

CUTTING A

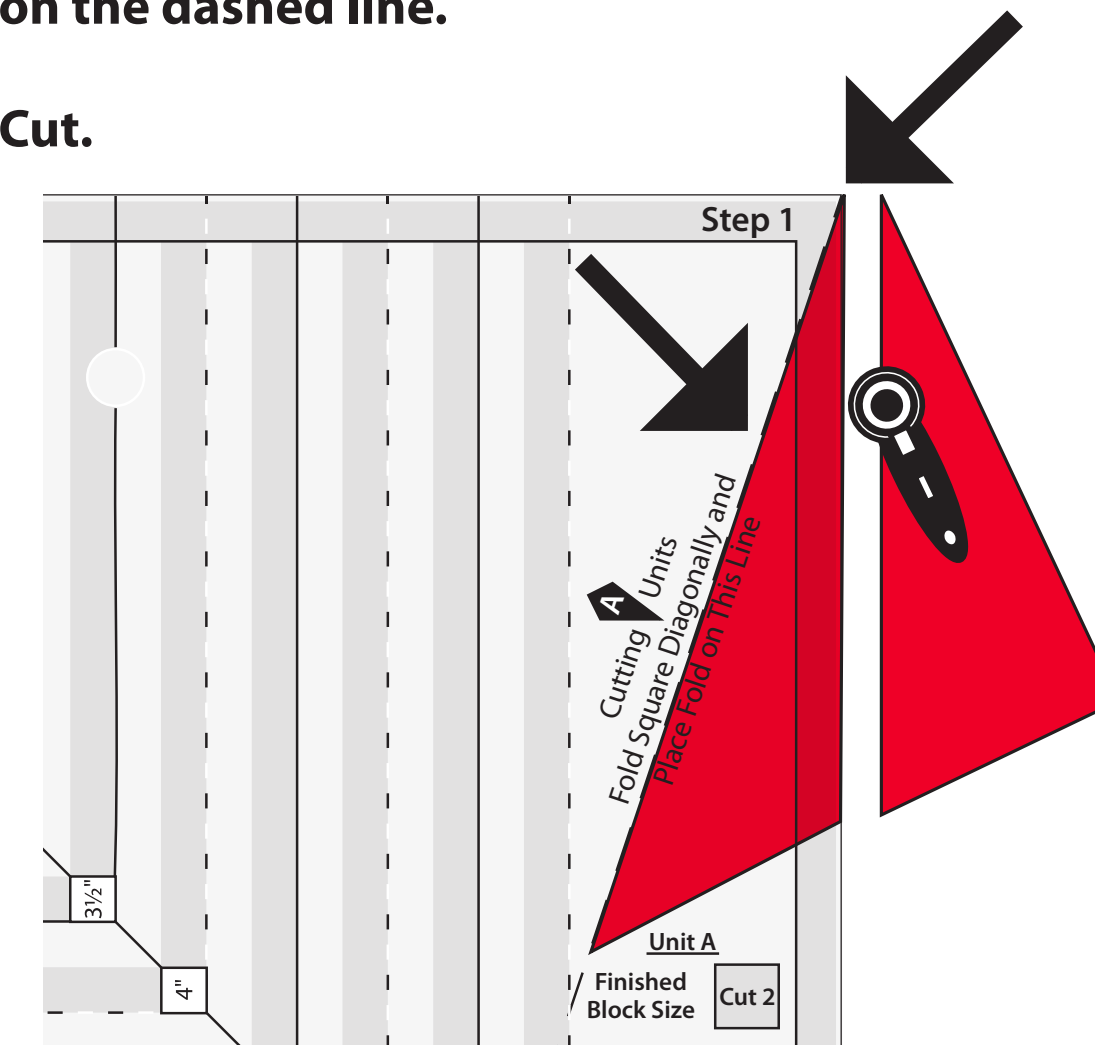

- 1 Referring to cutting chart Unit A on the Kitty Cornered tool, cut (2) squares.

Fold the squares diagonally and press.

