

Your pet's safety and comfort are of utmost importance at All Pets Hospital. Before your pet undergoes surgery, he/she will be examined for any issues that could potentially interfere with anesthesia. Your pet will be monitored before, during, and after surgery by qualified staff to help ensure a safe, quick procedure and recovery. We are happy to report that our patients do very well and we expect today to go smoothly.

Even for our younger, healthy patients, pre-anesthetic blood work can help put your mind at ease. In some instances, this blood work will detect an underlying medical issue that may not have been previously known.

PLEASE PERFORM PRE-ANESTHETIC TESTING	_____ YES	_____ NO	
(blood work is MANDATORY every 6 months for pets over 6 years)	under 6 years		\$77.00
	over 6 years		\$102.00

***Due to the fact that we cannot control the flea and tick population outdoors, we HIGHLY recommend monthly topical flea/tick treatment. In the event fleas or ticks are found on your pet, they will be treated at the owner's expense with a prescription Capstar and Frontline. \_\_\_\_\_ (initial)***

*Sedation is not necessary for the implant, but we offer it while the animal is under anesthesia in order to reduce stress, and minimize the discomfort of the patient.*

\$75.50                      YES                      NO
