

GRINNELL COLLEGE

Completed in 2006, the Joe Rosenfield '25 Campus Center is the heart and soul of Grinnell College. The rich wood textures highlight the existing warmth and natural charm of the campus. With a budget of \$2.2 million, every aspect of the 120,000 square-foot project enhances the user experience.

In addition to the extensive application of Linear panels covering walls and ceilings, the project features Flat Panels and ACGI's Concerto Wall System. Throughout the LEED certified and energy-efficient building, maple and douglas fir veneers dispell any intimidation by evoking a sense of comfort from the spacious multi-purpose and dining rooms.

According to Pelli Clark Pelli Architects: "The formal dining room is within a rectangular limestone pavilion at the northwest corner of the building, where windows look out onto the courtyard and the green.... At the heart of the building, a tall elliptical pavilion clad in Chinese red porphyry and topped with a skylight contains the fireplace lounge. With its monumental black granite fireplace, slatted wood ceiling, and warm colors for carpeting and upholstery, this informal space has a welcoming atmosphere. In other parts of the building, wood-paneled walls and slate or wood floors achieve a similar effect."
