Your Medical History Timeline

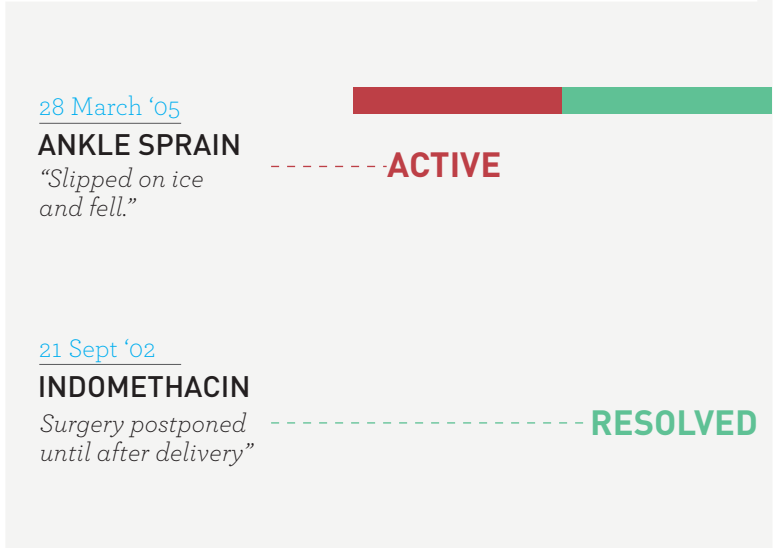

- VACCINES
- ENCOUNTERS
- PROCEDURES

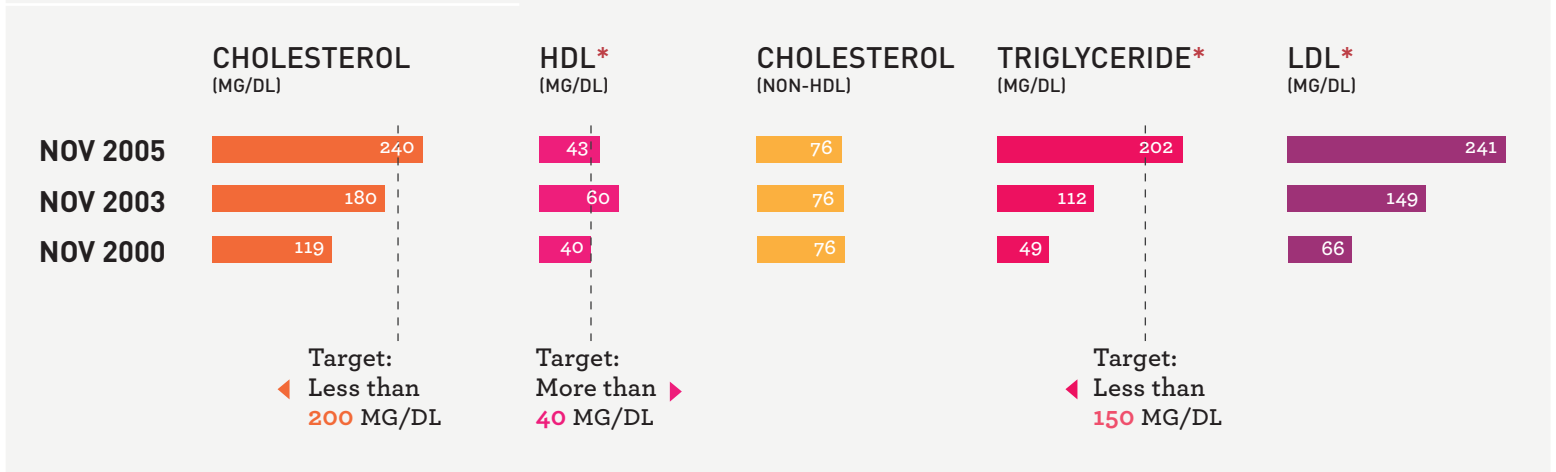

Medications :

Active/Resolved Problems

Your Lab Results :

- * LDL** 'Bad Cholesterol' - Higher LDL levels put you at greater risk for a heart attack
- * HDL** 'Good Cholesterol' - helps keep "bad" LDL cholesterol from building up in your arteries.
- Triglyceride** Fat in the blood that is used to provide energy to the body is stored in different places when you have high triglyceride. High triglyceride levels have been linked to a greater chance for heart disease.
