer questions about their positions from a panel of judges. Judges assign scores based on logical consistency, clarity, focus and thoroughness. The presentations are evaluated on the following criteria:

Clarity and Intelligibility: Have you stated and defended your position in a way that is logically consistent and a reader/listener can clearly understand your line of reasoning?

Focus on Ethically Relevant Factors: Have you identified and discussed the ethically relevant factors?

Avoidance of Ethical Irrelevance: Have you stayed on track by avoiding preoccupation with issues that are not ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does your presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

The Intercollegiate Ethics Bowl (IEB) combines the excitement and fun of a competitive tournament with a valuable educational experience for undergraduate students.

The regional competition takes place in November and national in March. The course would be offered in the Fall to prepare students for the regional competition. The actual cases are sent out in mid September, so before that the students will look at previous year's cases and read material appropriate to cases in general, including ethical theory.

READINGS to be taken from the following:

Elements of Moral Philosophy, James Rachels – ordered & in bookstore
Being Good, Simon Blackburn
On Liberty, John Stuart Mill
Social Ethics: Morality and Social Policy, Thomas Mappes & Jane Zembaty, editors.

REQUIREMENTS:

I. CASE PREPARATION:

Each student will prepare a minimum of two cases. Each case involves:

1. 2-3 page paper setting out the argument with ethical implications.
2. Present argument to class- 5 minute presentation. Other students write a critique of the presentation with suggested revisions, readings, and research.
3. Revised paper based upon class presentation, discussion, and student critiques. Revised paper will also include an analysis of one aspect of the argument. 3-5 pages which will include bibliography and field research plans.
4. Present revised argument along with analysis: 5-7 minutes. Critiques.
5. Revised paper based on previous discussion. Revised paper will also include analysis of second aspect of the argument: 5-7 pages.
6. Present revised argument along with analysis: 5-7 minutes. Critiques
7. Revised paper based on previous discussion. Revised paper will include objections to your analysis.
8. Present revised argument: 5-7 minutes.
9. Revised paper with completed philosophical analysis: 12-15 pages
10. Oral presentation of completed analysis:
    8 minutes for presentation
    5 minutes for questions
    5-7 minutes rebuttal.

II. EXPERIENTIAL MENTORED RESEARCH STUDY:

1. For each case, students will contact appropriate units for essential background to investigate original problems and gain information regarding the case to be incorporated in the presentations and drafts. Throughout the experience, the work will be supervised and mentored by instructor and Parr Center Visiting Professor, who will assist students with setting appropriate goals. Research will also be assisted by the Parr Center graduate research fellow and the unit head or designate. [E.g. For legal cases, it would involve working with the DA office].

Expected minimum hours: 60

2. Three mock Ethics Bowl competitions: one to the Department/University, and two in local high schools as part of the Department's Outreach Program.

III. FINAL EXAM— TBD

GRADE: The final grade will be assessed as follows:

Papers:	30%
Presentations:	30%
Class participation &critiques:	20%
Final Exam:	20%

WEEKLY ASSIGNMENTS:

Week 1:	Readings: Rachels: Chapters 1- & Blackburn Chapters 1- Discuss readings and cases. Assign cases. Discuss appropriate research units.
Week 2:	Readings: Mill, On Liberty; Mappes One-two page reconstruction of the arguments of your cases Five minute oral presentation of the reconstruction Feedback and suggestions from class.
Week 3:	Re-write the reconstruction given the feedback from class. Prepare a bibliography of selected readings appropriate to your cases Present both the re-write and bibliography to the class. Receive student feedback and suggestions.
Week 4:	Annotated bibliography. 1-2 page showing the relevant facts of the case.
Weeks 5-8:	Presentations, discussions,
Week 9-11	Mock Ethics Bowl Competitions
Week 12:	In class discussions in preparation for National Competition.
Week 13:	National Ethics Bowl Competition
Week 14:	Debriefing and discussion of Ethics Bowl Competition; review for final exam.

Sample Cases:

Case #1

Dr. B., a Professor of Psychology at a large research institution, Ohio State University (OSU), has a long distinguished record of working with chimpanzees. In the 1970s, she taught chimps to communicate, first by using American Sign Language and later using graphic symbols. In the last decade, under her direction, two young chimps, Keeli and Ivy, have learned to count and to recognize simple written words. Another chimp, Bobby, has shown an uncanny ability to learn number sequences and even to fill in missing numbers in a sequence. She has learned that chimps can do simple arithmetic, behave similarly to preschoolers, and (along with humans) have the ability to perceive the knowledge state of a peer.

Dr. B., who has dedicated her entire professional life to the study of cognition in chimpanzees, has won international acclaim for her work and was named one of the top 50 women researchers in the nation by *Discover Magazine* in 2002. Her chimps have been featured on Discovery Channel. However, as funding to support the research center has been hard to come by in the last five years, the university decided to close the research center and send the chimps away. OSU abruptly seized the professor's laboratory on February 28, 2006, changed all the locks, and hired a truck to send all 12 primates (nine chimps and three monkeys) to Primarily Primates, a controversial Texas sanctuary. The university gave the sanctuary a $324,000 trust fund for the animal's care.

Dr. B. vigorously protested the decision. When a restraining order she filed failed to prevent the university from implementing its decision, Dr. B. chained herself to the center's gate to prevent the transport trucks from leaving. Her efforts were unsuccessful and one of the chimps, 25-year old Kermit, died during the 38-hour transport in early March. Bobby was found dead in his enclosure on April 20. One of the monkeys escaped and was never recovered. Dr. B sued OSU to win custody of the remaining chimps. PETA also joined the suit on behalf of the remaining seven chimps and two monkeys and in June a Texas judge ordered that an independent trustee should oversee the $324,000 funding to ensure that it be used to house and benefit the remaining OSU primates.

Case #2

Wisconsin State Representative Dan LeMahieu (R-Oostburg) was outraged when the University of Wisconsin-Madison's University Health Services (UHS) featured ads in the two student newspapers suggesting that students consider receiving prescriptions for emergency contraception (EC) prior to leaving for spring break. UHS services are available to any student at the UW-Madison, and as such they offer health expertise to students in the areas of medical treatment for illnesses and injuries, counseling for stress reduction, smoking cessation, nutrition, dermatology, sports medicine, as well as confidential testing and treatment of sexually transmitted diseases (STDs). Although a part of the state-funded University of Wisconsin System, the ads were paid for using student segregated fees which are not part of taxpayer dollars or academic tuition funds.

Following the publication of the ads, which were part of a series also advising students to protect themselves from sun exposure and limit their intake of alcohol, Representative LeMahieu initiated drafting legislation to ban any university health center in Wisconsin from advertising or distributing the morning-after pill (EC). LeMahieu contends, "I think it's offensive that the university is trying to tell young women to be prepared and to plan ahead so they can have promiscuous activities on spring break. I don't think that it's the role of the university to promote that type of activity, and I believe that's what their ad is asking young people to do." LeMahieu also added that the UW should be "made aware" that many people who are paying state taxes do not appreciate the offensive advertisements.

On June 16, 2005, Wisconsin's State Assembly voted 49-41 in favor of a bill prohibiting University of Wisconsin System health centers from advertising, prescribing or dispensing

emergency contraception, making it the first state in the country to move towards banning EC on all state college campuses.

Case #3

Near the end of its fall season, a top executive from the popular reality television competition, *Idol Starz*, appeared on the *Today Show* and revealed that the program's contestants either advanced or were cut based on producers' decisions rather than being selected through the program's public text-messaging voting system. The executive went on to state that the show's winners and losers were selected by producers on a round-by-round basis in the hopes that certain "controversial" or "questionable" choices would positively influence ratings, increase fervor for underdog candidates, and create a more developed fan-base which would return to view the show during both current and future seasons.

Given the show's popularity and viewers' commitment to their favorite contestants, the revelation led to a large public outcry condemning the show for dishonesty and false advertising. Many claimed to have been cheated and explained that the show had a responsibility to adhere to the public's decisions about which candidates they preferred. Given special attention during this debate was the show's slogan: "You vote. You decide. Who should be the next Idol Star?"

During ensuing interviews, the show's producers explained that their decisions were based on the fact that they were in the entertainment business and that certain unpredictable events helped to keep the audience invested in the show and provided increased entertainment value. They also argued that, more often that not, their decisions about who should advance or win were in line with the public's desires. When questioned about the program's slogan, one producer was quoted as saying, "Look at it carefully. There is a difference between telling someone to vote and decide who *should* be the next Idol Star and telling them that their votes *will* decide the next Idol Star."

Case #4

In a recent case, Florida authorities declined to file charges against a Miami Herald columnist for surreptitiously recording a phone call from a city commissioner who later committed suicide in the newspaper's lobby. Authorities cited the unusual circumstances that led to the taping as the basis for not filing charges against the columnist. These circumstances were not enough for the Miami Herald, who took immediate action to fire the columnist for violating a company policy that prohibited the taping of sources and interviewees without the subject's consent.

State laws related to the recording of phone calls and the courts interpretation of these laws vary widely in the United States. Many of these laws are intentionally written with ambiguous terms and interpretation is typically required on a case by case basis.

The firing of this popular columnist caused much protest around the world. Many members of the Herald staff signed a petition requesting the decision to fire the columnist be rescinded. The columnist was friends with the city commissioner, and the commissioner provided regular sources for stories to the columnist.

According to the columnist, the commissioner was despondent over public allegations about his sex life and the tone of his voice on the phone conversation was so alarming that the columnist impulsively decided to record the conversation. The tape records the columnist's attempts to calm the commissioner. Throughout their 20-minute conversation, the columnist attempted to steer the conversation to less volatile subjects in the hopes of lifting the commissioner's spirits. But the call ended with the commissioner still despondent. A few minutes later, the commissioner shot himself.

Following the suicide, the columnist told editors of the Miami Herald that he had been interviewing the commissioner earlier in the day and had recorded part of the conversation without the commissioner's consent.

After being fired, the columnist was quoted as saying "In a tense situation I made a mistake. The Miami Herald executives only learned about it because I came to them and admitted it. I told them I was willing to accept a suspension and apologize both to the newsroom and our readers. Unfortunately, the Herald decided on the death penalty instead."

The Miami Herald editors have taken the position that there must be an absolute prohibition of the paper's reporters taping conversations without a party's consent, and not just because it is against the law in Florida, as it is in many states. An executive of the Herald has stated that the policy is necessary to protect the paper's integrity, as well as to foster trust from news sources.

Journalists at the Miami Herald have pointed out that at least one other reporter surreptitiously taped an interview, but was not fired. The journalists also have also stated that there is no written policy on taping conversations and that any verbal policy on expectations of reporters is unclear. The Miami Herald responded to the alleged case of a previous surreptitious taping by saying "we understand this happened 18 years ago". They went onto state that the recent decision to fire the columnist was clearly guided by the environment in which journalists operate today; which is much more constrained in terms of the latitude given for violation of law and policy.

Case #5

Beginning in 2005, protests at funerals for military personnel killed in Iraq have been increasing – and have received much media attention. In particular, members of the Westboro Baptist Church, in Topeka, Kansas, have been especially visible and vocal at many of these military funerals. Reverend Fred Phelps and his protesters claim that U.S. military deaths in Iraq are because America tolerates homosexuals and that they are a sign of divine punishment for America's tolerance of homosexuality. For over a year now, members of this anti-gay church have been crisscrossing the United States, holding more than one hundred protests outside the funerals of U.S. soldiers killed in Iraq.

They wave placards with such expressions as: "You're Going to Hell," "Fag Vets, God Hates You," and "Thank God for IEDs" (the improvised explosive devices responsible for killing many military personnel in Iraq). Phelps contends that all American soldiers are guilty by association – because they are fighting in the service of the U.S. government.

By Spring, 2006, twenty-eight states and Congress were rushing to pass laws to restrict protests outside military funerals. On May 17, 2006, Illinois Governor Rod Blagojevich signed a

state law – "Let Them Rest in Peace Act" – that prohibits disruptive and inflammatory protesting 30 minutes before a funeral, during the service, and 30 minutes after a funeral while remaining 200 feet from the funeral site. This new Illinois law drew immediate scorn from Shirley Phelps-Roper, attorney for the Westboro Baptist Church: "The law is impotent. You've done nothing to change that God is killing your children and sending them home in body bags. Keep your big, fat snout out of our religion."

In the U.S. Congress, Representative Mike Rogers (R-Mich.) sponsored a House bill to address this matter. He said that he took up the issue after attending a military funeral in his home state, where mourners were greeted by "chants and taunting and some of the most vile things I have ever heard. Families deserve the time to bury their American heroes with dignity and in peace." On May 24, 2006, Congress passed legislation that would bar demonstrators from disrupting military funerals at national cemeteries.

The "Respect for America's Fallen Heroes Act" prohibits protests within 300 feet of the entrance of a national cemetery and within 150 feet of a road into the cemetery from 60 minutes before to 60 minutes after a funeral. Those violating the act would face up to a $100,000 fine and up to a year in prison. Senate Majority Leader Bill Frist (R-Tenn.) said that this act "will protect the sanctity of all 122 of our national cemeteries as shrines to their gallant dead. It's a sad but necessary measure to protect what should be recognized by all reasonable people as a solemn, private and deeply sacred occasion."

In response to this federal legislation, Phelps has said that Congress was "blatantly violating the First Amendment rights to free speech" in passing the bill. He said that he will continue to demonstrate but would abide by the restrictions. Constitutional experts are warning that protest restrictions – such as those passed in Illinois and in Congress – appear overly broad and are likely to be overturned if challenged in court. Eugene Volokh, a law professor at the University of California-Los Angeles and an authority on the First Amendment, said: "You can't treat speech as a breach of peace simply because it offends people. These protests are tremendously offensive and hard to ignore. But ignoring them or counter-protesting is unfortunately the only remedy the 1st Amendment allows." And, the American Civil Liberties Union has filed a lawsuit against a new Kentucky law, saying that it goes too far in limiting freedom of speech and expression. Additional lawsuits are expected to be filed.

U.S military veterans find Phelps' beliefs and actions particularly abhorrent, and in November, 2005, veterans' motorcycle groups began showing up at military funerals to oppose the protesters and to show support for the families of the deceased soldiers. Calling themselves the Patriot Guard Riders, these motorcycle groups have organized hundreds of counter-protesters to wave American flags and stand silently in front of the Westboro picketers, to pay respects to the fallen soldier, and to protect the soldier's family from disruptions.

Case #6

Alejandro Toledo, President of Peru, has launched a public campaign demanding that Yale University return to Peru Incan artifacts excavated at Machu Picchu in 1912. Yale professor Hiram Bingham III, guided by a native Peruvian, came upon the Incan city of Machu Picchu in 1911. Bingham secured backing from the National Geographic Society and support from Peru's government for archeological excavations at Machu Picchu in 1912 and again in 1914-15.

In October 1912, Bingham gained the Peruvian government's permission to bring to Yale for research the contents of 170 tombs in Machu Picchu. The decree allowed that Peru reserve the right to ask for the return of the objects.

By 1916, Peru, suspecting Bingham of secretly taking Incan gold, ended Bingham's work at Machu Picchu. The items taken to Yale from the 1914-15 excavations were loaned for only 18 months. Yale has refused several Peruvian requests for return of the artifacts.

Today, Yale claims that they have complied with the 1912 and the 1916 agreements, returning the objects to Peru during the 1920's. Yale sees no similar responsibility to return the items taken from earlier work. National Geographic Society records show that about half of the items were returned to Peru, with no mention of the remaining artifacts.

Luis Guillermo Lumbreras, the director of Peru's National Institute of Culture in Lima, claims that Yale has had 90 years to complete research on the objects, and now Peru wants the items returned. Peru elected its first indigenous president–Alejandro Toledo, who honored the nation's Incan heritage by holding part of his inauguration ceremony at Machu Picchu in 2001. In part due to his influence, Peru wants possession of the artifacts, which have formed the core of Yale's impressive, scholarly exhibition: *Unveiling the Mystery of the Incas*. After traveling to six cities and attracting over a million visitors, the exhibit now resides at Yale's Peabody Museum of Natural History in Connecticut.

The recent research of Yale professors Lucy Salazar and her husband Richard L. Burger, including extensive scientific analysis of burials, has provided the most reasonable explanation for the existence of Machu Picchu. Rather than supporting the earlier ideas of the city as a center for religious activity including the sacrifice of virgins, the professors' research has suggested that the city served as a simple country retreat from the Inca capital of Cuzco.

The number and kinds of artifacts taken to Yale from Machu Picchu is in dispute. Yale has offered to return some of the pieces to Peru, if Peru allows it to keep others at the Peabody Museum of Natural History, where Machu Picchu is the prize exhibit.

Case #7

In October of 2002, after the overdose of one of its workers, management at a Weyerhaeuser, a multinational corporation in the pulp and paper industry located in Valliant, Oklahoma, became concerned that employees were not following drug and safety regulations in its parking lot. Management decided to have the parking lot searched with gun and drug sniffing dogs. While the dogs found no drugs, they did find firearms in twelve vehicles, including shotguns and automatic weapons. The owners of these vehicles, including a 23-year veteran shift manager, were fired in the next two days.

Weyerhaeuser and many other businesses have had long standing bans on firearms brought into the plant in order to protect workers and prevent workplace violence. In 2002, Weyerhaeuser extended this ban to the parking lot. Many workers claim they were not told of the extension of the ban, though management claims they informed workers. Some of the fired workers have filed suits claiming they were not informed. The initial suit was thrown out, but the decision is being appealed.

Since this and other incidents, many states -- beginning with Oklahoma -- have enacted laws protecting workers who want to keep firearms in their cars. The latest state to consider such a law is Florida, home to Walt Disney World, which does not allow any of its 50,000+ employees to bring guns onto company property.

A number of corporations have joined federal lawsuits against these new state laws. These companies include ConocoPhillips (petroleum), Halliburton (energy), and the Nordam Group (aircraft manufacture). They state that they cannot provide a safe and secure workplace without the ban on guns in the parking lot, and they see state laws allowing guns as infringing on the right of private property owners to decide what is and is not allowed on their property. Even aside from their property rights, companies claim that the laws would disregard public safety. The Bureau of Labor Statistics Census of Fatal Occupational Injuries states that in 2004, there were 551 workplace homicides out of 5703 workplace fatalities. A study at the University of North Carolina claims that such killings are five times more likely to occur at workplaces that allow guns compared to those who do not.

The National Rifle Association (NRA) has been the primary champion of laws that allow workers to have guns in cars in company parking lots. The NRA claims that prohibiting lawful gun owners to keep guns in their car dramatically diminishes their right to own firearms and defend themselves. All 50 states allow the transportation of firearms for lawful purposes. The laws also restrict workers who may want to hunt or target shoot after work from engaging in these lawful activities. They also claim that one's car should enjoy the same protections that one's home enjoys with regards to being able to keep lawful weapons and immunity to unlawful searches.

The NRA claims that the state laws already have commonsense provisions in them that prevent abuse. For instance, anyone wanting to transport a firearm and park their car in a company lot must keep the automobile locked, and at no time is it permissible to take the firearm out of the car on company property. Against the property rights claims of business owners, the NRA claims that business owners are already under extensive federal, state, and local regulations about what they can do with their property and that striking down these state laws would allow companies to "micro-manage" the contents of an employee's automobile. The NRA also cites statistics that 84% of workplace murders are committed by strangers, and anyone determined to commit a crime will not be discouraged from bringing the gun onto company property by a company regulation prohibiting guns in parking lots.

Case #8

After several years of miscarriages, Edward and Susan turn to *in vitro* fertilization as a means of screening embryos for genetic defects. More than two years elapse, with all the attendant discomfort and expense, but finally an “acceptable” embryo is produced and implanted. To their joy, nine months later they are blessed by Michelle, an apparently happy, healthy baby. They decide that they will not tempt fate by trying to increase their family, instead choosing to relish the raising of their daughter. Five years pass and they eagerly anticipate Michelle’s starting kindergarten. They have elected to enroll her in a well-respected private school so as to realize her fullest potential. Part of the school’s pre-entry preparation is an extremely thorough set of physical examinations. (The physical examinations are not done to screen for admission, but rather to anticipate potential health issues while the student is enrolled.)

To their horror, the examinations determine that Michelle has early symptoms of a particularly virulent form of *Acute Childhood Lymphoid Leukemia*. Nothing in the embryonic screening could have predicted its occurrence. They begin immediate conventional treatments which prove to be ineffective. At their oncologist's recommendation they enroll her in the nation's premier pediatric oncology program. She gives them the bad news that Michelle shows evidence of having Philadelphia chromosome-positive ALL. The most successful treatment involves hematopoietic stem cell transplantation from matching relatives. The oncology clinic tests both Edward and Susan, but finds neither of them compatible. Since neither of them (nor Michelle) has any siblings, it looks as if they will have to hope for a million-to-one chance of finding a well-matched unrelated donor.

While waiting in the lounge of the clinic, the mother of another child under treatment introduces herself and suggests that they do have another option – they could have another child, *via in vitro*, selecting among possible embryos for compatibility for transplant. Initially they are horrified at the idea of producing another child as a "biological stockpile" for Michelle, but the more they think about it the better the idea seems. After all, they really had wanted more children. The new child wouldn't be seriously injured by the procedure needed to provide Michelle with the transplant material she so desperately needs. Given their history of medical procedures needed to have Michelle, the screening required to make sure the new child would be a compatible donor is almost the same as if they were just having another child as a family expansion.

When they raise the possibility with Michelle's physician, she explains that the screening technology has improved sufficiently since Michelle's birth to guard against the new child's having the same disposition toward this disease. But, before she will go further, she tells them they must speak with the clinic's counselor. The counselor asks them to consider what their true motives are in proposing the conception of this second child, whether they would be treating her as a person or as an object and how they will explain to her the reason for her conception.

Case #9

After 25-30 years of service, ships are at the end of their sailing life and are sold as "End of Life Vessels" to be dismantled primarily to recover the valuable steel which makes up about 95% of the ship. Ship breaking (or ship demolition) is the process of dismantling the structure of an obsolete vessel for scrapping or disposal and includes a wide range of activities, from removing all gear and equipment to cutting down and recycling the ship's infrastructure. However, the only ones who profit from ship breaking are the ship owners. They extract an average of $1.9 million profit per "End of Life Vessel." Ship breaking is also a challenging and controversial process, due to the structural complexity of ships and the many environmental, safety, and health issues involved.

Ship breaking is dangerous and has the reputation of being one of the dirtiest jobs on earth. For minimal dollars a day, workers with little protective gear tear out pipes insulated with asbestos, transformers covered with PCBs, and leaky diesel tanks. Until the late twentieth century, ship breaking took place primarily in port cities in developed countries – including the United States and Europe. Today, however, most ship breaking yards are in developing countries – especially India, China, Bangladesh, and Pakistan. This is due to rules dealing with lead paint and toxic substances. The industry was such a disgrace that, in 2000, Congress acted to stop U.S. registered ships from being sent overseas for scrap. Ship breaking remains an international environmental and labor concern - because ship breaking now occurs mostly in

underdeveloped countries where working conditions and environmental impact are not regulated. Also, many ships being scrapped now were made before many international environmental laws were enacted.

In late 2005, a Virginia-based company, Bay Bridge Enterprises, visited the small coastal town of Newport, Oregon, and proposed opening a ship breaking plant on the banks of Yaquina Bay. The company offered up to 125 jobs paying $20 an hour. Their spokesperson indicated that the company had no environmental violations since they have been doing this work, and that they had zero lost-time injuries since 2001. Also, he noted that there is no large-scale ship breaking yard on the West Coast, and that there are about 60 ships anchored in a California bay – just waiting to be moved to a scrap yard. Therefore, there would be plenty of work available at a new ship breaking plant in Newport – for some time to come.

A strong coalition of interested parties in the Newport area emerged in opposition to this proposal. The "Friends of Yaquina Bay" were the group of people most responsible for rallying the community together to try to stop this ship breaking proposal. The Oregon Coast Aquarium and the Oregon State University Hatfield Marine Science Center – both located in Newport – also added major support to the effort to block the proposed plant. Some of the major issues raised by these opponents to the proposal included: the world-wide negative reputation of ship breaking; the safety of towing "ghost ships" (some with a length of up to 540 feet) from San Francisco Bay in California to Newport, Oregon; potential infestation of as many as 100 invasive species on the ships in California that are not in Yaquina Bay; toxins on and in the ships that would escape into the bay and the air, affecting the seafood industry – especially crabbing – as well as the fear of pollution runoff at the Hatfield Marine Science Center and the Oregon Coast Aquarium; and visual pollution. Yaquina Bay is a continentally Important Bird Area – with several endangered species present. There are 15 or more blue heron nests and other bird species on the tide flats near the proposed ship breaking site. The local tides extend 15 miles up the Yaquina River and thus the largest oyster farm in Oregon could be affected. Plus there is fear that money-spending tourists would not view these rusting ships as an asset to the beautiful Oregon coast.

On January 24, 2006, about 200 people packed a meeting room in Newport, Oregon, to hear Mr. Don Mann, general manager of the Port of Newport, announce that "some projects are a good fit, or not a fit at all. Bay Bridge's plan for a ship breaking facility in Yaquina Bay does not qualify in our test for a good fit." Thus, quite surprisingly, it seems, the ship breaking plan for Newport was ended. Mr. Mann continued: "This was not a good business deal for the company, or for the Port. I believe that the environmental issues could have been resolved, but our financial concerns could not be adequately addressed." The vast majority of persons at the meeting were very pleased with this decision.

While this issue was being considered by the town of Newport, Oregon, the office of the Port Commissioners received hundreds of telephone calls of concern – from all over the country. As one commissioner said: "We have gained much free advertising – for the port and community. The whole world knows we're here. This issue is bringing this concern to Oregon, and to the nation." Bay Bridge's next move on the West Coast remains to be seen. The company is still looking for a possible Oregon or Washington port.

Case #10

Ardent R. Porter is an investigatory journalist with a respected Washington-area newspaper, *Capitol News Briefly*. As a reporter working in and around the D.C. area, Mr. Porter often relies on his long list of contacts in order to glean information that might be useful for the various articles he publishes on corruption within politics and government. By establishing relationships with individuals at all levels of government, Ardent has provided himself with valuable human sources that are often capable of providing him with names, tips, or other information that he could not extract from other channels. Furthermore, a few of Mr. Porter's key contacts are able to pass along hard-to-come-by information about questionable or downright illegal actions taken by government employees or agencies.

One such contact is Ian Stalwart, a mid-level agency administrator who works with individuals who do government "groundwork" as well as with high-level government bureaucrats. As a middleman of sorts, Ian is in a position uniquely suited to evaluating the actions of those who work both below and above him. One of Mr. Stalwart's responsibilities is to watch for and report any illegal activity that he might encounter. Mr. Stalwart takes this role very seriously and his responsibilities as a watchdog were what originally led him to seek out Ardent, a like-minded opponent of corruption and illegality within public service.

It so happened that Mr. Stalwart discovered that many individuals within his agency were working to cover up illegally-awarded, over-billed, or otherwise fraudulent government contracts awarded during the early months of the Iraq War, actions which were in violation of several federal laws, in addition to many agency standards. Upon presenting his discovery to his superiors, Mr. Stalwart was told to disregard his findings and to refrain from further discussing the subject. After pressing for a more sophisticated explanation, he was informed that the contracts in question had been deemed classified through appropriate agency and congressional channels and that because the contracts had been deemed to serve a compelling national security interest, it would be against agency policy (as well as illegal) to discuss them, regardless of any questionable procedural or substantive aspects.

Fully knowing that he was in violation of laws regarding the disclosure of classified information, Mr. Stalwart approached Mr. Porter and revealed everything he knew about the dubious contracts. He also provided Mr. Porter with the names of the individuals implicated in the cover-ups and the names of the administrators who had ordered him to remain silent.

After composing a lengthy and revealing story, Mr. Porter approached his editor about publishing the story, explaining the dilemma presented by the fact that much, if not all, of the story's core material was classified. Following a discussion about publishing the article by the paper's editorial board it was decided that the story would run in the paper's next issue.

Case #11

Students in schools of medicine, nursing, dentistry and veterinary medicine are required to observe actual surgeries (and other procedures) early in their educations as a preliminary exposure to the practices of their field. In fact, such study is thought to be essential in confirming the students' choice of profession. Of course, the observation takes place with the informed consent of the patients (or their guardians). Many pre-medical, pre-nursing, pre-dentistry, and pre-veterinary programs, especially at schools with associated hospitals, are beginning to recommend (or even require) similar observation programs.

The State University Museum has one of the nation's premier exhibits of the history of medicine and allied fields. They include displays replicating Leonardo's anatomy studies, teaching materials from Charles University (in Prague) dating from the 16th century, 18th century "bleeding," and 19th century nutrition studies (among many other presentations).
One of the most popular offerings at the museum is the "surgery room" where films of common surgical procedures can be viewed. Like the student viewing in medical schools, the patients shown have given their informed consent. Not surprisingly, the most identifiable attendees are people who are considering having the operations shown in the pictures. The films have been "sanitized" so that excess gore is avoided, but the surgeries are shown in detail.

Dr. Suarez, curator of the museum and retired professor of neurosurgery, has proposed to the board that rather than using films, which are hard to make and quickly become outdated, observers should be allowed to observe actual, in process surgeries on persons who have consented. After all, the University Hospital is adjacent to the museum and access is convenient. The hospital's operating theaters are set up above the surgical floor but separated from the patient and surgical team by sound- and atmosphere-proof windows. Dr. Suarez suggests that such watching could become a significant educational revenue-generating operation. He points out that special exhibits commonly serve as important financial resources for museums.

When Dr. Suarez proposes this program to the Museum's board of directors, Katherine Osborn (one of the community members of the board) objects vigorously. Although Dr. Suarez's proposal clearly restricts participation to persons "15 and older," Ms. Osborn argues that teens, and perhaps others, will attend surgeries not as education but as entertainment. Her position is that such "exhibitions" will be little better than the "bum fights" and ultraviolent films that have gained popularity in recent years. Ms. Osborn claims that teens will watch surgeries as a replacement for the gore seen while attending the ***Halloween*** and ***Nightmare on Elm Street*** movies. Her claim is that such actions are exploitative more than educational.

Dr. Suarez responds that actual surgeries come nowhere near the gore commonly shown on TV and in the movies. He points out that we seldom know what motivates people to act as they do in the presence of human affliction. "Do people slow their cars when passing accidents in order to see whether they can help or to see blood and gore? How would we know? Even if an adolescent attended a surgery out of a desire to see gore, might the experience not shift his or her perspective, creating an interest in becoming a medical professional?"

Case #12

Politicians have crossed the floor, or switched parties for as long as political parties have been in place—famous switches include those of Strom Thurmond, Ronald Reagan, Condoleezza Rice, Howard Dean, Hilary Clinton and most recently, Joe Lieberman. In 2001, nine serving members of Congress had switched parties while in office. Various reasons are cited for changing parties, including ideological disagreement with one's current party and moving to improve power and legislative efficacy, among others. U.S. Representative Ralph Hall of the Fourth Congressional District in Texas cites both reasons.

Ralph Hall was first elected in 1980 as a Democrat and has been re-elected each succeeding year. Hall has made a reputation for himself as a rogue Democrat, willing to "cross the aisle" and vote with Republicans when he agreed with their position. He also has been an avid supporter of President Bush, opposed to Democratic bids to unseat him. But it was more

than mere ideological agreement that encouraged a decision to switch parties in early 2004 before his bid for reelection.

As Hall stated in a January 2004 press release that announced his decision to switch parties, "This year I was denied requests for district appropriations because I was a Democrat who voted against the bill. I have always stated that … if being a Democrat hurt my district, I would either resign or switch parties." The bill to which he was referring was a "foreign operations bill" which, according to Hall, gave, "financial support to those countries that continue to vote against [the U.S.] in the United Nations."

Another motivation may be found in Hall's appreciation for being spared a potentially career devastating blow in the redistricting that cost many Democrats their seats in 2003. According to a CNN article, "…Hall's move comes after Republican state lawmakers in Austin spared him in a redistricting map that targets every other Anglo Democrat in the House. His district, based in the city of Tyler, was largely untouched by the GOP-drawn map, which is currently facing a Democratic court challenge."

ETHICS BOWL CASES—2006

Case #1

Dr. B., a Professor of Psychology at a large research institution, Ohio State University (OSU), has a long distinguished record of working with chimpanzees. In the 1970s, she taught chimps to communicate, first by using American Sign Language and later using graphic symbols. In the last decade, under her direction, two young chimps, Keeli and Ivy, have learned to count and to recognize simple written words. Another chimp, Bobby, has shown an uncanny ability to learn number sequences and even to fill in missing numbers in a sequence. She has learned that chimps can do simple arithmetic, behave similarly to preschoolers, and (along with humans) have the ability to perceive the knowledge state of a peer.

Dr. B., who has dedicated her entire professional life to the study of cognition in chimpanzees, has won international acclaim for her work and was named one of the top 50 women researchers in the nation by *Discover Magazine* in 2002. Her chimps have been featured on Discovery Channel. However, as funding to support the research center has been hard to come by in the last five years, the university decided to close the research center and send the chimps away. OSU abruptly seized the professor's laboratory on February 28, 2006, changed all the locks, and hired a truck to send all 12 primates (nine chimps and three monkeys) to Primarily Primates, a controversial Texas sanctuary. The university gave the sanctuary a $324,000 trust fund for the animal's care.

Dr. B. vigorously protested the decision. When a restraining order she filed failed to prevent the university from implementing its decision, Dr. B. chained herself to the center's gate to prevent the transport trucks from leaving. Her efforts were unsuccessful and one of the chimps, 25-year old Kermit, died during the 38-hour transport in early March. Bobby was found dead in his enclosure on April 20. One of the monkeys escaped and was never recovered. Dr. B sued OSU to win custody of the remaining chimps. PETA also joined the suit on behalf of the remaining seven chimps and two monkeys and in June a Texas judge ordered that an independent trustee should oversee the $324,000 funding to ensure that it be used to house and benefit the remaining OSU primates.

Case #2

Wisconsin State Representative Dan LeMahieu (R-Oostburg) was outraged when the University of Wisconsin-Madison's University Health Services (UHS) featured ads in the two student newspapers suggesting that students consider receiving prescriptions for emergency contraception (EC) prior to leaving for spring break. UHS services are available to any student at the UW-Madison, and as such they offer health expertise to students in the areas of medical treatment for illnesses and injuries, counseling for stress reduction, smoking cessation, nutrition, dermatology, sports medicine, as well as confidential testing and treatment of sexually transmitted diseases (STDs). Although a part of the state-funded University of Wisconsin System, the ads were paid for using student segregated fees which are not part of taxpayer dollars or academic tuition funds.

Following the publication of the ads, which were part of a series also advising students to protect themselves from sun exposure and limit their intake of alcohol, Representative LeMahieu initiated drafting legislation to ban any university health center in Wisconsin from advertising or distributing the morning-after pill (EC). LeMahieu contends, "I think it's offensive that the university is trying to tell young women to be prepared and to plan ahead so they can have promiscuous activities on spring break. I don't think that it's the role of the university to promote that type of activity, and I believe that's what their ad is asking young people to do." LeMahieu also added that the UW should be "made aware" that many people who are paying state taxes do not appreciate the offensive advertisements.

On June 16, 2005, Wisconsin's State Assembly voted 49-41 in favor of a bill prohibiting University of Wisconsin System health centers from advertising, prescribing or dispensing emergency contraception, making it the first state in the country to move towards banning EC on all state college campuses.

Case #3

Near the end of its fall season, a top executive from the popular reality television competition, *Idol Starz*, appeared on the *Today Show* and revealed that the program's contestants either advanced or were cut based on producers' decisions rather than being selected through the program's public text-messaging voting system. The executive went on to state that the show's winners and losers were selected by producers on a round-by-round basis in the hopes that certain "controversial" or "questionable" choices would positively influence ratings, increase fervor for underdog candidates, and create a more developed fan-base which would return to view the show during both current and future seasons.

Given the show's popularity and viewers' commitment to their favorite contestants, the revelation led to a large public outcry condemning the show for dishonesty and false advertising. Many claimed to have been cheated and explained that the show had a responsibility to adhere to the public's decisions about which candidates they preferred. Given special attention during this debate was the show's slogan: "You vote. You decide. Who should be the next Idol Star?"

During ensuing interviews, the show's producers explained that their decisions were based on the fact that they were in the entertainment business and that certain unpredictable events helped to keep the audience invested in the show and provided increased entertainment value. They also argued that, more often that not, their decisions about who should advance or win were in line with the public's desires. When questioned about the program's slogan, one producer was quoted as saying, "Look at it carefully. There is a difference between telling someone to vote and decide who *should* be the next Idol Star and telling them that their votes *will* decide the next Idol Star."

Case #4

In a recent case, Florida authorities declined to file charges against a Miami Herald columnist for surreptitiously recording a phone call from a city commissioner who later committed suicide in the newspaper's lobby. Authorities cited the unusual circumstances that led to the taping as the basis for not filing charges against the columnist. These circumstances were not enough for the Miami Herald, who took immediate action to fire the columnist for violating a company policy that prohibited the taping of sources and interviewees without the subject's consent.

State laws related to the recording of phone calls and the courts interpretation of these laws vary widely in the United States. Many of these laws are intentionally written with ambiguous terms and interpretation is typically required on a case by case basis.

The firing of this popular columnist caused much protest around the world. Many members of the Herald staff signed a petition requesting the decision to fire the columnist be rescinded. The columnist was friends with the city commissioner, and the commissioner provided regular sources for stories to the columnist.

According to the columnist, the commissioner was despondent over public allegations about his sex life and the tone of his voice on the phone conversation was so alarming that the columnist impulsively decided to record the conversation. The tape records the columnist's attempts to calm the commissioner. Throughout their 20-minute conversation, the columnist attempted to steer the conversation to less volatile subjects in the hopes of lifting the commissioner's spirits. But the call ended with the commissioner still despondent. A few minutes later, the commissioner shot himself.

Following the suicide, the columnist told editors of the Miami Herald that he had been interviewing the commissioner earlier in the day and had recorded part of the conversation without the commissioner's consent.

After being fired, the columnist was quoted as saying "In a tense situation I made a mistake. The Miami Herald executives only learned about it because I came to them and admitted it. I told them I was willing to accept a suspension and apologize both to the newsroom and our readers. Unfortunately, the Herald decided on the death penalty instead."

The Miami Herald editors have taken the position that there must be an absolute prohibition of the paper's reporters taping conversations without a party's consent, and not just because it is against the law in Florida, as it is in many states. An executive of the Herald has stated that the policy is necessary to protect the paper's integrity, as well as to foster trust from news sources.

Journalists at the Miami Herald have pointed out that at least one other reporter surreptitiously taped an interview, but was not fired. The journalists also have also stated that there is no written policy on taping conversations and that any verbal policy on expectations of reporters is unclear. The Miami Herald responded to the alleged case of a previous surreptitious taping by saying "we understand this happened 18 years ago". They went onto state that the recent decision to fire the columnist was clearly guided by the environment in which journalists operate today; which is much more constrained in terms of the latitude given for violation of law and policy.

