

DENTAL INFORMATION/CONSENT FORM

- Please see the handout on Oravet. We apply a base product after the dental and then you apply it weekly at home. This is a very effective product but does require that you be able to wipe the product on the outside surface of your pet's teeth.
- The cost to apply the base product is \$25 and the home care kit is \$34.00. The home care kit lasts 16-32 weeks depending on the size of your pet.

Oravet application to teeth

- It is difficult to determine the extent of dental disease unless your pet is under anesthesia. We will look at each individual tooth at that time and determine if further diagnostics or treatment will be needed. This could include dental radiographs, perioceutic treatment or extractions. We try to save any tooth that we can but if there is a deep pocket or mobility of the tooth, it may be necessary to extract it.
- The prices on the dental radiographs and extractions vary depending on the extent of the disease.
- The perioceutic treatment is \$58 if it is needed for deep pockets around the tooth.

Please indicate below how you wish us to handle these additional procedures if they are necessary.

- I authorize the doctor to do any extractions, X-rays, or procedures deemed necessary while my pet is under anesthesia.
- Please attempt to contact me if anything additional is needed, but proceed if I am not available.
- Please contact me regarding any additional procedures. If I am not available, do not proceed. I understand this may mean my pet will require an additional procedure under anesthesia at a different time.
