

DEL MAR HILLS 6TH GRADER

Nicholas's Story When Nicholas was only two weeks old he was diagnosed with Biliary Atresia. At 3 ½ weeks of age he underwent his first surgery, a Kasai procedure, which created drainage of bile for the liver when his bile duct eventually became completely obstructed. In Nicholas's case, the procedure was successful and has allowed him to do extremely well, although he now requires a liver transplant.

**At this point there is no cure for
Biliary Atresia -
please help us change this!**

Saturday, May 12th
5K Fun Run/ Walk through San Diego Zoo
