### The 702786, 703327 (EURO), and 702854 (CARGO) Chrysler/Jeep Door Locks

In 1995 and 1996, STRATTEC introduced the 702786, 703327 (EURO), 702854 (CARGO) door lock service packages, used on many Chrysler vehicles, including the Cherokee and Grand Cherokee. All these locks use seven tumblers.

Problems have arisen, however, in understanding the the differences and applications surrounding these three lock service packages.

The 702786 and 702854 (CARGO) lock service package have locks that are identical in design and fit with the exception of the groove. The 702786 plug incorporates the 85 groove and accepts both master and valet blanks. The plug from the 702854 package, however, has the 84 groove and accepts only the master key blank. A valet key cannot be used on this lock.

The 702786 lock service package should be used where both master and valet key need to operate the lock. The 702854 should be used where only a master key should operate the lock.

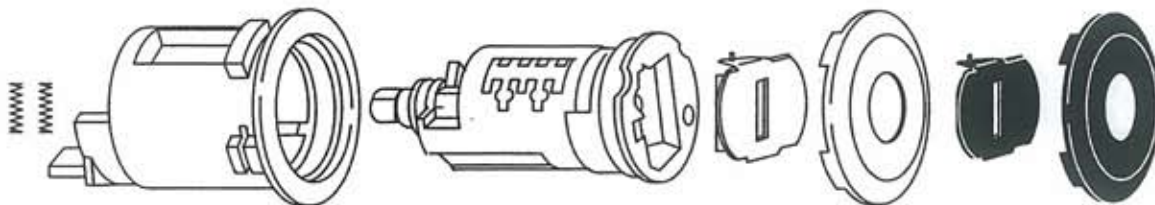

While the 702786 and 702854 are interchangeable, they should never be interchanged where keying is a factor.

Due to a mid-year change, the 1996 Grand Cherokee may be fit with either the 702786 or the 703327 (EURO) style door lock package.

Designed to meet European standards, the Chrysler EURO lock is designed with a larger diameter lock case than other Chrysler door locks. As such, the door cutout for the EURO lock and the lock in the 703327 (EURO) lock service package is larger and not interchangeable with the lock from the 702786 lock service package.

In the field, it is not necessary to remove the lock from the door to determine whether the 703327 or 702786 lock service package is needed. Measure the outside diameter of the lock case cap. If it measures approximately 1.20" (30.65 mm), use the 703327 lock service package for replacement. If the case cap measures approximately 1.05" (26.70mm) in diameter, use the 702786 lock package.

It is expected that the EURO lock will expand into other Chrysler lines in the coming years.
