Abstract

This study aims to examine the impact of ROA, ROE, NPM, and EPS on the stock value of energy companies listed on the Indonesia Stock Exchange from 2022 to 2024. Data were analyzed using multiple linear regression, and the outcomes display that return on assets has a partially insignificant negative effect on stock price, return on equity has a partially insignificant negative effect on stock price, net profit margin has a partially insignificant negative effect on stock price, and earnings per share has a significant positive effect on stock price. For laypeople interested in investing in the stock market, it is recommended that they use return on assets, return on equity, net profit margin, and lastly earnings per share as guidelines when making investment decisions.