Case #5

Beginning in 2005, protests at funerals for military personnel killed in Iraq have been increasing – and have received much media attention. In particular, members of the Westboro Baptist Church, in Topeka, Kansas, have been especially visible and vocal at many of these military funerals. Reverend Fred Phelps and his protesters claim that U.S. military deaths in Iraq are because America tolerates homosexuals and that they are a sign of divine punishment for America's tolerance of homosexuality. For over a year now, members of this anti-gay church have been crisscrossing the United States, holding more than one hundred protests outside the funerals of U.S. soldiers killed in Iraq.

They wave placards with such expressions as: "You're Going to Hell," "Fag Vets, God Hates You," and "Thank God for IEDs" (the improvised explosive devices responsible for killing many military personnel in Iraq). Phelps contends that all American soldiers are guilty by association – because they are fighting in the service of the U.S. government.

By Spring, 2006, twenty-eight states and Congress were rushing to pass laws to restrict protests outside military funerals. On May 17, 2006, Illinois Governor Rod Blagojevich signed a state law – "Let Them Rest in Peace Act" – that prohibits disruptive and inflammatory protesting 30 minutes before a funeral, during the service, and 30 minutes after a funeral while remaining 200 feet from the funeral site. This new Illinois law drew immediate scorn from Shirley Phelps-Roper, attorney for the Westboro Baptist Church: "The law is impotent. You've done nothing to change that God is killing your children and sending them home in body bags. Keep your big, fat snout out of our religion."

In the U.S. Congress, Representative Mike Rogers (R-Mich.) sponsored a House bill to address this matter. He said that he took up the issue after attending a military funeral in his home state, where mourners were greeted by "chants and taunting and some of the most vile things I have ever heard. Families deserve the time to bury their American heroes with dignity and in peace." On May 24, 2006, Congress passed legislation that would bar demonstrators from disrupting military funerals at national cemeteries.

The "Respect for America's Fallen Heroes Act" prohibits protests within 300 feet of the entrance of a national cemetery and within 150 feet of a road into the cemetery from 60 minutes before to 60 minutes after a funeral. Those violating the act would face up to a $100,000 fine and up to a year in prison. Senate Majority Leader Bill Frist (R-Tenn.) said that this act "will protect the sanctity of all 122 of our national cemeteries as shrines to their gallant dead. It's a sad but necessary measure to protect what should be recognized by all reasonable people as a solemn, private and deeply sacred occasion."

In response to this federal legislation, Phelps has said that Congress was "blatantly violating the First Amendment rights to free speech" in passing the bill. He said that he will continue to demonstrate but would abide by the restrictions. Constitutional experts are warning that protest restrictions – such as those passed in Illinois and in Congress – appear overly broad and are likely to be overturned if challenged in court. Eugene Volokh, a law professor at the University of California-Los Angeles and an authority on the First Amendment, said: "You can't treat speech as a breach of peace simply because it offends people. These protests are tremendously offensive and hard to ignore. But ignoring them or counter-protesting is unfortunately the only remedy the 1st Amendment allows." And, the American Civil Liberties Union has filed a lawsuit against a new Kentucky law, saying that it goes too far in limiting freedom of speech and expression. Additional lawsuits are expected to be filed.

U.S military veterans find Phelps' beliefs and actions particularly abhorrent, and in November, 2005, veterans' motorcycle groups began showing up at military funerals to oppose the protesters and to show support for the families of the deceased soldiers. Calling themselves the Patriot Guard Riders, these motorcycle groups have organized hundreds of counter-protesters to wave American flags and stand silently in front of the Westboro picketers, to pay respects to the fallen soldier, and to protect the soldier's family from disruptions.

Case #6

Alejandro Toledo, President of Peru, has launched a public campaign demanding that Yale University return to Peru Incan artifacts excavated at Machu Picchu in 1912. Yale professor Hiram Bingham III, guided by a native Peruvian, came upon the Incan city of Machu Picchu in 1911. Bingham secured backing from the National Geographic Society and support from Peru's government for archeological excavations at Machu Picchu in 1912 and again in 1914-15.

In October 1912, Bingham gained the Peruvian government's permission to bring to Yale for research the contents of 170 tombs in Machu Picchu. The decree allowed that Peru reserve the right to ask for the return of the objects.

By 1916, Peru, suspecting Bingham of secretly taking Incan gold, ended Bingham's work at Machu Picchu. The items taken to Yale from the 1914-15 excavations were loaned for only 18 months. Yale has refused several Peruvian requests for return of the artifacts.

Today, Yale claims that they have complied with the 1912 and the 1916 agreements, returning the objects to Peru during the 1920's. Yale sees no similar responsibility to return the items taken from earlier work. National Geographic Society records show that about half of the items were returned to Peru, with no mention of the remaining artifacts.

Luis Guillermo Lumbreras, the director of Peru's National Institute of Culture in Lima, claims that Yale has had 90 years to complete research on the objects, and now Peru wants the items returned. Peru elected its first indigenous president–Alejandro Toledo, who honored the nation's Incan heritage by holding part of his inauguration ceremony at Machu Picchu in 2001. In part due to his influence, Peru wants possession of the artifacts, which have formed the core of Yale's impressive, scholarly exhibition: *Unveiling the Mystery of the Incas.* After traveling to six cities and attracting over a million visitors, the exhibit now resides at Yale's Peabody Museum of Natural History in Connecticut.

The recent research of Yale professors Lucy Salazar and her husband Richard L. Burger, including extensive scientific analysis of burials, has provided the most reasonable explanation for the existence of Machu Picchu. Rather than supporting the earlier ideas of the city as a center for religious activity including the sacrifice of virgins, the professors' research has suggested that the city served as a simple country retreat from the Inca capital of Cuzco.

The number and kinds of artifacts taken to Yale from Machu Picchu is in dispute. Yale has offered to return some of the pieces to Peru, if Peru allows it to keep others at the Peabody Museum of Natural History, where Machu Picchu is the prize exhibit.

Case #7

In October of 2002, after the overdose of one of its workers, management at a Weyerhaeuser, a multinational corporation in the pulp and paper industry located in Valliant, Oklahoma, became concerned that employees were not following drug and safety regulations in its parking lot. Management decided to have the parking lot searched with gun and drug sniffing dogs. While the dogs found no drugs, they did find firearms in twelve vehicles, including shotguns and automatic weapons. The owners of these vehicles, including a 23-year veteran shift manager, were fired in the next two days.

Weyerhaeuser and many other businesses have had long standing bans on firearms brought into the plant in order to protect workers and prevent workplace violence. In 2002, Weyerhaeuser extended this ban to the parking lot. Many workers claim they were not told of the extension of the ban, though management claims they informed workers. Some of the fired workers have filed suits claiming they were not informed. The initial suit was thrown out, but the decision is being appealed.

Since this and other incidents, many states -- beginning with Oklahoma -- have enacted laws protecting workers who want to keep firearms in their cars. The latest state to consider such a law is Florida, home to Walt Disney World, which does not allow any of its 50,000+ employees to bring guns onto company property.

A number of corporations have joined federal lawsuits against these new state laws. These companies include ConocoPhillips (petroleum), Halliburton (energy), and the Nordam Group (aircraft manufacture). They state that they cannot provide a safe and secure workplace without the ban on guns in the parking lot, and they see state laws allowing guns as infringing on the right of private property owners to decide what is and is not allowed on their property. Even aside from their property rights, companies claim that the laws would disregard public safety. The Bureau of Labor Statistics Census of Fatal Occupational Injuries states that in 2004, there were 551 workplace homicides out of 5703 workplace fatalities. A study at the University of North Carolina claims that such killings are five times more likely to occur at workplaces that allow guns compared to those who do not.

The National Rifle Association (NRA) has been the primary champion of laws that allow workers to have guns in cars in company parking lots. The NRA claims that prohibiting lawful gun owners to keep guns in their car dramatically diminishes their right to own firearms and defend themselves. All 50 states allow the transportation of firearms for lawful purposes. The laws also restrict workers who may want to hunt or target shoot after work from engaging in these lawful activities. They also claim that one's car should enjoy the same protections that one's home enjoys with regards to being able to keep lawful weapons and immunity to unlawful searches.

The NRA claims that the state laws already have commonsense provisions in them that prevent abuse. For instance, anyone wanting to transport a firearm and park their car in a company lot must keep the automobile locked, and at no time is it permissible to take the firearm out of the car on company property. Against the property rights claims of business owners, the NRA claims that business owners are already under extensive federal, state, and local regulations about what they can do with their property and that striking down these state laws would allow companies to "micro-manage" the contents of an employee's automobile. The NRA also cites statistics that 84% of workplace murders are committed by strangers, and anyone determined to commit a crime will not be discouraged from bringing the gun onto company property by a company regulation prohibiting guns in parking lots.

Case #8

After several years of miscarriages, Edward and Susan turn to *in vitro* fertilization as a means of screening embryos for genetic defects. More than two years elapse, with all the attendant discomfort and expense, but finally an "acceptable" embryo is produced and implanted. To their joy, nine months later they are blessed by Michelle, an apparently happy, healthy baby.
They decide that they will not tempt fate by trying to increase their family, instead choosing to relish the raising of their daughter. Five years pass and they eagerly anticipate Michelle's starting kindergarten. They have elected to enroll her in a well-respected private school so as to realize her fullest potential. Part of the school's pre-entry preparation is an extremely thorough set of physical examinations. (The physical examinations are not done to screen for admission, but rather to anticipate potential health issues while the student is enrolled.)

To their horror, the examinations determine that Michelle has early symptoms of a particularly virulent form of *Acute Childhood Lymphoid Leukemia*. Nothing in the embryonic screening could have predicted its occurrence. They begin immediate conventional treatments which prove to be ineffective. At their oncologist's recommendation they enroll her in the nation's premier pediatric oncology program. She gives them the bad news that Michelle shows evidence of having Philadelphia chromosome-positive ALL. The most successful treatment involves hematopoietic stem cell transplantation from matching relatives. The oncology clinic tests both Edward and Susan, but finds neither of them compatible. Since neither of them (nor Michelle) has any siblings, it looks as if they will have to hope for a million-to-one chance of finding a well-matched unrelated donor.

While waiting in the lounge of the clinic, the mother of another child under treatment introduces herself and suggests that they do have another option – they could have another child, *via in vitro*, selecting among possible embryos for compatibility for transplant. Initially they are horrified at the idea of producing another child as a "biological stockpile" for Michelle, but the more they think about it the better the idea seems. After all, they really had wanted more children. The new child wouldn't be seriously injured by the procedure needed to provide Michelle with the transplant material she so desperately needs. Given their history of medical procedures needed to have Michelle, the screening required to make sure the new child would be a compatible donor is almost the same as if they were just having another child as a family expansion.

When they raise the possibility with Michelle's physician, she explains that the screening technology has improved sufficiently since Michelle's birth to guard against the new child's having the same disposition toward this disease. But, before she will go further, she tells them they must speak with the clinic's counselor. The counselor asks them to consider what their true motives are in proposing the conception of this second child, whether they would be treating her as a person or as an object and how they will explain to her the reason for her conception.

Case #9

After 25-30 years of service, ships are at the end of their sailing life and are sold as "End of Life Vessels" to be dismantled primarily to recover the valuable steel which makes up about 95% of the ship. Ship breaking (or ship demolition) is the process of dismantling the structure of an obsolete vessel for scrapping or disposal and includes a wide range of activities, from removing all gear and equipment to cutting down and recycling the ship's infrastructure. However, the only ones who profit from ship breaking are the ship owners. They extract an average of $1.9 million profit per "End of Life Vessel." Ship breaking is also a challenging and controversial process, due to the structural complexity of ships and the many environmental, safety, and health issues involved.

Ship breaking is dangerous and has the reputation of being one of the dirtiest jobs on earth. For minimal dollars a day, workers with little protective gear tear out pipes insulated with asbestos, transformers covered with PCBs, and leaky diesel tanks. Until the late twentieth century, ship breaking took place primarily in port cities in developed countries – including the United States and Europe. Today, however, most ship breaking yards are in developing countries – especially India, China, Bangladesh, and Pakistan. This is due to rules dealing with lead paint and toxic substances. The industry was such a disgrace that, in 2000, Congress acted to stop U.S. registered ships from being sent overseas for scrap. Ship breaking remains an international environmental and labor concern - because ship breaking now occurs mostly in underdeveloped countries where working conditions and environmental impact are not regulated. Also, many ships being scrapped now were made before many international environmental laws were enacted.

In late 2005, a Virginia-based company, Bay Bridge Enterprises, visited the small coastal town of Newport, Oregon, and proposed opening a ship breaking plant on the banks of Yaquina Bay. The company offered up to 125 jobs paying $20 an hour. Their spokesperson indicated that the company had no environmental violations since they have been doing this work, and that they had zero lost-time injuries since 2001. Also, he noted that there is no large-scale ship breaking yard on the West Coast, and that there are about 60 ships anchored in a California bay – just waiting to be moved to a scrap yard. Therefore, there would be plenty of work available at a new ship breaking plant in Newport – for some time to come.

A strong coalition of interested parties in the Newport area emerged in opposition to this proposal. The "Friends of Yaquina Bay" were the group of people most responsible for rallying the community together to try to stop this ship breaking proposal. The Oregon Coast Aquarium and the Oregon State University Hatfield Marine Science Center – both located in Newport – also added major support to the effort to block the proposed plant. Some of the major issues raised by these opponents to the proposal included: the world-wide negative reputation of ship breaking; the safety of towing "ghost ships" (some with a length of up to 540 feet) from San Francisco Bay in California to Newport, Oregon; potential infestation of as many as 100 invasive species on the ships in California that are not in Yaquina Bay; toxins on and in the ships that would escape into the bay and the air, affecting the seafood industry – especially crabbing – as well as the fear of pollution runoff at the Hatfield Marine Science Center and the Oregon Coast Aquarium; and visual pollution. Yaquina Bay is a continentally Important Bird Area – with several endangered species present. There are 15 or more blue heron nests and other bird species on the tide flats near the proposed ship breaking site. The local tides extend 15 miles up the Yaquina River and thus the largest oyster farm in Oregon could be affected. Plus there is fear that money-spending tourists would not view these rusting ships as an asset to the beautiful Oregon coast.

On January 24, 2006, about 200 people packed a meeting room in Newport, Oregon, to hear Mr. Don Mann, general manager of the Port of Newport, announce that "some projects are a good fit, or not a fit at all. Bay Bridge's plan for a ship breaking facility in Yaquina Bay does not qualify in our test for a good fit." Thus, quite surprisingly, it seems, the ship breaking plan for Newport was ended. Mr. Mann continued: "This was not a good business deal for the company, or for the Port. I believe that the environmental issues could have been resolved, but our financial concerns could not be adequately addressed." The vast majority of persons at the meeting were very pleased with this decision.

While this issue was being considered by the town of Newport, Oregon, the office of the Port Commissioners received hundreds of telephone calls of concern – from all over the country. As one commissioner said: "We have gained much free advertising – for the port and community. The whole world knows we're here.

This issue is bringing this concern to Oregon, and to the nation." Bay Bridge's next move on the West Coast remains to be seen. The company is still looking for a possible Oregon or Washington port.

Case #10

Ardent R. Porter is an investigatory journalist with a respected Washington-area newspaper, *Capitol News Briefly*. As a reporter working in and around the D.C. area, Mr. Porter often relies on his long list of contacts in order to glean information that might be useful for the various articles he publishes on corruption within politics and government. By establishing relationships with individuals at all levels of government, Ardent has provided himself with valuable human sources that are often capable of providing him with names, tips, or other information that he could not extract from other channels. Furthermore, a few of Mr. Porter's key contacts are able to pass along hard-to-come-by information about questionable or downright illegal actions taken by government employees or agencies.

One such contact is Ian Stalwart, a mid-level agency administrator who works with individuals who do government "groundwork" as well as with high-level government bureaucrats. As a middleman of sorts, Ian is in a position uniquely suited to evaluating the actions of those who work both below and above him. One of Mr. Stalwart's responsibilities is to watch for and report any illegal activity that he might encounter. Mr. Stalwart takes this role very seriously and his responsibilities as a watchdog were what originally led him to seek out Ardent, a like-minded opponent of corruption and illegality within public service.

It so happened that Mr. Stalwart discovered that many individuals within his agency were working to cover up illegally-awarded, over-billed, or otherwise fraudulent government contracts awarded during the early months of the Iraq War, actions which were in violation of several federal laws, in addition to many agency standards. Upon presenting his discovery to his superiors, Mr. Stalwart was told to disregard his findings and to refrain from further discussing the subject. After pressing for a more sophisticated explanation, he was informed that the contracts in question had been deemed classified through appropriate agency and congressional channels and that because the contracts had been deemed to serve a compelling national security interest, it would be against agency policy (as well as illegal) to discuss them, regardless of any questionable procedural or substantive aspects.

Fully knowing that he was in violation of laws regarding the disclosure of classified information, Mr. Stalwart approached Mr. Porter and revealed everything he knew about the dubious contracts. He also provided Mr. Porter with the names of the individuals implicated in the cover-ups and the names of the administrators who had ordered him to remain silent.

After composing a lengthy and revealing story, Mr. Porter approached his editor about publishing the story, explaining the dilemma presented by the fact that much, if not all, of the story's core material was classified. Following a discussion about publishing the article by the paper's editorial board it was decided that the story would run in the paper's next issue.

Case #11

Students in schools of medicine, nursing, dentistry and veterinary medicine are required to observe actual surgeries (and other procedures) early in their educations as a preliminary exposure to the practices of their field. In fact, such study is thought to be essential in confirming the students' choice of profession. Of course, the observation takes place with the informed consent of the patients (or their guardians). Many pre-medical, pre-nursing, pre-dentistry, and pre-veterinary programs, especially at schools with associated hospitals, are beginning to recommend (or even require) similar observation programs.

The State University Museum has one of the nation's premier exhibits of the history of medicine and allied fields. They include displays replicating Leonardo's anatomy studies, teaching materials from Charles University (in Prague) dating from the 16th century, 18th century "bleeding," and 19th century nutrition studies (among many other presentations).
One of the most popular offerings at the museum is the "surgery room" where films of common surgical procedures can be viewed. Like the student viewing in medical schools, the patients shown have given their informed consent. Not surprisingly, the most identifiable attendees are people who are considering having the operations shown in the pictures. The films have been "sanitized" so that excess gore is avoided, but the surgeries are shown in detail.

Dr. Suarez, curator of the museum and retired professor of neurosurgery, has proposed to the board that rather than using films, which are hard to make and quickly become outdated, observers should be allowed to observe actual, in process surgeries on persons who have consented. After all, the University Hospital is adjacent to

the museum and access is convenient. The hospital's operating theaters are set up above the surgical floor but separated from the patient and surgical team by sound- and atmosphere-proof windows. Dr. Suarez suggests that such watching could become a significant educational revenue-generating operation. He points out that special exhibits commonly serve as important financial resources for museums.

When Dr. Suarez proposes this program to the Museum's board of directors, Katherine Osborn (one of the community members of the board) objects vigorously. Although Dr. Suarez's proposal clearly restricts participation to persons "15 and older," Ms. Osborn argues that teens, and perhaps others, will attend surgeries not as education but as entertainment. Her position is that such "exhibitions" will be little better than the "bum fights" and ultraviolent films that have gained popularity in recent years. Ms. Osborn claims that teens will watch surgeries as a replacement for the gore seen while attending the ***Halloween*** and ***Nightmare on Elm Street*** movies. Her claim is that such actions are exploitative more than educational.

Dr. Suarez responds that actual surgeries come nowhere near the gore commonly shown on TV and in the movies. He points out that we seldom know what motivates people to act as they do in the presence of human affliction. "Do people slow their cars when passing accidents in order to see whether they can help or to see blood and gore? How would we know? Even if an adolescent attended a surgery out of a desire to see gore, might the experience not shift his or her perspective, creating an interest in becoming a medical professional?"

Case #12

Politicians have crossed the floor, or switched parties for as long as political parties have been in place—famous switches include those of Strom Thurmond, Ronald Reagan, Condoleezza Rice, Howard Dean, Hilary Clinton and most recently, Joe Lieberman. In 2001, nine serving members of Congress had switched parties while in office. Various reasons are cited for changing parties, including ideological disagreement with one's current party and moving to improve power and legislative efficacy, among others. U.S. Representative Ralph Hall of the Fourth Congressional District in Texas cites both reasons.

Ralph Hall was first elected in 1980 as a Democrat and has been re-elected each succeeding year. Hall has made a reputation for himself as a rogue Democrat, willing to "cross the aisle" and vote with Republicans when he agreed with their position. He also has been an avid supporter of President Bush, opposed to Democratic bids to unseat him. But it was more than mere ideological agreement that encouraged a decision to switch parties in early 2004 before his bid for reelection.

As Hall stated in a January 2004 press release that announced his decision to switch parties, "This year I was denied requests for district appropriations because I was a Democrat who voted against the bill. I have always stated that … if being a Democrat hurt my district, I would either resign or switch parties." The bill to which he was referring was a "foreign operations bill" which, according to Hall, gave, "financial support to those countries that continue to vote against [the U.S.] in the United Nations."

Another motivation may be found in Hall's appreciation for being spared a potentially career devastating blow in the redistricting that cost many Democrats their seats in 2003. According to a CNN article, "…Hall's move comes after Republican state lawmakers in Austin spared him in a redistricting map that targets every other Anglo Democrat in the House. His district, based in the city of Tyler, was largely untouched by the GOP-drawn map, which is currently facing a Democratic court challenge."

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

ETHICS BOWL COMPETITION SCHEDULE
DRAFT

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.
Registration information for all teams
Breakfast meeting with judges and moderators.

9:00 a.m Welcome

MORNING SESSIONS

9:30-10:30 Round I
Eight sessions with 2 teams competing

10:30-11 Break

11:00-12 Round II
Eight sessions with 2 teams competing
Eight teams advance to Round III

12-1 Lunch

AFTERNOON SESSIONS

1:00-2:00 Round III
Four sessions
Four teams advance

2:00-2:30 Break

3:30-4:30 Round IV
Two sessions
Two teams advance

4:30-5:00 Break

5:00-6:00 Championship Round

Note: For each session: Three-judge panel; a moderator and timer

- **RULES FOR THE NATIONAL CHAMPIONSHIP OF THE INTERCOLLEGIATE ETHICS BOWL (2007)**

PROCEDURAL RULES:

1. In an Ethics Bowl match each team will be questioned by a moderator on a case. On or about January 16, 2007 each team will receive fifteen (15) cases. Each of the cases will be 1 to 2 pages in length. The cases on which teams will be asked questions at the Ethics Bowl will be taken from these fifteen cases. The teams will not know in advance which of the cases they will be asked about at the Ethics Bowl or what the questions will be. JUDGES AND MODERATORS WILL ALSO RECEIVE THE FIFTEEN CASES ON OR ABOUT JANUARY 16, 2007. LIKE THE TEAMS, THEY WILL RECEIVE COPIES OF THE CASES BUT NOT COPIES OF THE QUESTIONS. THE JUDGES AND MODERATORS, LIKE THE TEAMS, WILL NOT BE INFORMED IN ADVANCE OF THE SPECIFIC CASES TEAMS WILL BE ASKED ABOUT AT THE ETHICS BOWL.
2. Teams can be any size but only 5 or fewer can be active participants at any time. Substitutions cannot be made once the initial 5 or fewer are seated and ready for action. Substitutions CANNOT be made once the case is announced. Team members must be undergraduates.
3. During competition books and notes will not be allowed, however, scrap paper to jot down thoughts is permissible. The teams will be given a copy of the case and the question to which they must respond.
4. The Moderator will indicate the case with which the team that goes first (hereinafter Team 1) will deal, and then read Team 1's question about the case. (The Moderator will not read aloud the entire case).
5. Team 1 will then have one minute to confer, after which one spokesperson for the team may use up to ten (10) minutes to respond to the Moderator's question.
6. The opposing team (hereinafter Team 2) receives one minute to confer, and then may use up to five minutes to comment about Team 1's answer to the Moderator's question. The commentary may include the posing of a question to Team 1. More than one team member may contribute to the commentary, but only one team member may speak at a time.
7. Team 1 receives one minute to confer and then may use up to five minutes to respond to Team 2's commentary. More than one team member may respond to the commentary, but only one team member may speak at a time.
8. The judges then may ask questions to Team 1. EACH JUDGE MAY ASK NO MORE THAN ONE QUESTION WITH A BRIEF FOLLOW-UP QUESTION. THE ENTIRE PERIOD FOR JUDGES QUESTIONS SHALL LAST NO MORE THAN TEN (10) MINUTES. Before asking questions the judges may confer with one another to discuss briefly areas that they want to cover during the question period. Different team members may respond to the questions of different judges. Teams may huddle briefly to discuss their answers to the judges' questions.
9. The judges will evaluate Team 1 and Team 2 on score sheets provided to them (see scoring rules below). AT THIS POINT, HOWEVER, THE JUDGES WILL NOT ANNOUNCE TO THE TEAMS THE SCORES THEY HAVE GIVEN THEM.
10. Team 1 and Team 2 will reverse roles for a second round with a different case.
11. At the close of the second round the Moderator will ask the judges to announce the teams' scores for the match (**see scoring rules below**).

SCORING RULES:

12. Judges shall evaluate the responses of teams solely in terms of the following criteria:

    Clarity and Intelligibility - Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

    Avoidance of Ethical Irrelevance: Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

    Identification and Discussion of Central Ethical Dimensions: Did the team's presentation clearly identify and thoroughly discuss the central ethical dimensions of the case?

    Deliberative Thoughtfulness: Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with the team's position?
13. The judges will score each team as follows:

    0-40 for a team's answer to the Moderator's question (40 best); In evaluating a team's answer the judges will give the team a score of 0-10 relative to each of the four evaluation criteria indicated above and total the sum.

    0-10 for the opposing team's commentary (10 best);

    0-10 for the response to the opposing team's commentary, and for the response to the judges questions, by the team that answered the Moderator's question (10 best).

    Both in evaluating a team's commentary, and the other team's response to the commentary, the judges will take into account the four evaluation criteria indicated above, but give the teams an overall score, rather than a separate point score relative to each of the criteria.
14. The top eight teams in the competition will be determined in the following way

    <u>Morning Competition:</u>

    Teams will be ranked based on a) the number of wins, followed by b) the number of ties, followed by c) the total points awarded by judges. Thus, all teams with three wins will rank ahead of all teams with two wins. All teams with two wins will rank ahead of all teams with one win. Within rankings, a team with more ties ranks above a team with fewer ties. Finally, for teams with the same number of wins and ties, a team with a higher point differential would rank above a team with a lower point differential.

For example:

TEAM	WINS	TIES	POINTS	RANK
School R	3 wins	0 ties	12 point differential	1st
School M	3 wins	0 ties	10 point differential	2nd
School B	2 wins	1 tie	15 point differential	3rd
School S	2 wins	0 ties	-8 point differential	4th
School H	1 win	2 ties	-6 point differential	5th

REGIONAL ETHICS BOWL RULES:

- **Rules variations in regional bowls:**

Regional bowls are expected to use the national bowl's rules, guidelines, and scoring rubric, with the following exceptions:

a. Regional bowls are not required to conduct a straight elimination match of the top scoring teams in the three morning matches, as provided for under the national rules. However, regional bowls must adopt scoring rules that enable them to rank teams from top to bottom.

b. Under certain conditions other alterations will be allowed, such as the following: Minor adjustments to timing and other rules are allowed without prior approval, but require notification to the IEB Executive Board, and, where appropriate, post-bowl reports about the effects of these adjustments. Preapproved variations include:

1. initial presentations may run from 7 to 12 minutes.
2. commentary on initial presentations may run from 5 to 8 minutes.
3. ratio of presenting team to opposing team scores may not exceed 5:1.
4. judges' Q&A need not be restricted to one Q and one follow-up;
5. Judges' Q&A may be expanded from 10 to 15 minutes.
6. response to commentary may be shortened in favor of lengthening the judges' Q&A period.
7. rules regarding the number of members of a team that may speak during any particular part of the round may be changed without prior consent.

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

***Please note: Most cases were derived from newspapers, Internet and book sources. We omitted citation information, but it is available upon request.**

- **RULES FOR THE NATIONAL CHAMPIONSHIP OF THE INTERCOLLEGIATE ETHICS BOWL (2007)**

PROCEDURAL RULES:

1. In an Ethics Bowl match each team will be questioned by a moderator on a case. On or about January 16, 2007 each team will receive fifteen (15) cases. Each of the cases will be 1 to 2 pages in length. The cases on which teams will be asked questions at the Ethics Bowl will be taken from these fifteen cases. The teams will not know in advance which of the cases they will be asked about at the Ethics Bowl or what the questions will be. JUDGES AND MODERATORS WILL ALSO RECEIVE THE FIFTEEN CASES ON OR ABOUT JANUARY 16, 2007. LIKE THE TEAMS, THEY WILL RECEIVE COPIES OF THE CASES BUT NOT COPIES OF THE QUESTIONS. THE JUDGES AND MODERATORS, LIKE THE TEAMS, WILL NOT BE INFORMED IN ADVANCE OF THE SPECIFIC CASES TEAMS WILL BE ASKED ABOUT AT THE ETHICS BOWL.
2. Teams can be any size but only 5 or fewer can be active participants at any time. Substitutions cannot be made once the initial 5 or fewer are seated and ready for action. Substitutions CANNOT be made once the case is announced. Team members must be undergraduates.
3. During competition books and notes will not be allowed, however, scrap paper to jot down thoughts is permissible. The teams will be given a copy of the case and the question to which they must respond.
4. The Moderator will indicate the case with which the team that goes first (hereinafter Team 1) will deal, and then read Team 1's question about the case. (The Moderator will not read aloud the entire case).
5. Team 1 will then have one minute to confer, after which one spokesperson for the team may use up to ten (10) minutes to respond to the Moderator's question.
6. The opposing team (hereinafter Team 2) receives one minute to confer, and then may use up to five minutes to comment about Team 1's answer to the Moderator's question. The commentary may include the posing of a question to Team 1. More than one team member may contribute to the commentary, but only one team member may speak at a time.
7. Team 1 receives one minute to confer and then may use up to five minutes to respond to Team 2's commentary. More than one team member may respond to the commentary, but only one team member may speak at a time.
8. The judges then may ask questions to Team 1. EACH JUDGE MAY ASK NO MORE THAN ONE QUESTION WITH A BRIEF FOLLOW-UP QUESTION. THE ENTIRE PERIOD FOR JUDGES QUESTIONS SHALL LAST NO MORE THAN TEN (10) MINUTES. Before asking questions the judges may confer with one another to discuss briefly areas that they want to cover during the question period. Different team members may respond to the questions of different judges. Teams may huddle briefly to discuss their answers to the judges' questions.
9. The judges will evaluate Team 1 and Team 2 on score sheets provided to them (see scoring rules below). AT THIS POINT, HOWEVER, THE JUDGES WILL NOT ANNOUNCE TO THE TEAMS THE SCORES THEY HAVE GIVEN THEM.
10. Team 1 and Team 2 will reverse roles for a second round with a different case.
11. At the close of the second round the Moderator will ask the judges to announce the teams' scores for the match (**see scoring rules below**).

SCORING RULES:

12. Judges shall evaluate the responses of teams solely in terms of the following criteria:

    Clarity and Intelligibility - Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

    Avoidance of Ethical Irrelevance: Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

    Identification and Discussion of Central Ethical Dimensions: Did the team's presentation clearly identify and thoroughly discuss the central ethical dimensions of the case?

    Deliberative Thoughtfulness: Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with the team's position?
13. The judges will score each team as follows:

    0-40 for a team's answer to the Moderator's question (40 best); In evaluating a team's answer the judges will give the team a score of 0-10 relative to each of the four evaluation criteria indicated above and total the sum.

    0-10 for the opposing team's commentary (10 best);

    0-10 for the response to the opposing team's commentary, and for the response to the judges questions, by the team that answered the Moderator's question (10 best).

    Both in evaluating a team's commentary, and the other team's response to the commentary, the judges will take into account the four evaluation criteria indicated above, but give the teams an overall score, rather than a separate point score relative to each of the criteria.
14. The top eight teams in the competition will be determined in the following way

    <u>Morning Competition:</u>

    Teams will be ranked based on a) the number of wins, followed by b) the number of ties, followed by c) the total points awarded by judges. Thus, all teams with three wins will rank ahead of all teams with two wins. All teams with two wins will rank ahead of all teams with one win. Within rankings, a team with more ties ranks above a team with fewer ties. Finally, for teams with the same number of wins and ties, a team with a higher point differential would rank above a team with a lower point differential.

For example:

TEAM	WINS	TIES	POINTS	RANK
School R	3 wins	0 ties	12 point differential	1st
School M	3 wins	0 ties	10 point differential	2nd
School B	2 wins	1 tie	15 point differential	3rd
School S	2 wins	0 ties	-8 point differential	4th
School H	1 win	2 ties	-6 point differential	5th

REGIONAL ETHICS BOWL RULES:

- **Rules variations in regional bowls:**

Regional bowls are expected to use the national bowl's rules, guidelines, and scoring rubric, with the following exceptions:

a. Regional bowls are not required to conduct a straight elimination match of the top scoring teams in the three morning matches, as provided for under the national rules. However, regional bowls must adopt scoring rules that enable them to rank teams from top to bottom.

b. Under certain conditions other alterations will be allowed, such as the following: Minor adjustments to timing and other rules are allowed without prior approval, but require notification to the IEB Executive Board, and, where appropriate, post-bowl reports about the effects of these adjustments. Preapproved variations include:

1. initial presentations may run from 7 to 12 minutes.
2. commentary on initial presentations may run from 5 to 8 minutes.
3. ratio of presenting team to opposing team scores may not exceed 5:1.
4. judges' Q&A need not be restricted to one Q and one follow-up;
5. Judges' Q&A may be expanded from 10 to 15 minutes.
6. response to commentary may be shortened in favor of lengthening the judges' Q&A period.
7. rules regarding the number of members of a team that may speak during any particular part of the round may be changed without prior consent.

For complete eligibility and rules go to the Ethics Bowl website:

ETHICS BOWL COMPETITION SCHEDULE
DRAFT

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.
Registration information for all teams
Breakfast meeting with judges and moderators.

9:00 a.m Welcome

MORNING SESSIONS

9:30-10:30 Round I
Eight sessions with 2 teams competing

10:30-11 Break

11:00-12 Round II
Eight sessions with 2 teams competing
Eight teams advance to Round III

12-1 Lunch

AFTERNOON SESSIONS

1:00-2:00 Round III
Four sessions
Four teams advance

2:00-2:30 Break

3:30-4:30 Round IV
Two sessions
Two teams advance

4:30-5:00 Break

5:00-6:00 Championship Round

Note: For each session: Three-judge panel; a moderator and timer

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

***Please note: Most cases were derived from newspapers, Internet and book sources. We omitted citation information, but it is available upon request.**

Lance:

Following up on our conversation last week, here is a copy of a communication (and attachments) we sent to all the judges in the Upper Midwest Regional Ethics Bowl last year, which may be useful as a model. Of course you could modify it any way that serves the purposes of the Mid Atlantic Regional Bowl. As you'll see, the communicatrion refers to a videotape and training guide. I'm sending both of those to you via UPS tomorrow.

I hope this will be helpful. Please don't hesitate to contact me if I can be of further assistance.

Bob

Dear Judges for the first Upper Midwest Regional Ethics Bowl (UMREB):

I have attached to this message the following materials concerning the first UMREB, which will take place on Saturday December 02, 2006 at Harper College in Palatine, Illinois

- Information concerning the Format and Rules of the first UMREB;
- Guidelines for judging;
- The Scoresheet judges will use at the first UMREB.

(In a separate communication, I'll send shortly, you'll receive directions to Harper College, and also a list of the thirteen schools that have entered teams in the first UMREB.

Please read the attached items carefully. First time participants will, I think, find them somewhat detailed, but, hopefully, clear. If after reading the attached items there are any points on which anyone would like further clarification, please do not hesitate to get in touch with me, or my fellow UMREB Co-Chairs, John Garcia (jgarcia_phil@yahoo.com),Dan Milsky (d-milsky@neiu.edu) and David Ozar (dozar@luc.edu). Furthermore, as indicated in the first of the attached items, there will be a breakfast/prepping session for judges on the morning of the first UMREB before the competition begins.

Also, by no later than November 20 we will send all the new judges a videotape of the final match of the Ninth Intercollegiate Ethics Bowl (IEB) (2003) along with a training guide, which tracks the sequence of events in the match. Our feedback from new judges in the Intercollegiate Ethics Bowl over the past several years indicates that these materials were quite useful to them. I'm requesting all the new (first-time) judges to send me a mailing address at which we can send the videotape and training guide to you.

Finally, to assist us in preparing the program for the first UMREB please send as soon as you are able to do so, your name and title as you would like it to appear in the program.

Thank you again for your interest in, and much appreciated support of the first Upper Midwest Regional Ethics Bowl. My fellow UMREB Co-Chairs and I look forward with great anticipation to seeing you on Saturday, December 02, 2006!

Yours truly,

Bob

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

TOTAL SCORE FOR TEAM

\+ \+ =

Total from Front | **Response to Commentary** | **Commentary on other team [from other** | **Total Score (maximum 60)**

Score sheet]

Judge's Guidelines

Reasonable disagreement
The ethical case studies are designed to address controversial issues about which intelligent, thoughtful people can reasonably disagree. The scores of the teams, therefore, should be based on the quality of their arguments, not on whether or not they adopted one position rather than another. The team that makes the strongest argument should win the most points. Moral decisions are made case by case based on applying critical thought to difficult situations. When evaluating teams, judges should not let whether or not they agree with the team's conclusion influence their assessment.

Research
Successful presentations should include a clear and detailed understanding of the facts given in the case. Since cases often involve details that are not general knowledge, research will often be necessary. Students should be prepared to identify sources of facts gained through independent research. While research is helpful, even necessary as a learning tool, judges should focus predominantly on the quality of arguments presented.

Presentation style
The focus of the ethics bowl is on the arguments the students provide. This means that judges must evaluate, <u>and only evaluate</u>, a team on aspects of its presentation that relate directly to the four criteria identified on the judge's score-sheet. Judges may not consider in their scoring other aspects of the team's presentation (e.g. the voice quality of presenters, whether they maintain eye contact with the judges, etc.)

Moral theories
Moral theories and other moral perspectives (such as professional codes) can be useful for drawing out what is ethically significant in a case. However, the mere mention of a moral theory or other moral perspective does not, by itself, strengthen the presentation.

