# Installation

## *WordPress Installation*

The WordPress Profit System WordPress plugin is extremely easy to install and setup. The plugin is installed like any other standard WordPress plugin.

1. Unzip contents of the download file to your local hard drive.
2. Install the WordPress Profit System plugin
  - Use the Add New WordPress feature (Plugins | Add new) to upload the plugin file: `ubam_dp_demon.zip`.
3. Activate the plugin

# Setup

## Account Info

Navigate to the settings screen for WordPress Profit System (Settings | WordPress Profit System for WP). Next, go to the 'Account Info' screen under the 'Account Info' tab. The settings should be self-explanatory, but we'll go through them one by one.

### WordPress Profit System Plugin

Products	Account Info
----------	--------------

Account Identifier	Authorization Code
PayPal Email: paypal@yourpaypal.com	ABC123456
CB Vendor ID: texasbix	CLICKBANKSECRETKEY
E-Junkie Client ID: 12345	

Additional Options
Support Name: Your Name
Support Email: you@somedomain.com
DL Pg. Expires: 120 hours.

Download Link Protection Options
Primary Key: atleast8characterslong
Secondary Key: atleast8characterslong
Links Expire In: 300 seconds.
DL Directory: /home2/ccnetzn/public_html/wp-content/ down9

- **Paypal Email:** – The email address of the PayPal account that will accept payments
- **Authorization Code (PayPal)** – Optional. This is an additional check that the WordPress Profit System can to ensure payments received are from PayPal. Without it, just the very reliable PayPal authentication checks are used. Put any 7-10 letters and/or numbers.
- **CB Vendor ID** – The ClickBank vendor id for the ClickBank account that your product is defined in.
- **Authorization Code (ClickBank)** – This is required for ClickBank. This is the **EXACTLY** the same “Secret Key” that you place in your Clickbank account (Account Settings | My Site | Advanced Tools).
- **Support Name/Email** – This is the name and email address that you'd like to have placed on your Thank You and Download pages and your confirmation emails. The information you place here will show up where ever you place the {SUPPORT NAME} and {SUPPORT EMAIL} tags.

- **DL Pg. Expires (hours)** – This number is actually for the link to the Download Page. You'll usually want to allow your client some time to download the file they've purchased. The default is 120 hours or 5 days. You, of course, can select any value you wish.

## ***Download Link Protection Options***

WordPress Profit System allows you to use a special SECURE syntax for your download links. This syntax causes WordPress Profit System to create ugly, encrypted, and time expiring URLs that make it difficult for users to share your download links with others (who haven't purchased the product).

- **Primary/Secondary Key** – These keys are used to encrypt your SECURE download links. You can place any values in these fields that you wish, but the most secure values would be random character strings that are at least 8 characters long.
- **Links Expire in (seconds)** – This number is for the actual link to your downloadable content. For secure links, this value should be kept under 5 minutes (300 seconds) which is the default value. The time limit restarts each time the download page is refreshed, so the value could easily be reduced to 2 minutes (120 seconds) without negatively impacting your customers.  
EXAMPLE: If the value is set to 120 seconds or 2 minutes, your customers will have 2 minutes to click on the download link before it expires. However, it also gives abusive customers just 120 seconds to copy the link and “share” it with non-users. By the time the non-user accesses the link, it will likely have expired.
- **DL Directory** – You can create secure links to downloadable files located anywhere on your website. However, WordPress Profit System allows you to create a special download “area” or directory specifically to hold those files.

Enter your information and click the “Save” button.

## ***Edit Default Email***

WordPress Profit System creates default “Thank You” email text every time you create a new product. Clicking the “Edit Default Email” button displays a window that allows you to tailor this email to your company or website. Modifying the default email text only affects NEW products – it will not change any already existing email text.

# Add/Edit Products

From the Product tab, you can add new products and edit existing products.

- **add a product** - click the “[Show/Hide] Add Product” link in the upper left-hand corner of the page.
- **edit an existing product** - from the product listing, click on the “Edit” link on the right hand side of the product row.

You'll be presented with the Add/Edit Product page where you'll set up and maintain your products.

Add Product

Product ID:

Description:

Pmt Processor:

Product Nbr:

Product Name:

Sales Page:

Thank-U Page:

Download Page:

Download Link:

Price:

Currency:

Email Subject:

Email Body: 

Dear {CUSTOMER NAME},

Thank you for purchasing {PRODUCT NAME}.

