

Gform address types

From GravityForms

Description

This filter is executed when creating the address field (admin and front end). Use it to add support for a new address type

Usage

Applies to all forms

```
1. <?php
2. add_filter("gform_address_types", "brazilian_address", 1);
3. ?>
```

Applies to a specific form. In this case, form Id 5

```
1. <?php
2. add_filter("gform_address_types_5", "brazilian_address", 1);
3. ?>
```

Parameters

\$address_types

(Array) A list of all configured address types to be filtered. Following is the default declaration of this array.

```
1. $addressTypes = array(
2.     "international" => array("label" => "International",
3.         "zip_label" => "Zip / Postal Code", "state_label"
4.         => "State/Province/Region"),
5.     "us" => array("label" => "United States", "zip_label" =>
6.         "Zip Code", "state_label" => "State", "country" => "United
7.         States", "states" => array_merge(array(''),
8.         GFCommon::get_us_states())),
9.     "canadian" => array("label" => "Canadian", "zip_label" =>
10.        "Postal Code", "state_label" => "Province", "country" =>
11.        "Canada", "states" => array_merge(array(''),
12.        GFCommon::get_canadian_provinces()))
13. );
```

\$form_id

(int) The current form ID

Examples

This example adds a Brazilian address type to the list.

```
01. <?php
02. add_filter("gform_address_types", "brazilian_address", 1);
03.
04. function brazilian_address($address_types, $form_id){
05.     $address_types["brazil"] = array(
06.         "label" => "Brasil",
07.         "country" => "Brasil",
08.         "zip_label" => "CEP",
09.         "state_label" => "Estado",
10.         "states" => array("", "Acre", "Alagoas",
11.             "Amapa", "Amazonas", "Bahia", "Ceara",
12.             "Distrito Federal", "Espirito Santo",
13.             "Goias", "Maranhao", "Mato Grosso",
14.             "Mato Grosso do Sul", "Minas Gerais",
15.             "Para", "Paraiba", "Parana",
16.             "Pernambuco", "Piaui", "Roraima",
17.             "Rondonia", "Rio de Janeiro", "Rio
18.             Grande do Norte", "Rio Grande do Sul",
19.             "Santa Catarina", "Sao Paulo",
20.             "Sergipe", "Tocantins")
21.     );
22.     return $address_types;
23. }
24.
25. ?>
```