Scoring note:
At the end of each round you should enter the following scores:
a) The presenting team's presentation score
b) The presenting team's response to commentary and judge's question score (this is one score)
c) The responding team's commentary score

FIRST UPPER MIDWEST REGIONAL ETHICS BOWL

FORMAT, PROCEDURAL RULES, SCORING RULES, AND

QUALIFYING RULES (FOR INTERCOLLEGIATE ETHICS BOWL NATIONAL CHAMPIONSHIP COMPETITON)

Format of the First Upper Midwest Regional Ethics Bowl

The first Upper Midwest Regional Ethics Bowl will take place on Saturday December 02, 2006 at Harper College in Palatine, Illinois. Participants (teams, judges, and moderators) will be able to check-in from 8:30 AM to 9:45 AM. From 9:00 AM to 9:45 AM there will be a breakfast/prepping session for the judges and moderators. From 10:00 AM to 10:25 AM all the participants (teams, judges, and moderators) will convene in a plenary session to review the format, and rules of the First Upper Midwest Regional Ethics Bowl.

Each team will compete in three matches, against a different team in each match. The first set of matches will take place from 10:30 AM to 11:35 AM. The second set of matches will take place from 11:45 AM to 12:50 PM. There will be a break fro lunch from 12:50 PM to 1:45 PM. The third set of matches will take place from 1:55 PM to 3:00 PM.

At 4:00 PM the two top scoring teams will be announced (**see below for the scoring rules of the First Upper Midwest Regional Ethics Bowl).**

The Final Match, between the two top scoring teams will take place from 4:30 PM to 5:35 PM.

Schedule

8:30 AM – 9:45 AM	Check – In
9:00 AM – 9:45 AM	Breakfast/Prepping Session for Judges and Moderators
10:00 AM – 10:25 AM	Plenary Session: Welcome; Review of Format and Rules

10:30 AM – 11:35 AM	First set of matches
11:45 AM – 12:50 PM	Second set of matches
12:50 PM – 1:45 PM	LUNCH
1: 55 PM – 3:00 PM	Third set of matches
4:00 PM	Announcement of Finalists
4:30 PM – 5:35 PM	Final Match
5:35 PM – 5:45 PM	Award Presentation/Conclusion

RULES OF THE FIRST UPPER MIDWEST REGIONAL ETHICS BOWL

PROCEDURAL RULES:

(1) In an Ethics Bowl match each team is questioned by a moderator on a case. Each case is 1 to 2 pages in length. The cases on which teams will be asked questions at the Ethics Bowl will be taken from fifteen cases which are posted on the Intercollegiate Ethics Bowl website (http://ethics.iit.edu/eb/Regional.html) The teams do not know in advance which of the cases they will be asked about at the Ethics Bowl or what the questions will be. THE JUDGES AND MODERATORS, LIKE THE TEAMS, WILL NOT BE INFORMED IN ADVANCE OF THE SPECIFIC CASES TEAMS WILL BE ASKED ABOUT AT THE UPPER MIDWEST REGIONAL ETHICS BOWL

(2) Teams can be any size but only 5 or fewer can be active participants at any time. Substitutions cannot be made once the initial 5 or fewer are seated and ready for action. Substitutions CANNOT be made once the case is announced. Team members must be undergraduates.

(3) During competition books and notes will not be allowed, however, scrap paper to jot down thoughts is permissible. The teams will be given a copy of the case and the question to which they must respond.

(4) The Moderator will indicate the case with which the team that goes first (hereinafter Team 1) will deal, and then read Team 1's question about the case. (The Moderator will not read aloud the entire case).

(5) Team 1 will then have one minute to confer, after which one spokesperson for the team may use up to seven (7) minutes to respond to the Moderator's question.

(6) The opposing team (hereinafter Team 2) receives one minute to confer, and then may use up to five minutes to comment about Team 1's answer to the Moderator's question. The commentary may include the posing of a question to Team 1. More than one team member may contribute to the commentary, but only one team member may speak at a time.

(7) Team 1 receives one minute to confer and then may use up to five minutes to respond to Team 2's commentary. More than one team member may respond to the commentary, but only one team member may speak at a time.

(8) The judges then may ask questions to Team 1. EACH JUDGE MAY ASK NO MORE THAN ONE QUESTION WITH A BRIEF FOLLOW-UP QUESTION. THE ENTIRE PERIOD FOR JUDGES QUESTIONS SHALL LAST NO MORE THAN TEN (10) MINUTES. Before asking questions the judges may confer with one another to discuss briefly areas that they want to cover during the question period. Different team members may respond to the questions of different judges. Teams may huddle briefly to discuss their answers to the judges questions.

(9) The judges will evaluate Team 1 and Team 2 on score sheets provided to them **(see scoring rules below)**. AT THIS POINT, HOWEVER, THE JUDGES WILL NOT ANNOUNCE TO THE TEAMS THE SCORES THEY HAVE GIVEN THEM.

(10) Team 1 and Team 2 will reverse roles for a second round with a different case.

(11) At the close of the second round the Moderator will ask the judges to announce the teams' scores for the match **(see scoring rules below)**.

SCORING RULES:

1. Judges shall evaluate the responses of teams solely in terms of the following criteria:

   Clarity and Intelligibility - Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

   Avoidance of Ethical Irrelevance: Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

   Identification and Discussion of Central Ethical Dimensions: Did the team's presentation clearly identify and thoroughly discuss the central ethical dimensions of the case?

   Deliberative Thoughtfulness: Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that

would loom large in the reasoning of individuals who disagree with the team's position?

2. The judges will score each team as follows:

   0-40 for a team's answer to the Moderator's question, including how well the team addressed the judges' questions (40 best); In evaluating a team's answer the judges will give the team a score of 0-10 relative to each of the four evaluation criteria indicated above and total the sum.

   0-10 for the opposing team's commentary (10 best);

   0-10 for the response to the commentary by the team that answered the Moderator's question (10 best).

   Both in evaluating a team's commentary, and the other team's response to the commentary, the judges will take into account the four evaluation criteria indicated above, but give the teams an overall score, rather than a separate point score relative to each of the criteria.

3. The competing teams in the Upper Midwest Regional Ethics Bowl will be rank-ordered in the following manner:

   Teams will be ranked based on a) the number of wins, followed by b) the number of ties, followed by c) the total points awarded by judges. Thus, all teams with three wins will rank ahead of all teams with two wins. All teams with two wins will rank ahead of all teams with one win. Within rankings, a team with more ties ranks above a team with fewer ties. Finally, for teams with the same number of wins and ties, a team with a higher point differential would rank above a team with a lower point differential. For example:

TEAM	WINS	TIES	POINTS	RANK
School R	3 wins	0 ties	12 point differential	1st
School M	3 wins	0 ties	10 point differential	2nd
School B	2 wins	1 tie	15 point differential	3rd
School S	2 wins	0 ties	-8 point differential	4th
School H	1 win	2 ties	-6 point differential	5th

Note, for example that School B has a greater point differential than School M, and School H has a lower negative point differential than School S. Nonetheless, M ranks ahead of B because it has more wins, and, likewise, S ranks ahead of H.

Point differentials: Point differentials are the margin of victory or loss. A point differential for each match is determined by taking the team's total points and subtracting the other team's total. Note that point differentials will be negative in the case of a loss. At the end of the morning competition the point differential for a team is simply the sum of the point differentials for that team in each of its three morning matches.

The 2 teams with the highest ranking based in their three matches will compete for the UMREB championship. The 4 teams with the highest rankings in their three matches will qualify for the National Championship of the Intercollegiate Ethics Bowl.

Ties

1) If 2 teams have the same ranking then if they played against each other during the three rounds of play, whoever won that competition will win gain the higher ranking.

2) The method in number 1) above will also apply to a 3 (or more) way tie in ranking, just in case all teams played each other and transitivity holds (e.g. A beat B, B beat C, but C did not beat A).

3) In case numbers 1) and 2) do not determine a winner, then raw points will be used to determine a winner.

4) Finally, if 1-3 above fail, an impartial random process will determine the final outcome between the teams. In case 2 teams are still tied, a coin toss will be used. If more than 2 teams still remain, the high card drawn from a standard deck of playing cards will decide. This process will be repeated until the outcome is decided.

QUALIFYING FULES (FOR INTERCOLLEGIATE ETHICS BOWL (IEB) NATIONAL CHAMPIONSHIP COMPETITION)

1. Qualifying Rule Restriction for Linked Teams: If any of a group of linked* teams from a single school qualifies for the IEB National Championship Competition, a single team may be formed with members of any teams in the group, but only one space may be earned to take part in the IEB National Championship Competition, no matter how well the linked teams perform at the Upper Midwest Regional Ethics Bowl. If teams from a single school are unlinked**, however, each team is independently eligible to qualify for the IEB National Championship Competition, but members may not be switched from one team to another.

2. Subject to restriction indicated immediately above, the top scoring four teams in the Upper Midwest Regional Ethics Bowl will qualify for the IEB National Championship Competition.

3. If any of the top scoring four teams decline to take part in the IEB National Championship competition another team will be invited to do so, starting with the fifth highest scoring team and proceeding downward until a team accepts the invitation.

* Linked teams are closely connected – e.g. the same faculty sponsor, preparation together in the same class or ethics bowl club, or participation in the same intramural ethics bowl, etc.

** Unlinked teams are those without major connections – e.g. consisting, respectively, of students from different colleges within a university, with different courses of study, etc.

.

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

Subject: National Conference on Ethics in America/Ethics Bowl
Attach: Ethics Bowl description.doc

Dear Chancellor Moeser,
Each year West Point hosts a National Conference on Ethics in America. We have been asked to send delegates to this conference this year. Delegates are undergraduate students who participate in a 4-day conference with about 200 undergraduates from universities across the country, along with faculty and community speakers. This information was passed on to me as Director of the Parr Center for Ethics, and I would like sponsor two students from UNC to participate. . The conference objective is for students to learn from others about ethical issues that affect their lives as undergraduates both in the university and the community in which they live, and then return to share this knowledge with their own schools. I am writing to seek your support in sending delegates and also to seek funding for travel expenses for the two students.

Also, the Parr Center for Ethics is hosting the first Mid-Atlantic Regional Ethics Bowl competition on November 17, 2007, tentatively scheduled to begin at 9:30 a.m.. The regional will bring16 teams from various Mid-Atlantic universities. The teams will be judged on their presentations of coherent arguments. The judges will include faculty from many different departments, likely selected from our Parr Faculty Fellows, the present mayor of Chapel Hill, two former mayors, including Howard Lee, and other community leaders. The regional competitions select teams to then compete in the National Ethics Bowl competition in February. As this is a significant event, we would like to invite you to give a welcoming address to all the participants and judges. I have attached a description of the Ethics Bowl for your information.

Thank you for your consideration. I would be happy to meet with you to discuss either or both of these.

Regards,
Jan

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

After encountering a dying pilgrim on a climbing trip in the Himalayas, a businessman ponders the differences between individual and corporate ethics

The parable of the sadhu

Bowen H. McCoy

It was early in the morning before the sun rose, which gave them time to climb the treacherous slope to the pass at 18,000 feet before the ice steps melted. They were also concerned about their stamina and altitude sickness, and felt the need to press on. Into this chance collection of climbers on that Himalayan slope an ethical dilemma arose in the guise of an unconscious, almost naked sadhu, an Indian holy man. Each climber gave the sadhu help but none made sure he would be safe. Should somebody have stopped to help the sadhu to safety? Would it have done any good? Was the group responsible? Since leaving the sadhu on the mountain slope, the author, who was one of the climbers, has pondered these issues. He sees many parallels for business people as they face ethical decisions at work.

Mr. McCoy is a managing director of Morgan Stanley & Co., Inc., and president of Morgan Stanley Realty, Inc. He is also an ordained ruling elder of the United Presbyterian Church.

Illustration by Geoffrey Moss.

Last year, as the first participant in the new six-month sabbatical program that Morgan Stanley has adopted, I enjoyed a rare opportunity to collect my thoughts as well as do some traveling. I spent the first three months in Nepal, walking 600 miles through 200 villages in the Himalayas and climbing some 120,000 vertical feet. On the trip my sole Western companion was an anthropologist who shed light on the cultural patterns of the villages we passed through.

During the Nepal hike, something occurred that has had a powerful impact on my thinking about corporate ethics. Although some might argue that the experience has no relevance to business, it was a situation in which a basic ethical dilemma suddenly intruded into the lives of a group of individuals. How the group responded I think holds a lesson for all organizations no matter how defined.

The sadhu

The Nepal experience was more rugged and adventuresome than I had anticipated. Most commercial treks last two or three weeks and cover a quarter of the distance we traveled.

My friend Stephen, the anthropologist, and I were halfway through the 60-day Himalayan part of the trip when we reached the high point, an 18,000-foot pass over a crest that we'd have to traverse to reach to the village of Muklinath, an ancient holy place for pilgrims.

Six years earlier I had suffered pulmonary edema, an acute form of altitude sickness, at 16,500 feet in the vicinity of Everest base camp, so we were understandably concerned about what would

happen at 18,000 feet. Moreover, the Himalayas were having their wettest spring in 20 years; hip-deep powder and ice had already driven us off one ridge. If we failed to cross the pass, I feared that the last half of our "once in a lifetime" trip would be ruined.

The night before we would try the pass, we camped at a hut at 14,500 feet. In the photos taken at that camp, my face appears wan. The last village we'd passed through was a sturdy two-day walk below us, and I was tired.

During the late afternoon, four backpackers from New Zealand joined us, and we spent most of the night awake, anticipating the climb. Below we could see the fires of two other parties, which turned out to be two Swiss couples and a Japanese hiking club.

To get over the steep part of the climb before the sun melted the steps cut in the ice, we departed at 3:30 A.M. The New Zealanders left first, followed by Stephen and myself, our porters and Sherpas, and then the Swiss. The Japanese lingered in their camp. The sky was clear, and we were confident that no spring storm would erupt that day to close the pass.

At 15,500 feet, it looked to me as if Stephen were shuffling and staggering a bit, which are symptoms of altitude sickness. (The initial stage of altitude sickness brings a headache and nausea. As the condition worsens, a climber may encounter difficult breathing, disorientation, aphasia, and paralysis.) I felt strong, my adrenaline was flowing, but I was very concerned about my ultimate ability to get across. A couple of our porters were also suffering from the height, and Pasang, our Sherpa sirdar (leader), was worried.

Just after daybreak, while we rested at 15,500 feet, one of the New Zealanders, who had gone ahead, came staggering down toward us with a body slung across his shoulders. He dumped the almost naked, barefoot body of an Indian holy man – a sadhu – at my feet. He had found the pilgrim lying on the ice, shivering and suffering from hypothermia. I cradled the sadhu's head and laid him out on the rocks. The New Zealander was angry. He wanted to get across the pass before the bright sun melted the snow. He said, "Look, I've done what I can. You have porters and Sherpa guides. You care for him. We're going on!" He turned and went back up the mountain to join his friends.

I took a carotid pulse and found that the sadhu was still alive. We figured he had probably visited the holy shrines at Muklinath and was on his way home. It was fruitless to question why he had chosen this desperately high route instead of the safe, heavily traveled caravan route through the Kali Gandaki gorge. Or why he was almost naked and with no shoes, or how long he had been lying in the pass. The answers weren't going to solve our problem.

Stephen and the four Swiss began stripping off outer clothing and opening their packs. The sadhu was soon clothed from head to foot. He was not able to walk, but he was very much alive. I looked down the mountain and spotted below the Japanese climbers marching up with a horse.

Without a great deal of thought, I told Stephen and Pasang that I was concerned about withstanding the heights to come and wanted to get over the pass. I took off after several of our porters who had gone ahead.

On the steep part of the ascent where, if the ice steps had given way, I would have slid down about 3,000 feet, I felt vertigo. I stopped for a breather, allowing the Swiss to catch up with me. I inquired about the sadhu and Stephen. They said that the sadhu was fine and that Stephen was just behind. I set off again for the summit.

Stephen arrived at the summit an hour after I did. Still exhilarated by victory, I ran down the snow slope to congratulate him. He was suffering from altitude sickness, walking 15 steps, then stopping, walking 15 steps, then stopping. Pasang accompanied him all the way up. When I reached them, Stephen glared at me and said: "How do you feel about contributing to the death of a fellow man?"

I did not fully comprehend what he meant.

"Is the sadhu dead?" I inquired.

"No," replied Stephen, "but he surely will be!"

After I had gone, and the Swiss had departed not long after, Stephen had remained with the sadhu. When the Japanese had arrived, Stephen had asked to use their horse to transport the sadhu down to the hut. They had refused. He had then asked Pasang to have a group of our porters carry the sadhu. Pasang had resisted the idea, saying that the porters would have to exert all their energy to get themselves over the pass. He had thought they could not carry a man down 1,000 feet to the hut, reclimb the slope, and get across safely before the snow melted. Pasang had pressed Stephen not to delay any longer.

The Sherpas had carried the sadhu down to a rock in the sun at about 15,000 feet and had pointed out the hut another 500 feet below. The Japanese had given him food and drink. When they had last seen him he was listlessly throwing rocks at the Japanese party's dog, which had frightened him.

We do not know if the sadhu lived or died.

For many of the following days and evenings Stephen and I discussed and debated our behavior toward the sadhu. Stephen is a committed Quaker with deep moral vision. He said, "I feel that what happened with the sadhu is a good example of the breakdown between the individual ethic and the corporate ethic. No one person was willing to assume ultimate responsibility for the sadhu. Each was willing to do his

bit just so long as it was not too inconvenient. When it got to be a bother, everyone just passed the buck to someone else and took off. Jesus was relevant to a more individualistic stage of society, but how do we interpret his teaching today in a world filled with large, impersonal organizations and groups?"

I defended the larger group, saying, "Look, we all cared. We all stopped and gave aid and comfort. Everyone did his bit. The New Zealander carried him down below the snow line. I took his pulse and suggested we treat him for hypothermia. You and the Swiss gave him clothing and got him warmed up. The Japanese gave him food and water. The Sherpas carried him down to the sun and pointed out the easy trail toward the hut. He was well enough to throw rocks at a dog. What more could we do?"

"You have just described the typical affluent Westerner's response to a problem. Throwing money – in this case food and sweaters – at it, but not solving the fundamentals!" Stephen retorted.

"What would satisfy you?" I said. "Here we are, a group of New Zealanders, Swiss, Americans, and Japanese who have never met before and who are at the apex of one of the most powerful experiences of our lives. Some years the pass is so bad no one gets over it. What right does an almost naked pilgrim who chooses the wrong trail have to disrupt our lives? Even the Sherpas had no interest in risking the trip to help him beyond a certain point."

Stephen calmly rebutted, "I wonder what the Sherpas would have done if the sadhu had been a well-dressed Nepali, or what the Japanese would have done if the sadhu had been a well-dressed Asian, or what you would have done, Buzz, if the sadhu had been a well-dressed Western woman?"

"Where, in your opinion," I asked instead, "is the limit of our responsibility in a situation like this? We had our own well-being to worry about. Our Sherpa guides were unwilling to jeopardize us or the porters for the sadhu. No one else on the mountain was willing to commit himself beyond certain self-imposed limits."

Stephen said, "As individual Christians or people with a Western ethical tradition, we can fulfill our obligations in such a situation only if (1) the sadhu dies in our care, (2) the sadhu demonstrates to us that he could undertake the two-day walk down to the village, or (3) we carry the sadhu for two days down to the village and convince someone there to care for him."

"Leaving the sadhu in the sun with food and clothing, while he demonstrated hand-eye coordination by throwing a rock at a dog, comes close to fulfilling items one and two," I answered. "And it wouldn't have made sense to take him to the village where the people appeared to be far less caring than the Sherpas, so the third condition is impractical. Are you really saying that, no matter what the implications, we should, at the drop of a hat, have changed our entire plan?"

The individual vs. the group ethic

Despite my arguments, I felt and continue to feel guilt about the sadhu. I had literally walked through a classic moral dilemma without fully thinking through the consequences. My excuses for my actions include a high adrenaline flow, a superordinate goal, and a once-in-a-lifetime opportunity – factors in the usual corporate situation, especially when one is under stress.

Real moral dilemmas are ambiguous, and many of us hike right through them, unaware that they exist. When, usually after the fact, someone makes an issue of them, we tend to resent his or her bringing it up. Often, when the full import of what we have done (or not done) falls on us, we dig into a defensive position from which it is very difficult to emerge. In rare circumstances we may contemplate what we have done from inside a prison.

Had we mountaineers been free of physical and mental stress caused by the effort and the high altitude, we might have treated the sadhu differently. Yet isn't stress the real test of personal and corporate values? The instant decisions executives make under pressure reveal the most about personal and corporate character.

Among the many questions that occur to me when pondering my experience are: What are the practical limits of moral imagination and vision? Is there a collective or institutional ethic beyond the ethics of the individual? At what level of effort or commitment can one discharge one's ethical responsibilities?

Not every ethical dilemma has a right solution. Reasonable people often disagree; otherwise there would be no dilemma. In a business context, however, it is essential that managers agree on a process for dealing with dilemmas.

The sadhu experience offers an interesting parallel to business situations. An immediate response was mandatory. Failure to act was a decision in itself. Up on the mountain we could not resign and submit our résumés to a headhunter. In contrast to philosophy, business involves action and implementation – getting things done. Managers must come up with answers to problems based on what they see and what they allow to influence their decision-making processes. On the mountain, none of us but

Stephen realized the true dimensions of the situation we were facing.

One of our problems was that as a group we had no process for developing a consensus. We had no sense of purpose or plan. The difficulties of dealing with the sadhu were so complex that no one person could handle it. Because it did not have a set of preconditions that could guide its action to an acceptable resolution, the group reacted instinctively as individuals. The cross-cultural nature of the group added a further layer of complexity. We had no leader with whom we could all identify and in whose purpose we believed. Only Stephen was willing to take charge, but he could not gain adequate support to care for the sadhu.

Some organizations do have a value system that transcends the personal values of the managers. Such values, which go beyond profitability, are usually revealed when the organization is under stress. People throughout the organization generally accept its values, which, because they are not presented as a rigid list of commandments, may be somewhat ambiguous. The stories people tell, rather than printed materials, transmit these conceptions of what is proper behavior.

For 20 years I have been exposed at senior levels to a variety of corporations and organizations. It is amazing how quickly an outsider can sense the tone and style of an organization and the degree of tolerated openness and freedom to challenge management.

Organizations that do not have a heritage of mutually accepted, shared values tend to become unhinged during stress, with each individual bailing out for himself. In the great takeover battles we have witnessed during past years, companies that had strong cultures drew the wagons around them and fought it out, while other companies saw executives supported by their golden parachutes, bail out of the struggles.

Because corporations and their members are interdependent, for the corporation to be strong the members need to share a preconceived notion of what is correct behavior, a "business ethic," and think of it as a positive force, not a constraint.

As an investment banker I am continually warned by well-meaning lawyers, clients, and associates to be wary of conflicts of interest. Yet if I were to run away from every difficult situation, I wouldn't be an effective investment banker. I have to feel my way through conflicts. An effective manager can't run from risk either; he or she has to confront and deal with risk. To feel "safe" in doing this, managers need the guidelines of an agreed-on process and set of values within the organization.

After my three months in Nepal, I spent three months as an executive-in-residence at both Stanford Business School and the Center for Ethics and Social Policy at the Graduate Theological Union at Berkeley. These six months away from my job gave me time to assimilate 20 years of business experience. My thoughts turned often to the meaning of the leadership role in any large organization. Students at the seminary thought of themselves as antibusiness. But when I questioned them they agreed that they distrusted all large organizations, including the church. They perceived all large organizations as impersonal and opposed to individual values and needs. Yet we all know of organizations where peoples' values and beliefs are respected and their expressions encouraged. What makes the difference? Can we identify the difference and, as a result, manage more effectively?

The word "ethics" turns off many and confuses more. Yet the notions of shared values and an agreed-on process for dealing with adversity and change – what many people mean when they talk about corporate culture – seem to be at the heart of the ethical issue. People who are in touch with their own core beliefs and the beliefs of others and are sustained by them can be more comfortable living on the cutting edge. At times, taking a tough line or a decisive stand in a muddle of ambiguity is the only ethical thing to do. If a manager is indecisive and spends time trying to figure out the "good" thing to do, the enterprise may be lost.

Business ethics, then, has to do with the authenticity and integrity of the enterprise. To be ethical is to follow the business as well as the cultural goals of the corporation, its owners, its employees, and its customers. Those who cannot serve the corporate vision are not authentic business people and, therefore, are not ethical in the business sense.

At this stage of my own business experience I have a strong interest in organizational behavior. Sociologists are keenly studying what they call corporate stories, legends, and heroes as a way organizations have of transmitting the value system. Corporations such as Arco have even hired consultants to perform an audit of their corporate culture. In a company, the leader is the person who understands, interprets, and manages the corporate value system. Effective managers are then action-oriented people who resolve conflict, are tolerant of ambiguity, stress, and change, and have a strong sense of purpose for themselves and their organizations.

If all this is true, I wonder about the role of the professional manager who moves from company to company. How can he or she quickly absorb the values and culture of different organizations? Or is there, indeed, an art of management that is totally transportable? Assuming such fungible managers do exist, is it proper for them to manipulate the values of others?

What would have happened had Stephen and I carried the sadhu for two days back to the village and become involved with the villagers in

his care? In four trips to Nepal my most interesting experiences occurred in 1975 when I lived in a Sherpa home in the Khumbu for five days recovering from altitude sickness. The high point of Stephen's trip was an invitation to participate in a family funeral ceremony in Manang. Neither experience had to do with climbing the high passes of the Himalayas. Why were we so reluctant to try the lower path, the ambiguous trail? Perhaps because we did not have a leader who could reveal the greater purpose of the trip to us.

Why didn't Stephen with his moral vision opt to take the sadhu under his personal care? The answer is because, in part, Stephen was hard-stressed physically himself, and because, in part, without some support system that involved our involuntary and episodic community on the mountain, it was beyond his individual capacity to do so.

I see the current interest in corporate culture and corporate value systems as a positive response to Stephen's pessimism about the decline of the role of the individual in large organizations. Individuals who operate from a thoughtful set of personal values provide the foundation for a corporate culture. A corporate tradition that encourages freedom of inquiry, supports personal values, and reinforces a focused sense of direction can fulfill the need for individuality along with the prosperity and success of the group. Without such corporate support, the individual is lost.

That is the lesson of the sadhu. In a complex corporate situation, the individual requires and deserves the support of the group. If people cannot find such support from their organization, they don't know how to act. If such support is forthcoming, a person has a stake in the success of the group, and can add much to the process of establishing and maintaining a corporate culture. It is management's challenge to be sensitive to individual needs, to shape them, and to direct and focus them for the benefit of the group as a whole.

For each of us the sadhu lives. Should we stop what we are doing and comfort him; or should we keep trudging up toward the high pass? Should I pause to help the derelict I pass on the street each night as I walk by the Yale Club en route to Grand Central Station? Am I his brother? What is the nature of our responsibility if we consider ourselves to be ethical persons? Perhaps it is to change the values of the group so that it can, with all its resources, take the other road.

Subject: INFORMATIONAL: Child actors needed for video

Physician in the UNC Dept of Pediatrics is filming a series of videos on the topic of pediatrician communication about child weight status and nutrition and physical activity habits. If you have a child between the ages of 3 and 8 who would enjoy being a part of the filming process, please see details below.

We are specifically looking for:

Two children between the ages of 3 and 8 who are Caucasian.

We need two children who would be considered at least somewhat above average weight for their age and height.

Children do not need to have any prior acting experience. Your child will not be asked to memorize lines. Great care will be taken to make sure your child feels comfortable.

Child will play the role of a child visiting the pediatrician's office with his/her mother.

Expected time commitment is 1-2 hours. We will work to meet your schedule as much as possible and avoid school days if necessary.

Family will receive $50 for time commitment.

If you and your child might be interested, please send email to jfinkle@unc.edu or call 966-3849 for more information.

This email is sponsored by: Department of Pediatrics

==========
"INFORMATIONAL:" email will only be sent to those who have indicated that they do want to receive mass email. To set your informational mass email preference, logon to the on-line directory web site at https://dir.unc.edu/dir/update.

---

Hi Jan

Here is a draft for ethics training - Please share with your group for comments. I have included the results of the survey for the week. I think it is going to be critical we find a way to integrate the value and expertise the Parr Center brings to the training with the actual expertise and experience faculty have on the various issues. Once you have digested the survey results and the draft can I stop by for a quick chat with you and your group if you like on how best to move forward based on the lessons learned from this years training.

Pat

Proposal for Biomedical Research Ethics Training for Graduate Students and Postdoctoral Scholars at the University of North Carolina at Chapel Hill

OBJECTIVES

Provide a basic overview of biomedical research ethics at the beginning of a graduate student's career.

Provide real-time ethics training – present topics during a graduate student's and/or postdoctoral scholar's career when they are relevant.

Provide continuous ethics training through-out a graduate students and/or postdoctoral scholar's academic career.

Create ethics training that is engaging, interactive and continuously improved.

Introduce interdisciplinary views into the ethics training curriculum by including Parr Center Fellows from philosophy, sociology, law, business and other disciplines outside of biomedical research.

Integrate ethics expertise in addition to viewpoints into the ethics training curriculum by partnering with the Parr Center for Ethics

Encourage Postdoctoral Scholars to assume responsibility for their own ethics training by providing opportunities to lead case study discussions, lead workshops or organize panel discussions and seminars on biomedical ethics.

Create a culture within the school of medicine basic science departments that promotes the importance of ethical issues and fosters open discussions among faculty, students and staff.

PROGRAM STRATEGY

<u>Graduate Student Orientation</u>

All graduate students will be required to attend a two hour workshop that will cover the basis of ethical decision making, plagiarism and research misconduct.

<u>Host monthly lunch and learn series for research bioethics</u>

<u>Host special events like symposiums, invited speakers or movies followed by discussions that address the key biomedical research ethics topics.</u>

Graduate students will be required to attend a session related to each of the following topics during their graduate career.

1. New Scientific Discoveries

2. Research Data, Acquisition, Management, Sharing and Ownership
3. Publication Practices
4. Mentor and Mentee Relationships
5. Peer review process for publications and grants
6. Ethical treatment of research animals
7. Collaborative Research
8. Conflict of Interest and Intellectual Property Rights
9. Ethical Decision Making Skills
10. Plagiarism
11. International Research
12. Scientific Integrity and the scientific method

Provide opportunities for postdoctoral fellows to enhance their ethics training

Encourage postdoctoral fellows to actively engage in the ethics training process by either organizing special events, suggesting case studies for lunch and learn sessions, leading case study discussions at lunch and learn sessions, leading case study discussion at graduate student orientation training, or working with faculty to host a lunch and learn session.

Recruit and coordinate an annual ethics training committee of postdoctoral scholars that set the training agenda for the academic year.

Evaluations

Collect participant survey data at each session or event and integrate recommended changes into next years training.

Biomedical Ethics Training, August 27th - August 31st, 2007
University of North Carolina at Chapel Hill School of Medicine and Parr Center for Ethics

Rating	Session	Speakers
7.7/6.8	The Ethics of New Scientific Discoveries – Research, Social and Legal Implications of Stem Cell Research	James Evans, Associate Professor, Genetics and Molecular Biology Kimberly Cogdell, Professor, Biochemistry and Pharmaceutical Law Institute Gail Henderson, Professor of Social Medicine Rebecca Walker, Assistant Professor of Social Medicine and Adjunct Assistant Professor of Philosophy
7.1/5.2	Ethical Decision Making	Jan Boxil, Director, The Parr Center for Ethics
7.3/7.3	Ethics and Plagerism	Kimryn Rathmell, Assistant Professor of Oncology and Hematology
7.3/.6.9	The Ethics of Research Data - Acquisition, Management, Sharing and Ownership	Kelly Sivertson, Post Doctoral Fellow, Cystic Fibrosis and Pulmonary Research
7.3/6.5	Collaborative Science - Ethical Dilemmas	Doug Cyr, Professor Cell and Developmental Biology Con Beckers, Associate Professor, Cell and Developmental Biology Henrik Dohlman, Professor, Biochemistry and Biophysics
6.7/7.2	The Interrelationship of Diversity and Workplace Ethics	Cookie Newsome, Director, Center for Multicultural Affairs and Diversity Terri Phoenix, Director, GLBTQ Center
7.5/7.1	Ethical Publication Practices	Ellen Weiss, Associate Professor, Cell and Developmental Biology
6.8/6.3	Ethical Treatment of Research Animals	Tracy Heenan, Research Associate Professor, Pathology, Director, Office of Institutional Animal Care and Use Dr. Lesley Marson (Ph.D. Department Surgery) and Chair of the IACUC
7.0/7.0	Ethical Issues that Arise in Mentor and Mentee Relationships	Pat Brennwald, Associate Professor, Cell and Developmental Biology Bill Coleman, Associate Professor, Pathology and Laboratory Medicine Tom Traut, Professor, Biochemistry and Biophysics
7.8/8.5	Ethical Issues that arise in Peer Review of Grants and Publications	Dr. David Siderovski, Associate Professor, Pharmacology
7.7/7.2	Research Misconduct	David Weber, Associate Professor, School of Medicine and Associate Professor Epidemiology
What format or aspect of the ethics training did graduate students prefer		
5.9	Case Study Discussions	
8.0	Audience Response System	
6.4	Faculty Panels	
7.3	Interacting with PostDocs	
6.6	Presentations	

Rating – 1st mean represents if the participants gained and increased understanding of that subject and the 2nd number represents if the participants found the session engaging and informative.

Sandra,
For this course we need is a 1-hour course, like the one I had with the Ethics Scholars. Is that a problem? I told Doug I thought this was relatively easy to do.

Are you a smoker between the ages of 35 and 75 that is motivated to quit smoking?

If so, you may qualify for a research study of an investigational drug to stop smoking. During the course of the study, you will receive study medication and smoking cessation counseling at no cost to you. Also at no cost, you will be given routine medical examinations that may include pulmonary function tests, blood tests, urine tests, and electrocardiograms (ECG's).

You will be compensated for your time and effort for participating in this clinical trial.

If you are interested in participating in this research study please call Sharikia Burt at 919-843-6101 or email sharikia_burt@med.unc.edu.

I replied to this person, but perhaps you can verify that some awards allows for this, but not those that require the person to be teaching in the year of the award.
Thanks,
Jan

TIBBS NEWSLETTER

OCTOBER 2007

LEARN MORE ABOUT INDUSTRY POSTDOCTORAL FELLOWSHIPS

TIBBS WELCOMES

Dr. Charles Dean, Principal Investigator in Genome and Proteome Sciences

Dr. Andreas Bender, Presidential Postdoctoral fellow whose research involves prediction of targets for small molecules and natural products, and development of new methods for virtual screening.

Dr. Leslie Pond, Scientific Education Manager

NOVARTIS INSTITUTE FOR BIOMEDICAL RESEARCH

Wednesday
OCTOBER 17th
1:00 pm
G030 Bondurant Hall

Leslie, Charles and Andreas will talk about Novartis' Presidential Postdoctoral Fellowship Program and how an industry postdoc differs from an academic postdoc. The Presidential Postdoctoral Fellow Program provides talented scientists with a unique opportunity to perform high quality science in an environment with the resources of a large pharmaceutical company at one of our global sites in Basel, Switzerland; Cambridge, USA; Horsham, UK; or Vienna, Austria. Each year, innovative scientists from academia are selected to become fellows and collaborate with leading pharmaceutical discovery scientists pursuing multidisciplinary research projects. Together, they can apply their expertise to discovering new medicines that will help patients lead healthier lives.

Registration is limited

HTTP://CFX.RESEARCH.UNC.EDU/RES_CLASSREG/BROWSE_SINGLE.CFM?NEW=1&EVENT_ID=21258

TIBBS American Heart Association Predoctoral Fellowship Workshop Series

American Heart Association®

Learn and Live.

Application Deadline is 1/11/2008
Award Activation is 7/1/2008
For more information

http://www.americanheart.org/presenter.jhtml?identifier=3050176

The workshop series will be led by Carol Winkelman. Carol has over 15 years experience of grant writing, medical writing and editing. She teaches grant writing to postdocs and junior faculty at NIH, Memorial Sloan Kettering Cancer Center, Harvard Medical School,

Carol teaches researchers how to effectively "craft" or shape the scientific content of the abstract, aims, preliminary data, and background and significance sections of their grants. The goal of her workshops is to teach strategies for writing clear, compelling, and persuasive arguments or "stories" that drive home to reviewers why the research is significant and worthy of funding Graduate students at UNC-CH have provided fellowship proposals that were funded and not funded to use through-out the workshop series. The series will combine peer review, individual reviews by Carol, faculty input and input from graduate students that have received AHA fellowships. The series will begin in October and the timing will be based on the participants schedules.

Registration is limited

http://cfx.research.unc.edu/res_classreg/browse_single.cfm?New=1&event_id=21257

TIBBS OCTOBER WORKSHOPS

Scientific Writing with Dr, Pam Hurley

This workshop is designed for graduate students who are currently working on a scientific paper, an abstract, a fellowship proposal or your thesis outline. The purpose of the workshop is to enhance the clarity, organization and structure of your writing. The workshop focuses on writing from the reader's perspective. This is a two part workshop with multiple opportunities for individualized feedback of your writing. The first workshop is on Tuesday, October 2nd from 9:00 am to 12:00 pm and will be an overview of organizational strategies, using language effectively, and editing and proofreading strategies. Examples from scientific papers and grants will be used to emphasize key points. The second session is a private 30 minute session where you will work one on one with Dr. Pam Hurley to focus on your specific strengths and weaknesses. These sessions will be scheduled on Tuesday, October 9th. Participants will have the opportunity to submit a sample of their work before the first workshop, in between the two workshops and after the last workshop for on-line feedback. The workshops are two weeks apart so you can work on your writing in between. You must attend both sessions.

The workshop is Tuesday October 2nd 9:00 am to 12:00 pm in 2127 Bioinformatics Building

This workshop if full—if you would like to attend a workshop like this is the future please send me an email.

Novartis Institute for Biomedical Research Presidential Postdoctoral Program

Novartis will be represented by Dr. Charles Dean, Principal Investigator in Genome and Proteome Sciences Dr. Andreas Bender, Presidential Postdoctoral fellow whose research involves prediction of targets for small molecules and natural products, and development of new methods for virtual screening. Dr. Leslie Pond, Scientific Education Manager. Leslie, Charles and Andreas will talk about Novartis' Presidential Postdoctoral Fellowship Program and how an industry postdoc differs from an academic postdoc. The Presidential Postdoctoral Fellow Program provides talented scientists with a unique opportunity to perform high quality science in an environment with the resources of a large pharmaceutical company at one of our global sites in Basel, Switzerland; Cambridge, USA; Horsham, UK; or Vienna, Austria. Each year, innovative scientists from academia are selected to become fellows and collaborate with leading pharmaceutical discovery scientists pursuing multidisciplinary research projects. Together, they can apply their expertise to discovering new medicines that will help patients lead healthier lives.