Below is the URL to your download page. You have approximately {X} hours to download your purchase, after which the download page will be expired.

Add Product

Cancel

1. **Product ID** - an identifier for your product. This is the value the WordPress Profit System will use. This value should be only numbers, letters, and underscores (no spaces).
2. **Pmt Processor** – PayPal, ClickBank, E-Junkie or Affiliate. If using PayPal, the product information entered here is used for describing the product to PayPal. For ClickBank, the product is defined in your ClickBank account. For Affiliate and E-Junkie products, you need only enter the Sales Page information.
3. **Product Nbr** - PayPal: This is a number that is internal to your business. ClickBank: This MUST match the numeric product number in your ClickBank account.
4. **Sales/Thank-U/Download Page** - The post/page titles if you're using pages

on your WordPress site or the full URL (<http://www.wheneverdomain.com/page>) if you are using a page that's not on your WordPress site.

NOTE: There are two files in your plugin folder that contain sample text for your Thank You and Download pages.

**Thank You Page Template** - sample-thank-you-page.html  
**Download Page Template** - sample-download-page.html

Open these files and copy them into your WordPress page or post (make sure you use the HTML tab in the WordPress editor window)

5. **Price** - Required for PayPal. You should enter it for ClickBank items, but ClickBank uses the price in your ClickBank Account.
6. **Download Link** - the link to your download file. WordPress Profit System has its own download link protector. Simplest way is to put:

SECURE:Some\_Product.zip

See "Securing Download Links" for advanced details and syntax.

7. **Email Subject/Body** - Create the text for your purchase confirmation email. See the Appendix for the tags that can be used here.

# Payment Buttons

There are two (2) ways to add buttons to your sales pages.

1. If your sales page is on your WordPress website, simply enter:

`[dpd-button]product_id[/dpd-button]`

on the page where you'd like the button code to be displayed. “product\_id” is the Product ID you assigned to the product on the “Add/Edit Product” page.

2. If your sales page is not on your WordPress website (sales page can be anywhere), click on the -word- “Button” link at the right of the product row. You'll see this screen:

The screenshot shows a configuration window for a PayPal button. It has three main sections: 'Button HTML:', 'Test Button:', and 'Link to Sales Page:'. The 'Button HTML:' section contains a long code snippet for a 'Pay Now' button. The 'Test Button:' section shows a preview of the button with the text 'Pay Now' and logos for Visa, MasterCard, and American Express. The 'Link to Sales Page:' section has a text input field containing the URL 'http://www.life-insurance-geek.com/epptest/?mlpid=thingy1'. At the bottom right is a 'Done' button.

**Button HTML:**

```
<form name="form1" action="https://www.paypal.com/cgi-bin/webscr" method="post"><input type="image" src="https://www.paypal.com/en_US/i/btn/btn_paynowCC_LG.gif" border="0" name="submit" alt="Make payments with PayPal - it's fast, free and secure!"><input type="hidden" name="cmd" value="_xclick"><input type="hidden" name="business" value="payments@eubieartmedia.com"><input type="hidden" name="item_name" value="Thingy Doodle"><input type="hidden" name="item_number" value="1001"><input type="hidden" name="amount" value="1.00"><input type="hidden" name="no_shipping" value="1"><input type="hidden" name="return" value="http://www.life-insurance-geek.com/epptest/?mlp-pp-thankyou=thingy1"><input type="hidden" name="notify_url" value="http://www.life-insurance-geek.com/epptest/?mlp-pp-notify=thingy1"><input type="hidden" name="no_note" value="1"><input type="hidden" name="currency_code" value="USD"><input type="hidden" name="rm" value="2">
```

**Test Button:**

Pay Now

**Link to Sales Page:**

http://www.life-insurance-geek.com/epptest/?mlpid=thingy1

Done

Simply copy the text from the “Button HTML” text area and place it on your sales page.

Notice the “Link to Sales Page”. With PayPal buttons, you can use your normal link or use this link.

For ClickBank products, this screen looks a little different...

