

tweservation provides restaurant reservations through Facebook

SAN FRANCISCO, CA June 21, 2011 – [tweservation](http://www.tweservation.com) now offers Facebook users the ease and convenience of making restaurant reservations at their favorite restaurants using their Facebook ID on the tweservation website or mobile site. No separate login or password is required. After booking a reservation at a tweservation-partner restaurant, the restaurant will appear in the Facebook user's News Feed, promoting the restaurant among the user's network of Friends, similar to the check-in feature which has proved extremely popular among Facebook users.

“More and more users told us they wanted to connect to tweservation through their Facebook account and they also wanted to highlight their favorite restaurants to their friends without adding another step like the check-in process” says co-founder, James Bryant, he continues, “Facebook users total over 687 million today so combining that total with Twitter allows us to reach nearly 900 million people worldwide.”

All diners can make free reservations via tweservation through their mobile device using their Facebook ID, by simply downloading tweservation's free iPhone, Android or Windows 7 Phone apps or through the web at: <http://www.tweservation.com>

About tweservation:
