

ABSTRACT

FACTOR RELATED TO COMPLIANCE THOUGHT HEMODIALISA IN PATIENT WITH KIDNEY FAILUR AT ROYAL PRIMA HOSPITAL MEDAN

Obodience is one of the problem factors in hemodialysis patients who experience chronic kidney disese. Noncompliance can lead to therapiutic failure that can decrease the patient's quality of life,increasing mortality and morbidity. The severerity of renal impairment determines the type of treatment and treatment given. In some cases, damage to kidney failure and circulation can be prevented by taking medication to control blood pressure and control blood cholesterol levels. At least 1 out of 100 people with kidney stroke will have kidney failure. People with chronic renal failure require furtur treatment to replace a number of kidney functions such as performing hemodialysis. The purpose of this study was to determine the factor associated with hepatitis undergoing hemodyalis in patients with chronic renal failure in Royal prima hospital, patients with chronic renal failure who undergo hemodialysis in royal prima hospital were 114 patients in september.The type of research used is a survery analytic research with cross sctional design. The population consisted of 114 respondents and the samples were 29 respondents. The research used a purposive sampling technique. Data were processed and analyzed by Chi-square test. Data colection method was performed by filling queationer.Based on the result of this research, there is a significant corelation between adherence with motivation ($p=0,069$), age ($p=0,002$), family support ($p= 0,002$). The research concluded that there is a relationship between factors associated with hemodialysis in patients with kidney failure in Royal Prima Hospital in 2025.
