About OsiriX^{PRO}

Medical images present a steadily growing challenge. In these Hands-on Workshops, we introduce you to the latest state in medical image postprocessing. The attendees can immediately follow the demonstrated contents on Apple Macintosh workstations at hand. The software in use is **OsiriX^{PRO}** – the CE-labeled and FDA-cleared version of OsiriX. OsiriX is an excellent Open Source Software which meets this challenge and was decorated with multiple international awards.

About aycan

aycan Digitalsysteme GmbH is a PACS vendor and system provider in the medical engineering branch with long lasting experience and well-founded know-how – especially in the area of radiology, PACS, DICOM and postprocessing. More than 1,000 radiologists are using our solutions and services. Visit www.aycan.de to find out more.
