

FABARM FP6 Pump-action with new sighting system

When it comes to reliability and tactical flexibility, nothing matches a FABARM FP6 shotgun—and the addition of a new ghost-ring sighting system, a low profile Picatinny rail, and an ergonomic polymer pistol grip stock make this new FP6 model the best choice for those who require a full-featured pump-action security shotgun.

User input from a variety of American law enforcement professionals contributed to FABARM design decisions on this new model FP6 shotgun.

SPECIFICATIONS FP6

Gauge/Chamber	12 (3")
Operation	Pump-action
Magazine Capacity	5, with magazine extension 7
Overall Length	41.25 inches
Barrel Length	20 inches, TriBore
Weight	7.4 lbs.

Sights	ghost-ring sighting system with low profile Picatinny rail
Stock	polymer pistol grip
Length of Pull	14.58 inches
Drop at Heel	1.58 inches
Drop at Comb	2.44 inches

FP6 with new pistol grip stock, fixed front sight, low profile Picatinny rail, and ghost ring rear sight

The new pistol grip buttstock is slightly angled for quick and natural sight alignment. The quick detachable ghost-ring sights are easy to adjust and protected from damage by protective ears. Colored 3-dot inserts and a new fixed front sight also help for quick target acquisition.

Like all FP6 shotguns, this model makes use of the reliable FABARM pump-action operating system—standard features include twin action bars and a free carrier for quick, smooth reloading. Add a TriBore™ barrel manufactured by advanced deep drilling, a durable sandblasted anodized finish, and interchangeable chokes, and you have one of the strongest and most tactically adaptable pump-action

security shotguns available.

The ability to mount accessory Picatinny rails on the extended forearm, combined with the low profile Picatinny-type receiver rail mount make the attachment of lights and optical accessories simple. Additional features include:

- extended forearm has hard points for mounting accessories
- threaded outer barrel for chokes
- Ergal 55 alloy receiver
- can use a variety of accessories, including folding stocks, compact handgrip, and magazine extension
- 3" chamber
- large safety button
- lifetime warranty

FABARM Tactical Semi-automatic with new sighting system

Tactical Semi-automatic with new sighting system and pistol grip stock

Like its pump action FP6 counterpart, the FABARM Tactical Semi-automatic shotgun is a rugged and simple design—only with the addition of a technically radical autoloading operating system.

This model features the same enhancements as its FP6 companion—a new ghost-ring sighting system, a low profile Picatinny rail, an ergonomic polymer pistol grip stock, plus a modified operating system.

To lessen felt recoil, a rubber buffer is added to the proven FABARM gas operating system. Combined with the FABARM TriBore™ barrel technology (of a special internal bore profile), this model of the Tactical Semi manages to subdue the worst of normal recoil forces.

The new angled pistol grip buttstock provides for quick and natural sight alignment. The new ghost-ring sights are easy to adjust and ensure fast and effective target acquisition.

The Tactical Semi functions reliably with all standard 12 gauge shells without adjustment—whether they're light 2¾-inch tactical loads or the most powerful 3-inch slugs and buckshot.

The low recoil system that has no action parts contained in the buttstock to change the center of gravity when the gun is fired. This allows the Tactical Semi to stay balanced—and stay on target when firing—and the Tactical Semi accepts many of the same accessories as the FP6 pump shotguns.

Additional features include:

- threaded outer barrel for fitting choke
- free carrier
- uses a variety of accessories, including folding stocks, compact handgrip, and magazine extension
- extended forearm has hard points for mounting accessories
- large cocking lever and safety button
- lifetime warranty