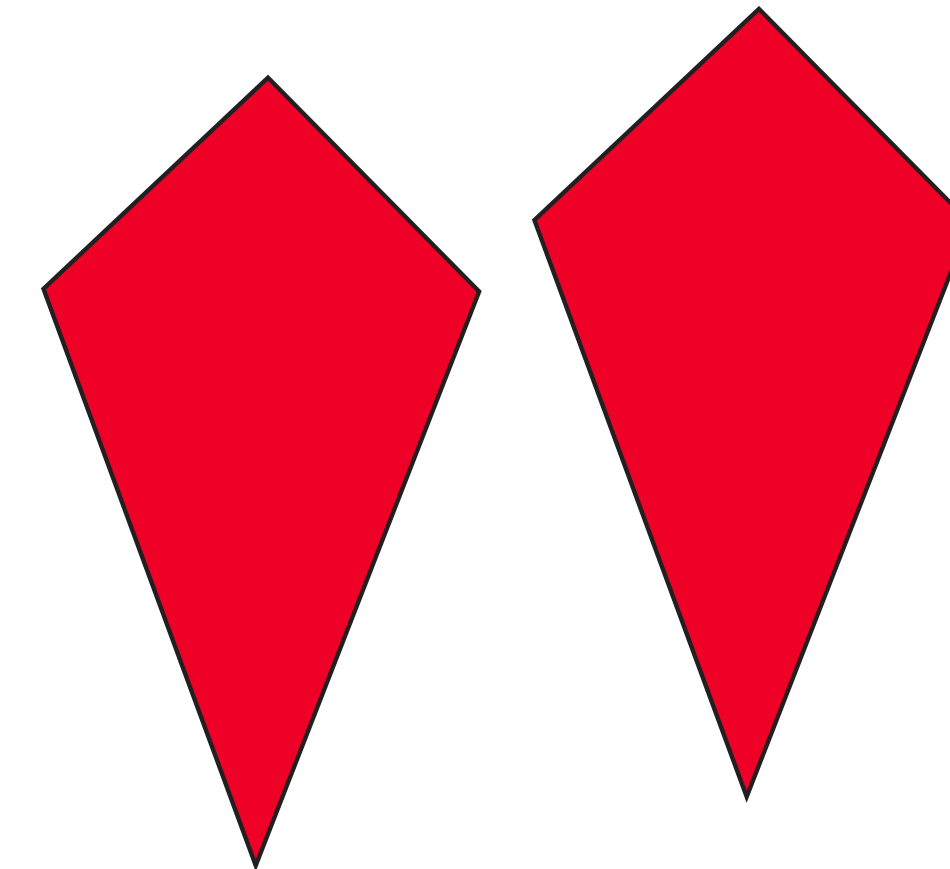

- 2 Place the tip of the folded square at the corner of the Step 1 section of the tool, and align the folded edge on the dashed line.

Cut.

- 3 Repeat process for second square. Open and press unit A.