The workshop is Wednesday October 17th at 1:00 pm in G030 Bondurant Hall

http://cfx.research.unc.edu/res_classreg/browse_single.cfm?New=1&event_id=21258

Demystifying the Dissertation Process

This workshop will discuss working effectively with you mentor and your committee, general tips, how to develop a dissertation plan and timeline, formatting and electronic submission and provide helpful handouts on how to get unstuck and start writing! Faculty and graduate students that have completed their thesis will be available to answer questions and provide their insights and advice

This workshop is Wednesday, October 24th from 4:00 to 5:30

To register:

http://cfx.research.unc.edu/res_classreg/browse_single.cfm?New=1&event_id=21259

TIBBS MONTHLY SOCIAL—GHOULISH DELIGHTS

Tombstone Brownies, Chocolate Spiders and Fiendish Cupcakes

October 31st at 11:45 to 1:00 on the MBRB Lawn

We will try our best not to run out of treats!

Funding Opportunities for Graduate Students

American Association of University Women Dissertation Fellowship
Deadline November 15th, 2007
http://www.aauw.org/fga/fellowships_grants/american.cfm
Department of Defense National Defense Science and Engineering Graduate Fellowship
Fields of Study: science and engineering in a number of interdisciplinary areas
Deadline: January 8, 2008
http://www.asee.org/ndseg/
Liebmann Fund, Dolores Zohrab Dolores Zohrab Liebmann Fellowship
Fields of Study: all disciplines
Deadline: December 12, 2007 (anticipated)
http://gradschool.unc.edu/forms.html#fund
National Academies Ford Foundation Dissertation Diversity Fellowships
Fields of Study: humanities; social, behavioral, and life and physical sciences
Deadline: November 29, 2007
http://www7.nationalacademies.org/fordfellowships/forddiss.html
National Academies Ford Foundation Predoctoral Fellowships for Minorities
Fields of Study: humanities; social, behavioral, and life and physical sciences
Deadline: November 15, 2007
http://www7.nationalacademies.org/fordfellowships/fordpredoc.html
Department of Homeland Security Graduate Fellowships
Fields of Study: physical sciences, mathematical sciences, computer and information sciences, life sciences, social sciences, psychology, selected humanities, or engineering
Deadline: January 30, 2008 (anticipated
http://www.orau.gov/dhsed/
National Science Foundation Doctoral Dissertation Research Improvement Grants in Biological Sciences
Deadline: November 16, 2007
http://www.nsf.gov/funding/pgm_summ.jsp?pims_id=5234
National Institutes of Health Ruth Kirschstein National Research Service Awards for Individual Predoctoral Fellows
Fields of Study: behavioral; clinical research
Deadlines: Dec. 8, 2007, April 8, 2008, Aug. 8, 2008
http://grants.nih.gov/grants/guide/pa-files/PA-07-002.html
National Science Foundation Graduate Research Fellowships
Fields of Study: science, technology, engineering, and mathematics Deadline: November 2007 (various)
http://www.nsf.gov/funding/pgm_summ.jsp?pims_id=6201
United Negro College Fund Merck Graduate Science Research Dissertation Fellowships
Fields of Study: life and physical sciences
Deadline: December 15, 2007 (anticipated)
http://www.uncf.org/merck/programs/grad.htm
Paul and Daisy Soros Fellowships for New Americans
Fields of Study: arts (fine and performing), humanities, social sciences, sciences, professional fields
Deadline: November 1, 2007
http://www.pdsoros.org/

Hispanic Scholarship Fund $1,000 to $5,000 wards to US citizens of Hispanic heritage with minimum cumulative GPA of 3.0 and have applied for financial aid and are the first pursuing a graduate degree

National Consortium for Graduate Degrees for Minorities in Engineering and Science, Inc. $10,000 stipend over 3 semesters, two paid summer internships with GEM employer member and full tuition and fees

OCTOBER SEMINARS

Monday 10/1 at 12:00 pm "Balancing Normal Intestinal Growth & Cancer: Growth Factors, Stem Cells and Tales of Two SOCX/SOX"
P. Kay Lund, PhD Professor, Cell and Molecular Physiology, UNC-CH; G202 Medical Biomolecular Research Bldg. (MBRB)
Tuesday 10/2 at 11:00 am "A Novel Evolutionary Conserved Polyadenosine RNA Building Protein: Grabbing RNA with Zinc Fingers"
Dr. Anita Corbett, Emory University; 408 Mary Ellen Jones Bldg.
Tuesday 10/2 at 4:00 pm "Regulation of G Protein Signaling in Neurons"
Kirill Martemyanov, PhD, Assistant Professor of Pharmacology, University of Minnesota; 1102 Mary Ellen Jones
Tuesday 10/2 at 3:45 pm "Chromatin as the gatekeeper of genetic information"
Jason Lieb, PhD, UNC Biology; Coker 201
Wednesday 10/3 at 7:15 am "Concentric Needle EMG-Basics"
James F. Howard, Jr., MD, Chief Neuromuscular Disorders Section; Bioinformatics Auditorium-First Floor
Wednesday 10/3 at 10:00 am "Does High Monosodium Glutamate (MSG) Intake Increase Obesity?"
Ka He, PhD Assistant Professor, UNC; 3300 Thurston Bldg., Library Conference Room
Wednesday 10/3 at 12:00 pm "Coordination of Focal Adhesions and the Endoplasmic Reticulum to Mediate IL-1 Signaling"
Dr. Chris McCulloch, University of Toronto; 124 Taylor Hall
Wednesday 10/3 at 12:00 pm "Protein Motions in Folding, Ligand-Binding, and Catalysis"
Art Palmer Columbia University; 125 Chapman
Wednesday 10/3 at 2:00 pm "Mechanistic investigations of replication termination in E. coli and Yeast"
Deepak Bastia, PhD Professor of Biochemistry and Molecular Biology, Med Univ. SC; 1301 MGG
Thursday 10/4 at 9:00 am to 1:00 pm speakers, 1:00 pm to 2:00 pm luncheon "8th Annual UNC Neuroscience Center Symposium"
Rafael Yuste, MD, PhD; Erin Schuman, PhD; William Newsome, PhD; Lennart Mucke, MD; Carolina Club
RSVP megan_murphy@med.unc.edu
Friday 10/5 at 9:00 am "Molecular Epidemiology and Women's Health"
Joellen Schildkraut, PhD, MPH Professor of Community & Family Medicine, Duke University Med Ctr; G100 Bondurant Hall
Friday 10/5 at 12:00 pm "Gene Pleiotropy Links Evolutionary Processes of Proteins, Biological Systems and Networks
Xun Gu, PhD Professor, Genetics and Developmental Biology, Iowa State University; G202 MBRB
Monday 10/8 at 12:30 pm "Development and application of fast optical technology for interrogating neural circuitry"
Karl Deisseroth, MD, PhD Assistant Professor, Psychiatry and Behavioral Sciences, Stanford; 1131 Bioinformatics Bldg
Tuesday 10/9 at 3:45 pm "Host-microbial interactions in the zebrafish digestive tract'
John Rawls, PhD, UNC Cell and Molecular Biology; Wilson 107
Tuesday 10/9 at 11:00 am Biochemistry and Biophysics Fall Seminar Series
Dr. Richard Wolfenden, Distinguished Professor, UNC; 408 Mary Ellen Jones Bldg
Tuesday 10/9 at 12:00 pm "Neuroimaging and Neurocognitive Studies of Bipolar Disorder"
Jair Soares, MD, Director, Center of Excellence for Research and Treatment of Bipolar Disorder; Bioinformatics Bldg-First Floor Auditorium
Wednesday 10/10 at 12:00 pm Cell and Developmental Biology Seminar Series
Dr. Markus Babst, Department of Biology, University of Utah; 124 Taylor Hall
Thursday 10/11 at 3:30 pm "Pseudomonas Interactions with Host Cells"
George O'Toole, PhD, Microbiology and Immunology, Dartmouth Medical School; Lineberger Cancer Center, Plaza Level Conference Room
Monday 10/15 at 12:00 pm "Analyzing small circuits with a cellular bias"
Gary Westbrook, MD Senior Scientist, Professor of Neurology, Oregon Health & Science Univ; G202 MBRB
Tuesday 10/16 at 11:00 am "Biophysical Characterization of Functional Enzyme Motions"
Patrick Loria, Yale University; 408 Mary Ellen Jones Bldg
Tuesday 10/16 at 4:00 pm "New-Rho-Biology for Thyroid Hormone"
Saverio Gentile, PhD, NIH/NIEHS; 1102 Mary Ellen Jones Bldg
Tuesday 10/16 at 3:45 pm "Social Communication in Tungara Frogs: Brain, Behavior, and Evolution"
Mike Ryan, PhD; University of Texas; Wilson 107
Wednesday 10/17 at noon "How the Endothelial Cell Lateral Border Recycling Compartment Regulates Transendothelial Migration"
Dr. William Muller, Cornell University; 124 Taylor Hall
Thursday 10/18 at 3:30 pm "Regulation of lymphocyte function"
Andrew Chee-Yuen Chan, MD/PhD, Vice President: Immunology and Antibody Engineering, Genentech, Inc.; Lineberger Cancer Center
Thursday 10/18 OTD Carolina Innovation Seminar Series
Brant Hamel, President of the Carolina Student Biotechnology Network, 201 Chapman Hall

OCTOBER SEMINARS

Monday 10/22 at 12:00 pm "Merrimon Lecture, the Tobacco Pandemic: Ethics, Health, and History
Allen M. Brandt, PhD, Chair, Department of the History of Science, Harvard University; 2204 MBRB
Monday 10/22 at 12:00 pm "Understanding the Psychologic Basis of Thirst and Salt Appetite Using Cell and RNA Targeting"
Willis K. Sampson, PhD Professor, Pharmacological and Physiological Science, Saint Louis Univ; G202 MBRB
Tuesday 10/23 at 3:45 pm "Mitotic spindle assembly and function"
Rebecca Heald, PhD, UC Berkeley; Wilson 107
Tuesday 10/23 at 11:00 am "The ABC's of Structure-Based Function Elucidation"
Dr. John F. Hunt, Columbia University; 408 Mary Ellen Jones
Tuesday 10/23 at 4:00 pm "Predictive Relationships Between Structure and Function of Biologically Active Molecules"
Alexander Tropsha, PhD, UNC-CH, School of Pharmacy, Division of Medicinal Chemistry; 1102 Mary Ellen Jones
Wednesday 10/24 at 12:00 pm Cell and Developmental Biology Seminar Series
Dr. Timothy E. McGraw, Department of Biochemistry, Cornell University; 124 Taylor Hall
Wednesday 10/24 at 4:00 pm "Carolina Student Biotechnology Network Seminar
Dr. Daniel Baden 1131, Bioinformatics Building
Thursday 10/25 at 12:30 pm "Shared pathways and genes: Neurobiology, Immunology, and Cancer"
Jenny Ting, PhD Distinguished Professor, Microbiology and Immunology, UNC; 1131 Bioinformatics Building
Thursday 10/25 at 3:30 pm "Modulation of human dendritic cells by Francisella tularensis Schu4"
Catherine M. Bosio, PhD Investigator, Rocky Mountain Laboratories, NIAID, NIH; Lineberger Cancer Center, Plaza Level Conference Room
Friday 10/26 at 12:00 pm "Regulation of P13K Signaling and Transformation by PTEN C-Terminal-Interacting Proteins"
Frank Furnari, PhD Associate Professor of Medicine, UC-San Diego; G202 MBRB
Monday 10/29 at 12:00 pm "Receptor Trafficking and Dynamic Nanoarchitecture of the Postsynaptic Membrane"
Mike Ehlers, MD, PhD Associate Professor, Neurobiology, Duke Univ Medical Center; G202 MBRB
Tuesday 10/30 at 3:45 pm "The role of epitasis and pleiotrophy in adaptation: investigations of model systems with few genes"
Christina Burch, PhD, UNC-CH Biology Department; Wilson 107
Tuesday 10/30 at 11:00 "Minimalist engineering of protein interaction interfaces and its application to structural biology problems"
Shokei Koide, University of Chicago; 408 Mary Ellen Jones
Wednesday 10/31 at 7:15 am "Clinical Features of Peripheral Neuropathy"
Caroline M. Klein, MD, PhD, Neuromuscular Disorders Sections; Bioinformatics Auditorium-First Floor
Wednesday 10/31 at 12:00 pm Cell and Developmental Biology Seminar Series
Dr. Miriam Braunstein, Department of Microbiology and Immunology, UNC; 124 Taylor Hall
Wednesday 10/31 at 12:00 pm "Genetic divergence among populations of *Drosophila ananassae* from Asia and the South Pacific"
Malcolm Schug, UNC-Greensboro and NESCent; 215 Coker Hall

The New Graduate Certificate in Entrepreneurship

How to Engage UNC Graduate Students Through the Carolina Entrepreneurial Initiative

Please join us next Wednesday, October 3rd at Noon at the Institute of Arts and Humanities, for a luncheon presentation and discussion on a new graduate certificate program in entrepreneurship. Co-sponsored by the UNC Graduate School and the Kenan Institute of Private Enterprise, this new 9-credit hour course series will offer UNC graduate students the opportunity to explore entrepreneurship though an innovative new curriculum. Ted Zoller, executive director of the Center for Entrepreneurial Studies at the Kenan-Flagler Business School will outline the program and facilitate a discussion on how best to engage our graduate students in the certificate.

By way of background, the certificate program will allow UNC faculty, grad students and post-docs to take new course tracks focusing on scientific, social and artistic entrepreneurship, and will then finish their coursework by enrolling in existing entrepreneurship course offerings at UNC, and completing a capstone project. The curriculum is designed to offer the students a choice in attaining a general literacy in entrepreneurial concepts, or taking a sequence that allows them to pursue creating a new ventures through our Launching the Venture program. The faculty leading the pilot tracks in scientific, social and artistic entrepreneurship will be on hand to outline their approach and hear your feedback on this new program.

We invite you to join us for this program, to learn how we can serve our graduate students through our entrepreneurship opportunities on campus.

MOVIE SCREENING AND DISCUSSION
A CLASS DIVIDED AND RECOGNIZING BIAS WITH JAN BOXILL, DIRECTOR PARR CENTER FOR ETHICS
THURSDAY, OCTOBER 4TH AT 4PM IN G202 MBRB

The movie is about a school teacher, Jane Elliot, who taught her students a lesson in discrimination. Elliott divided her class by eye color, those with blue eyes and those with brown. On the first day, the blue-eyed children were told they were smarter, nicer, neater, and better than those with brown eyes. Throughout the day, Elliott praised them and allowed them privileges such as taking a longer recess and being first in the lunch line. In contrast, the brown-eyed children's behavior and performance were criticized and ridiculed by Elliott. On the second day, the roles were reversed and the blue-eyed children were made to feel inferior while the brown eyes were designated the dominant group.

What happened over the course of the unique two-day exercise surprised Elliott. On both days, children who were designated as inferior took on the look and behavior of genuinely inferior students, even performing poorly on tests and other work. In contrast, the "superior" students became mean-spirited and seemed to like discriminating against the "inferior" group.

Fourteen years later, Elliott reunited with her students to discuss the impact of the lesson. The students talked about some of the difficult feelings the experiment evoked, but agreed that the positive impact -- what they learned about discrimination and how all people should be treated -- was worth the agony they experienced during the lesson.

THIS IS A GREAT MOVIE AND WILL LEAD TO A GREAT DISCUSSION
DON"T MISS IT!

Local Running Events

October 6, 2007 – Carrboro 10K
McDougle Middle School

C'est la amour! A perfect race for this time of year – an early fall 10K through the tree-lined streets of Carrboro (here's the course map). Register online

6th Annual Pumpkin Trail Run 4K (that's 2.5 miles)

Enjoy the popular and scenic running trails through the University Woodlands in Chapel Hill on Saturday, October 27 at 5 pm. Register online

Anna's Angels 10 Miler & 5 K
Sunday October 7th, 2007 8:00 am
Research Triangle Park
For more Information

October Research Day

An interdepartmental symposium celebrating graduate student research in the life sciences

Several graduate student speakers will be highlighted. There will also be a poster session featuring ongoing research from multiple departments on campus. Come and support your colleagues as they share their scientific progress.

Tuesday, October 9th MBRB G202
Talks begin at 9:00 am
Poster Session begins at 11:30 am

To register for lunch

This event is sponsored by the Cell and Molecular Biology Predoctoral Training

Carolina Student Biotechnology Network

Carolina Student Biotechnology Network October Seminar is 10/24/07
Dr. Daniel Baden, Executive Principal at MARBIONC. Dr. Bladen will discuss disruptive technologies in marine biosciences. 4pm in 1131 Bioinformatics Bldg.

Culture on Campus

IF YOU ARE INTERESTED IN CULTURAL EVENTS ON CAMPUS A GREAT RESOURCE IS
http://events.unc.edu/cal/main/showMain.rdo

Intramural Sports Currently Open for Entries

If you want to form a TIBBS Team let us know and we will help recruit other graduate students who may be interested in being on your team!

Soccer 10/1 to 10/9
Badminton singles 10/1 to 10/9
Innertube water polo 10/8 to 10/16
Sports Trivia 10/22 to 10/30
Floor Hockey 10/22 to 10/30
Basketball tournament 10/29 to 11/6
Spades Tournament 10/29 to 11/6

Hi Pat,
I wasn't sure if I emailed you all this, but can you come to a meeting
at 4 p.m. today in the Parr Center.
Thanks,
Jan

All,
I have another meeting scheduled for 3pm. Can you all meet later?
Perhaps 4pm?
thanks
Sandra

Subject: INFORMATIONAL: MANO ESL tutoring for women

MANO is an ESL program for women, and we're looking for tutors! We believe in one-on-one tutoring so that the specific needs and goals of each student are emphasized. Anyone can become a tutor (faculty, employees, and all types of UNC students). No Spanish is necessary, though a little can be helpful. Classes are Mondays and Wednesdays, 7-8:30pm at Carrboro Elementary. You can commit to one or both days. Additionally, we offer rides from campus. Please contact Rachel Craft at rcraft@email.unc.edu if you are interested!

Subject:	FORMAL NOTICE: 2008 Summer Reading Book Recommendations

---

The 2008 Summer Reading Program Book Selection Committee of faculty, staff, and students will soon begin the process of selecting next years book.

We invite all members of the UNC-Chapel Hill community to suggest books for our consideration. Criteria for book selection include the following desirable qualities:

Intellectually stimulating, stretches students minds, causes students to think about things they might not have thought about.
Enjoyable, engaging, relatively short, easy to read, of current interest.
Able to provoke interesting discussion.
Appropriate for the level of maturity of incoming students.
Having a theme or topic applicable to students lives (for example, societal, political, or ethical issues).

Do you have a favorite book that meets these criteria? What book do you think will stimulate critical discussion among incoming students next summer? To make your suggestion, visit the Carolina Summer Reading Program website: http://www.unc.edu/srp/. Full consideration will be given to all book recommendations received by October 24th, 2007.

Thanks for your consideration of this matter.

Peter Coclanis
Chair, 2008 Summer Reading Program Book Selection Committee

Greetings from the University Ombuds Office. As many of you know, we are a confidential, impartial, informal, and independent resource for all staff, faculty, and administrators at Carolina. If you have any work concern that you would like to discuss in a safe place, we invite you to talk with us. We will do our best to help you get accurate information and consider all your options before you make decisions.

We are here to help you, not to judge you or tell you what you should do. We will participate in a neutral role in resolving disputes or facilitating difficult conversations. We will offer to refer you to other people when we think they may be better sources of assistance. We also welcome suggestions about improving Carolina and will carry forward recommendations for systemic change.

You can learn more at www.ombuds.unc.edu or by calling us at 843-8204. Better yet, come by our office at 134 E. Franklin Street(entrance on Porthole Alley) and get acquainted. We'd like to meet you and tell you more.

Geoff,
This is a program generally for "at risk" students, most of whom take a remedial English class, or the first level at best. It is an excellent program, but I am not sure anything other than math and English have ever been taught. However, it might be worth checking into doing a first year-like seminar.

Subject: Course Submission Message

Geraldine Taylor has sent your submission for PHIL-560 back to you requesting the following change:

Please resolve the issues identified below and/or remove unapproved General Education classification(s) from this course submission and return immediately for Administrative Boards review.
This course was approved as Philosophical and Moral Reasoning (PH).
This course was not approved as (Communications Intensive) (CI) because revision of written work is not part of the course (perhaps have students revise a paper after engaging in a debate?).
Not approved as Global Issues (GL) because the course does not meet GL criteria.
Not approved as Experiential Education (EE) because the rationale for counting this as EE is not clear. Is this mentored research? Seems not. Field work? How so? Of what would the field work consist? Engaging in a debate/game in public is not necessarily experiential in the sense implied by the criteria document. In any case, the hours of "field work" are not specified.

To update this course, please log in to Faculty/Staff Central using your ONYEN and password. Select Course Request Approval from the menu, then enter the course number in the field provided and select the appropriate function:

If your original course submission was
Revision... choose 'Revision'
Renumber... choose 'Revision'
Addition... choose 'Addition'

Subject: PLCY 780 cross list

Dear Megan,
In September of 2006, I began working with Asta Crowe [now retired] of Public Policy on the changes to PLCY 780 to be cross listed with PHIL 785. Before on line submissions this was done easily on paper with signatures required from each Department, which I received. But when it was submitted it to grad school, it was returned because everything is now done on line. I understand this, but it has been very difficult to get things done. Since the course originates in PLCY, Asta did all that was necessary for the submission. In October we were told that once she submitted the course and it was approved, then PHIL would be involved. We have repeatedly tried to get this settled, which we wanted to have done before Asta retired. And now we are being told that it is too late for Fall and to use a dummy number. We will of course do this, but I am concerned about future cross listed course submissions.
For the time being we will use PHIL 805 Section 1 for the dummy number.
I hope that this does not create too much confusion.

Thank you for your consideration,
Jan

WRITING YOUR PAPER

TITLE PAGE: Your name, PID, the paper topic, Honor pledge with signature.

STRUCTURE OF PAPER:

I. FORMAL ARGUMENT CONSTRUCTION/RECONSTRUCTION

Reconstruct the argument in the passage:

Premise 1:
Premise 2:
Premise 3:
…
…
Conclusion:

Clearly state the position you are going to take. This is your thesis statement

II. SUPPORT FOR THESIS:

Argue for the position you are taking. If you are arguing for the conclusion, then support argument you have constructed in Section I with good reasons. If you are arguing against the conclusion, then give reasons why the argument you have constructed is not sound. In so doing be sure to give adequate philosophical support, using the readings and your own ideas. Avoid using "I believe" or "I feel." Personal opinions are acceptable only if supported by good reasons.

III. OBJECTIONS TO YOUR POSITION

Consider obvious objections to your position. That is, how would someone argue against the position you took and what support would they give? Use readings and your own ideas.

IV. ANSWERING THE OBJECTIONS

Answer the objections raised. What reasons can be offered to counter the objections?

V. CONCLUSION

Basically restate your thesis to show why your position is the better one.

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

WRITING YOUR PAPER

TITLE PAGE: Your name, PID, the paper topic, Honor pledge with signature.

STRUCTURE OF PAPER:

I. FORMAL ARGUMENT CONSTRUCTION/RECONSTRUCTION

Reconstruct the argument in the passage:

Premise 1:
Premise 2:
Premise 3:
…
…
Conclusion:

Clearly state the position you are going to take. This is your thesis statement

II. SUPPORT FOR THESIS:

Argue for the position you are taking. If you are arguing for the conclusion, then support argument you have constructed in Section I with good reasons. If you are arguing against the conclusion, then give reasons why the argument you have constructed is not sound. In so doing be sure to give adequate philosophical support, using the readings and your own ideas. Avoid using "I believe" or "I feel." Personal opinions are acceptable only if supported by good reasons.

III. OBJECTIONS TO YOUR POSITION

Consider obvious objections to your position. That is, how would someone argue against the position you took and what support would they give? Use readings and your own ideas.

IV. ANSWERING THE OBJECTIONS

Answer the objections raised. What reasons can be offered to counter the objections?

V. CONCLUSION

Basically restate your thesis to show why your position is the better one.

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

Hi Carol,
I think with a good committee and working with Debbie Stevenson, things should be fine. In looking at the potential committee members, I notice that it is short on men. I should be able to receive email at Texas A&M, unless they have me so busy giving papers, classes, etc. And I'll look forward to talking with you on Thursday or Friday of next week.

Have a good weekend.

Jan Boxill, Director 919.962.3317 jmboxill@email.unc.edu

Dear _____,

On Saturday, November 17, 2007, for the very first time, the Mid-Atlantic Regional Intercollegiate Ethics Bowl Competition will be held here on UNC campus, hosted by the UNC Parr Center for Ethics. The Intercollegiate Ethics Bowl (IEB) is designed to provide students and the audience with a valuable educational experience within the context of a fun and exciting competitive tournament. For the past ten years the IEB has proven to be an innovative and rewarding event and in 2006 received the American Philosophical Association/Philosophy Documentation Center's prize for Excellence and Innovation in Philosophy Programs. We are asking the Department of _____ to co-sponsor this event.

The Intercollegiate Ethics Bowl is not simply about philosophical debate. The IEB directly addresses timely issues ranging from animal testing and stem cell research, to the safety of public infrastructure. In the tournament, a moderator poses questions to teams of three to five students. Questions concern ethical challenges on a wide range of topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.). This year's topics include corporate sponsorship of college sports, the plight of Iraqi translators, and the influence of private drug companies in FDA research. Students are expected to be able to debate this broad range of issues, thereby gaining educational experience in ethics as it is directly applicable to a variety of disciplines and professions.

The Mid-Atlantic Regional Intercollegiate Ethics Bowl at UNC-Chapel Hill is a day-long event open to spectators, taking place in Murphey Hall on November 17th starting at 9:00a.m., and ending with an awards ceremony at 6:00p.m. Thirteen schools from across the mid-Atlantic and northeast region will be represented in the competition. Through this event, students and the community will have a better understanding of the breadth and dimensions of the ethical challenges faced by society and the world today.

To host the Mid-Atlantic Regional Ethics Bowl at UNC-Chapel Hill, it will cost approximately $3,500. Therefore, we hope that the Department of _____ would be interested in being a co-sponsor with us and contribute funds towards making this event possible. These funds will be used for the production expenses needed to facilitate this intercollegiate event. Please let me know as soon as possible if you can help us with this event.

Thank you very much for your help.

Sincerely,

Jan Boxill

Director

Senior Lecturer in Philosophy

To: Walker, Rebecca L <rebecca_l_walker@med.unc.edu>
Subject: Bioethics classes

Rebecca,
Excellent meeting today!

Here are the UNDERGRADUATE courses we found on initial scanning of departments:

AFAM 428: Bioethics in Afro-American Studies
ANTH 239: Human Ecology of the Amazon
ANTH 254: Environmental Consciousness and Action
ANTH 262: Population Anthropology
ANTH 278: Women in Science
ANTH 315: Human Genetics and Evolution
ANTH 318: Human Growth and Development
ANTH 319:Global Health
ANTH 441: [WMST 441] Anthropology of Gender, Health and Illness
ANTH 545: The Politics of Culture in East Asia
EXSS 141: Personal Health
EXSS 360: Nutrition
PHIL 163: Practical Ethics
PHIL 165 : Bioethics
PHIL 368: Environmental Ethics [cross listed with ENST]
PHIL 465: Justice in Health Care
PHIL 468: Risk and Society
BIOL 501: Ethical Issues in Life Sciences
SOCI 165: Sociology of Aging

These are just the undergraduate courses.

Jan

Dear Virginia, vcarson@email.unc.edu

On Saturday, November 17, 2007, for the very first time, the Mid-Atlantic Regional Intercollegiate Ethics Bowl Competition will be held here on UNC campus, hosted by the UNC Parr Center for Ethics. The Intercollegiate Ethics Bowl (IEB) is designed to provide students and audiences with a valuable educational experience within the context of a fun and exciting competitive tournament. For the past ten years the IEB has proven to be an innovative and rewarding event and in 2006 received the American Philosophical Association/Philosophy Documentation Center's prize for Excellence and Innovation in Philosophy Programs. We are asking the Campus Y to co-sponsor this event.

The Intercollegiate Ethics Bowl is not simply about philosophical debate. The IEB directly addresses timely issues ranging from animal testing and the rights of convicts, to affirmative action in South Africa. In the tournament, a moderator poses questions to teams of three to five students. Questions concern ethical challenges on a wide range of topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.). This year's topics include the ethics of Payday Loans companies, The World Bank and its effect on developing economies like Jamaica, corporate sponsorship of college sports, and the plight of Iraqi translators. Students are expected to be able to debate this broad range of issues, thereby gaining educational experience in ethics as it is directly applicable to a variety of disciplines and professions.

The Mid-Atlantic Regional Intercollegiate Ethics Bowl at UNC-Chapel Hill is a day-long event open to spectators, taking place in Murphey Hall on November 17th starting at 9:00a.m., and ending with an awards ceremony at 6:00p.m. Thirteen schools from across the mid-Atlantic and northeast region will be represented in the competition. Through this event, students and the community will have a better understanding of the breadth and dimensions of the ethical challenges faced by society and the world today.

To host the Mid-Atlantic Regional Ethics Bowl at UNC-Chapel Hill, it will cost approximately $3,500. Therefore, we hope that the Kenan-Flagler Business School would be interested in being a co-sponsor with us and contribute funds towards making this event possible. These funds will be used for the production expenses needed to facilitate this intercollegiate event. Please let me know as soon as possible if you can help us with this event.

Thank you very much for your help.

Sincerely,

JBoxill

Dear Anne Whisnant, <mailto:joetemp@email.unc.edu>

On Saturday, November 17, 2007, for the very first time, the Mid-Atlantic Regional Intercollegiate Ethics Bowl Competition will be held here on UNC campus, hosted by the UNC Parr Center for Ethics. The Intercollegiate Ethics Bowl (IEB) is designed to provide students and audiences with a valuable educational experience within the context of a fun and exciting competitive tournament. For the past ten years the IEB has proven to be an innovative and rewarding event and in 2006 received the American Philosophical Association/Philosophy Documentation Center's prize for Excellence and Innovation in Philosophy Programs. We are asking the Office of Faculty Governance to co-sponsor this event.

The Intercollegiate Ethics Bowl is not simply about philosophical debate. The IEB directly addresses timely issues ranging from animal testing and the rights of convicts, to the World Bankâ€™s effect on developing economies. //In the tournament, a moderator poses questions to teams of three to five students. Questions concern ethical challenges on a wide range of topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.). //This yearâ€™s topics include the fair treatment of adjunct professors, ethical issues raised by charging higher tuitions for particular undergraduate degrees, corporate sponsorship of college sports, and the plight of Iraqi translators. Students are expected to be able to debate this broad range of issues, thereby gaining educational experience in ethics as it is directly applicable to a variety of disciplines and professions.

The Mid-Atlantic Regional Intercollegiate Ethics Bowl at UNC-Chapel Hill is a day-long event open to spectators, taking place in Murphey Hall on November 17th starting at 9:00a.m., and ending with an awards ceremony at 6:00p.m. Thirteen schools from across the mid-Atlantic and northeast region will be represented in the competition. Through this event, students and the community will have a better understanding of the breadth and dimensions of the ethical challenges faced by society and the world today.

To host the Mid-Atlantic Regional Ethics Bowl at UNC-Chapel Hill, it will cost approximately $3,500. Therefore, we hope that the Office of Faculty Governance would be interested in being a co-sponsor with us and contribute funds towards making this event possible. These funds will be used for the production expenses needed to facilitate this intercollegiate event. Please let me know as soon as possible if you can help us with this event.

Attach: Ethics Bowl--School of Law.doc

Dear John, <mailto:jcboger@email.unc.edu>

On Saturday, November 17, 2007, for the very first time, the Mid-Atlantic Regional Intercollegiate Ethics Bowl Competition will be held here on UNC campus, hosted by the UNC Parr Center for Ethics. The Intercollegiate Ethics Bowl (IEB) is designed to provide students and audiences with a valuable educational experience within the context of a fun and exciting competitive tournament. For the past ten years the IEB has proven to be an innovative and rewarding event and in 2006 received the American Philosophical Association/Philosophy Documentation Center's prize for Excellence and Innovation in Philosophy Programs. We are asking the School of Law to co-sponsor this event.

The Intercollegiate Ethics Bowl is not simply about philosophical debate. The IEB directly addresses timely issues ranging from animal testing and the rights of convicts, to government surveillance. //In the tournament, a moderator poses questions to teams of three to five students. Questions concern ethical challenges on a wide range of topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.). //This yearâ€™s topics include the use of churches as public polling stations, teaching intelligent design in schools, corporate sponsorship of college sports, and the plight of Iraqi translators. Students are expected to be able to debate this broad range of issues, thereby gaining educational experience in ethics as it is directly applicable to a variety of disciplines and professions.

The Mid-Atlantic Regional Intercollegiate Ethics Bowl at UNC-Chapel Hill is a day-long event open to spectators, taking place in Murphey Hall on November 17th starting at 9:00a.m., and ending with an awards ceremony at 6:00p.m. Thirteen schools from across the mid-Atlantic and northeast region will be represented in the competition. Through this event, students and the community will have a better understanding of the breadth and dimensions of the ethical challenges faced by society and the world today.

To host the Mid-Atlantic Regional Ethics Bowl at UNC-Chapel Hill, it will cost approximately $3,500. Therefore, we hope that the School of Law would be interested in being a co-sponsor with us and contribute funds towards making this event possible. These funds will be used for the production expenses needed to facilitate this intercollegiate event. Please let me know as soon as possible if you can help us with this event.

Thank you very much for your help.

We are asking the School of Journalism and Mass Communication to co-sponsor this event.

The Intercollegiate Ethics Bowl is not simply about philosophical debate. The IEB directly addresses timely issues ranging from animal testing and the rights of convicts, to the World Bank's effect on developing economies. In the tournament, a moderator poses questions to teams of three to five students. Questions concern ethical challenges on a wide range of topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.). This year's topics include the ethics of selective Government leaks to the media, the need for communications between corporations and third world artisans, corporate sponsorship of college sports, and the plight of Iraqi translators. Students are expected to be able to debate this broad range of issues, thereby gaining educational experience in ethics as it is directly applicable to a variety of disciplines and professions.

The Mid-Atlantic Regional Intercollegiate Ethics Bowl at UNC-Chapel Hill is a day-long event open to spectators, taking place in Murphey Hall on November 17th starting at 9:00a.m., and ending with an awards ceremony at 6:00p.m. Thirteen schools from across the mid-Atlantic and northeast region will be represented in the competition. Through this event, students and the community will have a better understanding of the breadth and dimensions of the ethical challenges faced by society and the world today.

To host the Mid-Atlantic Regional Ethics Bowl at UNC-Chapel Hill, it will cost approximately $3,500. Therefore, we hope that the School of Journalism and Mass Communication would be interested in being a co-sponsor with us and contribute funds towards making this event possible. These funds will be used for the production expenses needed to facilitate this intercollegiate event. Please let me know as soon as possible if you can help us with this event.

Thank you very much for your help.

Sincerely,

JBoxill

Attach: Ethics Bowl-Women Center.doc

Dear Donna,

On Saturday, November 17, 2007, for the very first time, the Mid-Atlantic Regional Intercollegiate Ethics Bowl Competition will be held here on UNC campus, hosted by the UNC Parr Center for Ethics. The Intercollegiate Ethics Bowl (IEB) is designed to provide students and the audience with a valuable educational experience within the context of a fun and exciting competitive tournament. For the past ten years the IEB has proven to be an innovative and rewarding event and in 2006 received the American Philosophical Association/Philosophy Documentation Center's prize for Excellence and Innovation in Philosophy Programs. We are asking the Carolina Womenâ€™s Center to co-sponsor this event.

The Intercollegiate Ethics Bowl is not simply about philosophical debate. The IEB directly addresses timely issues ranging from politics in the regulation of contraception, to pornography in undergraduate education, to corporate sponsorship of college sports. /In the tournament, a moderator poses questions to teams of three to five students. Questions concern ethical challenges on a wide range of topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.). /This yearâ€™s topics include judging the value of traditional â€œwomenâ€™s workâ€ (e.g. homemaking), revisionist history (Japanâ€™s denial of sexual slavery in WWII), and the plight of Iraqi translators. Students are expected to be able to debate this broad range of issues, thereby gaining educational experience in ethics as it is directly applicable to a variety of disciplines and professions.

The Mid-Atlantic Regional Intercollegiate Ethics Bowl at UNC-Chapel Hill is a day-long event open to spectators, taking place in Murphey Hall on November 17th starting at 9:00a.m., and ending with an awards ceremony at 6:00p.m. Thirteen schools from across the mid-Atlantic and northeast region will be represented in the competition. Through this event, students and the community will have a better understanding of the breadth and dimensions of the ethical challenges faced by society and the world today.

To host the Mid-Atlantic Regional Ethics Bowl at UNC-Chapel Hill, it will cost approximately $3,500. Therefore, we hope that the Carolina Womenâ€™s Center would be interested in being a co-sponsor with us and contribute funds towards making this event possible. These funds will be used for the production expenses needed to facilitate this intercollegiate event. Please let me know as soon as possible if you can help us with this event.

Thank you very much for your help.

Subject: Jennifer Lawless dinner

Hi Donna,
I am scheduled to have dinner with you all for Jennifer Lawless. While I was in Texas giving papers, I incurred a serious knee injury and am unable to ambulate very well. As a result I will be unable to attend dinner or the program. I am so disappointed, as I was very much looking forward to meeting Jennifer and attending her talk. Please extend my regrets.

Thanks for understanding.
Jan

Jan,

Thanks for your message. Our problem is that we have established the budget with a strong set of guidelines not to change it. In other words, it has always been the changes that got us in trouble. I can come up with $500 and hope that will help.

Dick Baddour

> On Saturday, November 17, 2007, for the very first time, the Mid-Atlantic Regional Intercollegiate Ethics Bowl Competition will be held here on UNC campus, hosted by the UNC Parr Center for Ethics. The Intercollegiate Ethics Bowl (IEB) is designed to provide students and the audience with a valuable educational experience within the context of a fun and exciting competitive tournament. For the past ten years the IEB has proven to be an innovative and rewarding event and in 2006 received the American Philosophical Association/Philosophy Documentation Center's prize for Excellence and Innovation in Philosophy Programs. We are asking the Department of Athletics to co-sponsor this event.
>
> The Intercollegiate Ethics Bowl is not simply about philosophical debate. The IEB directly addresses timely issues ranging from the growing popularity of fight sports (e.g. Ultimate Fighting), to the question of lowering university standards to maintain enrollment, to the plight of Iraqi translators. /In the tournament, a moderator poses questions to teams of three to five students. Questions concern ethical challenges on a wide range of topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.). /This year's topics include the corporate sponsorship of college sports, the increasing reliance on adjunct faculty, and creating multi-tiered tuition rates for different academic majors. Students are expected to be able to debate this broad range of issues, thereby gaining educational experience in ethics as it is directly applicable to a variety of disciplines and professions.

