# 1. Introduction

The ANCAP CRS Selection List provides a list of Child Restraint Systems (CRS) that will be used in the CRS Installation Assessment under the ANCAP Child Occupant Protection Testing and Assessment protocols. This list must be read in conjunction with the relevant protocols.

The CRS included in the list are intended as representative of typical, widely available, restraints of each type and indicative of the suitability of a vehicle for installation of restraints of that type in general. The list should not be considered as endorsement or recommendation of any particular CRS.

Convertible (eg Type A/B) CRS will be installed in both forward and rearward facing mode. Similarly, CRS with ISOfix attachment will be installed in both ISOfix and Belted mode.

The list will be amended from time to time, depending on availability of CRS and for other reasons at ANCAP's discretion.

## 2. CRS Selection List

### 2.1. List of CRS

CRS Model	Description
