Glencoe Science—Your Partner in Understanding and Implementing NGSS*

Ease the Transition to Next Generation Science Standards

Meeting NGSS
Glencoe Science helps ease the transition to Next Generation Science Standards (NGSS). Our middle school science programs ensure you are fully aligned to:

- Performance Expectations
- Science and Engineering Practices
- Disciplinary Core Ideas
- Crosscutting Concepts

We are committed to ensuring that you have the tools and resources necessary to meet the expectations for the next generation of science standards.

What is NGSS?
The purpose of the NGSS Framework is to act as the foundation for science education standards while describing a vision of what it means to be proficient in science. It emphasizes the importance of the practices of science where the content becomes a vehicle for teaching the processes of science.

Why NGSS?
The NGSS were developed in an effort to create unified standards in science education that consider content, practices, pedagogy, curriculum, and professional development. The standards provide all students with an internationally benchmarked education in science.

Correlation of NGSS Performance Expectations to Science

The Correlation Table lists a Performance Expectation that integrates a combination of Science and Engineering Practices, Disciplinary Core Ideas, and Crosscutting Concepts.

**Performance Expectations**
are tasks to evaluate student’s knowledge. Each Performance Expectation is correlated to an Applying Practices activity written specifically for the purpose. These activities can be found in the resources for the section listed.

**Science and Engineering Practices**
are skills that scientists and engineers use in their work. Each Practice is correlated to a part of the Science and Engineering Practices Handbook, which can be found in the program resources.

**Disciplinary Core Ideas**
are the content knowledge students will need to learn. These are correlated to the main student text.

**Crosscutting Concepts**
are themes that appear throughout all branches of science and engineering. These are not directly correlated but are found implicitly in the other correlations listed on the page.

</table>

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

**Science and Engineering Practices**

**Planning and Carrying Out Investigations**
Planning and carrying out investigations in 6-8 builds on K-5 experiences and progresses to include investigations that use multiple variables and provide evidence to support explanations or solutions.

- Conduct an investigation to produce data to serve as the basis for evidence that meet the goals of an investigation.

**Disciplinary Core Ideas**

**LS1.A Structure and Function**
- All living things are made up of cells, which is the smallest unit that can be said to be alive. An organism may consist of one single cell (unicellular) or many different numbers and types of cells (multicellular).

**Crosscutting Concepts**

**Scale, Proportion, and Quantity**
- Phenomena that can be observed at one scale may not be observable at another scale.

**Connections to Engineering, Technology and Applications of Science**

**Interdependence of Science, Engineering, and Technology**
- Engineering advances have led to important discoveries in virtually every field of science, and scientific discoveries have led to the development of entire industries and engineered systems.
## Integrated iScience Course 1 (Frog)

**Code** | **Title/Text** | **Location**
--- | --- | ---
MS-PS1 | Matter and Its Interactions | Refer to the Project-Based Activity titled “Model Molecules”

### MS-PS1-1

**Develop models to describe the atomic composition of simple molecules and extended structures.**

**Clarification Statement:** Emphasis is on developing models of molecules that vary in complexity. Examples of simple molecules could include ammonia and methanol. Examples of extended structures could include sodium chloride or diamonds. Examples of molecular-level models could include drawings, 3D ball and stick structures, or computer representations showing different molecules with different types of atoms.

**Assessment Boundary:** Assessment does not include valence electrons and bonding energy, discussing the ionic nature of subunits of complex structures, or a complete description of all individual atoms in a complex molecule or extended structure is not required.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

**Developing and Using Models**

Modeling in 6-8 builds on K-5 and progresses to developing, using and revising models to describe, test, and predict more abstract phenomena and design systems.

- Develop and use a model to predict and/or describe phenomena.

### Disciplinary Core Ideas

#### PS1.A Structure and Properties of Matter

- Substances are made from different types of atoms, which combine with one another in various ways. Atoms form molecules that range in size from two to thousands of atoms.

- Solids may be formed from molecules, or they may be extended structures with repeating subunits (e.g., crystals).

**Student Edition:**

- 353-363, 367-372
- 354, 356, 357, 358, 360, 361, 363; SCB 350E; VL 356, 357, 363

**Addressed in Integrated iScience Course 3 (Owl)**

### Crosscutting Concepts

#### Scale, Proportion, and Quantity

- Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small.

**Student Edition:**

- MiniLab 370
- Lab 374-375

---

*NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.*
MS-PS1-2: Analyze and interpret data on the properties of substances before and after the substances interact to determine if a chemical reaction has occurred. Clarification Statement: Examples of reactions could include burning sugar or steel wool, fat reacting with sodium hydroxide, and mixing zinc with hydrogen chloride. Assessment Boundary: Assessment is limited to analysis of the following properties: density, melting point, boiling point, solubility, flammability, and odor.

The performance expectation above was developed using the following elements from the NRC document A Framework for K-12 Science Education:

Analyzing and Interpreting Data
Analyzing data in 6-8 builds on K-5 and progresses to extending quantitative analysis to investigations, distinguishing between correlation and causation, and basic statistical techniques of data and error analysis.

Scientific Knowledge is Based on Empirical Evidence
Science knowledge is based upon logical and conceptual connections between evidence and explanations.

Disciplinary Core Ideas
PS1.A Structure and Properties of Matter
- Each pure substance has characteristic physical and chemical properties (for any bulk quantity under given conditions) that can be used to identify it.

PS1.B Chemical Reactions
- Substances react chemically in characteristic ways. In a chemical process, the atoms that make up the original substances are regrouped into different molecules, and these new substances have different properties from those of the reactants.

Crosscutting Concepts
Patterns
- Macroscopic patterns are related to the nature of microscopic and atomic-level structure.

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.
### Science and Engineering Practices

**Obtaining, Evaluating, and Communicating Information**

- Obtaining, evaluating, and communicating information in 6-8 builds on K-5 and progresses to evaluating the merit and validity of ideas and methods.
- Gather, read, and synthesize information from multiple appropriate sources and assess the credibility, accuracy, and possible bias of each publication and methods used, and describe how they are supported or not supported by evidence.

Refer to the Project-Based Activity titled “Protect Your Noggin”

### Disciplinary Core Ideas

**PS1.A  Structure and Properties of Matter**

- Each pure substance has characteristic physical and chemical properties (for any bulk quantity under given conditions) that can be used to identify it.

Student Edition: 388-393
Teacher Edition: GQ 388, 389, 390, 391, 392, 393; SCB 382E; VL 392, 393

**PS1.B  Chemical Reactions**

- Substances react chemically in characteristic ways. In a chemical process, the atoms that make up the original substances are regrouped into different molecules, and these new substances have different properties from those of the reactants.

Student Edition: 400-404
Teacher Edition: GQ 400, 401; IM 382H; SCB 382F; VL 401

Note: Correlation continues on the next page
Crosscutting Concepts

Structure and Function

- Structures can be designed to serve particular functions by taking into account properties of different materials, and how materials can be shaped and used.

Connections to Engineering, Technology, and Applications of Science

Interdependence of Science, Engineering, and Technology

- Engineering advances have led to important discoveries in virtually every field of science, and scientific discoveries have led to the development of entire industries and engineered systems.

Connections to Engineering, Technology, and Applications of Science

Influence of Science, Engineering and Technology on Society and the Natural World

- The uses of technologies and any limitation on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions. Thus technology use varies from region to region and over time.

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.

<tr>
<td></td>
<td><strong>Clarification Statement:</strong> Emphasis is on qualitative molecular-level models of solids, liquids, and gases to show that adding or removing thermal energy increases or decreases kinetic energy of the particles until a change of state occurs. Examples of models could include drawing and diagrams. Examples of particles could include molecules or inert atoms. Examples of pure substances could include water, carbon dioxide, and helium.</td>
<td></td>
</tr>
</tbody>
</table>

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

**Developing and Using Models**

Modeling in 6-8 builds on K-5 and progresses to developing, using and revising models to describe, test, and predict more abstract phenomena and design systems.

- Develop a model to predict and/or describe phenomena.

### Disciplinary Core Ideas

#### PS1.A **Structure and Properties of Matter**

- Gases and liquids are made of molecules or inert atoms that are moving about relative to each other.

- In a liquid, the molecules are constantly in contact with others; in a gas, they are widely spaced except when they happen to collide. In a solid, atoms are closely spaced and may vibrate in position but do not change relative locations.

- The changes of state that occur with variations in temperature or pressure can be described and predicted using these models of matter.

#### PS3.A **Definitions of Energy**

- The term “heat” as used in everyday language refers both to thermal energy (the motion of atoms or molecules within a substance) and the transfer of that thermal energy from one object to another. In science, heat is used only for this second meaning; it refers to the energy transferred due to the temperature difference between two objects. (secondary to MS-PS1-4)

- The temperature of a system is proportional to the average internal kinetic energy and potential energy per atom or molecule (whichever is the appropriate building block for the system’s material). The details of that relationship depend on the type of atom or molecule and the interactions among the atoms in the material. Temperature is not a direct measure of a system’s total thermal energy. The total thermal energy (sometimes called the total internal energy) of a system depends jointly on the temperature, the total number of atoms in the system, and the state of the material. (secondary to MS-PS1-4)

*Addressed in Integrated iScience Course 2 (Leopard)*

*Addressed in Integrated iScience Course 3 (Owl)*

**Note:** Correlation continues on the next page
Integrated iScience Course 1 (Frog) continued

**Crosscutting Concepts**

**Cause and Effect**

- Cause and effect relationships may be used to predict phenomena in natural or designed systems.

