

LOST? BUT FOUND!

Loss Protection
Mobilephones (Symbian OS)

BAK2u

'Sometimes it is not even about the cost of replacement but the data in it.'

PhoneBAK Mobilephone is an innovative lost & found anti-theft software program that sends the thief's contact number to a pre-defined mobile phone number when your mobilephone is stolen!

Install the software program into your device and the program works quietly in the device by automatically checking on the Subscriber Identity Module (SIM) card, all without the knowledge of the unauthorized user!

It will send out 02 SMSes (local and/or overseas) using the thief's SIM card to the pre-defined mobilephone numbers. SMS will include a customizable message, IMEI, IMSI, Area Code* and Cell ID*.

No subscriptions or annual fees.

Operating System

Symbian.

SMS Notification

Install the software program into the mobilephone and the program works quietly checking for any unauthorized SIM card.

If detected, 02 SMS will be sent out to the pre-defined (local and/or overseas) mobilephone numbers (e.g. spouse, colleague, I.T. dept).

SMS will contain the thief own mobilephone number, IMEI (International Mobile Equipment Identity), IMSI* (International Mobile Subscriber Identity) and GSM Cell ID* (GSM Localization).

Owner can contact the thief directly to retrieve back the stolen mobilephone.

LOST? BUT FOUND!

PhoneBAK Mobilephone

Anti-theft software

BAK2u.com

Customisable Message

Owner can personalise the SMS message to be sent to the pre-defined numbers.

Auto Start Up

PhoneBAK mobilephone autoruns every time the mobilephone is powered up.

Supported Languages

English, Chinese, French, German, Spanish, Thai and Russian.

Low Memory Resource

During the day-to-day usage of the phone with an authorized SIM, PhoneBAK mobilephone will not use any memory resource, and it will not even run in the background.

Program will only run once when mobilephone starts up and will turn off once SIM card is authorized.

Multi SIM Cards

Up to 10 SIM cards can be supported. Password protection to ensure no unauthorized access to program.

*Subject to changes according to countries' network & service providers.

How it works

PhoneBak Mobilephone software supports,

- Up to 10 SIM cards storage.
- 02 recipient numbers (1 local, 1 overseas).
- A custom message.

Registration

See document '**PhoneBAK-HowToRegister.pdf**' for more details.

Frequently Asked Questions

i. How do I know if PhoneBAK (PDA Phones & Mobilephones) works?

When the finder replaced the owner's SIM card with his, PhoneBAK will silently send a SMS to the pre-defined mobile phone number.

It is important to test out the pre-defined local number by simply interchanging with another SIM card first before actual use.

ii. How do I install the software?

There will be a step-by-step installation guide included.

iii. Are there any technical or local support?

BAK2u has presence in Singapore and various countries through our partners to provide the necessary supports, including documents for owners to report to police for non-recoverable cases too.

iv. Can I use the same program for any other devices?

Each copy of PhoneBAK program is licensed to only 01 registered device. It is therefore non-transferable.

v. Who will recover the lost device?

As the device has been pre-defined with a mobile phone number, the receiver of the alert can contact the finder directly and make the necessary arrangement or can report to the police to be dealt with too.

vi. How would BAK2u deal with non-recoverable cases?

Refer to the police in the event when the finder does not want to return the phone. Save the SMS alert received as evidence of the theft.

Owners can also refer to BAK2u to help facilitate the return of the items by providing supporting documents for owners to report to police.

In the event, that there is no sms received to the pre-defined mobile number after the phone is lost, the device could have been lost and not found.
