

SMS Protective Apparel

3 TIMES BETTER

When protecting your staff is as critical as protecting your patients, choose SMS apparel from Busse. You'll be providing more resistance to blood strike through as well as comfort with this extra strong material.

BETTER PROTECTION

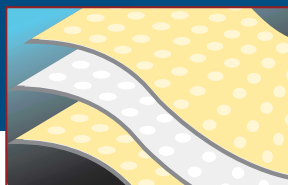

More fluid resistant than regular spunbonded material, the multi-layered SMS apparel offers better protection for any level of exposure in a variety of health care situations.

BETTER COMFORT

Sized generously and softer than regular spunbonded materials, latex free SMS apparel drapes easily, making gowns, labcoats and coveralls more comfortable.

BETTER VALUE

Once again, Busse gives you the quality and technology that others offer, but at a fraction of the cost.

SMS is made of meltblown polypropylene sandwiched between two layers of spunbonded polypropylene to create a stronger, yet more comfortable barrier.