**Student Edition:**
Launch Lab 421

### MS-PS1-5

**Develop and use a model to describe how the total number of atoms does not change in a chemical reaction and thus mass is conserved.**

**Clarification Statement:** Emphasis is on law of conservation of matter and on physical models or drawings, including digital forms, that represent atoms.

**Assessment Boundary:** Assessment does not include the use of atomic masses, balancing symbolic equations, or intermolecular forces.

Refer to the Project-Based Activity titled “All Things Being Equal”

### Science and Engineering Practices

#### Developing and Using Models

Modeling in 6-8 builds on K-5 and progresses to developing, using and revising models to describe, test, and predict more abstract phenomena and design systems.

- Develop a model to describe unobservable mechanisms.

  - **Teacher Edition:** TD 403

#### Connections to Nature of Science

**Science Models, Laws, Mechanisms, and Theories Explain Natural Phenomena**

- Laws are regularities or mathematical descriptions of natural phenomena.

  - **Student Edition:** MiniLab 403
  - **Teacher Edition:** TD 403

### Disciplinary Core Ideas

#### PS1.B

**Chemical Reactions**

- Substances react chemically in characteristic ways. In a chemical process, the atoms that make up the original substances are regrouped into different molecules, and these new substances have different properties from those of the reactants.

  - **Student Edition:** 400-404
  - **Teacher Edition:** GQ 400, 401; IM 382H; SCB 382F; VL 401

- The total number of each type of atom is conserved, and thus the mass does not change.

  - **Student Edition:** 403
  - **Teacher Edition:** GQ 403; SCB 382F

### Crosscutting Concepts

#### Energy and Matter

- Matter is conserved because atoms are conserved in physical and chemical processes.

  - **Student Edition:** MiniLab 403
  - **Teacher Edition:** TD 403

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.

</table>

*Clarification Statement: Emphasis is on the design, controlling the transfer of energy to the environment, and modification of a device using factors such as type and concentration of a substance. Examples of designs could involve chemical reactions such as dissolving ammonium chloride or calcium chloride.

*Assessment Boundary: Assessment is limited to the criteria of amount, time, and temperature of substance in testing the device.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

#### Constructing Explanations and Designing Solutions

Constructing explanations and designing solutions in 6-8 builds on K-5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific knowledge, principles, and theories.

- Undertake a design project, engaging in the design cycle, to construct and/or implement a solution that meets specific design criteria and constraints. Addressed in Integrated iScience Course 3 (Owl)

### Disciplinary Core Ideas

#### PS1.B Chemical Reactions

- Some chemical reactions release energy, others store energy. **Student Edition:** 402

- **Teacher Edition:** GQ 402; SCB 382F; VL 402

#### ETS1.B Developing Possible Solutions

- A solution needs to be tested, and then modified on the basis of the test results, in order to improve it. (secondary to MS-PS1-6) Addressed in Integrated iScience Course 3 (Owl)

#### ETS1.C Optimizing the Design Solution

- Although one design may not perform the best across all tests, identifying the characteristics of the design that performed the best in each test can provide useful information for the redesign process - that is, some of the characteristics may be incorporated into the new design. (secondary to MS-PS1-6)

- The iterative process of testing the most promising solutions and modifying what is proposed on the basis of the test results leads to greater refinement and ultimately to an optimal solution. (secondary to MS-PS1-6) Addressed in Integrated iScience Course 3 (Owl)

### Crosscutting Concepts

#### Energy and Matter

- The transfer of energy can be tracked as energy flows through a designed or natural system. Addressed in Integrated iScience Course 3 (Owl)

### MS-PS2 - Motion and Stability: Forces and Interactions continued

**MS-PS2-2**

Plan an investigation to provide evidence that the change in an object's motion depends on the sum of the forces on the object and the mass of the object.

**Clarification Statement:** Emphasis is on balanced (Newton's First Law) and unbalanced forces in a system, qualitative comparisons of forces, mass and changes in motion (Newton’s Second Law), frame of reference, and specification of units.

**Assessment Boundary:** Assessment is limited to forces and changes in motion in one-dimension in an inertial reference frame and to change in one variable at a time. Assessment does not include the use of trigonometry.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

**Science and Engineering Practices**

**Planning and Carrying Out Investigations**

Planning and carrying out investigations to answer questions or test solutions to problems in 6-8 builds on K-5 experiences and progresses to include investigations that use multiple variables and provide evidence to support explanations or design solutions.

- Plan an investigation individually and collaboratively, and in the design: identify independent and dependent variables and controls, what tools are needed to do the gathering, how measurements will be recorded, and how many data are needed to support a claim.

**Connections to Nature of Science**

**Scientific Knowledge is Based on Empirical Evidence**

- Science knowledge is based upon logical and conceptual connections between evidence and explanations.

**Disciplinary Core Ideas**

**PS2.A - Forces and Motion**

- The motion of an object is determined by the sum of the forces acting on it; if the total force on the object is not zero, its motion will change. The greater the mass of the object, the greater the force needed to achieve the same change in motion. For any given object, a larger force causes a larger change in motion.

- All positions of objects and the directions of forces and motions must be described in an arbitrarily chosen reference frame and arbitrarily chosen units of size. In order to share information with other people, these choices must also be shared.

**Crosscutting Concepts**

**Stability and Change**

- Explanations of stability and change in natural or designed systems can be constructed by examining the changes over time and forces at different scales.

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.
MS-PS2 Motion and Stability: Forces and Interactions continued

MS-PS2-3: Ask questions about data to determine the factors that affect the strength of electric and magnetic forces.

Clarification Statement: Examples of devices that use electric and magnetic forces could include electromagnets, electric motors, or generators. Examples of data could include the effect of the number of turns of wire on the strength of an electromagnet, or the effect of increasing the number or strength of magnets on the speed of an electric motor.

Assessment Boundary: Assessment about questions that require quantitative answers is limited to proportional reasoning and algebraic thinking.

Refer to the Project-Based Activity titled “The Great Metal Pick-Up Machine”

The performance expectation above was developed using the following elements from the NRC document A Framework for K-12 Science Education:

Science and Engineering Practices

Asking Questions and Defining Problems

Asking questions and defining problems in grades 6-8 builds from grades K-5 experiences and progresses to specifying relationships between variables, and clarifying arguments and models.

• Ask questions that can be investigated within the scope of the classroom, outdoor environment, and museums and other public facilities with available resources and, when appropriate, frame a hypothesis based on observations and scientific principles.

Student Edition:
MiniLab 512
Lab 514-515

Disciplinary Core Ideas

PS2.B Types of Interactions

• Electric and magnetic (electromagnetic) forces can be attractive or repulsive, and their sizes depend on the magnitudes of the charges, currents, or magnetic strengths involved and on the distances between the interacting objects.

Student Edition:
491, 495-502, 508, 511-512

Teacher Edition:
GO 491, 496, 498, 499, 501, 508, 511, 512; RWS 499; SCB 484E-F; VL 488, 491, 501, 502, 511

Crosscutting Concepts

Cause and Effect

• Cause and effect relationships may be used to predict phenomena in natural or designed systems.

Student Edition:
MiniLab 512
Lab 514-515

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.

Construct and present arguments using evidence to support the claim that gravitational interactions are attractive and depend on the masses of interacting objects.

**Clarification Statement:** Examples of evidence for arguments could include data generated from simulations or digital tools; and charts displaying mass, strength of interaction, distance from the Sun, and orbital periods of objects within the solar system.

**Assessment Boundary:** Assessment does not include Newton’s Law of Gravitation or Kepler’s Laws.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Engaging in Argument from Evidence

Engaging in argument from evidence in 6-8 builds from K-5 experiences and progresses to constructing a convincing argument that supports or refutes claims for either explanations or solutions about the natural and designed world.

- Construct and present oral and written arguments supported by empirical evidence and scientific reasoning to support or refute an explanation or a model for a phenomenon or a solution to a problem.

### Connections to Nature of Science

**Scientific Knowledge is Based on Empirical Evidence**

- Science knowledge is based upon logical and conceptual connections between evidence and explanations.

### Disciplinary Core Ideas

**PS2.B Types of Interactions**

- Gravitational forces are always attractive. There is a gravitational force between any two masses, but it is very small except when one or both of the objects have large mass—e.g., Earth and the sun.

### Crosscutting Concepts

**Systems and System Models**

- Models can be used to represent systems and their interactions—such as inputs, processes and outputs—and energy and matter flows within systems.

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.

### Science and Engineering Practices

**Planning and Carrying Out Investigations**

Planning and carrying out investigations to answer questions or test solutions to problems in 6-8 builds on K-5 experiences and progresses to include investigations that use multiple variables and provide evidence to support explanations or design solutions.