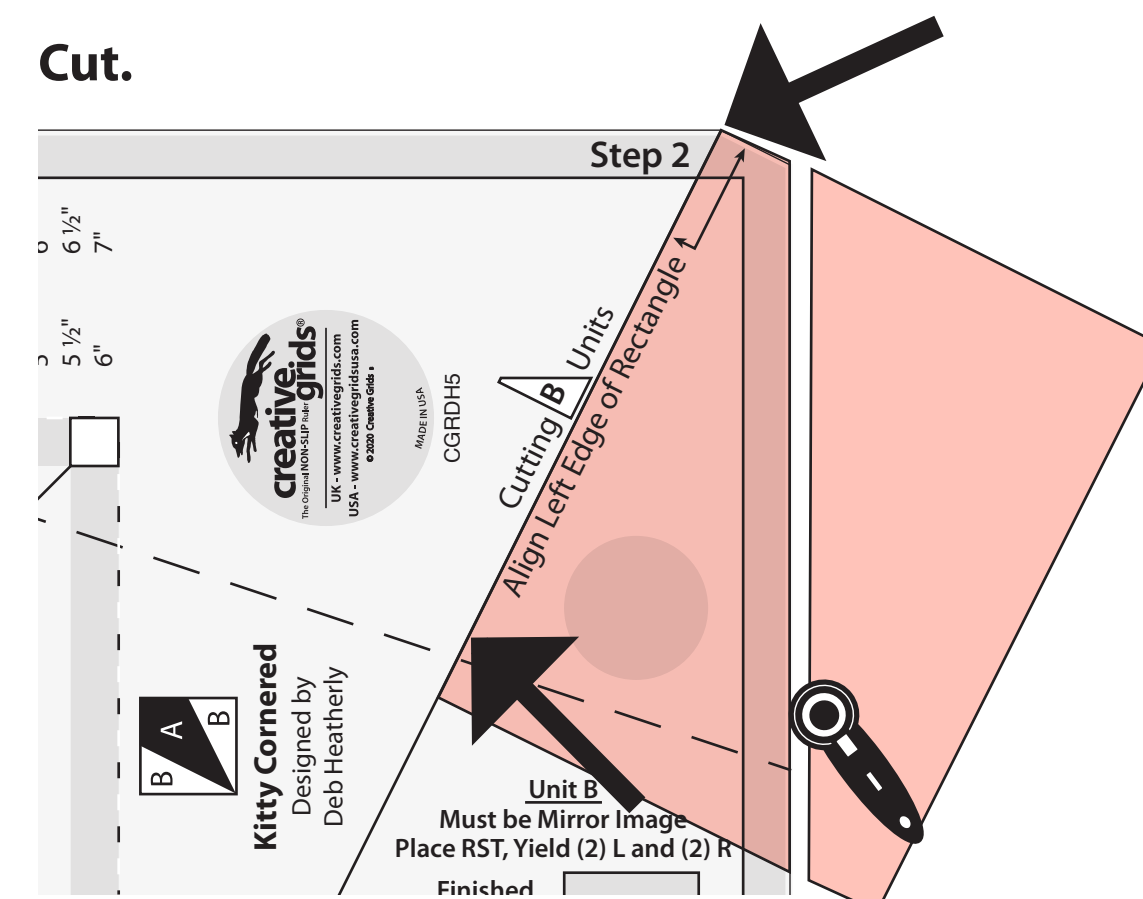

CUTTING B

- 4 Referring to cutting chart B, place the rectangles right sides together.

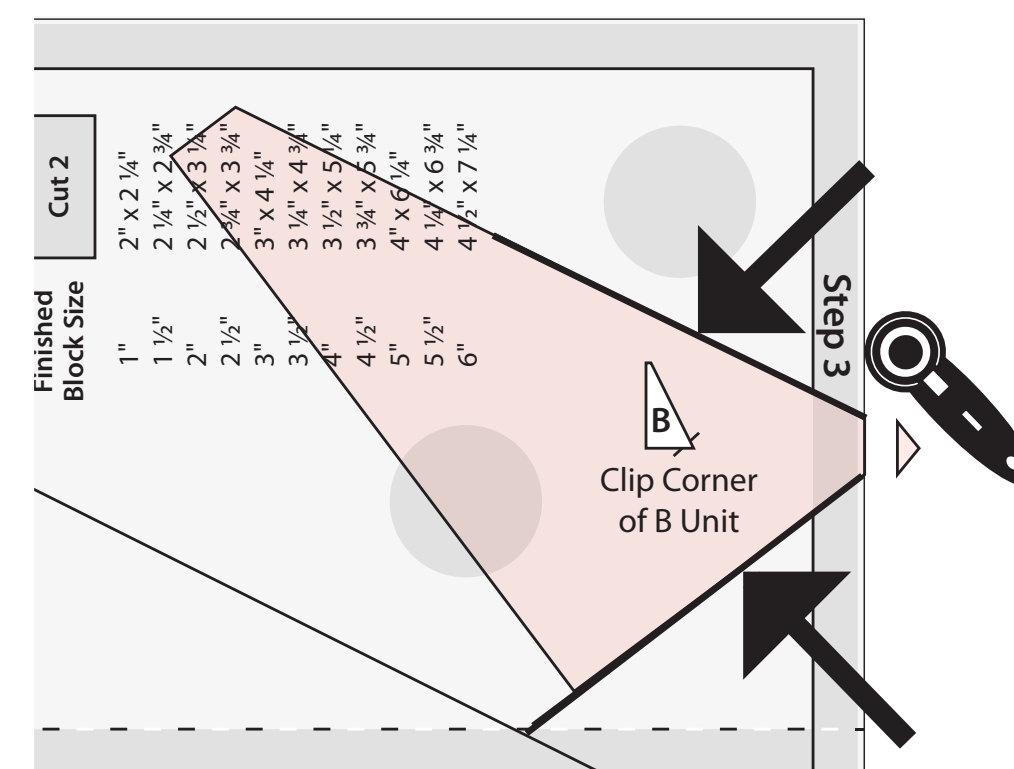

(NOTE: It is important that you place them right sides together in order to make mirror image B units.)

Align the left side and the top left corner of the rectangles with the Step 2 B unit line on the tool.

