## Trento Doors Specifications

Trento Entry Doors made of 14-gauge steel with 1/2" wrought iron design work. Our standard door jamb is 6" and the door pane; thickness is 1 1/2" by 4 1/2".

The weight of our iron door entryways are supported by barrel hinges.

All doors will be pre-hung, frames are equipped with screw holds to secure the door frame with 3" lag bolts.

Weather strip around the door and a glass frame is standard.

All doors are pre-bored with 2 3/8th" backset, 2 1/8th" borings and 5 1/2" center to center.

Most welding is performed from the inside in order not to alter the smooth finish line.

Door frames are squared and leveled before the door hinges are positioned and welded thereby ensuring a smooth operation period. Door frames are squared to less than 1/4" tolerance.

Each entry door includes double-pane tempered matte glass panels that open independently from the doors.

A variety of glass is offered as an option. This feature allows for ventilation, ease of cleaning the glass, and the option of being locked while the homeowner is talking to the visiting party.

All hardware necessary to operate and assemble our doors are standard sizes.

All doors are fully insulated with thermal injected foam in the door, window frame, and in the door panel.

All the door jams have attached thresholds and includes the door sweep.
