

BULLHEAD ROAD, WD6
£575,000, Freehold

Extended 3 bedroom semi detached family home located on sought after South side road in close proximity to local schools and a short walk to the amenities of Borehamwood High Street and mainline station.

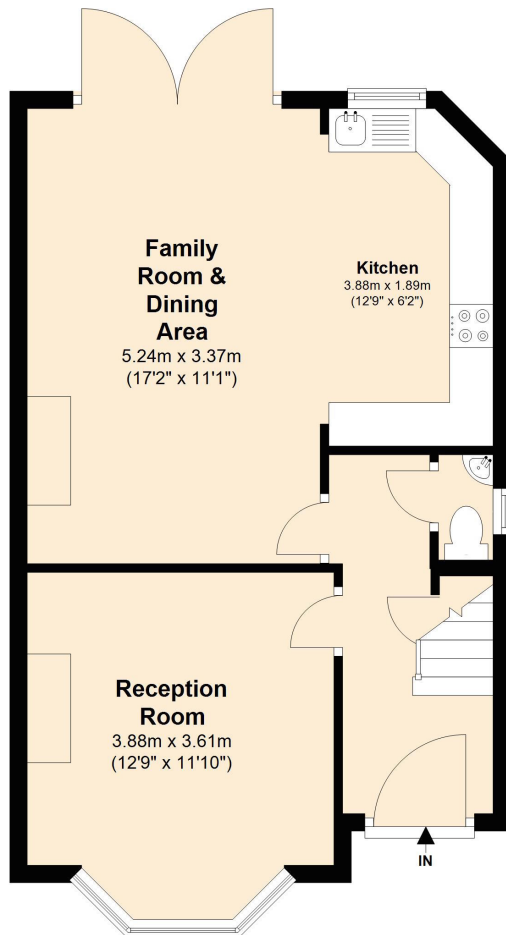

Early viewing is recommended!

Ground Floor

Approx. 46.0 sq. metres (495.0 sq. feet)

First Floor

Approx. 37.1 sq. metres (399.4 sq. feet)

Total area: approx. 83.1 sq. metres (894.3 sq. feet)

Dreamview Estates give notice to anyone reading these particulars that: (i) these particulars do not constitute part of an offer or contract; (ii) these particulars and any pictures or plans represent the opinion of the author and are given in good faith for guidance only and must not be construed as statements of fact; (iii) nothing in the particulars shall be deemed a statement that the property is in good condition otherwise; we have not carried out a structural survey of the property and have not tested the services, appliances or specified fittings.

Long Description

BULLHEAD ROAD, BOREHAMWOOD, WD6 1HW

An extended three bedroom semi detached family home located on this sought after South side road in close proximity to local schools and a short walk to the amenities of Borehamwood High Street and mainline station.

The property benefits from a large family/dining room, kitchen, separate reception room, downstairs WC, large rear garden and driveway to fit several cars.

Early viewing is recommended!

Entrance Hallway

Solid wood floor, spotlights, radiator, under stairs cupboard.

Reception 12' 9" x 11' 10" (3.88m x 3.61m)

Carpeted throughout, double glazed bay window to front aspect, fitted units, working fireplace.

Family/Dining Room 17' 2" x 11' 1" (5.24m x 3.37m)

Solid wood floor throughout, radiators, double glazed doors to rear aspect.

Kitchen 12' 9" x 6' 2" (3.88m x 1.89m)

Solid wood floor, fully fitted units both wall mounted and base, ample work surface area, integrated Lamona oven and gas hob, integrated Lamona fridge/freezer, space for washing machine and tumble dryer or dishwasher, spotlights, double glazed windows to rear aspect.

Downstairs WC

Tiled floor, fully tiled walls, low level WC, wall mounted basin, obscured double glazed window to side aspect.

Upstairs Hallway

Fully carpeted stairs, double glazed window to side aspect.

Bedroom 1 13' 0" x 10' 10" (3.96m x 3.31m)

Fully carpeted, fitted wardrobes, radiator, double glazed bay window to front aspect.

Bedroom 2 10' 4" x 10' 10" (3.14m x 3.30m)

Fully carpeted, fitted wardrobes, radiator, double glazed windows to rear aspect.