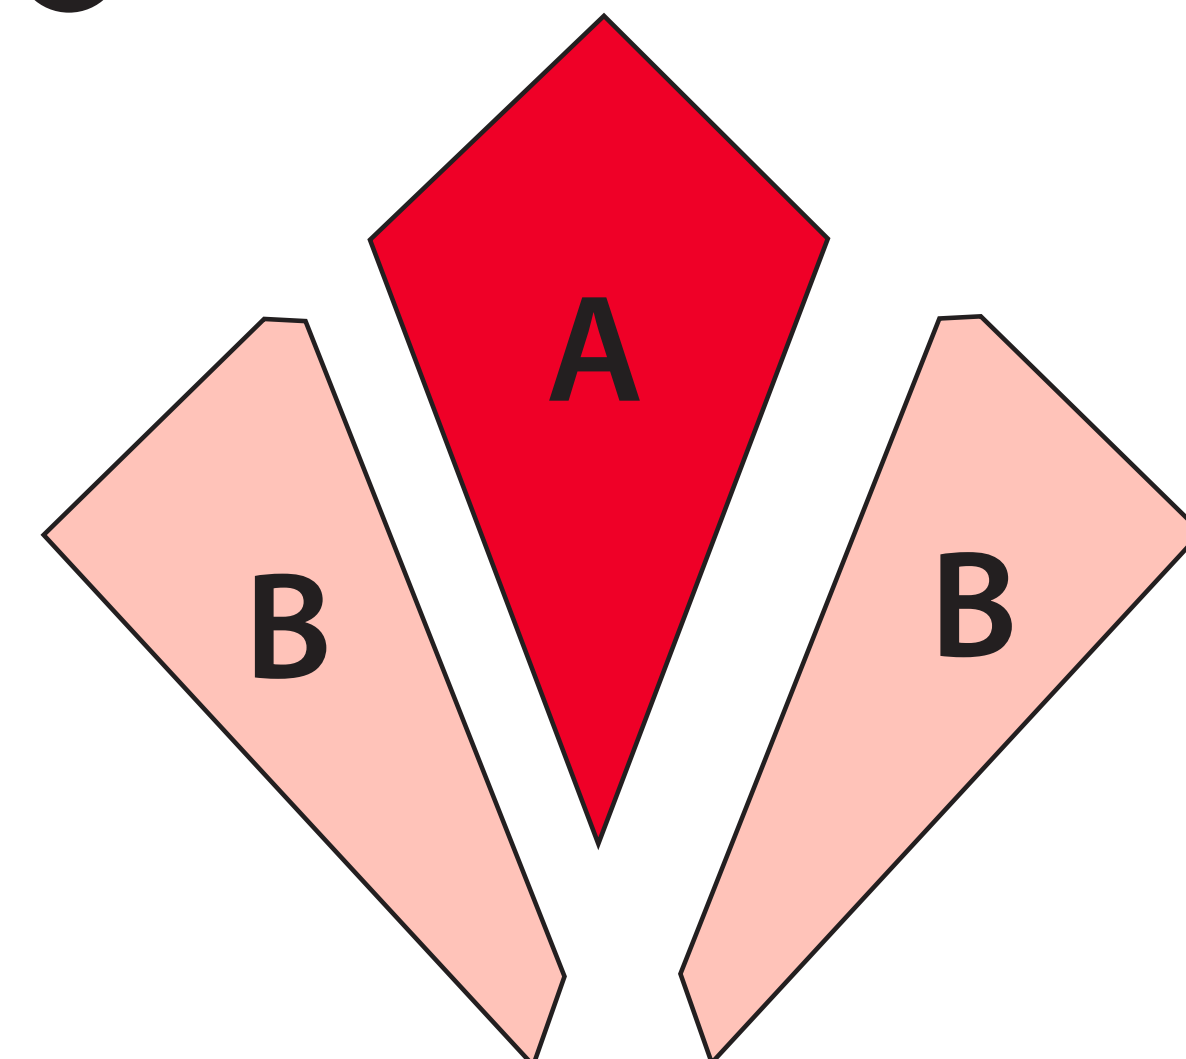

Cut.

- 5 Align the B units with the Step 3 lines on the tool. Trim off the tip.

- 6 Now you are ready to sew!