- Conduct an investigation and evaluate the experimental design to produce data to serve as the basis for evidence that can meet the goals of the investigation.

### Disciplinary Core Ideas

**PS2.B**

**Types of Interactions**

- Forces that act at a distance (electric, magnetic, and gravitational) can be explained by fields that extend through space and can be mapped by their effect on a test object (a charged object, or a ball, respectively).

**Student Edition:**

- Launch Lab 506
- Skill Practice 493

**Teacher Edition:**

- DI 491, TD 491, 507

### Crosscutting Concepts

**Cause and Effect**

- Cause and effect relationships may be used to predict phenomena in natural or designed systems.

**Student Edition:**

- Launch Lab 506
- Skill Practice 493

**Teacher Edition:**

- DI 491, TD 491, 507

<td>MS-PS3-1</td>
<td>Construct and interpret graphical displays of data to describe the relationships of kinetic energy to the mass of an object and to the speed of an object. <strong>Clarification Statement:</strong> Emphasis is on descriptive relationships between kinetic energy and mass separately from kinetic energy and speed. Examples could include riding a bicycle at different speeds, rolling different sizes of rocks downhill, and getting hit by a wiffle ball versus a tennis ball. Refer to the Project-Based Activity titled “Energy in Motion”</td>
<td></td>
</tr>
</tbody>
</table>

### Science and Engineering Practices

**Analyzing and Interpreting Data**

Analyzing data in 6-8 builds on K-5 and progresses to extending quantitative analysis to investigations, distinguishing between correlation and causation, and basic statistical techniques of data and error analysis.

- Construct and interpret graphical displays of data to identify linear and nonlinear relationships.

### Disciplinary Core Ideas

**PS3.A Definitions of Energy**

- Motion energy is properly called kinetic energy; it is proportional to the mass of the moving object and grows with the square of its speed.

### Crosscutting Concepts

**Scale, Proportion, and Quantity**

- Proportional relationships (e.g. speed as the ratio of distance traveled to time taken) among different types of quantities provide information about the magnitude of properties and processes.

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.

<td>Develop a model to describe that when the arrangement of objects interacting at a distance changes, different amounts of potential energy are stored in the system.</td>
<td>Refer to the Project-Based Activity titled “Physics Day at the Amusement Park”</td>
</tr>
</tbody>
</table>

**Clarification Statement:** Emphasis is on relative amounts of potential energy, not on calculations of potential energy. Examples of objects within systems interacting at varying distances could include: the Earth and either a roller coaster cart at varying positions on a hill or objects at varying heights on shelves, changing the direction/orientation of a magnet, and a balloon with static electrical charge being brought closer to a classmate’s hair. Examples of models could include representations, diagrams, pictures, and written descriptions of systems.

**Assessment Boundary:** Assessment is limited to two objects and electric, magnetic, and gravitational interactions.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

**Developing and Using Models**

Modeling in 6-8 builds on K-5 and progresses to developing, using and revising models to describe, test, and predict more abstract phenomena and design systems.

- Develop a model to describe unobservable mechanisms.

### Disciplinary Core Ideas

**PS3.A Definitions of Energy**

- A system of objects may also contain stored (potential) energy, depending on their relative positions.

### PS3.C Relationship Between Energy and Forces

- When two objects interact, each one exerts a force on the other that can cause energy to be transferred to or from the object.

### Crosscutting Concepts

**System and System Models**

- Models can be used to represent systems and their interactions - such as inputs, processes, and outputs - and energy and matter flows within systems.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

**Science and Engineering Practices**

**Constructing Explanations and Designing Solutions**

Constructing explanations and designing solutions in 6-8 builds on K-5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific ideas, principles, and theories.

- Apply scientific ideas or principles to design, construct, and test a design of an object, tool, process or system.

**Disciplinary Core Ideas**

**PS3.A Definitions of Energy**

- Temperature is a measure of the average kinetic energy of particles of matter. The relationship between the temperature and the total energy of a system depends on the types, states, and amounts of matter present.

**PS3.B Conservation of Energy and Energy Transfer**

- Energy is spontaneously transferred out of hotter regions or objects and into colder ones.

**ETS1.A Defining and Delimiting an Engineering Problem**

- The more precisely a design task’s criteria and constraints can be defined, the more likely it is that the designed solution will be successful. Specification of constraints includes consideration of scientific principles and other relevant knowledge that is likely to limit possible solutions. (secondary to MS-PS3-3)

**ETS1.B Developing Possible Solutions**

- A solution needs to be tested, and then modified on the basis of the test results in order to improve it. There are systematic processes for evaluating solutions with respect to how well they meet criteria and constraints of a problem. (secondary to MS-PS3-3)

*Note: Correlation continues on the next page*
Crosscutting Concepts

**Energy and Matter**

- The transfer of energy can be tracked as energy flows through a designed or natural system.

Plan an investigation to determine the relationships among the energy transferred, the type of matter, the mass, and the change in the average kinetic energy of the particles as measured by the temperature of the sample.

Clarification Statement: Examples of experiments could include comparing final water temperatures after different masses of ice melted in the same volume of water with the same initial temperature, the temperature change of samples of different materials with the same mass as they cool or heat in the environment, or the same material with different masses when a specific amount of energy is added.

Assessment Boundary: Assessment does not include calculating the total amount of thermal energy transferred.

The performance expectation above was developed using the following elements from the NRC document A Framework for K-12 Science Education:

Science and Engineering Practices
Planning and Carrying Out Investigations
Planning and carrying out investigations to answer questions or test solutions to problems in 6-8 builds on K-5 experiences and progresses to include investigations that use multiple variables and provide evidence to support explanations or design solutions.

Disciplinary Core Ideas
PS3.A Definitions of Energy
- Temperature is a measure of the average kinetic energy of particles of matter. The relationship between the temperature and the total energy of a system depends on the types, states, and amounts of matter present.

PS3.B Conservation of Energy and Energy Transfer
- The amount of energy transfer needed to change the temperature of a matter sample by a given amount depends on the nature of the matter, the size of the sample, and the environment.

Crosscutting Concepts
Scale, Proportion, and Quantity
- Proportional relationships (e.g. speed as the ratio of distance traveled to time taken) among different types of quantities provide information about the magnitude of properties and processes.

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.
Construct, use, and present arguments to support the claim that when the kinetic energy of an object changes, energy is transferred to or from the object.

**Clarification Statement:** Examples of empirical evidence used in arguments could include an inventory or other representation of the energy before and after the transfer in the form of temperature changes or motion of object.

**Assessment Boundary:** Assessment does not include calculations of energy.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

**Engaging in Argument from Evidence**

Engaging in argument from evidence in 6-8 builds on K-5 experiences and progresses to constructing a convincing argument that supports or refutes claims for either explanations or solutions about the natural and designed worlds.

- Construct, use, and present oral and written arguments supported by empirical evidence and scientific reasoning to support or refute an explanation or a model for a phenomenon.

**Connections to Nature of Science**

**Scientific Knowledge is Based on Empirical Evidence**

- Science knowledge is based upon logical and conceptual connections between evidence and explanations.

**Disciplinary Core Ideas**

**PS3.B**

**Conservation of Energy and Energy Transfer**

- When the motion energy of an object changes, there is inevitably some other change in energy at the same time.

**Crosscutting Concepts**

**Energy and Matter**

- Energy may take different forms (e.g., energy in fields, thermal energy, energy of motion).

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.

### Science and Engineering Practices

**Using Mathematics and Computational Thinking**
Mathematical and computational thinking at the 6-8 level builds on K-5 and progresses to identifying patterns in large data sets and using mathematical concepts to support explanations and arguments.

- Use mathematical representations to describe and/or support scientific conclusions and design solutions.

### Integrated iScience Course 1 (Frog) continued

#### Science and Engineering Practices

**Developing and Using Models**
- Modeling in 6-8 builds on K-5 and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.
- Develop and use a model to describe phenomena.

#### Disciplinary Core Ideas

**PS4.A Wave Properties**
- A sound wave needs a medium through which it is transmitted.

**PS4.B Electromagnetic Radiation**
- When light shines on an object, it is reflected, absorbed, or transmitted through the object, depending on the object’s material and the frequency (color) of the light.
- The path that light travels can be traced as straight lines, except at surfaces between different transparent materials (e.g., air and water, air and glass) where the light path bends.
- A wave model of light is useful for explaining brightness, color, and the frequency-dependent bending of light at a surface between media.
- However, because light can travel through space, it cannot be a matter wave, like sound or water waves.

---

**Note:** Correlation continues on the next page
## Crosscutting Concepts

### Structure and Function

- Structures can be designed to serve particular functions by taking into account properties of different materials, and how materials can be shaped and used.

</tr>
</tbody>
</table>

**Clarification Statement:** Emphasis is on a basic understanding that waves can be used for communication purposes. Examples could include using fiber optic cable to transmit light pulses, radio wave pulses in wifi devices, and conversion of stored binary patterns to make sound or text on a computer screen.

