Gform predefined choices

From GravityForms

Description

This filter is executed when the form editor is loaded, before creating the list of predefined choices for the selection fields (Checkboxes, Multiple Choice and Drop Down). This hook can be used to add new predefined choices as well as deleting existing ones.

Usage

Applies to all forms

```php
1. <?php
2. add_filter("gform_predefined_choices",
      "add_predefined_choice");
3. ?>
```

Applies to a specific form. In this case, form Id 5

```php
1. <?php
2. add_filter("gform_predefined_choices_5",
      "add_predefined_choice");
3. ?>
```

Parameters

$choices

> (Array) An array with the existing predefined choices to be filtered. It is an associative array where the key is the title and the value is an array containing the choices.

```php
1. $choices["My Favorite Food"] = array("Fruit", "Hamburge
      "Beans");
```

Examples

This example adds a new predefined choice to the end of the list.

```php
1. <?php
2.
3. add_filter("gform_predefined_choices",
      "add_predefined_choice");
4. function add_predefined_choice($choices){
5.   $choices["My New Choice"] = array("Choice 1", "Choice 2",
        "Choice 3");
6.   return $choices;
```

```
7.  }
8.  ?>
```
