Ref. No. 009744Ga

Dreamview Estates give notice to anyone reading these particulars that: (i) these particulars do not constitute part of an offer or contract; (ii) these particulars and any pictures or plans represent the opinion of the author and are given in good faith for guidance only and must not be construed as statements of fact; (iii) nothing in the particulars shall be deemed a statement that the property is in good condition otherwise; we have not carried out a structural survey of the property and have not tested the services, appliances or specified fittings.

Long Description

WEST HEATH PLACE, 1B HODFORD ROAD, LONDON, NW11 8NL

*A beautifully, presented, interior designed 3 bedroom lateral apartment of 1,855 sq ft/172 sq m, set on the first floor of this highly desirable modern luxury development.

*The apartment offers a large Master Bedroom with en-suite bathroom, two double bedrooms, two bathrooms (one en-suite shower room), and a separate utility room. In addition there is a fully fitted kitchen, complemented by high quality Miele appliances, granite work tops with glass splash back, an eat in breakfast area which opens into a delightful reception room with doors leading out to a private South facing terrace.

*Additional benefits include secure underground car parking, a store room, concierge service, gymnasium, communal gardens and a share of freehold.

*West Heath Place is perfectly located for access to Hampstead, Golders Green and Brent Cross, (Northern Underground Line) whilst the open spaces of Childs Hill Park, Golders Hill Park and the Heath Extension are all located close by.

Energy Performance Certificate

Flat 13,
1b, Hodford Road,
LONDON,
NW11 8NL

Dwelling type: Mid-floor flat
Date of assessment: 10 January 2011
Date of certificate: 10 January 2011
Reference number: 8789-6739-8570-4250-1992
Type of assessment: SAP, new dwelling
Total floor area: 190 m²

This home's performance is rated in terms of the energy use per square metre of floor area, energy efficiency based on fuel costs and environmental impact based on carbon dioxide (CO₂) emissions.

Energy Efficiency Rating			Environmental Impact (CO ₂) Rating		
	Current	Potential		Current	Potential
Very energy efficient - lower running costs			Very environmentally friendly - lower CO ₂ emissions		
(92-plus) A			(92-plus) A		
(81-91) B	86	88	(81-91) B	86	87
(69-80) C			(69-80) C		
(55-68) D			(55-68) D		
(39-54) E			(39-54) E		
(21-38) F			(21-38) F		
(1-20) G			(1-20) G		
Not energy efficient - higher running costs			Not environmentally friendly - higher CO ₂ emissions		
England & Wales EU Directive 2002/91/EC			England & Wales EU Directive 2002/91/EC		

The energy efficiency rating is a measure of the overall efficiency of a home. The higher the rating the more energy efficient the home is and the lower the fuel bills are likely to be.

The environmental impact rating is a measure of a home's impact on the environment in terms of Carbon Dioxide (CO₂) emissions. The higher the rating the less impact it has on the environment.

Estimated energy use, carbon dioxide (CO₂) emissions and fuel costs of this home

	Current	Potential
Energy use	78 kWh/m ² per year	73 kWh/m ² per year
Carbon dioxide emissions	2.4 tonnes per year	2.3 tonnes per year
Lighting	£145 per year	£103 per year
Heating	£289 per year	£292 per year
Hot water	£159 per year	£159 per year

Based on standardised assumptions about occupancy, heating patterns and geographical location, the above table provides an indication of how much it will cost to provide lighting, heating and hot water to this home. The fuel costs only take into account the cost of fuel and not any associated service, maintenance or safety inspection. This certificate has been provided for comparative purposes only and enables one home to be compared with another. Always check the date the certificate was issued, because fuel prices can increase over time and energy saving recommendations will evolve.

To see how this home can achieve its potential rating please see the recommended measures.

Certification mark

Remember to look for the energy saving recommended logo when buying energy-efficient products. It's a quick and easy way to identify the most energy-efficient products on the market.

About this document

The Energy Performance Certificate for this dwelling was produced following an energy assessment undertaken by a qualified assessor, accredited by Elmhurst Energy Systems Ltd, to a scheme authorised by the Government. This certificate was produced using the SAP 2005 assessment methodology and has been produced under the Energy Performance of Buildings (Certificates and Inspections)(England and Wales) Regulations 2007. A copy of the certificate has been lodged on a national register.

Assessor's accreditation number:	EES/006678
Assessor's name:	Mr. Gerard McGuigan
Company name/trading name:	Future Energy Surveys Ltd
Address:	Clifford Chambers, 4 Clifford Street, York, YO1 9RD
Phone number:	01904 674890
Fax number:	01904 656271
E-mail address:	gerard@futureenergysurveys.co.uk
Related party disclosure:	No related party

If you have a complaint or wish to confirm that the certificate is genuine

Details of the assessor and the relevant accreditation scheme are as above. You can get contact details of the accreditation scheme from their website at www.elmhurstenergy.co.uk together with details of their procedures for confirming authenticity of a certificate and for making a complaint.

