

EXACTA Temp Xtra

The new generation of EXACTA Temp XTRA is here. By taking the successful original formula and utilizing new nano-particle technology, EXACTA Temp XTRA provisionals are now stronger and appear more natural. Its unique ability to bond to itself allows for easy repair of voids. EXACTA Temp XTRA is ideal for single units and yet strong enough for long span bridges. Its high gloss enamel like finish makes aesthetically pleasing provisionals. This non-irritating formula is packaged in a large 82g cartridge.

AESTHETIC

Smaller particle size provides a smoother and more natural aesthetic appearance. The high gloss finish will polish easily every time.

DEPENDABLE

The right balance of compressive, flexural, and transverse strength provides durability for longer span bridges and longer term wear.

EASY TO USE

A minimal oxygen inhibition layer makes trimming and polishing quick and easy. The material will bond to itself for easy repairs.