**Assessment Boundary:** Assessment does not include binary counting. Assessment does not include the specific mechanism of any given device.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

**Obtaining, Evaluating, and Communicating Information**

- Obtaining, evaluating, and communicating information in 6-8 builds on K-5 and progresses to evaluating the merit and validity of ideas and methods.
- Integrate qualitative scientific and technical information in written text with that contained in media and visual displays to clarify claims and findings. Addressed in Integrated iScience Course 3 (Owl)

### Disciplinary Core Ideas

**PS4.C Information Technologies and Instrumentation**

- Digitized signals (sent as wave pulses) are a more reliable way to encode and transmit information. Addressed in Integrated iScience Course 3 (Owl)

### Crosscutting Concepts

**Structure and Function**

- Structures can be designed to serve particular functions. Addressed in Integrated iScience Course 3 (Owl)

**Connections to Engineering, Technology, and Applications of Science**

- Technologies extend the measurement, exploration, modeling, and computational capacity of scientific investigations. Addressed in Integrated iScience Course 3 (Owl)

**Connections to Nature of Science**

- Advances in technology influence the progress of science and science has influenced advances in technology. Addressed in Integrated iScience Course 3 (Owl)

</tbody>
</table>

*Clarification Statement:* Emphasis is on developing evidence that living things are made of cells, distinguishing between living and non-living things, and understanding that living things may be made of one cell or many and varied cells.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

**Science and Engineering Practices**

- **Planning and Carrying Out Investigations**
  - Planning and carrying out investigations in 6-8 builds on K-5 experiences and progresses to include investigations that use multiple variables and provide evidence to support explanations or solutions.
  - Conduct an investigation to produce data to serve as the basis for evidence that meet the goals of an investigation.

**Disciplinary Core Ideas**

- **LS1.A Structure and Function**
  - All living things are made up of cells, which is the smallest unit that can be said to be alive. An organism may consist of one single cell (unicellular) or many different numbers and types of cells (multicellular).

**Crosscutting Concepts**

- **Scale, Proportion, and Quantity**
  - Phenomena that can be observed at one scale may not be observable at another scale.

**Connections to Engineering, Technology and Applications of Science**

- **Interdependence of Science, Engineering, and Technology**
  - Engineering advances have led to important discoveries in virtually every field of science, and scientific discoveries have led to the development of entire industries and engineered systems.

Code | Title/Text | Location
--- | --- | ---
MS-LS1-2 | Develop and use a model to describe the function of a cell as a whole and ways parts of cells contribute to the function. | Refer to the Project-Based Activity titled “Engineering a Cell”

**Clarification Statement:** Emphasis is on the cell functioning as a whole system and the primary role of identified parts of the cell, specifically the nucleus, chloroplasts, mitochondria, cell membrane, and cell wall.

**Assessment Boundary:** Assessment of organelle structure/function relationships is limited to the cell wall and cell membrane. Assessment of the function of the other organelles is limited to their relationship to the whole cell. Assessment does not include the biochemical function of cells or cell parts.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

**Science and Engineering Practices**

**Developing and Using Models**

Modeling in 6-8 builds on K-5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.

- Develop and use a model to describe phenomena.

**Disciplinary Core Ideas**

**LS1.A Structure and Function**

- Within cells, special structures are responsible for particular functions, and the cell membrane forms the boundary that controls what enters and leaves the cell.

**Crosscutting Concepts**

**Structure and Function**

- Complex and microscopic structures and systems can be visualized, modeled, and used to describe how their function depends on the relationships among its parts, therefore complex natural structures/systems can be analyzed to determine how they function.

</table>

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

**Engaging in Argument from Evidence**

Engaging in argument from evidence in 6-8 builds on K-5 experiences and progresses to constructing a convincing argument that supports or refutes claims for either explanations or solutions about the natural and designed world(s).

- Use an oral and written argument supported by evidence to support or refute an explanation or a model for a phenomenon.

### Disciplinary Core Ideas

**LS1.A Structure and Function**

- In multicellular organisms, the body is a system of multiple interacting subsystems. These subsystems are groups of cells that work together to form tissues and organs that are specialized for particular body functions.

### Crosscutting Concepts

**Systems and System Models**

- Systems may interact with other systems; they may have sub-systems and be a part of larger complex systems.

**Connections to Nature of Science**

**Science is a Human Endeavor**

- Scientists and engineers are guided by habits of mind such as intellectual honesty, tolerance of ambiguity, skepticism, and openness to new ideas.

Alignment Guide • Correlations

Copyright © McGraw-Hill Education. Permission is granted to reproduce for classroom use.
Use argument based on empirical evidence and scientific reasoning to support an explanation for how characteristic animal behaviors and specialized plant structures affect the probability of successful reproduction of animals and plants respectively.

**Clarification Statement:** Examples of behaviors that affect the probability of animal reproduction could include nest building to protect young from cold, herding of animals to protect young from predators, and vocalization of animals and colorful plumage to attract mates for breeding. Examples of animal behaviors that affect the probability of plant reproduction could include transferring pollen or seeds, and creating conditions for seed germination and growth. Examples of plant structures could include bright flowers attracting butterflies that transfer pollen, flower nectar and odors that attract insects that transfer pollen, and hard shells on nuts that squirrels bury.

Refer to the Project-Based Activity titled “The Burrs and the Bees” for more information.
MS-LS1-5

Construct a scientific explanation based on evidence for how environmental and genetic factors influence the growth of organisms.

**Clarification Statement:** Examples of local environmental conditions could include availability of food, light, space, and water. Examples of genetic factors could include large breed cattle and species of grass affecting growth of organisms. Examples of evidence could include drought decreasing plant growth, fertilizer increasing plant growth, different varieties of plant seeds growing at different rates in different conditions, and fish growing larger in large ponds than they do in small ponds.

**Assessment Boundary:** Assessment does not include genetic mechanisms, gene regulation, or biochemical processes.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

**Science and Engineering Practices**

**Constructing Explanations and Designing Solutions**

Constructing explanations and designing solutions in 6-8 builds on K-5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific knowledge, principles, and theories.

- Construct a scientific explanation based on valid and reliable evidence obtained from sources (including the students’ own experiments) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.

**Disciplinary Core Ideas**

**LS1.B**

**Growth and Development of Organisms**

- Genetic factors as well as local conditions affect the growth of the adult plant.

**Crosscutting Concepts**

**Cause and Effect**

- Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability.

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.

<td>Construct a scientific explanation based on evidence for the role of photosynthesis in the cycling of matter and flow of energy into and out of organisms.</td>
<td>Refer to the Project-Based Activity titled “Sun Block”</td>
</tr>
</tbody>
</table>

**Clarification Statement:** Emphasis is on tracing movement of matter and flow of energy.

**Assessment Boundary:** Assessment does not include the biochemical mechanisms of photosynthesis.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

#### Science and Engineering Practices

**Constructing Explanations and Designing Solutions**

Constructing explanations and designing solutions in 6-8 builds on K-5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific knowledge, principles, and theories.

- Construct a scientific explanation based on valid and reliable evidence obtained from sources (including the students’ own experiments) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.

**Connections to Nature of Science**

**Scientific Knowledge is Based on Empirical Evidence**

- Science knowledge is based upon logical connections between evidence and explanations.

**Disciplinary Core Ideas**

**LS1.C** Organization for Matter and Energy Flow in Organisms

- Plants, algae (including phytoplankton), and many microorganisms use the energy from light to make sugars (food) from carbon dioxide from the atmosphere and water through the process of photosynthesis, which also releases oxygen. These sugars can be used immediately or stored for growth or later use.

**PS3.D** Energy in Chemical Processes and Everyday Life

- The chemical reaction by which plants produce complex food molecules (sugars) requires an energy input (i.e., from sunlight) to occur. In this reaction, carbon dioxide and water combine to form carbon-based organic molecules and release oxygen. (secondary to MS-LS1-6)

**Crosscutting Concepts**

**Energy and Matter**

- Within a natural system, the transfer of energy drives the motion and/or cycling of matter.

### MS-LS1-7

**Develop a model to describe how food is rearranged through chemical reactions forming new molecules that support growth and/or release energy as this matter moves through an organism.**

**Clarification Statement:** Emphasis is on describing that molecules are broken apart and put back together and that in this process, energy is released.

**Assessment Boundary:** Assessment does not include details of the chemical reactions for photosynthesis or respiration.

Refer to the Project-Based Activity titled “You Are What You Eat”

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education:*

**Science and Engineering Practices**

- **Developing and Using Models**
  - Modeling in 6-8 builds on K-5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.
  - Develop a model to describe unobservable mechanisms.

**Disciplinary Core Ideas**

- **LS1.C** Organization for Matter and Energy Flow in Organisms
  - Within individual organisms, food moves through a series of chemical reactions in which it is broken down and rearranged to form new molecules, to support growth, or to release energy.

- **PS3.D** Energy in Chemical Processes and Everyday Life
  - Cellular respiration in plants and animals involve chemical reactions with oxygen that release stored energy. In these processes, complex molecules containing carbon react with oxygen to produce carbon dioxide and other materials. (secondary to MS-LS1-7)

**Crosscutting Concepts**

- **Energy and Matter**
  - Matter is conserved because atoms are conserved in physical and chemical processes.

