Pre-surgical Blood work:

We recommend pre-anesthetic bloodwork prior to all types of surgery. The pre-anesthetic bloodwork will give us a complete CBC and chemistry. This will screen for any underlying potential problems that may complicate anesthesia. This is not a mandatory test, but is strongly recommended for older pets or pets with a history of concerns.

Canine Dental:

An examination and estimate are strongly recommended, if not seen in the last 2 months, before scheduling a dental for your dog. This is to ensure that your dog does not need an antibiotic before surgery and to give you, the owner, an idea of the costs if any extractions are needed.
