

## Socialization ~ The Single Most Important Thing You Can Do For Your Puppy...

*Animal Medical Center's First Steps Puppy Primer Classes are designed to meet the developmental needs of puppies between the ages of 8-16 weeks. This socialization period is considered to be the most important stage in your puppies life. Introducing your puppy to different stimuli in a positive way can have a significant impact on their adult behavior. With First Steps Puppy Primer Classes, we help ensure that your new puppy reaches your goal of becoming a well-adjusted, well-mannered family member.*

# Puppy Socialization ~ The First Steps to the Perfect Puppy!

Our First Steps Puppy classes are structured to provide a fun and safe environment in which to introduce your puppy to new sights, sounds, activities and friends.

Each hour class starts out with Puppy playtime and then moves on to the specific socialization exercise for that week. Each week we highlight a different theme. There is a night of objects that move and make noise, an evening of obstacles

(slides, tunnel and more), costume night as well as a visit to the vet clinic.

As the pups wind down from all of their exploring and meeting new friends, we discuss managing puppy behaviors and teaching puppy manners. First Steps is a positive learning experience for both you and your pup.

## General Information

Our Puppy Socialization Class meets once a week for an hour and your registration fee is for 4 weeks of classes. Our classes are open-ended which means, we can start new puppies every week

All family members, including children 3 years old and up, are encouraged to attend classes. Each of our weekly sessions will involve both you and your puppy in different games, props and learning activities.

## Puppy Information

All Pups must be between 8-12 weeks old at the first class they attend and have received their first set of vaccines. (Please bring proof of vaccinations)
