

ANZSNM Research Grant for 2014

Closing date **11 October 2013** for Research Grant to commence in 2014

The Australian and New Zealand Society of Nuclear Medicine (ANZSNM) offers an annual Research Grant to Society Members, consisting of one or more research grants up to a total value of \$A20,000.

Based on a competitive process, the Research Grant is funded with the aim of supporting investigation, clinical projects or experimentation aimed at the discovery and interpretation of facts or the development or application of theories in the field of Nuclear Medicine/ Molecular Biology. Clinical Projects are defined as projects that centre on groups of patients or other human subjects. It is recognised that clinical and collaborative arrangements may dictate that some aspects of work funded may be carried out at other sites.

ANZSNM Research Grants are intended to achieve one or more of the following:

1. Approach a meaningful conclusion in one year.
2. Support investigator initiated clinical projects (as defined above).
3. Assist investigators striving to establish new programs or new directions.
4. Fund initial exploratory research for which external funding will be sought subsequently.
5. Address circumscribed clinical problems of a sort unlikely to attract industry funding.
6. Survey groups of patients to assess the success rate, sequelae, safety or any other aspect of diagnostic or radionuclide therapy protocols.
7. Bridge the gap of a year between completion of one external grant and the commencement of another.

Further information and the application form are available on the Society's website.

Closing date for applications for the 2014 Research Grant is Friday 11 October 2013.