The Mid-Atlantic Regional Intercollegiate Ethics Bowl at UNC-Chapel Hill is a day-long event open to spectators, taking place in Murphey Hall on November 17th starting at 9:00a.m., and ending with an awards ceremony at 6:00p.m. Thirteen schools from across the mid-Atlantic and northeast region will be represented in the competition. Through this event, students and the community will have a better understanding of the breadth and dimensions of the ethical challenges faced by society and the world today.

To host the Mid-Atlantic Regional Ethics Bowl at UNC-Chapel Hill, it will cost approximately $3,500. Therefore, we hope that the Department of Athletics would be interested in being a co-sponsor with us and contribute funds towards making this event possible. These funds will be used for the production expenses needed to facilitate this intercollegiate event. Please let me know as soon as possible if you can help us with this event.

Thank you very much for your help.

Sincerely,

Jan Boxill, Ph.D.

Marc,
I am talking to the Dean tomorrow regarding the student in question. Is it okay if I mention to her about the comment she made to you about her paper grade?
In fact, before I talk to her, perhaps we could talk on the phone. Are you available @ 9 a.m. to talk on the phone?

Dear Prof. Boxill,

Sorry it took me so long to respond. I am currently in the field with limited access to email.

On behalf of the RLA, I'd be happy to make a modest contribution of $250 in support of the Ethics Bowl at UNC. The Society for American Archaeology holds such an event at each annual meeting, so I'm familiar with the format. In fact, last year I served as a judge.

In return I simply ask that our co-sponsorship be appropriately acknowledged, and that we get a supply of announcements or fliers to post in our building.

By copy of this message, I'll let my assistant Brenda Moore know.

Good luck with the event!

Best,
Vin

Dear Vin,
Thank you so very much for your generous support. I have copied Susan Clark, our accounting person, on this email, as all funding works through her.
Also, since you said you have served as a judge for a similar event, would you be interested in serving as a judge for this as well?

I have attached the day's schedule.

Thanks again,
Jan

ETHICS BOWL COMPETITION SCHEDULE

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.	Team Registration/continental breakfast
8:15-9	Breakfast meeting for judges and moderators
9-9:30	Plenary Session: welcome/review of rules

MORNING SESSIONS

9:45-11:00	Round I Eight sessions with 2 teams competing
11:15-12:30	Round II Eight sessions with 2 teams competing
12:30-1:30	Lunch/Orientation for afternoon judges

AFTERNOON SESSIONS

1:30-2:45	Round III Eight sessions with 2 teams competing
3:00-3:15	Announcement of Semifinalists Four teams advance
3:30-4:45	Semifinals Two sessions Two teams advance
5:00-6:15	Championship Round
6:15-6:30	Trophy Presentation/Conclusion

Note: For each session: Three-judge panel; a moderator

Hi Jan:

My apologies for the delay in responding to this. We can offer $200 for the women-centered areas of the Ethics Bowl. I've copied our office manager, Lucinda Thompson on this email so that when your folks get in touch with her, she'll know what's up. Lucinda, this can come out of the ledger 3 account.
Thanks,
Donna

Dear Professor Steiner,

Attached is the funding request form that Global Initiatives requires.
The Regional Competition is shaping up to be an interesting and
stimulating event. Our students are very excited to be able to participate.

Thank you so much for your willingness to consider supporting the event.

Regards,
Jan

Special Projects Matching Fund

Applicant's Name: Jan Boxill	Date: 10/30/2007
Department and CB #: Philosophy, 3125	Email: jmboxill@email.unc.edu

Preferred Mailing Address:
(street, city, state, zip) Campus Box 3125, Chapel Hill, NC 27599

Please provide a brief description of the proposed project (add additional sheets if necessary):

On Saturday, November 17, 2007, for the very first time, the Mid-Atlantic Regional Intercollegiate Ethics Bowl Competition will be held here on UNC campus, hosted by the UNC Parr Center for Ethics. The Intercollegiate Ethics Bowl (IEB) is designed to provide students and the audience with a valuable educational experience within the context of a fun and exciting competitive tournament. For the past ten years the IEB has proven to be an innovative and rewarding event and in 2006 received the American Philosophical Association/Philosophy Documentation Center's prize for Excellence and Innovation in Philosophy Programs. We are asking the Center for Global Initiatives to co-sponsor this event.

The Intercollegiate Ethics Bowl is not simply about philosophical debate. The IEB directly addresses timely issues ranging from the outsourcing of dangerous jobs (e.g. disposing of chemical waste), to affirmative action in South Africa, to the corporate sponsorship of college sports. In the tournament, a moderator poses questions to teams of three to five students. Questions concern ethical challenges on a wide range of topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.). This year's topics include exploring the policy results of the World Bank and International Monetary Fund on developing nations, Western companies using indigenous cultures to create their artwork for mass consumption, and the plight of Iraqi translators. Students are expected to be able to debate this broad range of issues, thereby gaining educational experience in ethics as it is directly applicable to a variety of disciplines and professions.

The Mid-Atlantic Regional Intercollegiate Ethics Bowl at UNC-Chapel Hill is a day-long event open to spectators, taking place in Murphey Hall on November 17th starting at 9:00a.m., and ending with an awards ceremony at 6:00p.m. Thirteen schools from across the mid-Atlantic and northeast region will be represented in the competition. Through this event, students and the community will have a better understanding of the breadth and dimensions of the ethical challenges faced by society and the world today.

To host the Mid-Atlantic Regional Ethics Bowl at UNC-Chapel Hill, it will cost approximately $4,990. Therefore, we hope that the Center for Global Initiatives would be interested in being a co-sponsor with us and contribute funds towards making this event possible. These funds will be used for the production expenses needed to facilitate this intercollegiate event.

Thank you very much for your help.

Jan Boxill, Ph.D.
Director, Parr Center for Ethics
Senior Lecturer in Philosophy

Please provide a budget that lists expected expenses. Funding will not often exceed $500.

Ethics Bowl Budget	**Estimated**
Breakfast Reception (approx. 125)	$ 700.00
Lunch Reception (approx. 125)	$ 1,250.00
Trophy Awards	$ 300.00
Award Ceremony Reception (approx. 35)	$ 200.00
Staff Time/Security costs	$ 720.00
Advertising (fliers/DTH ad)	$ 355.00
National ICB Fee ($50 per team)	$ 700.00
Van/Transportation	$ 65.00
Parking	$ 300.00
Tent rental	$ 300.00
Materials (printing and equipment)	$ 100.00
Total cost	$ 4,990.00

Total Amount Requested from the Center for Global Initiatives:___$500_____

Please list the amount of matching funds you have already secured in support of this project and the name and contact information of the person at each UNC unit who has committed this financial support:

Matching Funds	Department Contact	Contact Information	Commitment
Registration Fee ($150/per team)	14 teams registered		$2,100.00
Department of Athletics	Richard Baddour	rbaddour@email.unc.edu	$500.00
Department of Philosophy	Geoffrey Sayre-McCord	sayre-mccord@unc.edu	$500.00
Research Laboratories of Archaeology	Vin Steponaitis	vin@unc.edu	$250.00
Department of Religious Studies	Thomas Tweed	tatweed@email.unc.edu	$250.00
Women's Center	Donna Bickford	dbickford@unc.edu	$200.00
Total			$3,800.00

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

ETHICS BOWL COMPETITION SCHEDULE

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.	Team Registration/continental breakfast
8:15-9	Breakfast meeting for judges and moderators
9-9:30	Plenary Session: welcome/review of rules

MORNING SESSIONS

9:45-11:00	Round I Eight sessions with 2 teams competing
11:15-12:30	Round II Eight sessions with 2 teams competing
12:30-1:30	Lunch/Orientation for afternoon judges

AFTERNOON SESSIONS

1:30-2:45	Round III Eight sessions with 2 teams competing
3:00-3:15	Announcement of Semifinalists Four teams advance
3:30-4:45	Semifinals Two sessions Two teams advance
5:00-6:15	Championship Round
6:15-6:30	Trophy Presentation/Conclusion

Note: For each session: Three-judge panel; a moderator

Der Bernadette,

As you may know the Parr Center for Ethics in conjunction with several other academic departments is hosting the Mid-Atlantic Regional Ethics Bowl Competition here at UNC on Saturday, November 17th Fourteen universities will be competing in this regional. We would be honored if you could give the opening welcome and address for the competition at 9 a.m. Please let me know if this fits your schedule and you would be willing to do this.

Attached is the day's schedule and other information on the Ethics Bowl.

Thank you very much for your consideration,
Jan

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

Subject: Ethics Bowl; Sadhu
Attach: Parable of the Sadhu.pdf

Hi Gary,
Thanks for agreeing to serve as a judge. You have the schedule; it does require us to be there "very" early on Saturday! You'll be getting more information from us as soon as we get everything set.

I've attached the Parable of the Sadhu, which I mentioned at lunch. I've used it in several Ethical Decision Making workshops.

RE: basketball--we looked pretty good last night for a first game. Chinese National Team will be interesting and different.

After encountering a dying pilgrim on a climbing trip in the Himalayas, a businessman ponders the differences between individual and corporate ethics

The parable of the sadhu

Bowen H. McCoy

It was early in the morning before the sun rose, which gave them time to climb the treacherous slope to the pass at 18,000 feet before the ice steps melted. They were also concerned about their stamina and altitude sickness, and felt the need to press on. Into this chance collection of climbers on that Himalayan slope an ethical dilemma arose in the guise of an unconscious, almost naked sadhu, an Indian holy man. Each climber gave the sadhu help but none made sure he would be safe. Should somebody have stopped to help the sadhu to safety? Would it have done any good? Was the group responsible? Since leaving the sadhu on the mountain slope, the author, who was one of the climbers, has pondered these issues. He sees many parallels for business people as they face ethical decisions at work.

Mr. McCoy is a managing director of Morgan Stanley & Co., Inc., and president of Morgan Stanley Realty, Inc. He is also an ordained ruling elder of the United Presbyterian Church.

Illustration by Geoffrey Moss.

Last year, as the first participant in the new six-month sabbatical program that Morgan Stanley has adopted, I enjoyed a rare opportunity to collect my thoughts as well as do some traveling. I spent the first three months in Nepal, walking 600 miles through 200 villages in the Himalayas and climbing some 120,000 vertical feet. On the trip my sole Western companion was an anthropologist who shed light on the cultural patterns of the villages we passed through.

During the Nepal hike, something occurred that has had a powerful impact on my thinking about corporate ethics. Although some might argue that the experience has no relevance to business, it was a situation in which a basic ethical dilemma suddenly intruded into the lives of a group of individuals. How the group responded I think holds a lesson for all organizations no matter how defined.

The sadhu

The Nepal experience was more rugged and adventuresome than I had anticipated. Most commercial treks last two or three weeks and cover a quarter of the distance we traveled.

My friend Stephen, the anthropologist, and I were halfway through the 60-day Himalayan part of the trip when we reached the high point, an 18,000-foot pass over a crest that we'd have to traverse to reach to the village of Muklinath, an ancient holy place for pilgrims.

Six years earlier I had suffered pulmonary edema, an acute form of altitude sickness, at 16,500 feet in the vicinity of Everest base camp, so we were understandably concerned about what would

happen at 18,000 feet. Moreover, the Himalayas were having their wettest spring in 20 years; hip-deep powder and ice had already driven us off one ridge. If we failed to cross the pass, I feared that the last half of our "once in a lifetime" trip would be ruined.

The night before we would try the pass, we camped at a hut at 14,500 feet. In the photos taken at that camp, my face appears wan. The last village we'd passed through was a sturdy two-day walk below us, and I was tired.

During the late afternoon, four backpackers from New Zealand joined us, and we spent most of the night awake, anticipating the climb. Below we could see the fires of two other parties, which turned out to be two Swiss couples and a Japanese hiking club.

To get over the steep part of the climb before the sun melted the steps cut in the ice, we departed at 3:30 A.M. The New Zealanders left first, followed by Stephen and myself, our porters and Sherpas, and then the Swiss. The Japanese lingered in their camp. The sky was clear, and we were confident that no spring storm would erupt that day to close the pass.

At 15,500 feet, it looked to me as if Stephen were shuffling and staggering a bit, which are symptoms of altitude sickness. (The initial stage of altitude sickness brings a headache and nausea. As the condition worsens, a climber may encounter difficult breathing, disorientation, aphasia, and paralysis.) I felt strong, my adrenaline was flowing, but I was very concerned about my ultimate ability to get across. A couple of our porters were also suffering from the height, and Pasang, our Sherpa sirdar (leader), was worried.

Just after daybreak, while we rested at 15,500 feet, one of the New Zealanders, who had gone ahead, came staggering down toward us with a body slung across his shoulders. He dumped the almost naked, barefoot body of an Indian holy man – a sadhu – at my feet. He had found the pilgrim lying on the ice, shivering and suffering from hypothermia. I cradled the sadhu's head and laid him out on the rocks. The New Zealander was angry. He wanted to get across the pass before the bright sun melted the snow. He said, "Look, I've done what I can. You have porters and Sherpa guides. You care for him. We're going on!" He turned and went back up the mountain to join his friends.

I took a carotid pulse and found that the sadhu was still alive. We figured he had probably visited the holy shrines at Muklinath and was on his way home. It was fruitless to question why he had chosen this desperately high route instead of the safe, heavily traveled caravan route through the Kali Gandaki gorge. Or why he was almost naked and with no shoes, or how long he had been lying in the pass. The answers weren't going to solve our problem.

Stephen and the four Swiss began stripping off outer clothing and opening their packs. The sadhu was soon clothed from head to foot. He was not able to walk, but he was very much alive. I looked down the mountain and spotted below the Japanese climbers marching up with a horse.

Without a great deal of thought, I told Stephen and Pasang that I was concerned about withstanding the heights to come and wanted to get over the pass. I took off after several of our porters who had gone ahead.

On the steep part of the ascent where, if the ice steps had given way, I would have slid down about 3,000 feet, I felt vertigo. I stopped for a breather, allowing the Swiss to catch up with me. I inquired about the sadhu and Stephen. They said that the sadhu was fine and that Stephen was just behind. I set off again for the summit.

Stephen arrived at the summit an hour after I did. Still exhilarated by victory, I ran down the snow slope to congratulate him. He was suffering from altitude sickness, walking 15 steps, then stopping, walking 15 steps, then stopping. Pasang accompanied him all the way up. When I reached them, Stephen glared at me and said: "How do you feel about contributing to the death of a fellow man?"

I did not fully comprehend what he meant.

"Is the sadhu dead?" I inquired.

"No," replied Stephen, "but he surely will be!"

After I had gone, and the Swiss had departed not long after, Stephen had remained with the sadhu. When the Japanese had arrived, Stephen had asked to use their horse to transport the sadhu down to the hut. They had refused. He had then asked Pasang to have a group of our porters carry the sadhu. Pasang had resisted the idea, saying that the porters would have to exert all their energy to get themselves over the pass. He had thought they could not carry a man down 1,000 feet to the hut, reclimb the slope, and get across safely before the snow melted. Pasang had pressed Stephen not to delay any longer.

The Sherpas had carried the sadhu down to a rock in the sun at about 15,000 feet and had pointed out the hut another 500 feet below. The Japanese had given him food and drink. When they had last seen him he was listlessly throwing rocks at the Japanese party's dog, which had frightened him.

We do not know if the sadhu lived or died.

For many of the following days and evenings Stephen and I discussed and debated our behavior toward the sadhu. Stephen is a committed Quaker with deep moral vision. He said, "I feel that what happened with the sadhu is a good example of the breakdown between the individual ethic and the corporate ethic. No one person was willing to assume ultimate responsibility for the sadhu. Each was willing to do his

bit just so long as it was not too inconvenient. When it got to be a bother, everyone just passed the buck to someone else and took off. Jesus was relevant to a more individualistic stage of society, but how do we interpret his teaching today in a world filled with large, impersonal organizations and groups?"

I defended the larger group, saying, "Look, we all cared. We all stopped and gave aid and comfort. Everyone did his bit. The New Zealander carried him down below the snow line. I took his pulse and suggested we treat him for hypothermia. You and the Swiss gave him clothing and got him warmed up. The Japanese gave him food and water. The Sherpas carried him down to the sun and pointed out the easy trail toward the hut. He was well enough to throw rocks at a dog. What more could we do?"

"You have just described the typical affluent Westerner's response to a problem. Throwing money – in this case food and sweaters – at it, but not solving the fundamentals!" Stephen retorted.

"What would satisfy you?" I said. "Here we are, a group of New Zealanders, Swiss, Americans, and Japanese who have never met before and who are at the apex of one of the most powerful experiences of our lives. Some years the pass is so bad no one gets over it. What right does an almost naked pilgrim who chooses the wrong trail have to disrupt our lives? Even the Sherpas had no interest in risking the trip to help him beyond a certain point."

Stephen calmly rebutted, "I wonder what the Sherpas would have done if the sadhu had been a well-dressed Nepali, or what the Japanese would have done if the sadhu had been a well-dressed Asian, or what you would have done, Buzz, if the sadhu had been a well-dressed Western woman?"

"Where, in your opinion," I asked instead, "is the limit of our responsibility in a situation like this? We had our own well-being to worry about. Our Sherpa guides were unwilling to jeopardize us or the porters for the sadhu. No one else on the mountain was willing to commit himself beyond certain self-imposed limits."

Stephen said, "As individual Christians or people with a Western ethical tradition, we can fulfill our obligations in such a situation only if (1) the sadhu dies in our care, (2) the sadhu demonstrates to us that he could undertake the two-day walk down to the village, or (3) we carry the sadhu for two days down to the village and convince someone there to care for him."

"Leaving the sadhu in the sun with food and clothing, while he demonstrated hand-eye coordination by throwing a rock at a dog, comes close to fulfilling items one and two," I answered. "And it wouldn't have made sense to take him to the village where the people appeared to be far less caring than the Sherpas, so the third condition is impractical. Are you really saying that, no matter what the implications, we should, at the drop of a hat, have changed our entire plan?"

The individual vs. the group ethic

Despite my arguments, I felt and continue to feel guilt about the sadhu. I had literally walked through a classic moral dilemma without fully thinking through the consequences. My excuses for my actions include a high adrenaline flow, a superordinate goal, and a once-in-a-lifetime opportunity – factors in the usual corporate situation, especially when one is under stress.

Real moral dilemmas are ambiguous, and many of us hike right through them, unaware that they exist. When, usually after the fact, someone makes an issue of them, we tend to resent his or her bringing it up. Often, when the full import of what we have done (or not done) falls on us, we dig into a defensive position from which it is very difficult to emerge. In rare circumstances we may contemplate what we have done from inside a prison.

Had we mountaineers been free of physical and mental stress caused by the effort and the high altitude, we might have treated the sadhu differently. Yet isn't stress the real test of personal and corporate values? The instant decisions executives make under pressure reveal the most about personal and corporate character.

Among the many questions that occur to me when pondering my experience are: What are the practical limits of moral imagination and vision? Is there a collective or institutional ethic beyond the ethics of the individual? At what level of effort or commitment can one discharge one's ethical responsibilities?

Not every ethical dilemma has a right solution. Reasonable people often disagree; otherwise there would be no dilemma. In a business context, however, it is essential that managers agree on a process for dealing with dilemmas.

The sadhu experience offers an interesting parallel to business situations. An immediate response was mandatory. Failure to act was a decision in itself. Up on the mountain we could not resign and submit our résumés to a headhunter. In contrast to philosophy, business involves action and implementation – getting things done. Managers must come up with answers to problems based on what they see and what they allow to influence their decision-making processes. On the mountain, none of us but

Stephen realized the true dimensions of the situation we were facing.

One of our problems was that as a group we had no process for developing a consensus. We had no sense of purpose or plan. The difficulties of dealing with the sadhu were so complex that no one person could handle it. Because it did not have a set of preconditions that could guide its action to an acceptable resolution, the group reacted instinctively as individuals. The cross-cultural nature of the group added a further layer of complexity. We had no leader with whom we could all identify and in whose purpose we believed. Only Stephen was willing to take charge, but he could not gain adequate support to care for the sadhu.

Some organizations do have a value system that transcends the personal values of the managers. Such values, which go beyond profitability, are usually revealed when the organization is under stress. People throughout the organization generally accept its values, which, because they are not presented as a rigid list of commandments, may be somewhat ambiguous. The stories people tell, rather than printed materials, transmit these conceptions of what is proper behavior.

For 20 years I have been exposed at senior levels to a variety of corporations and organizations. It is amazing how quickly an outsider can sense the tone and style of an organization and the degree of tolerated openness and freedom to challenge management.

Organizations that do not have a heritage of mutually accepted, shared values tend to become unhinged during stress, with each individual bailing out for himself. In the great takeover battles we have witnessed during past years, companies that had strong cultures drew the wagons around them and fought it out, while other companies saw executives supported by their golden parachutes, bail out of the struggles.

Because corporations and their members are interdependent, for the corporation to be strong the members need to share a preconceived notion of what is correct behavior, a "business ethic," and think of it as a positive force, not a constraint.

As an investment banker I am continually warned by well-meaning lawyers, clients, and associates to be wary of conflicts of interest. Yet if I were to run away from every difficult situation, I wouldn't be an effective investment banker. I have to feel my way through conflicts. An effective manager can't run from risk either; he or she has to confront and deal with risk. To feel "safe" in doing this, managers need the guidelines of an agreed-on process and set of values within the organization.

After my three months in Nepal, I spent three months as an executive-in-residence at both Stanford Business School and the Center for Ethics and Social Policy at the Graduate Theological Union at Berkeley. These six months away from my job gave me time to assimilate 20 years of business experience. My thoughts turned often to the meaning of the leadership role in any large organization. Students at the seminary thought of themselves as antibusiness. But when I questioned them they agreed that they distrusted all large organizations, including the church. They perceived all large organizations as impersonal and opposed to individual values and needs. Yet we all know of organizations where peoples' values and beliefs are respected and their expressions encouraged. What makes the difference? Can we identify the difference and, as a result, manage more effectively?

The word "ethics" turns off many and confuses more. Yet the notions of shared values and an agreed-on process for dealing with adversity and change – what many people mean when they talk about corporate culture – seem to be at the heart of the ethical issue. People who are in touch with their own core beliefs and the beliefs of others and are sustained by them can be more comfortable living on the cutting edge. At times, taking a tough line or a decisive stand in a muddle of ambiguity is the only ethical thing to do. If a manager is indecisive and spends time trying to figure out the "good" thing to do, the enterprise may be lost.

Business ethics, then, has to do with the authenticity and integrity of the enterprise. To be ethical is to follow the business as well as the cultural goals of the corporation, its owners, its employees, and its customers. Those who cannot serve the corporate vision are not authentic business people and, therefore, are not ethical in the business sense.

At this stage of my own business experience I have a strong interest in organizational behavior. Sociologists are keenly studying what they call corporate stories, legends, and heroes as a way organizations have of transmitting the value system. Corporations such as Arco have even hired consultants to perform an audit of their corporate culture. In a company, the leader is the person who understands, interprets, and manages the corporate value system. Effective managers are then action-oriented people who resolve conflict, are tolerant of ambiguity, stress, and change, and have a strong sense of purpose for themselves and their organizations.

If all this is true, I wonder about the role of the professional manager who moves from company to company. How can he or she quickly absorb the values and culture of different organizations? Or is there, indeed, an art of management that is totally transportable? Assuming such fungible managers do exist, is it proper for them to manipulate the values of others?

What would have happened had Stephen and I carried the sadhu for two days back to the village and become involved with the villagers in

his care? In four trips to Nepal my most interesting experiences occurred in 1975 when I lived in a Sherpa home in the Khumbu for five days recovering from altitude sickness. The high point of Stephen's trip was an invitation to participate in a family funeral ceremony in Manang. Neither experience had to do with climbing the high passes of the Himalayas. Why were we so reluctant to try the lower path, the ambiguous trail? Perhaps because we did not have a leader who could reveal the greater purpose of the trip to us.

Why didn't Stephen with his moral vision opt to take the sadhu under his personal care? The answer is because, in part, Stephen was hard-stressed physically himself, and because, in part, without some support system that involved our involuntary and episodic community on the mountain, it was beyond his individual capacity to do so.

I see the current interest in corporate culture and corporate value systems as a positive response to Stephen's pessimism about the decline of the role of the individual in large organizations. Individuals who operate from a thoughtful set of personal values provide the foundation for a corporate culture. A corporate tradition that encourages freedom of inquiry, supports personal values, and reinforces a focused sense of direction can fulfill the need for individuality along with the prosperity and success of the group. Without such corporate support, the individual is lost.

That is the lesson of the sadhu. In a complex corporate situation, the individual requires and deserves the support of the group. If people cannot find such support from their organization, they don't know how to act. If such support is forthcoming, a person has a stake in the success of the group, and can add much to the process of establishing and maintaining a corporate culture. It is management's challenge to be sensitive to individual needs, to shape them, and to direct and focus them for the benefit of the group as a whole.

For each of us the sadhu lives. Should we stop what we are doing and comfort him; or should we keep trudging up toward the high pass? Should I pause to help the derelict I pass on the street each night as I walk by the Yale Club en route to Grand Central Station? Am I his brother? What is the nature of our responsibility if we consider ourselves to be ethical persons? Perhaps it is to change the values of the group so that it can, with all its resources, take the other road.

Subject: Re: tanner ta class rolls

You can get the class lists from the Department Chairs or the Student Services manager for each department. Most departments are accustomed to providing this. But if you have any trouble, please let me know. I think I called the Department Chair first to emphasize the importance of confidentiality, but then the chair will ask the student services person.

Hope this helps.

UNC
COLLEGE OF
ARTS & SCIENCES

THE UNIVERSITY
of NORTH CAROLINA
at CHAPEL HILL

DEPARTMENT OF PHILOSOPHY

CAMPUS BOX #3125 T 919.962.7291
CALDWELL HALL F 919.843.3929
CHAPEL HILL, NC 27599-3125 philosophy.unc.edu

6 November 2008

Dear comrades,

Believe it or not, it is already time to begin formulating the course schedule for the 2008-09 academic year. As you know, our normal teaching load consists of two "service" courses (including 100-level and 200-level courses) and two "perk" courses (including honors, first-year seminars, and graduate-level courses). Variations from this scheme are possible, of course, but the average must come very close to this norm if we are to meet our enrollment obligations and to be equitable in our teaching assignments.

You might consider coordinating your teaching preferences with your colleagues who teach courses in some of the same broad areas as you. If you wish, please feel free to tell me collectively how your group plans to cover the necessary courses, undergraduate and graduate.

The next page consists of the familiar form for presenting your course and time preferences. Please let me know of any special constraints that I should take into account in formulating the schedule. (Remember that I haven't done this before, so whereas you might have been able to take for granted that Jan already knows some of your constraints, it can safely be taken for granted that *I* will *not* know, so please spell it all out for me!) Please also be sure to let me know if you expect to have any sort of leave (or otherwise reduced course load).

For 100-level courses, please indicate whether you envision the class as having 4 teaching assistants (200 students), 2 teaching assistants (100 students), or no teaching assistants. Our course descriptions can be found at http://www.unc.edu/ugradbulletin/depts/phil.html

Please also bear in mind that we aim to have about as many 400-level graduate/undergraduate courses as we have graduate seminars. We would like to have all broad philosophical areas regularly covered at both of these levels.

To avoid having graduate courses overlap, it might be better for some graduate courses to be taught outside of the traditional 1-3:30 (Tuesdays, Wednesdays, or Thursdays) and 4-6:30 (Mondays through Thursdays) slots. Evening slots might interfere least with other classes. If you are amendable (or even eager) to teach a given course in an evening slot, please let me know.

Please be sure to let me know if you would like to teach Proto. Since first-year graduate students have fellowships and therefore do not teach, Proto will likely be scheduled 10-12:30 on either Tuesday or Thursday; and PHIL 455 will likely be taught MW 10-11:15
If you are scheduled to teach a Research Reading Group (PHIL 990) but it draws insufficient enrollment, then a service course will have to be assigned in its place.

Please send me your preferences by Monday, November 26. If I can assist you in any way, please don't hesitate to contact me. Thank you for your patience. --Marc

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

Judge's Guidelines

Reasonable disagreement
The ethical case studies are designed to address controversial issues about which intelligent, thoughtful people can reasonably disagree. The scores of the teams, therefore, should be based on the quality of their arguments, not on whether or not they adopted one position rather than another. The team that makes the strongest argument should win the most points. Moral decisions are made case by case based on applying critical thought to difficult situations. When evaluating teams, judges should not let whether or not they agree with the team's conclusion influence their assessment.

Research
Successful presentations should include a clear and detailed understanding of the facts given in the case. Since cases often involve details that are not general knowledge, research will often be necessary. Students should be prepared to identify sources of facts gained through independent research. While research is helpful, even necessary as a learning tool, judges should focus predominantly on the quality of arguments presented.

Presentation style
The focus of the ethics bowl is on the arguments the students provide. This means that judges must evaluate, <u>and only evaluate</u>, a team on aspects of its presentation that relate directly to the four criteria identified on the judge's score-sheet. Judges may not consider in their scoring other aspects of the team's presentation (e.g. the voice quality of presenters, whether they maintain eye contact with the judges, etc.)

Moral theories
Moral theories and other moral perspectives (such as professional codes) can be useful for drawing out what is ethically significant in a case. However, the mere mention of a moral theory or other moral perspective does not, by itself, strengthen the presentation.

Scoring note:
At the end of each round you should enter the following scores:
a) The presenting team's presentation score
b) The presenting team's response to commentary and judge's question score (this is one score)
c) The responding team's commentary score

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

ETHICS BOWL COMPETITION SCHEDULE

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.	Team Registration/continental breakfast
8:15-9	Breakfast meeting for judges and moderators
9-9:30	Plenary Session: welcome/review of rules
	Welcome address: Bernadette Gray-Little, Executive Vice-Chancellor & Provost, UNC

MORNING SESSIONS

9:45-11:00	Round I Eight sessions with 2 teams competing
11:15-12:30	Round II Eight sessions with 2 teams competing
12:30-1:30	Lunch/Orientation for afternoon judges

AFTERNOON SESSIONS

1:30-2:45	Round III Eight sessions with 2 teams competing
3:00-3:15	Announcement of Semifinalists Four teams advance
3:30-4:45	Semifinals Two sessions Two teams advance
5:00-6:15	Championship Round
6:15-6:30	Trophy Presentation/Conclusion

Note: For each session: Three-judge panel; a moderator

Judge's Guidelines

Reasonable disagreement
The ethical case studies are designed to address controversial issues about which intelligent, thoughtful people can reasonably disagree. The scores of the teams, therefore, should be based on the quality of their arguments, not on whether or not they adopted one position rather than another. The team that makes the strongest argument should win the most points. Moral decisions are made case by case based on applying critical thought to difficult situations. When evaluating teams, judges should not let whether or not they agree with the team's conclusion influence their assessment.

Research
Successful presentations should include a clear and detailed understanding of the facts given in the case. Since cases often involve details that are not general knowledge, research will often be necessary. Students should be prepared to identify sources of facts gained through independent research. While research is helpful, even necessary as a learning tool, judges should focus predominantly on the quality of arguments presented.

Presentation style
The focus of the ethics bowl is on the arguments the students provide. This means that judges must evaluate, <u>and only evaluate</u>, a team on aspects of its presentation that relate directly to the four criteria identified on the judge's score-sheet. Judges may not consider in their scoring other aspects of the team's presentation (e.g. the voice quality of presenters, whether they maintain eye contact with the judges, etc.)

Moral theories
Moral theories and other moral perspectives (such as professional codes) can be useful for drawing out what is ethically significant in a case. However, the mere mention of a moral theory or other moral perspective does not, by itself, strengthen the presentation.

Scoring note:
At the end of each round you should enter the following scores:
a) The presenting team's presentation score
b) The presenting team's response to commentary and judge's question score (this is one score)
c) The responding team's commentary score

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

ETHICS BOWL COMPETITION SCHEDULE

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.	Team Registration/continental breakfast
8:15-9	Breakfast meeting for judges and moderators
9-9:30	Plenary Session: welcome/review of rules
	Welcome address: Bernadette Gray-Little, Executive Vice-Chancellor & Provost, UNC

MORNING SESSIONS

9:45-11:00	Round I Eight sessions with 2 teams competing
11:15-12:30	Round II Eight sessions with 2 teams competing
12:30-1:30	Lunch/Orientation for afternoon judges

AFTERNOON SESSIONS

1:30-2:45	Round III Eight sessions with 2 teams competing
3:00-3:15	Announcement of Semifinalists Four teams advance
3:30-4:45	Semifinals Two sessions Two teams advance
5:00-6:15	Championship Round
6:15-6:30	Trophy Presentation/Conclusion

Note: For each session: Three-judge panel; a moderator

Judge's Guidelines

Reasonable disagreement
The ethical case studies are designed to address controversial issues about which intelligent, thoughtful people can reasonably disagree. The scores of the teams, therefore, should be based on the quality of their arguments, not on whether or not they adopted one position rather than another. The team that makes the strongest argument should win the most points. Moral decisions are made case by case based on applying critical thought to difficult situations. When evaluating teams, judges should not let whether or not they agree with the team's conclusion influence their assessment.

Research
Successful presentations should include a clear and detailed understanding of the facts given in the case. Since cases often involve details that are not general knowledge, research will often be necessary. Students should be prepared to identify sources of facts gained through independent research. While research is helpful, even necessary as a learning tool, judges should focus predominantly on the quality of arguments presented.

Presentation style
The focus of the ethics bowl is on the arguments the students provide. This means that judges must evaluate, <u>and only evaluate</u>, a team on aspects of its presentation that relate directly to the four criteria identified on the judge's score-sheet. Judges may not consider in their scoring other aspects of the team's presentation (e.g. the voice quality of presenters, whether they maintain eye contact with the judges, etc.)

Moral theories
Moral theories and other moral perspectives (such as professional codes) can be useful for drawing out what is ethically significant in a case. However, the mere mention of a moral theory or other moral perspective does not, by itself, strengthen the presentation.

Scoring note:
At the end of each round you should enter the following scores:
a) The presenting team's presentation score
b) The presenting team's response to commentary and judge's question score (this is one score)
c) The responding team's commentary score

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

TOTAL SCORE FOR TEAM

\+ \+ =

Total from Front | **Response to Commentary** | **Commentary on other team [from other** | **Total Score (maximum 60)**

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

ETHICS BOWL COMPETITION SCHEDULE

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.	Team Registration/continental breakfast
8:15-9	Breakfast meeting for judges and moderators
9-9:30	Plenary Session: welcome/review of rules
	Welcome address: Bernadette Gray-Little, Executive Vice-Chancellor & Provost, UNC

MORNING SESSIONS

9:45-11:00	Round I Eight sessions with 2 teams competing
11:15-12:30	Round II Eight sessions with 2 teams competing
12:30-1:30	Lunch/Orientation for afternoon judges

AFTERNOON SESSIONS

1:30-2:45	Round III Eight sessions with 2 teams competing
3:00-3:15	Announcement of Semifinalists Four teams advance
3:30-4:45	Semifinals Two sessions Two teams advance
5:00-6:15	Championship Round
6:15-6:30	Trophy Presentation/Conclusion

Note: For each session: Three-judge panel; a moderator

Judge's Guidelines

Reasonable disagreement
The ethical case studies are designed to address controversial issues about which intelligent, thoughtful people can reasonably disagree. The scores of the teams, therefore, should be based on the quality of their arguments, not on whether or not they adopted one position rather than another. The team that makes the strongest argument should win the most points. Moral decisions are made case by case based on applying critical thought to difficult situations. When evaluating teams, judges should not let whether or not they agree with the team's conclusion influence their assessment.

Research
Successful presentations should include a clear and detailed understanding of the facts given in the case. Since cases often involve details that are not general knowledge, research will often be necessary. Students should be prepared to identify sources of facts gained through independent research. While research is helpful, even necessary as a learning tool, judges should focus predominantly on the quality of arguments presented.

Presentation style
The focus of the ethics bowl is on the arguments the students provide. This means that judges must evaluate, <u>and only evaluate</u>, a team on aspects of its presentation that relate directly to the four criteria identified on the judge's score-sheet. Judges may not consider in their scoring other aspects of the team's presentation (e.g. the voice quality of presenters, whether they maintain eye contact with the judges, etc.)

Moral theories
Moral theories and other moral perspectives (such as professional codes) can be useful for drawing out what is ethically significant in a case. However, the mere mention of a moral theory or other moral perspective does not, by itself, strengthen the presentation.

Scoring note:
At the end of each round you should enter the following scores:
a) The presenting team's presentation score
b) The presenting team's response to commentary and judge's question score (this is one score)
c) The responding team's commentary score

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

TOTAL SCORE FOR TEAM

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

ETHICS BOWL COMPETITION SCHEDULE

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.	Team Registration/continental breakfast
8:15-9	Breakfast meeting for judges and moderators
9-9:30	Plenary Session: welcome/review of rules
	Welcome address: Bernadette Gray-Little, Executive Vice-Chancellor & Provost, UNC

MORNING SESSIONS

9:45-11:00	Round I Eight sessions with 2 teams competing
11:15-12:30	Round II Eight sessions with 2 teams competing
12:30-1:30	Lunch/Orientation for afternoon judges

AFTERNOON SESSIONS

1:30-2:45	Round III Eight sessions with 2 teams competing
3:00-3:15	Announcement of Semifinalists Four teams advance
3:30-4:45	Semifinals Two sessions Two teams advance
5:00-6:15	Championship Round
6:15-6:30	Trophy Presentation/Conclusion

Note: For each session: Three-judge panel; a moderator

Judge's Guidelines

Reasonable disagreement
The ethical case studies are designed to address controversial issues about which intelligent, thoughtful people can reasonably disagree. The scores of the teams, therefore, should be based on the quality of their arguments, not on whether or not they adopted one position rather than another. The team that makes the strongest argument should win the most points. Moral decisions are made case by case based on applying critical thought to difficult situations. When evaluating teams, judges should not let whether or not they agree with the team's conclusion influence their assessment.

Research
Successful presentations should include a clear and detailed understanding of the facts given in the case. Since cases often involve details that are not general knowledge, research will often be necessary. Students should be prepared to identify sources of facts gained through independent research. While research is helpful, even necessary as a learning tool, judges should focus predominantly on the quality of arguments presented.

Presentation style
The focus of the ethics bowl is on the arguments the students provide. This means that judges must evaluate, <u>and only evaluate</u>, a team on aspects of its presentation that relate directly to the four criteria identified on the judge's score-sheet. Judges may not consider in their scoring other aspects of the team's presentation (e.g. the voice quality of presenters, whether they maintain eye contact with the judges, etc.)

Moral theories
Moral theories and other moral perspectives (such as professional codes) can be useful for drawing out what is ethically significant in a case. However, the mere mention of a moral theory or other moral perspective does not, by itself, strengthen the presentation.