Bedroom 3 7' 10" x 6' 11" (2.40m x 2.11m)

Fully carpeted, radiator, double glazed windows to front aspect.

Family Bathroom 6' 0" x 6' 9" (1.83m x 2.06m)

Tiled floor, fully tiled walls, bath with overhead rain shower and handheld shower, low level WC, sink unit with storage cupboards, heated towel rail, obscured double glazed windows to rear aspect.

Rear Garden

Patio area with gated side access, laid to lawn.

PRICE £575,000 FREEHOLD

Energy Performance Certificate

7, Bullhead Road, BOREHAMWOOD, WD6 1HW

Dwelling type: Semi-detached house
Date of assessment: 02 February 2013
Date of certificate: 03 February 2013

Reference number: 8917-7722-0300-3402-8902
Type of assessment: RdSAP, existing dwelling
Total floor area: 80 m²

Use this document to:

- Compare current ratings of properties to see which properties are more energy efficient
- Find out how you can save energy and money by installing improvement measures

Estimated energy costs of dwelling for 3 years:	£ 2,931
Over 3 years you could save	£ 1,164

Estimated energy costs of this home

	Current costs	Potential costs	Potential future savings
Lighting	£ 225 over 3 years	£ 135 over 3 years	
Heating	£ 2,367 over 3 years	£ 1,398 over 3 years	
Hot Water	£ 339 over 3 years	£ 234 over 3 years	
Totals	£ 2,931	£ 1,767	

These figures show how much the average household would spend in this property for heating, lighting and hot water and is not based on energy used by individual households. This excludes energy use for running appliances like TVs, computers and cookers, and electricity generated by microgeneration.

Energy Efficiency Rating

The graph shows the current energy efficiency of your home.

The higher the rating the lower your fuel bills are likely to be.

The potential rating shows the effect of undertaking the recommendations on page 3.

The average energy efficiency rating for a dwelling in England and Wales is band D (rating 60).

The EPC rating shown here is based on standard assumptions about occupancy and energy use and may not reflect how energy is consumed by individual occupants.

Top actions you can take to save money and make your home more efficient

Recommended measures	Indicative cost	Typical savings over 3 years
1 Increase loft insulation to 270 mm	£100 - £350	£ 63
2 Cavity wall insulation	£500 - £1,500	£ 69
3 Internal or external wall insulation	£4,000 - £14,000	£ 507

See page 3 for a full list of recommendations for this property.

To find out more about the recommended measures and other actions you could take today to save money, visit www.gov.uk/energy-grants-calculator or call **0300 123 1234** (standard national rate). The Green Deal may enable you to make your home warmer and cheaper to run.

Summary of this home's energy performance related features

Element	Description	Energy Efficiency
Walls	Solid brick, as built, no insulation (assumed)	★ ☆ ☆ ☆ ☆
	Cavity wall, as built, no insulation (assumed)	★ ★ ☆ ☆ ☆
Roof	Pitched, 50 mm loft insulation	★ ★ ☆ ☆ ☆
	Flat, limited insulation (assumed)	★ ☆ ☆ ☆ ☆
Floor	Suspended, no insulation (assumed)	—
Windows	Fully double glazed	★ ★ ★ ☆ ☆
Main heating	Boiler and radiators, mains gas	★ ★ ★ ★ ☆
Main heating controls	Programmer, room thermostat and TRVs	★ ★ ★ ★ ☆
Secondary heating	Room heaters, coal	—
Hot water	From main system	★ ★ ★ ★ ☆
Lighting	Low energy lighting in 33% of fixed outlets	★ ★ ★ ☆ ☆

Current primary energy use per square metre of floor area: 310 kWh/m² per year

The assessment does not take into consideration the physical condition of any element. 'Assumed' means that the insulation could not be inspected and an assumption has been made in the methodology based on age and type of construction.

See addendum on the last page relating to items in the table above.

Low and zero carbon energy sources

Low and zero carbon energy sources are sources of energy that release either very little or no carbon dioxide into the atmosphere when they are used. Installing these sources may help reduce energy bills as well as cutting carbon. There are none provided for this home.

Your home's heat demand

For most homes, the vast majority of energy costs derive from heating the home. Where applicable, this table shows the energy that could be saved in this property by insulating the loft and walls, based on typical energy use (shown within brackets as it is a reduction in energy use).

