

Support Spring Hill's request to be considered for Google's trial Ultra-High Speed Broadband Fiber Network by completing an on-line "Nominate Your Community" form!

Google™ is planning to launch an experimental trial fiber optic network that they hope will deliver Internet speeds through a fiber-to-the-home connection that is more than 100 times faster than what most Americans have access to today; **over 1 gigabit per second**.

From now until Friday March 26th, Google™ is asking local governments and residents to express their interest in the fiber optic trial to help determine where they will build this network. **The City of Spring Hill** is currently preparing a Local Government Response to be considered for this trial network and **we would like to ask residents to support this response by completing an on-line nomination form.**

Showing your support for Spring Hill to be considered for this trial network is easy!

<p>Step One: Go to (or click on) the following link</p> <p>http://www.google.com/appserve/fiberrfi/public/options</p> 	<p>Step Two: Click on the button "Nominate Your Community"</p> 
<p>Step Three: Sign on with an existing Google™ Account or create a new Google Account.</p> <p>Note: A valid Google Account is required to complete the nomination form. * See Important Disclaimer below</p>	<p>Step Four: Complete the Online Nomination Form. Submit the form by clicking on the "Send Nomination" button</p> <p>Note: Make sure to include "Spring Hill" in the City form field and "TN" in State form field.</p>

When completing the **Nomination Form**, please keep in mind the following key points that make Spring Hill a good candidate for this trial Ultra-High Speed Broadband Fiber Network:

1. Spring Hill's family-based demographic is ideally aligned for this opportunity from the number of school age children to our community's above-average professional demographic.
2. Spring Hill's younger and technically-aware consumer demographic would result in excellent utilization.
3. Spring Hill has vast diversity in retail, industry, civic and residential which will provide for a variety of utilization.
4. Google™ is looking for a community "where we can bring significant benefits to residents and develop useful proofs-of-concept that can have a broader impact".
5. Spring Hill is in a stable weather climate, is relatively condensed in its land area and is conveniently located.
