

H.7

Charlie Sheehan

1. Innisfail is water rich and lake erylake is water poor
2. summer
3. march
4. August
5. yes
6. it would not be good because it would not get the averages of each season and month

Guiding activities

2 Look carefully at the climate graphs for each of these six locations. What trends do you notice in the temperature lines as you move from north to south on the map?

_____ under 35 degrees _____

3 What are the trends in the amount of rainfall as you move away from the equator towards the poles?

_____ less rainfall _____

- 4 This is the description of the climate at one of these six locations. Match the description with the location. Rainfall varies a great deal throughout the year with a clear wet season between May and August when rainfall exceeds 130mm for each month and a dry season between November and April. This coincides with warmer temperatures of 20°C whereas in the wetter winter temperatures average closer to 14°C.

This location is hobart

- 5 Describe the climate of Ulan Bator using the description in Question 4 as a guide to describing the trends in climate graphs.

for January an average temperature of high of -16 average low of -24. For august average low of 10 and high of 22.

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and run across the width of the page. There is no text or other markings on the paper.

- 6** Identify one similarity in the climates of these two locations and one difference:

Similarity: cold temperature

Difference: snows a lot in Ulan bator
