

S.2

By Charlie Sheehan

Solar energy

- It is harnessed from the sun when it hits a certain material and the energy turns in to electrical current.
- Product made with solar energy: radios, battery charger, rechargeable touch and outdoor lights.
- Solar energy is a continues energy and will never stop.
- You can find solar energy any where you just need solar panels. Solar energy dose not effect the environment.

Coal

- Coal is dug out of the ground and burned.
- Things made with coal: paint thinner, batteries and wood preservative.
- Coal will run out one because it comes out of the ground and will slowly run out.
- Coal comes from the ground and it does effect the environment.

Wind energy

- Wind energy is produced by a windmills.
With generates mechanical power.
- Wind energy does not produce any by product.
- Wind energy is continues.
- Wind energy is found all over the world.
Wind energy is good for the environment

Fossil fuels

- It is drilled out of the earth
- By products made by fossil fuels: petrol, toys, dishes and floor covering.
- Fossil fuels are not continuous because they take millions of years to form.
- Drilled from the earth out at sea. Our need of fossil fuels is bad because we burn it with causes global warming.