The screenshot shows a configuration window for a ClickBank button. It has four main sections: 'Test Button:', 'Link to Sales Page:', 'Append to HopLink:', and 'Enter as ClickBank Thank You Page:'. The 'Test Button:' section shows a preview of the button with the text 'Buy NOW!' and logos for Visa, MasterCard, American Express, and Discover. The 'Link to Sales Page:' section has a text input field containing the URL 'http://www.life-insurance-geek.com/epptest/?mlpid=thingy2'. The 'Append to HopLink:' section has a text input field containing '?mlpid=thingy2' and a checkbox labeled 'If Tracking (?tid=xxxx):' with a text input field containing '&mlpid=thingy2'. The 'Enter as ClickBank Thank You Page:' section has a text input field containing 'http://www.life-insurance-geek.com/epptest/?mlp-cb-thankyou=thingy2'. At the bottom right is a 'Done' button.

**Test Button:**

Buy NOW!

**Link to Sales Page:**

http://www.life-insurance-geek.com/epptest/?mlpid=thingy2

**Append to HopLink:**

?mlpid=thingy2

**If Tracking (?tid=xxxx):**

&mlpid=thingy2

**Enter as ClickBank Thank You Page:**

http://www.life-insurance-geek.com/epptest/?mlp-cb-thankyou=thingy2

Done

First, the button is different. The PayPal button comes from the PayPal website. The ClickBank button is a “custom” button. If you'd like a different button, you can replace the file “cb-buy-NOW.gif” that is in your plugin folder.

Also, there is additional information:

- **Enter as ClickBank HopLink Target URL** – this text must be entered in your ClickBank account as the “HopLink Target URL” for your account. Since ClickBank supports only one (1) HopLink Target per account, all of your sales traffic would go to this page. With WordPress Profit System, you and your affiliates will use the “Append to HopLink” information (below) to remove that limitation entirely.
- **Append to HopLink** – this is information you should give to your affiliates (on your affiliate recruitment page) so that they can link to individual sales pages. It's a real improvement on ClickBank's single “HopLink Target URL” and is a great way to support “super affiliates” by creating products/pages specifically for them.
- **Enter as ClickBank Thank You Page** – this text must be entered in your ClickBank account as the “Thank You Page” for this product (Account Settings | My Products). This URL sends the client back to your WordPress Profit System website after the purchase. Because it's product specific, you can create unique thank you pages for your products with cross-sells, up-sells, and related special offers.

You can test your payment button and button code from this window as well. Click on the test button and make sure your link takes you to the proper PayPal or ClickBank payment page.

# Affiliate Link Cloaking

Affiliate Link Cloaking feature in WordPress Profit System works very much like the Payment buttons – only instead of PayPal or ClickBank payment buttons, WordPress Profit System generates a cloaked affiliate link to your vendor's site.

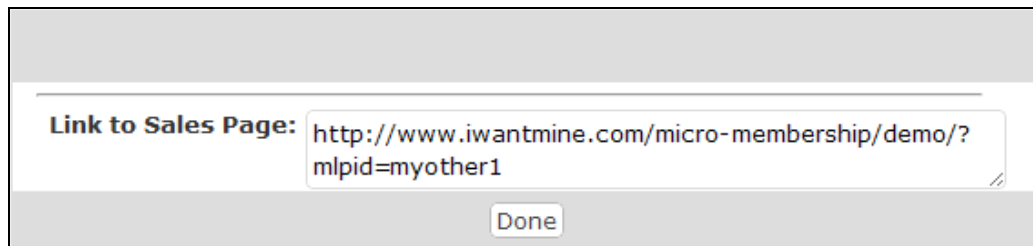

As with the Payment Buttons, There are two (2) ways to add buttons to your sales pages.

3. If your sales page is on your WordPress website, simply enter:

```
[dpd-button]product_id[/dpd-button]
```

on the page where you'd like the button code to be displayed. “product\_id” is the Product ID you assigned to the product on the “Add/Edit Product” page.

4. If your sales page is not on your WordPress website, click on the “Button” link at the right of the product row to display this screen:

Link to Sales Page:

Done

Now copy the text from the “Link to Sales Page” area and paste it on your affiliate page, article, advertisement, etc.