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.

</tr>
</tbody>
</table>

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

#### Science and Engineering Practices

**Obtaining, Evaluating, and Communicating Information**

- Gathering, evaluating, and communicating information in 6-8 builds on K-5 experiences and progresses to evaluating the merit and validity of ideas and methods.
- Gather, read, and synthesize information from multiple appropriate sources and assess the credibility, accuracy, and possible bias of each publication and methods used, and describe how they are supported or not supported by evidence.

**Disciplinary Core Ideas**

**LS1.D Information Processing**

- Each sense receptor responds to different inputs (electromagnetic, mechanical, chemical), transmitting them as signals that travel along nerve cells to the brain. The signals are then processed in the brain, resulting in immediate behaviors or memories.

**Crosscutting Concepts**

**Cause and Effect**

- Cause and effect relationships may be used to predict phenomena in natural systems.

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.

</table>

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

#### Science and Engineering Practices

**Analyzing and Interpreting Data**

Analyzing data in 6-8 builds on K-5 experiences and progresses to extending quantitative analysis to investigations, distinguishing between correlation and causation, and basic statistical techniques of data and error analysis.

- **Analyze and interpret data to provide evidence for phenomena.**

#### Disciplinary Core Ideas

**LS2.A Interdependent Relationships in Ecosystems**

- Organisms, and populations of organisms, are dependent on their environmental interactions both with other living things and with nonliving factors.

- In any ecosystem, organisms and populations with similar requirements for food, water, oxygen, or other resources may compete with each other for limited resources, access to which consequently constrains their growth and reproduction.

- Growth of organisms and population increases are limited by access to resources.

#### Crosscutting Concepts

**Cause and Effect**

- Cause and effect relationships may be used to predict phenomena in natural or designed systems.

**Clarification Statement:** Emphasis is on predicting consistent patterns of interactions in different ecosystems in terms of the relationships among and between organisms and abiotic components of ecosystems. Examples of types of interactions could include competitive, predatory, and mutually beneficial.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

**Constructing Explanations and Designing Solutions**

Constructing explanations and designing solutions in 6-8 builds on K-5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific ideas, principles, and theories.

- Construct an explanation that includes qualitative or quantitative relationships between variables that predict phenomena.

### Disciplinary Core Ideas

**LS2.A Interdependent Relationships in Ecosystems**

- Similarly, predatory interactions may reduce the number of organisms or eliminate whole populations of organisms. Mutually beneficial interactions, in contrast, may become so interdependent that each organism requires the other for survival. Although the species involved in these competitive, predatory, and mutually beneficial interactions vary across ecosystems, the patterns of interactions of organisms with their environments, both living and nonliving, are shared.

### Crosscutting Concepts

**Patterns**

- Patterns can be used to identify cause and effect relationships.

### MS-LS2 Ecosystems: Interactions, Energy, and Dynamics continued

**MS-LS2-3** Develop a model to describe the cycling of matter and flow of energy among living and nonliving parts of an ecosystem.

**Clarification Statement:** Emphasis is on describing the conservation of matter and flow of energy into and out of various ecosystems, and on defining the boundaries of the system.

**Assessment Boundary:** Assessment does not include the use of chemical reactions to describe the processes.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

#### Science and Engineering Practices

**Developing and Using Models**
- Modeling in 6-8 builds on K-5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.
  - Develop a model to describe phenomena.

#### Disciplinary Core Ideas

**LS2.B Cycle of Matter and Energy Transfer in Ecosystems**
- Food webs are models that demonstrate how matter and energy is transferred between producers, consumers, and decomposers as the three groups interact within an ecosystem. Transfers of matter into and out of the physical environment occur at every level. Decomposers recycle nutrients from dead plant or animal matter back to the soil in terrestrial environments or to the water in aquatic environments. The atoms that make up the organisms in an ecosystem are cycled repeatedly between the living and nonliving parts of the ecosystem.

#### Crosscutting Concepts

**Energy and Matter**
- The transfer of energy can be tracked as energy flows through a natural system.

**Connections to Nature of Science**

**Scientific Knowledge Assumes an Order and Consistency in Natural Systems**
- Science assumes that objects and events in natural systems occur in consistent patterns that are understandable through measurement and observation.
## Code/Text Location

**MS-LS2 Ecosystems: Interactions, Energy, and Dynamics continued**

**MS-LS2-4**
Construct an argument supported by empirical evidence that changes to physical or biological components of an ecosystem affect populations.

*Clarification Statement:* Emphasis is on recognizing patterns in data and making warranted inferences about changes in populations, and on evaluating empirical evidence supporting arguments about changes to ecosystems.

Refer to the Project-Based Activity titled “Snake Invaders”

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

**Engaging in Argument from Evidence**

Engaging in argument from evidence in 6-8 builds on K-5 experiences and progresses to constructing a convincing argument that supports or refutes claims for either explanations or solutions about the natural and designed world(s).

- Construct an oral and written argument supported by empirical evidence and scientific reasoning to support or refute an explanation or a model for a phenomenon or a solution to a problem.

**Connections to Nature of Science**

**Scientific Knowledge is Based on Empirical Evidence**

- Science disciplines share common rules of obtaining and evaluating empirical evidence.

### Disciplinary Core Ideas

**LS2.C Ecosystem Dynamics, Functioning, and Resilience**

- Ecosystems are dynamic in nature; their characteristics can vary over time. Disruptions to any physical or biological component of an ecosystem can lead to shifts in all its populations.

**Student Edition:**
320-321

**Teacher Edition:**
FF 321; VL 321

### Crosscutting Concepts

**Stability and Change**

- Small changes in one part of a system might cause large changes in another part.

**Student Edition:**
Skill Practice 323

**Teacher Edition:**
VL 327

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

- **Engaging in Argument from Evidence**
  - Engaging in argument from evidence in 6-8 builds on K-5 experiences and progresses to constructing a convincing argument that supports or refutes claims for either explanations or solutions about the natural and designed world(s).

### Disciplinary Core Ideas

- **LS2.C Ecosystem Dynamics, Functioning, and Resilience**
  - Biodiversity describes the variety of species found in Earth’s terrestrial and oceanic ecosystems. The completeness or integrity of an ecosystem’s biodiversity is often used as a measure of its health.

- **LS4.D Biodiversity and Humans**
  - Changes in biodiversity can influence humans’ resources, such as food, energy, and medicines, as well as ecosystem services that humans rely on—for example, water purification and recycling. (secondary to MS-LS2-5)

- **ETS1.B Developing Possible Solutions**
  - There are systematic processes for evaluating solutions with respect to how well they meet the criteria and constraints of a problem. (secondary to MS-LS2-5)

*Note: Correlation continues on the next page*
### Crosscutting Concepts

#### Stability and Change
- Small changes in one part of a system might cause large changes in another part.

Addressed in Integrated iScience Course 2 (Leopard)
Addressed in Integrated iScience Course 3 (Owl)

#### Connections to Engineering, Technology, and Applications of Science

**Influence of Science, Engineering, and Technology on Society and the Natural World**
- The use of technologies and any limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions. Thus technology use varies from region to region and over time.

Addressed in Integrated iScience Course 2 (Leopard)
Addressed in Integrated iScience Course 3 (Owl)

#### Connections to Nature of Science

**Science Addresses Questions About the Natural and Material World**
- Scientific knowledge can describe the consequences of actions but does not necessarily prescribe the decisions that society takes.

Addressed in Integrated iScience Course 2 (Leopard)
Addressed in Integrated iScience Course 3 (Owl)

<td></td>
</tr>
</tbody>
</table>

The performance expectation above was developed using the following elements from the NRC document A Framework for K-12 Science Education:

### Science and Engineering Practices

**Developing and Using Models**
- Modeling in 6-8 builds on K-5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.

  - Develop and use a model to describe phenomena. | Addressed in Integrated iScience Course 2 (Leopard)

### Disciplinary Core Ideas

**LS3.A Inheritance of Traits**
- Genes are located in the chromosomes of cells, with each chromosome pair containing two variants of each of many distinct genes. Each distinct gene chiefly controls the production of specific proteins, which in turn affects the traits of the individual. Changes (mutations) to genes can result in changes to proteins, which can affect the structures and functions of the organism and thereby change traits.

  | Student Edition: | 218, 222 |
  | Teacher Edition: | GQ 218   |

**LS3.B Variation of Traits**
- In addition to variations that arise from sexual reproduction, genetic information can be altered because of mutations. Though rare, mutations may result in changes to the structure and function of proteins. Some changes are beneficial, others harmful, and some neutral to the organism.

  | Student Edition: | 222       |
  | Teacher Edition: | GQ 216, 222 |

### Crosscutting Concepts

**Structure and Function**
- Complex and microscopic structures and systems can be visualized, modeled, and used to describe how their function depends on the shapes, composition, and relationships among its parts, therefore complex natural structures/systems can be analyzed to determine how they function.

  | Addressed in Integrated iScience Course 2 (Leopard) |

### Science and Engineering Practices

**Developing and Using Models**

Modeling in 6-8 builds on K-5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.

