

# Gform pre submission

## From GravityForms

## Description

This action hook is executed after form validation, but before any notifications are sent and the entry is stored. This action can be used to modify the posted values prior to creating the entry.

## Usage

Applies to all forms

```
1. <?php
2. add_action("gform_pre_submission", "pre_submission");
3. ?>
```

Applies to a specific form. In this case, form Id 5

```
1. <?php
2. add_action("gform_pre_submission_5", "pre_submission");
3. ?>
```

## Parameters

\$form

(Form Object) The current form.

## Examples

This example changes the post variable for field 14;

```
1. <?php
2.
3. add_action("gform_pre_submission", "pre_submission_handler");
4. function pre_submission_handler($form){
5.     $_POST["input_14"] = "new value for field 14";
6. }
7. ?>
```
