Siemon’s Continued Commitment to Industry Standards
Recognized by TIA in Annual Star Awards

Watertown, CT – Leading global network infrastructure specialist, Siemon, is pleased to be recognized as a winner in the Telecommunications Industry Association’s (TIA) annual Star Awards. Now in its second year, the TIA’s Star Awards recognizes and celebrates the contributions made to advancing the TIA and the broader ICT industry by the member and participant companies and individual volunteers.

Siemon was named a winner in the top 2% in the category of "Most Engaged Organization", while Brian Celella, Senior Electrical Engineer at the Siemon company, was individually recognized as a top 5% contributor. This achievement follows on from similar success for Siemon in 2021 and reinforces the organizations continued commitment to industry standards. Brian actively collaborates with a number of Siemon experts, including Dave Valentukonis, North American Technical Manager, in the development and delivery of various ANSI/TIA standards and this is viewed by the organization as a key element in its success and ability to help customers deliver upon their strategic objectives.

"We thank the TIA for this recognition of our company’s leadership role in the IT standards community for a second consecutive year” commented John Siemon, CTO and VP of Operations, “Participation in standards organizations like the TIA has been a cornerstone of our commitment to "Connect the World to a Higher Standard". This voluntary participation started when we first joined TIA in the 1980s to help develop the world’s first structured cabling standard TIA-568. Encouraging our engineers and technical experts to think and act in the long-term interests of the industry and our customers is consistent with our 120 year history of sustainable success made possible by our core values of teamwork, quality, innovation and service. We are extremely fortunate and proud to have a team of dedicated professionals who continue to help develop standards that drive superior quality and performance of critical network infrastructure that connects the world.”