- Develop and use a model to describe phenomena.

### Disciplinary Core Ideas

**LS1.B** Growth and Development of Organisms

- Organisms reproduce, either sexually or asexually, and transfer their genetic information to their offspring. (secondary to MS-LS3-2)

**LS3.A** Inheritance of Traits

- Variations of inherited traits between parent and offspring arise from genetic differences that result from the subset of chromosomes (and therefore genes) inherited.

**LS3.B** Variation of Traits

- In sexually reproducing organisms, each parent contributes half of the genes acquired (at random) by the offspring. Individuals have two of each chromosome and hence two alleles of each gene, one acquired from each parent. These versions may be identical or may differ from each other.

### Crosscutting Concepts

**Cause and Effect**

- Cause and effect relationships may be used to predict phenomena in natural systems.

**MS-LS4-1**

Analyze and interpret data for patterns in the fossil record that document the existence, diversity, extinction, and change of life forms throughout the history of life on Earth under the assumption that natural laws operate today as in the past.

**Clarification Statement:** Emphasis is on finding patterns of changes in the level of complexity of anatomical structures in organisms and the chronological order of fossil appearance in the rock layers.

**Assessment Boundary:** Assessment does not include the names of individual species or geological eras in the fossil record.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

**Analyzing and Interpreting Data**

Analyzing data in 6-8 builds on K-5 experiences and progresses to extending quantitative analysis to investigations, distinguishing between correlation and causation, and basic statistical techniques of data and error analysis.

- Analyze and interpret data to determine similarities and differences in findings. Addressed in Integrated iScience Course 2 (Leopard)

### Connections to Nature of Science

**Scientific Knowledge is Based on Empirical Evidence**

- Science knowledge is based upon logical and conceptual connections between evidence and explanations. Addressed in Integrated iScience Course 2 (Leopard)

### Disciplinary Core Ideas

**LS4.A**

Evidence of Common Ancestry and Diversity

- The collection of fossils and their placement in chronological order (e.g., through the location of the sedimentary layers in which they are found or through radioactive dating) is known as the fossil record. It documents the existence, diversity, extinction, and change of many life forms throughout the history of life on Earth. Addressed in Integrated iScience Course 2 (Leopard)

### Crosscutting Concepts

**Patterns**

- Graphs, charts, and images can be used to identify patterns in data. Addressed in Integrated iScience Course 2 (Leopard)

**Connections to Nature of Science**

**Scientific Knowledge Assumes an Order and Consistency in Natural Systems**

- Science assumes that objects and events in natural systems occur in consistent patterns that are understandable through measurement and observation. Addressed in Integrated iScience Course 2 (Leopard)

### Science and Engineering Practices

Constructing Explanations and Designing Solutions

Constructing explanations and designing solutions in 6-8 builds on K-5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific ideas, principles, and theories.

- Construct an explanation that includes qualitative or quantitative relationships between variables that describe phenomena.

**Clarification Statement:** Emphasis is on using simple probability statements and proportional reasoning to construct explanations.

Refer to the Project-Based Activity titled “Spot On”

### Disciplinary Core Ideas

**LS4.B Natural Selection**

- Natural selection leads to the predominance of certain traits in a population, and the suppression of others.

**Clarification Statement:**

Refer to the Project-Based Activity titled “Spot On”

### Crosscutting Concepts

**Cause and Effect**

- Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability.

**Clarification Statement:**

Refer to the Project-Based Activity titled “Spot On”

Gather and synthesize information about the technologies that have changed the way humans influence the inheritance of desired traits in organisms.

*Clarification Statement:* Emphasis is on synthesizing information from reliable sources about the influence of humans on genetic outcomes in artificial selection (such as genetic modification, animal husbandry, gene therapy); and, on the impacts these technologies have on society as well as the technologies leading to these scientific discoveries.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

**Science and Engineering Practices**

*Obtaining, Evaluating, and Communicating Information*

Obtaining, evaluating, and communicating information in 6-8 builds on K-5 experiences and progresses to evaluating the merit and validity of ideas and methods.

- Gather, read, and synthesize information from multiple appropriate sources and assess the credibility, accuracy, and possible bias of each publication and methods used, and describe how they are supported or not supported by evidence.

**Disciplinary Core Ideas**

**LS4.B Natural Selection**

- In *artificial* selection, humans have the capacity to influence certain characteristics of organisms by selective breeding. One can choose desired parental traits determined by genes, which are then passed on to offspring.

**Cause and Effect**

- Phenomena may have more than one cause, and some cause and effect relationships in systems can only be described using probability.

**Connections to Engineering, Technology, and Applications of Science**

*Interdependence of Science, Engineering, and Technology*

- Engineering advances have led to important discoveries in virtually every field of science, and scientific discoveries have led to the development of entire industries and engineered systems.

**Connections to Nature of Science**

*Science Addresses Questions About the Natural and Material World*

- Scientific knowledge can describe the consequences of actions but does not necessarily prescribe the decisions that society takes.

### Science and Engineering Practices

**Using Mathematics and Computational Thinking**

Mathematical and computational thinking in 6-8 builds on K-5 experiences and progresses to identifying patterns in large data sets and using mathematical concepts to support explanations and arguments.

- Use mathematical representations to support scientific conclusions and design solutions. **Student Edition:**
  - MiniLab 229
  - Lab 232-233

### Disciplinary Core Ideas

**LS4.C Adaptation**

- Adaptation by natural selection acting over generations is one important process by which species change over time in response to changes in environmental conditions. Traits that support successful survival and reproduction in the new environment become more common; those that do not become less common. Thus, the distribution of traits in a population changes. **Student Edition:**
  - 226-230, 282-283
  - **Teacher Edition:**
    - GQ 227, 283; SCB 276E

### MS-ESS1 | Earth’s Place in the Universe continued

**MS-ESS1-2**

Develop and use a model to describe the role of gravity in the motions within galaxies and the solar system.

**Clarification Statement:** Emphasis for the model is on gravity as the force that holds together the solar system and Milky Way galaxy and controls orbital motions within them. Examples of models can be physical (such as the analogy of distance along a football field or computer visualizations of elliptical orbits) or conceptual (such as mathematical proportions relative to the size of familiar objects such as students’ school or state).

**Assessment Boundary:** Assessment does not include Kepler’s Laws of orbital motion or the apparent retrograde motion of the planets as viewed from Earth.

Refer to the Project-Based Activity titled “Gravity Glue”

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

**Developing and Using Models**

Modeling in 6-8 builds on K-5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.

- Develop and use a model to describe phenomena.

### Disciplinary Core Ideas

**ESS1.A**

The Universe and Its Stars

- Earth and its solar system are part of the Milky Way galaxy, which is one of many galaxies in the universe.

**Student Edition:**

- 51
- Launch Lab 51
- Lab 64-65

**Teacher Edition:**

- DI 53; GQ 50, 51, 52, 53; SCB 38F; TD 41; VL 52, 53

**ESS1.B**

Earth and the Solar System

- The solar system consists of the sun and a collection of objects, including planets, their moons, and asteroids that are held in orbit around the sun by its gravitational pull on them.

**Student Edition:**

- 52-55

**Teacher Edition:**

- DI 53; GQ 50, 51, 52, 53; SCB 38F; TD 41; VL 52, 53

- The solar system appears to have formed from a disk of dust and gas, drawn together by gravity.

**Student Edition:**

- 51

**Teacher Edition:**

- GQ 51; SCB 38F; TD 51

<td>Analyze and interpret data to determine scale properties of objects in the solar system.</td>
<td><strong>Clarification Statement:</strong> Emphasis is on the analysis of data from Earth-based instruments, space-based telescopes, and spacecraft to determine similarities and differences among solar system objects. Examples of scale properties include the sizes of an object’s layers (such as crust and atmosphere), surface features (such as volcanoes), and orbital radius. Examples of data include statistical information, drawings and photographs, and models. <strong>Assessment Boundary:</strong> Assessment does not include recalling facts about properties of the planets and other solar system bodies.</td>
</tr>
</tbody>
</table>

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

#### Analyzing and Interpreting Data

Analyzing data in 6-8 builds on K-5 experiences and progresses to extending quantitative analysis to investigations, distinguishing between correlation and causation, and basic statistical techniques of data and error analysis.

- Analyze and interpret data to determine similarities and differences in findings.

### Disciplinary Core Ideas

#### ESS1.B Earth and the Solar System

- The solar system consists of the sun and a collection of objects, including planets, their moons, and asteroids that are held in orbit around the sun by its gravitational pull on them.

### Crosscutting Concepts

#### Scale, Proportion, and Quantity

- Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small.

### Connections to Engineering, Technology, and Applications of Science

#### Interdependence of Science, Engineering, and Technology

- Engineering advances have led to important discoveries in virtually every field of science and scientific discoveries have led to the development of entire industries and engineered systems.

Integrated iScience Course 1 (Frog) continued

MS-ESS1 Earth’s Place in the Universe

MS-ESS1-4

Construct a scientific explanation based on evidence from rock strata for how the geologic time scale is used to organize Earth’s 4.6-billion-year-old history.

