

Dental Cleaning Package

Oral disease is the #1 health problem diagnosed in dogs and cats. Without proper care, 80% of dogs and 70% of cats will show signs of disease by age 3. Unfortunately, most dental problems are progressive, and can cause pain and become untreatable without proper treatment.

By providing at-home oral care and yearly professional dental cleanings, your pets will:

- Live in less pain
- Live longer
- Eat better
- Be healthier
- Smell better

Our dental cleaning service includes:

- A general exam before anesthesia including evaluation of oral disease
- Examination of each tooth and the entire oral cavity under anesthesia
- Calculus (tartar) removal from the visible part of the tooth and below the gum line
- Tooth Polishing
- Fluoride application and antiseptic oral rinsing
- Use of a plaque detecting agent to ensure teeth are thoroughly cleaned
- Antibiotic injection
- Dental charting
- Dental radiographs (x-rays)
- Bair Hugger body warming unit*
- Therapy such as extractions with injections for pain relief*
- A no fee follow-up appointment when extraction is performed*

We also strongly recommend the following to ensure the safety of the procedure:

- Pre-anesthetic blood work
- IV catheter placement
- Fluid administration
- Use of safe anesthetic agents
- Monitoring during anesthesia and recovery

* Not applicable to all pets

Nail trim (free), anal sac expression, and microchip services available upon request.

We offer an annual dental discount (60% savings) after the first year and thereafter to promote dental health (must schedule appointment within 1 year of previous procedure, and have had performed all recommended dental services).
