Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

(It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fear-some feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.

Don't wait until the last minute to get your pet up to date on all their vaccines! Schedule your appointment now before they head to the boarding facility this holiday season.

Summer Updates

As the summer months begin to wind down we just wanted to take some time to update everyone on some of the fun that's been going on at the clinic:

- Our 2nd Annual Puppy Up Walk was a great success! Thank you to all our participants, sponsors and cancer survivors. We are already looking forward to making next year's walk the biggest one yet!
- Speaking of "biggest", our Biggest Loser: Pet Edition is nearing the end and we want to congratulate all our pets that have lost weight and encourage everyone to keep going!

Note: If we are closed and you have an animal emergency, please call the Emergency Veterinary Hospital on Jackson Road in Ann Arbor at (734) 369-6446 (also treats birds and other exotic pets).

Welcome Sarah!

We've noticed a ton of new faces coming into the clinic for pet care, and you may have noticed a new face behind our front desk too. Meet Sarah, the newest member of the City Pets Vet Clinic team!

Sarah returned to the Ann Arbor area after two years in Alabama and reports Nick Saban isn't all that bad. She will be attending Baker College this fall and applying for the Vet Technician program in April.

She's getting plenty of hands-on experience both at the clinic and at home where she lives on a farm with her Great Pyrenees, "Meekah". In her free time, she enjoys riding horses, milking cows and chasing goats.

Sarah is the one without feathers.

Airborne Allergies Assault Animals Also

Long time allergy sufferers know this time of year well. It's the second coming of allergy season and just the thought of going outside can start your eyes watering and your nose sneezing. We humans aren't the only ones that fight with allergies; our furry, little allergen factories can also suffer from the same airborne allergies that afflict humans. The biggest difference between our allergy suffering comes from the symptoms.

Pets with allergies commonly come into the clinic with itchiness, redness and bad odor on the skin. Allergies are often the trigger that lead to secondary skin or ear infections often coupled with hair loss (see diagram below for more information). If you notice that your pet is con-

stantly chewing on their skin and paws, that may also be a sign of an allergy.

Airborne allergies are not the only cause of these symptoms. Your pet may have a flea allergy, food allergy, infection or another cause of skin or ear irritation and therefore should be seen by a veterinarian to diagnose the problem. Mainly allergies are a clinical diagnosis based on history and examination findings. Allergies can also develop over time, so it's important to get your pet in to see the veterinarian.

If your pet is suffering from one or multiple of the symptoms below please call or email the clinic to set up an appointment.

Three Cheers for Three Years

City Pets Veterinary Clinic will be celebrating our 3rd Anniversary this month. The clinic has been growing since that first day back in September of 2011. We have met over 1430 clients and over 2200 patients in those three years. Over the last three years, we have performed over 6500 exams!

We didn't stop there either! We've performed surgeries on everything from chameleons to sugar gliders. We've provided

routine care to pot-belly pigs, chickens, boas and even a wild deer that literally ran into our clinic. (He must have heard

about the doctors' reputation.) In addition to routine, and not so routine, medical care, we have added pet acupuncture done by Dr. Kruttlin and orthopedic surgery performed by Dr. Gumbs to our list of services.

The clinic has also been given the opportunity to be involved in some great community events, including the Walk at the Arb and Pet Fest. We've also been able to sponsor a local sports team and work with many great professionals in the animal care field, from dog walkers to animal behaviorists. With our clients help, we were even able to start

our own annual event, The Puppy Up Walk, which celebrated its second anniversary this summer (see Summer Updates).

The most exciting growth over the last three years has been the growth of the City Pets family. Dr. Weinrick welcomed a new baby girl, Molly, and Mario joined Sid as our second clinic cat. Bill, Jess and Sarah (see page 3) joined us, while we were sad to see an original leave for Texas. We miss you Dorie!

Thank you for everything because without you the last 3 years wouldn't have been possible. We look forward to what the next 3 years bring!

October is our Bi-Annual Dental Month

Halloween isn't the only thing to look forward to this October, it's our Bi-Annual Dental Month as well! In honor of clean teeth and healthy mouths we are offering a discount on dentals performed in October. If you aren't sure that your pet needs a dental we will do a free dental evaluation during the month of October as well. Please note that this evaluation does not include the cost of blood work or a comprehensive exam if your pet hasn't been seen in the last six months.

When your pet comes in for a dental cleaning, it is done under anesthesia. The teeth and gums are thoroughly inspected to ensure that all the teeth are

healthy. Any teeth the doctor finds to be unhealthy are then extracted to ensure that the tooth does not cause a problem down the road. The remaining teeth are then scraped, cleaned with an ultrasonic scaler and polished. A dental rinse of fluoride and sealant is used to finish off the cleaning.

Dental cleanings are not a procedure exclusively for older pets either. Research has shown that pets as young as two years old can benefit from a professional dental cleaning. Owners often report improved comfort, better appetite and better breath after a pet's dental cleaning. Please contact the clinic for more information or to schedule your pets' dental evaluation.

Getting Geared Up for the Holiday Season

With the Labor Day weekend officially over, we all must come to terms with the fact that summer is ending. It's not all bad news though, because that means the holiday season is approaching. (It's never too early to get your favorite vet clinic a present, either!) We want to help you get your pet ready for the holiday season with a few helpful tips and reminders.

As is par for the course, we want to remind everyone of the dangers associated with the time of year. Poin-

settias are a popular flower around the holiday season, but be careful because they are extremely poisonous for our fuzzy flower grazers. Halloween candy can also be a danger to your hair-raising hound and fearsome feline. Ensure that chocolate, both candy and baking, are kept out of reach of pets and that all meat bones are disposed of properly. Bones should not be given to pets as they can splinter and cause injuries in the mouth and digestive tract. Be mindful of rib-

bons and other decorations because they can present a choking hazard or block your pet's digestive tract.

The holiday season isn't all scary stuff though. City Pets will be having a Holiday Open House on November 15th. There will be refreshments for both pets and their people. There will also be a professional photographer to take your pet's holiday photo. Mark your calendars and join us for some howling-good holiday fun.