Heat demand	Existing dwelling	Impact of loft insulation	Impact of cavity wall insulation	Impact of solid wall insulation
Space heating (kWh per year)	13,834	(699)	(745)	(4,276)
Water heating (kWh per year)	2,740			

You could receive Renewable Heat Incentive (RHI) payments and help reduce carbon emissions by replacing your existing heating system with one that generates renewable heat, subject to meeting minimum energy efficiency requirements. The estimated energy required for space and water heating will form the basis of the payments. For more information, search for the domestic RHI on the www.gov.uk website.

Recommendations

The measures below will improve the energy performance of your dwelling. The performance ratings after improvements listed below are cumulative; that is, they assume the improvements have been installed in the order that they appear in the table. Further information about the recommended measures and other simple actions you could take today to save money is available at www.gov.uk/energy-grants-calculator. Before installing measures, you should make sure you have secured the appropriate permissions, where necessary. Such permissions might include permission from your landlord (if you are a tenant) or approval under Building Regulations for certain types of work.

Recommended measures	Indicative cost	Typical savings per year	Rating after improvement
Increase loft insulation to 270 mm	£100 - £350	£ 21	 E54
Cavity wall insulation	£500 - £1,500	£ 23	 D55
Internal or external wall insulation	£4,000 - £14,000	£ 169	 D65
Floor Insulation	£800 - £1,200	£ 41	 D68
Draught proofing	£80 - £120	£ 12	 D68
Low energy lighting for all fixed outlets	£30	£ 25	 C69
Solar water heating	£4,000 - £6,000	£ 35	 C71
Solar photovoltaic panels, 2.5 kWp	£9,000 - £14,000	£ 231	 B81

Opportunity to benefit from a Green Deal on this property

Green Deal Finance allows you to pay for some of the cost of your improvements in instalments under a Green Deal Plan (note that this is a credit agreement, but with instalments being added to the electricity bill for the property). The availability of a Green Deal Plan will depend upon your financial circumstances. There is a limit to how much Green Deal Finance can be used, which is determined by how much energy the improvements are estimated to **save** for a 'typical household'.

You may be able to obtain support towards repairs or replacements of heating systems and/or basic insulation measures, if you are in receipt of qualifying benefits or tax credits. To learn more about this scheme and the rules about eligibility, call the Energy Saving Advice Service on **0300 123 1234** for England and Wales.

About this document and the data in it

This document has been produced following an energy assessment undertaken by a qualified Energy Assessor, accredited by Bre. You can obtain contact details of the Accreditation Scheme at www.breassessor.co.uk.

A copy of this certificate has been lodged on a national register as a requirement under the Energy Performance of Buildings Regulations 2012 as amended. It will be made available via the online search function at www.epcregister.com. The certificate (including the building address) and other data about the building collected during the energy assessment but not shown on the certificate, for instance heating system data, will be made publicly available at www.opendatacommunities.org.

This certificate and other data about the building may be shared with other bodies (including government departments and enforcement agencies) for research, statistical and enforcement purposes. Any personal data it contains will be processed in accordance with the General Data Protection Regulation and all applicable laws and regulations relating to the processing of personal data and privacy. For further information about this and how data about the property are used, please visit www.epcregister.com. To opt out of having information about your building made publicly available, please visit www.epcregister.com/optout.

There is more information in the guidance document *Energy Performance Certificates for the marketing, sale and let of dwellings* available on the Government website at: www.gov.uk/government/collections/energy-performance-certificates. It explains the content and use of this document, advises on how to identify the authenticity of a certificate and how to make a complaint.

About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions.

The average household causes about 6 tonnes of carbon dioxide every year. Based on this assessment, your home currently produces approximately 5.2 tonnes of carbon dioxide every year. Adopting the recommendations in this report can reduce emissions and protect the environment. If you were to install these recommendations you could reduce this amount by 3.4 tonnes per year. You could reduce emissions even more by switching to renewable energy sources.

The environmental impact rating is a measure of a home's impact on the environment in terms of carbon dioxide (CO₂) emissions based on standardised assumptions about occupancy and energy use. The higher the rating the less impact it has on the environment.
