Designer r32.5 Release Notes

Download r32.5 Full (Pro)

Full (Pro) build: *278583*
Starter build: *278584*
Released: *November 25th 2026*

Items marked with a ● are also included in r34.3.

r32.5 supports all legacy servers deprecated with the r33.0 release.

Remote transport command latency

Remote transport commands (OSC, DMX and MIDI) no longer wait for the **Redistribution Delay**, which is 4 frames by default, so they respond sooner. They are still synchronised across machines by the `additionalCommandLatency` option switch, which is 2 frames when it isn't set.

If you're upgrading a show with carefully tuned delays or lighting sync and want to keep Remote Transport latency the same, add your Redistribution Delay to `additionalCommandLatency` to keep the same command timing. With both at their defaults, set `additionalCommandLatency` to 6.

Fixes

- **DSOF - 30597** - Designer will no longer add the Redistribution Delay to transport commands received over OSC, DMX or MIDI, so remote transport control responds sooner.
- **DSOF - 33401** - OSC Sockpuppet patches will now list only legal OSC addresses and respond to messages sent to them.
- **DSOF - 33839** - Designer will now prefetch the content inside a TrackSection crossfade before the jump, so the crossfade plays smoothly.
- **DSOF - 34052** - Designer will no longer re - apply VFC target modes on every project launch when the cards already match the project.
- **DSOF - 34357** - A faulty audio file will no longer hang Designer with repeated audio error messages.
- **DSOF - 34456** - ACES 2.0 OCIO output views will now show content correctly instead of grey.