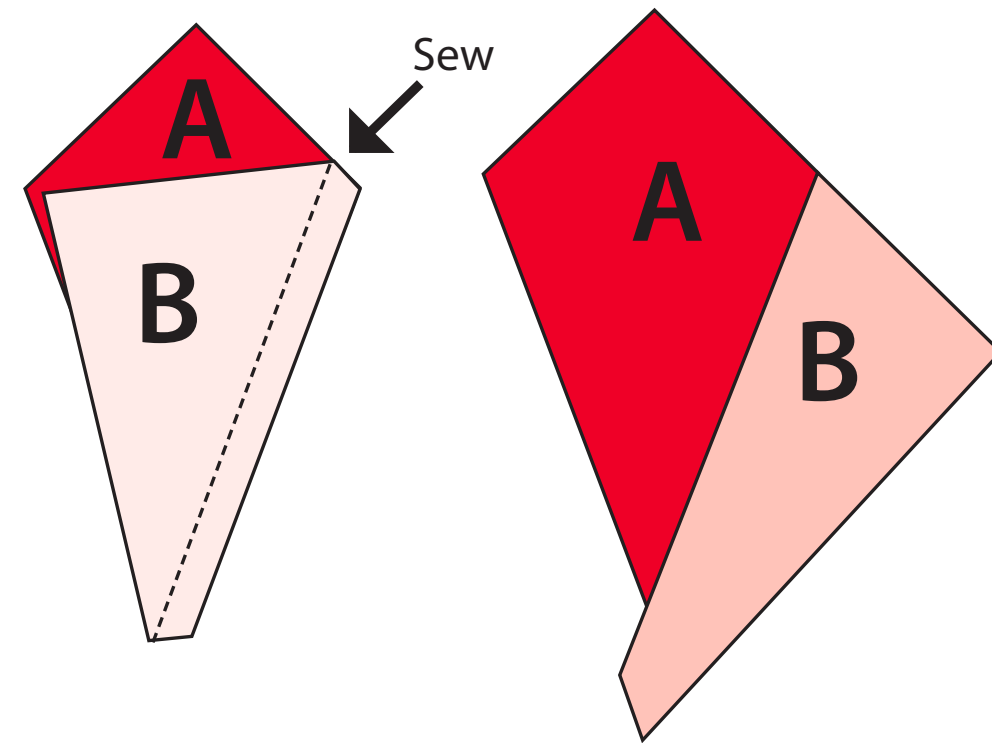

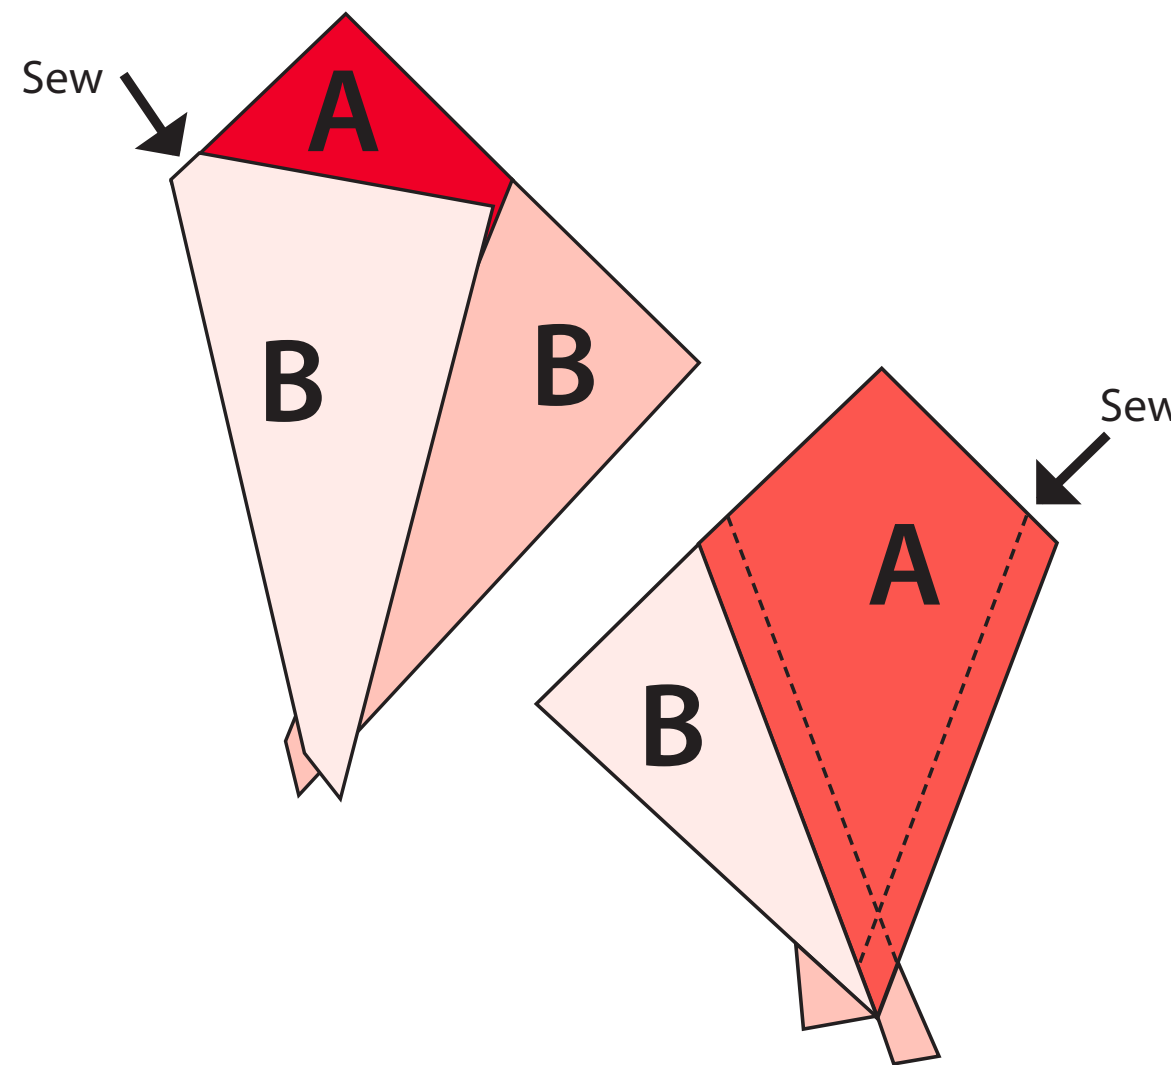

SEWING

- 1 With right sides together, place the first B unit on the A unit as shown. Start to sew from the clipped corner, sewing $\frac{1}{4}$ " from the edge.