**Clarification Statement:** Emphasis is on how analyses of rock formations and the fossils they contain are used to establish relative ages of major events in Earth’s history. Examples of Earth’s major events could range from being very recent (such as the last Ice Age or the earliest fossils of homo sapiens) to very old (such as the formation of Earth or the earliest evidence of life). Examples can include the formation of mountain chains and ocean basins, the evolution or extinction of particular living organisms, or significant volcanic eruptions.

**Assessment Boundary:** Assessment does not include recalling the names of specific periods or epochs and events within them.

Refer to the Project-Based Activity titled “Puzzles Rock!”

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

**Science and Engineering Practices**

- Constructing Explanations and Designing Solutions
  - Constructing explanations and designing solutions in 6-8 builds on K-5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific ideas, principles, and theories.
  - • Construct a scientific explanation based on valid and reliable evidence obtained from sources (including the students’ own experiments) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.

- Addressed in Integrated iScience Course 3 (Owl)

**Disciplinary Core Ideas**

**ESS1.B The History of Planet Earth**

- The geologic time scale interpreted from rock strata provides a way to organize Earth’s history.
  - Analyses of rock strata and the fossil record provide only relative dates, not an absolute scale.

- Addressed in Integrated iScience Course 3 (Owl)

**Crosscutting Concepts**

- Scale, Proportion, and Quantity
  - Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small.

- Addressed in Integrated iScience Course 3 (Owl)

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.

</tbody>
</table>

#### Clarification Statement
Emphasis is on the processes of melting, crystallization, weathering, deformation, and sedimentation, which act together to form minerals and rocks through the cycling of Earth’s materials.

#### Assessment Boundary
Assessment does not include the identification and naming of minerals.

### Science and Engineering Practices

#### Developing and Using Models
- Modeling in 6-8 builds on K-5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.
  - Develop and use a model to describe phenomena.

### Disciplinary Core Ideas

#### ESS2.A 地球的材料和系统
- All Earth processes are the result of energy flowing and matter cycling within and among the planet’s systems. This energy is derived from the sun and Earth’s hot interior. The energy that flows and matter that cycles produce chemical and physical changes in Earth’s materials and living organisms.

### Crosscutting Concepts

#### Stability and Change
- Explanations of stability and change in natural or designed systems can be constructed by examining the changes over time and processes at different scales, including the atomic scale.

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.

### MS-ESS2 Earth’s Systems continued

**MS-ESS2-3**

Analyze and interpret data on the distribution of fossils and rocks, continental shapes, and seafloor structures to provide evidence of the past plate motions.

**Clarification Statement:** Examples of data include similarities of rock and fossil types on different continents, the shapes of the continents (including continental shelves), and the locations of ocean structures (such as ridges, fracture zones, and trenches).

**Assessment Boundary:** Paleomagnetic anomalies in oceanic and continental crust are not assessed.

Refer to the Project-Based Activity titled “Movin’ Mountains”

### Science and Engineering Practices

**Analyzing and Interpreting Data**

Analyzing data in 6-8 builds on K-5 experiences and progresses to extending quantitative analysis to investigations, distinguishing between correlation and causation, and basic statistical techniques of data and error analysis.

- Analyze and interpret data to provide evidence for phenomena.

**Connections to Nature of Science**

**Scientific Knowledge is Open to Revision in Light of New Evidence**

- Science findings are frequently revised and/or reinterpreted based on new evidence.

Refer to the Project-Based Activity titled “Movin’ Mountains”

### Disciplinary Core Ideas

#### ESS1.C The History of Planet Earth

- Tectonic processes continually generate new ocean sea floor at ridges and destroy old sea floor at trenches. (HS.ESS1.C GBE), (secondary to MS-ESS2-3)

**Student Edition:**
- 120

**Teacher Edition:**
- GQ 117, 120; VL 120

#### ESS2.B Plate Tectonics and Large-Scale System Interactions

- Maps of ancient land and water patterns, based on investigations of rocks and fossils, make clear how Earth’s plates have moved great distances, collided, and spread apart.

**Student Edition:**
- 110

**Teacher Edition:**
- GQ 120; VL 120

### Crosscutting Concepts

#### Cause and Effect

- Patterns in rates of change and other numerical relationships can provide information about natural systems.

**Teacher Edition:**
- GQ 117, 120; VL 120

</tr>
</tbody>
</table>

**Clarification Statement:** Emphasis is on the ways water changes its state as it moves through the multiple pathways of the hydrologic cycle. Examples of models can be conceptual or physical.

**Assessment Boundary:** A quantitative understanding of the latent heats of vaporization and fusion is not assessed.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

**Developing and Using Models**

- Modeling in 6-8 builds on K-5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.

  - Develop a model to describe unobservable mechanisms.

### Disciplinary Core Ideas

**ESS2.C**

**The Roles of Water in Earth’s Surface Processes**

- Water continually cycles among land, ocean, and atmosphere via transpiration, evaporation, condensation and crystallization, and precipitation, as well as downhill flows on land.

- Global movements of water and its changes in form are propelled by sunlight and gravity.

**Crosscutting Concepts**

**Energy and Matter**

- Within a natural or designed system, the transfer of energy drives the motion and/or cycling of matter.

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.
Collect data to provide evidence for how the motions and complex interactions of air masses result in changes in weather conditions.

**Clarification Statement:** Emphasis is on how air masses flow from regions of high pressure to low pressure, causing weather (defined by temperature, pressure, humidity, precipitation, and wind) at a fixed location to change over time, and how sudden changes in weather can result when different air masses collide. Emphasis is on how weather can be predicted within probabilistic ranges. Examples of data can be provided to students (such as weather maps, diagrams, and visualizations) or obtained through laboratory experiments (such as with condensation).

**Assessment Boundary:** Assessment does not include recalling the names of cloud types or weather symbols used on weather maps or the reported diagrams from weather stations.

**Science and Engineering Practices**

**Planning and Carrying Out Investigations**

Planning and carrying out investigations in 6-8 builds on K-5 experiences and progresses to include investigations that use multiple variables and provide evidence to support explanations or solutions.

- Collect data to produce data to serve as the basis for evidence to answer scientific questions or test design solutions under a range of conditions.

**Disciplinary Core Ideas**

**ESS2.C**

The Roles of Water in Earth’s Surface Processes

- The complex patterns of the changes and the movement of water in the atmosphere, determined by winds, landforms, and ocean temperatures and currents, are major determinants of local weather patterns.

**ESS2.D**

Weather and Climate

- Because these patterns are so complex, weather can only be predicted probabilistically.

**Crosscutting Concepts**

**Cause and Effect**

- Cause and effect relationships may be used to predict phenomena in natural or designed systems.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*.

**NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.**

**Alignment Guide • Correlations**

**Copyright © McGraw-Hill Education. Permission is granted to reproduce for classroom use.**
Develop and use a model to describe how unequal heating and rotation of the Earth cause patterns of atmospheric and oceanic circulation that determine regional climates.

**Clarification Statement:** Emphasis is on how patterns vary by latitude, altitude, and geographic land distribution. Emphasis of atmospheric circulation is on the sunlight-driven latitudinal banding, the Coriolis effect, and resulting prevailing winds; emphasis of ocean circulation is on the transfer of heat by the global ocean convection cycle, which is constrained by the Coriolis effect and the outlines of continents. Examples of models can be diagrams, maps and globes, or digital representations.

**Assessment Boundary:** Assessment does not include the dynamics of the Coriolis effect.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

**Science and Engineering Practices**

**Developing and Using Models**

Modeling in 6-8 builds on K-5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.

- Develop and use a model to describe phenomena.

**Disciplinary Core Ideas**

**ESS2.C**

The Roles of Water in Earth’s Processes

- Variations in density due to variations in temperature and salinity drive a global pattern of interconnected ocean currents.

**ESS2.D**

Weather and Climate

- Weather and climate are influenced by interactions involving sunlight, the ocean, the atmosphere, ice, landforms, and living things. These interactions vary with latitude, altitude, and local and regional geography, all of which can affect oceanic and atmospheric flow patterns.

- The ocean exerts a major influence on weather and climate by absorbing energy from the sun, releasing it over time, and globally redistributing it through ocean currents.

**Crosscutting Concepts**

**Systems and System Models**

- Models can be used to represent systems and their interactions—such as inputs, processes and outputs—and energy, matter, and information flows within systems.

**Code** | **Title/Text** | **Location**
--- | --- | ---
MS-ESS3 | Earth and Human Activity | Refer to the Project-Based Activity titled “Where in the world...?”

- **MS-ESS3-1**
  - **Construct a scientific explanation based on evidence for how the uneven distributions of Earth’s mineral, energy, and groundwater resources are the result of past and current geoscience processes.**
  - **Clarification Statement:** Emphasis is on how these resources are limited and typically non-renewable, and how their distributions are significantly changing as a result of removal by humans. Examples of uneven distributions of resources as a result of past processes include but are not limited to petroleum (locations of the burial of organic marine sediments and subsequent geologic traps), metal ores (locations of past volcanic and hydrothermal activity associated with subduction zones), and soil (locations of active weathering and/or deposition of rock).

