# Senior Revit Technician

| | |
|---|---|
| **JOB REFERENCE** | FUS-0145 |
| **LOCATION** | Manchester |
| **EMPLOYMENT** | Permanent |
| **HOURS** | Full-time |
| **WORKING ARRANGEMENT** | Hybrid |

## THE CLIENT

A senior Revit role with an independent civil and structural engineering consultancy in Manchester. You will join a friendly team delivering varied work across the built environment.

The consultancy works across residential, commercial, infrastructure and event projects. The appointment will strengthen its Revit and building information modelling (BIM) capability, with scope to influence how technical information is produced and coordinated.

## THE ROLE

You will initially be the standalone senior technician, taking ownership of Revit delivery and helping develop the consultancy's BIM capability. The role needs someone who can work independently, organise competing priorities and take responsibility for the quality of their output.

You will contribute as part of the senior team, working closely with engineers and other project consultants. The medium-term plan is to recruit a junior technician beneath you, giving you the opportunity to build and lead a small team.

## KEY RESPONSIBILITIES

- Produce coordinated 2D drawings and 3D Revit models for engineering projects.
- Prepare construction drawings, layouts and supporting technical documentation.
- Coordinate drawing and model information with engineers and other disciplines.
- Review technical information for accuracy, consistency and project requirements.
- Maintain and develop CAD standards, drawing templates and Revit/BIM working methods.
- Manage drawing workloads across projects and liaise with clients, contractors and consultants.

## PROJECT DELIVERY

- Support engineers throughout the design process, translating design information into clear technical outputs.
- Prioritise project deadlines and take ownership of the drawing and modelling element of delivery.
- Apply the consultancy's quality, health and safety, and training procedures.
- Share technical knowledge, including one internal continuing professional development session each year.

## REQUIRED EXPERIENCE

- Practical Revit, CAD and BIM experience in an engineering or construction environment.
- Experience producing detailed, coordinated engineering drawings and models.
- A practical understanding of BIM workflows and model coordination.
- Ability to manage your own workload and deliver technical information independently.
- Clear communication with engineers, clients, contractors and other consultants.
- An organised approach to coordinating several projects and checking the quality of your work.

## DESIRABLE EXPERIENCE

- Experience developing drawing standards, templates or BIM working methods.
- Experience guiding junior technicians would be useful as the team develops.

## WORKING ARRANGEMENTS AND BENEFITS

- Three days in the Manchester office, normally Tuesday to Thursday.
- Monday and Friday are normally home-working days; the office is available if preferred.
- Discretionary annual bonus.
- Private healthcare.

## APPLICATION