(NOTE: The B Unit is larger than the A Unit, which will be trimmed to size later.)

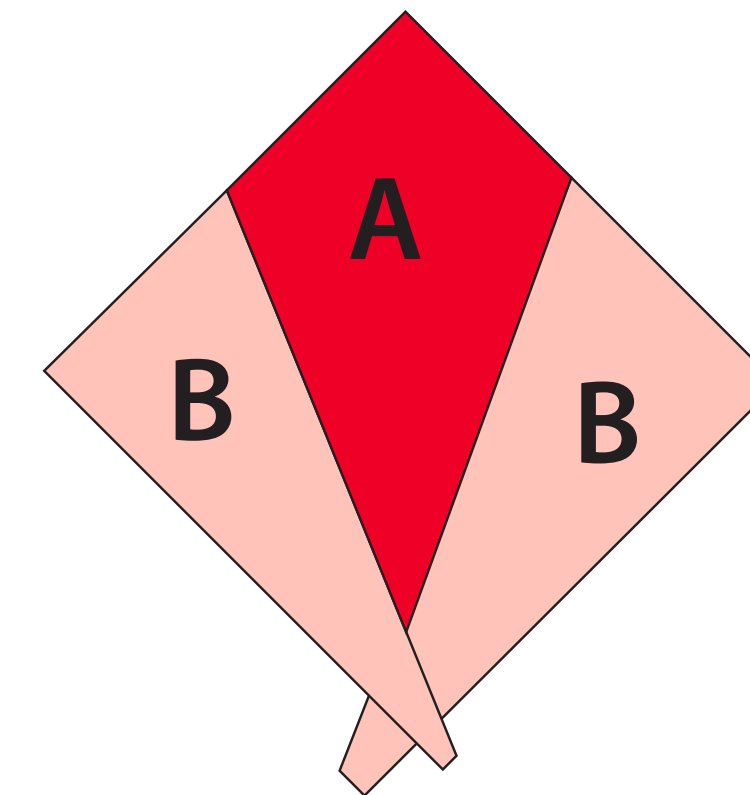

Press away from the A unit.

- 2 Align the opposite B unit using the clipped edge for placement. Turn the unit over and start sewing from the edge with the clipped corner.

