AMD Radeon Vega 8 is an integrated graphics processor that is used in the AMD Ryzen 5 series of main processors for laptops. Radeon Vega 8 can be used for light gaming. It offers performance similar to basic graphics for regular laptop processors, such as Intel UHD graphics for Intel Core processors. A step forward in the AMD Radeon Vega line is the Vega 10 Ryzen 7 chips, providing better performance but still a lightweight game category. AMD Radeon Vega 8 Graphics Benchmark Here is a benchmark test Radeon Vega 8 graphics processor that is attached to the popular AMD Ryzen 5 3500U main processor. This is compared to other widely used graphics processors for laptops. You can watch Vega 8 gameplay videos in the Reviews, Q&A, and Videos section of this page. Note: The reference points for these graphics processors are the averages measured with these processors from different devices. The scores and actual results of AMD Radeon Vega 8 and compared GPus may vary depending on other components, settings, cooling and other factors on laptops (especially single channel vs. faster two-channel RAM and head processor speed). However, benchmark results, as well as gameplay videos, are good indicators of graphics processors' performance.
