<p align="center">EARTH'S PLACE IN THE UNIVERSE</p>	<p align="center">HS-ESS1-1</p>
<p>Performance Expectation Develop a model based on evidence to illustrate the life span of the sun and the role of nuclear fusion in the sun's core to release energy that eventually reaches Earth in the form of radiation.</p> <p>Clarification Statement Emphasis is on the energy transfer mechanisms that allow energy from nuclear fusion in the sun's core to reach Earth. Examples of evidence for the model include observations of the masses and lifetimes of other stars, as well as the ways that the sun's radiation varies due to sudden solar flares ("space weather"), the 11-year sunspot cycle, and non-cyclic variations over centuries.</p>	<p>Activity: The Sun's Formation and Radiation, Chapter 29 Section 1</p>

Disciplinary Core Ideas	
<p>EARTH AND THE SOLAR SYSTEM Cyclical changes in the shape of Earth’s orbit around the sun, together with changes in the tilt of the planet’s axis of rotation, both occurring over hundreds of thousands of years, have altered the intensity and distribution of sunlight falling on Earth. These phenomena cause a cycle of ice ages and other gradual climate changes. (HS.ESS1B.b)</p>	<p>Student Edition: 314–315, 388–391, 776–777</p>
<p>EARTH MATERIALS AND SYSTEMS The geological record shows that changes to global and regional climate can be caused by interactions among changes in the sun’s energy output or Earth’s orbit, tectonic events, hydrosphere circulation, volcanic activity, glaciers, vegetation, and human activities. These changes can occur on a variety of time scales from sudden (e.g., volcanic ash clouds) to intermediate (ice ages) to very long-term tectonic cycles. (HS.ESS2A.d)</p>	<p>Student Edition: 282–283, 286–288, 314–315, 388–391, 393–396, 400–401, 412, 500, 502–504, 512, 636, 651–665, 743–744, 776–777, 834–835</p>
<p>WEATHER AND CLIMATE The foundation for Earth’s global climate systems is the electromagnetic radiation from the sun, as well as its reflection, absorption, storage, and redistribution among the atmosphere, hydrosphere and land systems, and this energy’s re-radiation into space. (HS.ESS2D.a)</p>	<p>Student Edition: 286–288, 314–315, 393–396</p>
<p>Gradual atmospheric changes were due to plants and other organisms that captured carbon dioxide and released oxygen. (HS.ESS2D.b)</p>	<p>Student Edition: 167, 282–283, 412, 687–689</p>
<p>Changes in the atmosphere due to human activity have increased carbon dioxide concentrations and thus affect climate. (HS.ESS2D.c)</p>	<p>Student Edition: 282–283, 393–396, 688–689, 743–744</p>
Crosscutting Concepts	
<p>CAUSE AND EFFECT Empirical evidence is required to differentiate between cause and correlation and make claims about specific causes and effects.</p>	<p>Science and Engineering Practices Handbook: Defining STEM 3, Practice 1</p>

<p>STABILITY AND CHANGE</p> <p>Much of science deals with constructing explanations of how things change and how they remain stable.</p>	<p>Science and Engineering Practices Handbook: Defining STEM 4</p>
HUMAN SUSTAINABILITY HS-ESS3-1	
<p>Performance Expectation</p> <p>Construct an explanation based on evidence for how the availability of natural resources, occurrence of natural hazards, and changes in climate have influenced human activity.</p> <p>Clarification Statement</p> <p>Examples of key natural resources include access to fresh water (such as rivers, lakes, and groundwater), regions of fertile soils such as river deltas, and high concentrations of minerals and fossil fuels. Examples of natural hazards can be from interior processes (such as volcanic eruptions and earthquakes), surface processes (such as tsunamis, mass wasting and soil erosion), and severe weather (such as hurricanes, floods, and droughts). Natural hazards and other geologic events exhibit some non-random patterns of occurrence. Examples of the results of changes in climate that can affect populations or drive mass migrations include changes to sea level, regional patterns of temperature and precipitation, and the types of crops and livestock that can be raised.</p>	<p>Activity: Human Activity, Natural Resources, Hazards, and Climate Change, Chapter 19 Section 4 (Earthquake Forecasting), Chapter 26 Section 4</p>