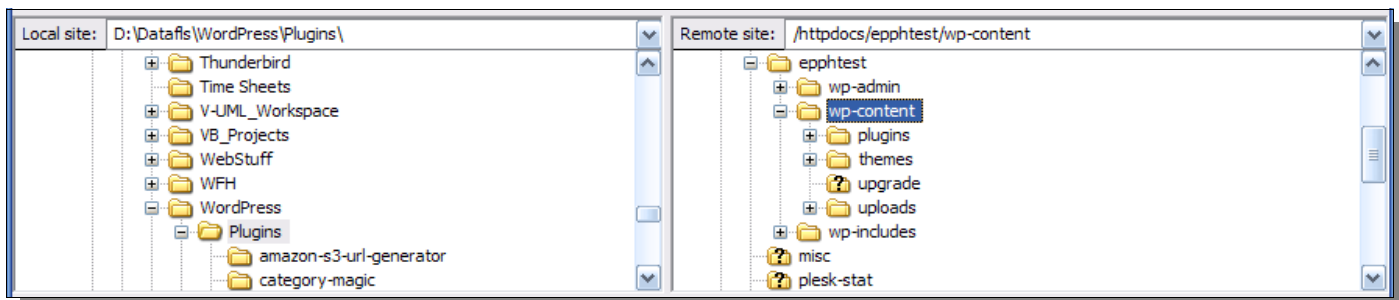

# Securing Download Links (SECURE)

## Creating a Download Directory

WordPress Profit System uses a separate directory to hold the files and other content to be downloaded. Unfortunately, **the WordPress Profit System plugin does not create the directory** so, you'll either have to use an existing directory or you'll need to create a new directory using some other tool.

If you're going the new directory route, the easiest tool to use is your FTP tool. Again, we'll use FileZilla to create a directory.

The WordPress Profit System download directory must be in the “wp-content” folder of your WordPress website. This is the same folder that WordPress creates an “upload” directory – if you've configured your site to handle uploads.

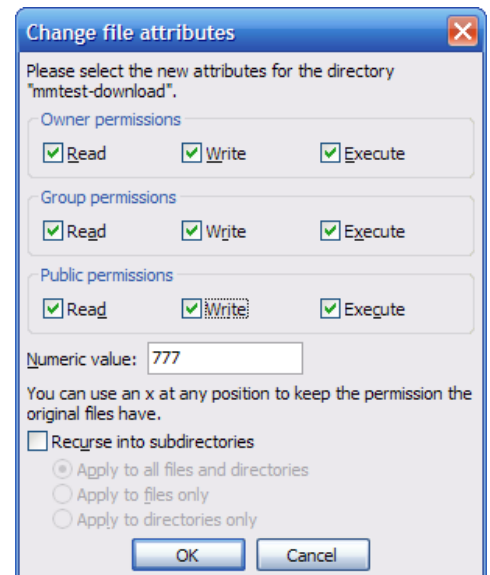

I've navigated to the “wp-content” directory and now I'll right click to get the context menu and choose “Create Directory”. I'm naming my download directory “mmtest-download”. You should choose a name that is less than obvious.

Once the directory has been created, right click and choose “File Permissions”. Set both the **Group** and **Public** Permissions so that both have read and write access to the directory. Normally, this would be a problem but in this case:

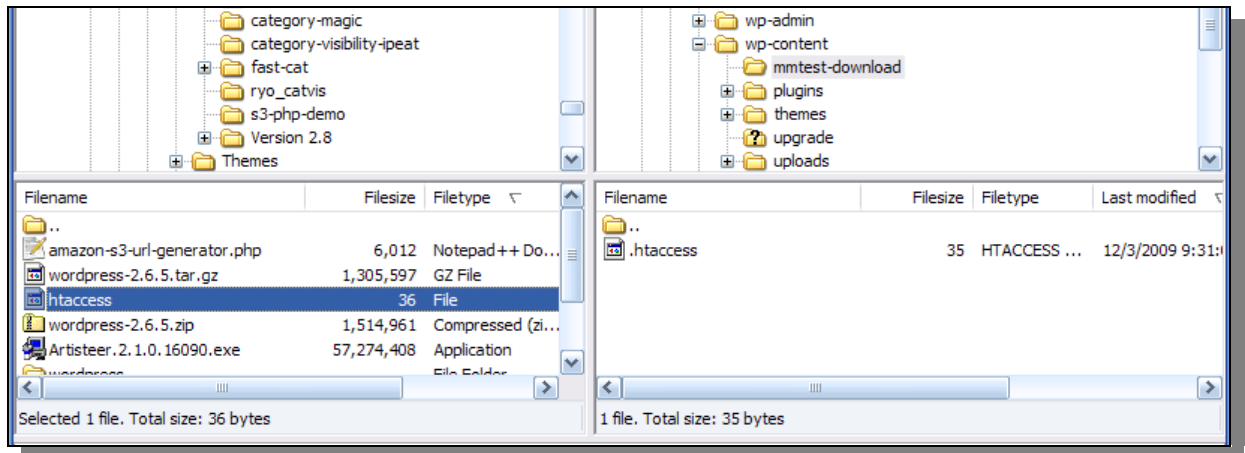

1. **the name of this directory is never revealed to the public** (the reason for choosing a name other than “download”), so it's unlikely that anyone will ever look for it.
2. You'll **use an .htaccess file** to make sure your service denies browser access to this directory. We'll create the .htaccess file in the next section.

