Surgery and Anesthesia Consent

Pet's Name:		, william respire	
Client Name:		Contact Ph. No:	_
		Alternate No:	_
Initials	I have not given my pet any food or water after 11pm on the night before the procedure, unless otherwise advised by my doctor. I understand that this is important for anesthesia safety.		
Hospitalization	Surgical Information		
Blood work:	Pre-Surgical blood work is strongly recommended. It is required for patients over seven years of age.		
Preparation:	The skin around the surgical area will be clipped and scrubbed with an antiseptic. We follow sterile procedures (surgical preparation, surgical packs, and surgical attire).		
Monitoring:	We further minimize anesthetic risk by monitoring heart rate and rhythm, respiration rate and quality, blood pressure, oxygenation, and depth of anesthesia during the procedure.		
Catheterization:	For most surgical procedures, an intravenous catheter is placed to provide us with an easy route to administer medication and fluids (which support kidney, liver and heart function, as well as blood pressure) during the procedure.		
Antibiotic:	An antibiotic is given to prevent potential b	bacterial infection that can occur after surgery.	
Pain Reduction:	We will proactively manage pain associated with any procedure with appropriate pain management medications. As with any drug, side effect may be associated with their administration.		
Laser:	When using the laser as a surgical instrume pain for the patient.	ent, it cauterizes as it cuts. This results in less blee	eding, swelling and
I authorize anest risks always exis	t with anesthesia and/or surgery, and I am er	ks of this procedure have been explained to me. I neouraged to discuss any concerns I have about the theorem indicates that any questions have been as	nose risks with my