Scoring note:
At the end of each round you should enter the following scores:
a) The presenting team's presentation score
b) The presenting team's response to commentary and judge's question score (this is one score)
c) The responding team's commentary score

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

TOTAL SCORE FOR TEAM

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

ETHICS BOWL COMPETITION SCHEDULE

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.	Team Registration/continental breakfast
8:15-9	Breakfast meeting for judges and moderators
9-9:30	Plenary Session: welcome/review of rules
	Welcome address: Bernadette Gray-Little, Executive Vice-Chancellor & Provost, UNC

MORNING SESSIONS

9:45-11:00	Round I Eight sessions with 2 teams competing
11:15-12:30	Round II Eight sessions with 2 teams competing
12:30-1:30	Lunch/Orientation for afternoon judges

AFTERNOON SESSIONS

1:30-2:45	Round III Eight sessions with 2 teams competing
3:00-3:15	Announcement of Semifinalists Four teams advance
3:30-4:45	Semifinals Two sessions Two teams advance
5:00-6:15	Championship Round
6:15-6:30	Trophy Presentation/Conclusion

Note: For each session: Three-judge panel; a moderator

Judge's Guidelines

Reasonable disagreement
The ethical case studies are designed to address controversial issues about which intelligent, thoughtful people can reasonably disagree. The scores of the teams, therefore, should be based on the quality of their arguments, not on whether or not they adopted one position rather than another. The team that makes the strongest argument should win the most points. Moral decisions are made case by case based on applying critical thought to difficult situations. When evaluating teams, judges should not let whether or not they agree with the team's conclusion influence their assessment.

Research
Successful presentations should include a clear and detailed understanding of the facts given in the case. Since cases often involve details that are not general knowledge, research will often be necessary. Students should be prepared to identify sources of facts gained through independent research. While research is helpful, even necessary as a learning tool, judges should focus predominantly on the quality of arguments presented.

Presentation style
The focus of the ethics bowl is on the arguments the students provide. This means that judges must evaluate, <u>and only evaluate</u>, a team on aspects of its presentation that relate directly to the four criteria identified on the judge's score-sheet. Judges may not consider in their scoring other aspects of the team's presentation (e.g. the voice quality of presenters, whether they maintain eye contact with the judges, etc.)

Moral theories
Moral theories and other moral perspectives (such as professional codes) can be useful for drawing out what is ethically significant in a case. However, the mere mention of a moral theory or other moral perspective does not, by itself, strengthen the presentation.

Scoring note:
At the end of each round you should enter the following scores:
a) The presenting team's presentation score
b) The presenting team's response to commentary and judge's question score (this is one score)
c) The responding team's commentary score

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

---

Hi Larry,
I know how busy you are, but I am writing to ask if you would serve as an Ethics Bowl judge. The date of the regional competition is Saturday, November 17th. I have attached the schedule. If I have enough judges, you would only have to do 2 sessions at most. Each panel will have 3 judges--hopefully 2 faculty and a community member. Basically judging involves the same kind of analysis as grading an undergraduate paper. I have attached some information to give you an idea. For further information visit the Parr Center website.

We are also having two mock competitions where you could observe or judge -- as we need judges for these as well. The first will be on Friday, November 9th at 3 p.m. in CW 213 and the second is Tuesday, November 13th at 6:30 also in CW 213.

UNC has two teams who have been working together over the course of the semester, so your support would be greatly appreciated. And you would be a great judge.

Please contact me, if you have any questions.

Thanks so much. I hope you can serve.
Jan

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

ETHICS BOWL COMPETITION SCHEDULE

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.	Team Registration/continental breakfast
8:15-9	Breakfast meeting for judges and moderators
9-9:30	Plenary Session: welcome/review of rules
	Welcome address: Bernadette Gray-Little, Executive Vice-Chancellor & Provost, UNC

MORNING SESSIONS

9:45-11:00	Round I Eight sessions with 2 teams competing
11:15-12:30	Round II Eight sessions with 2 teams competing
12:30-1:30	Lunch/Orientation for afternoon judges

AFTERNOON SESSIONS

1:30-2:45	Round III Eight sessions with 2 teams competing
3:00-3:15	Announcement of Semifinalists Four teams advance
3:30-4:45	Semifinals Two sessions Two teams advance
5:00-6:15	Championship Round
6:15-6:30	Trophy Presentation/Conclusion

Note: For each session: Three-judge panel; a moderator

Judge's Guidelines

Reasonable disagreement
The ethical case studies are designed to address controversial issues about which intelligent, thoughtful people can reasonably disagree. The scores of the teams, therefore, should be based on the quality of their arguments, not on whether or not they adopted one position rather than another. The team that makes the strongest argument should win the most points. Moral decisions are made case by case based on applying critical thought to difficult situations. When evaluating teams, judges should not let whether or not they agree with the team's conclusion influence their assessment.

Research
Successful presentations should include a clear and detailed understanding of the facts given in the case. Since cases often involve details that are not general knowledge, research will often be necessary. Students should be prepared to identify sources of facts gained through independent research. While research is helpful, even necessary as a learning tool, judges should focus predominantly on the quality of arguments presented.

Presentation style
The focus of the ethics bowl is on the arguments the students provide. This means that judges must evaluate, <u>and only evaluate</u>, a team on aspects of its presentation that relate directly to the four criteria identified on the judge's score-sheet. Judges may not consider in their scoring other aspects of the team's presentation (e.g. the voice quality of presenters, whether they maintain eye contact with the judges, etc.)

Moral theories
Moral theories and other moral perspectives (such as professional codes) can be useful for drawing out what is ethically significant in a case. However, the mere mention of a moral theory or other moral perspective does not, by itself, strengthen the presentation.

Scoring note:
At the end of each round you should enter the following scores:
a) The presenting team's presentation score
b) The presenting team's response to commentary and judge's question score (this is one score)
c) The responding team's commentary score

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

TOTAL SCORE FOR TEAM

\+ \+ =

Total from Front | **Response to Commentary** | **Commentary on other team [from other** | **Total Score (maximum 60)**

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

ETHICS BOWL COMPETITION SCHEDULE

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.	Team Registration/continental breakfast
8:15-9	Breakfast meeting for judges and moderators
9-9:30	Plenary Session: welcome/review of rules
	Welcome address: Bernadette Gray-Little, Executive Vice-Chancellor & Provost, UNC

MORNING SESSIONS

9:45-11:00	Round I Eight sessions with 2 teams competing
11:15-12:30	Round II Eight sessions with 2 teams competing
12:30-1:30	Lunch/Orientation for afternoon judges

AFTERNOON SESSIONS

1:30-2:45	Round III Eight sessions with 2 teams competing
3:00-3:15	Announcement of Semifinalists Four teams advance
3:30-4:45	Semifinals Two sessions Two teams advance
5:00-6:15	Championship Round
6:15-6:30	Trophy Presentation/Conclusion

Note: For each session: Three-judge panel; a moderator

Judge's Guidelines

Reasonable disagreement
The ethical case studies are designed to address controversial issues about which intelligent, thoughtful people can reasonably disagree. The scores of the teams, therefore, should be based on the quality of their arguments, not on whether or not they adopted one position rather than another. The team that makes the strongest argument should win the most points. Moral decisions are made case by case based on applying critical thought to difficult situations. When evaluating teams, judges should not let whether or not they agree with the team's conclusion influence their assessment.

Research
Successful presentations should include a clear and detailed understanding of the facts given in the case. Since cases often involve details that are not general knowledge, research will often be necessary. Students should be prepared to identify sources of facts gained through independent research. While research is helpful, even necessary as a learning tool, judges should focus predominantly on the quality of arguments presented.

Presentation style
The focus of the ethics bowl is on the arguments the students provide. This means that judges must evaluate, <u>and only evaluate</u>, a team on aspects of its presentation that relate directly to the four criteria identified on the judge's score-sheet. Judges may not consider in their scoring other aspects of the team's presentation (e.g. the voice quality of presenters, whether they maintain eye contact with the judges, etc.)

Moral theories
Moral theories and other moral perspectives (such as professional codes) can be useful for drawing out what is ethically significant in a case. However, the mere mention of a moral theory or other moral perspective does not, by itself, strengthen the presentation.

Scoring note:
At the end of each round you should enter the following scores:
a) The presenting team's presentation score
b) The presenting team's response to commentary and judge's question score (this is one score)
c) The responding team's commentary score

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

TOTAL SCORE FOR TEAM

\+ \+ =

Total from Front | **Response to Commentary** | **Commentary on other team [from other** | **Total Score (maximum 60)**

Hi Lolly,
I did get an email from him, and given the circumstances, I think we can be a bit flexible. Thanks so much for your input and help.

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 20 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-5 ☐

1 = Incoherent presentation
2 = Serious logical problems in the argument (poor)
3 = Hard to follow the argument (passable)
4 = Reasonably clear and systematic
5 = Crystal clear presentation

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-5 ☐

1 = Whole argument irrelevant
2 = Major irrelevance in the argument (poor)
3 = Some distractions from main argument (passable)
4 = Minor irrelevancies
5 = Exactly on point

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-5 ☐

1 = Failure to cover any relevant moral dimensions
2 = Serious missing or underdeveloped dimensions (poor)
3 = Some significant dimensions are missing or poorly covered (passable)
4 = Most dimensions are present and clarified
5 = All dimensions present, clarified and well developed

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-5 ☐

1 = Minimal awareness of different viewpoints
2 = Minimal consideration of different viewpoints (poor)
3 = Underdeveloped discussion of different viewpoints (passable)
4 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large
5 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large

☐ **Total from front (maximum 20)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 5 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1 = Failure to respond
2 = Weak or irrelevant response (poor)
3 = Some points are made (passable)
4 = Solid response
5 = Key points zeroed in on

1-5 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 5 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1 = Failure to respond
2 = Weak response (poor)
3 = Some points are made (passable)
4 = Solid response
5 = Key points zeroed in on

1-5 Points for PRESENTING Team

TOTAL SCORE FOR TEAM

ETHICS BOWL COMPETITION SCHEDULE

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.	Team Registration/continental breakfast
8:15-9	Breakfast meeting for judges and moderators
9-9:30	Plenary Session: welcome/review of rules

MORNING SESSIONS

9:45-11:00	Round I Eight sessions with 2 teams competing
11:15-12:30	Round II Eight sessions with 2 teams competing
12:30-1:30	Lunch/Orientation for afternoon judges

AFTERNOON SESSIONS

1:30-2:45	Round III Eight sessions with 2 teams competing
3:00-3:15	Announcement of Semifinalists Four teams advance
3:30-4:45	Semifinals Two sessions Two teams advance
5:00-6:15	Championship Round
6:15-6:30	Trophy Presentation/Conclusion

Note: For each session: Three-judge panel; a moderator

Judge's Guidelines

Reasonable disagreement
The ethical case studies are designed to address controversial issues about which intelligent, thoughtful people can reasonably disagree. The scores of the teams, therefore, should be based on the quality of their arguments, not on whether or not they adopted one position rather than another. The team that makes the strongest argument should win the most points. Moral decisions are made case by case based on applying critical thought to difficult situations. When evaluating teams, judges should not let whether or not they agree with the team's conclusion influence their assessment.

Research
Successful presentations should include a clear and detailed understanding of the facts given in the case. Since cases often involve details that are not general knowledge, research will often be necessary. Students should be prepared to identify sources of facts gained through independent research. While research is helpful, even necessary as a learning tool, judges should focus predominantly on the quality of arguments presented.

Presentation style
The focus of the ethics bowl is on the arguments the students provide. This means that judges must evaluate, <u>and only evaluate</u>, a team on aspects of its presentation that relate directly to the four criteria identified on the judge's score-sheet. Judges may not consider in their scoring other aspects of the team's presentation (e.g. the voice quality of presenters, whether they maintain eye contact with the judges, etc.)

Moral theories
Moral theories and other moral perspectives (such as professional codes) can be useful for drawing out what is ethically significant in a case. However, the mere mention of a moral theory or other moral perspective does not, by itself, strengthen the presentation.

Scoring note:
At the end of each round you should enter the following scores:
a) The presenting team's presentation score
b) The presenting team's response to commentary and judge's question score (this is one score)
c) The responding team's commentary score

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

Judge's Guidelines

Reasonable disagreement
The ethical case studies are designed to address controversial issues about which intelligent, thoughtful people can reasonably disagree. The scores of the teams, therefore, should be based on the quality of their arguments, not on whether or not they adopted one position rather than another. The team that makes the strongest argument should win the most points. Moral decisions are made case by case based on applying critical thought to difficult situations. When evaluating teams, judges should not let whether or not they agree with the team's conclusion influence their assessment.

Research
Successful presentations should include a clear and detailed understanding of the facts given in the case. Since cases often involve details that are not general knowledge, research will often be necessary. Students should be prepared to identify sources of facts gained through independent research. While research is helpful, even necessary as a learning tool, judges should focus predominantly on the quality of arguments presented.

Presentation style
The focus of the ethics bowl is on the arguments the students provide. This means that judges must evaluate, <u>and only evaluate</u>, a team on aspects of its presentation that relate directly to the four criteria identified on the judge's score-sheet. Judges may not consider in their scoring other aspects of the team's presentation (e.g. the voice quality of presenters, whether they maintain eye contact with the judges, etc.)

Moral theories
Moral theories and other moral perspectives (such as professional codes) can be useful for drawing out what is ethically significant in a case. However, the mere mention of a moral theory or other moral perspective does not, by itself, strengthen the presentation.

Scoring note:
At the end of each round you should enter the following scores:
a) The presenting team's presentation score
b) The presenting team's response to commentary and judge's question score (this is one score)
c) The responding team's commentary score

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

TOTAL SCORE FOR TEAM

\+ \+ =

Total from Front | **Response to Commentary** | **Commentary on other team [from other** | **Total Score (maximum 60)**

Subject: Re: Question and Recommendation
Attach: Joe & Jan.jpg

Hi Bob,
Good to hear from you.
Yes, I am still involved with the women's basketball team. I am their academic advisor, which in my case involves more than most of the advisors in the Student Athlete Support Center. I work with them in selecting majors, their classes, etc, the usual advising kind of stuff, but also more of a counselor/mentor in that I meet with them to discuss all aspects of their academic and athletic careers. I am heavily involved in their recruiting, meeting with their parents as well. Once here, I stiff often meet with their parents. While we have study skills staff at the Support Center, I do a lot of that with wbb. In particular on how to study in each subject, and how to write papers. I travel with them -nearly all the time--and on trips we have study hall. I also monitor their study hall here. In most cases, I know them pretty well before they come here, but on trips is where I have the time to sit with them to learn more about them, which is really good. They get to see me in a different light as well, and there is a great amount of trust between us. There isn't much they don't feel comfortable telling me about, as they know I won't judge them or tell the coaches everything.
I do work VERY closely with the coaches; talking to them nearly everyday to make sure we are all on the same page. After working with them for 22 years, they trust me completely. Together we do a good job--not that everything always goes smoothly, but all in all we do well. In fact, we just got a letter from Myles Brand congratulating our team as being a recipient of the NCAA Public Recognition Award, which recognizes those Division I Academic Rate in the top 10% of all sqads in their respective squads. We are the only team in this area in all sports to receive the award!
The one big thing that has changed over the years is all the paperwork for compliance. I have help this year on this, as given my teaching duties, I just can't keep up with all the paperwork. Anyway, hope this helps. I'll be glad to talk about this.

I am not sure I am going to make the NCAA convention as I am having double knee replacement on December 5th so will be out of commission for some time, but at least 6 weeks. But I'll see how I am progressing to see if coming to Nashville is a possibility.

I'll look out for Alan's application. I haven't looked at any that have come in so far. We are hosting the Ethics Bowl on Nov. 17th, so I have been consumed with this. So after that I'll have to seriously look at the applications. If he would like to call and talk with me that would be fine as well.

Thanks-- I thought I'd attach a picture of how I most like to spend my time these days--which are few and far between. I try to baby sit for them on Sat nights!

---

Hi Harry,
Thanks for your response.
Aren't we all "experts" in ethics? As you will see from the cases I have attached, there are interesting issues that you might come across in your courses. Basically judging the presentations is like grading your papers--what is the dilemma or issue, how well was it presented and argued for. We need judges mainly for the first 3 sessions, so if you could accommodate us, that would be great. I've attached information.

Thanks again,
Jan

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

***Please note: Most cases were derived from newspapers, Internet and book sources. We omitted citation information, but it is available upon request.**

ETHICS BOWL COMPETITION SCHEDULE

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.	Team Registration/continental breakfast
8:15-9	Breakfast meeting for judges and moderators
9-9:30	Plenary Session: welcome/review of rules
	Welcome address: Bernadette Gray-Little, Executive Vice-Chancellor & Provost, UNC

MORNING SESSIONS

9:45-11:00	Round I Eight sessions with 2 teams competing
11:15-12:30	Round II Eight sessions with 2 teams competing
12:30-1:30	Lunch/Orientation for afternoon judges

AFTERNOON SESSIONS

1:30-2:45	Round III Eight sessions with 2 teams competing
3:00-3:15	Announcement of Semifinalists Four teams advance
3:30-4:45	Semifinals Two sessions Two teams advance
5:00-6:15	Championship Round
6:15-6:30	Trophy Presentation/Conclusion

Note: For each session: Three-judge panel; a moderator

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

Judge's Guidelines

Reasonable disagreement
The ethical case studies are designed to address controversial issues about which intelligent, thoughtful people can reasonably disagree. The scores of the teams, therefore, should be based on the quality of their arguments, not on whether or not they adopted one position rather than another. The team that makes the strongest argument should win the most points. Moral decisions are made case by case based on applying critical thought to difficult situations. When evaluating teams, judges should not let whether or not they agree with the team's conclusion influence their assessment.

Research
Successful presentations should include a clear and detailed understanding of the facts given in the case. Since cases often involve details that are not general knowledge, research will often be necessary. Students should be prepared to identify sources of facts gained through independent research. While research is helpful, even necessary as a learning tool, judges should focus predominantly on the quality of arguments presented.

Presentation style
The focus of the ethics bowl is on the arguments the students provide. This means that judges must evaluate, <u>and only evaluate</u>, a team on aspects of its presentation that relate directly to the four criteria identified on the judge's score-sheet. Judges may not consider in their scoring other aspects of the team's presentation (e.g. the voice quality of presenters, whether they maintain eye contact with the judges, etc.)

Moral theories
Moral theories and other moral perspectives (such as professional codes) can be useful for drawing out what is ethically significant in a case. However, the mere mention of a moral theory or other moral perspective does not, by itself, strengthen the presentation.

Scoring note:
At the end of each round you should enter the following scores:
a) The presenting team's presentation score
b) The presenting team's response to commentary and judge's question score (this is one score)
c) The responding team's commentary score

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

TOTAL SCORE FOR TEAM

\+ \+ =

Total from Front | **Response to Commentary** | **Commentary on other team [from other** | **Total Score (maximum 60)**

Here are the courses. I've also attached it in word for you which may be easier to read; also attached the spread sheet.

Dorit's courses:

01-02:
FALL 2001: PHIL 110 [Phil of Language]=18; PHIL 305 [grad seminar]=3
SPRING 2002: Intro Large=88 w/2 TAs; Experience & Reality=40 w/1 TA.

02-03
FALL 2002: Leave
SPRING 2003: Large Intro=181 w/ 4 TAs; PHIL 35 Honors[Phil of Language]=23

03-04
FALL 2003: Experience & Reality Honors=22; Graduate Phil of Language=8
SPRING 2004: HONORS 32=11; PHIL 77 [Cognitive Science]=23

04-05:
FALL 2004: Large Intro=173 students-4 TAs; Graduate Metaphysics class=7
SPRING 2005: Leave

05-06:
FALL 2005: Small Intro= 32 PHIL 116 [old number-Analytic]=6
SPRING 2006: Leave

06-07
FALL 2006: HNRS=12; PHIL 990=7
SPRING 2007: PHIL 397 [Colloqiuim for majors]=11; PROTO w/Neta=8

07=08:
FALL 2007: HNRS=13; PHIL 735 [Epistemology] w/Neta=10
SPRING 2008: Small Experience & Reality=40 -- present enrollment; PHIL 445: Phil of language=19 [present enrollment]

Subject: Ethics Bowl
Attach: Ethics Bowl Cases Fall 2007.doc; Ethics Bowl info for judges.doc; Judge guidelines1.doc; Judge's Score Sheet; Ethics Bowl schedule.doc

---

Hi Gary,
I know how busy you are, but I am writing to ask if you would serve as an Ethics Bowl judge. The date of the regional competition is Saturday, November 17th. I have attached the schedule. If I have enough judges, you would only have to do 2 sessions at most. Each panel will have 3 judges--hopefully 2 faculty and a community member. Basically judging involves the same kind of analysis as grading an undergraduate paper. I have attached some information to give you an idea. For further information visit the Parr Center website.

UNC has two teams who have been working together over the course of the semester, so your support would be greatly appreciated. Please contact me if you have any questions.

Thanks so much. I hope you can serve. You wouldn't have to serve the entire day, only for 2 sessions.

Jan

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

Judge's Guidelines

Reasonable disagreement
The ethical case studies are designed to address controversial issues about which intelligent, thoughtful people can reasonably disagree. The scores of the teams, therefore, should be based on the quality of their arguments, not on whether or not they adopted one position rather than another. The team that makes the strongest argument should win the most points. Moral decisions are made case by case based on applying critical thought to difficult situations. When evaluating teams, judges should not let whether or not they agree with the team's conclusion influence their assessment.

Research
Successful presentations should include a clear and detailed understanding of the facts given in the case. Since cases often involve details that are not general knowledge, research will often be necessary. Students should be prepared to identify sources of facts gained through independent research. While research is helpful, even necessary as a learning tool, judges should focus predominantly on the quality of arguments presented.

Presentation style
The focus of the ethics bowl is on the arguments the students provide. This means that judges must evaluate, <u>and only evaluate</u>, a team on aspects of its presentation that relate directly to the four criteria identified on the judge's score-sheet. Judges may not consider in their scoring other aspects of the team's presentation (e.g. the voice quality of presenters, whether they maintain eye contact with the judges, etc.)

Moral theories
Moral theories and other moral perspectives (such as professional codes) can be useful for drawing out what is ethically significant in a case. However, the mere mention of a moral theory or other moral perspective does not, by itself, strengthen the presentation.

Scoring note:
At the end of each round you should enter the following scores:
a) The presenting team's presentation score
b) The presenting team's response to commentary and judge's question score (this is one score)
c) The responding team's commentary score

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

TOTAL SCORE FOR TEAM

\+ \+ =

Total from Front | **Response to Commentary** | **Commentary on other team [from other** | **Total Score (maximum 60)**

ETHICS BOWL COMPETITION SCHEDULE

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.	Team Registration/continental breakfast
8:15-9	Breakfast meeting for judges and moderators
9-9:30	Plenary Session: welcome/review of rules
	Welcome address: Bernadette Gray-Little, Executive Vice-Chancellor & Provost, UNC

MORNING SESSIONS

9:45-11:00	Round I Eight sessions with 2 teams competing
11:15-12:30	Round II Eight sessions with 2 teams competing
12:30-1:30	Lunch/Orientation for afternoon judges

AFTERNOON SESSIONS

1:30-2:45	Round III Eight sessions with 2 teams competing
3:00-3:15	Announcement of Semifinalists Four teams advance
3:30-4:45	Semifinals Two sessions Two teams advance
5:00-6:15	Championship Round
6:15-6:30	Trophy Presentation/Conclusion

Note: For each session: Three-judge panel; a moderator

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

ETHICS BOWL COMPETITION SCHEDULE

NOVEMBER 17, 2007
MURPHEY HALL
UNC CAMPUS

8-9 a.m.	Team Registration/continental breakfast
8:15-9	Breakfast meeting for judges and moderators
9-9:30	Plenary Session: welcome/review of rules
	Welcome address: Bernadette Gray-Little, Executive Vice-Chancellor & Provost, UNC

MORNING SESSIONS

9:45-11:00	Round I Eight sessions with 2 teams competing
11:15-12:30	Round II Eight sessions with 2 teams competing
12:30-1:30	Lunch/Orientation for afternoon judges

AFTERNOON SESSIONS

1:30-2:45	Round III Eight sessions with 2 teams competing
3:00-3:15	Announcement of Semifinalists Four teams advance
3:30-4:45	Semifinals Two sessions Two teams advance
5:00-6:15	Championship Round
6:15-6:30	Trophy Presentation/Conclusion

Note: For each session: Three-judge panel; a moderator

ETHICS BOWL

The Ethics Bowl provides students with a unique opportunity to practice applying the moral theories and argumentation principles that they learn in their ethics classes. They receive about 15 case studies in advance involving ethical issues in a number of practical contexts, including engineering, law, medicine, personal relationships, school and politics, both nationally and internationally. During the course of the semester the students will prepare these cases. Questions may concern ethical problems on wide ranging topics, such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, law, medicine), or social and political ethics (e.g. free speech, gun control, etc.) or global issues (e.g. the impact of globalization, global warming, the environment). Preparing responses to these questions involves a great deal of research, writing and oral presentation.

Mid-Atlantic Regional Competition at UNC Chapel Hill: November 17, 2007 beginning at 9 a.m.

I. How Ethics Bowl is Played:

In Ethics Bowl a moderator asks two teams of three to five undergraduate students questions that pose ethical problems on topics ranging widely over areas such as the classroom (e.g. cheating or plagiarism), personal relationships (e.g. dating or friendship), professional ethics (e.g. engineering, architecture, business, the military, law, medicine, etc.) or social and political ethics (e.g. free speech, gun control, health care, etc.) In an Ethics Bowl competition two teams are asked different questions. Each team answers its question according to the following format. After the moderator poses a question to a team the team gets one minute to confer, after which it must state its answer. (The team does not respond completely cold, however, because prior to the Ethics Bowl each competing team receives a set of cases that present ethical issues upon which the questions a team must answer at the Ethics Bowl are based.)

After the team states its answer to the question posed by the moderator the judges then have an opportunity to ask the team brief follow-up questions to elicit a teams' viewpoint on ethically important aspects of the question, or to seek clarification of a team's response. After the judges have asked their questions, the opposing team then has one minute to present a response to the first team's answer. The first team then has an opportunity to respond to the opposing team's comments.

The judges have been instructed prior to the Ethics Bowl concerning the criteria they are to apply in evaluating the teams' answers, which are the following:

Clarity and Intelligibility: Has the team stated and defended its position in a way that is logically consistent and which allows the Judges to understand clearly the team's line of reasoning?

Focus on Ethically Relevant Factors: Has the team identified and discussed the factors the Judges consider ethically relevant in connection with the case?

Avoidance of Ethical Irrelevance: Has the team stayed on track by avoiding preoccupation with issues that the Judges do not regard as ethically relevant, or as only having minor ethical relevance, in connection with a case?

Deliberative Thoughtfulness: Does the Team's presentation of its position on a question indicate both awareness and thoughtful consideration of different viewpoints, including especially those that could loom large in the reasoning of individuals who might disagree with the team's position?

II. Format :

The IEB is a tiered competition in which the top scoring thirty-two teams in ten regional ethics bowls compete against one another at a national ethics bowl. At the national ethics bowl participating teams will compete in three matches during the morning on the day of the event. In the evening the top scoring eight teams will compete in an eight team elimination consisting of four quarter-final matches, two semi-final matches, and a final match.

In both the regional ethics bowls and the national ethics bowl, four to six weeks prior to the day of the event, each entered team, as well as every judge and moderator, will receive a set of ethics bowl cases. The questions asked of teams are to be taken from this set. As in previous ethics bowls, the moderators and judges will be drawn from distinguished individuals in diverse fields, such as law, medicine, business, government service, engineering, science, academia, and other fields as well.

Judge's Guidelines

Reasonable disagreement
The ethical case studies are designed to address controversial issues about which intelligent, thoughtful people can reasonably disagree. The scores of the teams, therefore, should be based on the quality of their arguments, not on whether or not they adopted one position rather than another. The team that makes the strongest argument should win the most points. Moral decisions are made case by case based on applying critical thought to difficult situations. When evaluating teams, judges should not let whether or not they agree with the team's conclusion influence their assessment.

Research
Successful presentations should include a clear and detailed understanding of the facts given in the case. Since cases often involve details that are not general knowledge, research will often be necessary. Students should be prepared to identify sources of facts gained through independent research. While research is helpful, even necessary as a learning tool, judges should focus predominantly on the quality of arguments presented.

Presentation style
The focus of the ethics bowl is on the arguments the students provide. This means that judges must evaluate, <u>and only evaluate</u>, a team on aspects of its presentation that relate directly to the four criteria identified on the judge's score-sheet. Judges may not consider in their scoring other aspects of the team's presentation (e.g. the voice quality of presenters, whether they maintain eye contact with the judges, etc.)

Moral theories
Moral theories and other moral perspectives (such as professional codes) can be useful for drawing out what is ethically significant in a case. However, the mere mention of a moral theory or other moral perspective does not, by itself, strengthen the presentation.

Scoring note:
At the end of each round you should enter the following scores:
a) The presenting team's presentation score
b) The presenting team's response to commentary and judge's question score (this is one score)
c) The responding team's commentary score

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

TOTAL SCORE FOR TEAM

\+ \+ =

Total from Front | **Response to Commentary** | **Commentary on other team [from other** | **Total Score (maximum 60)**

Subject: [FEAST] Call For Student Papers

Dear Colleague,

Please find attached a Call For Papers for Vol. 4 of Stance: An Undergraduate Philosophy Journal. Stance is a national, peer-reviewed, peer-produced, academic journal that publishes papers by current undergraduate students.

Please encourage your students with superior work to submit a paper. Also, please distribute this CFP widely.

Authors of published papers will receive a free print version of the journal. By April 2008 the Stance staff should have created a full digital presence. Beyond a website, the journal will receive an ISSN number and be electronically housed in an academic library in an open source format.

I will be happy to answer any questions you might have.

Dr. David W. Concepción
Assoc. Prof. Philosophy
Ball State University

STANCE:
A PEER-REVIEWED UNDERGRADUATE PHILOSOPHY JOURNAL

Submission Guidelines:
Current undergraduates are to submit papers that are between 1500 and 3500 words in length. Papers should avoid unnecessary technicality and strive to be accessible to the widest possible audience without sacrificing clarity or rigor. They are evaluated on the following criteria: depth of inquiry, quality of research, creativity, lucidity, and originality.

Submission Procedures:
Submissions are to be prepared for blind review and must include a cover page with the author's name, affiliation, title, and email address. Papers should have no other identifying markers. Submissions are to be sent as attachments to phisigmatau@bsu.edu.

Deadline: Monday, December 17, 2007

Stance is a project of the Ball State University chapter of Phi Sigma Tau, an international undergraduate honor society for philosophy.

Dear Claudio,
Thanks so much for agreeing to serve as an Honorary Coach on Friday.
Attached is a letter with details for the evening as well as a bio form
for you to fill out for team introduction.

Thanks again,
Jan

November 11, 2007

Dear Claudio,

Thank you for agreeing to participate in the Honorary Guest Coaching Program for the 2007-2008 Women's Basketball Program.

The game assigned to you is: **COPPIN STATE**

Date and Time of the game: **FRIDAY, NOV. 16th at 7 p.m.**

Please meet me at the scorer's or media table **45 minutes** before game time. I will then introduce you to the coaching staff and your game host Head Manager Catherine Greene. Your name will be on the Parking List with the parking monitor who will direct you to where you may park. Just tell the parking attendant that you are a guest coach. Guest Coach tickets will be available at will call at the side entrance of Carmichael Auditorium, under your name. If you would like a guest to come with you, let me know as soon as possible and I'll include an extra ticket.

As Honorary Coach you will be included in the pre-game and post-game talks to the team in the locker room. During the game you will join the team on the bench. At half-time, you will remain in the gym to relax and observe any half-time activities.

Again thank you for participating. Honorary Coaching has been a rewarding experience both for the guests and the team members. I hope it proves so for you as well.

Please fill out the attached bio form and either email it to me or just bring it with you to the game As these coaching slots are very scarce, if you cannot attend for any reason, please let me know as soon as possible, so I can fill the slot with someone on the waiting list.

Your Honorary Coach partner will be Visiting EXSS professor, Debbie Stroman

If you have any questions please feel free to call me.

Sincerely,

Jan Boxill

Jan Boxill, Ph.D.
Honorary Coach Coordinator

Subject: INFORMATIONAL: Hot Flash Study Needs Volunteers

If you're bothered by hot flashes, you might be pleased to know that there is a clinical research trial underway associated with menopause, studying a non-hormonal investigational drug to see if it may relieve hot flashes.

The aim of this study is to evaluate the effects of the study drug on the frequency and severity of hot flashes and night sweats in postmenopausal women. The effectiveness will be assessed by the change in frequency and severity of vasomotor symptoms (VMS) from the start of the study to week 12 compared to a placebo (looks like the experimental drug but does not have any active drug in it).

To qualify for this 20 week clinical trial, you must be at least 12 months postmenopausal, generally healthy, experiencing moderate to extremely severe hot flashes with sweating.

Qualified participants will receive at no charge study related
Medical examinations
Laboratory tests
Electrocardiograms
Study Medication or placebo
Reimbursement for study related travel cost to the clinic

To learn more about the clinical research study, call or email either Kim Hamden at 919-843-1410, email: khamden@unch.unc.edu, or Susan Walley at 919-966-9846, email: swalley@email.unc.edu

This message has been approved by the Human Research Ethics committee, Study
07-1421 on October 11, 2007.

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

PROCEDURE and RULES

FOR THE

FIRST ANNUAL MID-ATLANTIC REGIONAL ETHICS BOWL

at

THE UNIVERSITY OF NORTH CAROLINA at CHAPEL HILL
MURPHEY HALL
CHAPEL HILL, NORTH CAROLINA

ON SATURDAY, NOVEMBER 17, 2007

Sponsored by:

Department of Athletics

Department of History

Department of Philosophy

Department of Religious Studies

Carolina Women's Center

Center for Global Initiatives

Research Laboratories of Archaeology

For more information:
(919) 843–5641
parrcenter@unc.edu

SCHEDULE

(All rooms listed will be in Murphey Hall, unless otherwise noted.)

8:00-9:00 a.m.	Team registration	Murphey Hall Auditorium (116)
8:00-9:00 a.m.	Continental breakfast for teams and coaches	Murphey Hall lobby
8:15-9:00 a.m.	Breakfast meeting for judges and moderators	Campus Y Lounge
9:00-9:30 a.m.	Plenary session	Murphey Hall Auditorium (116)
	Welcome: Bernadette Gray-Little, Executive Vice Chancellor and Provost Review of Rules: Jan Boxill, Director, UNC Parr Center for Ethics	
9:45-11:00 a.m.	Round #1	Rooms assigned
11:15 a.m.-12:30 p.m.	Round #2	Rooms assigned
12:30-1:30 p.m.	Participant lunch	Campus Y Lounge
	Judges, moderators & coaches lunch	Campus Y Seminar Room
1:30-2:45 p.m.	Round #3	Rooms assigned
3:00-3:15 p.m.	Announcement of Semifinalists	Murphey Hall Auditorium (116)
3:30-4:45 p.m.	Semifinals	Rooms assigned
5:00-6:15 p.m.	Finals	Murphey Hall Auditorium (116)
6:15 p.m.	Trophy presentation/Conclusion	Murphey Hall Auditorium (116)

PROCEDURE AND RULES

The First Annual Mid-Atlantic Regional Ethics Bowl will take place on Saturday, November 17, 2007 at the University of North Carolina at Chapel Hill campus. It is being sponsored by the UNC Parr Center for Ethics, Department of Athletics, Department of Religious Studies, Department of Philosophy, Department of History, Research Laboratories of Archaeology and Carolina Women's Center. At the plenary, to be held at 9:00 a.m. in Murphey Hall Auditorium (room 116), a review of the rules and procedures and distribution of classroom assignments for the morning rounds will occur; classroom assignments will be made through a random impartial process.

Each team will participate in 3 matches, competing with a different team in each match. Semi-finals are concurrent and will begin at 3:30 p.m.; finals will take place in Murphey Hall Auditorium at 5:00 p.m. There will be awards for the top three winners right after the final round at 6:15 p.m. The final competition will be videotaped. Participating teams will be provided a copy for future use.

There are no limits to the resources that may be used in researching the questions prior to the competition. Students are encouraged to consult all resources, including professors to understand the full breadth of the cases, determine their positions, and make the strongest possible presentation.

1) Each round will begin with a coin toss. The team that wins the coin toss may elect to present first (to be the team designated as Team A) or to have the other team present first (and thus to be the team designated as Team B).
2) Copies of the first case and question will be distributed to the competitors and to the judges. Neither the judges nor the team members will have advance knowledge of which case will be presented or which question will be asked.
3) The moderators will then read the question. Scratch paper will also be provided for the competitors to make notes during the round, but outside notes and materials are prohibited. Competitors may utilize the provided chalkboards and whiteboards as a visual aid in their presentations.
4) Team A will then have up to one minute to confer, after which a single spokesperson for Team A may speak for up to 10 minutes in response to the moderator s question, based on the team s research and critical analysis. This is known as the presentation period.
5) Next Team B will have up to one minute to confer, after which Team B may speak for up to 5 minutes in response to Team A s presentation and to the moderator s question. This is known as the commentary period. Any number of team members may contribute to the commentary.
6) Team A will then have up to one minute to confer, followed by 5 minutes to respond to Team B s challenge. This is known as the response period. Any number of team members may contribute to the response.
7) The judges will then begin their 10 minute question and answer session with Team A. Before asking questions, the judges may confer briefly (no more than 30 seconds).
8) At this time, more than one team member may respond to a given judge s question. Team members are not expected to confer for longer than 20 to 30 seconds after a question has been asked.
9) Each judge should have time for one question and one follow-up. Judges may ask more questions if time permits. Judges may confer briefly before asking questions (no more than 30 seconds). More than one team member may respond to any judge s questions.

10) Each judge will then give Team A a score on a scale of 1 to 25 with 25 being the highest score. They will also give Team B a score on a scale of 1 to 5, with 5 being the highest score. Judges will base their analyses on the following criteria:
    a. CONSISTENCY, CLARITY AND INTELLIGIBILITY (*out of 5 points possible*)
    b. COMPREHENSION OF ETHICALLY RELEVANT FACTORS (*out of 5 points possible*)
    c. AVOIDANCE OF ETHICALLY IRRELEVANT ISSUES (*out of 5 points possible*)
    d. COMPLETENESS IN ANALYSIS (*out of 5 points possible*)
    e. RESPONSE TO OPPOSING TEAM COMMENTARY (*out of 5 points possible*)

    The judges are not permitted to discuss their scoring decisions with each other; each judge is to rely on his or her own private judgment.
11) After the judges have made their scoring decisions, the moderator will give a second case and question to the same two teams.
12) The competition will proceed as above, with the Team B presenting in the second half, Team A offering commentary, Team B responding, and then Team B participating in the judge s question and answer session.
13) At the end of the round, the judges will announce the scores for both the first half and for the second half. Thus, in each round, each team will have the opportunity to present one case and to respond to the other team s presentation of another case, for a total of 30 points possible from each of the three judges.