### **.htaccess**

.htaccess was created to allow per-directory access control, hence the name. Nowadays .htaccess can override many other configuration settings, mostly related to content control. That's what we'll be using .htaccess for with WordPress Profit System.

A blank (essentially) htaccess file is provided as part of this package. Use your FTP package to upload the file to the directory you just created. In the example, the htaccess file is placed in the *mmtest-download* directory.

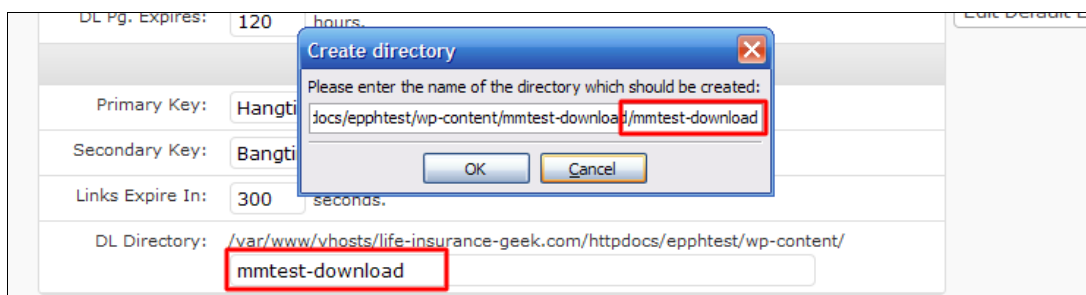

Now, rename the file to .htaccess. The “.” lets your web server know that the file is a special, hidden, system file.

Ok, let's head back to WordPress and bring up the WordPress Profit System configuration page ( Settings | WordPress Profit System) and take note of the Directory field.

To simplify then installation process, WordPress Profit System expects the download directory to be placed in the “wp-content” directory. The “wp-content” directory is not only where WordPress keep its downloaded themes and plugins, but it's also the default directory for the “upload” directory – the place where WordPress stored images and other files that you upload to your posts and pages. Consequently, it's a natural repository for the directory that will hold your download files.

Of course, the Directory entry in the WordPress Profit System configuration page will be the path for the directory you created earlier in this chapter.

Scroll to the bottom of the WordPress Profit System configuration page to the message concerning the .htaccess file. To complete your .htaccess protection for your download directory:

Links Expire In:  seconds.

DL Directory:

**.htaccess**

Your download directory is within a publicly accessible web directory. To restrict browser access to files placed here, the following should be created in the .htaccess file in the directory specified in **Directory** above...

```
RewriteEngine On
RewriteRule ^(.*)$ /var/www/vhosts/doitinthedark.com/httpdocs/epphtest/index.php
```

1. select the supplied text (see above)
2. copy the text to the clipboard
3. return to your FTP program
4. select the .htaccess file that you placed in your directory
5. right click on the file and select "View/Edit" (FileZilla)
6. select the entire contents of the file (Ctrl-A) then paste the text from the clipboard, effectively replacing the original file contents with the information from the WordPress Profit System settings window.
7. Save and close the file
8. Return to FileZilla to upload the changes back to your server. Simply click the "Yes" button in the supplied dialog box.

# WordPress Profit System-Usage

## Link Syntax

The WordPress Profit System plugin uses very simple syntax trigger the link generation. The basic syntax is:

```
[SECURE attribute=value ...attribute="attribute value":resource
```

All of attributes are optional and can be entered in any order. Each attribute should be used only if you require the feature or features that it controls. Values can be entered with or without quotes (both single and double quotes are supported).

The resource (in **red**) MUST be present. This describes the name (filename) and location (path or URL) of the asset.

