

The Instructions of UV Lamps

The procedure to operate the 38-watt UVC lamp is as follows:

1. Select the room or area to be disinfected. Place the lamp in the center of the space to be disinfected. If the room is large, you can place the lamp and in one area and then you can move the lamp to another area and repeat the disinfectant process as needed.
2. Plug in the fixture and turn on the inline switch on the power cord. The light will 'BLINK" on for an instant.
3. Once you make sure that there are no PLANTS or PETS in the area. No people can be in the area to be disinfected.
4. When you are ready, press the button on the base of the light. It may "Blink" again. You must leave the area now. Make sure that there are no FANS or A/C or HEAT ducts that are moving a significant amount of air. This air movement will be sensed by the occupancy sensor in the lamp and will prohibit the lamp from coming on.
5. As you leave the room, leave the door open a bit so you can see the light come on. It will run from 10 to 30 minutes. Once the light turns off, you can open the door and air out the room for up to 40 minutes.
6. Now you can move the lamp to another location and repeat the process.

UV disinfection lamp is mainly used to kill the DNA of microorganisms, destroy the structure of DNA, and make it lose the function of reproduction and self-replication, to achieve the purpose of sterilization and disinfection. It is suitable for space sterilization and disinfection of less than 40 m², Air purification. It can kill Candida albicans, Staphylococcus aureus, Escherichia coli, all surfaces polluted by the above bacteria, water and air can be disinfected by ultraviolet.

Thank you for purchasing our product.

Please read this manual carefully before use and keep it for future reference.

Usage Method

Start the switch on the lamp wire to start.

1. The UV sensor lamp will be light up after you pressing the button within 15 seconds. When people come into the space the sensor lamp will turn off, when people leave it will turn on. So, you do not need to turn the lamp on and off, it senses body motion.
2. As it is a disinfection lamp with ozone, you need to ventilate for more than 30-40 minutes after disinfection to enter the disinfection room.

Special Reminder:

1. Do not look directly at the lamp making the light. Your eyes will be very painful after looking 6-7 hours. Use some eyedrops to make your eyes relax. If you look at UV lamp and experience any eye pain. The fixtures should be used in the absence of people, pets, or plants. The strong ultraviolet rays may cause skin erythema, eye and conjunctival irritation, and eye fatigue.
2. Prolonged exposure to ultraviolet rays can burn eyes. Prolonged inhalation of ozone can hurt people's respiratory tract. Doors and windows must be closed during disinfection. People and animals must leave.
3. Ozone is a very unstable gas, which is usually divided into oxygen in the air for 30-40 minutes. Use ozone to disinfect the lamp at least 40 minutes after entering the room.
