

WOODSIDE Otway Gas Project

Construction, Hook-up, Pre-comm/Commissioning

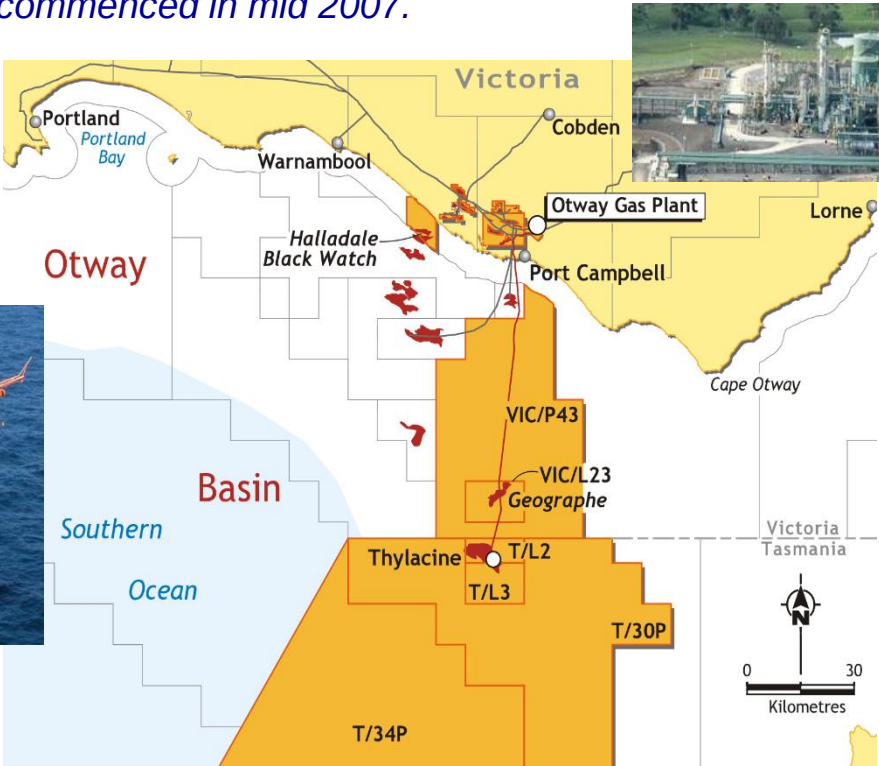

Operator/ Client:	Woodside Energy / Technip Oceania
Project/ Location:	Otway Gas Project Port Campbell, Australia
Scope of Services:	Construction, Hook-up, Pre-commissioning, Commissioning and Start-up Engineering, Supervision and Management

Otway Gas Project at a glance:

The Otway Gas Project consists of two offshore gas fields (Thylacine located in Tasmanian waters and Geographe located in Victorian waters), and an onshore gas processing facility (located north of Port Campbell).

Raw gas from the gas field is transported via offshore and onshore pipelines to the gas processing facility. From this gas stream the Otway Gas Processing Facility produces natural gas, condensate and liquefied petroleum, for sale.

Technip has been awarded by Woodside Energy Limited the EPCC contracts of the Otway Gas Project. The Otway Gas Project development was sanctioned in 2004 and production commenced in mid 2007.

Construction, Hook-Up, Pre-comm./Commissioning

ARAMIS Scope of Work:

- Preparation of pre-commissioning, commissioning and start-up procedures of onshore/offshore facilities at engineering office in Kuala Lumpur
- Offshore Construction, Hook-up and Commissioning Management and Supervision at Portland and offshore gas production platform
- Onshore Commissioning Management and Supervision of gas processing Plant at Port Campbell.
- Pre-commissioning and commissioning database preparation and management (WINPCS) at engineering office and sites
- Preparation and Management of Completion, Start-up and Handover activities.