Attributes:

- seconds** – (optional) the time in seconds that the link will remain active. A value entered here will override the global value entered on the plugin's Settings page.
- hotlink** – (optional) should be 0 or 1. Hot link protection checks the "Referrer" to make sure the link request came from within your site.
  - 0-Moderate** - permits access when the "Referrer" is missing. This can occur with legitimate users who have browsers that do not pass the "Referrer" information, have turned the "Referrer" feature turned off in their browser, or are behind a proxy that doesn't pass "Referrer" information. Unfortunately, this also permits potentially unauthorized access when link text is placed in browser address bar.
  - 1-Aggressive** – blocks all access where the "Referrer" is not from your site including scenarios where the "Referrer" information is missing. NOTE: This cannot be used with most flash/video players as their internal URL handling will not pass "Referrer" information.

Syntax Rules:

1. Attributes can be in any order
2. Attribute values can be entered with or without quotes.
3. If quotes are used for attribute values, single and double quotes are both acceptable
4. The values for the *seconds*, and *hotlink* attributes must be numeric
5. The plugin will remove the "/" from the front of the resource name if it is included

Here are a couple of examples of using the tags:

1. Link with path:  
`SECURE:/folder/pdfs/resource.pdf`
2. Link to play a video that overrides the default expiration time – setting it to 10 seconds:  
`SECURE seconds=10:/folder/vids/vid-1.flv`

## Using the Download Area

The download area you created in a prior step is a secure storage area that exists on your own site.

Although I like placing my large videos and download files on Amazon S3, there are many smaller files (PDFs, ZIPs, etc.) that I'd just as soon host on my own server.

If you upload those files to your download area, you can access the files with WordPress Profit System security by using tags like this:

```
SECURE:filename.pdf
```

Notice that there is no “http://...” used for files in the resource area. Resource specifications without the “http://” are assumed to be stored in the WordPress Profit System download directory or in sub-directories of the download directory.

For example, if a tag like this is used on the example site:

```
SECURE:thisFolder/subexample.zip
```

WordPress Profit System would expect to find the “subexample.zip” file in the mmtest-download/thisFolder directory.

### \*\*\*IMPORTANT FEATURE\*\*\*

#### ***Accessing Files NOT in the Download Area***

You can store your files anywhere on your website's domain. They don't have to be stored in the WordPress Profit System download directory.

To access files stored elsewhere on your domain, you'll enter the full URL to the files location as in:

```
SECURE:http://www.yoursite.com/directory/subdirectory/file.dat
```

# Appendix – I. Page and Email Tags

## Email

- {CUSTOMER NAME} - Customer Name
- {PRODUCT CODE} - Product Code (Product Nbr)
- {PRODUCT NAME} - Product Name
- {DOWNLOAD PAGE} - Link to your Download Page
- {SUPPORT NAME} - Your Support Name (from
- {SUPPORT EMAIL ADDRESS} - The address you've setup to receive support requests
- {X} - The expiration time for your Download Page (from the Account Info tab)

## Thank You Page

- {CUSTOMER BUSINESS NAME} - The purchaser's business name if available (PayPal only)
- {CUSTOMER NAME} - The purchaser's name
- {CUSTOMER EMAIL} - The purchaser's email address
- {DOWNLOAD PAGE} - Link to your Download Page
- {PRODUCT CODE} - Product Code (Product Nbr)
- {PRODUCT NAME} - Product Name
- {PRODUCT PRICE} - The price paid for your product
- {PURCHASE DATE} - The date your product was purchased
- {SUPPORT NAME} - Your Support Name (from
- {SUPPORT EMAIL ADDRESS} - The address you've setup to receive support requests
- {TXN ID} - The unique transaction Id

## Download Page

- {CUSTOMER BUSINESS NAME} - Customer Business Name if available (PayPal only)
- {CUSTOMER NAME} - Customer Name
- {CUSTOMER EMAIL} - The purchaser's name
- {DOWNLOAD LINK|Link Text} - The download link url and anchor text (anchor text is optional)
- {DOWNLOAD PAGE} - Link to your Download Page
- {DOWNLOAD TIME} - The amount of time the download link will be active
- {DOWNLOAD TIME LEFT} - The amount of time left that the download link will be active
- {EXPIRE DATE} - The time and date the link will expire
- {PRODUCT NAME} - Product Name
- {PRODUCT PRICE} - The price paid for your product
- {PURCHASE DATE} - The date your product was purchased
- {SUPPORT NAME} - Your Support Name (from
- {SUPPORT EMAIL ADDRESS} - The address you've setup to receive support requests
- {TXN ID} - The unique transaction Id
