- Real-time design collaboration
- Communicate with built-in Chat & Annotated feedback tools
- Per mockup User permissions & Team contact manager
- Team activity log and alerts
- Install additional components/templates from MockStore
- Seamlessly design mockups even when you go Offline
- Self-serve License Manager
- Flat 20% discount also for Add-on user licenses

Built-in Collaboration

Real-time designing

Multiple users can work on the same mockup online and they receive real-time notifications as other editors make changes to it. This enables teams to work together effectively to bring out the design prototype for their next website or software.

Communication

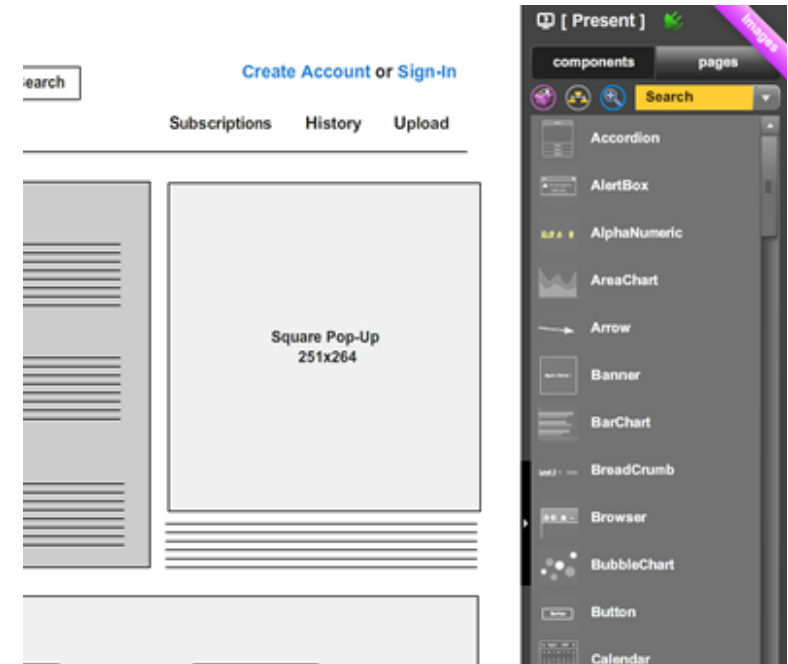

Efficient communication of ideas is vital for a design tool. This is why MockFlow comes with Team-Chat built-in the editor itself.

And reviewers can post their comments with annotation pointing to the design part they are referring to.

Sharing

The contact manager “My Team” is useful for bringing in business contacts of your team and clients. Once you have added their emails, you are now ready to share wireframes for selected users with appropriate permissions.

There are two permissions levels: ‘Reviewer’ – the user can only view and make comments about the design. ‘Editor’ – user can co-edit the mockup.

Work offline

The free MockFlow desktop client (<http://www.mockflow.com/desktop>) provides all web features + Offline Sync. Which means you can access, view, edit and export your mockup designs even when there is no Internet connectivity. This comes very handy since Internet is not omnipresent and the offline changes can be synced back when network is ON.

Team activity

MockFlow provides activity log to track *who shared with you, new comments posted, changes made* and much more to know what exactly is going behind your mockup design. It is secure and relevant.

MockStore

This is an excellent user community service for MockFlow. Rather than always starting from scratch, you can search and import ready-made component designs and templates from a wide range of categories within a click.

License Manager

The License Manager found under the “My Account” tab allows the administrator of a team to purchase new user licenses, upgrade users or downgrade existing licenses. This brings in automated control rather than mailing us back and forth.
