

## At Home Flea Treatment

### Treating your pets

- All pets in the home need to be treated for a minimum of 3 months; it is recommended to also treat any outdoor pets your animals may be in contact with.
- Any family/friends pets your pet has been in contact with should also be treated.
- Discuss with your veterinarian the most appropriate way to treat all the pets. At Country Hills Pet Hospital we recommend the following flea/tick products: Nexgard, Bravecto, or Revolution.

### Treating your home

- Vacuum the entire house and empty the vacuum outside.
- Wash any bedding/pillows/pet beds the animal is in contact with in a hot wash cycle.
- Wash around the baseboards of any hardwood, linoleum, tile floors with hot soapy water.
- After the home has been cleaned, use a premise spray such as KnockOut on all upholstery and carpeted areas. This spray prevents flea infestations for up to 7 months.
