

Building Products & Materials

Potential risk in the building products and materials space is widespread and can range from small personal claims to significant class action litigation. We have worked with a large variety of companies across the sector, so we understand your unique needs and we have the experience to ensure that all potential exposures are covered.

Types of Companies

- Basic Building Materials - cement, concrete, aggregates, brick, glass and other materials
- Building Products - roofing, siding, lumber, plywood, OSB, insulation, wallboard, windows, doors, cabinets, countertops, HVAC, piping, plumbing fixtures/fittings, flooring, electrical products, paint and many other products
- Distribution and Retail - spanning a wide range of distribution ecosystems
- Homebuilding - national and regional / local builders
- Engineering, Procurement, and Construction (EPC) - including all segments of the EPC value chain

Key Risk & Insurance Components

- **Product Liability** is typically the biggest coverage concern. Most common allegations are that building materials are faulty or defective due to their design and / or installation.
- **Professional Liability** exposures may be moderate or very significant depending on the amount of influence a company has on the product design.