The winner of the round will be the team with the greater number of total points. A tie will not count as a win or a loss for either team. Moderators will validate scores with the teams and judges and pass score sheets to the competition coordinator for tallying with scores from the other rounds.

At the end of the third round, the four teams with the greatest number of wins (out of 3 possible) will advance to the semi-finals; in the event that a tie takes place, ties will take precedence over losses. If two teams have the same number of wins, the team with the greatest total point differential will advance. Then teams will advance based on point totals for all three rounds (out of 270 possible). In the event that even further delineation is necessary, the team whose lowest score for any of the three morning rounds is higher than the other team s lowest score for any of the three morning rounds will advance. If the teams are still tied, the team with the higher scores based solely on its own presentations (not commentary to the other team) will advance. If there is no other way of breaking the tie, the winner will be determined by coin toss.

Also, please note that in the unlikely event that a team is unable to attend the competition, certain alternative procedures may be adopted to allow everyone to participate, including the adoption of a placebo team, usually consisting of students or recent graduates with some prior knowledge of the cases. In such a case, teams pitted against the placebo team may be scored but will not receive a win or loss, and for the purposes of advancement to the finals will be assessed assuming neither a win nor loss (thus, similar to a tie), but special weight added to their performance against actual teams. If you have any questions concerning this process, please inquire.

Semi-final and final rounds will be scored the same way as the morning rounds. Each of these will be a single elimination competition in which the team with the higher score will be declared the winner.

Please note that we need to adhere strictly to the schedule to accomplish the day s agenda in a timely fashion. Jan Boxill, as director of this year s competition, will be the final arbiter of any disputes. And remember that the competition is all about having fun and exchanging ideas.

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

Subject: Re: [Fwd: Ethics Bowl]
Attach: Rules and Procedures.pdf

Bernadette,
This is perfect. Thanks so much for taking time on Saturday, especially so early, to provide the right kind of setting for the competition.
I look forward to seeing you Saturday morning. I've attached the final schedule as part of the procedures.

Thanks again,
Jan

PROCEDURE and RULES

FOR THE

FIRST ANNUAL MID-ATLANTIC REGIONAL ETHICS BOWL

at

THE UNIVERSITY OF NORTH CAROLINA at CHAPEL HILL
MURPHEY HALL
CHAPEL HILL, NORTH CAROLINA

ON SATURDAY, NOVEMBER 17, 2007

Sponsored by:

Department of Athletics

Department of History

Department of Philosophy

Department of Religious Studies

Carolina Women's Center

Center for Global Initiatives

Research Laboratories of Archaeology

For more information:
(919) 843–5641
parrcenter@unc.edu

SCHEDULE

(All rooms listed will be in Murphey Hall, unless otherwise noted.)

8:00-9:00 a.m.	Team registration	Murphey Hall Auditorium (116)
8:00-9:00 a.m.	Continental breakfast for teams and coaches	Murphey Hall lobby
8:15-9:00 a.m.	Breakfast meeting for judges and moderators	Campus Y Lounge
9:00-9:30 a.m.	Plenary session	Murphey Hall Auditorium (116)
	Welcome: Bernadette Gray-Little, Executive Vice Chancellor and Provost Review of Rules: Jan Boxill, Director, UNC Parr Center for Ethics	
9:45-11:00 a.m.	Round #1	Rooms assigned
11:15 a.m.-12:30 p.m.	Round #2	Rooms assigned
12:30-1:30 p.m.	Participant lunch	Campus Y Lounge
	Judges, moderators & coaches lunch	Campus Y Seminar Room
1:30-2:45 p.m.	Round #3	Rooms assigned
3:00-3:15 p.m.	Announcement of Semifinalists	Murphey Hall Auditorium (116)
3:30-4:45 p.m.	Semifinals	Rooms assigned
5:00-6:15 p.m.	Finals	Murphey Hall Auditorium (116)
6:15 p.m.	Trophy presentation/Conclusion	Murphey Hall Auditorium (116)

PROCEDURE AND RULES

The First Annual Mid-Atlantic Regional Ethics Bowl will take place on Saturday, November 17, 2007 at the University of North Carolina at Chapel Hill campus. It is being sponsored by the UNC Parr Center for Ethics, Department of Athletics, Department of Religious Studies, Department of Philosophy, Department of History, Research Laboratories of Archaeology and Carolina Women's Center. At the plenary, to be held at 9:00 a.m. in Murphey Hall Auditorium (room 116), a review of the rules and procedures and distribution of classroom assignments for the morning rounds will occur; classroom assignments will be made through a random impartial process.

Each team will participate in 3 matches, competing with a different team in each match. Semi-finals are concurrent and will begin at 3:30 p.m.; finals will take place in Murphey Hall Auditorium at 5:00 p.m. There will be awards for the top three winners right after the final round at 6:15 p.m. The final competition will be videotaped. Participating teams will be provided a copy for future use.

There are no limits to the resources that may be used in researching the questions prior to the competition. Students are encouraged to consult all resources, including professors to understand the full breadth of the cases, determine their positions, and make the strongest possible presentation.

1) Each round will begin with a coin toss. The team that wins the coin toss may elect to present first (to be the team designated as Team A) or to have the other team present first (and thus to be the team designated as Team B).
2) Copies of the first case and question will be distributed to the competitors and to the judges. Neither the judges nor the team members will have advance knowledge of which case will be presented or which question will be asked.
3) The moderators will then read the question. Scratch paper will also be provided for the competitors to make notes during the round, but outside notes and materials are prohibited. Competitors may utilize the provided chalkboards and whiteboards as a visual aid in their presentations.
4) Team A will then have up to one minute to confer, after which a single spokesperson for Team A may speak for up to 10 minutes in response to the moderator's question, based on the team's research and critical analysis. This is known as the presentation period.
5) Next Team B will have up to one minute to confer, after which Team B may speak for up to 5 minutes in response to Team A's presentation and to the moderator's question. This is known as the commentary period. Any number of team members may contribute to the commentary.
6) Team A will then have up to one minute to confer, followed by 5 minutes to respond to Team B's challenge. This is known as the response period. Any number of team members may contribute to the response.
7) The judges will then begin their 10 minute question and answer session with Team A. Before asking questions, the judges may confer briefly (no more than 30 seconds).
8) At this time, more than one team member may respond to a given judge's question. Team members are not expected to confer for longer than 20 to 30 seconds after a question has been asked.
9) Each judge should have time for one question and one follow-up. Judges may ask more questions if time permits. Judges may confer briefly before asking questions (no more than 30 seconds). More than one team member may respond to any judge's questions.

10) Each judge will then give Team A a score on a scale of 1 to 25 with 25 being the highest score. They will also give Team B a score on a scale of 1 to 5, with 5 being the highest score. Judges will base their analyses on the following criteria:
    a. CONSISTENCY, CLARITY AND INTELLIGIBILITY (*out of 5 points possible*)
    b. COMPREHENSION OF ETHICALLY RELEVANT FACTORS (*out of 5 points possible*)
    c. AVOIDANCE OF ETHICALLY IRRELEVANT ISSUES (*out of 5 points possible*)
    d. COMPLETENESS IN ANALYSIS (*out of 5 points possible*)
    e. RESPONSE TO OPPOSING TEAM COMMENTARY (*out of 5 points possible*)

    The judges are not permitted to discuss their scoring decisions with each other; each judge is to rely on his or her own private judgment.
11) After the judges have made their scoring decisions, the moderator will give a second case and question to the same two teams.
12) The competition will proceed as above, with the Team B presenting in the second half, Team A offering commentary, Team B responding, and then Team B participating in the judge's question and answer session.
13) At the end of the round, the judges will announce the scores for both the first half and for the second half. Thus, in each round, each team will have the opportunity to present one case and to respond to the other team's presentation of another case, for a total of 30 points possible from each of the three judges.

The winner of the round will be the team with the greater number of total points. A tie will not count as a win or a loss for either team. Moderators will validate scores with the teams and judges and pass score sheets to the competition coordinator for tallying with scores from the other rounds.

At the end of the third round, the four teams with the greatest number of wins (out of 3 possible) will advance to the semi-finals; in the event that a tie takes place, ties will take precedence over losses. If two teams have the same number of wins, the team with the greatest total point differential will advance. Then teams will advance based on point totals for all three rounds (out of 270 possible). In the event that even further delineation is necessary, the team whose lowest score for any of the three morning rounds is higher than the other team's lowest score for any of the three morning rounds will advance. If the teams are still tied, the team with the higher scores based solely on its own presentations (not commentary to the other team) will advance. If there is no other way of breaking the tie, the winner will be determined by coin toss.

Also, please note that in the unlikely event that a team is unable to attend the competition, certain alternative procedures may be adopted to allow everyone to participate, including the adoption of a "placebo team," usually consisting of students or recent graduates with some prior knowledge of the cases. In such a case, teams pitted against the placebo team may be scored but will not receive a win or loss, and for the purposes of advancement to the finals will be assessed assuming neither a win nor loss (thus, similar to a tie), but special weight added to their performance against actual teams. If you have any questions concerning this process, please inquire.

Semi-final and final rounds will be scored the same way as the morning rounds. Each of these will be a single elimination competition in which the team with the higher score will be declared the winner.

Please note that we need to adhere strictly to the schedule to accomplish the day's agenda in a timely fashion. Jan Boxill, as director of this year's competition, will be the final arbiter of any disputes. And remember that the competition is all about having fun and exchanging ideas.

---

Hi Doug,
I am hoping you can serve as a judge for the Ethics Bowl. I am attaching the information you would need.
Thanks so much,
Jan

SCHEDULE

(All rooms listed will be in Murphey Hall, unless otherwise noted.)

8:00-9:00 a.m.	Team registration	Murphey Hall Auditorium (116)
8:00-9:00 a.m.	Continental breakfast for teams and coaches	Murphey Hall lobby
8:15-9:00 a.m.	Breakfast meeting for judges and moderators	Campus Y Lounge
9:00-9:30 a.m.	Plenary session	Murphey Hall Auditorium (116)
	Welcome: Bernadette Gray-Little, Executive Vice Chancellor and Provost Review of Rules: Jan Boxill, Director, UNC Parr Center for Ethics	
9:45-11:00 a.m.	Round #1	Rooms assigned
11:15 a.m.-12:30 p.m.	Round #2	Rooms assigned
12:30-1:30 p.m.	Participant lunch	Campus Y Lounge
	Judges, moderators & coaches lunch	Campus Y Seminar Room
1:30-2:45 p.m.	Round #3	Rooms assigned
3:00-3:15 p.m.	Announcement of Semifinalists	Murphey Hall Auditorium (116)
3:30-4:45 p.m.	Semifinals	Rooms assigned
5:00-6:15 p.m.	Finals	Murphey Hall Auditorium (116)
6:15 p.m.	Trophy presentation/Conclusion	Murphey Hall Auditorium (116)

PROCEDURE AND RULES

The First Annual Mid-Atlantic Regional Ethics Bowl will take place on Saturday, November 17, 2007 at the University of North Carolina at Chapel Hill campus. It is being sponsored by the UNC Parr Center for Ethics, Department of Athletics, Department of Religious Studies, Department of Philosophy, Department of History, Research Laboratories of Archaeology and Carolina Women's Center. At the plenary, to be held at 9:00 a.m. in Murphey Hall Auditorium (room 116), a review of the rules and procedures and distribution of classroom assignments for the morning rounds will occur; classroom assignments will be made through a random impartial process.

Each team will participate in 3 matches, competing with a different team in each match. Semi-finals are concurrent and will begin at 3:30 p.m.; finals will take place in Murphey Hall Auditorium at 5:00 p.m. There will be awards for the top three winners right after the final round at 6:15 p.m. The final competition will be videotaped. Participating teams will be provided a copy for future use.

There are no limits to the resources that may be used in researching the questions prior to the competition. Students are encouraged to consult all resources, including professors to understand the full breadth of the cases, determine their positions, and make the strongest possible presentation.

1) Each round will begin with a coin toss. The team that wins the coin toss may elect to present first (to be the team designated as Team A) or to have the other team present first (and thus to be the team designated as Team B).
2) Copies of the first case and question will be distributed to the competitors and to the judges. Neither the judges nor the team members will have advance knowledge of which case will be presented or which question will be asked.
3) The moderators will then read the question. Scratch paper will also be provided for the competitors to make notes during the round, but outside notes and materials are prohibited. Competitors may utilize the provided chalkboards and whiteboards as a visual aid in their presentations.
4) Team A will then have up to one minute to confer, after which a single spokesperson for Team A may speak for up to 10 minutes in response to the moderator s question, based on the team s research and critical analysis. This is known as the presentation period.
5) Next Team B will have up to one minute to confer, after which Team B may speak for up to 5 minutes in response to Team A s presentation and to the moderator s question. This is known as the commentary period. Any number of team members may contribute to the commentary.
6) Team A will then have up to one minute to confer, followed by 5 minutes to respond to Team B s challenge. This is known as the response period. Any number of team members may contribute to the response.
7) The judges will then begin their 10 minute question and answer session with Team A. Before asking questions, the judges may confer briefly (no more than 30 seconds).
8) At this time, more than one team member may respond to a given judge s question. Team members are not expected to confer for longer than 20 to 30 seconds after a question has been asked.
9) Each judge should have time for one question and one follow-up. Judges may ask more questions if time permits. Judges may confer briefly before asking questions (no more than 30 seconds). More than one team member may respond to any judge s questions.

10) Each judge will then give Team A a score on a scale of 1 to 25 with 25 being the highest score. They will also give Team B a score on a scale of 1 to 5, with 5 being the highest score. Judges will base their analyses on the following criteria:
    a. CONSISTENCY, CLARITY AND INTELLIGIBILITY (*out of 5 points possible*)
    b. COMPREHENSION OF ETHICALLY RELEVANT FACTORS (*out of 5 points possible*)
    c. AVOIDANCE OF ETHICALLY IRRELEVANT ISSUES (*out of 5 points possible*)
    d. COMPLETENESS IN ANALYSIS (*out of 5 points possible*)
    e. RESPONSE TO OPPOSING TEAM COMMENTARY (*out of 5 points possible*)

    The judges are not permitted to discuss their scoring decisions with each other; each judge is to rely on his or her own private judgment.
11) After the judges have made their scoring decisions, the moderator will give a second case and question to the same two teams.
12) The competition will proceed as above, with the Team B presenting in the second half, Team A offering commentary, Team B responding, and then Team B participating in the judge s question and answer session.
13) At the end of the round, the judges will announce the scores for both the first half and for the second half. Thus, in each round, each team will have the opportunity to present one case and to respond to the other team s presentation of another case, for a total of 30 points possible from each of the three judges.

The winner of the round will be the team with the greater number of total points. A tie will not count as a win or a loss for either team. Moderators will validate scores with the teams and judges and pass score sheets to the competition coordinator for tallying with scores from the other rounds.

At the end of the third round, the four teams with the greatest number of wins (out of 3 possible) will advance to the semi-finals; in the event that a tie takes place, ties will take precedence over losses. If two teams have the same number of wins, the team with the greatest total point differential will advance. Then teams will advance based on point totals for all three rounds (out of 270 possible). In the event that even further delineation is necessary, the team whose lowest score for any of the three morning rounds is higher than the other team s lowest score for any of the three morning rounds will advance. If the teams are still tied, the team with the higher scores based solely on its own presentations (not commentary to the other team) will advance. If there is no other way of breaking the tie, the winner will be determined by coin toss.

Also, please note that in the unlikely event that a team is unable to attend the competition, certain alternative procedures may be adopted to allow everyone to participate, including the adoption of a placebo team, usually consisting of students or recent graduates with some prior knowledge of the cases. In such a case, teams pitted against the placebo team may be scored but will not receive a win or loss, and for the purposes of advancement to the finals will be assessed assuming neither a win nor loss (thus, similar to a tie), but special weight added to their performance against actual teams. Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

***Please note: Most cases were derived from newspapers, Internet and book sources. We omitted citation information, but it is available upon request.**

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

TOTAL SCORE FOR TEAM

---

Hi Bob,
I left a message on your home phone and am emailing you to invite you to serve as a judge for our Regional Ethics Bowl Competition. The date of the regional competition is Saturday, November 17th. I have attached the schedule. If I have enough judges, you would only have to do 2 sessions at most. Each panel will have 3 judges--hopefully 2 faculty and a community member. Basically judging involves the same kind of analysis as grading an undergraduate paper. I have attached some information; and parking will be provided at the Caldwell Hall lot. For further information visit the Parr Center website.

UNC has two teams who have been working together over the course of the semester, so your support would be greatly appreciated. Please contact me or Jennie who is copied on this email.

Thanks so much. I hope you can serve. We especially need afternoon people.
Jan

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

PROCEDURE and RULES

FOR THE

FIRST ANNUAL MID-ATLANTIC REGIONAL ETHICS BOWL

at

THE UNIVERSITY OF NORTH CAROLINA at CHAPEL HILL
MURPHEY HALL
CHAPEL HILL, NORTH CAROLINA

ON SATURDAY, NOVEMBER 17, 2007

Sponsored by:

Department of Athletics

Department of History

Department of Philosophy

Department of Religious Studies

Carolina Women's Center

Center for Global Initiatives

Research Laboratories of Archaeology

For more information:
(919) 843–5641
parrcenter@unc.edu

SCHEDULE

(All rooms listed will be in Murphey Hall, unless otherwise noted.)

8:00-9:00 a.m.	Team registration	Murphey Hall Auditorium (116)
8:00-9:00 a.m.	Continental breakfast for teams and coaches	Murphey Hall lobby
8:15-9:00 a.m.	Breakfast meeting for judges and moderators	Campus Y Lounge
9:00-9:30 a.m.	Plenary session	Murphey Hall Auditorium (116)
	Welcome: Bernadette Gray-Little, Executive Vice Chancellor and Provost Review of Rules: Jan Boxill, Director, UNC Parr Center for Ethics	
9:45-11:00 a.m.	Round #1	Rooms assigned
11:15 a.m.-12:30 p.m.	Round #2	Rooms assigned
12:30-1:30 p.m.	Participant lunch	Campus Y Lounge
	Judges, moderators & coaches lunch	Campus Y Seminar Room
1:30-2:45 p.m.	Round #3	Rooms assigned
3:00-3:15 p.m.	Announcement of Semifinalists	Murphey Hall Auditorium (116)
3:30-4:45 p.m.	Semifinals	Rooms assigned
5:00-6:15 p.m.	Finals	Murphey Hall Auditorium (116)
6:15 p.m.	Trophy presentation/Conclusion	Murphey Hall Auditorium (116)

PROCEDURE AND RULES

The First Annual Mid-Atlantic Regional Ethics Bowl will take place on Saturday, November 17, 2007 at the University of North Carolina at Chapel Hill campus. It is being sponsored by the UNC Parr Center for Ethics, Department of Athletics, Department of Religious Studies, Department of Philosophy, Department of History, Research Laboratories of Archaeology and Carolina Women's Center. At the plenary, to be held at 9:00 a.m. in Murphey Hall Auditorium (room 116), a review of the rules and procedures and distribution of classroom assignments for the morning rounds will occur; classroom assignments will be made through a random impartial process.

Each team will participate in 3 matches, competing with a different team in each match. Semi-finals are concurrent and will begin at 3:30 p.m.; finals will take place in Murphey Hall Auditorium at 5:00 p.m. There will be awards for the top three winners right after the final round at 6:15 p.m. The final competition will be videotaped. Participating teams will be provided a copy for future use.

There are no limits to the resources that may be used in researching the questions prior to the competition. Students are encouraged to consult all resources, including professors to understand the full breadth of the cases, determine their positions, and make the strongest possible presentation.

1) Each round will begin with a coin toss. The team that wins the coin toss may elect to present first (to be the team designated as Team A) or to have the other team present first (and thus to be the team designated as Team B).
2) Copies of the first case and question will be distributed to the competitors and to the judges. Neither the judges nor the team members will have advance knowledge of which case will be presented or which question will be asked.
3) The moderators will then read the question. Scratch paper will also be provided for the competitors to make notes during the round, but outside notes and materials are prohibited. Competitors may utilize the provided chalkboards and whiteboards as a visual aid in their presentations.
4) Team A will then have up to one minute to confer, after which a single spokesperson for Team A may speak for up to 10 minutes in response to the moderator's question, based on the team's research and critical analysis. This is known as the presentation period.
5) Next Team B will have up to one minute to confer, after which Team B may speak for up to 5 minutes in response to Team A's presentation and to the moderator's question. This is known as the commentary period. Any number of team members may contribute to the commentary.
6) Team A will then have up to one minute to confer, followed by 5 minutes to respond to Team B's challenge. This is known as the response period. Any number of team members may contribute to the response.
7) The judges will then begin their 10 minute question and answer session with Team A. Before asking questions, the judges may confer briefly (no more than 30 seconds).
8) At this time, more than one team member may respond to a given judge's question. Team members are not expected to confer for longer than 20 to 30 seconds after a question has been asked.
9) Each judge should have time for one question and one follow-up. Judges may ask more questions if time permits. Judges may confer briefly before asking questions (no more than 30 seconds). More than one team member may respond to any judge's questions.

10) Each judge will then give Team A a score on a scale of 1 to 25 with 25 being the highest score. They will also give Team B a score on a scale of 1 to 5, with 5 being the highest score. Judges will base their analyses on the following criteria:
    a. CONSISTENCY, CLARITY AND INTELLIGIBILITY (*out of 5 points possible*)
    b. COMPREHENSION OF ETHICALLY RELEVANT FACTORS (*out of 5 points possible*)
    c. AVOIDANCE OF ETHICALLY IRRELEVANT ISSUES (*out of 5 points possible*)
    d. COMPLETENESS IN ANALYSIS (*out of 5 points possible*)
    e. RESPONSE TO OPPOSING TEAM COMMENTARY (*out of 5 points possible*)

    The judges are not permitted to discuss their scoring decisions with each other; each judge is to rely on his or her own private judgment.
11) After the judges have made their scoring decisions, the moderator will give a second case and question to the same two teams.
12) The competition will proceed as above, with the Team B presenting in the second half, Team A offering commentary, Team B responding, and then Team B participating in the judge's question and answer session.
13) At the end of the round, the judges will announce the scores for both the first half and for the second half. Thus, in each round, each team will have the opportunity to present one case and to respond to the other team's presentation of another case, for a total of 30 points possible from each of the three judges.

The winner of the round will be the team with the greater number of total points. A tie will not count as a win or a loss for either team. Moderators will validate scores with the teams and judges and pass score sheets to the competition coordinator for tallying with scores from the other rounds.

At the end of the third round, the four teams with the greatest number of wins (out of 3 possible) will advance to the semi-finals; in the event that a tie takes place, ties will take precedence over losses. If two teams have the same number of wins, the team with the greatest total point differential will advance. Then teams will advance based on point totals for all three rounds (out of 270 possible). In the event that even further delineation is necessary, the team whose lowest score for any of the three morning rounds is higher than the other team's lowest score for any of the three morning rounds will advance. If the teams are still tied, the team with the higher scores based solely on its own presentations (not commentary to the other team) will advance. If there is no other way of breaking the tie, the winner will be determined by coin toss.

Also, please note that in the unlikely event that a team is unable to attend the competition, certain alternative procedures may be adopted to allow everyone to participate, including the adoption of a "placebo team," usually consisting of students or recent graduates with some prior knowledge of the cases. In such a case, teams pitted against the placebo team may be scored but will not receive a win or loss, and for the purposes of advancement to the finals will be assessed assuming neither a win nor loss (thus, similar to a tie), but special weight added to their performance against actual teams. If you have any questions concerning this process, please inquire.

Semi-final and final rounds will be scored the same way as the morning rounds. Each of these will be a single elimination competition in which the team with the higher score will be declared the winner.

Please note that we need to adhere strictly to the schedule to accomplish the day's agenda in a timely fashion. Jan Boxill, as director of this year's competition, will be the final arbiter of any disputes. And remember that the competition is all about having fun and exchanging ideas.

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

TOTAL SCORE FOR TEAM

---

Dear Taylors,
I wouul like to invite you to be judges for the First Annual Mid-Atlantic Intercollegiate Ethics Bowl hosted by the Parr Center for Ethics, which will be held here at UNC. The date of the regional competition is Saturday, November 17th. I have attached the schedule. We have enough judges for the morning sessions, but need to fill our afternoon slots. Each panel will have 3 judges--hopefully 2 faculty and a community member. Basically judging involves the same kind of analysis as grading an undergraduate paper. I have attached some information to give you an idea. For further information visit the Parr Center website.

UNC has two teams who have been working together over the course of the semester, so your support would be greatly appreciated. Please contact me or Jennie, who is copied on this email, if you have any questions.

Thanks so much. I hope you can serve. I know Betsy your Saturday is sacred, but I am hoping David would enjoy coming back on campus for this. And parking will be provided at the Caldwell lot.

Thanks,
Jan

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

PROCEDURE and RULES

FOR THE

FIRST ANNUAL MID-ATLANTIC REGIONAL ETHICS BOWL

at

THE UNIVERSITY OF NORTH CAROLINA at CHAPEL HILL
MURPHEY HALL
CHAPEL HILL, NORTH CAROLINA

ON SATURDAY, NOVEMBER 17, 2007

Sponsored by:

Department of Athletics

Department of History

Department of Philosophy

Department of Religious Studies

Carolina Women's Center

Center for Global Initiatives

Research Laboratories of Archaeology

For more information:
(919) 843–5641
parrcenter@unc.edu

SCHEDULE

(All rooms listed will be in Murphey Hall, unless otherwise noted.)

8:00-9:00 a.m.	Team registration	Murphey Hall Auditorium (116)
8:00-9:00 a.m.	Continental breakfast for teams and coaches	Murphey Hall lobby
8:15-9:00 a.m.	Breakfast meeting for judges and moderators	Campus Y Lounge
9:00-9:30 a.m.	Plenary session	Murphey Hall Auditorium (116)
	Welcome: Bernadette Gray-Little, Executive Vice Chancellor and Provost Review of Rules: Jan Boxill, Director, UNC Parr Center for Ethics	
9:45-11:00 a.m.	Round #1	Rooms assigned
11:15 a.m.-12:30 p.m.	Round #2	Rooms assigned
12:30-1:30 p.m.	Participant lunch	Campus Y Lounge
	Judges, moderators & coaches lunch	Campus Y Seminar Room
1:30-2:45 p.m.	Round #3	Rooms assigned
3:00-3:15 p.m.	Announcement of Semifinalists	Murphey Hall Auditorium (116)
3:30-4:45 p.m.	Semifinals	Rooms assigned
5:00-6:15 p.m.	Finals	Murphey Hall Auditorium (116)
6:15 p.m.	Trophy presentation/Conclusion	Murphey Hall Auditorium (116)

PROCEDURE AND RULES

The First Annual Mid-Atlantic Regional Ethics Bowl will take place on Saturday, November 17, 2007 at the University of North Carolina at Chapel Hill campus. It is being sponsored by the UNC Parr Center for Ethics, Department of Athletics, Department of Religious Studies, Department of Philosophy, Department of History, Research Laboratories of Archaeology and Carolina Women's Center. At the plenary, to be held at 9:00 a.m. in Murphey Hall Auditorium (room 116), a review of the rules and procedures and distribution of classroom assignments for the morning rounds will occur; classroom assignments will be made through a random impartial process.

Each team will participate in 3 matches, competing with a different team in each match. Semi-finals are concurrent and will begin at 3:30 p.m.; finals will take place in Murphey Hall Auditorium at 5:00 p.m. There will be awards for the top three winners right after the final round at 6:15 p.m. The final competition will be videotaped. Participating teams will be provided a copy for future use.

There are no limits to the resources that may be used in researching the questions prior to the competition. Students are encouraged to consult all resources, including professors to understand the full breadth of the cases, determine their positions, and make the strongest possible presentation.

1) Each round will begin with a coin toss. The team that wins the coin toss may elect to present first (to be the team designated as Team A) or to have the other team present first (and thus to be the team designated as Team B).
2) Copies of the first case and question will be distributed to the competitors and to the judges. Neither the judges nor the team members will have advance knowledge of which case will be presented or which question will be asked.
3) The moderators will then read the question. Scratch paper will also be provided for the competitors to make notes during the round, but outside notes and materials are prohibited. Competitors may utilize the provided chalkboards and whiteboards as a visual aid in their presentations.
4) Team A will then have up to one minute to confer, after which a single spokesperson for Team A may speak for up to 10 minutes in response to the moderator's question, based on the team's research and critical analysis. This is known as the presentation period.
5) Next Team B will have up to one minute to confer, after which Team B may speak for up to 5 minutes in response to Team A's presentation and to the moderator's question. This is known as the commentary period. Any number of team members may contribute to the commentary.
6) Team A will then have up to one minute to confer, followed by 5 minutes to respond to Team B's challenge. This is known as the response period. Any number of team members may contribute to the response.
7) The judges will then begin their 10 minute question and answer session with Team A. Before asking questions, the judges may confer briefly (no more than 30 seconds).
8) At this time, more than one team member may respond to a given judge's question. Team members are not expected to confer for longer than 20 to 30 seconds after a question has been asked.
9) Each judge should have time for one question and one follow-up. Judges may ask more questions if time permits. Judges may confer briefly before asking questions (no more than 30 seconds). More than one team member may respond to any judge's questions.

10) Each judge will then give Team A a score on a scale of 1 to 25 with 25 being the highest score. They will also give Team B a score on a scale of 1 to 5, with 5 being the highest score. Judges will base their analyses on the following criteria:
    a. CONSISTENCY, CLARITY AND INTELLIGIBILITY (*out of 5 points possible*)
    b. COMPREHENSION OF ETHICALLY RELEVANT FACTORS (*out of 5 points possible*)
    c. AVOIDANCE OF ETHICALLY IRRELEVANT ISSUES (*out of 5 points possible*)
    d. COMPLETENESS IN ANALYSIS (*out of 5 points possible*)
    e. RESPONSE TO OPPOSING TEAM COMMENTARY (*out of 5 points possible*)

    The judges are not permitted to discuss their scoring decisions with each other; each judge is to rely on his or her own private judgment.
11) After the judges have made their scoring decisions, the moderator will give a second case and question to the same two teams.
12) The competition will proceed as above, with the Team B presenting in the second half, Team A offering commentary, Team B responding, and then Team B participating in the judge's question and answer session.
13) At the end of the round, the judges will announce the scores for both the first half and for the second half. Thus, in each round, each team will have the opportunity to present one case and to respond to the other team's presentation of another case, for a total of 30 points possible from each of the three judges.

The winner of the round will be the team with the greater number of total points. A tie will not count as a win or a loss for either team. Moderators will validate scores with the teams and judges and pass score sheets to the competition coordinator for tallying with scores from the other rounds.

At the end of the third round, the four teams with the greatest number of wins (out of 3 possible) will advance to the semi-finals; in the event that a tie takes place, ties will take precedence over losses. If two teams have the same number of wins, the team with the greatest total point differential will advance. Then teams will advance based on point totals for all three rounds (out of 270 possible). In the event that even further delineation is necessary, the team whose lowest score for any of the three morning rounds is higher than the other team's lowest score for any of the three morning rounds will advance. If the teams are still tied, the team with the higher scores based solely on its own presentations (not commentary to the other team) will advance. If there is no other way of breaking the tie, the winner will be determined by coin toss.

Also, please note that in the unlikely event that a team is unable to attend the competition, certain alternative procedures may be adopted to allow everyone to participate, including the adoption of a "placebo team," usually consisting of students or recent graduates with some prior knowledge of the cases. In such a case, teams pitted against the placebo team may be scored but will not receive a win or loss, and for the purposes of advancement to the finals will be assessed assuming neither a win nor loss (thus, similar to a tie), but special weight added to their performance against actual teams. If you have any questions concerning this process, please inquire.

Semi-final and final rounds will be scored the same way as the morning rounds. Each of these will be a single elimination competition in which the team with the higher score will be declared the winner.

Please note that we need to adhere strictly to the schedule to accomplish the day's agenda in a timely fashion. Jan Boxill, as director of this year's competition, will be the final arbiter of any disputes. And remember that the competition is all about having fun and exchanging ideas.

Judge's Score Sheet FRONT

Judge's Name_____

PRESENTING team_____

Part 1: PRESENTING Team's initial presentation (10 minutes; 40 total points)

1. Was the presentation clear and systematic? Regardless of whether or not you agree with the conclusion, did the team give a coherent argument in a clear and succinct manner?

1-10 ☐

1-2 = Incoherent presentation
3-4 = Serious logical problems in the argument (poor)
5-6 = Hard to follow the argument (passable)
7-8 = Reasonably clear and systematic
9 = Crystal clear presentation
10 = Exceptional

2. Did the team avoid ethically irrelevant issues? Or was the team preoccupied with issues that are not ethically relevant or are of minor ethical relevance to the case?

1-10 ☐

1-2 = Whole argument irrelevant
3-4 = Major irrelevance in the argument (poor)
5-6 = Some distractions from main argument (passable)
7-8 = Minor irrelevancies
9 = Exactly on point
10 = Exceptional

3. Did the team's presentation clearly identify and thoroughly discuss the central moral dimensions of the case?

1-10 ☐

1-2 = Failure to cover any relevant moral dimensions
3-4 = Serious missing or underdeveloped dimensions (poor)
5-6 = Some significant dimensions are missing or poorly covered (passable)
7-8 = Most dimensions are present and well developed
9 = All dimensions present and clarified appropriately
10 = Exceptional

4. Did the team's presentation indicate both awareness and thoughtful consideration of different viewpoints, including especially those that would loom large in the reasoning of individuals who disagree with team's position?

1-10 ☐

1-2 = Minimal awareness of different viewpoints
3-4 = Minimal consideration of different viewpoints…. (poor)
5-6 = Underdeveloped discussion of different viewpoints…. (passable)
7-8 = Solid analysis and discussion of different viewpoints, including careful attention especially to those that would loom large….
9 = Insightful analysis and discussion of different viewpoints, including full and careful attention especially to those that would loom large….
10 = Exceptional

☐ **Total from front (maximum 40)**

TURN OVER after initial presentation

Judge's Score Sheet BACK

<u>Part 2</u>: OPPOSING Team's Commentary (5 minutes; 10 total points)

To what extent has the team effectively dealt with the presenting team's arguments?

1-2 = Failure to respond
3-4 = Weak or irrelevant response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed commentary

1-10 Points for OPPOSING Team

These points are added to the other score sheet

<u>Part 3</u>: PRESENTING Team's Response to Commentary (5 minutes; 10 total points)

How did the team <u>respond</u> to the opposing team's commentary and the judges' questions?

1-2 = Failure to respond
3-4 = Weak response (poor)
5-6 = Some points are made (passable)
7-8 = Solid response
9 = Key points zeroed in on (crystal clear)
10 = Exceptionally composed response

1-10 Points for PRESENTING Team

TOTAL SCORE FOR TEAM

Hi Lawrence,
An interim progress report is due November 16th and unfortunately, the 29th is the Final meeting where all the final selections are presented along with the blurbs.
On that date the job of the committee members is completed. I will let Debbie respond to question about access to the files in the Chancellor's office.

Hi Debbie,
Thanks. I don't know him, but I was aware of this blog! Interestingly,
John Thelin is one of the people giving a paper at the colloquium [which
I am involved in]!

PROCEDURE and RULES

FOR THE

FIRST ANNUAL MID-ATLANTIC REGIONAL ETHICS BOWL

at

THE UNIVERSITY OF NORTH CAROLINA at CHAPEL HILL
MURPHEY HALL
CHAPEL HILL, NORTH CAROLINA

ON SATURDAY, NOVEMBER 17, 2007

Sponsored by:

Department of Athletics

Department of History

Department of Philosophy

Department of Religious Studies

Carolina Women's Center

Center for Global Initiatives

Research Laboratories of Archaeology

For more information:
(919) 843–5641
parrcenter@unc.edu

SCHEDULE

(All rooms listed will be in Murphey Hall, unless otherwise noted.)

8:00-9:00 a.m.	Team registration	Murphey Hall Auditorium (116)
8:00-9:00 a.m.	Continental breakfast for teams and coaches	Murphey Hall lobby
8:15-9:00 a.m.	Breakfast meeting for judges and moderators	Campus Y Lounge
9:00-9:30 a.m.	Plenary session	Murphey Hall Auditorium (116)
	Welcome: Bernadette Gray-Little, Executive Vice Chancellor and Provost Review of Rules: Jan Boxill, Director, UNC Parr Center for Ethics	
9:45-11:00 a.m.	Round #1	Rooms assigned
11:15 a.m.-12:30 p.m.	Round #2	Rooms assigned
12:30-1:30 p.m.	Participant lunch	Campus Y Lounge
	Judges, moderators & coaches lunch	Campus Y Seminar Room
1:30-2:45 p.m.	Round #3	Rooms assigned
3:00-3:15 p.m.	Announcement of Semifinalists	Murphey Hall Auditorium (116)
3:30-4:45 p.m.	Semifinals	Rooms assigned
5:00-6:15 p.m.	Finals	Murphey Hall Auditorium (116)
6:15 p.m.	Trophy presentation/Conclusion	Murphey Hall Auditorium (116)

PROCEDURE AND RULES

The First Annual Mid-Atlantic Regional Ethics Bowl will take place on Saturday, November 17, 2007 at the University of North Carolina at Chapel Hill campus. It is being sponsored by the UNC Parr Center for Ethics, Department of Athletics, Department of Religious Studies, Department of Philosophy, Department of History, Research Laboratories of Archaeology and Carolina Women's Center. At the plenary, to be held at 9:00 a.m. in Murphey Hall Auditorium (room 116), a review of the rules and procedures and distribution of classroom assignments for the morning rounds will occur; classroom assignments will be made through a random impartial process.

Each team will participate in 3 matches, competing with a different team in each match. Semi-finals are concurrent and will begin at 3:30 p.m.; finals will take place in Murphey Hall Auditorium at 5:00 p.m. There will be awards for the top three winners right after the final round at 6:15 p.m. The final competition will be videotaped. Participating teams will be provided a copy for future use.

There are no limits to the resources that may be used in researching the questions prior to the competition. Students are encouraged to consult all resources, including professors to understand the full breadth of the cases, determine their positions, and make the strongest possible presentation.

