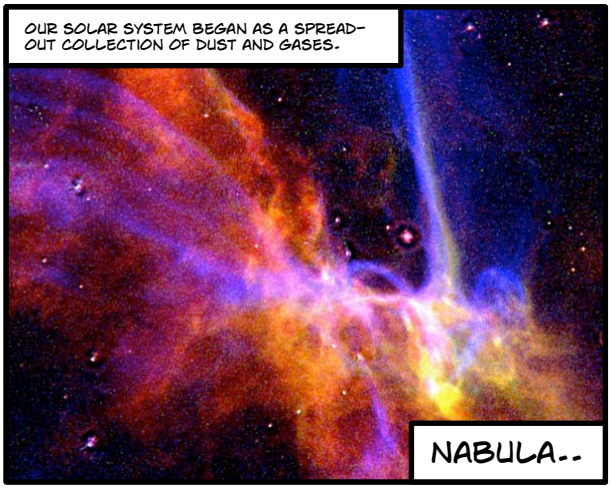
OUR SOLAR SYSTEM!!!

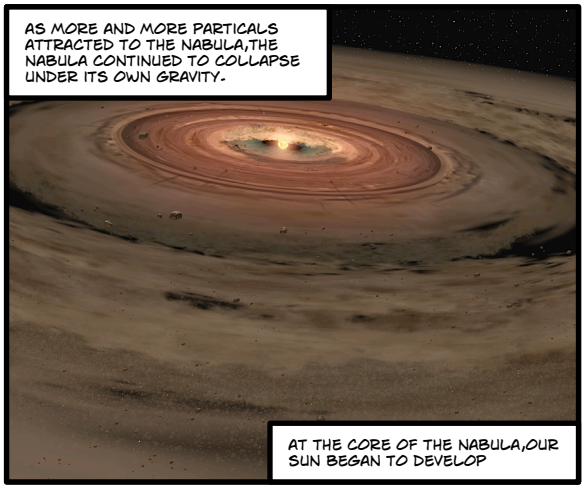
BY LEO

OUR SOLAR SYSTEM BEGAN AS A SPREAD-OUT COLLECTION OF DUST AND GASES.

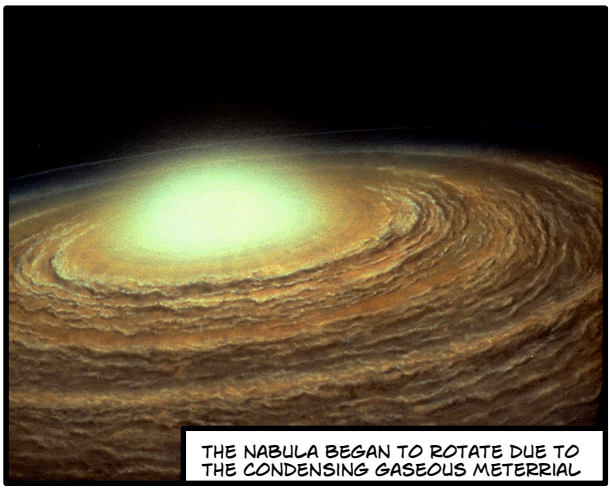


NABULA..

AS MORE AND MORE PARTICALS ATTRACTED TO THE NABULA,THE NABULA CONTINUED TO COLLAPSE UNDER ITS OWN GRAVITY.



AT THE CORE OF THE NABULA,OUR SUN BEGAN TO DEVELOP

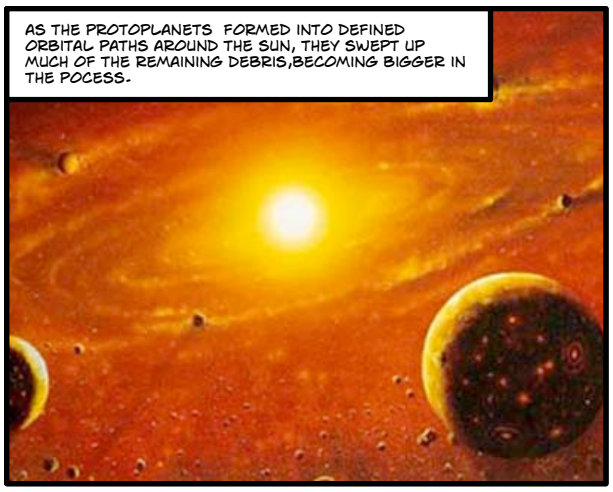


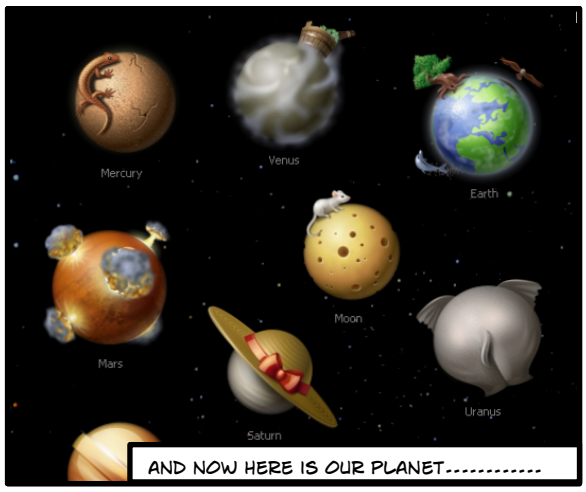
THE NABULA BEGAN TO ROTATE DUE TO THE CONDENSING GASEOUS METERRIAL

THE SPEED OF ROTATION BECAME TOO GREAT TO HOLD ALL THE MATTER TOGETHER.....

PROTOPLANET BRGAN TO APPEAR IN THE OUTER REGIONS OF THE NABULA.

AS THE PROTOPLANETS FORMED INTO DEFINED ORBITAL PATHS AROUND THE SUN, THEY SWEPT UP MUCH OF THE REMAINING DEBRIS,BECOMING BIGGER IN THE POCESS.





AND NOW HERE IS OUR PLANET.....