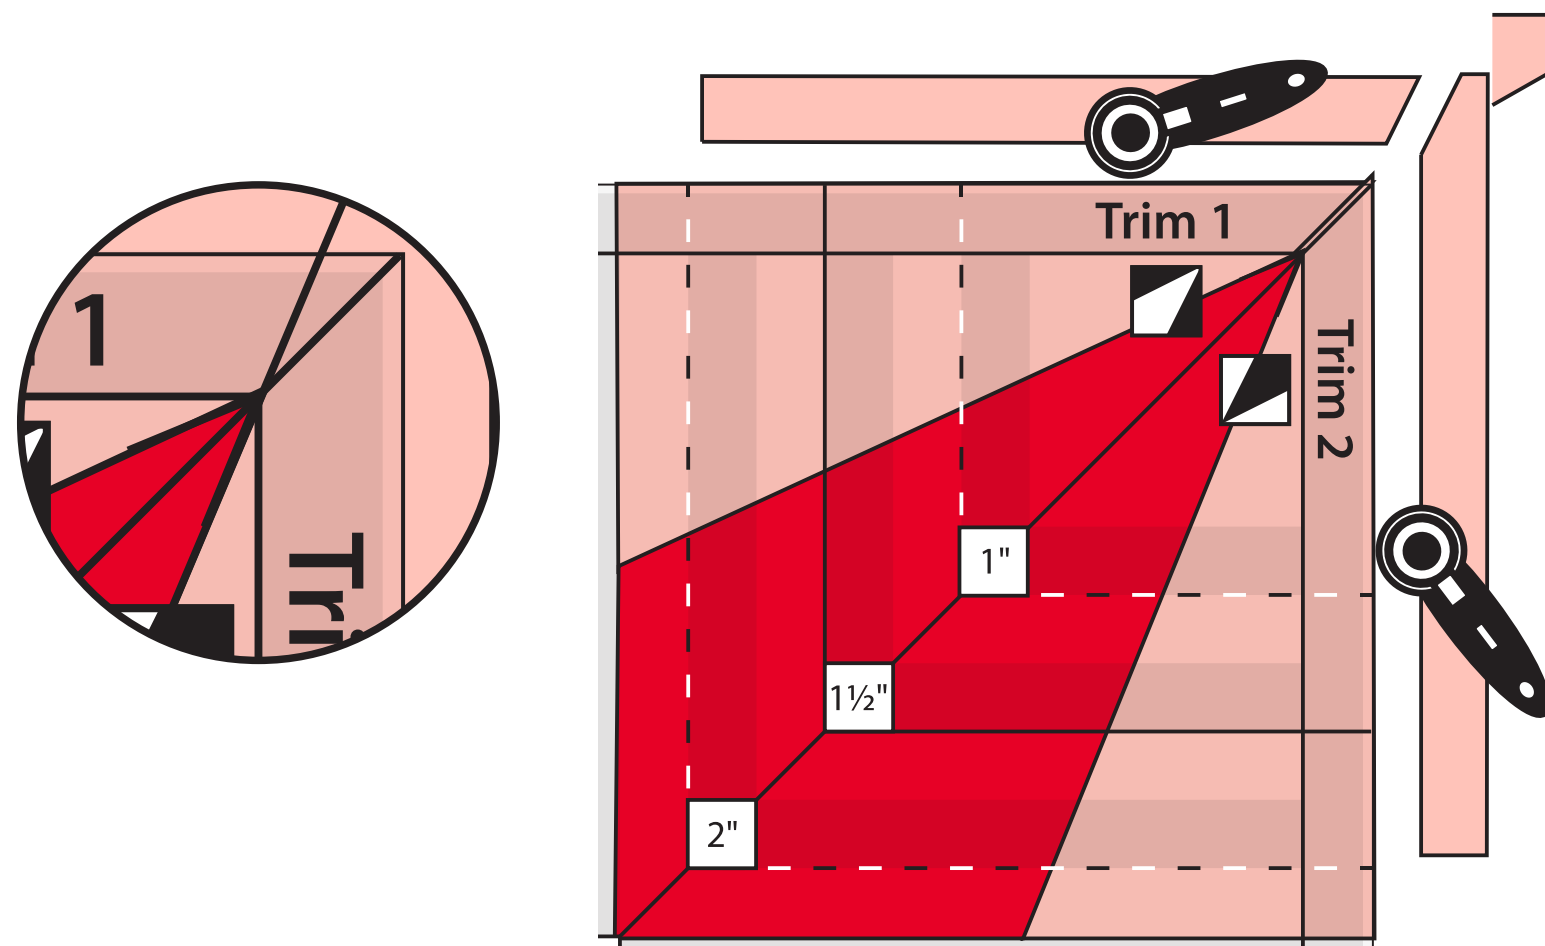

- 3 Press away from the A unit. Repeat with second set of A and B units.

