ClearEdge Power management systems attain ISO Certifications for quality and environmental impact

Fuel cell manufacturer achieves international designations for management standards

Hillsboro, Ore. December 3, 2009 - ClearEdge Power, a leading manufacturer of MicroCHP (combined heat and power) fuel cells for homes and businesses, announced today that the company's management systems have been certified to ISO 9001 and 14001 from the International Organization for Standardization, the world's largest standard developing organization. Based on a survey conducted by industry consultant, Quality Systems Enhancement, Inc, less than 2% of companies passed ISO certification audits for both ISO 9001 and ISO 14001 with zero nonconformities first time around.

The ISO 9001 certification of ClearEdge Power's management system validates the company's internal business practices ensuring the company has a core set of procedures that cover all management processes, including monitoring programs to ensure effectiveness, adequate record keeping, and continual improvement programs.

Russell Ford, CEO of ClearEdge Power, in support of his company's designation states, "Obtaining these certifications is a proud achievement for our company and positions us amongst the best managed organizations in the world. Reaching these high measurable standards provides our customers and partners with the assurance that ClearEdge Power performs at an internationally recognized level of management excellence."

ISO 14001 is a standard for measuring excellent environmental practices. The 14001 certification was developed to help businesses reduce their environmental footprints as well as decrease their pollution and waste. As part of the certification process, an independent registrar completed a rigorous audit of ClearEdge Power's environmental practices.

"Earning the 14001 certification formally acknowledged ClearEdge Power's commitment to our environment and our green practices," **said Ford**. "As a clean energy company, we practice what we preach. In addition to our strict recycling rules and our on-site wastewater treatment program, we are able to offset more than half of our facility's heat and electricity needs through the use of our ClearEdge5 appliance. Our business practices clearly reflect our responsibility to the environment."

About ClearEdge Power

With facilities in California and Oregon, ClearEdge Power is a privately held, technology company leading the way for smarter, cleaner on-site energy systems focused on commercial, institutional and residential buildings. The company designs, manufactures and markets the ClearEdge5 system, a unique, proven fuel cell appliance that cleanly converts natural gas to electricity and heat, offering a significant financial savings as well as a greatly reduced impact on the global environment. The ClearEdge corporate management systems are certified to ISO 9001 and ISO 14001. Please visit <http://www.clearedgepower.com>.