About the building's performance ratings

The ratings on the certificate provide a measure of the building's overall energy efficiency and its environmental impact, calculated in accordance with a national methodology that takes into account factors such as insulation, heating and hot water systems, ventilation and fuels used. The average Energy Efficiency Rating for a dwelling in England and Wales is band E (rating 46).

Not all buildings are used in the same way, so energy ratings use 'standard occupancy' assumptions which may be different from the specific way you use your home. Different methods of calculation are used for homes and for other buildings. Details can be found at www.communities.gov.uk/epbd.

Buildings that are more energy efficient use less energy, save money and help protect the environment. A building with a rating of 100 would cost almost nothing to heat and light and would cause almost no carbon emissions. The potential ratings in the certificate describe how close this building could get to 100 if all the cost effective recommended improvements were implemented.

About the impact of buildings on the environment

One of the biggest contributors to global warming is carbon dioxide. The way we use energy in buildings causes emissions of carbon. The energy we use for heating, lighting and power in homes produces over a quarter of the UK's carbon dioxide emissions and other buildings produce a further one-sixth.

The average household causes about 6 tonnes of carbon dioxide every year. Adopting the recommendations in this report can reduce emissions and protect the environment. You could reduce emissions even more by switching to renewable energy sources. In addition there are many simple everyday measures that will save money, improve comfort and reduce the impact on the environment. Some examples are given at the end of this report.

Visit the Government's website at www.communities.gov.uk/epbd to:

- Find how to confirm the authenticity of an energy performance certificate
- Find how to make a complaint about a certificate or the assessor who produced it
- Learn more about the national register where this certificate has been lodged
- Learn more about energy efficiency and reducing energy consumption

Recommended measures to improve this home's energy performance

Flat 13,
1b, Hodford Road,
LONDON, NW11 8NL

Date of certificate: 10 January 2011
Reference number: 8789-6739-8570-4250-1992

Summary of this home's energy performance related features

The following is an assessment of the key individual elements that have an impact on this home's performance rating. Each element is assessed against the following scale: Compliant / Average / Good / Very good.

Elements	Description	Current performance	
		Energy Efficiency	Environmental
Walls	Average thermal transmittance 0.33 W/m ² K	Good	Good
Roof	(other premises above)	-	-
Floor	(other premises below)	-	-
Windows	Fully double glazed	Very good	Very good
Main heating	Boiler and underfloor heating, mains gas	Very good	Very good
Main heating controls	Time and temperature zone control	Good	Good
Secondary heating	None	-	-
Hot water	From main system	Very good	Very good
Lighting	Low energy lighting in 60% of fixed outlets	Good	Good
Air tightness	Air permeability 3.2 m ³ /h.m ² (as tested)	Good	Good

Current energy efficiency rating B 86

Current environmental impact (CO₂) rating B 86

Thermal transmittance is a measure of the rate of heat loss through a building element; the lower the value the better the energy performance.

Air permeability is a measure of the air tightness of a building; the lower the value the better the air tightness.

Low and zero carbon energy sources

None

Recommendations

The measures below are cost effective. The performance ratings after improvement listed below are cumulative, that is they assume the improvements have been installed in the order that they appear in the table.

Lower cost measures (up to £500)	Typical savings per year	Performance ratings after improvement	
		Energy efficiency	Environmental impact
1 Low energy lighting for all fixed outlets	£37	B 88	B 87
Total	£37		
Potential energy efficiency rating		B 88	
Potential environmental impact (CO ₂) rating		B 87	

Further measures to achieve even higher standards

None

Improvements to the energy efficiency and environmental impact ratings will usually be in step with each other. However, they can sometimes diverge because reduced energy costs are not always accompanied by a reduction in carbon dioxide (CO₂) emissions.

About the cost effective measures to improve this home's performance ratings

Lower cost measures (typically up to £500 each)

These measures are relatively inexpensive to install and are worth tackling first. Some of them may be installed as DIY projects. DIY is not always straightforward, and sometimes there are health and safety risks, so take advice from an energy advisor before carrying out DIY improvements.

1 Low energy lighting

Replacement of traditional light bulbs with energy saving recommended ones will reduce lighting costs over the lifetime of the bulb, and they last up to 12 times longer than ordinary light bulbs. Also consider selecting low energy light fittings when redecorating; contact the Lighting Association for your nearest stockist of Domestic Energy Efficient Lighting Scheme fittings.

About the further measures to achieve even higher standards

Not applicable

What can I do today?

Actions that will save money and reduce the impact of your home on the environment include:

- Ensure that you understand the dwelling and how its energy systems are intended to work so as to obtain the maximum benefit in terms of reducing energy use and CO2 emissions. The papers you are given by the builder and the warranty provider will help you in this.
- Check that your heating system thermostat is not set too high (in a home, 21°C in the living room is suggested) and use the timer to ensure you only heat the building when necessary.
- Make sure your hot water is not too hot - a cylinder thermostat need not normally be higher than 60°C.
- Turn off lights when not needed and do not leave appliances on standby. Remember not to leave chargers (e.g. for mobile phones) turned on when you are not using them.
- Close your curtains at night to reduce heat escaping through the windows.
- If you're not filling up the washing machine, tumble dryer or dishwasher, use the half-load or economy programme.