TRIMMING

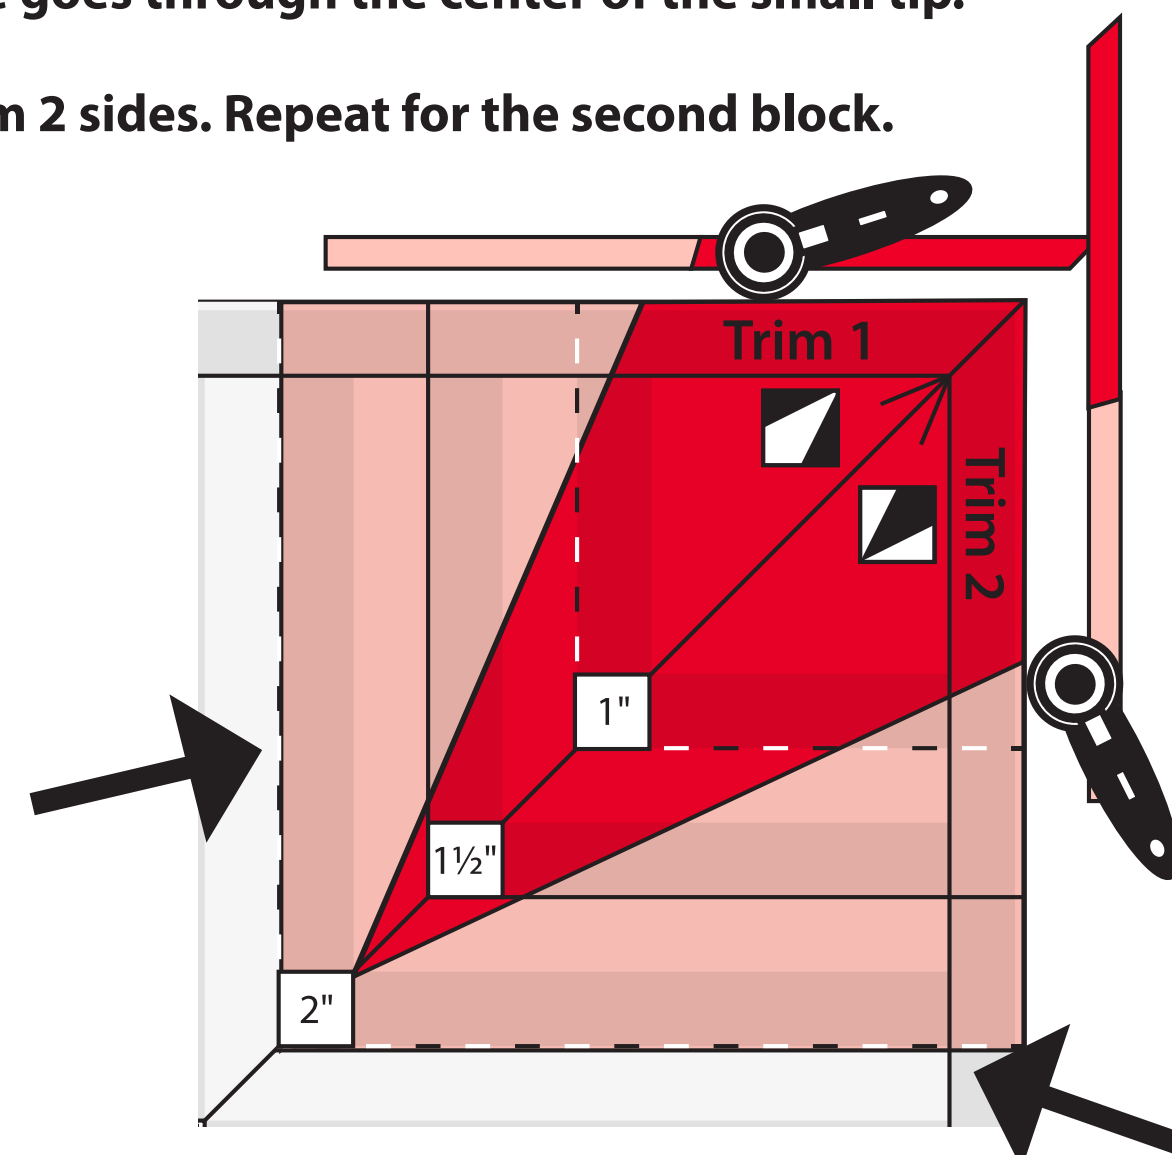

- 1 Trim the corner with the small tip first by placing the "V" on the trim corner on the tip of the block as shown and aligning the diagonal line with the opposite corner of the block.

Trim 2 sides.

- 2 Rotate the block. Align the trimmed edges with the lines for the size you are making. Make sure that the diagonal line goes through the center of the small tip.

Trim 2 sides. Repeat for the second block.

- 3 Yield = 2 perfect units.