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

**Science and Engineering Practices**

- **Constructing Explanations and Designing Solutions**
  - Constructing explanations and designing solutions in 6-8 builds on K-5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific ideas, principles, and theories.
  - **Construct a scientific explanation based on valid and reliable evidence obtained from sources (including the students’ own experiments) and the assumption that theories and laws that describe the natural world operate today as they did in the past and will continue to do so in the future.**

**Disciplinary Core Ideas**

- **ESS3.A Natural Resources**
  - Humans depend on Earth’s land, ocean, atmosphere, and biosphere for many different resources. Minerals, fresh water, and biosphere resources are limited, and many are not renewable or replaceable over human lifetimes. These resources are distributed unevenly around the planet as a result of past geologic processes.

**Crosscutting Concepts**

- **Cause and Effect**
  - Cause and effect relationships may be used to predict phenomena in natural or designed systems.

**Connections to Engineering, Technology, and Applications of Science**

- **Influence of Science, Engineering, and Technology on Society and the Natural World**
  - All human activity draws on natural resources and has both short and long-term consequences, positive as well as negative, for the health of people and the natural environment.

NGSS is a registered trademark of Achieve. Neither Achieve nor the lead states and partners that developed the Next Generation Science Standards was involved in the production of, and does not endorse, this product.
Integrated iScience Course 1 (Frog) continued

**Science and Engineering Practices**

**Analyzing and Interpreting Data**

Analyzing data in 6-8 builds on K-5 and progresses to extending quantitative analysis to investigations, distinguishing between correlation and causation, and basic statistical techniques of data and error analysis.

- Analyze and interpret data to determine similarities and differences in findings.

**Disciplinary Core Ideas**

**ESS3.B Natural Hazards**

- Mapping the history of natural hazards in a region, combined with an understanding of related geologic forces can help forecast the locations and likelihoods of future events.

**Crosscutting Concepts**

**Patterns**

- Graphs, charts, and images can be used to identify patterns in data.

**Connections to Engineering, Technology, and Applications of Science**

**Influence of Science, Engineering, and Technology on Society and the Natural World**

- The uses of technologies and any limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions. Thus technology use varies from region to region and over time.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

</table>

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

- **Constructing Explanations and Designing Solutions**
  - Constructing explanations and designing solutions in 6-8 builds on K-5 experiences and progresses to include constructing explanations and designing solutions supported by multiple sources of evidence consistent with scientific ideas, principles, and theories.
  - **Apply scientific principles to design an object, tool, process or system.**

### Disciplinary Core Ideas

- **ESS3.C Human Impacts on Earth Systems**
  - Human activities have significantly altered the biosphere, sometimes damaging or destroying natural habitats and causing the extinction of other species. But changes to Earth’s environments can have different impacts (negative and positive) for different living things.
  - Typically as human populations and per-capita consumption of natural resources increase, so do the negative impacts on Earth unless the activities and technologies involved are engineered otherwise.

Student Edition:
- 149, 157, 165, 167, 172
- Skill Practice 159
- Lab 174-175

Teacher Edition:
- AC 165
- DI 165; GQ 146, 164; TA 147
- CIS 157

Note: Correlation continues on the next page
### Crosscutting Concepts

**Cause and Effect**
- Relationships can be classified as causal or correlational, and correlation does not necessarily imply causation.

**Connections to Engineering, Technology, and Applications of Science**

**Influence of Science, Engineering, and Technology on Society and the Natural World**

- The uses of technologies and any limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions. Thus technology use varies from region to region and over time.

**MS-ESS3 Earth and Human Activity continued**

**MS-ESS3-4**

Construct an argument supported by evidence for how increases in human population and per-capita consumption of natural resources impact Earth’s systems.

**Clarification Statement:** Examples of evidence include grade-appropriate databases on human populations and the rates of consumption of food and natural resources (such as freshwater, mineral, and energy). Examples of impacts can include changes to the appearance, composition, and structure of Earth’s systems as well as the rates at which they change. The consequences of increases in human populations and consumption of natural resources are described by science, but science does not make the decisions for the actions society takes.

Refer to the Project-Based Activity titled “7 Billion and Counting”

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

**Science and Engineering Practices**

- **Engaging in Argument from Evidence**
  - Engaging in argument from evidence in 6-8 builds on K-5 experiences and progresses to constructing a convincing argument that supports or refutes claims for either explanations or solutions about the natural and designed world(s).
  - Construct an oral and written argument supported by empirical evidence and scientific reasoning to support or refute an explanation or a model for a phenomenon or a solution to a problem.
  - Student Edition: 142-150
  - Teacher Edition: TA 147

**Disciplinary Core Ideas**

- **ESS3.C Human Impacts on Earth Systems**
  - Typically as human populations and per-capita consumption of natural resources increase, so do the negative impacts on Earth unless the activities and technologies involved are engineered otherwise.
  - Student Edition: 143-149, 153-157, 167
  - Teacher Edition: CIS 157

**Crosscutting Concepts**

- **Cause and Effect**
  - Cause and effect relationships may be used to predict phenomena in natural or designed systems.
  - Student Edition: 142-150
  - Teacher Edition: TA 147

**Connections to Engineering, Technology, and Applications of Science**

- **Influence of Science, Engineering, and Technology on Society and the Natural World**
  - All human activity draws on natural resources and has both short and long-term consequences, positive as well as negative, for the health of people and the natural environment.
  - Student Edition: 142-150
  - Teacher Edition: FF 145, TA 147

- **Connections to Nature of Science**
  - Scientific knowledge can describe the consequences of actions but does not necessarily prescribe the decisions that society takes.
  - Student Edition: 142-150
  - Teacher Edition: FF 145, TA 147

<tr>
<td>MS-ESS3-5</td>
<td>Ask questions to clarify evidence of the factors that have caused the rise in global temperatures over the past century.</td>
<td>Addressed in Integrated iScience Course 2 (Leopard)</td>
</tr>
</tbody>
</table>

**Clarification Statement:** Examples of factors include human activities (such as fossil fuel combustion, cement production, and agricultural activity) and natural processes (such as changes in incoming solar radiation or volcanic activity). Examples of evidence can include tables, graphs, and maps of global and regional temperatures, atmospheric levels of gases such as carbon dioxide and methane, and the rates of human activities. Emphasis is on the major role that human activities play in causing the rise in global temperatures.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

**Science and Engineering Practices**

**Asking Questions and Defining Problems**

Asking questions and defining problems in grades 6-8 builds on grades K-5 experiences and progresses to specifying relationships between variables, and clarifying arguments and models.

- Ask questions to identify and clarify evidence of an argument. | Addressed in Integrated iScience Course 2 (Leopard)

**Disciplinary Core Ideas**

**ESS3.D Global Climate Change**

- Human activities, such as the release of greenhouse gases from burning fossil fuels, are major factors in the current rise in Earth’s mean surface temperature (global warming). Reducing the level of climate change and reducing human vulnerability to whatever climate changes do occur depend on the understanding of climate science, engineering capabilities, and other kinds of knowledge, such as understanding of human behavior and on applying that knowledge wisely in decisions and activities. | Addressed in Integrated iScience Course 2 (Leopard)

**Crosscutting Concepts**

**Stability and Change**

- Stability might be disturbed either by sudden events or gradual changes that accumulate over time. | Addressed in Integrated iScience Course 2 (Leopard)

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

### Science and Engineering Practices

**Asking Questions and Defining Problems**

Asking questions and defining problems in grades 6-8 builds on grades K-5 experiences and progresses to specifying relationships between variables, and clarifying arguments and models.

- Define a design problem that can be solved through the development of an object, tool, process or system and includes multiple criteria and constraints, including scientific knowledge that may limit possible solutions.

**ETS1.A Defining and Delimiting Engineering Problems**

- The more precisely a design task’s criteria and constraints can be defined, the more likely it is that the designed solution will be successful. Specification of constraints includes consideration of scientific principles and other relevant knowledge that are likely to limit possible solutions.

**Crosscutting Concepts**

**Influence of Science, Engineering, and Technology on Society and the Natural World**

- All human activity draws on natural resources and has both short and long-term consequences, positive as well as negative, for the health of people and the natural environment.

- The uses of technologies and limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions.

The performance expectation above was developed using the following elements from the NRC document *A Framework for K-12 Science Education*:

**Science and Engineering Practices**

- **Developing and Using Models**
  - Modeling in 6-8 builds on K-5 experiences and progresses to developing, using, and revising models to describe, test, and predict more abstract phenomena and design systems.
  - Develop a model to generate data to test ideas about designed systems, including those representing inputs and outputs.

**Disciplinary Core Ideas**

**ETS1.B Developing Possible Solutions**

- A solution needs to be tested, and then modified on the basis of the test results, in order to improve it.
- Models of all kinds are important for testing solutions.

**ETS1.C Optimizing the Design Solution**

- The iterative process of testing the most promising solutions and modifying what is proposed on the basis of the test results leads to greater refinement and ultimately to an optimal solution.