1) Each round will begin with a coin toss. The team that wins the coin toss may elect to present first (to be the team designated as Team A) or to have the other team present first (and thus to be the team designated as Team B).
2) Copies of the first case and question will be distributed to the competitors and to the judges. Neither the judges nor the team members will have advance knowledge of which case will be presented or which question will be asked.
3) The moderators will then read the question. Scratch paper will also be provided for the competitors to make notes during the round, but outside notes and materials are prohibited. Competitors may utilize the provided chalkboards and whiteboards as a visual aid in their presentations.
4) Team A will then have up to one minute to confer, after which a single spokesperson for Team A may speak for up to 10 minutes in response to the moderator's question, based on the team's research and critical analysis. This is known as the presentation period.
5) Next Team B will have up to one minute to confer, after which Team B may speak for up to 5 minutes in response to Team A's presentation and to the moderator's question. This is known as the commentary period. Any number of team members may contribute to the commentary.
6) Team A will then have up to one minute to confer, followed by 5 minutes to respond to Team B's challenge. This is known as the response period. Any number of team members may contribute to the response.
7) The judges will then begin their 10 minute question and answer session with Team A. Before asking questions, the judges may confer briefly (no more than 30 seconds).
8) At this time, more than one team member may respond to a given judge's question. Team members are not expected to confer for longer than 20 to 30 seconds after a question has been asked.
9) Each judge should have time for one question and one follow-up. Judges may ask more questions if time permits. Judges may confer briefly before asking questions (no more than 30 seconds). More than one team member may respond to any judge's questions.

10) Each judge will then give Team A a score on a scale of 1 to 25 with 25 being the highest score. They will also give Team B a score on a scale of 1 to 5, with 5 being the highest score. Judges will base their analyses on the following criteria:
    a. CONSISTENCY, CLARITY AND INTELLIGIBILITY (*out of 5 points possible*)
    b. COMPREHENSION OF ETHICALLY RELEVANT FACTORS (*out of 5 points possible*)
    c. AVOIDANCE OF ETHICALLY IRRELEVANT ISSUES (*out of 5 points possible*)
    d. COMPLETENESS IN ANALYSIS (*out of 5 points possible*)
    e. RESPONSE TO OPPOSING TEAM COMMENTARY (*out of 5 points possible*)

    The judges are not permitted to discuss their scoring decisions with each other; each judge is to rely on his or her own private judgment.
11) After the judges have made their scoring decisions, the moderator will give a second case and question to the same two teams.
12) The competition will proceed as above, with the Team B presenting in the second half, Team A offering commentary, Team B responding, and then Team B participating in the judge's question and answer session.
13) At the end of the round, the judges will announce the scores for both the first half and for the second half. Thus, in each round, each team will have the opportunity to present one case and to respond to the other team's presentation of another case, for a total of 30 points possible from each of the three judges.

The winner of the round will be the team with the greater number of total points. A tie will not count as a win or a loss for either team. Moderators will validate scores with the teams and judges and pass score sheets to the competition coordinator for tallying with scores from the other rounds.

At the end of the third round, the four teams with the greatest number of wins (out of 3 possible) will advance to the semi-finals; in the event that a tie takes place, ties will take precedence over losses. If two teams have the same number of wins, the team with the greatest total point differential will advance. Then teams will advance based on point totals for all three rounds (out of 270 possible). In the event that even further delineation is necessary, the team whose lowest score for any of the three morning rounds is higher than the other team's lowest score for any of the three morning rounds will advance. If the teams are still tied, the team with the higher scores based solely on its own presentations (not commentary to the other team) will advance. If there is no other way of breaking the tie, the winner will be determined by coin toss.

Also, please note that in the unlikely event that a team is unable to attend the competition, certain alternative procedures may be adopted to allow everyone to participate, including the adoption of a "placebo team," usually consisting of students or recent graduates with some prior knowledge of the cases. In such a case, teams pitted against the placebo team may be scored but will not receive a win or loss, and for the purposes of advancement to the finals will be assessed assuming neither a win nor loss (thus, similar to a tie), but special weight added to their performance against actual teams. If you have any questions concerning this process, please inquire.

Semi-final and final rounds will be scored the same way as the morning rounds. Each of these will be a single elimination competition in which the team with the higher score will be declared the winner.

Please note that we need to adhere strictly to the schedule to accomplish the day's agenda in a timely fashion. Jan Boxill, as director of this year's competition, will be the final arbiter of any disputes. And remember that the competition is all about having fun and exchanging ideas.

Case #1: Drug Companies Funding FDA Research

Since 1971, the Food and Drug Administration (FDA) had shown interest in charging "user fees" as a way to speed their review process and augment their funding provided by Congress. In 1992, Congress passed the Pharmaceutical Drug User Fee Act (PDUFA), which allowed the FDA to charge drug manufacturers a "user fee" to provide funds for FDA reviewers to complete their reviews within 12 months. The median drug review time was approximately 33 months in the early 1990's, which drug companies and patients awaiting new life-saving drugs, believed was too long. HIV and AIDs patients were pushing for opportunities to move new drugs more quickly through the long approval process. Soon after the PDUFA went into effect, the average review time dropped from 33 months to less than 12.

In addition to the user fees, the majority of the research on new pharmaceuticals is performed by the pharmaceutical companies themselves. The FDA engages a 12-step process in the approval of new pharmaceuticals; both the initial preclinical trials (those not performed on humans) and later human testing are performed either by the pharmaceutical companies themselves or by subcontractors for the pharmaceutical companies. After preclinical trials, the FDA orders local institutional review boards (IRBs) to determine the procedures (including dosage, measurement, and informed consent) required for human testing of a given drug. After 3 stages of human testing, FDA officials then review the results provided to them by the pharmaceutical companies in several steps in order to ensure product safety. The user fees are aimed at speeding the review process, by providing greater resources to the FDA so they can complete the reviews in a timely manner.

User fees, combined with the 12-step approval process, are aimed at providing safe, but quick approval of new medications. Those who oppose drug manufacturers paying for quick drug reviews fear that reviews conducted to meet a specific deadline risks having errors and believe that the practice gives control over FDA to the pharmaceutical companies. Additionally, critics of the FDA approval process have long noted the conflict of interest created when drug companies provide the information upon which approval of their own drugs is based. Marcia Angell, editor in chief of the New England Journal of Medicine from 1999 to 2000 believes "oversight of clinical trials is too important to leave in the hands of drug companies and their agents."

The Pharmaceutical Research and Manufacturers of America (PhRMA), a trade association for the drug industry, believes strongly in the process and supports the use of IRBs as a safe method to move along the approval process and save sick patients awaiting new drug options. "The vast majority of clinical trials conducted in the United States meet high ethical standards. The U.S. regulatory system is the world's gold standard, and the Food and Drug Administration has the best product safety record."

Case #2: Churches as Polling Places

Political philosophers agree that the single most crucial requirement for a democracy to function is for those who are governed to have a say in how they are governed. This is usually accomplished by a significant portion of voters regularly participating in elections. Historically, one of the devices used to discourage segments of the population from voting has been to make polling places difficult to reach. To guard against such manipulation of the electorate, most

municipalities work to distribute polling places in such a way as to make access easy for all voters.

That access includes not only proximity to voters' places of residence or employment, but also ease of entry and exit, sufficient space for voting booths and other paraphernalia, and public right of entry for the period of voting. That generally excludes places of commerce and industry because the comings and goings of voters would surely interfere with normal business. Similarly most governmental structures would find voting operations interfered with regular operations. Schools seem to work well because they have areas (like gymnasia) that can be used for an occasional day without severely disrupting education. But in some locales, schools are not distributed uniformly across populations.

The other semi-public structures whose ordinary functions are not seriously impeded by elections are places of worship. Most congregations welcome non-member visitors, have large, usable, open spaces, and do not have significant numbers of congregants using their facilities on Tuesdays – the most common election day.

But a problem occurs when individuals are uncomfortable going into houses of worship other than their own. An observant Jew, Rob Meltzer was deeply troubled by the prospect of entering a Methodist church and has since voted by absentee ballot while trying to persuade local officials to move polling stations in the church and a Catholic school to secular sites, saying the current locations infringe on voters' constitutional rights. Some are also concerned that as churches often have political agendas, making churches into polling places increases the amount of influence a church could wield, consciously or subconsciously, over those voting in the church.

Selectmen (those in charge of the logistics of polling places) in the Boston area have refused, saying the practice is widely accepted and that logistics make the church the only sensible spot. They argue that proof that the location of polling places in religious structures does not interfere with a voter's rights is proven by Meltzer's own case. According to his claim he has been free to vote by absentee ballot (and has done so) so as to avoid the "uncomfortable" location.

Case #3: Adjunct Faculty

In the 1970's, economic and political factors gave rise to the current, business-style model of the university. As with any business, output and bottom line were the focus of management, in this case, university administration officials. Regular faculty are expected not only to teach and publish, but also to write proposals and manage grant programs, serve on committees, and direct students' research. Their classroom teaching loads typically include only two to four courses a year, at least half of these consisting of seminars where advanced students present their work.

Due to the many roles played by full-time faculty and the drastic increases in enrollment over the past decades, adjunct professors or instructors have become much more common. Typically they are well-qualified, with Master's degrees or doctorates in the field they teach. Because of adjuncts, instruction can be offered to students at a discount, and tenure-track faculty can pursue their grants and publications. Administrators tend to believe that hiring adjuncts is their panacea; without these hires, they claim, tuition and fees would skyrocket and research would come to a standstill, with the return of professors to lecture halls.

Adjuncts tend to be paid low on a university's scale; from around $1,000 per class per semester to a livable salary in some cases. Because adjuncts often are employed to teach introductory courses that are required and cover broad topics, their class size is generally large, which may mean greater burden on the adjunct in evaluating student performance. They may teach one course per term, or several courses, up to just-below the limit for full-time employment. Since they are employed on a class-by-class basis (and may therefore be viewed as more "temporary"), they are monitored more closely than regular faculty. Often, adjuncts teach at two or more colleges at a time. Adjuncts are usually required to hold minimal office hours, and may be inaccessible to students unless they choose to volunteer time for consultation.

Even with the lack of benefits, some adjuncts feel they make a decent living while doing the work they love. Teaching adjunct can provide flexibility. Most adjuncts would prefer to have tenure-track posts, but some like to be free from the bureaucratic restraints of full-time academic employment. Some believe the teach-and-go routine serves their family life better. Others may work full-time at another type of job. Often, a full-time professor may teach adjunct at a nearby college, either to help that school with its staffing shortages, or to supplement his income.

The flexibility and transient nature of adjunct faculty are viewed by some as tantamount to acting as a "scab" on a picket line. If all potential adjuncts refused to teach individual courses, universities might be forced to hire more full-time faculty and provide benefits to those who fill the positions. However, the adjunct positions are often filled by doctoral students attempting to gain additional classroom experience before searching for a full-time position post-graduation, and thus, they are only interested in a small course load.

Case #4: Erosion of Native Art

Alpine Imports, an international corporation that distributes native crafts throughout the United States, has found a new production site in Guatemala. Alpine has been certified by groups such as the Fair Trade Resource Network for its commitment to paying fair wages and preventing inhumane working conditions in the areas from which it purchases its products. Labor in Guatemala is relatively cheap, even with a living wage, and moreover, the corporation has found that native artisans there have a distinctive style that should market well in the United States. In particular, Alpine is considering Kaqchikel clothing for dolls, handmade in the Guatemalan village of San Lucas Toliman. The clothing fits several generic doll figures, including American Girl™ dolls.http://webster.brazosport.edu/webct/ContentPageServerServlet/globalization case.htm?pageID=2380722185001 - _ftn1

Alpine Imports has researched the market and determined that import motif stores conspicuously lack toy divisions, and therefore it has little background as to what items succeed. It hopes, however, that its venture into this new arena will pay off. Managers at Alpine ordered an initial batch of 1,000 dresses to be produced by the Kaqchikel workers for distribution in Alpine stores throughout the United States. Managers project the cost of the dresses to be about $5 a piece, and the retail price will be $15. If these doll dresses are a success, they could mean a substantial profit for Alpine Imports and a sustained relationship between Alpine and the Kaqchikel.

The shipment of doll clothing arrived to the Alpine warehouse on time, and was distributed; managers anxiously awaited sales results. The first reports showed moderate sales; however, the response was not as strong as the marketing department had hoped. Alpine attempted some advertising of the dolls in local markets, to raise awareness of the new product, but still sales lagged behind expectations. Executives at Alpine began to realize that children are often subject to national advertising ploys coupled with strong peer pressure, and that if they want to realize success in the toy market, their strategy has to change. They assessed the situation and decided that the clearest options would be to cut their losses and discontinue the relationship with the Kaqchikel people, work on stronger marketing ploys, or to suggest changes to the design of the dresses. Alpine is in no danger of bankruptcy based on the sale of Kaqchikel dresses, but as a business, they strive to maintain fiscal viability, and thus, must keep the success of this product in mind.

Case #5: Payday Loans

In recent years, businesses have appeared that offer cash advance "payday" loans in many urban areas and smaller towns. These businesses usually operate out of storefronts in strip malls and offer small advances ($300-$500) to people who need money quickly, usually at a high interest rate. Their clientele tends to be employed, but poor or lower middle-class.

In order to receive the loan, the client writes a post-dated check to the company for the amount he or she wants as an advance plus a fee, usually about $15-$25 per $100. So if someone is being advanced $400, he or she writes a check for between $460 and $500. On payday, the client deposits his or her paycheck and the payday loan company deposits the post-dated check, effectively ending the loan. Clients do not always have enough money in their accounts to cover the post-dated check, so they are also offered the option of rolling the loan amount over to the next pay period. In order to take advantage of this offer, the same fee is charged: $15-$25 per $100 borrowed. This effectively doubles the interest rate of the loan, so for the aforementioned $400 loan spread across two pay periods, the fee would be between $120 and $200—half of the amount borrowed in the worst case.

Interestingly, a study by the Center for Responsible Lending found that the vast majority of these loans are not made to one-time emergency borrowers. It found that 91% of all payday loans are made to borrowers with five or more payday loans per year. Furthermore, most payday borrowers go to more than one lender, dramatically increasing their total number of payday loans per year. Only 1% of all payday loans are made to emergency borrowers.

Church groups and anti-poverty organizations claim that these businesses lure people in with offers of quick money to handle important payments, but aim to get people caught up in the system of rolling over loans. They say that such high fees would be immoral to charge to anyone, but it is especially heartless to charge them to people without the financial means to pay the loans back and get back on their feet. These groups have fought for legislation restricting the fees and ability to rollover loans from one paycheck to the other as well as legislation that would crack down on companies' ability to ignore current outstanding debt when giving out the loans. The payday loan industry is profitable and can afford to devote a percentage of those profits to opposing such legislation. Additionally, those who would benefit from regulation of the industry, the working poor and lower middle-class, are less likely to vote, write their congressperson, or donate to campaigns.

Payday loan advocates counter that they provide a valuable service to those who need money sooner than their employers can provide. It is not their fault that people get caught in the web of escalating fees, but rather the temptation that consumer society creates for people to live beyond their means. Without their services, advocates claim that job terminations, unpaid bills, evictions, and mortgage foreclosures would soar, swelling the welfare rolls and increasing taxes. They claim that existing regulations already require them to make very clear how much people will pay for the loan and to limit people's ability to freely choose such fees is to treat them as children rather than adults who are capable of reigning in their own spending.

Case #6: Revisionist History—Deleting Bad Acts

They say that history is written by the winners, but others are finding that they have a say in what future generations learn about a country's past. Recently Japan's Prime Minister, Shinzo Abe, has tested how far that "say" can go.

In March 2007, the Japanese Ministry of Education ordered that publishers delete passages from history textbooks that claimed Imperial Army officers ordered citizens to commit mass suicide when Okinawa was about to fall to American forces near the end of the war. Responses to the ministry's order have taken the form of changing active verbs to passive ones in order to describe mass suicides. Instead of saying, "There were some people who were forced to commit suicide by the Japanese Army," one textbook now reads, "There were some people who were driven to mass suicide." Opposing the new official stance on the suicides are eye-witness accounts of Okinawans (now Japanese citizens) who claim Japanese soldiers gave them grenades with orders to use the grenades to take their own lives should the Americans win.

This is not the first time modern Japan has been accused of "whitewashing" history. Abe was recently in the international spotlight for claiming that the Japanese military had not forced women, many Korean, into sexual slavery during World War II despite testimonials from witnesses and victims alike. The remarks drew strong condemnation from South Korean foreign minister Song Min-soon, who said that, "…problems over perceptions of history are making it difficult to move South Korean-Japanese relations forward."

Other Asian leaders have expressed similar concerns about Japan's version of events especially in China where hostility towards the Japanese has lingered long after Japanese involvement in China during World War II. Japanese and Chinese historians are famously at odds over the number of civilians killed in the Nanking Massacre with estimates ranging from several hundred to 100,000 to 300,000.

Overall, the worries of other Asian nations could be summed up as a concern that the truth about Japan's actions in World War II will not be learned by future generations of Japanese students, thus eliminating barriers to a resurgent Japanese nationalism. Those who do not learn the mistakes of the past have no chance to learn *from* the mistakes of the past and stand a greater chance of repeating them. In the background of these arguments are other echoes of Japanese nationalism, such as new nationalist "manga" comic books and Abe's move to bolster the Defense Agency, reigniting fears that Japan may change its Constitution to create an army for purposes other than defense.

The revisionists argue that Japan need not paint such a "masochistic" view of its own history, and that constant reminders of Japanese militarism and atrocities only serve to keep a national attitude of guilt for events that current generations are no more responsible for than current generations of Germans are responsible for Nazi atrocities in Europe. A more positive, less guilt-ridden view of history has been sought by most if not all nations at one time or another. Whether there is an ethical duty to maintain an accurate historical account, or whether history is just one of many tools leaders can use to lead their people is not merely an issue faced by contemporary Japan. Chinese textbooks have also been changed recently to de-emphasize communism, relegating Chairman Mao Zedong (a former focal point of recent Chinese history) to a section on etiquette. United States textbooks also face strong criticism from historians and Native Americans for their depiction of Christopher Columbus and the other "discoverers" of

North America. Japan claims its current interests lie in leading its citizens towards the future in a positive way, rather than dwelling incessantly on every detail of a troubled past.

Case #7: Corporate Sponsorship of College Sports

A college athlete's uniform bears the endorsement of various sportswear companies. The student learns of certain ethical violations tied one of the companies, Nike. She finds wearing the uniform objectionable because it looks as though she supports Nike. Refusing to wear the little swoosh might jeopardize contracts with the uniform providers and interfere with team identity. She asks that the symbol be removed from her school's uniforms, but is refused. She values her team, but wonders if she should continue to play on the team if she objects to the sponsors.

Nike, an American company based in Oregon, has 500,000 employees in 55 countries. It has been reported that Nike's subcontractors in Asia violate local labor laws, pay below minimum wages, do not provide safe working conditions, oppose unionization efforts and tolerate child labor. Apparently, children in Pakistan stitch Nike's soccer balls for as little as 6 cents per hour. A U.S. network of child advocates has repeatedly demanded identification and removal of all child laborers, arguing instead for programs of education and rehabilitation for them. However, in many nations throughout the world child labor is a necessary evil – the family needs the children's income to survive. The Christian Science Monitor reported that closing the factories in Pakistan over the child-labor issue would cause economic distress and add to human misery in Pakistan.

Nike's Chief Executive Officer Phil Knight, stated, "Whether you like Nike or don't like Nike, good corporations are the ones that lead these countries out of poverty," in an interview with the Washington Post. He argued that Nike's investment in Asian business has helped countries like Taiwan and Japan. The article also notes that workers in many Nike factories actually like the work. Despite these endorsements, Nike has suffered serious public relations problems based on its labor practices. Nike has invested in improving their image, and has also adopted a Labor Practices Department to investigate mistreatment. The company's measures to improve the working conditions, however, have been called nothing more than a public relations campaign.

The question also arises about whether US activists should focus condemnation of child labor in other countries when in the United States child labor, illegal as it is, still exists. For example, Latino children are known to work in the agriculture industry as members of migrant farm worker families, sometimes under appalling working conditions. There is little enforcement of the time and effort that children in America are forced to work in family businesses, and little review of the tasks that they are expected to perform or the pay that they receive.

Case #8: Ethics Officers Getting Businesses off the Hook?

In late June of 2007 Kevin Hunsaker, former Ethics Officer of Hewlett-Packard, completed 96 hours of community service as part of a plea bargain entered into earlier in the year to drop charges of misdemeanor fraud brought against him, along with several other defendants, by the Attorney General of California. The charges grew out of disclosures that an investigator, hired by Hewlett Packard to discover the source of leaks to the press about boardroom meetings had posed as another person to obtain phone records of reporters and board members.

In an interview with Bloomberg.com, Professor James Post states, "The failure at HP was a failure of ethical leadership, not headcount." Post, a professor of management at Boston

University, further states, "The fact that they had only six [ethics officials] on staff before the 2006 scandal suggests an overworked staff, but I doubt that a few more people in the ethics department would have deterred the board chair, the head of ethics, and the general counsel from their chosen investigatory path."

According to Forbes.com, "chief ethics officers and compliance officers have become trendy in recent years, but some experts fear they act mainly as window dressing." Chief ethics officers began appearing in defense contractor organizational structures in 1986, when a self governing Defense Industry Initiative was created as a recommendation of the Packard Commission championed by President Reagan.

Companies began creating more chief ethics officers in 1991, when the Federal Sentencing Guidelines (FSG) for corporations went into effect. When companies employ "effective" ethics compliance programs, penalties for ethical violations can be reduced to 5% of fines levied. Penalties can be increased up to 400% where evidence demonstrated that an effective program did not exist.

Many believe having a chief ethics officer is a "requirement for good governance." But according to Efrem Grail, ethics officers are sometimes "just a mask for the company to hide behind." Grail is an attorney specializing in corporate investigations at Reed Smith. According to Forbes, most corporations hire an attorney to fill the chief ethics officer position – while attorneys generally receive training in professional responsibility, they are not specialists in ethics.

The New York Times reported an email exchange between HP's officer, Hunsaker, and Anthony R. Gentilucci, the head of HP's global investigations unit. Hunsaker asked whether the spying tactics used by a subcontractor were "above board," but later noted, "I shouldn't have asked."

Case #9: Differential Undergraduate Tuition

Many public institutions have seen stagnant or decreasing budgets, and so are now asking students to shoulder more of the financial burden through increased tuitions. Sometimes, the amount they are being asked to pay depends on their majors. At some institutions, students in engineering and business pay more for their undergraduate degrees than students completing degrees in liberal arts or education.

The University of Wisconsin approved a tuition differential for students enrolled in the Bachelor of Business Administration program or earning a Certificate in Business beginning in fall 2007. The rationale offered for the increased tuition is that the costs of business education are rising faster than the university's resource base and that the demand for those programs has grown and that higher tuition would help sustain the quality and expand the size of the business programs.

Higher tuition for business or engineering schools can be justified based on the higher costs of educating students in those disciplines. Business school faculty often command higher salaries than those in other colleges due to lucrative opportunities outside academia. Engineering students require expensive laboratory space and equipment, which needs to be constantly

maintained and updated. The differential tuition policy can also be defended on the basis of higher starting salaries for graduates in those majors.

It can also be argued that differential tuition forces qualified students from economically disadvantaged backgrounds to make career choices based on affordability, rather than aptitude or interest. This is contrary to the societal goal of providing equal access to higher education to every qualified member of the community. Moreover, students graduating from university programs that charge higher tuition may choose higher paying jobs in the private sector to pay off loans, rather than choosing service positions such as careers in public service.

Many schools including most of the Big Ten schools have a tuition differential at least for undergraduate business majors.

Case #10: The Buddhas of Bamiyan

The two huge Buddhas of Bamiyan, which stood 15 stories and 10 stories respectively, had survived wars and the elements for 1500 years. Their cultural importance had even resulted in Genghis Khan refraining from causing them harm. In March 2001, however, they fell victim to the Taliban. The Taliban government ordered explosives placed at the feet of these statues; over weeks of repeated shelling, they reduced the sacred relics of central Afghanistan to rubble ranging in size from 90 ton boulders to dust.

Religion is most often cited as the primary reason for destruction. The pre-Islamic artifacts were reportedly destroyed as dictated by Islamic law to prevent the adoration of idols.

Cultural experts are divided over what should happen with the Buddhas and the Bamiyan site in a post-Taliban Afghanistan. With the focus on what was one of Afghanistan's primary tourist attractions, suggestions include rebuilding the Buddhas by anastylosis – i.e. reassembly from the remaining fragments, incorporating new materials where necessary, supervised by qualified achaeologists. Some favor funding preservation of the site, but leaving the rubble as evidence of the cultural destruction. Some argue for a solar- and wind-powered laser system that will project the images of the Buddhas on the cliff where they stood. Some archaeologists are delighted with the new findings that have been possible only because of the destruction, and want to use this opportunity to further dissect the site for the historical knowledge that can be derived.

Considering that the population of Afghanistan is poor and war-torn and that present-day Afghans are Muslim rather than Buddhists, others suggest that money that would fund anything related to the Bamiyan Buddhas would be better spent on Afghan children.

Case #11: Women's Work

What is a mom? "Housekeeper, day care center teacher, cook, computer operator, laundry machine operator, janitor, facilities manager, van driver, CEO, and psychologist," according to Salary.com. And, what is she worth? According to that website, "If paid, Stay at Home Moms would earn $134,121 annually …Working Moms would earn $85,876 annually for the "mom job" portion of their work, in addition to their actual "work job" salary.

But of course, moms *aren't* paid. Indeed, "On a worldwide scale, the UN has found that women do two-thirds of the work in the world, receive less than 5 percent of the world's income,

and own less than one percent of the world's real property," according to a recent article in the Ottawa Citizen. Statistics Canada reports that "unpaid work took up 831 hours of an average man's year, whereas it's an average of 1,482 hours for a woman."

The lack of payment for traditional woman's work creates a variety of concerns beyond basic equity and fairness, said author Penney Kome.

First, the work, if performed by paid assistants, counts in a nation's Gross National Product (GNP); unpaid labor by domestic partners does not. The fact that the work is often unpaid decreases the value that society places on it as demonstrated by the low wages paid day care workers, housekeepers, and maintenance workers. In addition, unpaid workers are not entitled to benefits provided those workers who perform the same duties for pay, such as "unemployment insurance, pensions, or social assistance." Last, unpaid domestic labor can be ignored or usurped by focus on market value. According to Kome, "[S]ubsistence agriculture is specifically excluded from IMF and World Bank Calculations. Therefore, IMF and World Bank projects often evict mothers and their families from small patches of arable land – where they are, at least, reasonably well nourished – to create huge plantations with cash crops. The nation's GDP (Gross Domestic Product) flourishes, but the local children go hungry."

Case #12: Iraqi Translators

One of the first things most people learn in school is not to be a tattletale. No matter how appropriate it might be to let the authorities know what is happening, everyone learns that the consequences of "telling" are severe. Such people are viewed as "collaborating with the system" and putting their own personal advancement ahead of their friends and community.

Throughout human history people seen as collaborators are, at best, ostracized; at worst they are killed. During and after World War II, women who fraternized with Nazi forces in order to survive and sustain their families were beaten, shunned, and had their heads shaved as a sign of their "guilt." Vietnamese who worked for the U.S. government or military were the first people imprisoned, tortured or killed after the U.S. left their country.

The West lacks fluent speakers of most non-western tongues. Few westerners have any significant knowledge of history, culture, and society outside Europe and the U.S. (Even knowledge there is seldom incisive.) This is especially true in the Middle East. With hundreds of thousands of western soldiers and civilians on the ground in Iraq, Afghanistan and their surroundings, the ability to communicate reliably with natives is necessary for survival. For that reason one of the most effective ways for natives with linguistic skills to support their families has been to become translators for government, business and the military. But this employment is not without risk. As in previous conflicts, translators risk being seen as collaborating with the "occupiers" and to date more than 250 Iraqis who have worked for allied forces or western businesses have been executed, often quite brutally, by factions who oppose the U.S. presence there. Estimates suggest that a similar number of translators' family members have suffered as well.

One of the reasons translators still work for the U.S., despite threats on their lives and those of their families is offers of political asylum from countries such as the U.S. Translators conclude they only need to hide their identities long enough to make enough money for their new lives in the States. Others identify with the stated goals of the U.S. occupation and believe that translating might help ease tensions between rival factions, paving the way for non-violent

political solutions to the country's problems—perhaps even paving the way for a Western-style democracy.

It appears, however, that western governments are not protecting those who have helped them. For instance, the U.S. State Department processes applications for refugee translators. These translators who have worked for the U.S. are given preferential treatment when the State Department considers them for immigration. Despite such preference, the process requires that the translators have already fled Iraq. Even after they have fled, the process of reviewing their applications is often very slow "for security reasons." Moreover, many who have gone through the difficulty and cost of fleeing Iraq cannot even apply for asylum since they do not qualify as "refugees" according to the United Nations definition (which is the one the U.S. currently employs in its considerations).

Those individuals who worked with the U.S. have routinely had their applications for immigration (even as seekers of political asylum) refused by the very societies they have assisted. Justifications offered for such rejections include concern that some applicants might turn out to be sleeper agents, that the allies cannot afford to grant exceptions to their established immigration laws, or that the risks to such people are not grave. Even without outright denial, the processing of applications, which often takes many months, leads many to turn back to Iraq because the wait creates an insurmountable hurdle.

Case #13: Intelligent Debate about Intelligent Design

Public school boards in at least 19 states have, over the past two decades, debated the teaching of "creationism" about the origins of biological species in tandem with teaching evolution. There are various creationist theories about how species came about, but all require some kind of intervention in (if not outright replacement of) natural history by a being of great power and intelligence. Frequently, this being is the Judeo-Christian God and the method of creation is as outlined in the book of Genesis in the Old Testament. Creationism supporters claim that teaching evolution, without offering creationist accounts as an alternative, is a denial of their Constitutional right to have their views expressed systematically in the educational system. The movement makes no effort to disguise its political motivations in its drive to include the Biblical account of creation, or some variation of it, such as "intelligent design," in public school biology classes.

Many biology teachers in public schools and colleges happen to believe in Biblical accounts of the beginning of the universe and of life. Other biologists believe that adding the creationists' perspective balances the consideration, gives a fair treatment to different points of view, and helps the students with their skills in critical thinking. Others, however, feel that they are being forced to violate the Constitutional separation of church and state or that they are being asked to present a non-scientific theory as biological science.

A growing number of biology teachers in the lower grades through high school have decided simply to omit evolution from their course syllabi, despite that fact that the American Association for the Advancement of Science has stated unequivocally that knowledge of the basic concepts of evolution must be included in high school science competencies. These abstaining teachers argue that they can never cover everything, so they might as well omit the topics that encourage discussion and controversy, which could endanger their jobs. School principals and superintendents have been inclined recently to support, and even to suggest, this strategy of skipping the topic of evolution. Physics and geology teachers have begun to weigh

into the debate as well. They object that creationism conflicts with the big bang theory, accepted by virtually all physicists, and that some versions of creationism contend that the universe has existed for only six thousand years.

Some educational policymakers have encouraged the inclusion of "creationism vs. evolution" in literature or social science courses, rather than in biology classes where evolution currently appears in curricula. Their argument is that liberal arts courses would be more likely to study the different perspectives critically and historically, and in their sociopolitical contexts.

School boards across the country have opted for creationism in a *de facto* way, by selecting science textbooks only if they include creationism. Some districts require stickers appended to their biology textbooks, stating that evolution is only a theory and that there are also viable religious accounts of the origins of life. Federal suits regarding the stickers have occurred in several states. The Kansas school board has included knowledge about the concept of intelligent design as part of high school exit examinations in Kansas.

Case #14: Jamaica and the World Bank

After years of unwise spending following British colonial rule, Jamaica finds itself deeply in debt to other countries. Jamaica owes $4.5 billion to international moneylenders like the World Bank, the International Monetary Fund (IMF), and the Inter-American Development Bank. The World Bank demands that Jamaica undertake economic reforms as a condition of the loans. One such reform is the opening of its markets to foreign vegetables and fruits, which are sold at much lower prices than Jamaican-produced crops. The hope is that decreasing the debt will allow the economy to grow, raising many Jamaicans out of poverty. But in a largely agricultural economy, Jamaica's farmers find themselves increasingly out of work.

A similar situation involves Jamaica's banana industry. Forced to compete with strong U.S.-based companies like Dole and Chiquita, which grow bananas on a large scale in Central America, Jamaica's banana production has plummeted. The number of small banana farmers on the island has dropped from 45,000 to 3,000.

The World Bank's restrictions aim to deregulate the Jamaican economy, and integrate it into the global market. Thus far, however, the people of Jamaica have suffered while moneylenders collect interest. Only 5% of the money borrowed since 1977 has stayed inside Jamaica, with the bulk of the funds dedicated to paying interest. The deregulation has hurt Jamaica's farmers, who find themselves increasingly impoverished.

Case #15: Vacillating on Public Safety

Grave safety concerns with the Alaskan Way Viaduct and the SR 520 Bridge in Washington State have been known and debated for the past decade. At the current time (September, 2007), however, no public action is imminent to address the concerns. Government agencies and regulators, the private sector, including building owners, corporations, and merchants, professionals in architecture, construction, engineering and related fields, and individuals such as homeowners, consumers, farmers, residents and tax payers have all played a role in perpetuating the present condition of vulnerability. Although the above players may act with the best intentions, each may have only a limited view of what mitigation should involve.

Independent reviews have concluded that both the Alaskan Way Viaduct and the SR 520 Bridge need to be replaced. In September 2000, Tammy Doherty, Regional Director of the Federal Emergency Management Agency (FEMA), stated that "Seismic hazard in the Pacific Northwest has remained constant this last decade, but seismic risk has increased dramatically, due to urban development, aging infrastructure and vulnerable transportation corridors. A FEMA study of earthquake risk across the United States indicates that 84 percent of this nation's annual losses are expected to occur in California, Oregon and Washington State."

More recently, based on an independent study, the Alaskan Way Viaduct was found to have one of the lowest ratings possible for structural sufficiency. State bridges are given a structural sufficiency rating to prioritize them for rehabilitation and replacement. This rating is a number between 0 and 100 that reflects the physical condition of the bridge, load ratings and importance of the bridge. A new bridge receives a rating of 100. When a bridge is rated at 80, it becomes eligible for rehabilitation funding. A rating of 50 warrants the bridge's replacement with a new structure. The Viaduct currently has a structural sufficiency rating of 9.

In 2006, an expert review panel of the Alaskan Way Viaduct and SR 520 structures concluded "The Washington State Legislature, the Puget Sound region, and the people of Washington Stave have explored – diligently and faithfully – the various possibilities for these much needed projects. The public thoughtfulness that has characterized them for the past several years is admirable. But additional deliberation of the merits of various options would be counterproductive. If the decision making process is extended much further, inflation will diminish the purchasing power of the funds that have already been committed. Meanwhile, the existing viaduct and bridge will continue to deteriorate and inch closer to catastrophic failure. The time has come to move forward with these vital public works projects."

This same expert review panel commented "we are concerned about the political fragmentation that seems to characterize these projects today. It is not evident that either political will or public support has coalesced around these projects. We see strongly held opinions and positions by political leaders and stakeholders, but no process for reaching a conclusion. We see a great need for strong political leadership now, to move these vital public-works projects forward. The biggest risk these projects face is that of indecision and vacillation by political and civic leaders. The safe, speedy rebuilding of these roadways and infrastructure is critical, both to the Puget Sound Region and the entire statewide transportation system – not only to review congested highways, but also to prevent catastrophic damage in the event of an earthquake or major storm."

In 2007, voters of Washington State voted against each of two separate (and conflicting), one of which called for replacing the Viaduct with a similar above ground structure, and the other of which would have involved building a tunnel to replace the currently existing viaduct structure. After the failure of both initiatives, the Governor of Washington has commissioned another study consider alternatives for the replacement of the Viaduct and SR 520 Bridge.

Hi Tim,
Thanks for your email. Sounds like your committee is right on target.
We would like to have the citations all sent to Debbie on the Monday or
Tuesday before our final meeting so we can have them available to look
over before the final meeting.
Thanks,
Jan

Hi Merle,
I am happy that you can serve as an Honorary Coach for today's game. Attached is a brief bio form which if you could fill out and bring to the game with you. I'ave also attached a letter giving details. I know you will be coming with Diane.

Thanks,
Jan

November 18, 2007

Dear Merle and Diane,

Thank you for agreeing to participate in the Honorary Guest Coaching Program for the 2007-2008 Women's Basketball Program.

The game assigned to you is: **SYRACUSE**

Date and Time of the game: **SUNDAY, NOV. 18th, 2 p.m.**

Please meet me at the scorer's or media table **45 minutes** before game time. I will then introduce you to the coaching staff and your game host Head Manager Catherine Greene. Your name will be on the Parking List with the parking monitor who will direct you to where you may park. Just tell the parking attendant that you are a guest coach. Guest Coach tickets will be available at will call at the side entrance of Carmichael Auditorium, under your name. If you would like a guest to come with you, let me know as soon as possible and I'll include an extra ticket.

As Honorary Coach you will be included in the pre-game and post-game talks to the team in the locker room. During the game you will join the team on the bench. At half-time, you will remain in the gym to relax and observe any half-time activities.

Again thank you for participating. Honorary Coaching has been a rewarding experience both for the guests and the team members. I hope it proves so for you as well.

Please fill out the attached bio form and either email it to me or just bring it with you to the game As these coaching slots are very scarce, if you cannot attend for any reason, please let me know as soon as possible, so I can fill the slot with someone on the waiting list.

Your Honorary Coach partner will be Visiting EXSS professor, Debbie Stroman

If you have any questions please feel free to call me.

Sincerely,

Jan Boxill

Mary, and all,
This is somewhat good news. I just looked at next term's Engl 100, and the instructor is one of my Ph.D. students, Asst Director of theWriting Center, who is a very sensitive, caring person, who would "hand hold"!! But if she passes it this term,that is much better. And I would suggest we see about dropping DRAMA. I think that the History prof and TA will work with her. Her AFAM will be fine; as will the COMM.

Thanks,
Jan

Subject: Tanner TA Committee

Dear Chad & Lloyd,

I have heard from Donna LeFebvre, Chair of the Tanner TA Teaching Awards Committee, about the unprofessional and inappropriate comments by one of the Committee members. As Chair of the Teaching Awards Committee, I want to apologize to Chad Bryant and the History Department. I cannot imagine what would have prompted such disrespectful and, as I said, completely inappropriate comments. As he was a teaching award winner, I appointed him to the committee, and fully expected that since he was a such a winner, he would conduct himself in a professional manner. I can assure you that his personal feelings has not influenced the committee's final decision. And I can further assure you that he will not be serving on any Teaching Awards committee in the future.

This is very unfortunate and having participated in these committees for several years, never have I heard of such behavior. I apologize and will personally address the issue. As the Chair of that committee, Donna handled the situation very well and professionally. The History Department has the reputation for excellence in teaching, so this committee member's comments are not those of the committee nor did they affect the other members.

If you have any questions or further concerns, please feel free to contact me. Thank you for your service.

Regards,
Jan Boxill
Chair, Teaching Awards Committee

---

no problem. You got the notes from Chad and Lloyd, which were nice.
I spoke to Debbie Peterson and she said we need to bring this to the
attention of Bernadette, as she officially gives the appointments and
charges.
Is your committee done? You have the finals ones?

Hi Donna,
I too don't want to involve Bernadette, as long as it is now pretty well resolved. I will talk with Robert after this is done. Will you have the blurbs ready before the luncheon?
